Square, v. a. To form with equal sides and four right angles. — To reduce to a square; to form to right angles. — To reduce to any given measure or standard. — To adjust; to regulate; to mould; to shape; to accommodate; to fit. — To make even, so as to leave no difference or balance.

—*v. n.* To take the attitudes of a boxer; to spar.

Squarely, adv. In a square manner or form.

Squareness, n. The state of being square.

Squarer, n. The person who, or that which, squares.

Square-rigged, a. (*Naut.*) Said of a ship that has long yards at right angles with the length of the deck, in contradistinction to sails extended obliquely by stays, or lateen yards.

Square-sail, n. (*Naut.*) A sail extended by a yard, distinguished from others extended by booms, stays, lateens, and gaffs.

Squarish, a. Nearly square.

Squarrose, a. [*Lat. squarrosus.*] (*Nat. Hist.*) Cut into deep segments, that are elevated above the plane of the surface.

(*Bot.*) Applied to those parts of plants which are covered with bodies spreading at right angles, or at a greater angle, from the surface which bears them, or being so arranged, as the leaves of some mosses.

Squarulose, a. (*Bot.*) Slightly squarrose.

Squash, (skwosh), v. a. To crush; to beat or press into pulp or flatness.

—*n.* Something soft and easily crushed. — Something unripe or soft. — A sudden fall of a heavy, soft body.

(*Bot.*) See **CUCURBITA**.

Squash-bug, n. (*Zoöl.*) See **COREIDE**.

Squash'er, n. A person who, or that which, squashes.

Squashy, adv. Like a squash; also, muddy.

Squat, (skwot), v. n. [*It. acquattare.*] To sit down upon the hams or heels, as a human being. — To sit close to the ground; to cower, as an animal; to stoop or lie close to escape observation, as a partridge or rabbit.

—*a.* Sitting on the hands or heels; sitting close to the ground; cowering; short and thick, like the figure of an animal squatting.

—*n.* The posture of one who sits on his hams, or close to the ground.

Squat'ter, n. One who squats or sits close. — One who settles on the public land without any legal authority. (*U. States.*)

Squat'terville, in California, a town of Contra Costa co.

Squaw, (skwaw), n. The name given by N. American Indians to a woman; — more especially to a wife.

Squaw Grove, in Illinois, a post-township of De Kalb co.

Squeak, (skwëk), v. n. [*Ger. quicken.*] To utter a sharp, shrill cry, usually of short duration; to cry with an acute tone, as an animal, or to make a sharp noise, as a pipe or quill, a wheel, a door, and the like. — To break silence or secrecy for fear or pain; to speak.

—*n.* A sharp, shrill sound, suddenly uttered.

Squeak'er, n. One who, or that which, squeaks. — A young pigeon.

Squeaking, a. Crying with a sharp voice; making a sharp sound: as, a squeaking wheel.

Squeal, (skwël), v. n. [*This is simply a different orthography of squall.*] To cry with a sharp, shrill voice: — used of animals only, and chiefly of swine.

Squealing, a. Uttering a sharp, shrill sound or voice.

Squeamish, a. [*Probably corrupted from qualmish.* See **QUALM**.] Having a stomach that is easily turned, or that readily nauseates at anything: nice to excess in taste; easily disgusted; apt to be offended at trifling improprieties; fastidious; dainty; scrupulous.

Squeam'ishly, adv. In a fastidious manner; with too much niceness.

Squeam'ishness, n. State or quality of being squeamish; excessive niceness; vicious delicacy of taste; fastidiousness; excessive scrupulousness.

Squeez'able, a. That may be squeezed.

Squeeze, (skwëz), v. a. [*A. S. cvoysan.*] To crush; to press; to compress; to press between two bodies; to press closely; to oppress with hardships, burdens, and taxes; to harass; to embrace closely; to hug; to force between close bodies; to compel or cause to pass.

—*v. n.* To press; to urge one's way; to pass by pressing; to crowd.

—*n.* Pressure; compression between bodies; a close hug or embrace.

Squeeze'ing, n. Act of squeezing or of pressing; compression, oppression; that which is forced out by pressure; dregs.

Squeteague, (skwëtëg'), n. (*Zoöl.*) *Labrus squeteague*, a fish of the genus *Labrus*, q. v., common in Long Island Sound.

Squib, (skwib), n. [*It. schioppo.*] a musket, a sort of gun; *scoppio*, a crackling noise.] A little pipe or hollow cylinder of paper, filled with powder or combustible matter and sent into the air, burning and bursting with a crack; a cracker. — A sarcastic speech, or short, censorious writing published: a petty lampoon; a diatribe.

—*v. n.* To throw squibs; to utter sarcastic or severe reflections; to contend in petty dispute.

Squid, n. (*Zoöl.*) The common name of the family *Teuthide* (genus *Loligo* of Linnaeus), comprising cephal-

opodous fishes with an elongated body, fins short, broad, and mostly terminal; the internal shell, or *gladius*, consisting of three parts — a shaft and two lateral expansions. Their ink-bag is well developed, and its secretion jet black. They are sometimes called *Calansaries*, from their internal pen-like bone and ink-bag, and the general cylindrical form like an ancient escritoire.

Squier, ENRICH GEORGE, an American author and archæologist, b. in Bethlehem, Albany co., N.Y., 1821. Having for some time acted as a teacher in a school and studied engineering, he went to Albany in 1840, and began writing for the press. In 1844, he removed to Chillicothe, Ohio, to assume the editorship of the *Scioto Gazette*. His attention being attracted to the antiquities of the Scioto Valley, he made an exploration of similar monuments through the Mississippi Valley, an account of which was published in 1848, forming the first volume of the *Smithsonian Contributions to Knowledge*. He made similar explorations in New York and Connecticut; and on being appointed *chargé d'affaires* to Guatemala and other states of Central America, he used his official position as a means of making extensive geographical and archæological explorations in those interesting regions. On visiting Europe in 1851, he received the gold medal of the French Geographical Society, and was made a member of other learned societies. Returning to America (1853), he surveyed a railway route through Honduras, and drew up the treaty between that country and England for the retrocession of the Bay Islands. In addition to the afore-mentioned works, S. has written *Nicaragua, its People, Scenery, Ancient Monuments, and Proposed Inter-Oceanic Canal*, and *The Serpent Symbol, or Worship of the Reciprocal Principles of Nature in America* (1852); *Notes on Central America, &c.* (1854); *Waikna, or Adventures on the Mosquito Shore, under the non de plume of "Samuel A. Bard"* (1855); *Question Anglo-Américaine, &c.*, at Paris (1856); *The States of Central America, &c.* (1857); *Report of the Survey of the Inter-Oceanic Railway* (1859); *Translation, with Notes, of the Letter of Don Diego de Palacio (1571) to the Crown of Spain, on the Provinces of Guatemala, San Salvador, &c.*, and *Monograph of Authors who have written on the Aboriginal Languages of Central America* (1860); and *Tropical Fibers and their Economic Extraction* (1861); *Pern* (1877). Many of his works have been translated into French, Spanish, and German. Died April 17, 1888.

Squill, (skwîl), n. [*Fr. squille; Lat. squilla, scilla.*] (*Bot.*) See **SCILLA**.

(*Zoöl.*) The common name of the genus *Squilla*, or Mantis Crabs, composed of crustacea, belongs to the division *Stomatopoda*. Its carapace only covers the anterior half of the thorax, the hinder being formed of rings like those of the abdomen. It is provided with enormous claws, terminating in a sharp hook, the last joint furnished with 6 sharp projecting spines, and the preceding joint with 3, and so hollowed as to render this claw a most efficient instrument of prehension, bearing a considerable resemblance to the fore-legs of the orthopterous genus *Mantis*; hence the more popular name applied to the species of this genus.

Fig. 2421. — SPOTTED MANTIS-CRAB, (*Squilla maculata*.)

Squint, (skwînt), n. [*Du. schuin, oblique, schuïne, declivity.*] Wry; oblique; looking obliquely; not having the optic axes of both eyes coincident.

—*n.* Act or habit of squinting; an oblique look.

(*Arch.*) A narrow aperture cut in the walls of churches (generally about 2 feet wide), to enable persons standing in the aisles to see the high altar. These openings are always in the direction of an altar.

—*v. n.* To see obliquely; to look obliquely, or with the eyes differently directed; to have the axes of the eyes not coincident; to slope. — To deviate from a true line.

Squint'er, n. One who squints.

Squint-eyed, (-îd), a. Having eyes that squint; afflicted with strabismus.

Squint'ing, n. [*Lat. strabismus.*] (*Surg.*) A disease of the eyes, in which they do not move in harmony with each other; hence the optic axes are not parallel, and a disturbance of vision is the consequence. S. may be confined to one eye, or it may affect both, and it may be in any direction. If the sight of both eyes is equally good, or nearly so, then all objects are seen double; but if the sight of one is much better than that of the other, the mind only attends to the more vivid impression, and disregards the weaker. S. is owing to some affection of the nerves or muscles of the eye. In most cases it admits of cure by the operation of dividing the muscle by which the distortion is produced.

—The act or habit of looking squint.

Fig. 2422. — SQUINT, (Mayor's Chapel, Bristol.)

Squint'ingly, adv. With a squint look; by side glances.

Squire, (skwîr), n. An abbreviated term for **ESQUIRE**, q. v.

Squireen', n. In Ireland, a petty squire; a gentleman of small estate.

Squirm, v. n. To wriggle or twist about, as an eel; to writhe.

Squirrel, (skwîr'el), n. [*Gr. shiourous; Fr. ecureuil.*] (*Zoöl.*) See **SCIURIDÆ**.

Squirt, (skwert'), v. a. [*O. Fr. esquarter, to scatter.*] To eject or drive out of a narrow pipe or orifice in a stream.

—*v. n.* To throw out words; to let fly.

—*n.* An instrument with which a liquid is ejected in a stream with force; a syringe; also, a small quick stream.

Squirt'er, n. One who squirts.

S.S.E. Abbreviation of *south-south-east*.

S.S.W. Abbreviation of *south-south-west*.

St. Abbreviation of *saint* and *street*.

Staatsburg, in New York, a post-village of Dutchess co., 60 m. S. of Albany.

Stab, n. [*A. S. staf.*] The thrust of a pointed weapon; an injury given in the dark; a sly mischief.

—*v. a.* To pierce with a pointed weapon; to wound mischievously or mortally; to kill by the thrust of a pointed instrument; to injure secretly or by malicious falsehood or slander.

—*v. n.* To give a stab or wound with a pointed weapon; to give a mortal wound.

Stabat-Ma'ter, n. [*Lat., the mother stood.*] (*Mus.*) This celebrated Latin hymn, performed in the Roman churches during Holy Week, was written by a monk named Jacopone in the 14th century. It has been put to music by nearly all the greatest composers.

Stabber, n. One who stabs; an assassin.

Stab'bing, n. Act of piercing with a pointed weapon; act of wounding or killing with a pointed instrument.

Stability, n. [*Fr. stabilité; Lat. stabilitas, from stabilis.*] State or quality of being stable; firmness; steadiness; immovability; fixedness; strength of character; strength of resolution or purpose; constancy; firmness of mind.

Stable, a. [*Fr.; Lat. stabilis, from sto, to stand.*] That stands; firm; fast; steady; firmly established; not to be easily moved, shaken, or overthrown; constant; firm in purpose or resolution; not easily diverted from a purpose; not fickle or wavering; strong; durable; not subject to be overthrown or changed.

—*n.* [*Fr. étable; L. Fr. stabulum; Lat. stabulum, from sto.*] A stall; an abode for animals; a house, shed, or apartment for beasts, especially horses, to lodge and feed in.

—*v. a.* To put or keep in a stable.

—*v. n.* To dwell or lodge in a stable; to dwell in an inclosed place; to kennel.

Stable-boy, Stable-man, n. One who attends in the stable.

Stableness, n. The state or quality of being stable.

Stable-room, n. Room or place for stabling cattle.

Stabling, n. The act of keeping cattle in a stable. — A house, shed, or room for keeping horses and cattle.

Stably, adv. Firmly; fixedly; steadily.

Stacca'to, a. [*It., separated.*] (*Mus.*) A term denoting that the notes to which it is affixed are to be detached in a marked way from each other, much like *speccato*.

Stack, n. [*Sw.; Dan. stak; Ir. staca, sticca; O. Ger. stacchan, to crowd or press together.*] A large conical heap or pile of hay, grain, or straw, sometimes covered with thatch. — A large pile of wood. — A number of funnels or chimneys standing together. — The chimney of a steam-vessel or locomotive; as, a smoke-stack.

Stack of arms, (Mil.) A number of muskets or rifles placed together with their breeches on the ground, and the bayonets crossing each other, so as to form a conical pile. — *Simmonds*.

—*v. a.* To lay, as grain or hay, in a conical or other pile.

—To pile wood, poles, arms, &c.

Stack'et, n. A stockade.

Stack-guard, n. A protection or covering for a stack.

Stackhousia'ceæ, n. pl. (*Bot.*) A small order of plants, alliance *Rhinales*. — *DIAG.* Monopetalous flowers, and episepalous stamens. It consists of two genera of herbaceous plants native of Tasmania, the properties of which have not been studied.

Stack'ing-band, Stack'ing-belt, n. A rope used for binding straw or thatch upon a stack.

Stack-yard, n. A yard for stacks of hay, unthreshed corn, &c.

Stae'te, n. [*Lat. stacle, stacta; Gr. stal'te, from stazlin, to drop.*] The gum that distils from the tree that produces myrrh.

Staddle, (stad'dl), n. [*A. S. stathel, from standen, to stand.*] Anything which serves for support; the frame or support of a stack of hay or grain. — A young tree left standing or uncult, when others are cut down.

—*v. a.* To furnish with staddles, or to leave the staddles, when a wood is cut down. (*R.*)

Stad'dle-roof, n. The covering of a stack.

Stade, n. A landing or shipping place.

Stade, a fortified place of Hanover, on the Schwinge, 22 m. from Hamburg; pop. 7,000.

Stadium, n.; pl. STADIA. (*Antiq.*) A measure of length in use among the ancient Greeks and other nations. It was equal to 600 Greek or 625 Roman feet, or to 125 Roman paces. Hence the S. contained 606 ft. 9 inches, English.

Stadtholder, (stat'-), n. [*Du. stadhouder, from stad, a city, and houder, a holder.*] Formerly the chief magis-

trate of the United Provinces of Holland;—a title which, in 1814, was exchanged for that of king.

Stadt/holderate, Stadt/holdership, n. The office or dignity of a stadtholder.

Staël-Holstein, ANNE LOUISE GERMAINE, BARONESS DE, a French authoress, b. in Paris in 1766, where her father, M. Necker, afterwards the celebrated minister of France, was then a banker's clerk. At the age of twenty she became the wife of Baron De Staël-Holstein, the Swedish ambassador at Paris; and the strong literary turn which she had already exhibited, now developed itself still further, and produced, in the course of her life, a series of works embracing almost every sort of composition in prose or verse. At first sanguine in the cause of the Revolution, she soon became warmly interested in the sufferings of its victims, especially the Queen, whom she had the courage to defend in print. In 1800 she began the series of her works on speculative philosophy, by publishing her essay *De La Littérature, considérée dans ses rapports avec les Institutions Sociales*; and her very equivocal novel *Delphine* appeared in 1802. In that year her husband died. Madame de Staël was much too independent to be acceptable to Napoleon, who banished her from Paris, and afterwards ordered her to confine herself to her château at Coppet, on the Lake of Geneva. From 1803 till 1815 she travelled much in Germany, Italy, and England, and visited Sweden and Russia. Her *Corinne*, in form a novel, and the most eloquent of all tributes to the antiquities and scenery of Italy, appeared in 1807. Her most ambitious work, *De L'Allemagne*, printed at Paris in 1810, was seized by the police, and only published in London some years later. After the second restoration she lived chiefly in Switzerland, where she contracted a secret marriage with M. De Rocca. She died in 1817. After her death, useful contributions were made to the history of the times, by the publication of her *Considérations sur la Révolution Française*, and her *Dix Années d'Exil*.

Staff, n.; pl. STAVES, or STAFFS. [A. S. *staf, staf*; Dan. *stav*; Lat. *stipes*, a branch of a tree; Gr. *stupos*.] A stick carried in the hand for support or defence by a person walking; a stick or club used as a weapon.—A long piece of wood; a stick; the long handle of an instrument; a pole or stick used for many purposes.—An ensign of authority; a badge of office.—The round of a ladder. (R.)—A pole erected in a ship to hoist and display a flag.

(Mus.) The five lines and the spaces on which music is written.

(Mil. and Nav.) The body of naval or military officers intrusted with the direction of the several departments of an army or navy.—Also, the establishment of officers in various departments attached to a commander-in-chief, or general officer in the field.

To have or keep the staff in one's own hands. To retain possession of one's property.

Staff, n.; pl. STAVES. A stanza; a series of verses regularly disposed, so as that, when the series is concluded, the same order begins again.

Staff-angle, n. (Arch.) A square rod of wood or cement, standing flush with the finished plastering of the wall on either side, at the external angles of the plastering of the rooms, in order to oppose the tendency of the usual rendering to chip.

Stachys, (stă'kiz), n. (Bot.) A genus of plants, order *Lamiaceæ*, containing a great number of species, mostly European, having a ten-ribbed calyx, with five nearly equal teeth, the upper lip of the corolla entire, and the lower lip three-lobed. Several species are natives of the U. States. *S. aspera* is very common in shady places, a coarse herbaceous plant, sometimes called *Hedge Nettle*, or *Wound-wort*, with stem 2-3 feet high, ovate heart-shaped leaves on long stalks, whorls of purple flowers, and unpleasant smell.

Staffa, a small Basaltic island, in the W. of Scotland, one of the inner Hebrides, in Argyleshire, 15 m. W. of the island of Mull. See BASALT, and Figs. 298, 299.

Stafford, a noble family belonging to the Norman aristocracy of England. The principal historical names are: HUMPHREY, a partisan of Henry VI., created Duke of Buckingham, 1465.—HENRY, his grandson, a favorite of Richard III., beheaded 1483.—EDWARD, beheaded on an accusation of treason by Henry VIII., 1521.

Stafford, an inland county of England, nearly in the centre of the kingdom, bounded N. by Cheshire and part of Derbyshire, E. by Derbyshire and Warwickshire, and between these, for a short way, by Leicestershire, S. by Worcestershire, and W. by Shropshire and Cheshire. Area, 1,184 sq. m. The most elevated portion of the co. is the N., where wild moorlands in long ridges, separated by deeply cut valleys, extend from N.W. to S.E., and subside as they near the valley of the Trent. The surface is low or undulating in the midland regions, but becomes hilly again in the S. New red-sandstone occupies the whole of the central parts; the Potteries' coal-field occupies the N., and the Dudley coal-field, remarkable also for its abundant and rich iron-ores, occupies the south. The Trent is the chief river. The climate is cold and humid, and though three-fourths of the area are arable, much of the soil is cold and clayey, and agriculture is in a backward condition. The Potteries lie around Stoke, Burslem, and Hanley, and here most extensive manufactures of china and earthenware are carried on. In the S., iron is very largely manufactured in all its branches, from mining to the production of articles in iron and steel. Pop. (1897) 1,150,140. STAFFORD, the cap. of the above co., stands on the Sow, 25 m. N. N.W. of Birmingham. Manuf. Boots and shoes. Pop. (1897) 23,720.

Stafford, in Connecticut, a post-town of Tolland co., 28

m. N. E. of Hartford, containing the post-villages of Stafford, Staffordville, West Stafford, and Stafford Springs. The latter, situated on the Willimantic River, is celebrated throughout the United States for the excellent medical properties of its chalybeate springs.

Staff'ford, in Indiana, a township of De Kalb co.—A township of Greene co.

Stafford, in New Jersey, a township of Ocean co., 53 m. S.E. of Trenton.

Stafford, in New York, a post-village and township of Genesee co., 6 m. E. of Batavia.

Stafford, in Ohio, a post-village of Monroe co., abt. 25 m. N.N.E. of Marietta.

Stafford, in Virginia, an E. co., bordering on the Potomac; area, 250 sq. m. Rivers, Rappahannock and Potomac, and Aquia and Accokeek creeks. Surface, hilly; soil, fertile along the Potomac, in other parts sandy. Min. Granite, freestone, and some gold. Cap. Stafford Court-house.

Stafford Court-house, in Virginia, a post-village, cap. of Stafford co., 76 m. N. of Richmond.

Stafford Village, in New York, a post-village of Genesee co.

Staff-tree, n. (Bot.) *Celastrus scandens*. See CELASTRACEÆ.

Stag, n. [A. S. *stician*.] (Zool.) See DEER.

(Com.) Among stockholders, an outside, irregular jobber or broker in stocks, shares, &c.—A getter up of sham companies, or one who tries fraudulently to obtain shares.

Stag-beetle, n. (Zool.) See LUCANIDÆ.

Stag-boar, n. (Zool.) See BABYROUSA.

Stag-dance, n. A dance in which men only are engaged. (U. S.)

Stage, n. [Fr. *étage*; A. S. *stigan*; Ger. *steigen*, from Gr. *steicho*, to go up, to mount.] A floor or platform of any kind elevated above the ground or common surface, as for an exhibition of something to public view.—The floor on which theatrical performances are exhibited; the theatre; the place of scenic entertainments; theatrical representations.—A place where anything is publicly exhibited; a place of action or performance.—A place of rest on a journey, or where a relay of horses is taken.—The distance between two places of rest on a road.—A single step; a degree of advance; degree of progression.—A large vehicle running between stations, for the accommodation of the public.

Stage-box, n. A box or inclosure near the stage in a theatre.

Stage-coach, n. A coach that passes and repasses regularly on certain days, for the accommodation of passengers.

Stage-door, n. The private door of the theatre, used by actors, employés, &c.

Stage-lights, n. pl. The lights in the front of the stage in a theatre, usually called *foot-lights*.

Stage-play, n. A theatrical entertainment.

Stage-player, n. One who publicly represents characters on the stage; an actor.

Stag'er, n. A player. (R.)—One who has long acted on the stage of life; a practitioner; a person of experience.

Stage-evil, n. (Far.) A kind of palsy in the jaw of a horse.

Stage-wagon, n. A wagon running between stations for the conveyance of passengers or goods.

Stagger, v. n. [Belg. *staggeren*.] To reel; to totter; to vacillate; to move to one side and the other in standing or walking; not to stand or walk with steadiness; to fail; to cease to stand firm; to begin to give way; to hesitate; to begin to doubt and waver in purpose; to become less confident or determined.

—v. a. To cause to reel; to cause to doubt and waver; to make to hesitate; to make less steady or confident; to shock.

Staggering, a. Causing to reel or to waver; reeling; vacillating.

—n. Act of reeling.

Staggeringly, adv. In a staggering or reeling manner.

Stag'gers, n. pl. (Far.) A popular term applied to several diseases of horses. *Mad* or *sleepy staggers* is inflammation of the brain, a rare but fatal complaint, marked by high fever, a staggering gait, violent convulsive struggling, usually terminating in stupor, and treated by bleeding, full doses of physic, and cold water applied to the head. *Grass* or *stomach staggers* is acute indigestion, usually occasioned by overloading the stomach and bowels with tough, hard grass, vetches, or clover, a full meal of wheat, or other indigestible food. It is most common in summer and autumn, is indicated by impaired appetite, distended abdomen, dull aspect, unsteady gait, and is remedied by full doses of purgative medicine, such as six drachms of aloes and a drachm of calomel rubbed down together, and given in a quart of thin, well-boiled gruel. Frequent clysters, with hand-rubbing and hot water to the belly, are likewise useful. Where the dulness increases, stimulants should be freely given.

Stag'hound, n. A hound used in hunting the stag or deer.

Stag'ing, n. The management of, or the act of travelling in, stage-coaches.—A stage or platform for support, as of workmen; a scaffolding. (U. S.)

Stag'nancy, n. State of being stagnant; stagnation.

Stag'nant, a. [Fr.; Lat. *stagnans*, from *stagnare*.] Standing; not flowing; not running in a current or stream; motionless; still; not agitated; not active; dull; not brisk.

Stag'nantly, adv. In a still, motionless, inactive manner.

Stag'nate, v. n. [Lat. *stagnare*, from *stagnum*, a place of standing water.] To stand; to stand still; to cease to flow; to be motionless; to stop; to rest; to cease to move; not to be agitated; to cease to be brisk or active; to become dull.

Stagna'tion, n. [Fr.] Act of stagnating; state of being stagnant; the cessation of flowing or circulation of a fluid, or the state of being without flow or circulation; the state of being motionless; the cessation of action or of brisk action; the state of being dull.

Stahl, (stäl), GEORG ERNST, a German chemist and physiologist, b. at Anspach, 1660. He was educated at Jena, where he took his doctor's degree in 1683; but, upon the establishment of the University of Halle, in 1694, he was appointed Professor of Anatomy and Chemistry there. Acquiring great reputation in this office, he was, in 1716, invited to Berlin, and made counsellor of the court and physician to the king. Stahl was more eminent in chemistry than in medicine, because he was less fanciful. He made many important discoveries, the chief being his theory of phlogiston, which, although erroneous in itself, led to the discovery of great truths in chemistry. He composed a number of learned works in Latin upon medical science and upon chemistry. His phlogistic theory, which held its ground for nearly a century, was given in a work entitled *Zymotechnia Fundamentalis*. D. 1734.

Stahl's town, in Pennsylvania, a post-village of Westmoreland co., 50 m. S.E. of Pittsburg.

Staid, a. Sober; grave; steady; composed; regular; sedate.

Staid'ly, adv. Calmly; soberly.

Staid'ness, n. The state or condition of being staid; sobriety; gravity; steadiness; regularity; constancy; firmness; stability.

Stain, v. a. To discolor by the application of foreign matter; to make foul; to spot.—To tinge with a different color; to dye.—To impress with figures, in colors different from the ground.—To mark with guilt or infamy; to bring reproach on; to disgrace.

Stained glass. See GLASS.

—n. A discoloration from foreign matter; a blot; a spot.—A natural spot of a color different from the ground.—Taint of guilt; pollution; tarnish.—Cause of reproach; infamy; shame.

Stain'er, n. One who stains, blots, or tarnishes; a dyer.

Stain'less, a. Free from stains or spots.—Free from the reproach of guilt; free from sin.

Stair, n. [A. S. *stager*; Dan. *stige*; Sw. *stege*.] A stone, or a frame of boards or planks, by which a person rises one step; a flight of steps.

—pl. A series of steps by which persons ascend to a higher story in a building.

Below stairs, in the lower portion or basement of a dwelling.—*A flight of stairs,* a pair of stairs, the stairs from one story to another.—*Stair carpet,* the carpet which covers a flight of stairs, or intended for that purpose.—*Up-stairs,* in the upper or higher rooms of a house.

Staircase, (stair'kais), n. (Arch.) A term applied to the whole set of stairs, with the walls supporting the steps leading from one story to another. The same staircase frequently conducts to the top of the building, and thus consists of as many stories as the edifice itself.—The part of a building which contains the stairs.

Stair-head, n. The top or upper part of a staircase.

Stair-rod, n. A metallic rod used to fasten or hold stair-carpet on a stair.

Stair'way, n. A staircase.

Stairway Brook, in Pennsylvania, a village of Wayne co., 107 m. N.W. of New York city.

Staith, n. [A. S. *stādih*.] A line of rails on a stage or platform, generally near navigable waters, from which vessels are loaded.

Stake, n. [A. S. *stace*; Du. *staak*.] A small piece of wood or timber, sharpened at one end, set or fixed in the ground, or prepared for setting, as a support to something; a piece of long, rough wood.—The piece of timber to which a martyr was fastened when about to be burned;—hence, figuratively, martyrdom.—That which is pledged or wagered.—A small anvil to straighten cold iron, or to cut or punch upon with a cold chisel or punch.

(Ship-building.) One of the regular ranges or planks on the bottom and sides of a ship, reaching from the stem to the stern.

At stake, hazarded; in danger; at risk.

Stake and rice, a fence formed by stakes driven into the ground, and closely interwoven with branches and twigs.

—v. a. To fasten, support, or defend with stakes.—To mark the limits of by stakes.—To wager; to pledge; to put at hazard upon the issue of competition, or upon a future contingency.—To pierce with a stake. (R.)

Stake-head, n. (Rope-making.) A stake with wooden pins in the upper side, to keep strands apart.

Stake-holder, n. One with whom the stakes are deposited when a wager is laid.

Stalac'tic, Stalac'tical, a. Relating to, or resembling, stalactite.

Stalac'tiform, a. Resembling a stalactite.

Stalac'tite, n. [Gr. *stalaktos*, trickling or dropping, from *stalasso*, to let fall drop by drop.] (Min.) A conical or cylindrical concretion of carbonate of lime attached to the roofs of calcareous caverns, and formed by the gradual dropping of water holding the carbonate in solution.

Stalactit'ic, Stalactit'ical, a. [Gr. *stalaktikos*.] Having the character of a stalactite; having the form of an icicle.

Stalactit'iform, a. Stalactiform.

Stalag'mite, *n.* Stalactical formations of carbonate of lime found upon the floors of calcareous caverns, and caused by the evaporation of water fallen from the surface.

Stalagmitic, **Stalagmitic**, *a.* Having the form of stalagmites.

Stalagmitically, *adv.* In the manner or form of stalagmites.

Stal'der, *n.* A frame to set casks on.

Stale, *a.* [A. S. *stæl*, *stæl*, a place.] Worn out by use; common; trite; having lost its novelty or power of pleasing. — Old; worn out; decayed. — Vapid or tasteless from age; having lost its life, spirit, and flavor from being kept too long. — Not fresh; not newly made, as bread.

S. demand, a claim which has been for a long time undemanded; as, for example, when there has been a delay of 12 years unexplained.

— *n.* The handle of any thing, as of a broom.

— *v. n.* To make water; to discharge urine, as horses and cattle.

Stale-mate, *n.* (*Chess-playing*.) The position of a king when he is not in check, but cannot be moved without being checked.

Stale-ness, *n.* State of being stale.

Staleybridge, (*stai'le-bridj*.) a market-town and municipal borough of England, in Lancashire and Cheshire, 6 m. from Stockport. *Manuf.* Cotton goods. *Pop.* 28,576.

Stalk, (*stawk*), *n.* [A. S. *stel*, *stèle*; Ger. *stiel*; Dan. *stilk*.] The stem or axis of a plant. — The pedicel of a flower, or the peduncle that supports the fructification of a plant. — The stem of a quill.

(*Arch.*) An ornament in the Corinthian capital resembling a stalk. — A chimney carried up to a great height above the roofs of the buildings with which it is connected.

— *v. n.* To walk with high and proud steps; — usually implying the affectation of dignity. — To steal or creep along; to walk softly and warily. — To stalk behind a stalking horse, or behind a cover.

— *v. a.* To approach by stealth, or under cover, as deer.

Stalked, (*stawk't*), *a.* Having a stalk.

Stalker, (*stawk'er*), *n.* One who walks with a proud step.

Stalk-ing-horse, *n.* A horse, real or factitious, behind which a fowler conceals himself from the sight of the game which he is aiming to kill. — Hence, a mask; a pretence.

Stalk-less, *a.* Without a stalk.

Stalk'y, *a.* Hard as a stalk; resembling a stalk.

Stall, (*stawl*), *n.* [A. S. *stæl*, *stæl*; Dn. *stal*; Sw. *stall*.] A stand or place where a horse or an ox is kept and fed; the division of a stable, or the apartment for one horse or ox. — A stable; a place for cattle. — A bench, form, or frame of shelves in the open air, where anything is exposed for sale; a small house or shed in which an occupation is carried on. — The seat of an ecclesiastical dignitary in the choir of a church.

— *v. a.* To put into a stall or stable, or to keep in a stable.

— To set or fix into mire, so as to be unable to proceed.

— *v. n.* To kennel. — To be set or fixed, as in mire.

Stallage, *n.* The right of erecting stalls in pairs; also, rent paid for a stall.

Stall-feed, *v. a.* To feed in a stall, or on dry fodder.

Stallion, (*stail'yun*), *n.* [Fr. *stalon*; It. *stallone*.] A horse kept for mares; a stone horse; a seed horse; a male horse not castrated.

Stal'lon, *n.* A scion; a cutting, as of a plant.

Stal'wart, **Stal'worth**, *a.* Strong; robust; brave.

Stamens, *n.*; *pl.* STAMENS, or STAMINA. [Lat., from Gr. *stemon*, from *histemi*, to stand.] The warp in the upright loom of the ancients. — Texture; foundation; basis. — *pl.* The fixed, firm part of a body, which supports it or gives it its strength and solidity; whatever constitutes the principal strength or support of anything.

(*Bot.*) The male reproductive organ of a flowering plant. It consists essentially of a case or bag, called the *anther*, containing a powdery substance, called the *pollen*, which is discharged at certain periods through

Stam'ford, in Vermont, a post-township of Bennington co., 116 m. S.W. of Montpelier.

Stam'in, *n.* A slight sort of woollen cloth.

Stam'ina, *n. pl.* of STAMEN, *q. v.*

Stam'inal, *a.* Belonging to stamens.

Stam'inate, *a.* (*Bot.*) Consisting of, or furnished with, stamens.

— *v. a.* To endue with stamina or first principles.

Stam'inal, **Stam'inal**, *a.* Belonging to, or having, stamens.

Staminiferous, *a.* Bearing, or having, stamens.

Stam'inode, **Stamino'dium**, *n.* (*Bot.*) An abortive stamen, or an organ resembling an abortive stamen.

Stam'mel, *n.* A species of red color paler than scarlet. — *a.* Of a pale, reddish color.

Stammer, *v. n.* [A. S. *stamer*; Dn. *stameraar*, a stammerer.] To stop in uttering syllables or words; to stutter; to hesitate or falter in speaking; and hence, to speak with stops and difficulty.

— *v. a.* To utter or pronounce with hesitation or difficulty.

— *n.* The act of one who stammers.

Stammerer, *n.* One who stutters or hesitates in speaking.

Stammering, *n.* A term commonly used in a somewhat wide and indefinite sense to signify all kinds of defective utterance. Strictly, however, it denotes a difficulty or inability to enunciate certain elementary sounds; while stuttering is an inability fluently to enunciate words and sentences. The former may be regarded as mainly an organic or symptomatic affection; the latter chiefly an idiopathic or functional one. Defective utterance may arise from malformation of the organs of speech, inflammation or enlargement of the tonsils, or such like, or from some general or local affection of the nerves of the vocal organs. Frequently, also, it is the result of bad habit or imitation. In stuttering, the stoppage generally takes place at the first syllable of a word, but sometimes it may be at the second or third. It is not a little remarkable that most stutterers can sing without difficulty; the reason being that so frequent changes do not take place in the vocal organs. Hence we have an important means for the cure of this intractable affliction. The stutterer should commence by giving leisurely and fully every word. To aid in this, some have recommended motions of the hands or feet to accompany each sound. In fact, the art of speaking has to be really learned from the beginning, from syllables up to words and sentences. Cheerful society, healthy mental occupation, athletic sports, and attention to the general laws of health, are of the utmost importance in such cases. As a general rule, everything that increases the control of the mind over the muscles improves the speech, and *vice versa*.

Stammeringly, *adv.* In a stammering manner.

Stamp, *v. a.* [Du. *stampen*; Ger. *stämpeln*, to mark with a stamp; It. *stampa*, a stamp, impression.] To strike or beat forcibly, as with the bottom of the foot, or by thrusting the foot downward. — To impress with some mark or figure; to impress; to imprint; to fix deeply; to fix, as a mark, by impressing it; to make by impressing a mark; to coin; to mint; to form; to cut into various forms with a stamp. — To crush by the downward action of a kind of pestle, as ore in a stamping-mill.

— *v. n.* To strike the foot forcibly downward.

— *n.* Any instrument for making impressions on other bodies. — A mark imprinted; an impression; that which is marked. — A thing stamped; a picture cut in wood or metal, or made by impression; a cut; a plate. — A mark or seal set upon paper or parchment in regard to things chargeable with duty to government, as evidence that the duty is paid. — An instrument for cutting out materials, as paper, leather, &c., into various forms by a downward pressure. — A character of reputation, good or bad, fixed on anything. — Authority; current value derived from suffrage or attestation; make; cast; form; character.

(*Law*.) An impression made by order of the government on paper, which must be used in reducing certain contracts to writing, for the purpose of raising a revenue. A paper bearing an impression or device authorized by law, and adapted for attachment to some subject of duty or excise. The Internal Revenue acts of the United States of 1862, and subsequent years, required stamps to be affixed to a great variety of objects, under severe penalties in the way of fines, and also under penalty of invalidating written instruments and rendering them incapable of being produced in evidence. Only a few articles now require to be stamped.

Stampede, *n.* [Sp. *estampeda*, a crackling; It. *stampa*; L. Ger. and Du. *stampen*.] A sudden fright which sometimes seizes droves of cattle or horses, causing them to run for miles. — Any sudden fright caused by a panic.

— *v. a.* To drive away or disperse by reason of a sudden fright, as a herd of cattle.

Staup'er, *n.* An instrument for pounding or stamping. — One who affixes a stamp or post-mark.

Stampers Creek, or **Stamper**, in Indiana, a township of Orange co.

Stamp'ing Ground, in Kentucky, a post-village of Scott co., 21 m. N.W. of Lexington.

Stamp'ing-machine, *n.* A machine or apparatus for stamping metals.

Stamp'ing-mill, *n.* (*Metal*.) A machine, consisting of several movable pillars of wood, for crushing or bruising ores.

Stamp'-note, *n.* A memorandum delivered by a shipper of goods to the searcher, which, when stamped by him, permits the goods to be sent by lighters to the ship, and is the captain's authority for receiving them on board.

Stan'ardville, in Virginia, a post-village, cap. of Greene co., 92 m. N.W. of Richmond.

Stanch, *v. a.* [Fr. *étancher*, from L. Lat. *stancare*.] To stop or hinder from running, as blood.

— *v. n.* To stop, as blood; to cease to flow.

— *a.* Firm; steady; sound; strong and tight. — Firm in principle; constant and zealous; hearty; — written also *staunch*.

Stanch-hound, one that follows the scent without error or remissness.

Stanch'el, *n.* Same as STANCHION, *q. v.*

Stanch'er, *n.* One who stops the flow of blood.

Stanchion, (*stan'shun*), *n.* [O. Fr. *estanson*, from *estancher*, to stop, to stay.] (*Arch.*) A proper support; a piece of timber or iron in the form of a stake or post, used for a support.

(*Ship-building*.) A small pillar of wood or iron, used to prop and support the decks, awnings, &c.

Stanch'less, *a.* Not to be stopped; insatiable.

Stanch'ness, *n.* The state or quality of being stanch; soundness; firmness in principle; closeness of adherence.

Stand, *v. n.* [A. S. *standan*; O. Ger. *stantan*; Lat. *stare*, to stand.] To be upon the feet in an erect position, as a man, or a beast: not to sit, kneel, or lie. — To be erect, supported by the roots, as a plant. — To be on its foundation; not to be overthrown or demolished; — said of an edifice. — To be placed or situated; to have a certain position or location, as a town or city. — To stop; to halt; not to proceed; to be at a stationary point without progress or regression. — To be in a state of fixedness; hence, to continue; to endure; to make resistance to whatever tends to injure or impair. — To be fixed and steady; not to vacillate; to be in or to maintain a posture of resistance or defence. — To be placed with regard to order or rank. — To be in any particular state; to be, emphatically expressed, that is, to be fixed or set. — To continue unchanged or valid; not to fail or become void. — To consist; to have its being and essence; to be in any state. — To maintain one's ground; not to fail; to be acquitted; to be safe. — To offer one's self as a candidate; to place one's self; to be placed. — To stagnate; not to flow. — To agree; to consist.

(*Naut.*) To hold a course at sea.

(*Law*.) To abide by a thing; to submit to a decision; to comply with an agreement; to have validity; as, the judgment must stand.

To stand against, to resist. — To stand by, to be present, without being an actor. — To support; to defend; not to desert. — To repose on; to rest in.

(*Naut.*) To be ready to proceed.

To stand fast, to be immovable or unshaken. — To stand firmly on, to be convinced of. — To stand for, to propose one's self as a candidate. — To maintain; to profess to support. — To represent; to be the substitute of. (*Naut.*) To direct the course toward. — To stand from. (*Naut.*) To shape the course from. — To stand in hand, to be at one's service. — To stand off, to keep at a distance. — To forbear friendship or intimacy. — Not to comply. — To appear protuberant or prominent; to have relief. — To stand off and on. (*Naut.*) To remain near a coast by sailing toward and from it alternately. — To stand on, to continue on the same course. — To stand one in, or to stand out, to be prominent or protuberant. — Not to comply; to secede; to hold resolution; to hold a post; not to yield a point. — To stand to, to ply; to persevere. — To remain fixed in a purpose. — To abide by a contract or an assertion. — To be consistent with. — Not to yield. — To stand together, to agree. — To stand to sea. (*Naut.*) To direct the course to the open sea. — To stand under, to undergo; to sustain. — To stand up, to erect one's self; to rise from sitting. — To arise in order to speak or act. — To make a party. — To stand up for, to defend; to support. — To stand upon, to concern; to interest. — To value; to take pride in. — To insist. — To stand with, to be in accordance with.

— *v. a.* To endure; to sustain; to bear. — To resist without yielding or receding. — To abide; to await; to suffer; to abide by.

To stand fire, to receive the discharge of fire-arms without yielding. — To stand it, to endure bravely. (*Colloq.*) — To stand one's ground, to maintain one's ground or position. — To stand trial, to sustain the trial of a cause.

— *n.* A place or post where one stands, or a place convenient for persons to remain in for any purpose. — An erection or raised station for spectators, as at a horse-race. — A station where carriages, cabs, &c., wait to be hired. — Station; rank; post; standing. (*n.*) — The act of opposing. — A stop; a halt; act of stopping or standing. — Something on which a thing rests or is laid. — The place where a witness stands to testify in court. — A small table; a frame on which vessels of any kind may be laid; as, a stand for music. — A young tree usually reserved when the other trees are cut.

Stand of arms, (*Mil.*) A complete set of arms for one soldier. — To be at a stand, to be perplexed; to stop, owing to some difficulty or doubt. — To make a stand, to stop, for the purpose of opposing resistance to an enemy.

Stand'ard, *n.* [A. S. *standard*, from *standan*, to stand; Fr. *étendard*.] An ensign of war; a staff with a flag or colors, standing upright. — That which is established by sovereign power, as a rule or measure by which others are to be adjusted. — That which is established as a rule or model by the authority of public opinion, or by custom; criterion; test. — A standing tree or stem; a tree not supported or attached to the wall.

(*Coinage*.) The proportion of weight of fine metal and alloy established by authority.

(*Carp.*) An upright support, as the poles of a scaffold.

(*Ship-building*.) A timber in the form of a knee, with one arm on the deck, and the other fayed to a ship's side.

Fig. 2423. — STAMENS.

little holes or slits. The anther is generally supported on the summit of a little column or stalk, called the *filament*. This is not an essential part of the *S.*, being often wanting; in which case the anther is said to be *sessile*. The stamens constitute the whorl, or whorls, of organs situated on the inside of the corolla.

Stamened, (*stam'end*), *a.* Furnished with stamens.

Stam'ford, a town of England, in Lincolnshire, on the Welland, 10 m. from Peterborough; *pop.* 9,772.

Stam'ford, in Upper Canada, a village and township of Welland county, about 3 miles N.W. of Niagara Falls.

Stamford, in Connecticut, a post-borough and township of Fairfield co., at the entrance of Mill River into Long Island Sound, 36 m. N.E. of New York. It is a favorite residence and summer resort of many opulent New Yorkers, and the surroundings are embellished with many handsome dwellings. *Manuf.* locks, woollens, &c.

Stamford, in New York, a post-village and township of Delaware co., abt. 60 m. W.S.W. of Albany.

Stand'ard, *n.* (*Bot.*) The vexillum, or upper part of a papil maceous corolla (Fig. 65).

—*a.* Having a fixed value; as, a *standard* work.

Stand'ard-bearer, *n.* An officer of an army, company, or troop, who bears a standard; an ensign of infantry or a cornet of horse.

Stand'el, *n.* A tree of long standing.

Stand'er, *n.* One who, or that which, stands.

Stand'er-by, *n.* One present; a mere spectator.

stand'ing, *a.* Settled; established either by law or by custom, &c.; continually existing; permanent; not temporary. — Lasting; not transitory; not liable to fade or vanish. — Stagnant; not flowing, as water. — Fixed; not movable. — Remaining erect; not cut down.

Standing rigging. (*Naut.*) Stationary rigging, as shrouds, stays, backstays, &c.

—*n.* The state of being erect upon the feet; stand. — Continuance; duration or existence. — Possession of an office, character, or place. — Station; place to stand in. — Power to stand. — Condition in society; rank.

Stand'ing Stone, in *Pennsylvania*, a post-township of Bradford co., 7 m. E. of Towanda.

Standing Stone Creek, in *Pennsylvania*, enters the Juniata River from Huntingdon co.

Stand'ish, *n.* A stand or case for pen and ink.

Stand'ish, in *Maine*, a post-township of Cumberland co., 58 m. S.W. of Augusta.

Stand-point, *n.* Place of standing; position; point of view; basis.

Stand'still, *n.* A stop; act of standing erect.

Stan'ford, in *Indiana*, a post-village of Monroe co., 60 m. S.W. of Indianapolis.

Stan'ford, in *Kentucky*, a post-village, cap. of Lincoln co., 50 m. S. of Frankfort.

Stanford, in *New York*, an unimportant village of Dutchess co.

Stan'fordville, in *Georgia*, a village of Putnam co., 22 m. N.W. of Milledgeville.

Stanfordville, in *New York*, a post-vill. of Dutchess co., 20 m. N.E. of Poughkeepsie.

Stan'hope, LADY HESTER, a very highly accomplished, but no less eccentric, English lady, whose remarkable life on Mount Lebanon may be numbered among the most interesting romances of biography. Born in 1766, she was daughter of Charles, Earl Stanhope, and niece of the celebrated William Pitt. Soon after the death of that great statesman, with whom she lived, and with whose pursuits she so much sympathized as to act upon some occasions as his private secretary, she went to Syria, assumed the dress of a male native of that country, and devoted herself to astrology, in which she was a most implicit believer. She had a large pension from the English government, and for many years was possessed of considerable influence over the Turkish pacha, which, however, when habitual carelessness in money matters had deprived her of the means of bribing, she so entirely lost as to be in actual danger of her life. So completely anti-national were the prejudices of this high-souled lady, that, though at the time of her death she had no fewer than 23 domestics, not one of them was English; and her last sigh was breathed among foreigners and hirelings. Her permanent abode was in Mount Lebanon, about 8 m. from Sidon, where she died, 1839.

Stanhope, PHILIP HENRY, EARL, an English historian, b. 1805, and better known to literature as LORD MAHON, his title before succeeding to the earldom. His greatest work is his *History of England from the Peace of Utrecht to the Peace of Aix-la-Chapelle*. He has also written a *History of the War of the Spanish Succession*, and other works. As Lord Mahon he entered Parliament in 1830, and has held minor offices in several conservative administrations.

Stan'hope, a seaport-town of Prince Edward Island, in Queen's co., on the Gulf of St. Lawrence; Lat. 46° 22' N., Lon. 63° 10' W.

Stanhope, in *N. Carolina*, a post-village of Nash co., 32 m. N.E. of Raleigh.

Stanhope, in *New Jersey*, a post-village of Sussex co., 52 m. N.E. of Trenton.

Stanhope, in *Pennsylvania*, a village of Monroe co., 128 m. N.E. of Harrisburg.

Stanislaus I., LEZINSKI (*stan'is-laws*.) King of Poland, b. 1677, was the son of the grand-treasurer of that kingdom. In 1704 he was deputed by the assembly at Warsaw to Charles XII. of Sweden, who had just conquered Poland. That monarch caused him to be crowned king at Warsaw in 1705; but when Charles was defeated, in 1709, Stanislaus was obliged to leave his kingdom. On the death of Augustus, in 1733, he returned, in hopes of being acknowledged; but the power of the Emperor of Germany and the Empress of Russia prevailed against him, and he was again obliged to fly. He was the author of some productions in French and Polish, which were printed under the title of *The Works of the Liberal Philosopher*. He died in consequence of his night-gown taking fire, 1766.

Stan'islaus, in *California*, a river which rises in the Sierra Nevada, on the boundary of Calaveras and Tuolumne cos., and flowing S.W. falls into San Joaquin River, abt. 25 m. S.E. of Stockton. — A central co.; area, 1,450 sq. m. *Rivers*, San Joaquin, Tuolumne, and Stanislaus. *Surface*, traversed by the Coast Range in the S.W., elsewhere diversified; *soil*, generally fertile. *Min.* Gold and copper. *Cap.* Modesta. *Pop.* (1897) 12,150.

Stan'islaus City, in *California*, a village of Stanislaus co., abt. 24 m. S. of Stockton.

Stan'islaus, (*St.*) (*Order of*.) A Polish order of knighthood, founded by Stanislaus, King of Poland, in 1765, and renewed by the Emperor Alexander in 1815.

Stan'islawow, a fortified town of Austrian Poland, 75 m. from Lemberg.

Stank, *pp.* of STINK (*q. v.*).

Stan'ley, in *North Carolina*, a S.W. central co.; area, 390 sq. m. *Rivers*, Yadkin and Rocky. *Surface*, mountains; *soil*, fertile in the valleys. *Products*, Cereals, potatoes, tobacco, &c. *Min.* Gold and silver. *Cap.* Albemarle. *Pop.* (1897) 14,050.

Stan'ley, (*Port.*) in *Canada*, a port of entry of Elgin co., on Lake Erie, 110 m. S.W. of Hamilton.

Stan'nary, *a.* [From Lat. *stannum*, tin.] Relating to tin-mines, or to tin-works.

—*n.* A tin-mine, or tin-works.

Stan'nate, *n.* (*Chem.*) A salt formed by the union of stannic acid with a base. — The *S. of soda*, prepared on a large scale for use as a mordant by calico-printers, crystallizes in hexagonal tables.

Stan'nie Acid, *n.* (*Chem.*) Peroxide of tin.

Stan'nine, *n.* (*Min.*) An opaque, brittle mineral, variously colored, but having frequently the appearance of bronze, whence its common name of *bell-metal ore*. *Comp.* Sulphur 29.6, tin 27.2, copper 29.3, iron 6.5, zinc 7.5 = 100.

Stan'notype, *n.* [Lat. *stannum*, tin, and Gr. *typos*, impression.] A photograph taken upon a tin plate.

Stan'nous, *a.* Relating to, or containing, tin.

Stan'stead, in prov. of Quebec, a town, cap. of a co. of same name, 100 m. S.E. of Montreal; *pop.* abt. 1,000.

Stan'ton, EDWIN, an American statesman, b. in Steubenville, Ohio, 1814. After receiving a good education, he studied for the bar under Benjamin Tappan, senator for the State of Ohio, who took him into partnership, and thus gave him a good start in his legal career. He continued to practise in Ohio until 1847, when he removed to Pittsburg, Pa., where he was associated in several important cases with Messrs. R. J. Walker and Abraham Lincoln. In the winter of 1857-58, S. was selected by President Buchanan to manage an important case connected with Mexican grants, and conducted it to a successful issue, and in 1858 he began to practice in the Supreme Court at Washington, but held aloof from politics. Towards the close of President Buchanan's term of office, in 1860, S. reluctantly accepted the post of attorney-general; and while holding it, he tried hard to prevail on the president to send reinforcements to Fort Sumter. Mr. Cameron resigned his post as head of the War Dept., Jan. 13, 1862, when the vacant place was offered to S., and accepted. The change was looked upon by the people as advantageous to the cause of abolition; and Judge Holt, in a letter to the Governor of Ohio, characterized the appointment as "an immense stride in the direction of the suppression of the rebellion." Indeed, the vigorous manner in which S. set about the reform of the War Dept. confirmed the sanguine expectations of his friends, and the beneficial results that attended his appointment soon became evident in the increased efficiency of the various branches of the military establishment of the Union. After Lincoln's death, S. was retained in the cabinet by President Johnson, but his firm opposition to the *personal policy* of the President soon made him obnoxious to Mr. Johnson, who finally requested him to resign; and, on his refusal to comply, notified him (August 5, 1867) that he had suspended him from office and appointed Gen. Grant as secretary of war *ad interim*. S. gave up the office under protest; but when Congress reassembled in November, the Senate declared that the suspension was not justifiable, and that the secretary must be reinstated. Gen. Grant immediately surrendered the office to him. On the 21st of Feb., 1868, President Johnson notified S. that he had removed him, and appointed Adj.-Gen. Lorenzo Thomas Secretary *ad interim*. This last act led to the famous impeachment of the President. On May 26, the Senate having acquitted Mr. Johnson, S. resigned his office. After leaving the War Dept., S. devoted himself to his profession; but his health had been so seriously impaired by his enormous and protracted labors as head of the War Dept., that he was not able to work with his former energy. In Dec., 1869, President Grant nominated him for an Associate Justice of the Supreme Court, and he was readily confirmed by the Senate, but his commission had not yet been made out when his friends had to mourn his sudden death, Dec. 19, 1869.

Stan'ton, in *Del.*, a p.-vill. of New Castle co., 6 m. S.W. of Wilmington; in *Ill.*, a twp. of Champaign co.; in *Ind.*, a p.-vill. of Clay co., 12 m. N.E. of Terre Haute; in *Iowa*, a twp. of Plymouth co.; in *Kan.*, a twp. of Linn co.; in *Kan.*, a p.-vill. and twp. of Miami co., abt. 33 m. S.E. of Lawrence; in *Ky.*, a p.-vill. cap. of Powell co., abt. 42 m. E.S.E. of Lexington; in *Mich.*, a p.-vill., cap. of Montcalm co., abt. 42 m. N.E. of Grand Rapids; or STAXTON, in *Mo.*, a p.-vill. of Franklin co., 65 m. S.W. of St. Louis; in *Neb.*, an E. central co.; in *N. J.*, a p.-vill. of Hunterdon co., abt. 30 m. N. of Trenton; in *Tenn.*, a dist. of Haywood co.

Stan'tonsburg, in *North Carolina*, a village of Wilson co., 50 m. E.S.E. of Raleigh.

Stan'tonville, in *South Carolina*, a village of Anderson dist.

Stan'tonville, in *Tennessee*, a district of McNairy co.

Stan'za, *n.* [It.; Sp. *estancia*; Fr. *stance*.] (*Poet.*) A series or number of verses connected with each other in a poem, of which the metre is constructed of successive series similar in arrangement. The stanza, however, must be understood to form a shorter division than the classical strophe, to which this definition would be equally applicable. It is so called from terminating with a full point or pause.

Stan'za'ie, *a.* Consisting in stanzas. (*R.*)

Stape'lia, *n.* (*Bot.*) A genus of plants, order *Asclepiadaceae*, chiefly remarkable for the curious, wrinkled, toad-

like appearance of their handsomely marbled or mottled star-shaped flowers, and the disgusting carrion-like scent emitted by most of them.

Stapes, *n.* (*Anat.*) A bone of the ear. See EAR.

Staphy'lea, *n.* (*Bot.*) A genus of plants, order *Staphyleaceae*. *S. trifolia*, the Bladder-nut, is a handsome shrub, 6-8 feet high, found in moist woods and thickets from Canada to Carolina and Tennessee. Leaves oval-acuminate, serrate, pale beneath, with scattered hairs; flowers white, in a short, drooping raceme. The most remarkable feature of the plant is its large, inflated capsules, which are 3-sided, 3-parted at top, 3-celled, containing several hard, small nuts or seeds, with a bony, smooth, and polished testa.

Staphy'lea'ceae, *n. pl.* (*Bot.*) A small order of plants, alliance *Sapindales*, included by many botanists in the order *Sapindaceae*, as a tribe distinguished by the stamens being inserted outside instead of inside the disc, and by albuminous seeds. They consist of trees or shrubs, which are natives of Europe, Asia, and northern and tropical America.

Staphyliu'idae, *n. pl.* (*Zool.*) See BRACHELYTRA.

Staphylo'ma, *n.* [Gr., from *staphylē*, a bunch of grapes.] (*Med.*) A disease of the eyeball, in which the cornea becomes opaque and tumid, forming a white projection, sometimes resembling a grape in shape; it occasionally increases to a great extent, and requires to be removed by an operation.

Staphyloplas'tie, *n.* [Gr. *staphylē*, and *plassein*, to form.] (*Surg.*) Applied to the operation for replacing the soft palate when it has been lost.

Staphylor'aphy, *n.* [Fr. *staphylorrhaphie*, from Gr. *staphylē*, and *raphē*, a seam, from *raptein*, to sew.] (*Surg.*) The operation of uniting a cleft palate.

Staple, (*stapl*), *n.* [A. S. *stapel*, *stapul*; Du., Ger., and Sw. *stapel*; Dan. *stabel*; Fr. *étape*.] A principal commodity or production of a country or district. — The material or substance of a thing. — The thread or pile of wool, cotton, or flax. — A loop of iron, or a bar of wire, bent and formed with two points to be driven into wood, to hold a hook, pin, &c.

—*a.* Relating to, or constituting, a market or staple, for commodities. (*R.*) — Established in commerce; settled. — Regularly produced or made for market; chief; principal. — According to the laws of commerce. (*R.*)

Stap'ler, *n.* A dealer in commodities.

Stap'leton, in *Iowa*, a post-township of Chickasaw co., abt. 90 m. W.N.W. of Dubuque.

Stapleton, in *New York*, a post-village of Richmond co., on the N.E. of Staten Island, 7 m. S.W. of New York.

Star, *n.* [A. S. *steorra*; Ger. *stern*; Lat. *stella*; Gr. *aster*.] (*Astron.*) A general term applied to any celestial body, including the planets. In astronomy, however, the word is used to designate only those self-shining bodies which are situated beyond the limit of solar attraction. They are also called *fixed stars*, to distinguish them from the planets, comets, satellites, &c. Astronomy inquires into the distance, number, magnitude, nature, and motion of the fixed S. In appearance, the magnitudes of the S. seem to differ greatly; but this variation is attributed to that of their distances. It is impossible to tell the number of the fixed S. In order to establish a gradation among them, and for convenience in description or reference, astronomers divide them into classes or orders, called *magnitudes*. The most brilliant are called S. of the *first magnitude*; those less brilliant are styled of the *second magnitude*; and so on to the sixth or seventh, when they become invisible to the naked eye. The S. are very irregularly distributed throughout the heavens; in some parts considerable regions are to be found with scarcely a single S., while other portions, like the Milky Way, are crowded. In all ages, the distance of the fixed S. from the earth has been a subject of interest and inquiry. In determining the question of *parallax*, the S. 61 Cygni was selected as being a S. with a large proper motion. The experiment turned out favorably, and the parallax was discovered, and with it roughly the distance of the S. from the solar system. This was estimated at about 592,000 times the mean radius of the earth's orbit. See MILKY WAY; NEBULÆ; and SECTION II.

—The figure of a star; an asterisk, thus (*); — used as a mark of reference. — The figure of a star worn as a badge of rank. — A person of brilliant and attractive qualities on some public occasion; an eminent theatrical performer.

—*v. a.* To set or adorn with stars, or bright, radiating bodies; to bespangle.

—*v. n.* To shine as a star; to perform on the stage, as an actor or singer of eminence.

Star, in *Kansas*, a township of Coffey co.

Star, or STARR, in *Texas*, a S. co., bordering on the Rio Grande, which separates it from Mexico; area, 2,570 sq. m. *Surface*, mostly prairies, which support large droves of wild horses and cattle. *Cap.* Rio Grande City. *Pop.* (1897) 11,650.

Star, in *Wisconsin*, a post-township of Vernon co., 12 m. E. of Viroqua.

Staraja Russa, (*sta'ra-ya*.) a town of European Russia, 137 m. from St. Petersburg.

Star'-anise, *n.* (*Bot.*) See ILLICIUM.

Star'-apple, *n.* (*Bot.*) See CHRYSOPHYLLUM.

Star'-blind, *a.* Seeing obscurely.

Star-board, *n.* (*Naut.*) See LARBOARD.

Star'-bow'lins, *n. pl.* (*Naut.*) A term for the men in the starboard watch.

Star'bruek Island, in the S. Pacific; Lat. 5° 20' S., Lon. 155° 56' W.

Starch, (*startsh*), *n.* [A. S. *stearc*.] Chemically speaking, S. consists of $C_6H_{10}O_6$. It is readily distinguished from other similar substances by the deep-blue color it assumes on the addition of free iodine to its solution.

Boiled with dilute sulphuric acid, it becomes converted into dextrine, without any change in its chemical composition. It then gradually assumes the elements of water, becoming changed into *glucose*, or *grape sugar*. *S.* consists of a number of ovoid grains, built up of a series of skins, one over the other, like an onion. With cold water *S.* forms only a granular paste, but with hot water the granules burst and dissolve, giving rise to a glutinous viscous solution, which, when dry, forms a translucent horny mass. Hence its use in stiffening linen. In the manufacture of *S.* from potatoes and cereal grains, advantage is taken of its insolubility in cold water. Commercially, there are two classes of starch—those used for food, and those used for manufacturing purposes. The former are treated under *Arrow-root*, *q. v.*; the latter are chiefly made from wheat, rice, and potatoes; but in addition, large quantities of sago-starch are prepared in India, and small quantities are from time to time prepared from other sources, such as the fruit of the horse-chestnut, &c.

—A formal manner.

Starch, *a.* Stiff; precise; rigid. (*R.*)

—*v. a.* To stiffen with starch.

Star'-chamber, *n.* (*Eng. Hist.*) A celebrated court of justice, so called from the ornaments of the ceiling of the room in which at one period it sat. This court, of very ancient origin, was under the direction of the chancellor, and consisted of divers lords, spiritual and temporal, being privy councillors, with two judges of the courts of common law. It had jurisdiction in cases of forgery, perjury, riot, conspiracy, fraud, and libel; but its power came afterwards to be much extended, so as to render it a most odious and unjust instrument in the hands of a despotic administration. Its process was summary and often iniquitous, and the punishment which it inflicted often arbitrary and cruel. It became particularly odious in the reign of Charles I., and was at length abolished by 16 Car. I. c. 10, to the great joy of the people.

Starched, (*starcht*), *a.* Stiffened with starch.—Stiff in manner; precise; formal.

Starch'edness, **Starch'ness**, *n.* The state of being starched; formality; stiffness.

Starch'er, *n.* One who starches, or whose occupation is to starch; as, a clear-starcher.

Starch'ly, *adv.* With stiffness of manner; formally.

Starch'y, *a.* Consisting of, or resembling, starch.—Stiff in manner; precise; formal.

Star City, in *Nevada*, a post-village of Humboldt co., 12 m. N. of Unionville.

Stare, (*stär*), *v. n.* [*A. S.* *starian*; *Ger.* *starren*.] To gaze, or to look with fixed eyes wide open; to fix or fasten an earnest look on some object.

—*v. a.* To stare at; to affect or influence by staring; to gaze at earnestly.

To *stare in the face*, to be unmistakably apparent; to be, as it were, before the eyes; as, ruin *stares* him in the face.

—*n.* A fixed look with eyes wide open.

Star'er, *n.* One who stares or gazes earnestly.

Star'-finch, *n.* (*Zoöl.*) Same as *REDSTART*, *q. v.*

Star'-fish, *n.* (*Zoöl.*) See *ASTERISCIDE*, *q. v.*

Star'-fort, *n.* (*Fortif.*) A fort possessing external projecting angles.

Star'gard, (*New*), a town of Prussian Pomerania, on the Ihna, 21 m. from Stettin. *Manuf.* Woollens, toys, and tobacco.

Star'-gazer, *n.* One who gazes at the stars; a seer; hence, an astrologer; also, a visionary;—employed in a contemptuous sense.

(*Zoöl.*) See *URANOSCOPUS*.

Star'-grass, *n.* (*Bot.*) See *HYPOXIDACEÆ*.

Star'ingly, *adv.* With a fixed, steady gaze.

Stark, *a.* (*comp.* *STARKER*; *superl.* *STARKEST*.) [*A. S.* *stearc*.] Stiff; strong; rugged; as, a *stark* corpse.—Confirmed or established; mere; gross; sheer; entire; absolute; as, the thing is a *stark* absurdity.

—*adv.* To the utmost degree; wholly; entirely; absolutely; as, the man is *stark* mad.

Stark, in *Illinois*, a N.W. central co.; area, 290 sq. m. It is intersected by the Spoon River, a tributary of the Illinois. *Surface*, level, and partly timbered; *soil*, fertile. *Cap.* Toulon.

Stark, in *Indiana*, a N.W. co.; area, 432 sq. m. *Rivers.* Yellow and Kaukakee. *Surface*, level; *soil*, generally fertile. *Cap.* Knox.

Stark, in *New Hampshire*, a post-township of Coos co., 90 m. N. of Concord.

Stark, in *New York*, a thriving township of Herkimer county.

Stark, in *Ohio*, a N.E. co.; area, 570 sq. m. *Rivers.* Tuscarawas, and Nimishillen, Sugar, and Sandy creeks. *Surface*, undulating; *soil*, excellent. *Min.* Stone-coal and limestone. *Cap.* Canton.—A township of Noble co.

Star'key, in *New York*, a post-village and township of Yates co., 32 miles N. of Elmira.

Stark's, in *Illinois*, a village of Kane co., on the C. & P. R. R.—In *Maine*, a post-township of Somerset co., 33 m. N.W. of Augusta.

Stark's-borough, in *Vermont*, a post-village and township of Addison county, 24 miles south-west of Montpelier.

Starks'ville, in *New York*, a village of Rensselaer co.

Stark'ville, in *Georgia*, a village, former cap. of Lee co., 115 m. S.S.W. of Milledgeville.

Starkville, in *Mississippi*, a post-town, cap. of Oktibeha co., 125 m. N.E. of Jackson.

Starkville, in *New York*, a post-village of Herkimer co., 60 m. W.N.W. of Albany.

Star'less, *a.* Having no starlight, or no stars visible; as, a *starless* sky.

Star'light, *n.* The light issuing from the stars.

—*a.* Lighted by the stars; as, a *starlight* night.

Star'like, *a.* Stellated; radiated like a star; as, a *starlike* flower.—Bright; lustrous; as, *starlike* eyes.

Star'ling, *n.* [*A. S.* *starno*, *stearn*; *Lat.* *sturnus*.] (*Zoöl.*) See *STURNIDÆ*.

(*Arch.*) A large pile of woodwork placed on the outside of the foundation of the piers of bridges, &c., to break the force of the water, and protect the stone-work.

Starodub, (*sta-ro-doo'b*), a town of European Russia, govt. of Tchernigov, on the Babinza.

Star'-of-Beth-lehem, *n.* (*Bot.*) See *ORNITHOGALUM*.

Star'ost, *n.* [*Pol.* *starosta*.] In Poland, the proprietor of a starosty.

Star'osty, *n.* [*Pol.* *starostwo*.] In Poland, a castle and demesne granted to noblemen for life by the crown.

Star Prairie, in *Wisconsin*, a post-township of St. Croix co.

Starred, (*stard*), *a.* Gemmed or studded with stars.

Star'riness, *n.* State of being starry

Star'ry, *a.* [*From* *star*.] Abounding with stars; gemmed with stars; as, the *starry* sky.—Stellar; stellary; consisting of, or proceeding from, the stars; as, *starry* light, *starry* influence.—Resembling, or beaming like, stars; as, *starry* eyes.

(*Bot.*) Stellate.

Star-spangled, (*-späng'gld*), *a.* Studded with stars.

Star-spangled banner, the flag of the U. States; the stars and stripes.

Star'-stone, *n.* (*Min.*) A variety of sapphire, which, when cut in a certain direction, presents a reflection of light in the form of a star.

Start, *v. n.* [*Ger.* *stärzen*, to precipitate.] To move suddenly, as if by a twitch; to move instinctively, as by an involuntary shrinking from sudden fear or alarm; to move with sudden quickness, as with a spring or leap; as, he *started* aside.—To wince; to shrink.—To set out; to commence a race, as from a barrier or goal; to begin a journey or enterprise; as, they *start* for home to-morrow.—To move or shift from its place; as, the hoops of the cask were *started*.

To *start after*, to follow; to pursue; to chase; to run after.—To *start against*, to enter into competition with; to act as a rival candidate against.—To *start for*, to run as a candidate.—To *start up*, to rise suddenly, as from a seat or sitting posture.—To come into sudden notice or importance.

—*v. a.* To rouse suddenly, as from concealment; to startle; to move or disturb suddenly; to cause to flee or fly.—To call forth; to raise; to bring into sudden motion; to produce suddenly to view or notice; as, to *start* a controversy.—To invent or discover; to bring within pursuit; as, to *start* a pastime.—To dislocate; to move suddenly from its place; as, to *start* a bone out of its socket.

(*Naut.*) To pour out; to empty, as liquor from a cask; as, to *start* a butt of water.—To give a start to, or cause to move with quickness, by chastising with a rope's end, as for refractoriness or dilatoriness.

—*n.* A sudden motion, as from alarm; a quick spring; a darting; a sudden rousing to action.—A sudden motion followed by intermission: a spastic affection; a sudden twitch, or convulsive motion or spasm; as, he does everything by fits or *starts*.—A sudden spring, motion, or effusion; an impulsive fit; a sally; as, the *start* of spleen.—Act of setting out: commencement of a journey or enterprise; first motion from a place; as, a *start* in life.—To get or have the *start*, to begin before another; to have the advantage over another.

[*A. S.* *steort*.] A projection; a horn; a tail.—In England, the long haft or handle of anything; as, the *start* of a plough.

Start'er, *n.* One who starts: one who shrinks from his purpose.—One who suddenly moves a question or raises an objection.—One who places men, horses, or dogs in order for running.—A dog that rouses game.

Start'ful, *a.* Apt or inclined to start; skittish.

Start'fulness, *n.* Disposition to start.

Start'-thistle, (*-thi's'l*), *n.* (*Bot.*) An annual plant of the genus *CENTAUREA*, *q. v.*

Start'ing-bar, *n.* (*Mach.*) The hand-lever which serves to start a steam-engine.

Start'ingly, *adv.* By sudden fits or starts.

Start'ing-point, *n.* Act of moving suddenly.

Start'ing-point, *n.* The point from which anything moves or starts.

Start'ing-post, *n.* A post, place, or barrier from which competitors in a race make their start.

Start'ish, *a.* Apt to start or shy; skittish;—said of a horse. (*Colloq.*)

Startle, (*stört'l*), *v. n.* [*Intensive* of *start*.] To shrink; to wince; to move suddenly, or be excited, on feeling a sudden alarm.

—*v. a.* To start; to shock; to frighten; to alarm; to surprise; to impress with fear; to excite by sudden alarm, surprise, or apprehension.

—A sudden motion or shock caused by an unexpected alarm, surprise, or apprehension of danger; a sudden impression of fright or terror.

Start'lingly, *adv.* In a manner to startle or affright suddenly.

Starne'ea, in *Pennsylvania*, a post-borough of Wayne co., 180 m. N.E. of Harrisburg.

Starne'ea Creek, in *Pennsylvania*, rises in Wayne co., and flows S.W. into the Susquehanna River.

Starvation, (*-vü'shun*), *n.* Act of starving, or state of being starved.

Starve, *v. n.* [*A. S.* *steorfan*, *steorfan*.] To perish or die with cold; to suffer extreme cold. (Rare in the U. S.)—To perish with hunger; to suffer extreme hunger or destitution.—Hence, to be extremely indigent; to lack the necessities of life.

Starve, *v. a.* To kill or reduce with cold.—To kill with hunger;—hence, to distress or subdue by famine; as, to *starve* a city into a surrender.—To destroy by want; as, to *starve* plants by deprivation of nutriment.—To deprive of force or vigor; as, "The powers of their minds are *starved* by disuse."—*Locke*.

Starve'ling, *a.* Hungry; lean; meagre; starving from lack of nutriment; as, "a *starveling* bard." *Swift*.—*n.* An animal or plant that is rendered thin, lean, and weak through want of nutritious aliment.

Star'wort, (*-wärt*), *n.* (*Bot.*) A popular name applied to plants of the genera *Aster* and *Stellaria*.

Sta'tant, *a.* [*From* *Lat.* *stare*, to stand.] (*Her.*) In a standing position; as, a stag *statant*.

State, *n.* [*Fr.* *état*; *Lat.* *status*, from *sto*.] Condition or circumstances of a being or thing at any given time; situation; case; predicament; plight; as, the present *state* of things cannot last long.—Rank; quality; condition; as, the *state* of fame.—Appearance of pomp, dignity, or greatness; condition of wealth or prosperity; as, his majesty received him in *state*.—A political body, or body politic; the whole body of people united under one government;—more usually, a commonwealth or body politic having a representative legislature; as, a *state* without a ruler.—A body of men professionally united, or constituting a community of a specific or particular character; as, in England, the two grand divisions—civil and ecclesiastical—Church and *State*.—In the U. States, one of the commonwealths or bodies politic.—The people of the States, collectively, make up the body of the entire nation.

—*pl.* The bodies that constitute the legislature of a country; as, the *States-general* of Holland.

State paper, a paper relating to the political or diplomatic interests of a state.

State trial, a trial of a person, or persons, for a political offence.

—*v. a.* To set forth, as the position, condition, or circumstances under which anything exists or subsists; to set in order; to settle; to express, as the particulars of anything in writing; to set down in detail or in gross; to express, as the particulars of anything verbally; to represent fully in words; to recite; to narrate.

—*a.* Pertaining, or having reference, to the state or nation; public; grand; pompous; ceremonial; royal; as, a *state* pageant.

State'craft, *n.* Art of managing or conducting affairs of state.

State'-criminal, *n.* An offender against the dignity or well-being of a state or commonwealth; one guilty of treason.

Stat'ed, *a.* Settled; established; regular; occurring at regular times; not occasional; as, to attend on a *stated* occasion.—Fixed; established; specified; as, he was engaged at a *stated* salary.

Stat'edly, *adv.* Regularly; at certain or specified times; not occasionally.

State'-house, *n.* The building wherein the sittings of a state legislature are held.

State'ly, *adv.* In a stately manner.

State Line, in *New York*, a village of Columbia co., 38 m. S.E. of Albany.—A village of Washington co.

State'liness, *n.* Quality of being stately; grandeur; loftiness of mien, or majestic or dignified appearance; also, semblance of pride; affected dignity.

State'ly, *a.* (*comp.* *STATELIER*; *superl.* *STATELIEST*.) According to state, high rank, quality, or condition; august; grand; majestic; lofty; dignified; magnificent; elevated in style or sentiment; as, a *stately* air, a *stately* building, a *stately* form, &c.

—*adv.* Loftily; majestically; with dignity.

State'ment, *n.* Act of stating, presenting, or reciting verbally or on paper.—A series of facts or particulars expressed on paper; a detail of facts or figures verbally recounted; recital of the circumstances of a transaction; a formal embodiment in language of facts or opinions.

State-monger, (*-müng'ger*), *n.* A dabbler in politics or statecraft.

Stat'en Island, off the extreme S.E. coast of Terra del Fuogo, 45 m. long, separated from King Charles's Land by Le Maire Strait; *Lat.* of Cape St. John, on its E. extremity, 54° 42' S', *Lon.* 63° 43' 5" W.

Staten Island, in *New York* Bay, separated by the Narrows from Long Island, and from New Jersey by Staten Island Sound. It is 14 m. long and 8 wide, and formerly comprised the co. of Richmond. It now constitutes, under the title of *RICHMOND*, a part of New York city as reorganized under the new charter, on Jan. 1, 1898.

State-prison, *n.* A public prison, penitentiary, or jail.

State'-prisoner, *n.* A prisoner held in durance for a political offence.

Stat'er, *n.* One who states, or makes a statement.

—[*Gr.*] (*Numis.*) The principal coin of republican Greece. The Attic golden stater weighed 2 drachms, and is estimated at 20 silver drachms, or equivalent to about \$5.50.

State'-room, *n.* A magnificent room in a palace or great house.

(*Naut.*) A small private apartment on shipboard.

States-borough, in *Georgia*, a village, cap. of Bullock co., 53 m. N.W. of Savannah.

States'burg, in *South Carolina*, a post-village of Sumter dist., 35 m. S.E. of Columbia.

States'-general, (*Hist.*) A term employed in France before the first Revolution to express the national parliament, or assembly of the three orders of the state—the clergy, nobility, and commonalty. The *S.-A.* had not been convened for a hundred years, when Louis XVI., in the hope of allaying public discontent, called them together in 1787; but the parliament, instead of

addressing itself to the vital state of the country, commenced quarrelling about precedence and the privileges of their orders, till the exasperated nation terminated the dispute by a revolution that swept all orders and precedence from the country. In Holland, the *S.-G.* is the congress of the two chambers, or the legislative body.

States'man, *n.*; *pl.* STATESMEN. A man versed in public or state affairs, or in the arts of government; usually, one eminent for political or diplomatic abilities; a politician; one versed in statecraft. — A person employed in public affairs. — In the north of England, a petty landholder: as, a Cumberland statesman.

States'manlike, *States'manly*, *a.* Having the manner, wisdom, or experience of statesmen; befitting a statesman.

States'manship, *n.* The qualifications or employments of a statesman.

States of the Church, (*It. Stati della Chiesa*, or *Stati Pontifici*), a territory, or rather a group of states, in Central Italy, formerly united into one sovereignty, with the Pope for its head, and now annexed to the kingdom of Italy. The States of the Church being no more a geographical denomination, we must confine this article to a rapid sketch of their history from their formation till their absorption into the Italian nationality. During the rule of the Goths and Lombards in Italy, the inhabitants of Rome, and all who desired to live free from the barbarian yoke, feeling that the Greek empire was incapable of protecting them, and at the same time observing the pertinacity and energy with which the Pope asserted the importance and dignity of Rome, naturally looked up to him as, in some sort, a protector; and it is to the gradual growth and spread of this feeling that the important position subsequently taken by the popes as authorities in temporal matters is chiefly due. About 720 A. D., Gregory III., having quarrelled with the Emperor Leo the Isaurian, declared the independence of Rome. In 726, Pepin le Bref compelled the Lombard king to hand over Ravenna, Rimini, Pesaro, Fano, Cesena, Urbino, Forlì, Comacchio, and fifteen other towns, to the Pope, who now assumed the state of a temporal sovereign. Pepin's example was followed by his son, Charlemagne. In the 11th century, the Normans greatly aided to increase the Papal temporal authority, and in 1053 the duchy of Benevento was annexed. In 1102, the Countess Matilda of Tuscany left to the Pope her fiefs of Parma, Mantua, Modena, and Tuscany; but these were immediately seized by the German empire, and of this magnificent bequest only a few estates came into the Pope's hands. In 1278, the Emperor Rodolph I. defined authoritatively the boundaries of the Papal States, and acknowledged the Pope's exclusive authority over them, by absolving their inhabitants from their oath of allegiance to the empire. The States of the Church at this time included Perugia, Bologna, Bertinoro, the duchy of Spoleto, the exarchy of Ravenna, and the march of Ancona. Sixtus IV., Alexander VI., and Julius II. increased the Papal States by the addition of the Romagna, Pesaro, Rimini, Faenza, Parma, Piacenza, and Reggio. In 1830, the people of Ancona and Bologna rose in rebellion. They were put down by the aid of an Austrian army; but the abuses in the administration were so flagrant, that even Austria urged the necessity for reform. Her remonstrances, however, were not attended to, and the Bolognese again rebelled. This second revolt supplied Austria with a pretext for occupying the northern legations, and the French at the same time garrisoned Ancona. Occasional risings took place from time to time up to 1846, when the present Pope, Pius IX., assumed the tiara, and burst upon the astonished world in the new character of a reforming Pope. His projects were of a most liberal character, and were put in force with great energy, despite the opposition of Austria; but, alarmed at the spread of revolution in Europe during 1848, he halted in his career, just at the critical moment when to halt was to be lost. The people rose, and Pius IX. fled to Gaëta, while Rome was proclaimed a republic. He was restored, and his subjects reduced to submission, by the arms of France, Austria, Naples, and Spain. The Austrians held the legations in subjection to the Pope's authority till 1859, but the French continued to occupy Rome (*see* ROME). In July, 1859, the 4 northern legations (the Romagna) threw off the Papal authority and proclaimed their annexation to Sardinia. Their example was followed, in 1860, by Pesaro, Urbino, Ancona, and the other provinces known as the Marches. In July, 1870, the Emperor Napoleon III. having withdrawn the French troops from Rome, the small territory still belonging to the Pope, comprising Rome with the Comarca, the legation of Velletri, and the delegations of Civita Vecchia, Frosinone, and Viterbo, were invaded by the Italian troops, and annexed to the kingdom of Italy, against the solemn protest of the Pope and of the entire Roman Catholic Church.

Statesville, in North Carolina, a city, the cap. of Iredell co., 47 m. N. of Charlotte. *Pop.* (1897) 2,620.

Statesville, in Tennessee, a post-village of Wilson co., 17 m. S.E. of Lebanon.

Stat'ic, *Stat'ical*, *a.* [*Gr. statikos*, causing to stand.] Pertaining to statics; belonging or relating to bodies at rest or in equilibrium. — Resting; acting by mere weight; as, *static pressure*.

Static electricity, electricity caused by friction.

Stat'ice, *n.* (*Bot.*) A genus of plants, order Plantaginaceae, characterized by its leaves radical or cauline, dilate, mostly entire. *S. linum*, the Marsh Rosemary, is found in salt marshes from Rhode Island to Maryland. Its scape is about a foot high, with several lanceolate, clasping bracts, and supporting at the top a broad, branching panicle, composed of close, secund

spikes of sessile, blue flowers. The root is large, ligneous, strongly astringent, and much valued in medicine.

Stat'ics, (*stai'tiks*), *n. sing.* [*Gr. statice*; *Fr. statique*.] That subdivision of mechanics which treats of bodies at rest, in opposition to *dynamics*, which treats of bodies in motion. The two great propositions of *S.* are the principle of the lever, and the principle of the composition of forces. Archimedes demonstrated the first, namely, the equilibrium of a straight horizontal lever loaded at its extremities with weights which are reciprocally proportioned to their distances from the fulcrum. The second general principle consists in this, that any two forces acting together upon the same point of a body are equivalent to a single force, represented in intensity and direction by the diagonal of a parallelogram, of which the two given forces are represented by the sides. This principle was not known to the ancients. Newton proved it to be true generally, and shows how the laws of equilibrium may be deduced from it, in the second corollary to the third laws of motion. *See* GRAVITY, MECHANICS, FORCE, PHYSICS.

Station, (*stai'shun*), *n.* [*Fr.*; *Lat. statio*, from *sto*.] The spot or place where a person or thing stands, particularly, where he or it habitually stands, or is appointed to remain for a time; as, the *station* of a coast-guard; — hence, specifically, a place on a railroad where trains make a halt, for the purpose of receiving or discharging passengers, freight, and the like; a depot. — The position of a ship of war; as, she was sent to the Mediterranean *station*. — The place assigned to the assembling of a police force when off duty; also, a house of temporary detention for offenders. — (Generically, a term applied to fixed points or places, of which a series is included in any extended works, arrangements, or organizations; as, a post-office *station*, a telegraph *station*, a fire-engine *station*, &c.) — Office; post or position assigned; the part or department of a public duty which a person is appointed or commissioned to perform. — Situation; position; as, "To single *stations* now what years belong." — *Crech*.

— Business; avocation; employment; occupation; as, "The common size of human understanding is fitted to some *station* or other." (*Swift*). — Character; state; rank, or condition of life.

"The post of honour is a private *station*." — *Addison*.

(*Ecl.*) One of certain points in the narrative of the passage of Christ from the judgment-seat to the cross, which are selected by the Romanists as subjects for meditation, and are well known through the pictorial representations common in Roman Catholic churches.

(*Ship-building*.) Same as room and space. *See* ROOM.

(*Surveying*.) The place selected for planting the instrument with which an angle is to be measured.

(*Zoological Geog.*) The particular place or kind of situation in which a species naturally occurs.

— *v. a.* To assign a station to; to place; to set; to appoint to the occupation of a post, place, or office; as, to *station* troops in California, to *station* a missionary, sentry, &c.

Stational, (*stai'shun-al*), *a.* [*Lat. stationalis*.] Belonging, or having reference, to a station.

Stationariness, *n.* State or quality of being stationary.

Stationary, *a.* [*Fr. stationnaire*; *L. Lat. stationarius*, from *statio*.] Standing; fixed; not moving; not progressive or regressive; stable. — Not appearing to move; as, a *stationary* planet. — Not advancing, in a moral sense; not improving; not growing wiser, greater, or better; as, *stationary* ideas, *stationary* diseases.

(*Med.*) Certain diseases which depend upon a particular state of the atmosphere, and which prevail in a district for a certain number of years, and thus give way to others.

Stationary contact. (*Geom.*) The curve of intersection of two surfaces which touch each other has, in general, a double point at the point of contact, the tangents at which are distinct. When these tangents coincide, there is a cusp or stationary point on the curve of intersection, and the contact of the surfaces is then said to be *stationary*. — *Stationary engine*. (*Mach.*) A form of steam-engine for drawing carriages on railroads by means of a rope; — so called in distinction from a *locomotive engine*. — *Stationary point*. (*Geom.*) Same as CUSP, *q. v.*

— *n.* One who, or that which, stands still.

Station-bill, *n.* (*Naut.*) A list assigning to each person his proper station in the navigation of a ship.

Stationer, (*stai'shun-er*), *n.* Originally, a bookseller, from his occupying a stand or station; in modern parlance, a vender of paper, quills, inkstands, and the various paraphernalia belonging to writing.

Stationery, *n.* The articles commonly sold by stationers, as paper, ink, pens, &c.

— *a.* Belonging, or relating, to a stationer.

Station-pointer, *n.* (*Surveying*.) An instrument used in marine surveying for expeditiously laying down on a chart the position of a place from which the angles subtended by three distinct objects, whose positions are known, have been observed.

Station-staff, *n.* (*Surveying*.) An instrument for taking angles.

Stat'ist, *n.* [*From state*.] A statesman; one skilled in statecraft or government; a politician; also, a political writer.

Stat'istic, **Stat'istical**, *a.* [*Fr. statistique*.] Pertaining, or having reference to, or containing, statistics; belonging to social or political economy.

Stat'istically, *adv.* In a statistical manner.

Statistician, (*-tish'an*), *n.* [*Fr. statisticien*.] One versed in the science of statistics.

Stat'istics, *n. sing.* [*Fr. la statistique*; *It. statistica*,

from *Lat. status*, a condition, from *sto*, to stand.] A collection of facts, arranged, tabulated, and classified, respecting the state of society or condition of the people in a nation or country—the health, longevity, domestic economy, arts, resources, political strength, &c.; also, the science which treats of such subjects.

Statistology, *n.* [*Eng. statistics*, and *Gr. logos*, treatise.] A discourse or treatise upon statistics.

Statius, PUBLIUS PAPINIUS, (*stai'shi-us*), a Roman poet, was born at Naples, A. D. 61. His principal productions are two epic poems,—the *Thebais*, in twelve books, and the *Achilleis*, in two books, which he left unfinished,—and the *Salvæ*, occasional poems on various subjects, and the most pleasing of his works. D. 96.

Stat'ive, *a.* [*Lat. stativus*.] Belonging to a fixed camp or military station.

Statoc'raey, *n.* [*Eng. state*, and *Gr. kratain*, to govern.] A government conducted by political power only, in distinction from a government ruled or largely controlled by ecclesiastical power.

Statuary, *n.* [*Fr. statuaire*, from *Lat. statuarius* — *statuo*; root *sto*, to stand.] (*Fine Arts*.) The art of carving images, or making statues or images, as representatives of real persons or things; — a branch of sculpture. — Statues taken collectively. — One who professes or practises the art of carving images or making statues.

Statue, (*stai'tyu*), *n.* [*Fr.*; *Lat. statua*, from *statuo*, to set, place.] A work of plastic art, executed in marble, bronze, clay, or other suitable material, and representing a living being; an image. — An equestrian statue is one which represents the figure on horseback.

— *v. a.* (*imp.* and *pp.* STATUED,) (*stai'tyud*.) To form a statue of; to place, as a statue.

Statuesque, (*-esh'*), *a.* Partaking of, or expressing, the characteristics of a statue; as, a *statuesque* pose.

Statnette, *n.* [*Fr.*] A statue formed on a small scale.

Stature, (*stai'tyur*), *n.* [*Fr.*; *Lat. statura* — *statuo*, to set, fix, place.] The natural height of the human figure; as, a man of tall *stature*.

Stat'ured, *a.* Arrived at full stature. (*R.*)

Stat'us, *n.* [*Lat.*] State; degree; rank; condition.

Stat'us quo, **Stat'u quo**, *n.* [*Lat.*] (*Pol.*) A treaty between two or more belligerents, which leaves each party in possession of the territories, fortresses, &c., which it occupied before hostilities broke out; or, *in statu quo ante bellum*, i. e., in the same state as before the war.

Stat'utable, *a.* [*From statute*.] Made or introduced by statute; proceeding from legislative enactment; as, a *statutable* offence, a *statutable* remedy. — Made or being in conformity to statute; as, a *statutable* measure.

Stat'utably, *adv.* In a manner conformable to statute.

Statute, (*stai'tyut*), *n.* [*Fr. statut*; *Lat. statutum*, from *statuo*.] A fixed or established law, decree, or edict; a positive law or enactment; an act of the legislative body of a state commanding or prohibiting something; also, a special act of the supreme power, of a private nature, or intended to operate only on an individual or a company. — The act of a corporate body, or of its founder, designed as a permanent rule or law; as, the *statutes* of a university.

— *pl.* The whole municipal law of a particular state or country, from whatever source originating.

Statute fair, in some parts of England, a kind of fair held for the hiring of domestic and farm servants, &c. — *Statute labor*, a definite amount of labor required for the public service in making roads, streets, bridges, and other improvements in certain British colonies. (*Sinmonds*). — *Statute of limitations*. (*Law*.) A statute indicating a certain time, after which rights or claims cannot be enforced by legal action.

Stat'ute-book, *n.* A record or digest of laws or legislative enactments.

Stat'utory, *a.* Enacted by statute; resting on a legislative statute for its legitimacy or authority; as, a *statutory* provision.

Stanch, *a.* An orthography of STANCH (*q. v.*), in frequent use.

Stann'ton, in Illinois, a post-village and township of Macoupin co., 26 m. N.E. of Alton.

Stanton, in Ohio, a post-village of Fayette co., 42 m. S.W. of Columbus. — A township of Miami co.

Stamton, in Virginia, a river which rises in Montgomery co., and unites with the Dan to form the Roanoke river at Clarksville, after an E.S.E. course of 200 m. — A city, cap. of Augusta co., 120 m. N.W. of Richmond. It was incorporated in 1749, and is the site of the Western State Lunatic Asylum, and the Deaf and Dumb and Blind Asylum. *Pop.* (1897) 7,460.

Stau'rolite, *n.* [*Gr. stauros*, a cross, and *lithos*, a stone.] (*Min.*) The mineral called *Cross-stone*. It is a silicate of alumina, with about one-third of the alumina replaced by peroxide of iron, and forms small rhombic prisms, often intersecting and crossing each other at right angles. *S.* generally occurs imbedded in mica-slate, talc-slate, and clay-slate; sometimes in gneiss.

Stau'rotide, *n.* [*Gr. stauros*.] (*Min.*) The prismatic garnet, or *Grenatite*. It occurs in imbedded crystals in primary rocks, and is distinguished from garnet by its crystalline form and infusibility.

Stau'rotypous, *a.* [*From Gr. stauros*, a cross, and *typos*, type.] (*Min.*) Having its spots in the form of a cross.

Stavanger, (*sta-rang'ger*), an old seaport-town of Norway, 85 m. from Christiansand; *pop.* 9,616.

Stave, *n.* [*From staff*; *Fr. douve*.] A thin, narrow piece of timber, of which casks are made.

— (*Mus.*) [*Icel. stef*, a strophe.] A staff or metrical portion; a part of a psalm appointed to be sung in churches.

— *v. a.* (*imp.* and *pp.* STAVED, or STOVE.) To thrust through

with a staff; to break a hole in; to burst; as, to *stave* a cask. — To push, as with a staff; — before *off*; as, "The condition of a servant *staves* him *off* to a distance." (South.) — To delay forcibly; to drive away; as, to *stave off* an unpleasant task. — To suffer to be lost, as by the breaking of a cask. — To give solidity to by compressing with a pointed or edged tool.

Staves-acre. (*stāvz-ā'kr.*) *n.* [From Gr. *staphis*, a dried grape, and *agrios*, wild.] (Bot.) See RANUNCULACEÆ.

Staves'-wood. *n.* (Bot.) Same as QUASSIA, *q. v.*

Stav'ropol. a town of European Russia, cap. of a govt. of same name, on the chief highway from Europe to Caucasus, 200 m. S.E. of Rostov; *pop.* 19,427.

Staw, v. n. To be fixed, set, or stayed; — (an English provincialism.)

Stay, v. n. (*imp.* and *pp.* STAYED, or STAYED.) [O. Fr. *estayer*, to stay.] To remain; to continue in a place; to abide for any indefinite time; to stop; to stand still; as, he *stays* with his friends. — To continue in a state. — To wait; to attend; to forbear to act; as, I cannot *stay* longer than a few minutes. — To dwell; to tarry. — To rely; to rest; to confide; to trust; — frequently before *on* or *upon*; as, "They . . . *stay* themselves *upon* God." Isa. xlviii. 2.

(Naut.) To tack; to be in stays.

— *v. a.* To cause to stand or cease from motion; to stop; to hold; as, to *stay* the outbreak of one's temper. — To delay; to obstruct; to hinder or hold from proceeding; to keep from departure; as, business *staid* him a month in New York. (R.) — To prop; to support; to hold up; to stop from motion or falling; as, to *stay* a vine. — To sustain with strength; to support or keep from sinking; to appease in part; as, he *staid* his stomach with a sandwich.

(Naut.) To tack about, as a ship.

— *n.* Abode for a time indefinite; sojourn; continuance in a place; as, what *stay* do you make in Philadelphia? — Stop; stand; obstruction; hinderance from progression or motion; as, matters appear to be at a *stay*. — One who, or that which, serves as a prop, support, or bulwark; as, integrity is man's main *stay*.

— *pl.* A bodice, corset, or sort of stiffened vest worn by females to support the body or keep it firm.

(Naut.) A set of strong ropes leading forward and downward from a ship's masts to prevent the spar from falling aft; they take the name of the mast they help to support; as, the fore-*stay*, main-topmast *stay*, &c. See BACKSTAYS.

Outside stays, in locomotive engines, sling-stays binding the boiler and frame together. — *Inside boiler stays*, in locomotive engines, rods of iron binding together the flat ends of the boilers. Without these stays, they could not resist the pressure of the steam against so large a surface. — *Inside frame stays*, strong stays placed below the boiler, firmly fixed at one end to the fire-box, and at the other end to the smoke-box; they support the inside bearings of the driving axle and other parts of the machinery.

In stays, or *hove in stays*. (Naut.) To be in the act of tacking, as a ship. — *To miss stays*, said of a ship that fails in attempting to tack. — *Triatic stay*, a stay secured at the ends to the heads of the fore and main masts with thimbles spliced to its light to hook stay-tackles to.

Stay-bolt, n. (Mach.) A rod or stay connecting opposite plates, so as to hinder them from being bulged out.

Stay-busk, n. See BUSK.

Stay'er, n. One who, or that which, stays, props, upholds, supports, or restrains.

Stay-lace, n. A lace used for fastening women's stays or corsets.

Stay-maker, n. One who makes stays, corsets, &c., for women's wear.

Stay-sail, (stā'sl.) n. (Naut.) Any sail extended on a stay.

Stay-tackle, (stā-tāk'l.) n. (Naut.) A large tackle attached to the triatic stay by means of a pendant, and used to hoist heavy bodies, as boats, butts of water, and other objects.

Stay-wedges, (-wēj'-) n. pl. (Mach.) In locomotive engines, wedges fitted to the inside bearings of the driving axles, to keep them in their proper position in the stays.

Stead, (stēd,) n. [A. S. *stede*, *styd*; Du. *stede*; Icel. *stadr*.] Place or room which another had, or might have; — noting substitution, replacing, or filling the place of another; as, another man was appointed in his *stead*.

To stand in stead, to be of great use, avail, or advantage; as, this thing will *stand in stead* of a better.

Steadfast, (stēd'-) a. [A. S. *stēdfast*.] Fast fixed; firmly placed or established; as, "this *steadfast* globe of earth." (Spenser.) — Constant; firm; resolute; immutable; steady; not fickle or wavering; as, a *steadfast* friend.

Steadfastly, adv. Firmly; with constancy or steadiness of mind.

Steadfastness, n. State or quality of being steadfast; firmness of standing; fixedness in place; stability or steadiness of mind or purpose; fixedness in principle; constancy; irresolution; immutability; unchangeableness.

Steadily, (stēd'-) adv. In a steady manner; with firmness of standing or position; without tottering, shaking, or leaning; without wavering, inconstancy, or irregularity; without deviating.

Steadiness, (stēd'-) n. [A. S. *stedignys*.] State or quality of being steady; firmness of standing or position; a state of being not tottering or easily moved or shaken; firmness of mind or purpose; consistent uniform conduct; constancy; resolution.

Steading, (stēd'-) n. Same as FARMSTEAD or HOME-STEAD, *q. v.*

Steady, (stēd'y,) a. (*comp.* STEADIER; *superl.* STEADIEST.) [O. Ger. *stātig*, stable.] Firm in standing or position; fixed; stable; not tottering or shaking; as, a *steady* table. — Constant in mind, purpose, or pursuit; not fickle, changeable, or wavering; not easily moved or induced to alter a purpose or intention; constant in direction or progress; as, he is a good, *steady* conservative in politics. — Uniform; regular; not fluctuating or deviating; as, a *steady* breeze of wind.

— *v. a.* (*imp.* and *pp.* STEADIED,) (*stēd'ed.*) To make steady; to hold or keep from shaking, reeling, or falling; to support; to render or keep firm.

— *v. n.* To move steadily; to be firm; to maintain an equilibrium, or an upright position; as, he *steadies* himself with difficulty.

Steady-rest, n. (Mach.) Same as BACK-REST, *q. v.*

Steady Run, in Iowa, a village and township of Keokuk county, 45 miles south south-west of Iowa City.

Steak, (stāk,) n. [A. S. *stycce*.] A piece, slice, or collop of flesh, broiled, or cut for broiling; as, a beef-*steak*, ramp-*steak*, tenderloin *steak*, &c.

Steal, (stēl,) v. a. (*imp.* STOLE; *pp.* STOLEN.) [A. S. *stelan*; Ger. *stehlen*.] To take and carry away feloniously, as the personal property of another; to pilfer; to purloin; as, to *steal* money from the person. — To withdraw or convey without notice, or surreptitiously; as, he *steals* away without speaking. — To gain or win by address or adroitness, or by gradual and imperceptible means; as, to *steal* a woman's affections. — To try to pass privily or secretly; to accomplish in a stealthy or unnoticed manner; as, to *steal* a kiss.

To steal a march, to gain an advantage in a covert or unobserved manner; to march in a stealthy way; as, to *steal a march* over one's creditors.

— *v. n.* To withdraw or pass silently or privily; to slip in, along, or away, unperceived; to abscond; as, she *stole* away with her lover. — To take feloniously; to practise theft; as, to be guilty of *stealing*.

— *n.* A stole or handle.

Steal'er, n. A thief; a purloiner; a pilferer.

Stealing, n. Act of taking the goods of another feloniously and surreptitiously; theft. — (*pl.*) Stolen goods.

Stealth, (stēlth,) n. Clandestine practice; secret act; means unperceived employed to gain an object; way or manner not noticed or observed; as, to do good by *stealth*.

Stealthily, adv. By stealth; in an underhand or clandestine manner.

Stealthiness, n. Same as STEALTH, *q. v.*

Stealthy, a. (*comp.* STEALTHIER; *superl.* STEALTHIEST.) Accomplished in a clandestine or surreptitious manner; done or performed by stealth; secret; private; underhand; sly; as, he gave her hand a *stealthy* squeeze.

Steam, (stēm,) n. [A. S. *stem*; Du. *stoom*.] The vapor given off by water when its temperature is raised to such a degree as to cause it to pass into a state of ebullition. The mechanical properties of *S.* are similar to those of gases in general. In its natural state it is transparent and colorless; its visibility in air is caused by its partial condensation. In the case of *S.*, the most important mechanical property to be considered is the elastic pressure. When confined in a close vessel, a gas or vapor will press upon the interior surface of the vessel with a power arising from the elasticity of the fluid. This pressure is uniformly distributed over every part of the inner surface of the vessel in which the fluid is contained. All the mechanical force of *S.* arises from this property. The following general laws affect the formation of *S.*: — First, the temperature of the boiling-point of a liquid is the same at all times under the same pressure, and in a vessel of the same substance. Second, the temperature of the liquid remains constant during ebullition, provided the pressure remains the same; and if a greater quantity of heat be applied to the vessel containing the liquid at one time than another, the only result will be that a larger quantity of *S.* will be given off; the temperature of the liquid will not be increased. Third, the volume of the *S.* will be much greater than that of the liquid which supplies it, and the volume of the vapor of water will be about 1,700 times greater than that of the water itself. Water evaporates at all temperatures; but the law with respect to ebullition was ascertained by Dalton. It lays down that "the elastic force of the vapor given out during the process is equal to the external pressure." This allows us to calculate the elastic force of the *S.* from the temperature at which ebullition takes place, from tables showing the elastic force of *S.* at different temperatures. The boiling-point of a liquid is not affected by substances held in suspension; but when substances are held in solution, they produce very decided effects. Salts dissolved in water retard its ebullition. The boiling-point of water is 212°; while that of sea-water, containing 1.33 of its own weight of chloride of sodium, boils at 213.2° in the open air. After the production of *S.*, it acts according to fixed laws. First, under ordinary atmospheric pressure, a cubic inch of water is converted into a cubic foot of *S.* Second, under the same pressure, a cubic inch of water, evaporated, gives a mechanical force equal to that which would raise a ton weight to the height of one foot. The following facts have also been ascertained within very small limits of error: Under the pressure of 35 lbs. on the square inch, and at the temperature of 261°, *S.* exerts a force equal to a ton weight raised one foot; under the pressure of 15 lbs., and at 213°, it is 2,086 lbs., or nearly 7 per cent. less; and under 70 lbs., at 306°, it is 2,382 lbs., or nearly

6½ per cent. more than a ton raised a foot. The relations between the elasticity, temperature, and density of *S.* have long been important subjects of philosophical research.

— Visible vapor; the mist formed by condensed vapor; — popularly so called. — Any exhalation; as, the *steam* of a savory dinner. — *High steam*, or *high-pressure steam*, steam at a temperature considerably above the boiling-point. — *Low steam*, or *low-pressure steam*, steam at the boiling-point. — *Saturated steam*, or *wet steam*, steam holding water in a state of suspension mechanically. — *Dry steam*, steam so condensed that it holds little water in suspension.

Steam, v. n. To rise or pass off in vapor by means of heat; to tume. — To rise in steam-like vapor or exhalations; as, smoke *steamed* from every fissure of the crater. — To pass, move, or travel, by means of steam; as, the squadron *steamed* out of port on a cruise. — To evaporate; to exhale. — To expose to steam; to apply steam to, for softening, dressing, or preparing; as, to *steam* potatoes.

Steam'-boat, Steam'er, Steam'-ship, Steam-vessel, n. (Naut.) A ship or vessel propelled through the water by steam.

Steam'-boiler, n. See BOILER.

Steam'-car, n. A car drawn or propelled by steam-power.

Steam-carriage, n. A carriage propelled by steam, intended to be run on common roads at a considerable rate of speed. The only species of steam vehicle now used on common roads is a kind of steam wagon called a TRACTION-ENGINE, *q. v.*

Steam'-casing, n. A space or compartment filled with steam, surrounding any pipe, vessel, &c., to prevent the loss of heat by radiation.

Steam'-chamber, Steam'-room, n. (Mach.) The space in a boiler appropriated to the storage of the steam, and which includes the whole contents of the boiler except that occupied by the water and flues.

Steam'-chest, VALVE'-CHEST, VALVE'-BOX, n. (Mach.) In locomotive engines, a box attached to the cylinders, into which the steam is admitted by the regulator; the slide-valve works in this box over the steam-ports, which open into it from the cylinder.

Steam'-chest cocks, n. pl. In locomotive engines, oil-cups placed conveniently for lubricating the faces of the steam-ports and slide-valve.

Steam'-chimney, n. In the U. States, an annular chamber around the chimney of a boiler-furnace, for drying steam.

Steam'-coal, n. (Min.) A variety of coal, intermediate between bituminous and anthracite, burning with a good flame, and lasting for a long time without being consumed.

Steam'-colors, n. pl. (Calico-printing.) Colors in which the chemical reaction fixing the coloring matter to the fibre is produced by steam.

Steam'-crane, n. A crane worked by a steam-engine attached, and used in the lifting or removal of heavy weights.

Steam'-cylinder, (-sil'-) n. In steam-engines, the cylinder which contains the piston.

Steam'-dome, n. A chamber upon the top of a steam-boiler, from which steam passes to the engine.

Steam'-dredger, (-drēj'r,) n. A dredging-machine worked by steam-power.

Steam'-engine, n. A machine in which the elastic force of aqueous vapor, or steam, is used as motive force. In the ordinary engines the alternate expansion and condensation of steam imparts to a piston an alternating rectilinear motion, which is changed into a circular motion by means of various mechanical arrangements. *S.-E.* vary in their size, in their proportions, and in their form, as well as in the mechanical details by which the power of steam is adapted to their action. The fact that the application of heat would generate steam from water, and that the steam so generated would issue with much force from a small aperture in the vessel employed to generate it, must have been known at a very early period. The *volipile* of Hero of Alexandria was a small machine in which a motion of continued rotation was given to an axis by the reaction of steam issuing from lateral orifices in arms placed at right angles to the revolving axis. The date of this machine is about 100 B. C. Some other similar mechanisms were well known among the Egyptians, Greeks, and Romans. The idea of employing the impulsive force of *aeolipile* seems to have been the only one which had been formed for using steam as a source of motion before the time of Solomon de Caus, a French engineer, who, in 1615, published, in his *Raisons des Forces Mouvantes*, the statement that by fire water is dissolved into an air with such violence as to burst a closed copper ball containing a small quantity of it, and highly heated; and he described the propelling of a jet of water, by pressure on its surface in the vessel, of steam generated from it. The Marquis of Worcester, in a work published in 1663, entitled *A Century of the Names and Scantlings of Inventions*, describes a method of employing the pressure of steam for raising water to great heights. Towards the close of the 17th century, Papin, a French engineer, who was professor of mathematics at Marburg, began to observe the properties of steam, and conceived the idea of obtaining a moving power by introducing a piston into a cylinder, and producing a vacuum under it by the gradual condensation of steam by cold. But if Papin was the true inventor of the *S.-E.*, Thomas Savery, an Englishman, has the credit of having made the first actual working *S.-E.* of which we have any account. According to the patent granted to him in 1698, his machines were only *pumps* for raising water, and were employed for a long period in England. Passing over a number of the earlier *S.-E.*, which are unimpor-

tant, we come to that of Newcomen, a smith of Dartmouth, England, who, in conjunction with Cawley, a plumber in the same place, obtained a patent for a *S.-E.* in 1705. The novelty of this construction consisted entirely in condensing the steam below an air-tight piston, in a cylindrical vessel having an open top; and the idea was probably taken from the idea of Papin, for it appears that Newcomen was in correspondence with Dr. Hooke on the subject, to whom the speculations of Papin were well known, but the mode of effecting the condensation was entirely different from Papin's. It consisted in admitting steam below a piston, and at first the steam was condensed by applying cold water to the outside of the cylinder; but it was soon found that injection of cold water by a jet into the interior was a much more effective method, and is said to have been discovered by accident. This engine was called the *atmospheric engine*, and was improved by Beighton, Smeaton, and other engineers, previous to Watt's time. It was in general use during the last century, but only for pumping water. James Watt was a mathematical instrument-maker in Glasgow, and in 1763 it chanced that the lecturer upon natural philosophy at the university intrusted to him, for repairs, the model of an atmospheric engine. In making experiments with this model, Watt was struck with the fact that the quantity of steam it consumed for each stroke of the piston was many times more than the contents of the cylinder. This led him to further observations, by which he soon arrived at some of the most important phenomena connected with the evaporation of water. Full of astonishment at his own researches, he repaired to Dr. Black, then professor of natural philosophy in the university, and communicated his discoveries to him. From this meeting dated Watt's improvements of the *S.-E.* The first and most important of these consisted in effecting the condensation in a separate vessel communicating with the cylinder, and called the *condenser*. This vessel being filled with steam from the boiler at the same time with the cylinder, the jet of cold water, admitted into the former only, effected the condensation of the whole volume of steam, both of that in the cylinder as well as of that in the condenser, in conformity with the principles in physics that an action originated in any part of a homogeneous fluid is almost instantaneously communicated throughout its mass. Watt also placed his condenser in a cistern, in order to further still more this separate condensation. The temperature of this cistern was kept constant by a fresh supply of cold water; for otherwise, the heat given out by the condensing steam would, by heating the vessel and the water surrounding it, have retarded the rapid condensation necessary for the effective work of the engine. The second of Watt's improvements in the atmospheric engine consisted in closing the cylinder at the top, the piston-rod being made to pass through a cylindrical neck in the top, called a *stuffing-box*, from the passage being rendered steam-tight by a stuffing of tow saturated in grease, by the lubrication of which the additional friction was lessened. This alteration had for its object the admission of the elastic force of steam, in order to impel the piston downwards, instead of the simple pressure of the atmosphere. To effect this, steam was admitted from the boiler above the piston at the same moment that the condensation took place in the condenser. For this purpose the steam passage was made double, so that the communication with the condenser could be cut off when that with the cylinder was opened, alternately. As in the atmospheric engine, when the piston had descended to the bottom of the cylinder, the counterpoise raised it again; but to permit this motion, it was necessary to remove the steam which was above the piston; and this was effected by causing it to pass under the piston and into the condenser by a passage opened at the exact time for this purpose. Such constitutes the principal features of Watt's *single-acting S.-E.* Not long afterwards, the counterpoise at the end of the pump-rod was done away with, an arrangement which had added much to the unproductive work of the engine, since this weight had to be raised in addition to that of the water. The stroke of the piston upwards was now produced by admitting the steam underneath to act by its elasticity, and the engine became *double-acting*. This principle it has ever since maintained, although in detail it has been considerably improved by other engineers. Watt's changes and improvements created the necessity for two pumps, and sometimes three, which are worked by rods attached to the beam. The hot-water or air-pump is intended to remove the air, condensed water, and steam from the condenser, which would otherwise accumulate and stop the action of the engine. The second is a force-pump, used to force back to the boiler the water drawn from the condenser by the first pump. The third is the cold-water pump. By a patent taken out in 1782, Watt included many contrivances, and in the next year, for a smoke-condensing furnace, the governor, steam-gauge, condenser-gauge, and indicator. Cartwright was the next engineer who proposed an important modification of the *S.-E.* His proposal was to condense the steam by means of cold water applied to the external surface of the condenser. His condenser consisted of two cylinders, one inclosed in the other, the cold water flowing through the inner and enveloping the outer. The valves to change the steam were placed in the piston, so that the condenser was always open. Although this engine was ingenious, it did not come into use. We are, however, indebted to Cartwright for the metallic piston used in his engine; it may fairly take its place as one of the greatest improvements in the *S.-E.* One of the next important advances was the four-way cock, originally invented by Leupold, a German, and afterwards improved by Bramah and others; it was intro-

duced as a substitute for the valves, the cock always turning in one direction. As early as 1720, Leupold had also proposed a high-pressure engine, and Watt had afterwards projected a similar machine, but the first complete and practically working non-condensing or high-pressure engine was constructed in 1785 or 1787, by Oliver Evans, of Philadelphia, who thus paved the way, by economy of space and comparative simplicity of the mechanism required, for the locomotive-engine, and the adaptation of steam to the purposes of land-carriages. Since that time, a numberless quantity of inventions, of which it would be impossible to give here even the mere enumeration, have been introduced, intended to improve the form, the working, or the economy, of the *S.-E.*, or to adapt it to specific purposes.

Every *S.-E.* consists essentially of two distinct parts: the apparatus in which the vapor is produced, or the boiler, and the engine proper. Boiler will be found described at that word. Its office is to make the steam that drives the engine, and the engine and boiler may be made in one machine, as is the case with many small sizes, or as separate mechanisms, connected by a steam-pipe, which is the more usual plan. The principal parts of a *S.-E.* are the cylinder, piston, steam-chest, valves, crank, connecting-rod, fly-wheel, and governor. The cylinder and steam-chest are commonly enclosed together, and contain the piston and valves, which combination includes the essential working parts, necessary to a correct understanding of its operation, and is made the subject of illustration (Fig. 2424). Steam is admitted from the boiler into the steam-chest (*S.-C.*), being free to flow into the open space in the valve (*V.*). This is a slide-valve, and has a short motion to the right and left, as determined by the stroke of the valve-stem (*V.-S.*). In the position shown in the illustration the valve is closed, and no steam can flow into the steam-ports (*S.*). It will be seen, however, that when the valve is drawn slightly to the left, or front end of the steam-chest, the steam has access to the port on that

of a vacuum is not done in the steam cylinder itself, but in a nearby vessel, called the *condenser*, which is more easily subjected to cooling water, and from which the hot water of the condensed steam, at a temperature of perhaps over 200, may be conducted back and fed into the boiler to be reheated, thus effecting a still further saving, as but a slight increase of temperature is required to reconvert it into steam. There are two common types of condensers: the jet condenser, in which the exhaust steam is met by a jet of cold water, coming in with atmospheric pressure; and the surface condenser, in which the steam comes in contact with the surfaces of a set of brass tubes containing cold water, and is condensed into water. The surface condenser is preferred in marine engines, because it allows the condensed steam to pass back to the boilers uncontaminated by mixture with any other water, and once the boiler-water is purified it may be used over and over again without danger of incrusting the boilers. With this form of condenser it is also possible to use sea-water or any waste water in the condensers, the only requirement being that it shall be cool.

After condensation, there is yet another loss in the *S.-E.*, in that the steam condensed has further expansive power, which should not be discarded. If steam be admitted to a cylinder at 100 pounds effective pressure, and allowed to drive the piston its full stroke before its admission is cut off by the valve, the cylinder will contain steam of 100 pounds pressure at the instant of condensing. But suppose that the valve in the steam-chest cuts off the admission of the steam when the piston has made half its stroke; then the pressure is, theoretically speaking, for the first half of the stroke 100 pounds, and at the end of the full stroke, being expanded one-half, 50 pounds. At three-quarter stroke it is 75 pounds, or the mean pressure for the whole stroke is $87\frac{1}{2}$ pounds, and the amount of steam used but half what it was when 100 pounds of pressure was obtained—a theoretical gain of 75 per cent. In actual operation the result obtained

Fig. 2424.—MODERN HIGH-SPEED SINGLE-VALVE ENGINE.

side, and may flow down into the end of the cylinder, and exert its pressure against the front end of the piston; and when the valve is drawn to the right the admission of the steam in front is cut off, and it is allowed to flow into the back port, and against the back end of the piston, driving it the other way, so that a uniform reciprocating motion of the piston is caused, which is conveyed by the piston-rod to a connecting-rod, and thence to the crank, turning a shaft and fly-wheel. Since the consumption of a given quantity of steam means the burning of a certain amount of fuel, it becomes essential that the *S.-E.* should be constructed so as to be as economical as possible of steam. As outlined above, without other mechanism, a *S.-E.* would be extremely wasteful, as it would use all the steam the cylinder would hold at every stroke, and in releasing it lose all the heat and expansive power that it still possessed. It is in the mechanism for retaining these that modern steam-engines are superior to the early types. The first material saving to be obtained is securable by condensing the steam at every stroke. If the steam be used at a pressure of 100 pounds, and the atmospheric pressure be reckoned at 15 pounds, then the effective pressure on the piston will be 85 pounds. If a vacuum were instantaneously produced on one side of the cylinder just as the pressure of steam is admitted at the other side, the whole pressure of 100 pounds would be available. Steam condenses the instant its temperature is brought below 212° , normal pressure, and in returning to water loses volume to such an enormous extent that an approximate vacuum is created, so the pressure in the condensed chamber may be reduced to 3 pounds or less, with the result that an effective pressure of 97 pounds of steam may be obtained from 100 by condensing. The injecting of cold water into a steam space or the bringing of the steam into contact with cold surfaces suffices to condense it almost instantly, and thus a material saving is effected.

The condensation of the steam to secure the benefit

is considerably less, as the steam is constantly cooling, and the operation of the valves is not absolutely perfect, so that the effective pressure of steam which leaves the boiler at 100 pounds is not more than 75 in good engines. But the more perfect and scientific the construction, the better the results obtained. Calculating theoretically, it would be best to cut off the stroke at one-quarter or one-eighth, as still further expansion is thus obtained. In practice, however, cut-off at about half stroke secures the best results. A still further gain is to be had by taking the steam when half expanded and, instead of condensing it, carrying it to another cylinder for further expansion. To obtain the best results from this system of double expansion, it is best to secure a high initial pressure of steam, and boiler pressures of 200 pounds are becoming common, while 300 and 400 pounds are talked of, and would be used, but for difficulties in construction and lubrication at such high pressures. If an initial pressure of 200 pounds is used, and the steam cut off at one-half, a pressure of about 90 pounds can be obtained for admission to another cylinder, and after this second cylinder has used the steam at a similar cut-off, about 40 pounds pressure is available for a third cylinder, and about 15 pounds for a fourth, and about 5 pounds for a fifth cylinder, in which there may be a further gain of about 12 pounds by condensing the steam and securing the benefit of most of the atmospheric pressure. When the steam is used in two cylinders in this way, the engine is called *compound*; if three, the system is called *triple expansion*, or three-stage expansion, and so with four and five cylinders, *quintuple expansion* being the highest that has been tried, and this with dubious results, most engineers at the present stage of boiler pressures favoring triple expansion for large engines, as on ocean steamers, and double expansion for locomotives and large stationary engines. For a description of the arrangement of compound cylinders, see LOCOMOTIVE; of the triple-expansion system, see MARINE ENGINE.

The variable cut-off of steam according to the demand upon the engine for power is another form of economy extensively practiced. If a stationary engine in a factory be arranged to run so as to give the shafting a speed of 150 revolutions a minute, and if the machines make a demand on the engine of sometimes 100 horse-power, and sometimes only 25 horse-power, the changes being sudden, as from the starting or stopping of several large machines at the same instant, some means must be provided for maintaining an even speed in the engine, and a saving of the steam when there is a call for only a fraction of the rated amount of power. The automatic cut-off is well exemplified in the Corliss engine, which employs a wrist-plate, or oscillating disk, having attached to it four rods, each connected with a valve, two inlet-valves and two exhaust-valves. The wrist-plate is oscillated by eccentrics on the main shaft, in such manner that a very slight increase of speed, as from a lighter load of work, causes the inlet-valves to cut off the steam sooner, thus keeping down the speed and saving the steam. When a greater load is applied to the shafting and tends to slow down the engine, the wrist-pin is oscillated so as to allow the valves to remain open longer, introducing more steam, and giving an increase of power. For the further regulation of the speed of an engine, and the prevention of racing, or extreme speed when the demand for power is withdrawn, the fly-wheel is partially useful, and the governor still more so. (See GOVERNOR, where the common form of ball-governor is illustrated.) Another form of governor is shown here in the illustration of the modern high-speed single-valve engine. It is contained in the fly-wheel, and the weights are normally held near the center, under the control of springs and a suction mechanism called a dash-pot. The fly-wheel is essential to most forms of S.E., and sometimes it is found convenient to use two fly-wheels, as in the illustration, to secure better balance. As soon as an engine acquires speed the fly-wheel stores up a certain amount of the energy developed, and should there be a sudden demand for more power this energy is drawn upon under the law of inertia. The heavier the fly-wheel the greater its inertia, and the more energy will it be able to give forth in emergency. It is also useful in overcoming the dead center, or point in the crank-movement where

PRINCIPAL WORKING PARTS OF A STEAM-ENGINE.

A, cap of steam-chest; S-C, steam-chest; V, valve; V-S, valve-stem; S, steam-ports; P, piston; P-R, piston-rod; F, front head; B, back head; G, cylinder-gland; G-R, gland-ring; L, lagging; C, casing.

the piston, connecting-rod, and crank are all in a direct line, and a thrust on the piston has no tendency at all to start the engine.

The horse-power of an engine is calculated from measurements of the area of the cylinder. The standard horse-power is 33,000 foot-pounds moved in one minute, which for convenient figuring under the metric system is reduced to 32,549 foot-pounds. Then if P equals the pressure on the piston-head, per square inch of area, and if A equals the area of the piston, and S equals the stroke or distance travelled by the piston, and N equals the number of strokes per minute, it follows that $P \times A$ equals the number of pounds, and that $P \times A \times S$ equals the number of foot-pounds developed at each cylinder-stroke, and that $P \times A \times S \times N$ equals the foot-pounds per minute, and that the horse-power of the engine is $P \times A \times S \times N$, divided by 33,000. Figured in this way the horse-power is called nominal, for it is apparent that it would be the same for an engine well designed as for one poorly designed, or having leaks in the steam-chambers, or suffering from a lack of lubrication, &c. The real measure of efficiency in an engine is judged by the indicated horse-power, which is commonly abbreviated to i. h. p. This is obtained from a recording device called an indicator, mounted on the engine, and making a diagram on a smoked paper of the mean pressure per square inch actually existing. The proper figure being taken from this diagram, and used in the calculation as the quantity expressed by P, a correct figure is obtained of the actual horse-power of the engine.

Steam-engines having the piston-rod and connecting-rod directly attached are called *direct-acting*; when having a walking-beam mounted on a post, so that one end is connected to the piston-rod and the other to the crank, the name *beam engine* is applied. The *Cornish engine*, much used at mines, is an illustration of this type, which is also commonly seen on river steamboats,

the walking-beam projecting above the deck-house. Engines are also named from the position of the cylinder, as *upright*, *horizontal*, and *inclined*. The latest types of marine engines are upright, while the most common forms of stationary engine are horizontal. Where two cylinders are used side by side, the name *twin-compound* is commonly applied; or if one cylinder is above the other, *steep engine*; or if one is horizontally in front of the other, *tandem compound*. *Rotary engines* have a cylinder in which the piston turns around instead of reciprocating, being constructed like a vane in a cylinder. The arrangement is very simple, but does not afford opportunity to use the steam expansively, hence is little used. The *oscillating engine* is one having no connecting-rod, so that the piston-rod is made fast to the crank. As a result the cylinder must be mounted on trunnions and allowed to oscillate to accommodate itself to the changing positions of the piston-rod. In the *trunk engine* the piston-rod is dispensed with and one end of the cylinder is left open, so that the connecting-rod can be directly attached to the piston. Only one stroke of the piston is effective in such an engine, the return being lost motion. The *binary engine* is one in which the exhaust from one cylinder is used to volatilize a fluid, which latter is thus made to exert pressure by its expansion in another cylinder. When the stroke of an engine is made of the same length as its piston-diameter it is called a *square engine*. Engines which condense the steam, so that atmospheric pressure gives the return stroke, are styled *atmospheric engines*; when the steam acts on both sides of the piston they are *double-acting*; if a quadrant-shaped chamber is used instead of a cylinder, to contain a vibrating piston, it is a *quadrant engine*; if the boiler and engine are built as one machine, it is *self-contained*; if two engines are coupled together to work as one, it is a *twin engine*; if the steam is cut off before the end of the stroke it is an *expansion engine*; and if the cylinder is overhung and the bed-plate out of line it is a *Tungay engine*.

Steam'er, *n.* A vessel or utensil in which articles are subjected to the action of steam, as in washing or cooking.—A fire-engine, the pumps of which are worked by steam-power. See FIRE-ENGINE; STEAM-BOAT.

Steam'-gas, *n.* Superheated steam;—so called from its resemblance to a perfect gas.

Steam'-gauge, (*-gāj*), *n.* (*Mach.*) A contrivance to show the exact amount of pressure of steam; it consists of a siphon-tube with equal legs, half filled with mercury; one end is cemented into a pipe, which enters that part of the boiler which contains the steam; the other end is open to the atmosphere. A stop-cock is usually provided between this gauge and the boiler, so that it may be put in communication with the boiler at pleasure. When the stop-cock is open, the steam acting on the mercury in one leg of the gauge presses it down, and the mercury in the other leg rises. The difference between the two columns is the height of mercury, which corresponds to the excess of the pressure of the steam in the boiler above the pressure of the atmosphere; or, in other words, to the effective pressure on the safety-valve. If half a pound per inch be allowed for the length of this column, the effective pressure of the steam, in pounds per square inch, is obtained.

Steam'-hammer, *n.* (*Mach.*) See HAMMER.

Steam'iness, *n.* Quality or condition of being steamy; vaporousness.

Steam'-jacket, *n.* Same as STEAM-CASING (*q. v.*).

Steam'-jet, *n.* A jet of steam suffered to escape from a pipe, and employed either to accelerate the flow of smoke up a chimney, by being projected upward in the manner in which the waste steam is projected through the blast-pipe into the chimney of a locomotive, or it may be employed to cause a current of air for purposes of ventilation. The arrangement is suitable for ventilating steam-ships, by sucking the vitiated air from the cabins.

Steam'-packet, *n.* A packet or vessel propelled by steam-power, and plying periodically between certain ports.

Steam'-pipe, *n.* Any pipe for conducting steam; specifically, in locomotive engines, one of the pipes which collect and convey the steam to the steam-chest; they commence inside the boiler.

Steam'-plow, *n.* (*Agric.*) A plow worked by steam-power.

Steam'-power, *n.* The motive force of steam practically applied to the accomplishment of results.

Steam'-trap, *n.* A contrivance to permit the passage of water, and prevent the escape of steam.

Steam'-way, *n.* In steam-engines, a passage leading from a port to a cylinder.

Stearate, *n.* (*Chem.*) See STEARIC ACID.

Stear'ic Acid, *n.* [*Gr. stear, fat.*] (*Chem.*) A fatty acid liberated during the saponification of most animal, and many vegetable, fats. (See FATTY ACIDS.) It may be obtained pure by saponifying mutton-suet and decomposing the hot solution of the soap with hydrochloric acid. The oily and fatty acids separated are next submitted to pressure between hot plates, by which means the oleic acid is separated. Recrystallization from alcohol and ether, three or four times, gives the pure acid separated from its congeners. The stearates of the alkalis are soluble in water. Stearate of soda is the basis of ordinary hard soap; stearate of potash, on the contrary, is soft. The other stearates are insoluble. Stearate of lead is one of the constituents of lead or diachylon plaster. S. A. is insoluble in water, but is soluble in ether and alcohol, from which it crystallizes in beautiful colorless transparent rhombic plates. Its solution reddens litmus. Ordinary so-called *stearic*

candles consist of S. A., combined more or less with palmitic acid, according to the raw material used in their manufacture.

Stearin, Stearine, *n.* [*Gr. stear, tallow.*] (*Chem.*) A white crystalline neutral fat, existing in most oils and fats.

Stearns, in Minnesota, a central co., bordering on the Mississippi; area, 1,334 sq. m. It is intersected by Sank river. Surface, undulating; soil, very productive. Cap. St. Cloud. Pop. (1895) 39,925.

Steatite, *n.* [*Fr., from Gr. steatos, tallow.*] (*Min.*) See SOAPSTONE.

Steato'ma, *n.* [*Lat., from Gr. steatos, fat, tallow, suet.*] (*Med.*) A tumor, the contents of which are of the appearance and consistency of hard fat.

Steed, *n.* [*A. S. stele; Swed. stod, a stallion.*] A horse or mare from the stud or stand; a horse of high mettle for state or war;—used chiefly in poetical composition.

Steel, *n.* [*A. S. stýle; Swed. stål; Ger. stahl.*] A compound of iron and carbon, usually including less than three per cent. of carbon, and very much tougher and stronger than pure iron, and malleable at a high temperature. It is the strongest material known, and admits of being alloyed with manganese, nickel, chromium, &c. When the quantity of carbon is small it is known as *soft steel*, and may be more easily worked. *Mild steel* is another term used for steel that is somewhat low in carbon, and *hard steel* for a compound in which the quantity of carbon is high. The hardest steel is required for cutting-tools and parts of machines subjected to great wear. Mild steel is ordinarily used for structural purposes, in tall buildings, bridges, &c. Molded or cast-steel is more brittle and has less strength than rolled steel.

Steel was originally made from wrought-iron, which was itself made from cast-iron by the puddling process. (See IRON.) It is now largely made by the process developed by Sir Henry Bessemer, in which an air-blast is utilized to eliminate the carbon and silicon from the molten pig-iron. He melted the cast-iron in a cupola and ran it off into a vessel having blow-holes in the bottom, through which a heavy blast of air was sent before the molten iron flowed in, and maintained until the carbon and silicon were completely burned out by the great increase of temperature caused in the mass by the presence of the air. Ferromanganese and spiegel-eisen were afterward added to determine the quantity of carbon in the steel. A converter is now used for this process, and an illustration of it appears at iron (*q. v.*). The presence of phosphorus in the iron was a serious difficulty, however, until Sidney Gilchrist-Thomas discovered that by lining the converter with bricks containing lime and magnesia, and throwing in a little lime, the phosphorus was removed. This has become known as the basic Bessemer process. The Siemens-Martin open-hearth method of making steel was introduced about 1860, the Siemens regenerative gas-furnace being used. The three chambers of this are piled with loose fire-brick, and the products of combustion are made to pass through the chambers, first one way and then the other, by means of switching valves. This causes a reheating or regenerating, which results in an economy of fuel, while the pig-iron is decarbonized in the furnace by melting in combination with scrap-iron and ore-iron. What is known as the basic open-hearth process is now widely used, as it permits a most effective control of the product. The processes of making steel castings have been much improved within recent years. Soft steel castings for plate-armor were first made in the United States about 1886. At first they were quite porous, but the use of silicon for solidifying has remedied this difficulty. Silica molding-sand mixed with molasses is commonly used for the purpose.

In a modern steel-making plant, operating the Bessemer process, the pig-iron is first melted in cupolas, receiving blasts of air from mammoth tuyeres, and arranged to deliver to a car or ladle, which delivers the metal to the converter. When the heating has properly eliminated the carbon and silicon, and the molten mass becomes steel, the converter is tipped on its trunnions, and poured into a great ladle, which pours it into molds for ingots. The molds as soon as poured go to heating-pits, or soaking-pits, as they are sometimes termed. These are artificially heated in the first place, and usually retain a high enough temperature to preserve the heat of the ingots sufficiently for their rolling in the blooming-mill, which is the next operation. In the manufacture of armor-plates the ingots are subjected to great hydraulic pressure to assist homogeneity. At the South Bethlehem works, in Pennsylvania, is a press which delivers to the ingots a pressure of 7,000 pounds per square inch. The Harvey process of surface-hardening has been largely used of late years for all armor-plate. See NICKEL STEEL below.

Great progress has been made in studying the micro-structure of steel within a few years. According to Howe, it is found that all carbon steels, when examined by the microscope, show: ferrite (pure iron); cementite, which is iron combined with cement-carbon (carbon), as it appears in unhardened steel, being a carbide; pearlite, a granular or lamellar mixture of ferrite and cementite; and martensite, a constituent retained by sudden cooling, and productive of hardness. This theory associates pearlite with all soft steels and martensite with all hard steels. This investigation renders it easier to calculate the physical constituents and qualities of a steel, of which the percentage of carbon is known.

The steel production of the world, in tons, during 1893, the last complete figures obtainable, was as follows:

United States	6,212,671
Great Britain	3,150,000
Germany and Luxembourg.....	2,825,000
France.....	716,931
Belgium.....	455,550
Austria-Hungary	495,000
Russia.....	574,112
Sweden.....	230,000
Spain.....	65,000
Italy.....	55,000
All other countries.....	275,000

TOTAL, 15,054,264

MANGANESE STEEL.—Manganese is present in all combinations of iron and steel, but often in infinitesimal quantities. If the alloy be increased, some remarkable and useful combinations result. If the quantity of manganese is between $1\frac{1}{4}$ and $3\frac{1}{2}$ per cent., there result decreased strength and ductility; but if $3\frac{1}{2}$ to 5 per cent. are introduced the steel becomes hard and brittle; above $6\frac{1}{2}$ per cent. is noted a return to ductility and toughness; and as it approaches 13 per cent. its magnetism is lost; when used for castings the maximum of strength is found at 14 per cent.; if forged, 13 or 14 per cent. gives the most tenacity and ductility, and 5 per cent. the greatest brittleness. The use of this alloy for castings is found in screw-propellers, car-wheels, stamps and dies, crushing-rolls, &c.

NICKEL STEEL.—Within the past ten years it has come to be generally appreciated by makers of steel that alloying with nickel adds valuable qualities of toughness and elasticity, as well as materially increases the tensile strength of the steel. Various alloys are now being used, containing, as a rule, from 2 to 4 per cent of nickel. In the manufacture of armor-plate the alloy has been specially valued, and the celebrated Harveyized plates are made of nickel steel, exhibiting a resistance 43.8 per cent. superior to the best all-steel non-Harveyized. Large forgings of nickel steel have shown tensile strengths of 95,000 pounds per square inch, with an elastic limit of 60,000 pounds. The alloys used always contain other metals in minute quantities, and a variety of combinations have been tried. These will serve as an illustration: I.—Iron, 93; carbon, 4; nickel, 2; chromium, 1. II.—Iron, 96; nickel, 3.21; carbon, 0.28; silicon, .08; phosphorus, .03; manganese, trace; sulphur, trace.

CHROME STEEL.—The use of chromium as an alloy with steel is confined to application as a third element in some other alloy, being introduced to insure hardness. It is of much value in making projectiles.

—Figuratively, a weapon; particularly, an offensive weapon, as a sword, spear, &c.; as, "Poemen worthy of their steel."—Specifically, an instrument of steel for giving an edge to table-knives.—Anything conveying the idea of extreme hardness, sternness, or rigor.

Steel, v. a. To edge, point, or overlay with steel; as, to steel an axe, sword, or razor.—To harden; to make hard, or extremely hard; to make obdurate or insensible; as, his heart is steel to pity.—To cause to resemble steel in its more characteristic qualities.

Steele, Sir Richard, an English essayist and dramatic author of the last century, b. in Dublin in 1671, and who commenced his literary career in 1702 by writing for the stage, and produced *The Funeral, or Grief à la Mode*, *The Tender Husband*, *The Lying Lover*, and *The Conscious Lovers*, his best work. In 1709 he began the *Tatler*, and four years later assisted with the *Spectator* and *Guardian*, and soon after entered the House of Commons as member for Stockport, but was expelled for writing a satire, supposed to be a breach of privilege. Upon the accession of George I. he was knighted, given several lucrative posts, and returned to Parliament for Boroughbridge. D. 1729.

Steele, in Indiana, a twp. of Daviess co.

Steele, in Minnesota, a S.E. co.; area, 432 sq. m. It is drained by Straight River, a branch of Cannon River. Surface, undulating; soil, excellent. Capital City, Owatonna.

Steel-engraving, n. The art of engraving on steel. See ENGRAVING.

Steel'er, n. (*Ship-building*.) The foremost or aftermost plank in a strake, which is dropped short of the stern or stern-post of a vessel.

Steeliness, n. [From *steely*.] A great degree of hardness or obduracy.

Steels'ville, in Michigan, a village of Ottawa co., 75 m. W.N.W. of Lansing.

Steel-trap, n. A trap for snaring vermin or wild animals, consisting of two serrated iron jaws, which close by the agency of a powerful steel spring, worked by a catch.

Steelville, in Missouri, a post-village, cap. of Crawford co., 90 m. S.W. of St. Louis.

Steelville, in Pennsylvania, a post-village of Chester co., 20 m. S.W. of Westchester.

Steely, a. Made or consisting of steel; as, *steely* particles.—Hence, analogically, hard; firm; resembling the stnbnh quality of steel; as, a *steely* nature.

Steelyard, n. (*Statics*.) A sort of balance or weighing-machine (Fig. 2427), consisting of a lever with unequal arms, and the fulcrum in F. The short one, B, supports the substance to be weighed, and an invariable weight, P, is made to slide along the other till the two

Fig. 2427. — STEELYARD.

forces are in equilibrium; the weight required is then indicated on the graduated edge of the long arm.

Steep, Stean, Stein, v. a. (*Arch.*) To line with brick, stone, or other material, as a well.

Steep, in Indiana, a twp. of Knox co.

Steep, a. (*comp.* STEEPER; *superl.* STEEPEST.) [*A. S. steep.*] High; lofty; ascending or descending with great inclination; precipitous; approaching to an upright position; as, a *steep* hill.

—*n.* A precipitous place, hill, mountain, rock, or ascent; a precipice; an abrupt acclivity or declivity; as, a mountain *steep*.

—Something that is steeped, or employed in steeping; a fertilizing liquid for quickening the germination of seeds.—In some parts of England, a rennet-bag.

—*v. n.* To become steep; as, the road *steepens* by degrees.

—*v. a.* [Probably formed from *A. S. dyppan*, by prefixing *s*; *Ice.* *steypa*, to pour, to melt.] To soak in a liquid; to macerate; to imbue; to drench; to keep anything in a liquid till it has thoroughly imbibed it.

Steep'er, n. A vessel, vat, cistern, or other utensil, in which articles are placed to steep.

Steep Falls, in Maine, a post-village of Cumberland co., 22 m. N.W. of Portland.

Steeple, (stē'pl.) n. [*A. S. stýpel, stēpel.*] (*Arch.*) The tower of a church, &c., including any superstructure, such as a spire or lantern, standing upon it. See SPIRE and TOWER.

Steeple-chase, n. (*Sporting*.) A race in which a number of horsemen ride at full speed across country, leaping over walls, fences, hedges, ditches, or whatever obstacles may face them in a direct course to a certain goal or winning-post;—a sport popularly practised in England and Ireland.

Steeply, adv. With steepness; in a steep manner; with precipitous declivity.

Steepness, Steepness, n. State of being steep; precipitous declivity; as, the *steepness* of a mountain.

Steer, n. [*A. S. steor; Ger. stier.*] A young castrated male of the ox kind, or common ox, especially one from two to four years old.

—*v. a.* [*A. S. styran.*] To govern; to direct or to guide; to show the way or course to;—particularly, to direct and govern, as a ship by the movements of the helm; as, to *steer* a straight course.

—*v. n.* To direct one's course; to direct or govern a ship or other vessel in its course.—To be directed and managed, with respect to course or motion; as, the vessel *steered* badly.—To conduct one's self; to take or pursue a course or way; as, he *steers* clear of temptations.

Steerage, (stē'raj.) n. Act or practice of governing or directing in a course; as, the *steerage* of a ship, the *steerage* of a national policy.

(*Naut.*) The effort of a helm, or its effect on the course of a ship; or, the peculiar manner in which an individual ship is affected by the helm.—Also, an apartment in the fore part of a ship, between decks, for the accommodation of an inferior class of passengers, as distinguished from the *chief cabin*.

—Direction; regulation; management; control; as, the *steerage* of one's course through life. (R.)—That which serves to direct a course.

Steerage passenger, a second- or third-class passenger in a ship, who is accommodated in the steerage.

Steerage-way, n. (*Naut.*) That degree of progressive motion of a ship which renders her capable of direction by the helm.

Steer'er, Steers'man, n.; pl. STEERSMEN. One who steers; a helmsman; a pilot.

Steering, n. Act or art of directing and governing a ship or other vessel in her course.

Steering-wheel, n. (*Naut.*) A wheel to which the tiller-ropes or rudder-chains are attached, for the convenience of steering a ship.

Steeve, v. n. (*Ship-building*.) To set the bowsprit so as to form an angle with the horizon, or with the line of a ship's keel.

—*v. a.* (*Ship-building*.) To cause to project at an angle with the horizon;—said of a ship's bowsprit.

—*n.* (*Naut.*) The angle at which a bowsprit is set with the horizon, or with the line of a ship's keel.—A long, heavy spar, with a place to fit a block at one end, used in stowing certain kinds of cargo which need be driven in closely.

Steeping, n. (*Naut.*) The elevation which a ship's bowsprit or cathead forms above the stem, or the angle which either makes with the horizon; steeve.

Steganography, n. [From *Gr. stēgēin*, to cover closely, and *graphein*, to write.] The art or practice of writing in cipher or secret characters.

Stegnotic, a. [*Fr. stegnotique; Gr. stegnōtikos.*] (*Med.*) Having a tendency to cause constipation, or to diminish natural discharges generally.

—*n.* (*Med.*) A medicine which tends to produce costiveness.

Steilacoom (sti-la-koon'), in Washington, an unimportant village and post-office, former cap. of Pierce co., on Puget Sound, 120 m. N.E. of Pacific City.

Stein, (stīn.) HEINRICH KARL, BARON VON, a Prussian statesman, b. in Nassau, 1759. After being educated at Göttingen, and studying public law at Wetzlar, he entered the Prussian civil service, and after filling several important offices, was in 1786, appointed President of the Westphalian Chambers, which post he held till 1804, in which year he became Minister of Finance and Trade. In this capacity he laid the foundation of important social reforms; but, exciting the jealousy of Napoleon, S. was exiled to Pragne. In 1812, he went to St. Petersburg, where he rendered great services to the Russian govt. during the French invasion. Subsequently returning to his own country, he was placed at the head of

administrative affairs, from which position he retired in 1827. D. 1831.

Stein'bok, Stein'bock, Steen'bok, n. [*Du. steen, stone, and bok, a buck.*] (*Zoöl.*) A very graceful antelope (*Antilope tragulus*), which inhabits the stony plains and rocky hills of S. Africa; is particularly shy, and runs with remarkable swiftness. It is much hunted, on account of the delicacy of its flesh, which is esteemed excellent venison.

Steinheilite, n. (*Min.*) A variety of iolite, found with copper pyrites at Orijetoi, in Finland. It is of a blue color, and is considered by jewellers an inferior variety of sapphire.

Stekene, (stek'in,) a market-town of Belgium, 18 m. from Ghent; pop. 5,646.

Stellar, Stel'ary, a. [*Fr. stellaire; Lat. stellaris*—*stella*, a star.] Pertaining, or having reference, to stars; astral; as, "*stellar* virtue." (*Milton.*)—Consisting of, or set with, stars; stary; as, a *stellar* world.

Stellaria, n. (*Bot.*) A genus of plants, order *Caryophyllaceæ*, composed of small grass-like herbs, with flowers in forked cymes, found in moist, shady places. *S. media*, the Chickweed, is a common weed in almost every situation N. of Mexico. It gives small, white flowers from the beginning of spring to the end of autumn. The seeds are eaten by poultry and the smaller birds.

Stelleriferous, a. [*Lat. stella*, a star, and *ferre*, to bear.] Possessing, or abounding with, stars.

Stel'iform, a. [*Lat. stella*, and *forma*, form.] Star-shaped; radiated.

Stellionate, n. [*Lat. stellionatus*, cozenage.] (*Civil Law*.) A general term, comprehending all sorts of frauds committed in matters of agreement not designated by any more special appellation.

Stel'ular, Stel'ulate, a. [From *Lat. stellula*, dim. of *stella*.] Shaped like a little star; radiated; having a mark resembling a star.

Stel'ite, n. [*Lat. stella*, a star.] (*Min.*) A white, translucent variety of scapolite, crystallized in concentric stellar groups of delicate rhombic prisms.

Stem, n. [*A. S. stefn, or stenn.*] (*Bot.*) The ascending axis of a plant, or that part of the axis which, at its first development, takes an opposite direction to the root. S. have usually considerable firmness and solidity, but sometimes they are too weak to support themselves. When they trail on the ground, they are said to be *procumbent*; when they cling to other bodies by means of suckers, *climbing*, or *scandent*; and when they twist in a spiral manner round their supports, *twining*, or *volute*. The four principal kinds of S. are: 1, the *caulis*, common to plants which are herbaceous, or die down annually—examples may be seen in most garden and roadside plants; 2, the *trunk*, the woody and permanent S. of a tree—it always springs from a dicotyledonous embryo; 3, the *culm*, common to most grasses and sedges—it is usually a tube, having joints or partitions at the points where the leaves arise; 4, the *stipe*, a fibrous S., straight and cylindrical, being almost as thick at the summit as at the base—it is peculiar to acotyledonous plants, and may be observed in any of the palms or tree-ferns. For descriptions of the principal modifications of the S., see BULB, CORM, RHIZOME, TUBER.

—The stock of a family; a race or generation of progenitors.

"Learn well their lineage and their ancient stem."—*Tickell*.

—Progeny; a descendant or branch of a race or family; as, "This is a *stem* of that victorious stock."—*Shaks.*

(*Mus.*) An upright or downright line added to the head of a musical note; the head being that part filled in black or left open, as the case may be.

(*Ship-building*.) A strong timber, forming in a ship the wedge-like front. It is united by a scarf to the keel, and rises nearly perpendicularly from it. The fore-ends of the planks of the side are firmly imbedded in the S. It is backed by the *apron* and *stemson*.

From *stem* to *stern*, from fore to aft, or from one end of the ship to the other; as, to rake a vessel *from stem* to *stern*.

—*v. a.* [*Ger. stämmen*, to bank up.] To oppose or resist, as a current; to make progress against, as a current; as, to *stem* the waves.—To stop; to check, as a stream or moving force; as, to *stem* the tide of public opinion.

Stem-elasp'ing, a. (*Bot.*) Amplexicanl, as a leaf or petiole.

Stem'-leaf, n. A leaf springing from the stem.

Stem'less, a. Having no visible or obvious stem; acaulous.

Stem'let, n. A small stem.

Stem'ple, n. (*Mining*.) A cross-bar of wood in the shaft of a mine.

Stem'son, n. (*Ship-building*.) A piece wrought on the aft part of the apron, continued as high as the middle or upper deck in small ships, the lower end lapping on or scarfing into the keelson.

Stench, n. [*A. S. stenc.*] An ill smell; an offensive odor; stink.

Stench'-trap, n. A contrivance for the prevention of the escape of effluvia from sinks and drains; formed on the same principle as a gasometer.

Stencil, (stēn'sil.) n. A piece of thin leather or oil-cloth, used in painting on walls. The pattern, cut out of such pieces, is laid flat on the wall, and the color is brushed over it.

—*v. a.* (*imp.* and *pp.* STENCILLED,) (*stēn'sild.*) To paint, print, or mark by means of a stencil.

Sten'dal, a town of Prussia, on the Uchte, 62 m. from Berlin. *Manuf.* Woollens and leather. Pop. 9,114.

Stenocor'us, n. (*Zoöl.*) A genus of coleopterous insects, family *Cerambycidae*, which has the wing-covers

Sir Richard Steele

1671-1729

Alexander Hamilton Stephens

1812-1883

narrow, and notched or armed with two little thorns at the tips, and the antennæ very long. The Oak-pruner, *S. villosus*, about half an inch long, lays its eggs in July, placing each one in the joint of a leaf-stalk, near the extremity of a branch. As soon as the larva is hatched, it penetrates to the pith, and then moves towards the body of the tree, devouring the pith as it goes. At the close of the summer it has moved several inches; and now, having arrived at its full growth, it cuts out all the wood at the lower extremity of its burrow, leaving only the bark to sustain the branch; then, retiring a little, it stops up the downward end of its burrow, and awaits the fall of the branch, which takes place during the first strong wind. Branches an inch in diameter, and several feet in length, are thus cut off. The larva goes into the pupa state in the spring, and comes out a mature insect in June.

Stenograph, *v. a.* (*imp.* and *pp.* STENOGRAPHED,) (*-gräft.*) To write or report in a stenographic manner.

Stenographer, **Stenographist**, (*-fist*), *n.* One skilled in stenography, or short-hand.

Stenographic, **Stenographical**, *a.* [*Fr. sténographique.*] Pertaining to, or having reference to, stenography; as, a *stenographic* report.

Stenography, *n.* [*Fr. sténographie*, from *Gr. stenos*, close, confined, and *graphê*, writing.] The art of writing in short-hand by using abbreviations or characters for entire words; — otherwise called *tachygraphy*.

Sten'tor, *n.* [*Lat. and Gr.*] A herald mentioned in Homer, possessing a voice like thunder; — hence, any person having a powerful voice.

Stentorian, *a.* [*Lat. stentoreus*; *Gr. stentoreios*.] Pertaining to, or relating to, a stentor; excessively loud; as, a *stentorian* voice. — Capable of uttering an extremely loud sound; as, *stentorian* lungs.

Step, *v. n.* (*comp.* and *pp.* STEPPED,) (*stēpt.*) [*A. S. steppan*, *stæppan*; *Ger. stapfen*.] To move the foot; to advance or draw back by a movement of the foot or feet; as, to *step* forward. — To walk a short distance; as, he has just *stepped* over the way. — To walk gravely, slowly, or resolutely.

To *step aside*, to retire to a little distance. — To *step back*, to carry the mind or thoughts back; as, "They are *stepping* almost three thousand years back into remotest antiquity." — *Pope*.

To *step forth*, to move or come forth. — To *step in* or *into*, to move or advance suddenly into a place or state; as, to *step into* another person's shoes, that is, occupy the position formerly held by another. — To enter for a short space of time; as, I have just *stepped in* for a chat with you. — To take possession of without trouble; as, to *step into* a legacy.

To *step out*, to increase the length of the step or stride, without additional rapidity. — To *step short*. (*Mil.*) To curtail the length or rapidity of the step, according to established regulations.

— *r. a.* To set, as the feet. — To fix or erect in its place or socket; as, to *step* a mast.

— *n.* [*A. S. step*, *stap*; allied to *Gr. steibō*, to tread or stand on.] A pace; an advance, recession, or movement made by one removal of the foot; as, to take a *step* forward. — One remove in ascending or descending a stair; as, a flight of *steps*. — The space passed by the foot in walking or running; as, he takes a long *step*. — A small space or distance; as, the place is not more than a *step* from here. — Gradation; degree; as, he won his present position *step by step*. — Progression; act of advancing; resultant gain, benefit, or advantage; as, reform would be a *step* in the right direction. — Footstep; track; print or impression of the foot; trace; vestige; as, he walks in the *steps* of his forefathers. — Gait; manner of walking; as, a cripple approaching may be known by his *step*. — Proceeding; measure; action; as, I shall take *steps* to gain redress. — The round, rung, or rundle of a ladder; as, he ascended cautiously *step* after *step*.

— *pl.* Walk; passage; as, he bent his *steps* homeward. — A portable wooden framework of stairs, used within-doors in reaching to something elevated.

(*Mach.*) A kind of bearing wherein the lower end of a spindle or vertical shaft revolves.

(*Mus.*) A term applied to one of the larger diatonic degrees or intervals of the scale.

(*Ship-building*.) A block of wood, or in large ships, a strong, solid, platform upon the keelson, supporting the heel of the mast, and equalizing the pressure. — (*pl.*) Stairs on the topsides for the convenience of getting aboard a ship.

— [*A. S. steop*, from *stapan*; *Icel. styfi*, to cut off.] A prefix used in the composition of certain words to express relationship by the marriage of a parent; as, a *step*-father, *step*-mother, *step*-son, *step*-daughter, &c.

Step-brother, (*-brūth'ēr*), *n.* A brother by marriage of a parent.

Step-child, *n.* A son or daughter by marriage only.

Step-dame, *n.* A step-mother.

Step-daughter, *n.* The daughter of one's wife by a former husband, or of one's husband by a former wife.

Step-father, *n.* The husband of one's mother by virtue of a marriage subsequent to that of which the person spoken of is the offspring.

Step-grate, *n.* (*Mach.*) A kind of grate for containing fuel, in which the bars present the appearance of a series of steps.

Stephanite, (*stēf'*), *n.* (*Min.*) Native sulphide of silver and antimony, composed (when pure) of 70 per cent. of silver, 14 antimony, and 16 sulphur. It is a valuable ore of silver, of a dark, lead-gray, or iron-black color, with shining metallic lustre, and is found associated with other silver-ores.

Stephen I., (*stē'v'n*) Pope, ascended the pontifical chair after Lucius, in 253. He had a difference with

St. Cyprian and Firmilian about rebaptizing repentant heretics, which practice this Pope condemned. D. 257.

STEPHEN II., was a native of Rome, and elected pope in 752. Astolphus, King of the Lombards, having menaced the city of Rome, S. implored the aid of Constantine Copronymus, Emperor of the East; but he, being engaged in a war, recommended his cause to Pepin, King of the Franks, who marched into Italy, and deprived Astolphus of the exarchate of Ravenna and several cities, which he gave to the Pope, thus laying the foundation of the temporal sovereignty of the Church of Rome. D. 757.

STEPHEN III., succeeded Paul I. in 768. Throughout his career he was at variance with the Lombards, and threatened to excommunicate Charles (afterwards Charlemagne) and Carloman, sons of Pepin, if they entered into an alliance with them, or intermarried with the daughters of the Lombard king. Charles, however, married Hermengarda, daughter of Desiderius, King of the Lombards, but put her away a year afterwards. He was succeeded by Adrian I. D. 772.

STEPHEN IV., succeeded Leo III. in 816, but died in the same year.

STEPHEN V., was elected in succession to Adrian III., in 885. He was a learned pontiff, and greatly contributed to relieve the people of Rome from the effects of a terrible famine which had desolated the country shortly before his accession. D. 891.

STEPHEN VI., became Pope in succession to Romanus in 897. He caused the body of Pope Formosus to be disinterred and cast into an ordinary grave, on the plea that the Pope had been excommunicated by John VIII. anterior to his elevation to the tiara. In 898 the partisans of Formosus burst into an insurrection, and, having seized Stephen, strangled him.

STEPHEN VII., was the successor of Leo V., and was elevated to the papacy in 929. There are no reliable records of his pontificate. D. 931.

STEPHEN VIII., was the successor of Leo VIII. At the time of his election, 939, Rome was governed by Alberic, son of Marozia (see MAROZIA), who styled himself "Prince and Senator of all the Romans." The records of his papacy are extremely untrustworthy; but it is stated by one authority that Stephen VIII. was, during a revolt of the Roman populace, rendered a cripple for life. His successor was Martin III. Stephen D. 942.

STEPHEN IX., was elected to the papacy in succession to Victor II. in 1057. He had previously fulfilled the office of papal legate at the court of Constantinople. After his elevation, he dispatched legates to Milan to enforce celibacy among the clergy of that church; the disputes upon which decree lasted during a quarter of a century. He was a learned and energetic pontiff, but too ambitious of worldly influence. D. 1058.

Stephen I., King of Hungary, succeeded his father Geisa in 997. He reformed the manners of his subjects, enacted excellent laws, and introduced Christianity into his kingdom. D. 1038. S. was canonized, and his memory is held in great veneration throughout S. Germany, where churches are met everywhere dedicated to his name.

STEPHEN II., King of Hungary, succeeded his father Koloman in 1114. He invaded Poland and Austria, and marched into Russia, but was unsuccessful everywhere. He abdicated in 1131, and retired to a monastery, where he died in the same year.

STEPHEN III., was crowned King of Hungary in 1161, but was almost immediately deposed by the nobles. He regained the crown, however, in 1165, and reigned till 1174.

STEPHEN IV., ascended the throne in 1161, but was defeated by the preceding in 1163, soon after which he died at Semlin.

STEPHEN V., reigned two years only, but gained an illustrious name by his victories over Ottocar, King of Bohemia, 1270-1272.

Stephen, King of England, was the son of the Count of Blois by his wife Adela, daughter of William the Conqueror, and B. 1105. Being in England on the death of Henry I., he seized on the crown and royal coffers, to the prejudice of Henry's daughter, Maud, the empress, and was crowned in 1135. Four years elapsed before Matilda was able to land with forces to dispute S.'s possession of the throne, and after a long civil war, that lasted nearly the whole reign, and in which S. was once taken prisoner, but released for Maud's brother, the Earl of Gloucester, it was finally decided that S. should retain the crown for his own life, on condition that Prince Henry, Maud's son by her first husband, should succeed. These terms were concluded in 1154; Stephen only lived a year after, dying in 1154, after a stormy reign of 19 years.

Stephen, King of Poland, surnamed BATHORI, was a noble Hungarian, B. 1532, elected Prince of Transylvania 1571, and succeeded to Henry of Valois as King of Poland, 1575. D. 1586.

Stephen, (*St.*) *The Dracon*, called also the *Protomartyr*, or earliest of the Christian martyrs, was one of the seven deacons whose appointment is related in the 6th chapter of the Acts of the Apostles. The circumstances of his martyrdom are related in the same chapter. His festival is fixed during the festivals which accompany that of Christmas. It is kept with great solemnity, both in the east and in the west. His relics are believed to have been discovered in the beginning of the 5th cent., the "discovery" being commemorated by a festival held on the 3d of August.

Stephens, ALEXANDER HAMILTON, an American statesman, sometime Vice-President of the so-called Confederate States, B. in Tallahassee, Fla., 1812, was left an orphan at the age of 14, graduated at Franklin College in 1832,

and having studied law, was admitted to practice in 1835. He was elected to the Lower House of the State Legislature in 1836, and served five years; was elected to the Senate of his State in 1842, and a representative in Congress for Georgia in 1843. After the nomination of Gen. Scott for the Presidency, S., who had been a prominent leader of the Whig party in Georgia, became a supporter of the Democrats, and in August, 1860, delivered a speech before a convention in Georgia strongly in opposition to the secession of that State. When, however, he saw the rupture inevitable, he supported it, and was elected provisional Vice-President of the Confederate States. He was sent as commissioner to Virginia, which had passed the ordinance of secession, and through his agency a treaty was made with the State Convention, and the State was admitted into the new confederation provisionally formed at Montgomery. On the organization of the permanent government, S. was elected Vice-President by the vote of the people. After the failure of the Peace Conference in April, 1865, S. retired to Georgia, was arrested and confined in Fort Warren, Boston Harbor, but was released, Oct. 11, 1865, when he returned to Georgia. In December, 1865, he was elected Senator of the U. States Congress, but was not permitted to take his seat. In 1874, was elected representative to Congress, and served several terms. In 1882, was elected Gov. of Geo. D. March 4th, 1883. S. is author of a *Hist. of the War of Secession*, 1869.

Stephen's, (or **Ste'ven's**) **Landing**, in *Mich.*, a v. of Sanilac co., on L. Huron, abt. 6 m. S. of Lexington.

Stephensburg, in *Ky.*, a p. v. of Hardin co., 90 m. S.W. of Frankfort. — In *Va.*, a v. of Frederick co., abt. 9 m. S.S.W. of Winchester.

Stephen's Creek, in *New Jersey*, a village of Atlantic co., abt. 5 m. S. of May's Landing.

Stephenson, GEORGE, the founder of the railway system of Great Britain, and perfecter of the locomotive engine, was B. in Northumberland, 1781. At the age of 14, he joined his father in his work as fireman in a colliery, where, by a close attention to all he saw, and a constant study of every piece of mechanism that came in his way, he acquired a large amount of sound practical knowledge; while by mending boots, clothes, and cleaning clocks, he was enabled to add a trifle to his weekly earnings. In 1812 he was appointed engineer to the colliery, at a salary of \$500 a year. Soon after this he built his first travelling engine to draw the wagons along the tramway, which, though clumsy and weak in power, was immensely superior to any engine then in use; the following year he constructed a second, as superior to his first as that had been to all others before it. From this time improvement followed on improvement in rapid succession, not only in the form of the locomotive, but in the rails and in every department to which steam was applicable, till, from mere tramways, the whole beautiful system of railway locomotion, with all its complications of stations, signals, tenders, and carriages, was at last completed by the opening of the Liverpool and Manchester Railway. In 1830 that great undertaking was opened, and from that time the name of S. became one of the most popular among men of science in Europe. In 1845 he retired from all railway undertakings, and devoted his time to his collieries and other sources of business, and, after having been instrumental in establishing all the foreign and home lines, he B. in 1848, leaving his fortune and his name to his only son, ROBERT STEPHENSON, who, B. in 1803, joined his father in his complicated operations on the Liverpool line, became the permanent engineer of that company, surveyed several new lines, visited South America to inspect the gold and silver mines of that country, and long before his father's retirement from active operations had established a name as the first civil engineer in Europe. Among the great works with which Robert Stephenson's name is associated, are the High Level Bridge over the Tyne, the Tweed Viaduct, the Britannia Bridge over the Menai Straits, the Victoria Bridge at Montreal across the St. Lawrence, one of the grandest of engineering achievements, and the Alexandria and Cairo Railway. In 1847 he entered Parliament for Whitby; he was a Fellow of the Royal Society, and a member of nearly all the scientific societies of Europe. He published two valuable works—*The Locomotive Steam Engine*, and *The Atmospheric Railway System*. D. 1859.

Stephenson, in *Illinois*, a N.N.W. co., bordering on Wisconsin; area, 560 sq. m. *Rivers*, Pekatomica river, and Yellow and Richland creeks. *Surface*, undulating; soil, fertile. *Minerals*, Lead. *Cap.* Freeport. *Pop.* (1897) 33,830.

Stephensport, in *Kentucky*, a post-town of Breckenridge co., on the Ohio, 110 m. S.W. of Frankfort.

Stephensville, or STEVENSVILLE, in *Texas*, a post-village, cap. of Erath co., abt. 150 m. N.W. of Austin City.

Stephentown, in *New York*, a post-township of Rensselaer co.

Step-mother, *n.* The wife of one's father by virtue of a marriage subsequent to that of which the person spoken of is the offspring.

Stepney, in *Connecticut*, a post-village of Fairfield co., 20 m. W. of New Haven.

Steppe, (*stēp'*), *n.* [*Russ. stepj.*] (*Geog.*) The name given to part of the low tracts of flat land in the N. parts of the Old World, traceable from the shores of the German Ocean through Holland and N. Prussia into Russia, thence into Siberia, and so at intervals to the coast of the Pacific in Behring's Straits. The area is estim. at 4,500,000 sq. m., a part of which is below the level of the ocean. The parts of the plain strictly denominated *Steppes* begin at the River Dnieper, and extend along the shores of the

Black Sea, including all the country N. and E. of the Caspian and the lowlands of Siberia. Hundreds of leagues may be traversed eastward of the Dnieper without variation of scene, and there is a dead level of thin but luxuriant pasture, bounded only by the horizon. While vegetation lasts, there are horses and cattle without number; but winter begins in October, and the whole area is then covered with snow. Fearful storms of wind often rage when the sky is clear and bright. In June, the Steppes are parched and the air is filled with dust; but at other times, and in many parts, wheat is cultivated, and the crops obtained are very large. On the whole, however, the Steppes must be regarded as barren, and part of the tract is even a desert. Between the Caspian Sea and the Sea of Aral there is, for the most part, a wide ocean of shifting sand, often driven by whirlwinds.

Step'ping, *n.* Act of walking or running by steps.

Step'ping-stone, *n.* A stone to raise the feet above the mud or water in walking.—Hence, by analogy, a means of progress or further advantage; as, application is a *stepping-stone* to success.

Step'-sister, *n.* A sister by marriage only.

Step'-son, *n.* The son of one's wife by a former husband, or of one's husband by a former wife.

Step'-stone, *n.* A stone laid as a stair to step on before entering the door of a house.

Stereoraceous, (*-ko-rā'shus*), *a.* [From Lat. *stercus*, dung.] Pertaining or relating to, or partaking of the nature of, dung.

Sterco'ranism, Stereo'rianism, *n.* (*Eccl. Hist.*) A nickname which seems to have been applied in the Western Church, in the fifth and sixth centuries, to a dogma that a change took place in the substance of the consecrated elements, so as to render the divine body subject to the act of digestion.

Ster'corary, *n.* [From Lat. *stercus*, dung.] A sheltered place for receiving dung.

Sterculia, (*ster-kul'-le-a*), *n.* (*Bot.*) The typical genus of the order *Sterculiaceæ*. The most interesting species is *S. acuminata*, the seeds of which, under the name of *Rola-nuts*, are used in Africa to sweeten water, which has become more or less putrid. They contain a large amount of mucilage. *S. tragacantha*, a native of Sierra Leone, received its specific name from yielding a gum

Fig. 2428.—CHICHA, (*Sterculia chicha*).

a, Branch with leaves and flowers; b, parts of fructification; c, pistil; d, transverse section of ovary.

resembling flaky tragacanth. *S. urens*, a native of Coromandel, yields a gum of a similar nature, which is known as *gum kuteera*. The seeds of all the species contain fixed oil, and many are eaten in different parts of the globe, among which are those of the Chicha, *S. chicha* of Brazil (Fig. 2428), which are roasted before being eaten. They are about the size of a pigeon's egg, and have a pleasant flavor.

Sterculia'ceæ, *n. pl.* (*Bot.*) The Silk-cotton family, an order of plants, alliance *Malvales*. *DIAG.* Columnous stamens all perfect, and 2-celled anthers turned outward. They consist of large trees or shrubs. There are 37 genera and 128 species, all natives of the tropics or of very warm climates. In their properties they resemble the *Malvaceæ*, being generally mucilaginous, demulcent, and emollient. Some produce seeds with a hairy or cottony covering, and others yield useful fibres. Many are remarkable for their prodigious size, height, and apparently enormous age. See BAOBAB, BOMBAX, DURIO, STERCULIA.

Stère, *n.* [Fr., from Gr. *stereos*, firm, solid.] The French unit for solid measure, equivalent to a cubic metre, or 31.31044 American cubic feet.

Stere'obate, Sty'lobate, *n.* [Fr., from Gr. *stereos*, solid, and *basis*, base.] (*Arch.*) The lower part or basement of a building or column.

Stereochromie, (*-krôm'-*), *a.* Pertaining, or having reference to, the art of stereochromy.

Stereochromy, (*-ôk'-ro-my*), *n.* [Gr. *stereos*, hard, solid, and *chromê*, color.] (*Fine Arts.*) A new process of creating durable pictures upon walls. The wall to be painted is first coated with a layer of ordinary lime-mortar, in order to equalize its unevenness. The sand employed, which may be either silicious or calcareous, must be of even grain and well washed beforehand.

Lime must be sparingly employed, so as to render the cement rather poor than otherwise. In this and in all the subsequent operations, pure rain-water must be used. The plaster, thus prepared, must be well dried and exposed to the air for several days, so as to become entirely carbonated. Caustic lime would decompose the soluble glass. Fuchs, the inventor of *S.*, recommends the moistening of the wall several times with a solution of carbonate of ammonia, so as to accelerate the saturation of the lime. When dry, it is washed over several times with a moderately diluted solution of the so-called "double water-glass," allowing it to dry each time. The ground being thus prepared, the upper layer may be soon after added. It consists, like the lower one, of a lime-mortar, and is spread in the thickness of about one-tenth of an inch. The sand employed must be well washed, and of a grain not exceeding a certain size. When the coating is perfectly dry, it is sometimes rubbed with a sharp sandstone, in order to remove the layer formed of carbonate of lime. It is better, however, to accomplish this by means of diluted phosphoric acid. The phosphate of lime thus formed binds the soluble glass, a solution of which, when the coat is dry, is spread over the surface. The same is diluted with its equal bulk of water, and the operation is twice repeated. Too much water-glass prevents the ground from taking the colors. The ground being thus prepared, the painting may be at once proceeded with; some delay, however, increases the capacity for absorption. The colors to be used must be ground with pure water, (we shall speak of their preparation in a subsequent article,) and the wall has also to be frequently sprinkled with water, in order to displace the air from the pores, and to insure the adherence of the colors. Nothing further remains to be done than to fix the colors properly with a solution of the soluble glass referred to, which operation is accomplished by sprinkling the painting in the form of a fine shower or mist, then letting it dry, and repeating the operation until the colors adhere so firmly that they cannot be rubbed off by the finger.

Stèreograph, *n.* A photograph prepared for exhibition in the stereoscope.

Stereog'raphy, *n.* (*Geom.*) The act or art of delineating the forms of solid bodies on a plane; shaded geometric drawing.

Stereom'eter, *n.* [Gr. *stereos*, and *metron*, measure.] (*Hydrodynamics.*) An instrument for determining the specific gravity of liquid bodies, porous bodies, and powders, as well as of solids.

Stereom'etry, *n.* The art of measuring, and determining the solid contents of, solid bodies.

Stereomon'oscope, *n.* [Gr. *stereos*, firm, *monos*, single, and *skopeîn*, to view.] (*Optics.*) An instrument having two lenses, whereby a stereoscopic effect may be obtained from a single picture.

Stereopt'icon, *n.* [Gr. *stereos*, and *optikos*, having reference to sight.] (*Optics.*) A kind of magic lantern for the exhibition of photographic pictures.

Stèreoscope, *n.* [Gr. *stereos*, and *skopeîn*, to view.] (*Optics.*) An instrument by means of which two pictures taken from different points of view are shown as one picture of that object, having the almost magical appearance of solidity. The theory of the *S.* was first explained by Professor Wheatstone, who showed that the image of every solid object painted on the retina is different with every different position of the eye. To illustrate this by means of the common camera-obscura:—If the image of a picture be formed in this instrument, it is of no consequence in what position the instrument is fixed with regard to the picture, the relative position of all its points will be the same; but when a *solid object*, as a castle or a tree, is depicted in the camera, the case is far different. It will then be observed that the relative position of the several points of the solid image will vary every time the instrument is shifted. It is precisely similar with the eye; a different picture is painted on the retina every time the position of the eye is changed. In obedience to this law, two slightly different pictures of any solid object will be simultaneously impressed on the two eyes. That this is actually the case, we may convince ourselves by placing a lighted candle about three feet in front of the face, and holding up the fore-finger between the candle and the nose; the finger and candle will appear on the contrary sides of each other when seen by each eye separately. Professor Wheatstone showed that the combination of two dissimilar visual images, simultaneously depicted on the two retinae, conveyed to the mind the perception of relief or solidity, and this fact he proved by explaining that if two pictures of an object be taken in the direction in which it would be viewed by the two eyes separately, upon these pictures being presented to the two eyes in such a way that their images might fall on corresponding portions of the retinae, then the two views would be combined into one, and carry to the mind of the beholder the impression of actual solidity. The principle on which the instrument depends is not of modern invention; it was known to Euclid, B. C. 300, and was described by Galen in 174. The first *S.* was manufactured by Duboscq, of Paris, in 1851. The *lenticular S.*, which is the most generally useful, consists of two semi-lenses placed at such a distance that each eye sees the picture of a drawing opposite to it, through the margin of the semi-lens, or through parts of it equidistant from the margin. The distance of the two portions of the lens through which we look must be equal to the distance of the centres of the pupils, which, at an average, is two and a half inches. By this method the images are not only united, but magnified at the same time, which is in many cases advantageous. The *S.* now so commonly used for viewing photographs taken from

two different points of view are constructed on this principle.

Stereoscop'ic, Stereoscop'ical, *a.* Pertaining, relating, or adapted, to the stereoscope; as, *stereoscopic pictures*; beheld through a stereoscope; as, *stereoscopic views*.

Stereos'copy, *n.* The art of applying the stereoscope, or of constructing such instrument.

Stereot'omy, *n.* [Gr. *stereos*, hard, solid, and *temneîn*, to cut.] The art or science of cutting solids, or making sections thereof.

Stèreotype, *n.* [Gr. *stereos*, firm, solid, and *typos*, a blow, a type.] (*Print.*) The surface of a page of types cast in one piece of type metal, about one-eighth of an inch in thickness. The art of stereotyping was invented by the celebrated printers MM. Didot, who, towards the close of the 18th century, printed a number of publications, as well as some of the Latin classics, by means of stereotyped plates. This plan was to "set up" the work in movable types of a harder substance than is usual, and with these to obtain a matrix by striking upon a mass of soft metal in an intermediate state between perfect fusion and perfect solidity, after the manner called at the present time in France *clichagé*. About the year 1813 the art was introduced crudely into America, and stereotype foundries were afterwards established in N. York, Philadelphia, Boston, and other cities. It has been successively improved, and the process of stereotyping, as at present practised, may be briefly described as follows: After the setting up of a page, or a number of pages, of movable types, according to the method described under the head of PRINTING, the types are passed on to the stereotyper, who proceeds to take a mould from them. He first of all moistens the surface by rubbing over it an oily composition to prevent the mould from adhering to it. The page is then fixed in a metallic frame, called a *flask*, and plaster of Paris in a semi-liquid state is poured evenly over the whole surface. The plaster soon settles into a solid mass, upon which it is carefully lifted from the surface of the types. Supposing it to be a good and perfect mould, it is then placed face downwards upon a plate of iron termed a *float*. This last is contained in a cast-iron pan, the cover of this pan being placed above the back of the mould and firmly secured there by a screw. It should be observed that the corners of the lid of the casting-pan are cut off, in order that the metal may enter. The whole apparatus is next sunk into a large iron kettle containing melted metal, and the metal, running in through the open spaces at the corners of the pan-lid, insinuates itself into every hollow of the mould. After ten minutes' immersion the pan is raised, and when cold, the contents are removed, and a cast plate, the face of which is a perfect fac-simile of the types from which the mould was taken, is obtained. In order to insure the proper thickness, as well as an even surface, the back of the plate is shaved upon a shaving-machine. The most careful casting cannot prevent occasional defects in a plate, and it is the duty of the *finisher* to remove small globules of metal, which occasionally adhere to the letters, or to replace those letters that have been broken, by dexterously soldering in new ones. This mode, known as the *Plaster process*, is the most perfect, and the one mostly employed in stereotyping books. Another method, called the *Papier-Maché*, may be thus described: 4 or 5 sheets of moistened sized tissue-paper, called *papier-maché*, slightly pasted together on a sheet of plate paper, are placed upon the surface of the types. The whole is then struck with a heavy brush till the soft paper has taken a perfect impression of the type. On this matrix, as it is then called, a sheet of plate paper is next placed and again beaten with a brush. This paper mould is next dried and hardened by being placed upon a steam chest and a heavy screw pressure put on it in order to retain the perfect impression while drying. From this mould a cast may be taken by simply placing it in a flask and pouring upon it the molten metal. Several casts can be taken from the same mould. On account of the simplicity and rapidity of this paper process, many newspapers and publications having a large circulation have adopted it as the means of supplying plates, for the rapid production of the requisite number of copies. Still a third method of stereotyping, called the *Clay process*, has been recently invented, in which the mould of the type is made of clay, and by pressure as in electrotyping. The benefits afforded by *S.* are many; in the production of works of reference, of standard authors, and of books for which there is a continued demand, the process is of the greatest utility. Indeed, it is essential to the production of cheap books in large numbers, as it saves the publisher from printing more copies at a time than he needs; and when a new demand arises, there is no necessity to undergo a fresh expense in the new composition of the types.

—*a.* Pertaining, or having reference, to fixed metallic types; executed on fixed metallic types, or plates of fixed type; as, a *stereotype edition*.

—*v. a.* (*imp.* and *pp.* STEREOTYPED, *stère-o-tipt.*) To print by the use of fixed metallic types; to make, as fixed metallic types or plates of type-metal, corresponding with the words and letters of a book; to compose, as a book in fixed types; as, to *stereotype* the works of Shakspeare.

Stèreotyped, *p. a.* Formed on fixed metallic types, or plates of fixed types; as, a *stereotyped work*.—Hence, analogically, established in a fixed, unchangeable manner; as, *stereotyped ideas*.

Stèreotyper, Stèreotype-founder, Stèreotypist, *n.* A maker of stereotype plates.

Stereotyp'ic, *a.* Belonging, or relating to, stereotype or stereotype plates.

George Stephenson

1781-1859

Stereotypography, *n.* [Gr. *stereos*, solid, *typos*, a type, and *graphê*, to write.] Art or practice of printing in stereotype, or from stereotype plates.

Stereotypy, *n.* Art or occupation of making stereotype plates.

Sterile, (*stêr'îl*), *a.* [Fr., from Lat. *sterilis*, barren; Gr. *sterros*, stony.] Barren; infertile; unfruitful; yielding little or no crop; as, a *sterile* soil, a *sterile* year.—Barren; unproductive of offspring; as, a *sterile* woman, a *sterile* beast.

—Lacking fecundity of ideas; destitute of imagination or sentiment; as, a *sterile* production, a *sterile* writer or speaker.

(Bot.) Bearing stamens only; as, a *sterile* plant.

Sterility, *n.* [Fr. *sterilité*; Lat. *sterilitas*.] Quality or state of being sterile, or of producing little or nothing; barrenness; unfruitfulness; unproductiveness; state of not producing young, as of animals.—Destitution or poverty of ideas or sentiments, as in writings; want of fertility, or of inventive power; mental instead of physical barrenness.

Sterilize, *v. a.* [Fr. *stériliser*.] To make sterile; to exhaust of productive power; to impoverish, as land.—To deprive of the power of propagation, as of young.

Sterlet, *n.* [Russ. *stêrliadj*.] (Zool.) The smallest species of Sturgeon (*Acipenser ruthenus*), being from 2 to 3 feet in length; it is found chiefly in the Volga, and is considered a great delicacy. The caviare made from this fish is confined almost exclusively to the use of the royal table.

Sterling, *a.* [Probably from *Easterling*, the proper name, in past days, of German traders in England, whose money was of the purest quality.] An epithet by which English coin or money of account is distinguished; as, a pound *sterling*, *sterling* value.—Hence, by implication, of superior quality; genuine; pure; excellent; as, a work of *sterling* merit, a man of *sterling* reputation.

—*n.* English money of account.

Sterling, in *Arkansas*, a village of Philips co., abt. 9 m. N. of Helena.

Sterling, in *Connecticut*, a post-village and township of Windham co., 46 m. S.E. of Hartford.

Sterling, in *Illinois*, a city and township of Whitesides co., on Rock river, and the Chicago & Northwestern and Chicago, Burlington & Quincy R. Rs., 109 m. W. of Chicago. *Manuf.* Farming implements, flour, carriages, &c. The scenery about the city on Rock river is beautiful, and the river affords abundant water-power. *Pop.* (1897) 6,500.

Sterling, in *Indiana*, a twp. of Crawford co.

Sterling, in *Massachusetts*, a post-village and twp. of Worcester co., 40 m. N.W. of Boston.

Sterling, in *Michigan*, a twp. of Macomb co.

Sterling, in *Minnesota*, a post-township of Blue Earth co., abt. 20 m. S.W. of Mankato.

Sterling, in *Missouri*, a village of Lincoln co., on the Mississippi River, abt. 50 m. N.N.W. of St. Louis.

Sterling, in *New York*, a post-village and township of Cayuga co., 30 m. N. of Auburn.

Sterling, in *Ohio*, a village and township of Brown co., abt. 33 m. N.E. of Cincinnati.

Sterling, in *Pennsylvania*, a post-twp. of Wayne co.

Sterling, in *Vermont*, a township of Lamoille co.

Sterling, in *Wisconsin*, a township of Polk co.—A township of Vernon co.

Sterling City, in *Colorado*, a village of Park co., abt. 90 m. S.W. of Denver.

Sterling Hill, in *Connecticut*, a post-village of Windham co., abt. 18 m. N.E. of Norwich.

Sterlingville, in *New York*, a post-village of Jefferson co., 155 m. N.W. of Albany.

Stern, *a.* (comp. *sterner*; superl. *sternest*.) [A. S. *styrne*.] Fixed with an aspect of austerity, severity, or authority; rigid; as, a *stern* countenance, a *stern* gaze.—Noting severity of manners or disposition; harsh; unrelenting; cruel; austere; as, a *stern* parent, a *stern* will.—Immovable; rigidly decided or steadfast; as, a *stern* alternative, *stern* virtue.

—*n.* [A. S. *steora*, a starrer.] The hinder part of anything;—hence, humorously, the buttocks.

(Naut.) The aft or hind part of a ship, boat, or other vessel: in contradistinction from the *stem* or *proa*.

By the *stern*, laden more deeply abaft than forward;—said of a ship.

Sterna, *n.* (Zool.) The Terns, a genus of birds, order

Natatores. They have a bill as long, or longer, than the head, almost straight, compressed, and pointed; the mandibles of equal length, the upper one slightly inclined towards the point; nostrils pierced towards the middle of the bill; legs small, naked to above the knee; three anterior toes, united by an indented web, the hind toe free; wings very long and pointed; tail more or less forked. From the two

Fig. 2429.

ROSEATE TERN, (*S. paradisea*.)

latter characters, the species of *Sterna* are sometimes called *sea-swallows*. There are several American species, among which *S. paradisea*, the Roseate Tern (Fig. 2429), from New York to Florida, is 16 inches long.

Sternberg, a town of Moravia, 10 m. from Olmutz. *Manuf.* Woollens, linens, and canvas. *Pop.* 11,616.

Sternbergite, *n.* (Min.) Flexible sulphide of silver and iron, composed of 30.38 per cent. of sulphur, 34.18 silver, and 35.44 iron. It generally occurs in implanted rhombic crystals, which are attached to the matrix laterally, so as to form rose-like or fan-like aggregations, also massive. It is of a pinchbeck, brown color, with a violet-blue tarnish; is very sectile, and flexible in thin laminae, which after being bent may be smoothed down again with the nail, like tin-foil.

Stern-board, *n.* (Naut.) The lee-way, or retrogressive motion of a vessel;—hence, a loss of way in making tacks.

To make a *stern-board*, to recede from the point reached in the last tack.

Stern-chase, *a.* A chase in which two vessels sail on one identical course, one pursuing in the wake of the other.

Sterne, LAURENCE, an English miscellaneous writer, of a very singular and original cast, was a grandson of Richard Sterne, archbishop of York, and b. in 1713, at Clonmel, in Ireland, where his father, a lieutenant in the army, was at that time stationed. He was educated at Jesus College, Cambridge, where he took his degree of M. A. in 1740. Having entered into orders, his uncle, Dr. Sterne, a wealthy pluralist, presented him with the living of Sutton, to which were afterwards added a prebend at York, the rectory of Stillington, and the curacy of Coxwold. For many years he was little known beyond the vicinity of his pastoral residences; but in 1759 appeared the first two vols. of his celebrated *Tristram Shandy*, which drew upon him praise and censure of every kind, and became so popular that a bookseller engaged for its completion on very lucrative terms. During the intervals of the publication of *Tristram Shandy*, the ninth volume of which appeared in 1767, he published three vols. of *Sermons*, with his own comic figure, from a painting by Reynolds, at the head of them. He then spent some years in travelling on the Continent, and, in 1768, he composed his *Sentimental Journey*, which, by a number of pathetic incidents, and vivid strokes of national and characteristic delineation, is rendered extremely entertaining, and acquired a more general reputation than even its predecessor. D. 1768.

Sterned, (*stêr'nd*), *a.* (Naut.) Having a particular form of stern;—said of a ship; as, square-*sterned*, pink-*sterned*, round-*sterned*.

Sternly, *adv.* In a stern manner; with an austere or stern air or countenance; with severity or authority.

Sternmost, *a.* Furthest aft or astern; as, the *sternmost* ship in a squadron.

Sternness, *n.* Quality of being stern; severe or harsh manner or disposition; austerity; rigor; harshness.

Sterno-costal, *a.* [Gr. *sternon*, the breast, and Lat. *costa*, a rib.] (Anat.) Belonging, or having reference, to the breast-bone and the ribs.

Stern-post, *n.* (Ship-building.) The straight piece of timber at the aftermost part of a ship, and to which both sides of the vessel unite; the lower end is tenoned into the keel.

Stern-sheets, *n. pl.* [Stern and sheet.] (Naut.) That part of a ship's boat which is contained between the stern and the hindmost seat of the rowers.

Stern-son, *Stern-knee*, *n.* (Ship-building.) A timber bearing the same relation to the stern-post that the stemson bears to the stem.

Sternum, *n.* [Lat., from Gr. *sternon*.] (Anat.) The breast-bone, an oblong, flat, irregularly-shaped bone placed at the fore part of the thorax (see Fig. 2258). In the young subject, it consists of a number of bones, which become united in the adult, when it consists of three, and sometimes of two, or even of one bone. It serves for the articulation of the seven upper or true ribs on each side, is of use in aiding respiration, and defends the heart and lungs.

Sternutation, (*-tû'shun*), *n.* [Fr.; Lat. *sternutatio*.] The act of sneezing.

Sternutative, *Sternutatory*, *a.* Having the quality to excite or promote sneezing.

—*n.* Any substance that causes one to sneeze.

Stern-way, *n.* (Naut.) The retrograde or backward movement of a ship, that is, stern foremost.

Sterret's Gap, in *Pennsylvania*, a post-village of Perry co.

Stertorious, *Stertorous*, *a.* [Fr. *stertoreux*, from Lat. *stertere*, to snore.] Accompanied with, or characterized by, a deep snoring, or heavy, labored breathing, as in apoplexy;—hence, breathing with hoarse inspirations; snoring.

Stethomet, *n.* [Gr. *stêthos*, chest, and *metron*, measure.] (Med.) An instrument for determining the differential mobility of the opposite sides of the chest in respiration.

Stethoscope, *n.* [Gr. *stêthos*, the chest, and *skopein*, to explore.] (Med.) An instrument invented by M. Laennec, of Paris, in 1823, and is of valuable aid in the process of auscultation. It consists of a tube about ten inches in length, made of wood, or sometimes of gutta-percha, widening considerably at one end, and but slightly at the other. The wide end is applied to the chest, or other part of the patient, the physician putting his ear to the narrow end, and from the sounds emitted by the heart, lungs, &c., the state of these parts may be ascertained. These sounds vary according as they are examined at different parts of the chest or neck: thus, in the latter region, the sound heard is called *tracheal* respiration;

at the upper part of the sternum, *bronchial* respiration; while in other parts of the chest it is called *vesicular* respiration. Besides these,—the usual sounds heard when the parts are moistened by their natural secretions,—there are other sounds given out when there is an increased resistance offered to the passage of the air, either by a contraction of the part, or by the greater density of the fluids; these sounds are called *rhonchi*, or rattles, and are either dry or moist—dry, when the mucous membrane is swollen, or there is a constriction of the tubes; and moist, when fluids of a thinner consistency are collected in the several parts of the lungs.

Stethoscope, *Stethoscopic*, *a.* [Fr. *stéthoscopique*.] Pertaining, or relating, to a stethoscope; determined, or rendered, by means of a stethoscope.

Stetson, in *Maine*, a post-township of Penobscot co., 56 m. N.E. of Augusta.

Stettin, an important town and river-port of Prussia, cap. of Pomerania, on the left bank of the Oder, 36 m. above where it unites with the Baltic. The town communicates, by a bridge, with a suburb on the right side of the river, and is very strongly fortified. It is well-built, and is the most ancient, as well as the principal, town of Pomerania. S. is the seat of an extensive and growing commerce, and the principal port of importation in Prussia. *Pop.* (1897) 132,450.—Stettin Haft is an enlargement of the Oder immediately N. of Stettin; area, 200 sq. m. It receives several rivers, and has communication with the Baltic by three outlets.

Stettin, in *Wisconsin*, a post-township of Marathon county.

Steuken, FREDERIC WILLIAM AUGUSTUS, BARON, an officer of the American Revolution, b. in Magdeburg, Prussia, 1730. He came to America in 1777, and his offer of service was readily accepted. Having received the appointment of inspector-general, with the rank of major-general, he proved of efficient service to the American army, in establishing a system of discipline and tactics, a perfect knowledge of which he had acquired as an officer under Frederick the Great. As generous in character as he was capable as an officer, he spent his whole fortune in clothing his men, and gave his last dollar to the soldiers.

Fig. 2430. — BARON STEUBEN.

Congress made tardy reparation, and in 1790 voted him an annuity of \$2,500 and a township of land in the State of New York, both of which he divided with his fellow-officers. D. on his estate, near Utica, N. Y., 1794. In 1870, the corner-stone of a monument to his memory was laid at the Schützen Park.

Steuben, in *Illinois*, a township of Marshall co. *Pop.* (1897) 1,120.

Steuben, in *Indiana*, a N.E. co., bordering on Ohio and Michigan; area, 330 sq. m. *Rivers*. Pigeon and St. Joseph's. *Surface*, diversified; soil, generally fertile. *Products*. Wheat, corn, oats, hay, dairy products, and live stock. *Cap.* Angola. *Pop.* (1897) 15,670.

—A township of Warren co.

Steuben, in *Maine*, a post-township of Washington co., 110 m. N.E. of Augusta.

Steuben, in *New York*, a S.W. co., bordering on Pennsylvania; area, 1,490 sq. m. *Rivers*. Conhocton, Canisteo, Tioga, and Chemung. *Surface*, hilly; soil, fertile. *Min.* Iron, alum, and building-stone. *Caps.* Bath and Corn-*ing*. *Pop.* (1897) 88,730.

Steuben, in *Ohio*, a post-village of Huron co.

Steubenville, in *Indiana*, a village of Randolph co.

Steubenville, in *Ohio*, a city and river-port, cap. of Jefferson co., on the Ohio River, 35 m. S.W. of Pittsburgh, on the Cleveland and Pittsburg, and the P. C. & St. L. R. R. The latter crosses the river here on a bridge. *Manuf.* Extensive iron works are carried on, besides other manufactures. Bituminous coal is largely mined.

Steve, *v. a.* [Allied to *stow*.] To stow, as goods in a ship's hold.

Stevadore, *n.* One who is engaged in the loading and discharging of vessels; a lumper.

Stevens, THADDEUS, an American statesman and reformer, b. at Peacham, Caledonia co., Vt., 1793, graduated at Dartmouth College in 1814, removed to Pennsylvania, studied law, and was admitted to the bar in 1816. He was elected to the State Legislature in 1833, 1834, 1835, 1837, and 1841, was returned a member of the convention to revise the State constitution, but, being then, as always after, hostile to slavery, he refused to sign the document because it restricted suffrage on account of color. In 1848, he was elected to the Thirty-second Congress from the Lancaster district, and ardently opposed the repeal of the Missouri Compromise, the Fugitive Slave Law, and the Kansas-Nebraska Bill. In 1859, Mr. S. was again returned, and continued in Congress, by successive reëlections, and at the time of his death was serving his seventh term. In all these Congresses he was a recognized leader. Thoroughly radical in his views, hating slavery with all the intensity of his nature, believing it just, right, and expedient, not only to emancipate, but to arm the negro and make him a soldier, and after the war to make him a citizen and give him the ballot, he led off in all measures for effecting these ends. The Emancipation Proclamation was urged upon the President by him on all grounds of right, jus-

tice, and expediency; the Fourteenth Amendment to the Constitution was initiated and pressed by him. He advocated and carried, during the war, acts of confiscation, and proposed the most rigid and stern measures against the Southern people to the last day of his life. b. in Washington, 1868.

Stevens, in *North Dakota*, a W. central co.; area, 1,116 sq. m. Surface, rolling; a great portion of it rough. Indian reservation. Unorganized. Pop. 16.

Stevens, in *Washington*, a N. E. co., bordering on British Columbia. Rivers, Columbia, Wenatchee, and Okanagon. Surface, mountainous in the W., elsewhere undulating; soil, generally fertile. Cap. Fort Colville. Pop. (1897) 5,150.

Stevenson, in *Alabama*, a post-village of Jackson co., 38 m. W.S.W. of Chattanooga.

Stevenson, in *California*, a village of Merced co., about 30 m. W.S.W. of Snelling.

Stevens Point, in *Wisconsin*, a manufacturing city, cap. of Portage co., on Wisconsin Central R. R., 158 m. N.W. of Milwaukee. Pop. (1895) 8,995.

Stevenson, in *Wisconsin*, a post-village of La Crosse co., abt. 20 m. N. of La Crosse.

Stevensville, in *Pennsylvania*, a post-village of Bradford co.

Stevensville, in *Virginia*, a post-village of King and Queen co., 31 m. N.E. of Richmond.

Stew, (*stū*), v. a. [Fr. *étuver*; It. *stufare*; Sp. *estufar*, to stew.] To seethe or gently boil; to boil slowly in a moderate manner, or with a simmering heat; as, to *stew* meat or vegetables.

—v. n. To be seethed in a slow, gentle manner, or in heat and moisture.

—n. [Fr. *étuvé*, stewed meat; A.S. *stofa*, a stove.] A hot place;—hence, a bagnio; a brothel.—A dish that has been cooked by stewing; as, an oyster *stew*, Irish *stew*, &c.—A state of bewilderment, confusion, difficulty, or worry; as, In case of failure, what a *stew* shall I be in!

Steward, (*stū'ard*), n. [A.S. *steward*.] One who manages the domestic concerns of a large family; as, a house *steward*.—A land-agent; one who has the control and charge of a large estate; in Scotland, a factor.—In England, an officer who superintends the concerns of the kitchen in colleges.—A fiscal manager of certain bodies or institutions; as, the *steward* of a hospital.

(Naut.) An officer on shipboard who has the management of the table and of serving the provisions.

Steward, Lord High, of England, anciently the first officer of state; it was hereditary in the family of Hugh Grentmesnil, who was Lord High Steward in the reign of Henry II.; it passed by marriage to the Earls of Leicester, and reverted to the crown in 1265 on the death and attainder of Simon de Montfort; it was then granted to the son of Henry III. Since the reign of Henry IV., who at his succession held the position, it has fallen into abeyance. A temporary *Lord High Steward* is appointed at coronations and at trials of peers.

Steward, High, of Scotland, was formerly an office of great dignity, dating back from the 12th to the 15th cent. It was hereditary, and became the origin of the royal family name of Stewart or Stuart, by the accession of Robert, the 7th high Steward, to the Scottish throne. In 1469 the title of high Steward of Scotland, became a title of the eldest son of the king, hence is now taken by the Prince of Wales.

Stewardess, n. A female attendant on shipboard.

Stewart, ALEXANDER, a Scottish clergyman and author, b. 1781. Among his works are, *Cornelius Nepos, with Notes*, &c., 1819; *Compendium of Modern History*, &c. d. 1862.

Stewart, ALEXANDER TURNER, an American merchant, b. in Ireland 1802, educated for the ministry, and was a man of considerable literary attainment. He came to New York, in 1819, with very little means, and taught school for a time. In 1823 he started his business career as a retail dry-goods merchant with a capital of less than \$1,500; from this small beginning his business extended into one of the largest mercantile houses in the world. He projected the Working-Women's Home, upon which several millions were spent in erecting buildings; the project was abandoned, after his death, as a failure, and the edifice turned into a hotel. d. 1876.

Stewart, CHARLES, an English oriental scholar, b. 1770, edited several works on Eastern literature, *History of Bengal*, 1813, &c. d. 1840.

Stewart, CHARLES, an American naval officer, b. in Philadelphia, 1778, was sent to sea, at the age of thirteen, as a cabin boy, rose rapidly to the position of captain in the merchant marine, and entered the service of the U. S. as a lieutenant in 1798. As commander of the brig *Siren* he participated in the celebrated bombardment of Tripoli, Aug. 3, 1804, and received the praise of Decatur for his gallantry on that occasion. In 1806, he was promoted to the rank of captain. In 1812, he was placed in command of the frigate *Constitution*, and during the year following, though closely pressed by the British fleet, succeeded in eluding the enemy and bringing his ship safely to Norfolk. Subsequently he put to sea on a cruise, which was barren of result until the 20th of Feb., 1815, when he fell in with the British ships *Cyane* and *Levant*, and although they were vastly superior to the frigate, promptly attacked them. A severe engagement in the moonlight, lasting three hours, took place, at the end of which both vessels of the enemy struck their colors and surrendered, having been badly damaged, and losing 77 men in killed and wounded. The *Constitution* was but little injured, so admirably was she managed. Her loss was but 3 killed and 12 wounded. The news of this glorious feat was received with the wildest manifestations of joy by the people of the U. S. On the return home of Capt. S., numerous honors were

paid him. The Common Council of New York gave him the freedom of the city in a gold box, and the State of Pennsylvania presented him with a gold-bilted sword, and officially thanked him for the victory. Congress also voted him the thanks of the nation, together with a gold medal commemorative of his exploit, which was, undoubtedly, one of the most brilliant in our naval history. Capt. S. continued in active service till 1843, when he was placed on the retired list. In 1862 he was commissioned a rear-admiral, and d. Nov. 7, 1869.

Stewart, DUGALD, a Scotch philosopher, b. at Edinburgh, 1753, received his education at the University of Glasgow, under Reid. In 1785, he was called to the chair of Moral Philosophy, previously filled by Ferguson. This post he held till 1810, when failing health compelled him to resign. S. was very popular as a professor and lecturer; his teaching, like his master's, was a protest against the extreme results of the sensualist philosophy. He first appeared as an author in 1792, when he published the first volume of his *Elements of the Philosophy of the Human Mind*. The second did not appear till 1814, and the third followed in 1827. Among his other works are, *Philosophical Essays*, which passed through several editions; *Outlines of Moral Philosophy*, a preliminary dissertation, for the "Encyclopædia Britannica" on the progress of Metaphysical, Ethical, and Political Science, which appeared in two parts in 1815 and 1821, and had a great run for a time; and biographies of Adam Smith, Dr. Reid, and Dr. Robertson. d. 1828.

Stewart, in *Georgia*, a W.S.W. co., bordering on Alabama; area, 450 sq. m. Rivers, Chattahoochee River, and Hannahatchee, Kinchafona, and Pataula creeks. Surface, diversified; soil, fertile. Cap. Lumpkin. Pop. (1897) 16,260.

Stewart, in *Pennsylvania*, a township of Fayette county.

Stewart, in *Tennessee*, a N.N.W. co., bordering on Kentucky; area, 500 sq. m. Rivers, Cumberland and Tennessee. Surface, diversified; soil, generally fertile. Cap. Dover. Pop. (1897) 13,130.

Stewart Islands, a group in the Pacific Ocean.—Also, an island of New Zealand.

Stewartsburg, in *Tennessee*, a village of Rutherford co., 20 m. S.E. of Nashville.

Stewart's Fork, a river of Texas, rises in Cook co., and falls into the W. Fork of Trinity River in Tarrant co.

Stewart's Mills, in *Illinois*, a village of Crawford co.

Stewartson, in *Pennsylvania*, a township of Potter co.

Stewartstown, in *New Hampshire*, a post-township of Coos co., 130 m. N. of Concord.

Stewartstown, in *Pennsylvania*, a village of Alleghany co., 5 m. N.E. of Pittsburgh.

Stewartstown, in *W. Virginia*, a post-village of Monongalia co.

Stewartsville, in *Minnesota*, a post-village of Olmsted co., abt. 13 m. S. of Rochester.

Stewartsville, in *Missouri*, a post-town of De Kalb co., 21 m. E. of St. Joseph.

Stewartsville, in *New Jersey*, a post-village of Warren co., about 10 m. S. of Belvidere.

Stewartsville, in *North Carolina*, a township of Richmond co., 107 m. S.W. of Raleigh.

Stewartsville, in *Pennsylvania*, a village of Westmoreland co., 19 m. E.S.E. of Pittsburgh.

Stewish, a. Smiting a stew, bagnio, or brothel.

Steyer, (*stīre*), a town of Upper Austria, at the confluence of the rivers Steyer and Enns, 19 m. from Linz. Manuf. Cotton and woollens, but chiefly iron goods. Pop. 11,740.

Sthenic, a. [From Gr. *sthenos*, strength.] (*Med.*) Applied to one of those diseases which are the result of inflammatory or increased action, as opposed to *asthenic*, or diseases of debility.

Stiacciato, (*stē-at-chā'to*), n. [It.] (*Sculp.*) A very low relief adopted by sculptors for works which could be allowed little projection from the surface or base line chosen.

Stibnite, n. [Lat. *stibium*.] (*Min.*) A native telluride of antimony, occurring in long prismatic or acicular crystals, or in fibrous form, of a lead-gray color inclining to steel-gray, and sometimes with an iridescent tarnish. It is the ore from which most of the antimony of commerce is obtained. Comp. Antimony 72.88, sulphur 27.12 = 100.

Sticcardo, n. (*Mus.*) An instrument consisting of small lengths of wood, flat at the bottom and rounded at the top, and resting on the edges of a kind of open box. They are unequal in size, gradually increasing from the smallest to the largest, and are tuned to the diatonic scale.

Stich, (*stīck*), n. [Gr. *stichos*, a row, line.] A verse, of whatever measure or number of feet. (o.)—A line in the Scriptures. (o.)—An American localism for a stitch of land.

Stichometry, n. [Gr. *stichos*, and *metron*, measure.] Measurement of books, as ascertained by their lineal contents.—A division of the text of a book into lines.

Stick, n. [A.S. *sticca*.] A piece of wood, long, slender, and pointed, or tapering to a point, originally used as a goad.—The small shoot or branch of a tree or shrub cut off; a rod; a staff.—Any stem of a tree, of any size, cut for fuel or timber.—Anything in the form of a stick; as, a *stick* of sealing-wax.—A stab; a prod; a thrust with a sharp-pointed instrument.

(Print.) See COMPOSING.

—v. a. (*imp.* and *pp.* STUCK.) [Dan. *stikke*.] To pierce or prod with a pointed instrument; to stab; to puncture; hence, to slay by piercing; as, to *stick* an ox in slaughter.—To infix; to thrust in; to fasten or cause to re-

main by piercing; as, to *stick* a pin in one's scarf.—To set; to fix in.—To set with something sharp or pointed; as, to *stick* cards.—To fix on the point of a weapon or instrument; as, to *stick* a potato on a fork, pig-sticking, &c.—To cause to attach by adhesive application; as, to *stick* plaster on a cut finger.

Stick, v. a. (*Print.*) To arrange in a composing-stick; as, to *stick* type;—used in a colloquial sense.

To *stick out*, to cause to project or appear prominent.

—v. n. To adhere; to hold to by cleaving to the surface, as by tenacity or attraction; as, tar *sticks* to the fingers.—Hence, to stay or remain fixed or united; to cling fast to, as something reproachful; to abide; to rest with the memory; as, a nickname often *sticks* to a person.—To be impeded by adhesion or obstruction; to be stopped or hindered from proceeding; to be arrested in a course; to stop; to be prevented from making progress; as, the answer *stuck* in his throat, a cart-wheel *sticks* in the mud.—To hesitate; to be embarrassed, perplexed, or puzzled; as, to *stick* in a dilemma.—To cause difficulties, scruples, or doubts; to entertain hesitancy; as, he is a man who *sticks* at nothing to gain his ends.—To be closely allied; to adhere in intimate friendship and affection; as, old friends ought to *stick* together.—To *stick by*, to be firm and steadfast in adhesion or support; as, he *stuck by* his party to the last.—To be irksome by adherence; as, sad memories sometimes *stick by* one.—To *stick to*, to be constant and resolute in keeping or adhering to; as, he *sticks* to his word.—To *stick upon*, to dwell upon; not to discard or forsake; as, an unavenged insult *sticks upon* the memory.—To *stick in one's gizzard*, figuratively, to be retained in the thoughts, as something disagreeable or unpalatable; as, the necessity for a woman to hold her tongue on occasions is apt to *stick in her gizzard*. (Colloq.)

Sticker, n. One who, or that which, sticks.—A curt, pointed remark intended to snub or put down an offensive person. (Colloq.)—In the U. States, an article of merchandise which hangs on hand, and does not meet with a ready sale.

Stickiness, n. State or quality of being sticky; glutinousness; adhesiveness; viscosity; tenacity; as, the *stickiness* of gum.

Stick'ing-plaster, n. An adhesive plaster for closing wounds, cuts, &c.; court-plaster.

Stickle, (*stīk'l*), v. n. [From the practice of pugilists, who formerly placed seconds with *sticks* or *staves*, to interpose occasionally.]—To espouse or take part with one side or the other.—To contend, dispute, contest, or altercation, in an intrusive manner, on frivolous grounds; as, to *stickle* for precedence.—To trim; to play fast and loose; to go turn about from one side to the other.

Stickleback, n. (*Zoöl.*) The common name of the genus *Gasterosteus*, comprising acanthopterygious fishes, consisting of many species, several of which are American, which differ principally in their number of spines, and are named accordingly. They are seldom above 2½ inches in length.

Fig. 2431.
THREE-SPINED STICKLEBACK,
(*Gasterosteus aculeatus*.)

Stick'ler, n. Originally, a sidesman to fencers or pugilists; a second; an umpire in an affair of honor.—Specifically, one who obstinately contends for some frivolous thing; as, old maids are *sticklers* for fine-drawn propriety.

Stick'y, a. (*comp.* STICKIER; *superl.* STICKEST.) Having the quality of sticking, or of adhering to a surface; adhesive; viscous; gluey; gummy; viscid; tenacious; glutinous.

Sticta, n. (*Bot.*) A genus of lichens. *S. pulmonaria*, commonly known as Tree Lung-wort, or Oak-lungs, possesses tonic and nutritious properties. In Liberia it is used instead of hops for imparting bitterness to beer. A brown dye is produced from it in France.

Stierne, (*stīer-ne*), two islands of Norway, one at the entrance of the Skager-Rack, and the other in Finmark, between Altengaard and Hammerfest.

Stiff, n. In England, a cant term for a bank-note; as, a bit of *stiff*.

—a. (*comp.* STIFFER; *superl.* STIFFEST.) [A.S. *stif*.] Rigid; strong; inflexible; not ductile or pliant; not flaccid; not easily bent, as, *stiff* paper.—Not soft nor hard; not liquid or fluid; inspissated; as, a *stiff* paste.—Violent; strong; sustained in impetuous motion; as, it blows a *stiff* gale.—Pertinacious; stubborn; obstinate; resolute; not easily shaken or subdued; firm in perseverance or resistance; as, a man of *stiff* opinions or prejudices, they made a *stiff* fight of it, &c.—Constrained; affected; not natural and easy; harsh or formal in manner; starched; stuck-up; as, he maintained a *stiff* reserve.

(Naut.) Supporting a press of canvas without rolling much, as a ship;—the antithesis of *crank*.

Stiffen, (*stīf'n*), v. a. [A.S. *stifian*; Ger. *stiefen*.] To make stiff or rigid; to make less pliant, ductile, or flexible; as, to *stiffen* linen with starch.—To make more thick or viscous; to inspissate; as, to *stiffen* putty.—To make torpid; as, "*stiffening* grief." (*Dryden*).—To make more steady, in order to maintain the due equilibrium; as, to *stiffen* a ship.

—v. n. To become stiff; to become more rigid or less pliant or flexible; as, boxing *stiffens* one's biceps muscles.—To be inspissated; to become more thick or hard, or less soft; as, milk *stiffens* by coagulation.—To grow more pertinacious or obstinate; to become less ductile, tender, or yielding; to become less susceptible of impression; as, adversity *stiffens* some natures.

Stiffening, *n.* Something that is applied to a substance to make it more rigid or less soft.

Stiffening-order, *n.* (*Com.*) A permission granted by the department of customs to take on board heavy goods as ballast, to steady the ship.

Stiff Joint, (*Med.*) See **CONTRACTURA**.

Stiffly, *adv.* Firmly; strongly; rigidly; obstinately.

Stiff-necked, (*-neckt*), *a.* Stubborn; contumacious; inflexibly obstinate; unyielding.

Stiffness, *n.* State or quality of being stiff; rigidity; lack of ductility, pliability, or flexibility; the firm texture or consistence of a substance which renders it difficult to bend; as, the *stiffness* of teak timber. — Thickness; spissitude; a state or condition of being neither hard nor soft; as, the *stiffness* of liquid glue. — Tension; not laxity; as, the *stiffness* of a rope. — Inaptitude to motion; torpidness; as, *stiffness* of the limbs from intense cold. — Rigorosity; harshness; severity; as, *stiffness* of punishment. — Obstinacy; stubbornness; inflexibility; contumaciousness; as, *stiffness* of temper, *stiffness* of prejudice. — Formality of manner; constraint; assumed or affected preciseness; as, *stiffness* of etiquette. — Affected, constrained, or stilted manner of speech or writing; want of fluency, or of natural simplicity and ease; as, *stiffness* of epistolary style.

Stifle, (*stīfl*), *v. a.* [*Fr. étouffer.*] To choke; to suffocate; to stop, as the breath or action of the lungs, by crowding something, as smoke, into the wind-pipe, or by infusing a substance into the lungs, or by other means; as, to *stifle* one with dust. — To stop; to quench; to smother; to deaden; to extinguish; as, to *stifle* a fire. — To suppress; to hinder from transpiring or spreading; to check, or restrain and destroy; to suppress or repress; to conceal; to withhold from manifestation or publicity; as, to *stifle* a report, to *stifle* evidence, to *stifle* one's passion or conscience, &c.

— *n.* (*Far.*) That joint in a horse's hind-leg which corresponds to the knee in man. — A disease in the knee-pan of a horse. — *Stifle-bone*, a small bone in the hind-leg of a horse which corresponds to the knee-pan in man.

Stigliano, (*steel-ye-a'no*), a town of S. Italy, 28 m. from Matera; pop. 5,115.

Stigma, *n.*; *pl.* **STIGMATA**. [*Lat.*; *Gr.* from *stizō*, to prick.] A brand; a tattoo; a mark made with a burning iron. — Hence, any mark or sign of infamy; any reproachful act or course of conduct which sullies the purity of moral character or reputation; as, the *stigma* of treachery or cowardice.

(*Path.*) A small red pustule on the skin.

(*Bot.*) The upper extremity of the style without a cuticle, in consequence of which it has almost uniformly a humid and papillose surface (Fig. 2014). It is the part upon which the pollen, when it falls thereon, is stimulated into the production of the pollen tubes, which are indispensable to the act of impregnation.

— *pl.* (*Zoöl.*) The spiracles.

(*Theol.*) In the Roman Catholic Church, the term applied to the marks of the wounds of the Saviour on the cross.

Stigmatie, **Stigmatieal**, *a.* Marked or branded with a stigma, or other indelible token of reproach or disgrace. — Impressing with reproach or infamy.

(*Bot.*) Pertaining, or having reference, to the stigma.

Stigmatize, *v. a.* [*Fr. stigmatiser*, from *Gr. stigmatizō*, to brand.] To mark with a brand or stigma. — To set a mark of shame or disgrace on; to impress with some sign or token of reproach or infamy; as, he was *stigmatized* as a traitor.

Stigmatose, *a.* (*Bot.*) Pertaining, or relating, to the stigma.

Stilaginaceae, (*stil-ai-jin-ai'se-e*), *n.* (*Bot.*) The *Stilago* family, an order of plants, alliance *Urticales*, consisting of trees or shrubs, with alternate simple leathery leaves, having deciduous stipules, minute unisexual flowers, growing in scaly spikes, and drupaceous fruits. There are 5 genera and about 20 species, natives of Madagascar and India. Their fruits are commonly sub-acid and edible.

Stylar, **Stylar**, *a.* Belonging, or having reference to, a sun-dial.

Stilbaceae, (*stil-bai'se-e*), *n.* (*Bot.*) A small order of plants, alliance *Gentianales*. There are 3 genera and 7 species, natives of the Cape of Good Hope. They are shrubby plants, without any known uses.

Stilbite, *n.* [*From Gr. stilbein*, to shine.] (*Min.*) An anhydrous lime-oligoclase, composed of 58.2 per cent. of silica, 16.1 alumina, 8.8 lime, and 16.9 water. It generally occurs in broad prismatic crystals, clustered into sheaf-like aggregations and diverging groups; also, massive and in fibrous aggregates. It is white, but sometimes yellow, gray, red, or brown, with a vitreous lustre, and is translucent to transparent at the edges.

Stile, *n.* [*A. S. stigel.*] A step, or a set of steps, for ascending and descending, in passing a wall, hedge, or fence.

(*Arch.*) The upright piece in panelling or framework.

(*Dialling.*) See **STYLE**.

Stiles, in *Wisconsin*, a post-township of Oconto co.; pop. abt. 900.

Stilesville, in *Indiana*, a post-village of Hendricks co., 27 m. S.W. of Indianapolis.

Stiletto, *n.* [*It.*, dim. of *stila*, a dagger; *Lat. stilus*.] A small, round, pointed dagger; a dirk. — A kind of bodkin or pointed instrument for making eyelet-holes, in working lace, &c.

— *v. a.* To apply a stiletto to; to stab with a stiletto.

Stilicho, **FLAVIUS**, (*stil'i-ko*), a Vandal of great genius and bravery, who distinguished himself at the declining period of the Roman empire, was advanced to the highest

dignities of the state by Theodosius the Great, and married Serena, the Emperor's adopted daughter, besides being intrusted, in 394, with the guardianship of his two sons, Arcadius and Honorius. On the division of the empire, S. became virtual governor of the West, in the character of first minister to Honorius, while the same power in the East was exercised by Rufinus, under Arcadius, the other emperor. The military genius of S., after this period, was exhibited in the reduction of Africa, which had been led into a revolt by Eutropius, the successor of Rufinus at the Eastern court, and subsequently in the great contests with Alaric and Radagaisus. In the year 403 he routed the former near Verona, and in 406 put the hosts of the latter to flight, and killed their commander. While S. lived he sustained the fortunes of the Roman name, but he was accused of having a secret understanding with Alaric, and treacherously put to death in 408. The wives and children of 30,000 Germans who were in his service were massacred at the same time.

Still, *v. a.* [*A. S. stillan, gestillan*, to be mute or quiet.] To silence; to hush; to put a stop to, as noise. — To put a stop to, as motion, turmoil, or agitation; to lull; to make quiet; as, to *still* a tempest. — To pacify; to appease; to allay; to calm, as turbulence, agitation, or excitement; as, to *still* the emotions.

— *a.* (*comp.* **STILLER**; *superl.* **STILLEST**.) Silent; hushed; uttering no sound; as, his wife's tongue is *still* for once.

— *Calm*; quiet; tranquil; serene; not disturbed by noise or agitation; as, the air was *still*. — Motionless; as, to sit *still*.

— *n.* *Calm*; silence; repose; quietude; as, the *still* of night; — used only in poetry.

— *adv.* Till now; to this time; up to and during the time now present; as, I *still* believe him to be no fool. — Habitually; regularly; uniformly; continuously; always; as, he is *still* as good a fellow as I ever thought him. — By an increased degree; with additional efforts; as, more *still* was said about me. — Hence, nevertheless; notwithstanding; in spite of all and everything; — sometimes employed conjunctively; as, he *still* persists in getting inebriated now and then. — After that; after what is stated or declared; as, he felt it *still* to be a hardship.

— *v. a.* [*Lat. stillo*, to distil. See **DISTIL**.] To cause to fall in drops. — To effuse spirit from by heat, and to condense it in a refrigerator; to distil.

— *n.* See **DISTILLATION**.

Stillage, (*-lij*), *n.* A stand or framework for the support of casks.

Stillations, (*-lish-us*), *a.* Falling in drops; also, poured from a still.

Still-born, *n.* State of being born dead; a thing dead-born.

Still-born, *a.* Dead at the birth; as, a *still-born* child. — Abortive; as, a *still-born* project.

Still-burn, *v. a.* (*imp.* and *pp.* **STILL-BURNT**, or **STILL-BURNED**.) To burn during the process of distillation; as, to *still-burn* gin.

Still'er, *n.* One who, or that which, calms or quiets.

Still-house, *n.* A building in which distillation is carried on; a distillery.

Stilliform, *a.* Drop-shaped.

Still'ing, *n.* Act of calming, hushing, or quieting.

Still'ingia, *n.* (*Bot.*) A genus of the order *Euphorbiaceae*. The species *S. sebifera* is called the Chinese Tallow-tree, from its seeds being covered by a white sebaceous substance, which, when separated, is found to be a pure vegetable fat; it is used for making candles. *S. sylvatica*, Queen's root, is employed as an emetic, cathartic, and alterative.

Still-life, *n.* (*Paint.*) A term applied to that class of pictures representing fruit, flowers, groups of furniture, dead game, or a variety of other articles which generally form adjuncts to a picture only, and none of which have animate existence.

Stillness, *n.* State of being still; freedom from noise, motion, agitation, excitement, perturbation, and the like; calmness; quiet; silence; hush; as, the *stillness* of the midnight hour. — Taciturnity; habitual silence.

Still-room, *n.* An apartment in which distillation is carried on. — A room in a house where liquors, conserves, and similar delicacies are kept.

Still Valley, in *New Jersey*, a post-village of Warren co., 13 m. S.W. of Belvidere.

Stillwater, in *Maine*, a post-office of Penobscot co.

Stillwater, in *Minnesota*, an important city, cap. of Washington co., on St. Croix river and 5 R. Rs., 20 m. E.N.E. of St. Paul. Pop. (1895) 12,004.

Stillwater, in *New Jersey*, a post-village and township of Sussex co., 60 m. N.W. of Trenton.

Stillwater, in *New York*, a post-village and township of Saratoga county, on the Hudson, 24 miles North of Albany.

S. Battle of. See **SARATOGA SPRINGS**.

Stillwater Creek, in *Ohio*, rises in Darke co., and flowing S.E. unites with Greenville in Miami co. — A creek which rises in Belmont co., and flows N.W. into the Tuscarawas.

Stilly, *a.* Still; calm; quiet; tranquil; as, the *stilly* night.

— *adv.* Silently; without noise or sound. — Quietly; calmly; tranquilly; without disturbance.

Stilpnomelane, *n.* [*Gr. stilpnos*, beaming, and *melanos*, black.] (*Min.*) A hydrated silicate of alumina and protoxide of iron, which occurs in blackish-green masses, with a granular or radiating and filiated structure, in *Silesia*.

Stilpnosed/rite, *n.* [*Gr. stilpnos*, shining, and *sideros*, iron.] (*Min.*) Same as **LIMONITE**, *q. v.*

Stilt, *n.* [*Du. stelt*; *Swed. stylta*; allied to *A. S. styla*, to

mount, climb.] A prop or support for the foot; a long pole of wood, often with a shoulder, to raise the foot above the ground in walking; a crutch; — generally in the plural; as, to walk on *stilts*. — A root which is elevated above the surface of the ground.

Stilt, *v. a.* To elevate; to raise on stilts. — To raise by unnatural means.

Stilt'-bird, *n.* (*Zoöl.*) See **HIMANTOPUS**.

Stilt'-ed, *p. a.* Elevated as if on stilts; — hence, unreasonably or ridiculously uplifted; pompous; grandiose; stilted; as, *stilted* language, a *stilted* style.

Stiltify, *v. a.* To stilt; to raise or elevate as if upon stilts; as, to *stiltify* words.

Stilt'y, *a.* Radically the same as **STILTED**, *q. v.*

Stimulant, *a.* [*Fr.*, from *Lat. stimulan.*] Tending to stimulate.

— *n.* That which stimulates, provokes, or excites; as, hope is a *stimulant* to success.

(*Med.*) Any agent which produces a quickly-diffused and transient increase of vital energy and force of action in the heart and arterial system.

Stimulate, *v. a.* [*Lat. stimulo, stimulatum*, to urge on, from *stimulus*, a goad.] To rouse up; to urge on; to excite to action or more vigorous exertion by some powerful motive, or by dint of persuasion; as, to *stimulate* one by the promise of reward.

(*Med.*) To produce an exaltation of vital force and activity in the animal system.

Stimulation, (*-li'shun*), *n.* [*Lat. stimulatio*.] Act of stimulating or exciting to effort.

(*Med.*) An increase of organic action in the animal system.

Stimulative, *a.* Having the property of stimulating.

— *n.* That which stimulates; that which excites into more vigorous action.

Stimulator, *n.* One who stimulates.

Stimulus, *n.*; *pl.* **STIMULI**. [*Lat.*] A goad; — hence, by implication, something that stirs up the mind or spirits; as, the hope of future fame is a powerful *stimulus* to a young author.

(*Med.*) Same as **STIMULANT**, *q. v.*

Stinesville, in *Indiana*, a post-village of Monroe co., 14 m. N.N.W. of Bloomington.

Sting, *v. a.* (*imp.* and *pp.* **STUNG**.) [*A. S. stingan*, to stab.] To pierce with the sharp-pointed process with which certain animals are furnished, such as bees, mosquitoes, scorpions, and the like. — To pain acutely; to pierce with mental anguish; as, his vanity was *stung* by the taunt.

— *n.* [*A. S.* and *Dan.*] A sharp-pointed instrument by which certain animals, especially the females of hymenopterous insects, are armed by nature for their defence. — Act of stinging; — also, the thrust of a sting into the flesh; as, the *sting* of a scorpion. — That which causes acute mental pain or mortification; as, the *stings* of self-reproach. — The gist or point of an epigram, retort, satire, and the like; as, the *sting* of a lampoon, the *sting* of a piece of invective.

Stinger, *n.* One who, or that which, stings, or causes acute pain. — A sharp retort; a biting sarcasm.

Stingily, (*stin'jy*), *adv.* [*From stingy*.] In a stingy or niggardly manner; with mean parsimoniousness.

Stinginess, (*stin'ji*), *n.* [*From stingy*.] Quality of being stingy; niggardliness; extreme parsimoniousness; mean avarice or sordidness.

Stingless, *a.* Destitute of a sting; as, a *stingless* serpent, a *stingless* satire.

Stingo, *n.* [*From sting*, owing to the pungency of the taste.] In England, a term applied colloquially to old and strong ale; as, a pint of the real *stingo*.

Sting'-ray, *n.* See **TRYGON**.

Stingy, *a.* Possessing stinging or pain-giving properties; as, a *stingy* taunt, a *stingy* critique.

Stingy, (*stin'jy*), *a.* (*comp.* **STINGIER**; *superl.* **STINGIEST**.) [*W. ystanger*, to straiten.] Strait or close-fisted; meanly close and covetous; extremely avaricious or sordid; niggardly; narrow-hearted; as, a *stingy* fellow.

Stink, (*stink*), *v. n.* (*imp.* **STANK**, or **STUNK**; *pp.* **STUNK**.) [*A. S. stincan*, to perfume.] To emit a strong, offensive smell, commonly a smell of putrefaction.

— *n.* A strong, offensive smell.

Stinkard, *n.* A mean, stinking, paltry fellow.

(*Zoöl.*) The *Mydaus meliops* of Cuvier, a carnivorous animal of the Weasel family, allied to the skunk, and emitting, when disturbed, an almost intolerable odor from the anal glands.

Stink'-pot, *n.* An earthen jar, charged with materials of an offensive and suffocating smell, sometimes used in boarding an enemy's vessel.

Stinkstone, *n.* (*Min.*) A bituminous carbonate of lime, which exhales a fetid smell, like that of sulphuretted hydrogen gas, when rubbed or crushed.

Stint, *v. a.* [*A different form of stunt*.] To shorten; to curtail; to restrain within certain limits; to bound; to confine; to limit. — To assign a task or piece of work to; to be performed in a definite time. (U.S.)

— *n.* Limit; bound; restraint. — A portion or quantity assigned. — An allotted task or performance.

Stint'edness, *n.* State of being stinted.

Stint'er, *n.* He who, or that which, stints or cramps.

Stint'ing, *n.* Act of restraining or confining.

Stipa, *n.* [*Lat.*, a foot-stalk.] The Feather-grass, a genus of plants, order *Graminaceae*. The Rush-leaved Feather-grass of the West, is abt. 2 ft. high, has a pungent stripe, which, when in fruit, adheres to all that comes in its way. An immense quantity is used in paper-making; known in commerce as Alfa or Esparta grass.

Stipe, *n.* [*Fr.* from *Gr. stypos*.] (*Bot.*) The stem of a fungus or mushroom. — The stalk of a pistil. — The base of a frond, as of a fern.

Stipel, *n.* (*Bot.*) The stipule of a leaflet.

Stipel/late, *a.* (*Bot.*) Having stipels.

Stipend, *n.* [*Lat. stipendium.*] Allowance; salary; wages; settled pay for services, whether daily, weekly, or monthly wages, or an annual salary.

Stipendiary, *a.* [*Lat. stipendiarius.*] Receiving stipend, wages, or salary; performing services for a stated price or rate of compensation.

—*n.* One who performs services for a stipend or settled compensation, either by the day, month, or year.

Stipendiate, *v. a.* [*Lat. stipendiari—atum.*] To provide with a stipend.

Stipendless, *a.* Lacking a stipend or compensation.

Stipple, (*stip/pl.*) *v. a.* [*Du. stippelen, to dot.*] To engrave by means of dots, as distinguished from engraving in lines.

—*n.* A mode of engraving in imitation of chalk drawings, in which the effect is produced by dots instead of lines; each dot when magnified is, however, a group of smaller ones.

Stippling, *n.* (*Fine Arts.*) In engraving and miniature-painting, a mode of execution whereby the effect is produced by a succession of dots or small points instead of lines.

Stipulate, *v. n.* [*Lat. stipulor, stipulatus.*] To contract; to state or settle terms; to bargain; to engage; to make an agreement or a covenant with any person, or company of persons, to do or forbear anything.

—*a.* Having stipules; as, a stipulate leaf.

Stipulation, (*-lā'shun.*) *n.* [*Fr.; Lat. stipulatio.*] Act of stipulating, or of agreeing and covenanting; a contracting or bargaining.—An agreement or covenant made by one person with another for the performance or forbearance of some act; a contract or bargain.

(*Law.*) A material article of an agreement.

(*Bot.*) The position and structure of the stipule.

Stipulator, *n.* One who stipulates, contracts, or covenants.

Stipule, *n.* [*Fr.; Lat. stipula.*] (*Bot.*) See LEAF.

Stir, (*imp. and pp. STIRRED.*) (*stér.d.*) [*A. S. styran, gestyran; Ger. stören.*] To move; to change the place of in any manner; as, to stir the hand or foot.—To bring into action; to agitate; to disturb; to move into debate; as, to stir a controversial question.—To incite; to rouse; to stimulate; to provoke; to prompt; to instigate; as, to stir the passions.

To stir up, to disturb; as, to stir up the lecs of wine.

—To animate or excite thoroughly; as, to stir up troops

to mutiny.—To begin; to put into action; as, to stir up

strife or discord.—To quicken; to enliven; to make

more sprightly or vigorous; as, to stir up the ideas.

—*v. n.* To move one's self; to go or be carried in any manner; to change one's position; not to be still; as, he had not power to stir.—To be active; to be in motion.—To become the object of notice, remark, or observation.—To rise in the morning; as, the inmates were not yet stirring. (*Colloq.*)

—*n.* Commotion; agitation; tumult; bustle; noise or various movements; as, what is all this stir about?—Seditious uproar; tumultuous strife or commotion; popular turbulence or disturbance; as, certain demagogues raised a public stir.—Agitation of thoughts; conflicting passions.

Stirabout, *n.* In England, an appellation given to oatmeal-porridge, or thickened water-gruel.

Stir/iated, *a.* [*From Lat. stria, icicle.*] Furnished with pendants in the form of icicles.

Stirk, *n.* A young ox or heifer. (*Prov. Eng.*)

Stir/less, *a.* Without stirring; quiet; still.

Stirling, WILLIAM ALEXANDER, EARL OF, a British poet, b. 1580, published several tragedies and poems which were highly thought of. He obtained many royal favors, including a grant of Nova Scotia by James I., and of the lordship of Canada by Charles I.; was made Earl of Stirling in 1633. Died in 1640.

Stirling, a town of Scotland, cap. of a co. of the same name, and irregularly built on the sloping ridge of a rock, the precipitous end of which, towards the W., is occupied by a castle, 31 m. from Edinburgh. *Manuf.* Cotton and woollen goods, &c. *Pop.* 10,563.

Stirling, in Minnesota, a village of Mille Lacs co., on Lake Mille Lacs, abt. 60 m. N.N.E. of St. Cloud.

Stir/er, *n.* One who, or that which, stirs, or is in motion.—One who, or that which, puts in motion.—A riser in the morning.—An inciter or exciter; an agitator; an instigator; as, a stirrer of the will or passions.

Stir/ing, *n.* Act of moving or putting in motion.

Stirrup, (*stér/rup.*) *n.* [*A. S. stirap, stige-rap.*] An iron hoop or rest, suspended from the saddle by a strap, in which the horseman sets his foot when he mounts or rides.

(*Mach.*) That which resembles in shape and functional office the stirrup of a saddle.

(*Naut.*) A rope secured to a yard, with a thimble in its lower end, for reeving a foot-rope.

Stirrup-cup, *n.* A parting cup of liquor taken by a horseman in the saddle.

Stirrup-iron, (*-t'urn.*) *n.* The hoop or ring of steel or iron depending from the stirrup-strap to receive the foot.

Stirrup-leather, **Stirrup-strap**, *n.* The leathern strap which sustains a stirrup.

Stitch, *v. a.* [*A. S. stician, to pierce.*] To form stitches in; to pierce with a needle, as cloth; to sew with a back puncture of the needle, so as to double the thread; as, to stitch a garment.—To sew or unite together; as, to stitch leaves of printed matter into the form of a book or pamphlet.

(*Agric.*) To set land into ridges.

To stitch up, to close up with a needle and thread; as, to stitch up a wound.

—*v. n.* To practise stitching.

Stitch, *n.* [*A. S. stice.*] A single thrust or pass of a needle in sewing; also, the loop or turn of the thread thus made.—A link of yarn; a single turn of the thread round a needle in knitting; as, to take up a stitch.—An acute, lancinating pain, like the puncture made by a needle; as, a stitch in the side.—A space between double furrows or ridges in ploughed land.

Stitch/el, *n.* A kind of hirsute wool.

Stitch/ery, *n.* Sewing; needlework, in contempt.

Stitch/ing, *n.* Act of one who stitches.—Work done by sewing in a particular manner.—The setting of laud into ridges and divisions.

Stith'y, *n.* An anvil; also, a smith's shop; a smithy.

Stive, *v. a.* [*Allied to Lat. stipare, and Gr. steibein.*] To stuff up close.—To make hot, close, or sultry.—To stew; to simmer; as, to stive vegetables.

Sti/ver, *n.* [*Du. stuiver.*] In Holland, a coin and money of account, equivalent to about two cents.

Stoak, *v. a.* (*Naut.*) To stop up; to choke.

Stoat, *n.* (*Zoöl.*) See ERMINE.

Stocca/do, *n.* [*Fr. estocade.*] A stab or thrust with a rapier or pointed sword; also, a stockade.

Stock, *n.* [*A. S. stoc, stocce, a trunk.*] That which is set or fixed, as a trunk; the stem or main body of a tree, shrub, or plant.—The stem in which a graft is inserted, and which is its support.—A post or pillar; something fixed, solid, and senseless; as, "Our fathers worshipped stocks and stones." (*Milton.*)—Hence, a person very stupid, dull, or senseless.—The chief supporting part, the part in which others become inserted, or to which they are attached; as, specifically, (1.) The part of a tool for boring wood with a crank, whose end rests against the breast of the workman. (2.) The wood in which the barrel of a musket or other fire-arm is fixed; also, a part of a gun-carriage. (3.) The piece of timber in which the shank of an anchor is infixed. (4.) A die-stock. (5.) The part of a tally struck in the Exchequer, forming the counterfoil.

—The original progenitor; also, family; lineage; race; the progenitors of a family line and their direct descendants; as, he comes of an old English stock.—A fixed fund; principal; capital; money or goods invested or employed in trade, manufactures, insurance, banking, &c.; money funded in government securities, called also the public funds.—Supply; provision; store; accumulation; as, a stock of commodities.—A kind of neck-cloth or stiffened cravat; as, a black silk stock.

(*Cookery.*) Meat boiled down for the making of gravies.

(*Agric.*) In farming phraseology, the animals maintained upon a farm are called live-stock, in contradistinction from the implements and carriages employed thereon, which are termed dead-stock.

(*Ship-building.*) The ways or frame-work of timbers on which a vessel rests while building, and from which she is launched.

(*Com.*) In book-keeping, the account in a ledger or stock-book which is credited with all sums or values contributed or added to the capital of the concern, and debited with whatever is at any time subtracted therefrom.

(*Bot.*) See MATTHIOLA.

—*pl.* In the U. States, property consisting of shares in joint-stock companies or corporations, or in the obligations of a government for its funded debt;—in England, the former are termed shares, and the latter only, stocks.—A machine consisting of two pieces of timber, in which holes were cut to receive the legs of culprits or criminals confined therein by way of punishment for petty offences. This mode of punishment, now disused, was formerly so common as to have given the ordinary name to a chain of any kind in several languages.

Paper stock, rags and other material for the manufacture of paper.

Stock in trade, the goods for sale kept on hand by a tradesman; the fittings and appliances of a workman; as, brains were his only stock in trade.—To take stock, to make an inventory of stock or goods on hand.

—*v. a.* To lay; to put aside for future use, as merchandise, &c.—To store; to supply; to fill with sufficient material requisites or appliances; as, to stock a shop, to stock a farm, &c.—To pack; to put into a pack, as cards.—To suffer to retain milk for a certain period before sale or transfer, as cows.—To place in the stocks. (*n.*)

To stock an anchor. (*Naut.*) To fit with a stock.—To stock down, to sow, as ploughed land with grass-seed.

—To stock up, to uproot; to dig up.

—*a.* Standard; permanent; fixed for use or constant service; as, a stock play, a stock writer or actor.

Stock, in Ohio, a twp. of Harrison co.; *pop.* abt. 1,000.

Stock/ade, **Stocca/do**, *n.* [*Fr. estocade.*] (*Civ. Engin.*) A defence for the banks of rivers exposed to the erosion of the current.

(*Fortif.*) A strong timber wall 8 or 9 feet high, loop-holed for musketry fire, and sometimes having a ditch in front and banquettes in rear.—A corral; an inclosure or pen made with posts and stakes; as, a stock/ade for horses or cattle.

—*v. a.* To surround or fortify with sharpened posts stuck in the ground; to defend or protect by means of a stockade.

Stock/-breeder, **Stock/-farmer**, **Stock/-raiser**, *n.* Same as GRAZIER, *q. v.*

Stock/bridge, in Massachusetts, a post-township of Berkshire co., 120 m. S.W. of Boston.

Stockbridge, in Michigan, a post-village and twp. of Ingham co., 30 m. S.E. of Lansing.

Stockbridge, in New York, a township of Madison co., 25 m. W.S.W. of Utica.

Stockbridge, in Vermont, a post-township of Windsor co., 36 m. S.W. of Montpelier.

Stockbridge, in Wisconsin, a post-village and town-

ship of Calumet county, about 22 miles N.E. of Foud du Lac.

Stock/-broker, *n.* A broker who deals in the purchase and sale of stocks or shares in the public funds.

Stock/ale, in Indiana, a post-village of Miami co., abt. 12 m. N.W. of Wabash.

Stock/-dove, *n.* (*Zoöl.*) The common Wild Pigeon, *Columba xenas*. From it, it was once supposed that most of the beautiful varieties of the *Columbidae*, which in a state of domestication are dependent upon man, derived their origin; hence the name *Stock-dove*. It is, however, now believed that the Rock-dove (*Col. livia*) is the parent stock. The *S.-D.* is 14 inches in length, the bill very pale, legs and feet red, claws black. Its native colors are much variegated, and the pigeon-fancier's art has been carried so far as to produce an almost endless variety of tints among the various domesticated species.

Stock/-exchange, (*-chānj.*) *n.* [*Fr. bourse.*] (*Com.*) A building or room in which stock-brokers meet to transact their business of purchasing or selling stocks. In large cities, as New York and London, the stock business is transacted through the medium of the members of the board of brokers, governed by rules and regulations made by themselves, to which all the members are obliged to subject themselves. Admission is procured by ballot, and a member defaulting in his obligations forfeits his seat. A regular register of all the transactions is kept by an officer of the association, and questions arising between the members are generally decided by an arbitration committee. The official record of sales is the best evidence of the price of any stock on any particular day. The stocks dealt in at the session of the board are those which are placed on the list by a regular vote of the assoc.; and when it is proposed to add a stock to the list, a committee is appointed to examine into the matter, and the board is generally guided by the report of such committee.

Stock/-fish, *n.* Unsalted cod dried in the sun.

Stock/-gold, *n.* Gold laid by to form a hoard or fund.

Stock/holder, *n.* [*Stock and holder.*] A shareholder or proprietor of stock in the public funds, or in the funds of a bank or commercial corporation.

Stock/holm, a celebrated city of the N. of Europe, the cap. of Sweden, at the junction of Lake Mælär with the Baltic, 440 m. W. by S. of St. Petersburg. *S.* is very strikingly situated, partly on a number of islands, at the entrance of the lake, and partly on the mainland, upon both sides of the strait. On the islands, and more particularly on those called *Stockholm* (Isle of the Castle), *Ridderholm* (Knight's Isle), and *Helgeands-holm* (Isle of the Holy Spirit), all so near each other that they are united by short bridges, stand the king's palace, the great cathedral, the bank, the hall of the diet, and most of the more conspicuous ornaments of the city; but the larger proportion of the private houses are built on the mainland, which on the N. side, called *Nörrmalm*, or N. suburbs, slopes gradually backwards from the shore; but on the S. side, on the *Södermalm*,

Fig. 2432.—STOCKHOLM.

rises in bold abrupt cliffs, where the white houses nestle beautifully among shading trees. *S.* is the principal emporium of Sweden. The entrance of the harbor from the Baltic is intricate; but the water is deep, and the harbor itself capacious and excellent, the largest vessels lying close to the quays. *Manuf.* Woollen cloths, cottons, linens, silk, glass, iron-works, &c. *Exp.* Iron, timber, and deals. *S.* has several distinguished academies, including the Academy of Sciences, founded about 1740, with an admirable museum of zoölogy; the Swedish Academy, founded by Gustavus III.; the Academy of Painting and Sculpture; that of literature, a college of medicine, schools of navigation and drawing, with societies of agriculture, commerce, and philosophy. *S.* was founded in the 13th century, and became cap. of Sweden in the 17th century. *Pop.* (1891) 243,500; (1897) about 267,260.

Stockholm, in New York, a post township of St. Lawrence co., 18 m. E.N.E. of Canton.

Stockholm, in Wisconsin, a post-village of Pepin co., on Lake Pepin, abt. 15 m. N.W. of Wabasha.

Stockholm Depot, in New York, a post-village of St. Lawrence co., 36 m. E. of Ogdensburg.

Stock/horn, a mountain of Switzerland, 18 m. from Bern. It has two conical peaks, one of which attains an elevation of 7,211 feet above the sea.

Stock/ing, *n.* A knitted or woven covering for the foot and leg; as, a pair of stockings.

Stock'ing-frame, n. A machine for weaving stockings, or other articles of hosiery.

Stock'ington, n. In *New Jersey*, a village of Salem co., 9 m. E. of Salem.

Stock'ish, a. Stupid; blockish; thick-headed; as, a *stockish* lout.

Stock'-jobber, n. One who dabbles or speculates in the public stocks or funds for gain; one whose occupation is to buy and sell stocks.

Stock'-jobbing, n. Act, art, or business of dabbling or dealing in stocks or the public funds.

Stock'-list, n. A list or register of the prices of public stocks.

Stock'-lock, n. A lock imbedded in a wooden case, box, or frame.

Stock'-market, n. A market for the buying and selling of cattle.
(*Com.*) Same as STOCK-EXCHANGE.

Stock'port, n. A market-town and borough of England, in Cheshire, on the Mersey, 7 m. from Manchester. *Manuf.* Principally cotton, silk, and woollen weaving, and machinery, brass and iron goods, brushes, and shuttles.

Stockport, n. In *New York*, a post-village and township of Columbia county, on the Hudson, 24 miles south of Albany.

Stockport, n. In *Pennsylvania*, a village of Wayne co., on the Delaware River, 159 m. N.W. of New York.

Stockport Station, n. In *New York*, a post-village of Delaware co., 160 m. W.N.W. of New York.

Stock'-purse, n. (*Mil.*) Money saved out of the expenses of a troop, company, or regiment, and applied to objects of common interest, or to purposes in which all participate.

Stock'-still, a. Still as a stock or fixed post; perfectly still; as, "Our preachers stand *stock-still* in the pulpit." — *Addison*.

Stock'ton, n. In *Alabama*, a post-village of Baldwin co., 30 m. N.N.E. of Mobile.

Stockton, n. In *California*, a city, cap. of San Joaquin co., abt. 50 m. S.E. of Sacramento; Lat. 37° 37' N., Lon. 121° 14' 26" W.

Stockton, n. In *Illinois*, a post-township of Jo Daviess co., abt. 21 m. E.S.E. of Galena.

Stockton, n. In *Indiana*, a township of Greene county.

Stockton, n. In *Maine*, a post-village and township of Waldo co., at the mouth of the Penobscot River, abt. 12 m. E.N.E. of Belfast.

Stockton, n. In *Minnesota*, a post-village of Winona co., abt. 7 m. W. of Winona.

Stockton, n. In *Missouri*, a post-town, cap. of Cedar co., about 50 m. N.N.W. of Springfield.

—A village of Macon co., about 86 m. W. of Hannibal.

Stockton, n. In *New Jersey*, a township of Camden co., on the Delaware, just above Camden.

Stockton, n. In *New York*, a post-township of Chataqua co., 14 m. S. of Dunkirk.

Stockton, n. In *Wisconsin*, a post-township of Portage co., abt. 4 m. E. of Staunton.

Stock-ton-on-Tees, n. A market-town and seaport of England, co. of Durham, 11 m. E.N.E. of Darlington, on the left bank of the Tees. *Exp.* Coal. Ship-building, chiefly in iron, is here carried on to a great extent.

Stock'well, n. In *Indiana*, a post-village of Tippecanoe co., 12 m. S.E. of Lafayette.

Stock'y, a. Short and thick.

Stod'dard, n. In *Missouri*, a S.E. co.; area, 840 sq. m. *Rivers.* St. Francis, Castor, and Whitewater. *Lakes.* Stoddard, Castor, Micota, and Nicorny. *Surface, level; soil, generally fertile. Cap.* Bloomfield. *Pop.* (1897) 18,430.

Stoddard, n. In *New Hampshire*, a post-township of Cheshire co., 35 m. W.S.W. of Concord.

Stod'dardsville, n. In *Pennsylvania*, a post-village of Luzerne co., 18 m. S.W. of Wilkesbarre.

Sto'ic, n. [Gr. *stōikos*, from *stoa*, a porch.] One of a sect of philosophers, called *Stoics* from their founder, Zeno, who taught under a porch or portico at Athens, B.C. 300. Alarmed at the scepticism which seemed inevitably following speculations of a metaphysical kind, Zeno, like Epicurus, fixed his thoughts principally upon morals. His philosophy boasted of being eminently practical, and connected with the daily duties of life. The aim of man's existence is to be virtuous, and virtue consists not in a life of contemplation, but of action. The *S.* took their stand upon common sense, and showed that reason was unable to distinguish between appearance and certainty. Sense, they maintained, furnished all the materials of our knowledge, and by reason these materials were fashioned. Nature they regarded as composed of two elements,—the primordial matter from which things are formed, and the active principle by which they are formed, *i. e.*, Reason, Destiny, God. As reason was the great moving power in the outer world, to live conformably with reason, or to live harmoniously with nature, was, with them, the great law in morals. Hence the pleasures and pains of the body are to be despised as unworthy to occupy the attention of man. To be above pain they thought to be manly; and hence they contemned pain, and despised death. Stoicism as a reaction against effeminacy may be applauded; but as a doctrine, it is one-sided and false. Apathy, which by them was considered as the highest condition of humanity, is, in truth, its lowest.

—Hence, an apathetic or phlegmatic person, or one not easily excited or impressed by pleasure or pain.

Sto'ic, Sto'ical, a. [Fr. *stoïque*.] Pertaining or relating to, or resembling, the Stoics, or their doctrines. — Hence, unimpressionable; impassible; insensible; unfeeling; not affected by passion; unmanifesting indiffer-

ence, whether real or assumed, to pleasure or pain; as, a *stoical* temperament.

Sto'ically, adv. In a stoical manner.

Sto'icalness, n. State of being stoical; real or assumed insensibility to pleasure or pain.

Stoichei'ology, n. [Gr. *stoicheion*, and *logos*.] The doctrine of elements; pure logic.

Stoichiomet'rical, a. Belonging or relating to stoichiometry.

Stoichiomet'ry, n. [Gr. *stoicheion*, a first principle, and *metron*, measure.] (*Chem.*) The science of chemical equivalents.

Stoicism, (stō'i-kizm,) n. [Fr. *stoïcisme*.] The doctrinal opinions and maxims of the ancient Stoics. — Insensibility; a real or assumed indifference to pleasure or pain; as, the *stoicism* of a red Indian.

Stoke, v. n. To poke, stir up, or feed with fuel, as a fire, and attend to its combustion.

Stoke'-hole, n. The mouth to the grate of a furnace; also, the space in front of a furnace, where the stokers stand.

Stok'er, n. One who tends and feeds a fire with fuel, particularly that of a locomotive, or marine steam-engine.

Stokes, n. In *N. Carolina*, a N. co. bordering on Virginia; area, 550 sq. m. *Rivers.* The Dan River and its affluents. *Surface, hilly; soil, generally fertile. Min.* Iron. *Cap.* Danbury.

Stokes, n. In *Ohio*, a township of Logan co.; pop. abt. 900. — A township of Madison co.

Stoke-upon-Trent, n. A town of England, in Staffordshire, on the Trent, 16 m. N. by W. of Stafford, in the centre of what is commonly called the *Potteries*. It has many very enterprising manufactories of china and earthenware.

Stok'ing, n. The operation of replenishing a furnace with fuel, and of keeping it in proper order, by clearing away the ashes and clinkers, so as to maintain a vigorous combustion.

Sto'la, n., pl. STOLÆ. (*Roman Antiq.*) The characteristic dress of the Roman matrons, as the toga was of the men; it was worn over the tunic, and came as low as the ankles or feet, being fastened round the body by a girdle. It had either short or long sleeves, and was fastened over the shoulder by a fibula, and had a flounce sewed to the bottom; the ample pallium was thrown over it, and brought over the head when walking, or in winter. The *S.* was not allowed to be worn by courtesans, or by women who had been divorced from their husbands.

Stole, imp. of STEAL, q. v.

Stole, n. [It. and Lat. *stola*; Gr. *stolē*, a robe, garment.] A long, loose garment extending to the feet. — The sucker or shoot of a plant. (*Ecol.*) In the Roman Catholic Church, a narrow band of silk or stuff, sometimes enriched with embroidery and jewels, worn on the left shoulder of deacons, and across both shoulders of bishops and priests, pendent on each side nearly to the ground: — used in the administration of the sacraments and all other sacred functions.

Groom of the Stole, n. In the English royal household, the first lord of the king's bed-chamber, and, also, keeper of the robes of state.

Stoled, a. Wearing a stole or long garment; as, a *stoled* ecclesiastic.

Stolen, (stōln,) pp. of STEAL, q. v.

Stolid, a. [Lat. *stolidus*.] Dull; foolish; hopelessly insensible; impassibly stupid or thick-headed.

Stolid'ity, Stolid'ness, n. [Lat. *stoliditas*.] Dullness of intellect; stupidity; insensibility of mind; state of being stolid.

Stolon, n. [Lat. *stolo*.] (*Bot.*) A branch which, as of the currant, gooseberry, &c., naturally curves or falls down to the ground, where, favored by shade and moisture, it strikes root, and then forms an ascending stem, capable of drawing its nourishment directly from the soil, and, by the perishing of the portion which connects it with the parent stem, at length acquiring an entirely separate existence.

Stoloniferous, a. [Lat. *stolo*, *stolonis*, a sucker, and *ferre*, to produce.] (*Bot.*) Producing stolons or shoots; sending forth suckers.

Stolpe, n. A town of Prussian Pomerania, on the Stolpe, and abt. 15 m. from its mouth, 64 m. from Dantzic; Lat. 54° 27' 59" N., Lon. 16° 55' 15". *Manuf.* Woollen and linen fabrics.

Stoma, n.; pl. STOMATA. [Gr. *stoma*, mouth.] (*Bot.*) One of certain passages through the epidermis of plants, having the appearance of areolæ, in the centre of each of which is a slit that opens or closes, according to circumstances, and lies over a cavity in the subjacent tissue. They are universally regarded as spiracles or breathing pores.

Stomacee, (-māk'a-se,) n. [From Lat. *stomachus*.] A factor of breath, arising from ulcerated gums. Mouth-washes with tinctures of myrrh or borax, and the internal use of tonics, are the remedies which relieve it.

Stomach, (stum'dk,) n. [Gr. *stomachos*, also *gaster*; Fr. *estomac*.] (*Anat.*) The large membranous receptacle, which receives the food from the œsophagus (Figs. 218 and 356), and within which it is acted upon by the gastric juice and converted into chyme. It is situated in the left hypochondriac and epigastric regions, and when distended, has the shape of an irregular cone, having a rounded base and being curved upon itself. The left extremity is the larger, and is called the greater spheric end of the *S.*, the right or small end being called the *pyloric*. The œsophagus terminates in the *S.* two or three inches from the great extremity by the cardiac orifices, while by the pyloric orifice at the other end the digested matter enters the duodenum. When moderately filled, the *S.* is about ten or twelve inches in length, and its diameter at the widest part about four inches. The walls of the *S.* consist of four distinct coats, held together by fine areolar tissue, and named, in order from without inwards, the *serous*, *muscular*, *areolar*, and *mucous* coats. By some the areolar is not reckoned a distinct coat. The first of them is a thin, smooth, transparent, elastic membrane derived from the peritoneum. The muscular coat is very thick, and composed of three sets of fibres, the longitudinal, circular, and oblique, which form three layers. The areolar and fibrous coat is a tolerably distinct layer placed between the muscular and mucous coats, and connected with both. The last is a smooth, soft, rather thick and pulpy membrane, loosely connected with the muscular coat, and covered with exhaling and inhaling vessels. At the pyloric orifice leading from the *S.* into the duodenum, there is a sphincter muscle which contracts the aperture, and prevents the passage of any matter into the intestines until properly digested. The food is propelled along the œsophagus, and enters the *S.* in successive waves through its cardiac orifice. It is there subjected to a peculiar peristaltic motion, having for its object to produce a thorough intermixture of the gastric fluid with the alimentary mass, and to separate that portion which has been sufficiently reduced from the remainder. This motion causes not only a constant agitation or churning of the contents, but also moves them slowly along from one extremity to the other. These revolutions are completed in from one to three minutes, being slower at first than after chymification has more advanced. The passage of the chyme or product of the gastric digestion through the pyloric orifice into the commencement of the intestinal tube is at first slow; but when the digestive process is nearly completed, it is transmitted in much larger quantities. — See DIGESTION, GASTRIC JUICE.

—Appetite; desire of food instigated by hunger. — Inclination; liking; predilection; desire; as, asking of favors goes against a proud man's *stomach*.

—*v. a.* To brook; to put up with; to receive or bear without visible repugnance; as, to *stomach* impertinence from another.

Stomachal, (stūm'-) a. [Fr. *stomacal*.] Cordial; invigorating; stomachic.

—(*Med.*) A cordial; a stomachic; a tonic.

Stomacher, (stūm'a-cher,) n. The front body-piece of a dress worn by women; an ornament or support to the breast, forming part of a woman's attire; as, the lady wore a diamond *stomacher*.

Stomachic, Stomachical, (sto-māk'ik,) a. [Fr. *stomachique*; Gr. *stomachikos*.] Pertaining, or relating, to the stomach; as, the *stomachic* glands. — Strengthening, or exciting the action of the stomach; cordial; stomachal; as, a *stomachic* medicine.

Stomach'ic, n. (Med.) A medicine to invigorate and excite the action of the stomach; a cordial; a tonic.

Stomachless, (stūm'-ak-) a. Born without a stomach. — Having no appetite or inclination for food.

Stomach-pump, (stūm'-) n. (Med.) A small pump or syringe with two apertures, the valves of which are so arranged as to admit of liquids being drawn out of, or injected into, the stomach, by means of a flexible tube.

Stom'apods, Stom'apoda, n. pl. [Gr. *stoma*, mouth, and *pous, podos*, foot.] (*Zoöl.*) A group of *Crustacea*, containing those decapods which have the viscera extending into the abdomen, and the feet mainly approximating the mouth. Their general form bears considerable resemblance to that of shrimps. They are all marine. *Squilla*, containing the *Sea Mantes*, is a characteristic genus. — See SQUILL.

Stomat'ic, n. (Med.) A remedy for diseases of the mouth.

—*a. (Bot.)* Belonging, or relating, to a stoma.

Stomatit'is, n. [From Gr. *stoma*, *stomatos*.] (*Med.*) Inflammation of the mouth.

Stomato-gas'tric, a. [Gr. *stoma*, *stomatos*, mouth, and *gaster*, stomach.] (*Med.*) Pertaining, or having reference, to the mouth and stomach.

Stone, n. [A. S. *stan*, *stæn*; Ger. *stein*; Icel. *stein*; root Sansk. *sthā*, to stand.] A hard mass of concreted, earthy, or mineral matter, varying greatly in size, and used for building, paving, millstones, griststones, ornamental pumps, &c. — A gem; a precious stone; a jewel; as, *stones* of worth. (*Shaks.*) — Something made of stone; as, a tomb-stone. — A testicle. — The nut of a stone-fruit, or the hard covering inclosing the kernel; as, the *stone* of a peach. — Callousness; state of torpidness and insensibility; as, a heart of *stone*.

(*Med.*) See CALCULUS.

—In England, a weight legally reckoned at 14 lbs., but which varies in custom or practice; thus, the *stone* of hutchin's meat or fish is held to be 8 lbs.; of cheese, 16 lbs.; of hemp, 32 lbs.; of glass, 5 lbs.

(*Print.*) Same as IMPOSING-STONE, q. v.

(*NOTE.* *Stone* is prefixed to certain words, as a qualifier of their meaning; thus, *stone-dead*, *stone-deaf*,

Fig. 2433. — STOLA.

stone-blind, stone-still, in the sense of lifeless, deaf, blind, and still, as a stone.)

Artificial stone, a manufactured substance made to resemble stone, and used to take the place of stone in various structures. Bricks and terra cotta, in this sense, may be classed as artificial stone, though not usually so considered. Artificial stone, as ordinarily understood, consists of a combination of hydraulic cement, sand, crushed stone, pebbles, &c. Portland cement, mixed either with sand alone or with sand and broken stone, forms one kind of artificial stone. (See CONCRETE.) Paving tiles with beautiful designs are made by inlaying this cement with small pieces of colored stone. It makes an effective product for external wall decoration. *Scagliola* is a polished plaster for internal decoration, somewhat similarly ornamented. Ransome's artificial stone is a hard substance formed by mixing sand with soluble glass, pressing it into moulds, and, when partially dry, soaking it in a bath of chloride of calcium. Chimney-pieces, vases, and architectural ornaments of various kinds can be made of this material. The strength and durability of artificial stone depend on the hardness ultimately attained by the hydraulic ingredients employed, the use of the highest grades of cement being necessary if a thoroughly durable product is desired. Artificial stone may be moulded into blocks to be used in the manner of cut stone in edifices, or may, if desired, be built up into immense monolithic masses by moulding the different parts in place. *Granolithic* is the name given a combination of cement and crushed granite, frequently used for sidewalks, curbs, &c. *Beton-Coignet* is a combination of hydraulic cement, hydraulic lime, and sand, much used for constructive purposes in France. Other varieties might be named.

Meteoric stones. See AEROLITE. — *Philosopher's stone.* See ALCHEMY.

To leave no stone unturned, to use all practicable means to effect an object. (Colloq.)

Stone, *a.* Made of stone, or resembling stone; as, a stone house.

—*v. a.* [A. S. *stanan.*] To pelt, beat, or kill with stones. — To harden, indurate, or cause to resemble stone. (*R.*) — To dispart the stones from; as, to stone fruit. — To face, wall, line, or fortify with stones; as, to stone a flooring, to stone a well.

Stone, in *Missouri*, a S.W. co., bordering on Arkansas; area, 500 sq. m. Rivers. White River and James' Fork. Surface, diversified; soil, fertile, forests of ash, hickory, pine, and walnut are numerous. Min. Iron and lead. Cap. Galena.

Stone Arabia, in *New York*, a post-village of Montgomery co., abt. 50 m. W.N.W. of Albany.

Stone-blue, *n.* A compound, the basis of which is usually an impure starch, or mixture of starch and gluten, being the starch-maker's refuse, colored either by indigo or Prussian blue. It is used in the laundry to cover the yellow tint of linen.

Stone-borers, *n. pl.* (*Zoöl.*) Same as LITHOPHAGI, *q. v.*

Stone-brash, *n.* (*Agric.*) A sub-soil composed of small stones, or pulverized rock.

Stone-bruise, (*-brüz*), *n.* A sore place on the sole of the foot, as if from being bruised by a stone.

Stone-chat, Stone-chat'er, *n.* (*Zoöl.*) The common name of the insectorial birds composing the genus *Saxicola*, family *Turdidae*. They are small birds common in the Old World, and one species inhabits Greenland, and is accidental in the northern portion of North America.

Stone-coal, *n.* (*Min.*) A common name for ANTHRACITE, *q. v.*

Stone-cold, *a.* Cold as a stone. (Tautological.)

Stone-crop, *n.* [A. S. *stancropp.*] (*Bot.*) See SEDUM.

Stone-cutter, *n.* One who hews stones.

Stone-cutting, *n.* The business or occupation of hewing and preparing stones for walls, steps, cornices, monuments, &c.

Stone-falcon, *n.* (*Zoöl.*) See PEREGRINE FALCON.

Stone-fruit, *n.* (*Bot.*) Same as DRUPE, *q. v.*

Stone-gall, *n.* One of certain nodules of clay occurring in sandstone; they often fall out on exposure to weather, and render the stone unfit for architectural uses.

Stone-ham, in *Maine*, a township of Oxford co., 50 m. S.W. of Augusta.

Stoneham, in *Massachusetts*, a post-village and township of Middlesex county, 8 miles North of Boston.

Stoneham, in *Minnesota*, a village of Washington co., on the Mississippi River, abt. 5 m. N. of Hastings.

Stone-hearted, *a.* Hard-hearted; pitiless; cruel; insensible to pity or mercy.

Stone-henge, (*-hēnj*), *n.* [A. S. *stān-heng.*] See CELTIC ARCHITECTURE.

Stone-horse, *n.* An entire horse; a stallion.

Stone-house, a market-town of England, in Devonshire, between Devonport and Plymouth; pop. 13,200.

Stone-jug, *n.* A cant name for a prison.

Stone Lick, in *Ohio*, a township of Clermont county, 22 m. E. by N. of Cincinnati.

Stone-lily, *n.* (*Pal.*) A name sometimes given to ENCRINITE, *q. v.*

Stone Mountain, in *Georgia*, a post-village of De Kalb county, 160 miles W. of Augusta.—Stone Mountain, in the vicinity, a dome shaped granite rock, rises about 2200 feet above the sea.

Stone-ochre, (*ō'kr*), *n.* (*Paint.*) An earthy oxide of iron, forming a pigment of considerable permanence in oils or water-colors.

Stone-oil, *n.* (*Min.*) Same as PETROLEUM.

Stone-pit, *n.* A pit or quarry where stones are excavated.

Stone Ridge, in *New York*, a post-village of Ulster co., abt. 60 m. S.S.W. of Albany.

Stone, (Rosetta), *n.* (*Hieroglyphics.*) A trilingual inscription in the hieroglyphic, clemotic or euchorial, and Greek characters, which was discovered in 1799 by M. Boussard, a French officer of engineers, during the French occupation of Egypt, in an excavation made at Fort St. Julien, near Rosetta, and served as the key to the interpretation of the hieroglyphs. It is of black basalt, about 3 feet 7 inches in length, and 2 feet 6 inches in width, containing about one-third of the hieroglyphic, and nearly all the Greek and Roman portions, the upper part and portion of the side having been broken away. The contents of the inscription are a decree in honor of Ptolemy Epiphanes by the priests of Egypt assembled in a synod at Memphis, on account of his remission of arrears of taxes and dues owed by the sacerdotal body. It was set up 195 B. C.

Stone's-cast, Stone's-throw, *n.* [*Stone and cast.*] The distance which a stone may be flung or thrown by the hand.

Stonerstown, in *Pennsylvania*, a village of Bedford co., 100 m. S.W. of Harrisburg.

Stones'port, in *Missouri*, a village of Boone co., on the Missouri River, 6 m. W. of Jefferson City.

Stones River, in *Tennessee*, rises in Cannon co., and flowing N.W. enters Cumberland River, 6 m. N.E. of Nashville.

Stonesville, in *S. Carolina*, a village of Greenville dist., 97 m. N. of Columbia.

Stone Tavern, in *Pennsylvania*, a village of Cumberland co.

Stone Wall Mills, in *Virginia*, a post-village of Appomattox co., 108 m. S.W. of Richmond.

Stoneware, (*stone'wair*), *n.* A very hard kind of pottery, with which are made jars, drain-pipes, and a variety of chemical utensils. It is constituted of plastic clay, united in various proportions with some felspathic mineral sands of different kinds, and in some cases with cement, stone, or chalk. These mixtures are then subjected to a heat sufficiently great to cause a partial fusion of the mass. This condition of semi-fusion is the distinguishing character of *S.* The finer varieties of *S.* are made from carefully selected clays, which when burnt will not have much color. These are united with some fluxing substance, by which the particular state of semi-fusion above mentioned is brought about. Formerly the glaze of *S.* was always a salt glaze; recently, however, it has been customary to glaze with a mixture of Cornish stone, flint, &c., as in the manufacture of earthenware.

Stone-work, (*-wörk*), *n.* Work or wall constructed of stone; mason's work of stone.

Stone-wort, *n.* (*Bot.*) A plant of the genus *Chara* (*C. sabulosa*), found in pools of clear water in the Middle States.

Stoniness, *n.* [From *stony*.] State or quality of being stony, or of abounding with stones; as, stoniness of land. — Hardness or obduracy of heart. (*R.*)

Stonington, in *Connecticut*, a post-borough, township, and port of entry of New London co., 63 m. E. of New Haven. It is built upon a peninsula, nearly a mile long, and has a commodious harbor, protected by a break-water.

Stonington, in *Illinois*, a post-village of Christian co., abt. 34 m. E.S.E. of Springfield.

Stono, in *Missouri*, a post-village of St. Francois co., abt. 22 m. S.E. of Potosi.

Stony, *a.* [Ger. *steinicht*, *steinig*.] Made or consisting of stone; abounding with, or resembling, stone; as, a stony tract of country. — Petrific; converting into stone. — Hard; cruel; inflexible; unrelenting; obdurate; pitiless; insensible; perverse; morally hard; as, a stony heart.

Stony Brook, in *Massachusetts*, a village of Middlesex co., 12 m. W. of Boston.

Stony Brook, in *New Jersey*, rises in Hunterdon co., and flowing S.E. enters Millstone River abt. 3 m. E. of Princeton.

Stony Brook, in *New York*, a village of Suffolk co., Long Island, 50 m. N.E. of New York.

Stony Creek, in *Connecticut*, a post-village and seaport of New Haven co., 11 m. S.E. of New Haven.

Stony Creek, in *Indiana*, a township of Henry co. — A township of Madison co. — A township of Randolph co.

Stony Creek, in *Michigan*, enters Maple River from Clinton co. — Another, which flows into Lake Erie from Monroe co. — Another, which falls into Clinton River from Oakland co. — A post-village of Oakland co., 26 m. N.W. of Detroit.

Stony Creek, in *Pennsylvania*, enters the Conemaugh River at Johnstown, in Cambria co. — A creek which enters the Susquehanna River from Dauphin co. — A post-township of Somerset county, 12 miles east of Somerset.

Stony Creek, in *Virginia*, rises in Dinwiddie co., and flows into Nottaway River into Sussex co. — A village of Sussex co., 21 m. S.E. of Petersburg.

Stony Point, in *New York*, a fort in Orange co., on the Hudson, 42 m. N. of New York, the capture of which from the British by Gen. Wayne, in 1779, is regarded as one of the most brilliant exploits of the Revolutionary War.

Stony Point Mills, in *Virginia*, a post-village of Cumberland co., 61 m. W.S.W. of Richmond.

Stood, *imp.* of STAND, *q. v.*

Stool, *n.* [A. S. *stól*; Du. *stoel*; Ger. *stuhl*.] A seat without a back, so distinguished from a chair; a little form or stand consisting of a board, round or square, with legs, intended as a seat for one person; as, a three-legged

stool. — The seat used in evacuating the excrement of the bowels; hence, an evacuation; a fecal discharge; as, to go to stool. — In the U. States, a STOOLO-PIGEON, *q. v.* — *pl.* (*Naut.*) Pieces of plank fastened to a ship's sides to receive the bolting of the gallery; also, small channels for the dead-eyes of the backstays.

(*Hort. and Arboric.*) A stemless mother-plant used for propagation by annually bending its branches into the soil; the branches so bent down forming layers, and the process being designated *laying* or *layering*. — Also, the root or stump of a timber tree, which throws up shoots.

—*v. n.* To shoot or send out stools or suckers.

Stool-pigeon, (*-pij'un*), *n.* A decoy robber, in the pay of the police, who brings his associates into a trap laid for them.

— In the U. States, a decoy-pigeon; — hence, a person used as a decoy-duck.

—*v. n.* To ramify, as grain; to shoot out suckers, as plants.

Stoom, *v. a.* To stum; to impart a factitious strength to, as thin liquor by the introduction of must, &c.

Stoop, *v. n.* [A. S. *stupian*; Belg. *stuypen*.] To lean or bend the body forward and downward; to bend the body and incline forward; to incline forward in standing or walking; as, his shoulders stoop naturally. — To bend or bow by compulsion; to yield; to submit; to succumb; as, "Henry the Fifth made the Dauphin and the French to stoop." (*Shaks.*) — To descend from rank or dignity; to condescend; to become self-abased; to acknowledge inferiority; as, though of noble blood he yet stooped to marry a trader's daughter. — To swoop down on prey, as a hawk. — To fall; to sink to a lower place; as, "each bird stooped on his wing." — *Milton*.

—*v. a.* To sink; to cause to incline downward; as, to stoop a barrel of ale.

—*n.* Act of bending the body forward and downward; inclination forward. — Descent from dignity or superiority of natural condition; condescension; self-abasement; as, he made a stoop from his high estate. — Fall, swoop, or descent of a bird on its prey; as, the stoop of an eagle. — The steps of a doorway; also, the covered porch, having side-seats, before the door of a house.

Stoop, Stoup, *n.* [A. S. *stoppa*.] A flagon or measure of liquor; as, a stoop of harvest-ale.

Stoop'ingly, *adv.* With an inclination of the body forward.

Stooter, *n.* [Du.] In Holland, a small silver coin, worth about five cents American.

Stop, *v. a.* (*imp.* and *pp.* STOPPED.) (*stōpt*). [Du. *stoppen*, to fill, cram; Ger. *stopfen*.] To block, close, or fill up; to close, as an orifice or aperture, by filling or by obstructing; as, to stop a vent. — To close up, so as to render impassable; as, to stop a way, road, passage, or thoroughfare. — To obstruct; to impede; to shut in; to dam up; to hinder the passage; to arrest the progress of; as, to stop a carriage in the road, to stop the course of a river. — To hinder or restrain from action or practice; to check; to suppress; to repress; to suspend; to mar or prevent the effect or efficiency of; to put an end to; to intercept; as, to stop the encroachments of public vice, to stop the execution of an edict, &c. — To regulate the sounds of, as musical strings. — To point, as a manuscript; to punctuate; as, to stop a sentence.

(*Naut.*) To make fast; to stopper; as, to stop the hawse. —*v. n.* To cease to move forward; to come to a stand; as, he stopped on a sudden. — To cease from any motion, procedure, or course of action; as, when the play goes against one it is time to stop. — To stay, tarry, or abide temporarily; to spend a short time; to sojourn; as, he has come to stop with me for a week or two.

—*n.* Act of stopping, or the state of being stopped; cessation of progressive motion; hindrance of progress or advance; obstruction or interruption of operation or action; check; as, to put a stop to invasion of one's rights. — That which obstructs, checks, or hinders; impediment; obstacle; as, to oppose some stop to the tirades of a scolding woman. — The instrument by which the sounds of wind-music are regulated; regulation of musical chords by the fingers.

(*Punctuation.*) A point or mark in writing, intended to distinguish the sentences, parts of a sentence, or clauses, and to indicate the proper pauses in reading. See PUNCTUATION.

Stop-cock, *n.* [*Stop and cock.*] A turning cock, used to stop or to regulate the supply of water, gas, &c., which flows through pipes.

Stope, *n.* (*Mining.*) An horizontal bed or layer forming one of a series of steps, into which the upper surface of an excavation is cut.

—*v. a.* (*Mining.*) To excavate after the manner of stopes.

— To fill in with rubbish, as an excavated place.

Stop-gap, *n.* That which fills up an orifice, gap, hiatus, or chasm; as, luncheon is a stop-gap for the stomach between meals. — Hence, a temporary substitute or expedient. (*R.*)

Stop'ing, *n.* (*Mining.*) Act of forming stopes.

Stoppage, (*-paj*), *n.* [L. Lat. *stupacium*.] Act of stopping or arresting action, progress, or motion; state of being stopped; that which stops; obstacle; obstruction; as, the stoppage of friendly relations between two countries. — The stopping of a railroad train at a station; as, an express train makes few stoppages. — A deduction made from pay; as, the stoppage of two dollars per diem.

S. in transitu. (*Law.*) A resumption by the seller of the possession of goods not paid for, while on their way to the vendee, and before he has acquired actual possession of them. For most purposes, the possession of the carrier is considered to be that of the buyer; but by virtue of this right, which is an extension of the right of lien, the vendor may reclaim the possession

Harriet Beecher Stowe

1814-1896

before they reach the vendee, in case of the insolvency of the latter.

Stopper, *n.* One who stops, closes, shuts, or hinders; that which is an obstacle, obstruction, or impediment; that which closes or fills a vent, hole, or orifice in a vessel; a stopple, as of a bottle.

—*v. a.* To secure a stopper, as of a cable.

Stopper-bolt, *n.* (*Naut.*) On shipboard, a large ring-bolt attached to the deck, to which the deck-stoppers are hooked.

Stopping-out, *n.* (*Etching.*) A plan adopted to give effect to lines, varying their darkness and breadth by allowing the acid to remain on some longer than on others, which is done by removing the acid, and stopping-out or covering with Brunswick-black, or some other composition impervious to acid, such lines as appear dark enough. The acid is again put on the other lines, which become in consequence broader and deeper; and the effect of great variety of tint and tone is thus produced from the same etching.

Stopple, (*stōp'pl*) *n.* [From *stop*.] That which stops or closes the mouth or orifice of a vessel or of a bottle; a cork; a stopper.

—*v. a.* To close by means of a stopple.

Stop-watch, *n.* (*Horol.*) A watch whose hands can be stopped in order to calculate the time that has passed, as in timing a race.

Storage, (*stōr'aj*) *n.* [From *store*.] Act of depositing in a store or warehouse for safe-keeping; or, the safe-keeping of goods in a store or magazine. — Rent charged or paid for the safe-keeping of goods in a store.

Storax, *n.* (*Chem.*) See *STYRAX*.

Store, *n.* [A. S., Dan., and Swed. *stor*.] A stock provided; a large quantity for supply; that which is massed or accumulated together; — hence, ample abundance; a great number; a large aggregation; as, a store of provisions. — A store-house; a magazine; a warehouse; a dépôt for large quantities or accumulations. — Hence, by implication, any place where commodities are sold, whether by wholesale or retail; as, a drug store. — *pl.* Necessary articles accumulated or laid up for future use; supplies, as of provisions, arms, munitions, &c.; as, military or naval stores; supplies of different articles, provided for the use of the crew and passengers of a vessel; as, ship stores, cabin stores, &c.

In store, in a state of accumulation or amassment; — hence, in a state of preparedness; as, there is something in store for me yet. — To set store by, to esteem or value highly; to look upon with pride or fondness; as, he sets great store by his nationality. (*Colloq.*)

—*v. a.* To lay or hoard up; to amass; to gather together in quantities; to accumulate; to supply; to replenish; as, his brain is well stored with ideas. — To stock or furnish against a future time; as, a cellar well stored with drinkables. — To warehouse; to deposit in a store, magazine, or dépôt, for safe-keeping or preservation; as, to store merchandise.

Store-house, *n.* A building for housing or preserving goods or commodities of any kind; a warehouse; a magazine; a dépôt; a repository.

Store-keeper, *n.* One who has the care of a store.

Store-er, *n.* One who lays up or forms a store.

Store-room, *n.* Room, or space in a warehouse, for the reception of commodities; — also, a room in which commodities are stored.

Store-ship, *n.* (*Naut.*) A victualling ship; a vessel employed as a dépôt for the distribution of provisions, naval stores, &c.

Store-village, in *South Carolina*, a village of Anderson dist., 117 m. W.N.W. of Columbia.

Storey, in *Nevada*, a W. co.; area, 250 sq. m. The Truckee River bounds it on the N.W. Surface, mostly barren hills and sandy deserts. *Min.* Gold and silver. *Cap.* Virginia City.

Store, *n.* [Gr.] Parental or instinctive affection.

Storied, (*stōr'ēd*) *a.* [From *story*.] Narrated in a story. — Possessing a history; venerable from antiquity or the associations of the past. — Furnished with stories; — used mainly in composition; as, a three-storied house.

Stork, *n.* [A. S. *storc*.] (*Zoöl.*) The common name of a family of large gallatorial birds, the *Ciconiidae*, including the Stork of the Old World, and the Jabiru of both hemispheres. They have the bill thicker than in *Ardeidae*, and nearly equal membranes between the bases of the toes. The genus *Ciconia* comprises the White Stork, *C. alba*, of Europe, which is 42 inches long, white, with the quills of the wings black, and the feet and bill red. It is held in high estimation on account of its destruction of noxious reptiles. It prefers to build its nest in towers and steeples, and returns to the same spot year after year. The American Stork, *C. Americana*, chiefly found in Brazil, is about as large as the

Fig 2434. — WHITE STORK,
(*Ciconia alba*)

white species. The genus *Jabiru* comprises very large birds, which differ from the storks in having the extremity of the bill curved upward.

Stork's-bill, *n.* (*Bot.*) See *PELARGONIUM*.

Storm, *n.* [A. S., Du., L. Ger., Dan., and Swed.] The violent action of one or more of the elements, as wind, rain, snow, or thunder and lightning; — hence, frequently, a tempest; a downfall of rain or snow. — Hence, a violent civil, political, or domestic commotion or disturbance; sedition, insurrection, or war; popular clamor or tumult. — Extreme calamity; dire distress, adversity, or affliction; as, the storms of misfortune.

(*Mil.*) A violent assault on a fortified place; a furious attempt of troops to enter and take a fortified place.

—*v. a.* (*Mil.*) To assault or attack with violence, or by open force; to attack and attempt to take by scaling the walls, forcing gates or breaches, and the like.

—*v. n.* To raise a tempest. — To blow with violence; as, it storms. — To rage; to be in a violent agitation of passion.

Storm-beat, *a.* Beaten or injured by storms.

Storm'ful, *a.* Containing, or abounding in, storms.

Storm'fulness, *n.* The state of being storm'ful.

Storm'iness, *n.* State of being stormy; tempestuousness; state of being agitated by violent winds.

Storm'petrel, *n.* (*Zoöl.*) See *PETREL*.

Stormy, *a.* [A. S. *stormig*; Ger. *stürmisch*.] Tempestuous; agitated with furious winds; boisterous. — Proceeding from violent agitation or fury. — Violent; passionate.

Store, (*stōr'ē*) *n.* an island of Norway, 30 miles from Bergen. It is 15 m. long, with a breadth of 7 m.

Storrs, in *Ohio*, a flourishing post-township of Hamilton county.

Storthing, (*stōrt'ing'*) *n.* [Nor. *storting*, from *stor*, great, and *ting*, court.] See *NORWAY*, § *Gort*.

Story, *n.* [A. S. *star*, *ster*; It. *storia*; Fr. *histoire*; Gr. *historia*.] A verbal narration or recital of a series of facts or incidents; history; account of things past. — A petty tale; relation of a single event, or of trifling incidents. — A fiction; a fable. — A falsehood. (*Colloq.*) — A floor; a set of rooms on the same floor or level; a subdivision of the height of a house; a height that is ascended by one flight of stairs.

—*v. a.* To tell in history; to relate. — To range one under another.

Story, JOSEPH, an eminent American judge and juridical writer, was b. at Marblehead, in Massachusetts, 1779, studied at Harvard University, where he took his degree in 1798, was called to the bar in 1801, and soon acquired a distinguished reputation as a pleader. After representing Salem in the State legislature for 4 years, he was sent to Congress in 1809, where his talents as a forensic debater were so well appreciated that in 1811 he was appointed associate justice in the Supreme Court of the United States. In this capacity he displayed a thorough knowledge of the most intricate questions relating to international law, and earned such distinction as a jurist that his name has been carried far beyond the limits of this country. His *Commentaries on the Conflict of Laws* is looked upon as an authority in every state in Europe. His other principal works are: *Commentaries on the Constitution of the United States*, and treatises upon *Equity Jurisprudence*, the *Law of Bailments*, of *Bills of Exchange*, of *Promissory Notes*, and of *Partnership*. D. 1845.

Story, in *Iowa*, a central co.; area, 576 sq. m. Rivers. South Skunk River, and Walnut, Bear, and Indian creeks. Surface, undulating; soil, fertile. Capital City, Nevada.

Story City, in *Iowa*, a post-village of Story co., abt. 18 m. N.N.W. of Nevada.

Story-post, *n.* (*Arch.*) An upright piece of timber in a story for supporting the superincumbent part of the exterior wall.

Story-teller, *n.* One who tells stories; one who relates tales in conversation. — An historian; — in contempt.

Stouchburg, in *Pennsylvania*, a post-village of Berks co., 34 m. N.E. of Harrisburg.

Stoughton, (*stōw'town*), in *Pennsylvania*, a post-village of Cumberland co., 13 m. S.W. of Carlisle.

Stoughton, (*stō'ton*), in *Massachusetts*, a post-village and township of Norfolk county 19 miles south-west of Boston.

Stoughton, in *Wisconsin*, a city of Dane co., 16 m. S.E. of Madison. Pop. (1895) 2,936.

Stoup, (*stōop*) *n.* A flagon; a stoop. (*Local.*)

(*Eccl.*) A vessel to contain consecrated water, such as is placed near the entrance of a Roman Catholic church, into which all who enter dip their fingers and cross themselves. — Also, a portable vessel for holding holy water.

Stourbridge, (*stōor'bridj*) a town of England, in Worcestershire, on the Stour, near its junction with the Severn, 4 m. from Kidderminster. *Manuf.* Glass, earthenware, iron, cloth, &c. Pop. 9,000.

Stout, *a.* [Du., bold.] Strong; lusty. — Bold; intrepid; valiant; brave. — Large; bulky; corpulent. (*Colloq.*) — Proud; resolute; obstinate; pertinacious.

—*n.* A strong kind of beer.

Stoutly, *adv.* Lustily; boldly; obstinately.

Stout'ness, *n.* State of being stout; strength; boldness.

Stouts'ville, in *New Jersey*, a village on the border of Hunterdon and Somerset cos., 13 m. S.W. of Somerville.

Stoutsville, in *Ohio*, a post-village of Fairfield co., abt. 14 m. S.W. of Lancaster.

Stove, *n.* [O. Fr. *estuve*; A. S. *stofa*; It. *stufa*.] A receptacle for the combustion of fuel for the purpose of heating houses, &c.

(*Hort.*) A structure in which tropical plants, requir-

ing a considerably higher temperature than that of the open air in N. York and similar climates, are cultivated. Stoves are adapted for various purposes; but the principal are the *dry stove* and the *damp stove*. The dry stove is a structure the atmosphere of which is heated to the temperature of from 55° to 60° during winter, and in which the plants chiefly cultivated are succulents, such as species of *Cereus*, *Stapelia*, *Euphorbia*, and others having a similar habit. The damp stove, sometimes also called the *bark stove*, requires a temperature of between 60° and 70° during winter, with a proportionate increase during summer, accompanied, in both seasons, with a high degree of atmospherical moisture. This moisture is produced partly by evaporation from the bark-bed in which the plants are plunged, but chiefly by watering the floor of the house, and by syringing the walls and plants. The plants cultivated in the moist stove are exclusively those of the tropics; and those which require the highest degree of heat are chiefly monocotyledonous plants, such as the ginger, the plantain, the banana, the sugar-cane, palms, *Orchidaceae*, &c., and such dicotyledonous plants as the bread-fruit, the yam, the mangosteen, and other East Indian plants.

Cooking-stove. A stove adapted to culinary purposes.

Stove, *v. a.* To heat, as in a stove.

Stover, *n.* [O. Fr. *estover*, to furnish.] Fodder for cattle, as hay, straw, &c.

Stow, *v. a.* [A. S.; Dan. *stuve*.] To put in a suitable place or position; to lay up; to reposit.

Stow, in *Maine*, a post-township of Oxford co., 65 miles S.W. of Augusta.

Stow, in *Massachusetts*, a post-village and township of Middlesex co., 27 m. N.W. of Boston.

Stow, in *Ohio*, a township of Summit co.

Stowage, *n.* Act or operation of stowing, or of placing in a suitable position, or the suitable disposition of several things together. — Room for the reception of things to be reposit. — The state of being laid up. — Money paid for the stowing of goods. (*R.*)

Stow Creek, in *New Jersey*, forms part of the boundary between Cumberland and Salem cos., and flows into the Delaware Bay, 4 m. N.W. of the mouth of Cohansy River.

— A township of Cumberland co.

Stowe, in *Vermont*, a post-village and township of Lamoille co., 20 m. N.N.W. of Montpelier.

Stowe, HARRIET BEECHER, an American authoress, daughter of the late Dr. Lyman Beecher, b. in Litchfield, Conn., June 15, 1814, was associated with her sister in the labors of a school at Hartford in 1829, afterwards removed with her relatives to Walnut Hills, near Cincinnati, and was married in 1835 to the Rev. C. E. Stowe, Prof. of Biblical History in the Lane Seminary, over which her father presided. During the earlier part of her married life, Mrs. Stowe wrote several tales and sketches for the magazines, which were afterwards collected under the titles of *The May Flower*, and *Two Ways of Spending the Sabbath*. Shortly after Prof. Stowe had accepted the chair of Biblical Literature at Andover, in 1850, his wife, an ardent Abolitionist, having made herself thoroughly acquainted with the workings of slavery, published first in the "Washington National Era," *Uncle Tom's Cabin*. It went through several editions, was republished in England, and was translated into various European languages. The *Key to Uncle Tom's Cabin*, explanatory of the incidents on which her book was founded, appeared in 1852. Accompanied by her husband and brother, she travelled in Europe in 1853, and, after her return to America, produced her travelling impressions in a work entitled *Sunny Memories of Foreign Lands*. In 1856 she published *Dred*, a Tale of the Great Dismal Swamp; in 1859, a work upon the social condition of the U. States, entitled *The Minister's Wooing*; and a tale, under the title of *Agnes of Sorrento*, which appeared simultaneously in the pages of the *Cornhill Magazine* and the *Atlantic Monthly* in 1861. Her article entitled *The True Story of Lady Byron*, published in the "Atlantic Monthly" in 1869, caused a great scandal in the literary world. Her late published work is *Progressive People: their Loves and Lives*, 1878. Mrs. Stowe's home was in Hartford, Conn., but she passed much of her time at Mandarin, Florida, where she had an orange grove. Died July 1, 1896.

Stoyestown, (*stōis'town*), in *Pennsylvania*, a post-borough of Somerset county, 70 miles east south-east of Pittsburg.

Strabane, a town of Ireland, co. Tyrone, 42 m. from Armagh. It is a place of considerable trade, and has a salmon fishery.

Strabane, in *N. Carolina*, a post-village of Lenoir co., 78 m. S.E. of Raleigh.

Strabane, in *Pennsylvania*, a township of Adams co., 10 m. N.E. of Gettysburg.

Strabism, **Strabismus**, *n.* [Fr. *strabisme*; L. Lat. *strabismus*.] (*Med.*) See *SQUINTING*.

Stra'bo, a Greek historian and geographer, who flourished in the 1st cent., B.C. He is the author of one of the most valuable relics of antiquity, being a description of nearly every part of the world known in his time, namely, the first century of the Christian era. The work is indispensable to the elucidation of ancient history.

Strabom'eter, *n.* (*Med.*) An instrument used to measure the degree of deviation as well as the precise result obtained by tenotomy. The S. of Dr. Laurence had to be moved from one eye to the other in order to compare the degree of deviation. A *binocular S.*, invented in 1870 by Dr. Galezowski, does not present the same inconvenience; the two needles, which slide in the channel of a screw, are easily placed opposite to the

centre of each cornea; and by the divisions which are marked upon the horizontal bar, the deviation is immediately noted.

Strabotomy, *n.* [Gr. *strabos*, squinting, and *tomē*, cutting.] (Surg.) Removal of strabismus or squinting, by dividing the muscle or muscles which distort the eyeballs.

Straddle, (*strād'dl*.) *v. n.* To spread or part the legs wide; to stand or walk with the legs far apart.

—*v. a.* To place one leg on one side, and the other on the other side of anything.

—*n.* The act of standing or walking with the legs far apart. — The position of one who straddles.

Stock Ex. See *Pur*.

Stradella, a city of Italy, 10 m. S. E. of Pavia, situated on the slope of a hill; was formerly fortified.

Stradivarius, ANTONIO, (*strād-i-vair'f-us*.) a celebrated stringed-instrument maker, b. in Cremona, 1670, was the pupil of Amati; d. 1728. The violins made by him are highly esteemed, and have obtained as high a price as \$2,000 each.

Stratford, THOMAS WENTWORTH, EARL OF, an English statesman, b. in London, 1593. He was at first one of the principal leaders of the popular party in the House of Commons against the unconstitutional measures of Charles I.; but was gained over to the court, made a peer, appointed Lord-Lieutenant of Ireland, and afterwards to the command of the army against the Scots. On the opening of the Long Parliament, his enemies in the Commons impeached him at the bar of the House of Lords, and he was ordered into custody. His trial lasted 18 days, and was carried on with unusual virulence. His defence made a deep impression upon the hearers, though it did not abate the energy of his prosecutors, who introduced a bill of attainder against him. The bill was passed in both houses of Parliament, and Charles I. was weak enough to give his assent to it. The king afterwards made some slight and fruitless attempts to save the life of the minister who had been his too zealous tool in the despotic measures which he attempted against the liberties of his subjects. On the day of execution, *S.* went forth to the block with the manner of "a general marching at the head of an army to breathe victory, rather than that of a condemned man, to undergo the sentence of death." Executed on Tower Hill, London, 1641.

Stratford, in *New Hampshire*, an E.S.E. co., bordering on Maine; area, 350 sq. m. *Rivers*. Cochecho, Lamprey, Isinglass, and Salmon Falls. *Surface*, diversified; soil, generally fertile. *Cap.* Dover.

—A post-vill. and township of the above co., 20 m. E.N.E. of Concord.

Stratford, in *Vermont*, a post-village and township of Orange co., 33 m. S.S.E. of Montpelier.

Straggle, (*strag'gl*.) *v. n.* [A. S. *strægan*.] To wander from the direct course or way; to rove. — To wander at large without any certain direction or object; to ramble. — To exuberate; to shoot too far; as, *straggl*ing branches. — To be dispersed or separated.

Straggler, *n.* One who straggles or departs from the direct or proper course. — A vagabond; a wandering, shiftless fellow. — Something that shoots beyond the rest, or too far; an exuberant growth. — Something that stands by itself.

Stragglingly, *adv.* In a straggling manner.

Straight, (*strāt*.) *a.* [A. S. *streht*.] Passing from one point to another by the nearest course; not deviating or crooked; as, a *straight* line. — Narrow; close; tight; — properly written *strait*. — Upright; accordant with justice and rectitude; not deviating from truth or fairness.

S. arch. (*Arch.*) The arch over an aperture, whose intrados is straight, but with its joints drawn concentrically, as in a common arch. (*Brande.*) — *S. line.* (*Geom.*) A line, the direction of which is not changed between any two of its points.

—*adv.* Immediately; directly; in the shortest time.

—*v. a.* To straighten. (*R.*)

Straight-edge, (*strāt-ēj*.) *n.* A piece or strip of wood or metal having one edge straight, used for ascertaining whether a surface is perfectly even or level.

Straight'en, *v. a.* To make straight; to reduce from a crooked to a straight form. — To reduce to difficulties or distress. — To make narrow, tense, or close; to tighten.

Straight'ener, *n.* One who, or that which, straightens.

Straight'forward, *a.* Proceeding in a straight course; not deviating.

Straight'forwardness, *n.* Direction in a straight course.

Straight'joint, *n.* (*Arch.*) Applied to a floor which has its boards so laid that their joints or edges form a continuous line throughout the direction of their length.

Straight'ly, *adv.* In a right line; not crookedly; tightly; closely.

Straight'ness, *n.* State or quality of being straight; rectitude. — Narrowness; tightness; tension.

Straight'way, *adv.* Directly; immediately; without loss of time; without delay.

Strain, *v. a.* [Ger. *anstrengen*, to strain; O. Fr. *estreindre*, to strain.] To draw with force; to extend with great effort; as, to *strain* a rope. — To injure by pressing with too much effort. — To put to the utmost strength. — To make tighter; to cause to bind closer. — To press or cause to pass through some porous substance; to filter. — To force; to constrain; to make uneasy or unnatural.

—*v. n.* To make violent efforts. — To be filtered.

—*n.* A violent effort; a stretching or exertion of the limbs or muscles. — An injury by excessive exertion, drawing, or stretching. — Style; continued manner of speaking or writing; manner of speech or action. — Stretch or elevation of voice or sound; song; note;

sound, or a particular part of a tune. — Turn; tendency; inborn disposition. — Race; breed, as a body.

(*Mus.*) Any one of the periods into which a musical composition is divided by double bars, the *S.* being further subdivided into periods, sections, phrases, and feet.

Strainer, *n.* A person who strains. — That through which any liquid passes for purification; an instrument for filtration or percolation.

Strain'ing, *n.* The act of one who strains. — That which is strained.

S. piece. (*Arch.*) A piece of timber designed to prevent the nearer approach of two pieces of timber in a framing. The collar of a queen-post roof (Fig. 2274) may be cited as an illustration of the meaning of a straining-piece.

Strait, *a.* [Lat. *strictus*; It. *stretto*.] Narrow; close; not broad. — Close; intimate. (*R.*) — Difficult; distressful.

—*n.* Distress; difficulty; direful necessity.

(*Geog.*) A narrow pass or passage, either in a mountain, or in the ocean between continents or other portions of land; — commonly in the plural; as, the *Straits* of Gibraltar.

Strait'en, *v. a.* To make strait, narrow, or contracted; to contract; to confine. — To make tense, or tight. — To distress; to perplex; to press with poverty or other necessity; as, *straitened* means.

Straight-handed, *a.* Parsimonious; sparing; niggardly. (*R.*)

Straight-laced, (*-lāst*.) *a.* Laced tight; gripped with stays. — Stiff; constrained; as, a *straight-laced* person. — Rigid in opinion; strict; as, *straight-laced* morality.

Straight'ly, *adv.* Narrowly; closely; strictly; rigorously.

Straight'ness, *n.* The state or quality of being strait; narrowness; strictness; rigor; distress; difficulty; pressure from necessity of any kind, particularly from poverty.

Straight-waistcoat, **Straight-jacket**, *n.* A garment for restraining a lunatic person, or one laboring under violent delirium. It has long sleeves, which are tied behind the body, so that the arms cannot be extricated from them.

Strake, *n.* The iron band on the circumference of a wheel, defending the felly; a tire.

(*Ship-building*.) A line of planking extending from the stem to the stern.

Straitsund, a strongly fortified town of Prussia, Pomerania, long subject to Sweden, situate on the strait which separates the island of Rügen from the mainland, 85 m. from Stettin. Its harbor is capacious and safe. The aspect of the town is gloomy, the streets being narrow and indifferently paved. *Manuf.* Woollens, linens, tobacco, soap, and glass. *S.* was built about the year 1209, and became a member of the Hanseatic League. In 1628 it was besieged without success by Wallenstein, but was taken in 1678, 1713, and 1807. Since 1815 it has been made one of the strongest towns belonging to Prussia. *Pop.* 27,593.

Stramonium, *n.* (*Bot.*) The Thorn-apple (*Datura stramonium*). See *Datura*.

Strand, *n.* [A. S., Ger., Du. *strand*, shore.] The shore or beach of the sea or ocean, or of a large lake. — One of the twists, or parts of which a rope is composed.

—*v. a.* To drive or run aground on a shore or strand, as a ship. — To break, as one of the strands of a rope.

—*v. n.* To drift or be driven ashore; to run aground.

Strange, (*strānj*.) *a.* [Fr. *étrange*; O. Fr. *estrang*; Sp. *extrano*; Lat. *extraneus*.] Belonging to another country; foreign; not domestic. — New; not before heard, known, or seen. — Causing surprise; exciting curiosity; wonderful. — Not according to the common way; odd; unusual; irregular.

Strange sail. (*Naut.*) An unknown sail or vessel.

—*interj.* An exclamation of wonder.

Strange'ly, *adv.* In a strange manner; wonderfully; in a manner or degree to excite surprise or wonder.

— With some relation to foreigners.

Strange'ness, *n.* Foreignness; the state of belonging to another country. — Distance in behavior; reserve; coldness; forbidding manner. — Remoteness from common manners or notions; uncouthness. — Mutual dislike; estrangement. — Wonderfulness; the power of exciting surprise and amazement; uncommonness that raises wonder by force of novelty.

Stranger, *n.* [O. Fr. *estranger*; Fr. *étranger*.] A foreigner; one who belongs to another country. — One of another town, city, state, or province in the same country; one unknown; one unacquainted. — A guest; a visitor. — One not admitted to any communication, communion, or fellowship.

(*Law.*) A person born out of the U. States; — more properly called *alien* until he becomes naturalized. — A person who is not privy to an act or contract.

Stranger, in *Kansas*, a post-township of Leavenworth co.; *pop.* abt. 1,200.

Strangford, (*Lough*.) a large inlet of the sea, between Belfast Lough and Dundrum Bay, Ireland. It is studded with numerous islets, and is shallow.

Strangle, (*strang'gl*.) *v. a.* [O. Fr. *estrangler*, from Lat. *strangalo*; Gr. *strangolao*, or *stranggalizo*.] To choke; to stifle; to suffocate; to destroy the life of by stopping respiration. — To hinder from birth or appearance; to smother; to suppress.

Strangler, *n.* One who strangles.

Strangling, *n.* The act of killing by strangling or choking.

Strangles, (*strang'glz*.) *n. sing.* (*Farriery*.) A contagious eruptive disorder peculiar to young horses. It is ushered in by sore throat and cough, a mucopurulent nasal discharge, and the eruption of a swelling in the space between the branches of the lower jaw. In

about ten days, this swelling comes to a head, bursts, and in favorable cases the patient is soon well again. From exposure to cold, poverty, or other causes, the swelling, however, occasionally appears in less favorable situations, as about the glands lying within the shoulder, in those of the groin, or even in those of the mesentery. Such irregular cases are apt to be protracted, accompanied by much weakness, and sometimes prove fatal.

Strangulated, *a.* (*Bot.*) Irregularly contracted.

S. hernia. (*Sarg.*) A hernia whose aperture occasions more or less constriction on the protruded part.

Strangulation, *n.* [Fr., from Lat. *strangulatio*.] The act of killing by intercepting the breath. It is produced by forcibly compressing the anterior of the windpipe, or by drawing a rope tightly round the neck. Death is generally due to arrest of respiration, but it may be dislocation of the cervical vertebrae. See *HANGING*.

Strangury, *n.* [Gr. *straggouria*, from *stranz*, a drop, and *ouron*, urine.] (*Med.*) Painful difficulty in voiding urine.

(*Bot.*) A disease in plants, produced by tight ligatures.

Stranraer, (*strān-rar'*.) a town of Scotland, in Wigtownshire, at the head of the bay of Loch Ryan, 6 m. from Port Patrick. *Manuf.* Weaving, and there are tanneries and nail-factories. The harbor is excellent. *Pop.* 6,542.

Strap, *n.* [A. S. and Sw. *stropp*; Ger. *strippe*; Lat. *strappus*, a band, thong; Gr. *strophos*, a twisted band, from *stropho*, to twist.] A long, narrow slip of cloth or leather or some similar material. — A strap; a slip of leather or other material used for sharpening a razor.

(*Bot.*) The flat part of the corolla of a ligulate floret.

(*Carp.*) An iron band fixed round two or more timbers, sometimes with branches along each, to hold them all firmly together.

(*Naut.*) An iron bar of great strength forming part of the brake apparatus of a capstan on board ship.

—*v. a.* To beat or chastise with a strap. — To fasten or bind with a strap. — To rub on a strap for sharpening, as a razor.

Strappa'do, *n.* [It. *strappata*; Fr. *estrapade*.] A kind of rack; a very cruel species of military punishment formerly in vogue in most European armies; it consisted in tying the offender's hands behind his back, attaching a strong cord to the wrists, and then by means of a pulley drawing him rapidly up to a cross-beam many feet high, entirely suspended in this painful manner, and then allowing the tortured victim to fall by his own weight to the ground, the process being repeated till one or more of his bones were dislocated or fractured.

Strapper, *n.* A person who uses a strap. — Any person or thing of unusual size. (*Low.*)

Strapping, *a.* Tall; lusty; bulky; large; as, a *strapping* fellow.

Strap-shaped, *a.* (*Bot.*) Long, flat, and narrow, as a corolla; ligulate.

Strap-work, *n.* (*Arch.*) A peculiar kind of ornament, much used in the 15th and 16th centuries as a general decorative enrichment, and which consists of a narrow fillet or band, folded and crossed, and occasionally interlaced with another; the convolution sometimes exhibiting much ingenious elaboration.

Strasbourg, or **Strasburg**, a fortified city of Germany, near its W. frontier, cap. of the German Reichsland, on the Ill, near the Rhine, 100 m. S.S.W. of Mentz, and 250 E. by S. of Paris. The city is of a triangular form, is inclosed by a bastioned line of ramparts, strengthened by numerous out-works, entered by

Fig. 2435. — STRASBURG CATHEDRAL.

7 gates, and has on its E. side a strong pentagonal citadel, built by Vanban. S. was, indeed, until toward the close of the year 1870, one of the strongest and most important fortresses and arsenals of France. Of its remaining public buildings, the principal is the Cathedral of Notre Dame, commenced in 1015, and completed in 1439, and which is justly classed among the most magnificent examples of Gothic architecture that exist (Fig. 2435). Its tower, 466 feet in height, is a masterpiece of architectural taste and skill, being built of hewn stone, cut with such delicate nicety as to give it at a distance some resemblance to lace, and combining the most elegant symmetry of parts with the most perfect solidity. *Manuf.* Flax, hemp, wine, liquors, linens, sail-cloth, blankets, carpets, hardware, leather, cotton, lace, snuff, jewelry, cutlery, bijouterie, chemicals, mathematical and musical instruments, and the famous *palés de foie gras* of S. *Pop.* (1897) 133,250.—*Hist.* S. is very ancient, and most probably existed previous to the Romans. It assumed the name of *Strateburguen* in the 6th century. On the first partition of the Frankish territory it was included in the kingdom of Austria, and on the second in Lorraine. In the 10th cent. it belonged to the German emperors, and subsequently became a free city of the empire, which it continued to be till 1681, when it was taken possession of by Louis XIV., and finally annexed to France. Shortly after the outbreak of the Franco-Prussian war in Aug., 1870, and following the disastrous capitulation of the Emperor Napoleon with his army at Sedan, S. was invested by a German force of from 60,000 to 70,000 men under Gen. Werder, who opened his first parallel on the night of 29-30 Aug., and the second on that of 1-2 Sept. The garrison, numbering abt. 17,000 men, under Gen. Urich, after a most heroic defence, surrendered on the 28th of the last-named month. The surrender was hastened by a desire to stop further effusion of blood, and to save this magnificent city from total destruction. During the bombardment the shells of the Prussians destroyed some of the principal public buildings and private residences. The city was finally incorporated with the German Empire in 1871. It has since been considerably enlarged, and new fortifications of great extent were completed in 1882. The famous library burnt during the bombardment has been replaced by a much larger one.

Stras'burg, in *Ohio*, a post-village or Tuscarawas co., 110 m. S.E. of Columbus.

Strasburg, in *Pennsylvania*, a post-borough and township of Lancaster co., 8 m. E.S.E. of Lancaster.

Strasburg, in *Virginia*, a post-town of Shenandoah co., 18 m. S.W. of Winchester.

Strasznitz, (*stras'nitz*), a town of Austria, in Moravia, 12 m. from Hradisch; *pop.* 5,500.

Strat'a, *n. pl.* of STRATUM, *q. v.*

Stratagem, (*-jem*), *n.* [Fr. *stratagème*; Lat. *strategema*.] An artifice, particularly in war; a plan or scheme for deceiving an enemy.—A trick by which some advantage is intended to be obtained; any artifice.

Stratarith'metry, *n.* [Gr. *stratos*, army, *arithmos*, number, and *metron*, measure.] The art of drawing up an army or body of men in a geometrical figure.

Strateg'ies, *n. sing.* (*Mil.*) Strategy. (*R.*)

Strateg'ie, *n.* [Fr. *stratégie*.] A person skilled in strategy.

Strateg'ically, *adv.* In a strategic manner.

Strat'egist, (*-jist*), *n.* [Fr. *stratégiste*.] A person skilled in strategy.

Strat'egy, *n.* [Fr. *stratégie*; Lat. *strategia*.] (*Mil.*) The science of directing military movements on the theatre of the war, when not in actual contact with an enemy. It merges into *tactics* on the field of battle.

Strat'ford, a town of England, co. of Essex, on the Lea, 4 m. from London. *Manuf.* Chemicals.

Strat'ford, in prov. of Ontario, a town, cap. of Perth co.

Stratford, in *New Hampshire*, a post-township of Coos county, 117 m. N. of Concord.—In *Connecticut*, a p.-vill. and township of Fairfield co., at the mouth of the Housatonic River, Long Island Sound, 62 m. N.E. of New York. At the entrance of the harbor is the Stratford Point Light-house, with a revolving light; Lat. 41° 9' N., Lon. 73° 6' 36" W.

Stratford, in *Ohio*, a village of Delaware co., 27 m. N. of Columbus.

Stratford-le-Bow, (*-le-bo'*), a town of England, in Middlesex, on the Lea, 3 m. from London; *pop.* 6,000.

Stratford de Redcliffe, STRATFORD CANNING, Viscount, an English statesman, b. in London, 1788; was a cousin of George Canning, and himself a distinguished diplomatist. As ambassador to Turkey, he had the management of the negotiations with the Russian ambassador previous to the Crimean war.

Stratford-upon-Avon, a market-town of England, in Warwickshire, on the Avon, 9 m. from Warwick. It contains the house in which, it is said, Shakespeare was born; but that in which he died has long ago been razed to the ground by the proprietor. *Pop.* 3,500.

Strath'am, in *New Hampshire*, a post-twp. of Rockingham co., 39 m. E.S.E. of Concord.

Strathspey, (*sträth'spe'*) *n.* A kind of Scottish national dance, slower than the reel, and which is said to derive its name from having been first practised in the district called Strathspey.

Stratification, *n.* [Fr.] (*Geol.*) The arrangement of the various materials of which the earth's crust is composed in *strata*, *beds*, or *layers*, reposing one on another, with more or less appearance of regularity. Rocks are said to be *stratified* or *unstratified*, to have *conformable* or *unconformable* S., according as they present evidences of mechanical or chemical origin, and

as they seem to have succeeded each other without or after disturbances altering the horizontality of strata previously placed.

Strat'iform, *a.* In the form of strata.

Strat'ify, *v. a.* [Fr. *stratifier*.] To form into a stratum or strata.—To lay in strata.

Stratiotes, *n.* (*Bot.*) A genus of plants, order *Hydrocharideae*, including the Water Soldier, *S. aloides* (Fig. 2436), which grows in lakes and ditches.—It has numerous strap-shaped leaves, which spring from the root, as does also the 2-edged flower-stem bearing the spathe with beautiful and delicate white flowers. It is a very ornamental aquatic plant.

Stratoc'raey, *n.* [Gr. *stratos*, an army, and *krates*, to rule.] A military government.

Stratog'raphy, *n.* A description of armies, or of whatever relates to them.

Straton'ie, *a.* Relating to an army; warlike.

Strat'ton, in *Illinois*, a township of Edgar co., abt. 5 m. E.S.E. of Paris.

Stratton, in *Vermont*, a post-township of Windham co., 90 m. S.W. of Montpelier.

Strat'tonville, in *Pennsylvania*, a post-village of Clarion co., 3 m. E. of Clarion.

Stratum, *n.*; Latin pl. STRATA; Eng. pl. STRATUMS. (*R.*) (*Geol.*) A single bed or layer of rock as it lies in the earth. Several such layers together form a group of *strata*, and if compacted and in any way distinguishable from other similar groups, a group of strata forms a *stratified rock*.

Strat'us, *n.* [Gr. *sterno*, *stratus*, to spread.] (*Meteor.*) See CLOUD.

Straubing, (*strou'bing*), a town of Lower Bavaria, on the Danube, 27 m. from Regensburg; *pop.* 11,214.

Stras'berg, a town of Prussia, prov. of Brandenburg, 20 m. from Berlin; *pop.* 4,500.

Strauss, DAVID FRIEDRICH, (*strouss*), a German theologian, b. at Ludwigsburg, Württemberg, 1808. In 1832, he became assistant teacher in the Theological Institute at Tübingen, and lectured on philosophy in the university there. In 1835, he produced his famous *Life of Jesus Critically Treated*, in which he attempted to prove the received gospel history to be a collection of myths gradually formed in the early Christian communities, and sought, by an analytical dissection of each separate narrative, to detect, where it existed, a nucleus of historical truth free from every trace of supernaturalism. The book made a real epoch in theological literature, and produced a violent excitement in and out of Germany, calling forth numberless replies from opponents, frightening many by its bold disregard of consequences back into the ranks of orthodoxy, and stirring up others to similar investigations. S. was dismissed from his appointment at Tübingen, and, in the following year, became a private tutor at Stuttgart. He replied to his critics, in 1837, in two *Friendly Addresses*; nevertheless, the feeling against him was so strong, that when, in 1839, he was appointed professor of divinity and church history at the University of Zurich, he was not only compelled instantly to resign, but the administration under which he had received the post was overthrown. He subsequently produced a biography of Schöber, the German poet, and *The Doctrine of the Christian Faith*, is a natural sequel to the purely critical investigation of the origin of Christianity in the first book. D. Feb. 8, 1874.

Straw, *n.* [A. S. *strow*, *strew*; Ger. *stroh*.] The stalk or stem of certain species of grain, pulse, &c., chiefly of wheat, rye, oats, barley, buckwheat, and pease.—A mass of the stalks of certain species of grain when cut, and after being threshed.—Anything proverbially worthless.

Man of straw. A figure of straw, made to resemble a man.—A man without competent or responsible means.—*Straw-bail*. Bail given by irresponsible persons.—*To be in the straw*. To lie in child-bed. (*Colloq.*)

Straw, in *New Jersey*, a village of Warren co., 5 m. S.E. of Phillipsburg.

Strawberry, *n.* (*Bot.*) See FRAGARIA.

Straw'berry, in *Arkansas*, a township of Lawrence co.

Straw'berry-blit, *n.* (*Bot.*) See BLITUM.

Straw'berry Plains, in *Tennessee*, a post-village of Jefferson co., 18 m. N.E. of Knoxville.

Straw'berry River, in *Arkansas*, rises in Fulton co., and falls into Black River in the S.W. of Lawrence co.

Straw'berry Valley, in *California*, a post-village of Yuba co., 45 m. N.N.E. of Marysville.

Fig. 2436.—WATER SOLDIER, (*Stratiotes aloides*.)

Straw'-color, (*-kul'ur*), *n.* A light yellow color.

Straw'-cutter, *n.* An instrument for cutting straw or fodder.

Strawn'town, in *Pennsylvania*, a village of Bucks co., 18 m. S.E. of Easton.

Straw'-plait, *n.* A strip made by plaiting straw, and used for making bonnets, hats, &c.

Straw'town, in *Indiana*, a post-village of Hamilton co., 28 m. N.N.E. of Indianapolis.—A village of Hendricks co., 30 m. N.N.E. of Indianapolis.

Straw'y, *a.* Made of straw; consisting of straw; resembling straw; light.

Stray, *v. n.* [A. S. *stragan*.] To wander, as from a direct course; to turn or go out of the way.—To wander from company or from the proper limits; to rove at large.—To wander from the path of duty or rectitude; to err; to deviate.

—*a.* Strayed; wandering; as, a *stray* cow or horse. (*Col.*)

—*n.* Any domestic animal that has left an enclosure, and wanders at large, or is lost.—The act of wandering. (*R.*)

Stray'er, *n.* One who strays or wanders.

Streak, *n.* [A. S. *stricu*, *strice*; Du. *streek*; Ger. *strich*.] A line or long mark of a different color from the ground; a stripe.

(*Ship-building*.) Same as STRAKE, *q. v.*

(*Min.*) The appearance which arises from scratching a mineral with the point of a knife. The streak is *similar* when the color of the scratch is the same as that of the mineral, but *dissimilar* when the color varies.

—*r. a.* To form streaks or stripes in; to stripe; to variegate with lines of a different color, or of different colors.

—*v. n.* To stride; to vamoze; to run swiftly; as, to *streak* it. (*Vulgar*.)

Streaked, (*streekt*), *a.* Marked or variegated with stripes of a different color.

Streak'y, *a.* Having streaks or stripes; striped; variegated with lines of a different color.

Stream, *n.* [A. S.; Du. *stroom*; Ger. *strom*.] A liquid substance flowing in a line or course, either on the earth, as a river or brook, or from a vessel or other reservoir or fountain; a current of water or other fluid.—A current of melted metal or other substance.—Anything issuing from a source, and moving with a continued succession of parts.—A current of air or gas, or of light.—Current; drift, as of opinions or manners.

—*v. n.* To flow; to run or move in a continuous current.

—To pour out in abundance, as of tears.—To issue or shoot in streaks.—To extend; to stretch in a long line.

—*v. a.* To pour; to send forth in a current or stream.—To mark with colors or embroidery in long tracks.

To stream the buoy. (*Naut.*) To drop it into the water.

Stream'-anchor, *n.* (*Naut.*) A small anchor used for swaying, and sometimes for mooring by, in a river, &c.

Stream'er, *n.* An ensign or flag; a pennon extended or flowing in the wind.—A luminous beam or column, one of the forms of *aurora borealis*.

Stream'ful, *a.* Abounding in streams or running water.

Stream'-ice, *n.* A continued line or series of pieces of ice flowing in certain directions.

Stream'let, *n.* A small stream; a rivulet; a rill.

Stream'y, *a.* Streamful.—Flowing with a current or stream.

Street, *n.* [A. S. *street*; Du. *straat*; Ger. *strasse*; Lat. *strata* (*via*), a smooth or levelled way.] Any way or road in a city, chiefly a highway;—in distinction from a *lane* or *alley*.

Street-door. The door of a house, fronting or opening upon a street.

Streets'borough, in *Ohio*, a post-township of Portage co.

Streets'ville, in prov. of Ontario, a village of Peel co., 23 m. N. of Toronto.

Street'-walker, *n.* A common prostitute, who offers herself for hire in the open street.

Strehlen, (*strai'len*), a town of Prussia, in Silesia, on the Ohlau, 22 m. from Breslau. *Manuf.* Cottons, woollens, and leather. *Pop.* 5,635.

Strelitz, (*-its*), a city of Germany, divided into Old and New Strelitz. See NEU-STRELITZ.

Strel'itz, *n.*; pl. STRELITZY. A soldier of the ancient Muscovite militia.—The strelitz were the only standing army of the empire, and, like the Turkish janissaries, constantly interfered with its government. Their last revolt was in 1698, during the absence of the Czar, Peter I., who on his return cashiered the corps altogether.

Strel'izia, *n.* (*Bot.*) A genus of plants, order *Musaceae*, consisting of large herbaceous plants, natives of the Cape of Good Hope. Their foliage consists of long stalked leaves, sheathing at the base, arising from a contracted stem, the flower-stalk encircled below by the sheath of the leaf-stalk, while its upper portion gives origin to a large bract or spathe placed obliquely, within which are the flowers. The fine leaves and large orange and purple flowers of *S. reginae* render it one of the most splendid of plants.

Strength, *n.* [A. S. *strength*, *streng*.] The state or quality of being strong; vigor; force; capacity for exertion or endurance, whether physical, moral, or intellectual.—Solidity or toughness; the quality of bodies by which they sustain the application of force without breaking or yielding.—Power of resisting attacks; fastness; support.—Legal or moral force; validity; the quality that commands results.—That which yields support; confidence; security.—Amount of force, military or naval; an army or navy; number of troops or ships well appointed.—Force of writing; nervous diction; force;—opposed to *softness* in writing or painting.—Vividness; clearness;—said of light or color.—

The quality of any liquor which has the power of affecting the taste, or of producing sensible effects on other bodies.—Vehemence; force proceeding from motion, and proportioned to it;—said of air, water, &c.
(*Fine Arts.*) Boldness or vigor of conception or treatment.

Strength of materials. See MATERIALS (STRENGTH OF).

Strengthen, *v. a.* To make strong or stronger; to add strength to, either physical, legal, or moral; to confirm; to establish.—To fix in resolution; to animate; to encourage.—To cause to increase in power or security.

—*v. n.* To grow strong or stronger.

Strengthened, (*strengthen'er*), *n.* One who, or that which, increases strength.

Strengthless, *a.* Wanting strength; deprived of strength.—Lacking potency; weak;—said of liquors. (*R.*)

Strenuous, *a.* [*Lat. strenuus.*] Energetic; vigorous; eagerly pressing or urgent; zealous; ardent; bold, active, and vigorous; intrepid.

Strenuously, *adv.* With eager and pressing zeal; ardently; boldly; vigorously; actively.

Strenuousness, *n.* The state or quality of being strenuous; eagerness.

Strepisip'tera, *n. pl.* [*From Gr. strepho, I twist, and pteron, a wing.*] (*Zoöl.*) The name given by Kirby to the order of insects which he found to possess rudimentary elytra in the form of linear and spirally twisted scales.

Strep'topus, *n.* (*Bot.*) A genus of plants, order *Liliaceæ*, distinguished by its branched stem, and axillary, solitary flowers, generally with the peduncle distorted. *S. roseus*, the Rose-twistfoot, a common species, native of woods from Canada to the Carolinas, has reddish, spotted flowers suspended beneath the branches, one under each leaf.

Stress, *n.* [*Abbreviated from distress.*] That which bears the force or weight, or the force or weight itself; pressure.—Urgency; violence.

Stretch, *v. a.* [*A. S. streccan; Ger. strecken.*] To draw out to greater length; to extend in a line.—To extend in breadth; to spread or expand.—To reach out; to put forth; to extend.—To make tense; to render tight.—To draw or pull out in length; to strain.—To exaggerate; to extend too far.

—*v. n.* To be extended; to be drawn out in length or in breadth, or both.—To make violent efforts in running.—To spread.—To be extended, or to bear extension without breaking.—To strain beyond the truth; to exaggerate.
(*Naut.*) To sail; to direct a course.

—*n.* Extension in length or in breadth; reach; effort; struggle.—Utmost extent of meaning; utmost reach of power.—Course; direction.

(*Naut.*) Progress of a vessel under a heavy press of sail, and close-hauled.

Stretch'er, *n.* He who, or that which, stretches.—A litter for carrying the sick, wounded, &c.

(*Masonry.*) A block of stone or a brick laid horizontally, with its length in the direction of the face of a wall.

(*Naut.*) A movable bar across the bottom of a boat, for the rower to place his feet against. The power of the stroke is dependent on the proper adjustment of the stretcher.

Stretch'ing-course, *n.* (*Masonry.*) A course in which the bricks or stones are laid horizontally, with their lengths in the direction of the face of the wall.

Stretch'ing-machine, *n.* (*Manuf.*) Calicoes and other similar textile fabrics are prepared for the market by being stretched in a proper machine, which lays all their warp and woof yarns in parallel positions, and extends their width after the shrinkage caused by bleaching, dyeing, &c.

Stret'to, *n.* [*It., from Lat. strictus, strait, narrow.*] (*Mus.*) A term indicating that the measure to which it is affixed is to be performed short and concise, hence quick. It is the opposite of *largo*. The stretto of a fugue is a part coming towards the end, where the answers to the subject are brought more closely together.

Strew, (*stru*), *v. a.* [*A. S. streowan; Ger. streuen.*] To scatter; to spread by scattering.—To spread scatteringly or loosely.—To spread abroad.

Strew'ing, *n.* The act of one who, or that which, strews.—Something strewed or to be strewed.

Stria, *n.*; *pl.* STRIÆ. [*Lat.*] (*Arch.*) The channel or groove of a column.

Stri'æ, *n. pl.* [*Lat. pl. of stria.*] (*Zoöl.*) Fine thread-like lines in the exterior surface of many shells, longitudinal, transverse, or oblique.

Stri'ate, *v. a.* To furnish with furrows or channels.

Stri'ate, *Stri'ated*, *a.* (*Zoöl.*) Marked with lines or stripes.

(*Bot.*) Marked with longitudinal streaks or furrows.
(*Fine Arts.*) Disposed in ornamental lines, either parallel or wavy.

Stricken, (*strik'kn.*) *pp.* of STRIKE, *q. v.*

—*p. a.* Struck; smitten.—Advanced; worn out; far gone.

Strick'ersville, in *Pennsylvania*, a post-village of Chester co., abt. 40 m. W.S.W. of Philadelphia.

Strick'land's Depot, in *N. Carolina*, a village of Duplin co., 47 m. N. of Wilmington.

Strick'land's Ferry, in *Maine*, a post-village of Androscoggin co., abt. 22 m. N.W. of Augusta.

Strickle, (*strik'l.*) *n.* An instrument used to strike corn, to level it with the measure.—A tool used in moulding pipes.

Strict, *a.* [*Lat. strictus, from stringo, to stretch.*] Strained; drawn tight.—Tense; not relaxed.—Exact; accurate; rigorously nice.—Governed or governing by exact rules; severe; rigorous; observing exact rules.—Confined; limited; characterized by rigor.
(*Bot.*) Straight and narrow.

Strict'ly, *adv.* Closely; tightly; exactly; positively; rigorously.

Strict'ness, *n.* Quality of being strict; closeness; tightness;—opposed to *laxity*.—Exactness in the observance of rules, laws, rites, and the like.—Rigorous accuracy; nice regularity or precision.—Rigor; severity.

Strict'ure, *n.* [*Fr., from Lat. strictura, from stringo, strictus.*] A stroke; a glance; a touch.—A touch of criticism; a caustic remark; animadversion; censure.

(*Med.*) A spasmodic or other morbid contraction of any passage of the body.

Stride, *v. n.* (*imp. STRODE, pp. STRIDDEN.*) [*A. S. stredan, to spread.*] To walk by extending the feet wide apart; to walk with long steps; to straddle; to stand with the legs far from each other.

—*v. a.* To pass over at a step.

—*n.* [*A. S. stræde.*] A long step; a straddle.

Stri'dent, *a.* [*From Lat. stridere.*] Harsh; grating on the ears; as, a strident voice.

Stri'dor, *n.* [*Lat.*] A harsh, shrill, grating, or creaking noise.

Striegau, (*stre'gau*), a town of Prussian Silesia, 32 m. from Breslau; *pop.* 5,711. Near it, in 1745, the Austrians were defeated by the Prussians.

Strife, *n.* [*O. Fr. estrif.*] Act of striving; struggle; exertion or contention for superiority; contest of emulation, either by intellectual or physical efforts; contention in anger or enmity; discord; contest; struggle for victory; conflict; quarrel or war; opposition; contrariety; contrast.

Stri'ga, *n.*; *pl.* STRIGÆ. [*Lat., a windrow.*] (*Arch.*) A fluting of a column.

(*Bot.*) One of the close-pressed rigid hairs distributed over the surface.

Strig'idæ, *n. pl.* (*Zoöl.*) See OWL.

Strig'il, *n.* [*Lat. strigilis.*] A brush for the skin.

Strig'ous, **Strig'illose**, *n.* (*Bot.*) Clothed with sharp and short close-pressed hairs, or scale-like bristles.

Strike, *v. a.* (*imp. STRUCK; pp. STRUCK, and sometimes STRICKEN.*) [*A. S. astrican, to smite; Ger. streich.*] To act upon by a blow; to hit with a blow; to touch or hit with some force, either with the hand or an instrument.—To dash; to throw with a quick motion.—To stamp; to impress; to coin; to thrust in; to cause to enter or penetrate.—To punish; to afflict.—To cause to sound; to notify by sound.—To lower; to let down, as sails.—To impress strongly; to affect sensibly with strong emotion.—To make and ratify, as a bargain.—To produce by a sudden action.—To affect in some particular manner by a sudden impression or impulse.—To run on; to ground, as a ship.

To strike off, to separate by a blow, or any sudden action.—To strike out, to produce by collision.—To blot; to efface.—To bring to light.—To form at once by a quick effort.

—*v. n.* To make a quick blow or thrust.—To hit; to collide; to dash against; to clash.—To sound by percussion.—To be struck; to make an attack; to fall upon.—To act on by beating against; to sound with blows.—To run upon; to be stranded.—To pass with a quick or strong effect.—To dart; to penetrate.—To lower a flag or colors in token of respect, or to signify a surrender of the ship to an enemy.—To cease from work, as a body of workmen acting by combination, in order to attain higher wages; to revolt; to mutiny.

—*n.* Act of striking.—An instrument with a straight edge for levelling a measure of grain, &c., for scraping off what is above the level of the top.

(*Pol. Econ.*) A means adapted by workmen in order to obtain higher wages or some amelioration in their working circumstances, and in which they leave their work in a body and refuse to resume it until their demands are complied with. Such proceedings are always attended with great hardships, and usually give rise to much bad feeling on both sides. The object of the workmen evidently is to force their employers into compliance by taking advantage of their necessity to have the work carried on or completed, and the knowledge of this naturally makes the employers the more inclined to resist. Perhaps, however, the chief objection to strikes is the all but impossibility of their being carried out without a system of tyranny being maintained towards a number even of those who are parties to it. A strike without unity among a number of workmen is a failure; and to obtain this, usually a number of persons are forced into it most unwillingly. A strike, so long as there is no destruction of property or intimidation, is perfectly legal, but it often degenerates into a lawless mob. The disastrous results of the great railroad strikes of 1877 are still remembered, they having culminated in the loss of precious lives and millions in property. Other notable strikes have been that in Chicago in 1894, and that of the coal miners in Aug. and Sept., 1897.—When employers, as a means of coercion, close their works this action is termed a *lock-out*.

Strike'block, *n.* A plane shorter than the joints, used for shooting a short joint.

Strik'er, *n.* One who, or that which, strikes.

Strik'ing, *a.* Affecting with strong emotions; surprising; forcible; impressive; strong; exact; adapted to make impression.

Strik'ingly, *adv.* In such a manner as to affect or surprise; forcibly; strongly; impressively.

Strik'ingness, *n.* Power or quality of affecting.

Strik'le, *n.* Same as STRICKLE, *q. v.*

String, *n.* [*A. S. string, streng.*] That which draws tight; that which binds, ties, or fastens; a small rope, line, or cord, or a slender strip of leather, or other like substance, used for fastening or tying things; a ribbon; a thread on which anything is filed; and hence, a line of things; the cord of a musical instrument; a fibre,

as of a plant; a nerve or tendon of an animal body; the line or cord of a bow; a series of things connected or following in succession; any concatenation of things.

—*v. a.* (*imp. and pp. STRUNG.*) To make tense; to furnish with strings; to put in tune, as a stringed instrument; to file; to put on a line.

String'-beans, *n. pl.* Green beans cooked and eaten with the pods;—so called from the stringy substance which is stripped from the back of the pods in preparing them.

String'-course, *n.* (*Masonry.*) A course running round the face of a building, the projection of which is small in proportion to its height.

String'ed, *a.* Having strings; produced by strings.

Stringency, (*strin'jen-si.*) *n.* State of being stringent.

Strin'gent, *a.* [*Lat. stringens, from stringo.*] Drawing close together; contracting; binding strongly; urgent; drawn tight; severe; rigid; strict.

Strin'gently, *adv.* In a stringent manner.

String'er, *n.* One who strings; one who makes strings.

String'-halt, *n.* A peculiar catching up of the horse's limbs, usually of one or both hind limbs. It is most noticeable when the animal is first brought out of the stable, when he is excited, or made to turn suddenly round; it is a variety of chorea or St. Vitus's dance. Although a serious eyesore, it does not interfere with usefulness, and is quite incurable.

String'iness, *n.* State of being stringy.

String'-piece, (*-pēs*), *n.* A piece of timber in a bridge.

(*Arch.*) That part of a flight of stairs which forms its ceiling or soffit.

String'y, *a.* Consisting of strings or small threads; fibrous; filamentous; ropy; viscid; gluey; that may be drawn into a thread.

Strip, *v. a.* [*A. S. bestrypan, to strip, to spoil.*] To take away by force; to pull or tear off, as a covering; to deprive of covering; to skin; to peel.—To deprive; to bereave; to make destitute; to divest.—To rob; to plunder; to pillage.—To impoverish; to make bare by cutting, grazing, or other means.

To strip off, to tear or take off, as the bark of a tree.—To strip from, to take away from.

—*v. n.* To take off the covering or clothes.

—*n.* [*Ger. streif.*] A piece or slip, torn, pulled, or peeled off; a narrow piece, comparatively long.

Stripe, *n.* A line, or long, narrow division of anything, of a different color from the ground; a strip, or long, narrow piece attached to something of a different color.—The wale, or long, narrow mark discolored by a lash or rod.—A stroke made with a lash, whip, rod, strap, or scourge.

—*v. a.* To make stripes in; to form with lines of different colors; to variegate with stripes.

Striped, *a.* Having stripes of different colors.

Striped An'telope, *n.* (*Zoöl.*) See KODOO.

Striped Squir'el, *n.* (*Zoöl.*) One of a group of rodent animals, comprising the genus *Tamias*, family *Sciuridæ*. It is characterized by ample cheek-pouches, tail shorter than the body and not bushy, three to five dark dorsal stripes, and four permanent upper molars. This genus comprises only a few species, two of which are found in Europe and Asia, and the remaining four or five in N. America.

Strip'-leaf, *n.* Tobacco from which the stalks have been removed before packing it.

Strip'ling, *n.* [*From strip, stripe.*] A tall, slender youth; a youth in the state of adolescence, or just passing from boyhood to manhood; a hobbledohoy.

Strip'per, *n.* One who strips.

Strip'pings, *n. pl.* The last milk, at a milking, taken from a cow; the after-milking.

Stris'ores, *n. pl.* (*Zoöl.*) A sub-order of birds, order *Insessores*, including the Humming-birds, Swifts, and Goat-suckers.

Stritch'el, *n.* A strickle.

Strive, *v. n.* (*imp. STROVE; pp. STRIVEN.*) [*Ger. streben.*] To endeavor; to struggle; to contend; to make efforts; to use exertions with earnestness; to labor hard.—To struggle in opposition to another; to be in contention or dispute.—To vie; to emulate; to contest; to oppose by contrariety of qualities.—To be comparable to; to contend in excellence.

Striv'er, *n.* One who strives or contends; one who makes efforts of body or mind.

Striv'ing, *n.* Act of making efforts.

Strix, *n.* (*Zoöl.*) The typical genus of the *Strigidæ*. See OWL.

Strobil'aceous, *a.* (*Bot.*) Belonging to, or resembling, a strobile.

Stro'bile, *n.* [*Fr.; Lat. strobilus.*] (*Bot.*) An imbricated scaly inflorescence, or any collection of hard scales, representing distinct flowers arranged spirally, but closely imbricated, as the fir-cone, or any fruit which resembles it.

Strobil'iform, *a.* That has the form of a strobile.

Stro'cal, **Stro'cle**, **Stro'kal**, *n.* A shovel used in the glass trade, having a turned-up edge, suited to filling the pots or moulds from the chests or harbors of materials.

Stroke, *n.* [*From strike.*] The striking of one body against another; a hostile blow or attack.—A sudden attack of disease or affliction; calamity; fatal attack, as of death.—The sound of the clock.—The touch of a pencil; a touch; a masterly effort.—An effort suddenly or unexpectedly produced.—Series of operations.—A dash in writing or printing; a line; a touch of the pen.—The sweep of an oar in rowing; the upward or downward motion of a piston, as of a steam-engine.

—*v. a.* [*A. S. stracan.*] To rub gently with the hand by way of expressing kindness or tenderness; to soothe; to rub gently in one direction.—To make smooth.

Strok'er, *n.* One who strokes; one who pretends to cure by stroking.

Strokes'man, *n.* The person who rows the aftmost oar in a boat, and gives the stroke which the rest are to follow; usually called *stroke-oar*.

Strok'ing, *n.* The act of one who strokes.

Strok'ings, *n. pl.* Same as STRIPPINGS, *q. v.*

Stroll, *v. n.* [Contracted from *straggle*.] To move or wander about; to wander on foot; to ramble idly or leisurely; to rove; to roam; to stray.

—*n.* A wandering on foot; a walking idly and leisurely.

Stroll'er, *n.* One who strolls; an itinerant actor.

Stro'ma, *n.* [Gr., a bed.] (*Bot.*) A fleshy body, found on fungous plants, to which flocci are attached.

Strom'bite, *n.* (*Pal.*) A fossil shell of the genus *Strombus*.

Strom'boli, the most northerly of the Lipari islands, in the Mediterranean, off the N. coast of Sicily. It is abt. 12 m. in circumference, circular in shape, wholly of volcanic formation, and rises to the height of 3,100 feet above sea-level. On its W. side is a volcano of considerable activity. Sulphur and pumice-stone are gathered in large quantities. Pop. 1,350.

Strombu'tiform, *a.* [Gr. *strombos*, a top, and Lat. *forma*, form.] Shaped like a top.

Strom'bus, *n.; pl.* STROMBIDE. [Gr. *strombos*.] (*Zoöl.*) A genus and family of Mollusca, for the most part found in the seas of tropical countries, inhabiting large and thick oval shells. The head of the animal is furnished with a proboscis and two short tentacula; and the eyes

Fig. 2437. — FOUNTAIN-SHELL, (*Strombus gigas*.)

are situated on a lateral peduncle longer than the tentacula themselves. In the *Strombus gigas* (Fig. 2437), the largest univalve known, which is caught for the table, pearls are said to be occasionally, though very rarely, found. It is sometimes called the Fountain-shell, from its occasional use as a garden ornament.

Stromeyerite, (*ström-e'er-īt*), *n.* (*Min.*) A double sulphide of silver and copper, found in Chili, Peru, &c. Comp. Sulphur 15.7, silver 52.9, copper 31.4.

Strom'uess, a town of Scotland, at the S.W. end of the island of Pomona, on a bay of the same name, with a safe and commodious harbor, 12 m. from Kirkwall; Lat. 58° 51' N., Lon. 3° 9' W. Pop. 2,300.

Strom'ach, in Michigan, a post-township of Manistee co.; pop. abt. 150.

Strong, *a.* [A. S. *strang*, *strong*, *streng*, *strong*.] Having firmness or vigor; having physical active power, or great physical power to act; having the power of exerting great bodily force; vigorous; powerful; stout; robust; muscular; solid; firm; having physical passive power; having ability to bear or endure. — Well fortified; able to sustain attacks; not easily subdued or taken. — Having great wealth, means, or resources. — Moving with rapidity, as wind. — Hale; sound; healthy. — Adapted to make a deep or effectual impression on the mind or imagination. — Characterized by order and zeal; earnestly engaged. — Having virtues of great efficacy, or having a particular quality in a great degree. — Full of spirit; intoxicating; affecting the sight, the taste, or the smell powerfully. — Not of easy digestion. — Well established; not easily overthrown or altered. — Characterized by great earnestness. — Able; furnished with abilities; having great force of mind, of intellect, or of any faculty; having great force; comprising much in few words. — Bright; glaring; vivid. — Powerful to the extent of force named.

Strong'-fisted, *a.* Having a muscular hand.

Strong'-hand, *n.* Force; strength; violence.

Strong'hold, *n.* A place of strength or security; especially, a fortress; a fort; a fortified place.

Strong'ish, *a.* Somewhat strong.

Strong'ly, *adv.* With strength; with great force or power; forcibly; firmly; in a manner to resist attack; vehemently; eagerly.

Strong'-minded, *a.* Having a strong mind; of powerful intellect.

Strong'-pounced, *a.* Having powerful talons, as an eagle.

Strong River, in Mississippi, flows into Pearl River from Simpson co.

Strong-set, *a.* Firmly compacted.

Strong'town, in Pennsylvania, a post-village of Indiana co., abt. 15 m. S.E. of Indiana Court-House.

Strong'sville, in Ohio, a post-village and township of Cuyahoga co., 14 m. S.W. of Cleveland; pop. abt. 1,400.

Strontia, (*stron'she-d*), *n.* (*Chem.*) An alkaline earth very similar in character to baryta. It receives its name from having been discovered in the mineral *strontianite* found at Strontian, in Scotland. It may be readily prepared from the native carbonate by dissolving it in nitric acid, and heating the resulting nitrate to redness in a crucible until no more fumes are evolved. It is similar

in most of its properties to the corresponding alkaline earth baryta. It combines with water with great energy to form hydrate of *S*. The crystallized hydrate has the formula $\text{SrO} \cdot 10\text{H}_2\text{O} + 9\text{Aq}$. Carbonate of *S*. constitutes the mineral known as *strontianite*. Nitrate of *S*. is easily prepared by dissolving the carbonate in nitric acid, and crystallizing. The crystals are anhydrous octohedra, which decrepitate when heated. They are soluble in five parts of cold, and considerably less of hot water. Nitrate of *S*. is much employed in the preparation of red-fire for the theatres. A good mixture for this purpose may be made of 40 parts of nitrate of *S*, 13 of flowers of sulphur, 10 of chlorate of potash, and 4 of sulphide of antimony. Sulphate of *S*. is found native as *celestine*, crystallized in rhomboidal prisms. It may be prepared artificially by a solution of nitrate of *S*. with sulphuric acid. Form. SrO .

Strontit'ic, *a.* Relating to, or containing, strontia.

Strontium, (*stron'she-um*), *n.* (*Chem.*) The metal of which the alkaline earth strontia is the protoxide. It greatly resembles barium in its properties and combinations, but it is not so abundant in nature. It occurs principally as carbonate (*strontianite*) and sulphate (*celestine*). It is a metal of a pale-yellow color, and is procured in the same way as barium. Heated in air, it burns with a yellowish flame, emitting sparks. Water is decomposed by it with evolution of hydrogen. It dissolves readily in dilute nitric acid, but the concentrated acid is without action on it. It forms two oxides — the protoxide (strontia), which has already been described, and the binoxide, which is deposited as a hydrate in crystalline scales, when a solution of binoxide of hydrogen is added to a solution of strontia. Chloride of strontium crystallizes in needles, which deliquesce in the air; hence the nitrate of strontia is used for pyrotechnic purposes. It dissolves in alcohol, and burns with a brilliant red flame. The sulphides are similar in properties and character to the corresponding sulphides of barium.

Strap, *n.* A strap; a strip of leather used for sharpening razors, and giving them a fine smooth edge.

—*v. a.* To draw over a strap with a view to sharpen.

Strophic, (*-fē*), *n.* [Fr., from Gr. *strophē*, a turning.] (*Poetry*.) In the Greek tragedy, the turning of the chorus, dancing towards one side of the orchestra; hence, also, the strain sung during this evolution, to which the *antistrophe* answers.

Stroph'ic, *a.* Relating to, or consisting of, strophes.

Stroph'olate, **Stroph'iolated**, *a.* Furnished with a strophole.

Stroph'iole, *n.* [Lat. *strophium*.] A CARUNCLE, *q. v.*

Stroph'ulus, *n.* (*Med.*) The RED GUM, *q. v.*

Stroud, a market-town of England, in Gloucestershire, near the confluence of the river Frome and the Slade-water, 9 m. from Gloucester. It is the centre of an extensive clothing trade. Pop. 10,000.

Stroud, in Pennsylvania, a township of Monroe co., 22 m. N. W. of Easton.

Stroudsburg, in Pennsylvania, a post-borough, cap. of Monroe co., on D., L. & W. R.R., 24 m. N. of Easton; a summer resort. Pop. (1897) 2,740.

Stroud'ing, *n.* A coarse kind of cloth used in the American Indian trade.

Stroke, *imp.* of STRIVE, *q. v.*

Strow, *v. a.* The same as STREW, *q. v.*

Strozzi, (*strol'se*), the name of a wealthy and illustrious Florentine family. Palla, Filippo, and Piero were the three most renowned members of this princely house, between 1432 and 1537, and who were either exiled or lost their lives in the struggle for liberty against the power of the Medici family.

Struck, *imp.* and *pp.* of STRIKE, *q. v.*

Struct'ural, *a.* Pertaining to structure.

Structure, *n.* [Fr.; Lat. *structura*.] A putting together; adaptation; adjustment; manner of building. — Form; make; construction. — Manner of organization of animals, vegetables, &c. — A building of any kind, but chiefly a building of some size or magnificence; an edifice; a fabric. — The particular arrangement of the integrant particles of a mineral.

Structur'ist, *n.* A builder.

Struensee, (*stroo'en-se*), KARL AUGUST VON, first minister of Christian VII. of Denmark, b. at Halle, Saxony, 1737. He was brought up to medicine, and became, in 1768, physician to the King of Denmark. Soon after the marriage of Christian with the Princess Caroline Matilda of England, *S*. became a favorite of the young queen, and after a long course of court intrigues, taking advantage of the imbecility of the monarch, he gradually came to direct the whole affairs of government. At length the Queen-mother formed a party against him. He was arrested, with his friend, Count Brandt, and beheaded at Copenhagen, 1772.

Struggle, *v. n.* [Ger. *strucheln*, to totter; It. *sdrucchiolare*, to stumble.] To make efforts with a twisting, or with contortions of the body; to use great efforts or exertions; to labor hard; to strive; to contend; to use exertions in pain or anguish; to be in agony; to put forth efforts in any kind of difficulty or distress.

—*n.* A violent effort with contortions of the body; great labor; forcible effort to obtain an object or to avoid an evil; contest; contention; strife; agony; contortions of supreme distress.

Strug'ler, *n.* One who struggles.

Strug'ling, *n.* Act of striving; vehement or earnest effort.

—*a.* Making great efforts; using violent exertions. — Affected with contortions.

Stru'ma, *n.* [Lat.] (*Med.*) A chronic swelling of some gland, particularly the thyroid, dependent on a scrofulous disposition. Any scrofulous enlargement, white swelling, or other indolent tumor.

(*Bot.*) A swelling present in some leaves at the extremity of the petiole, where it is connected with the lamina, as in *Mimosa sensitiva*. The term is also used in describing mosses to denote a dilatation or swelling sometimes seen upon one side of the base of the theca.

Strump'et, *n.* [Du. *stront-pot* — *stront*, ordure.] A prostitute.

—*a.* Like a strumpet; hence, false; inconstant.

Strung, *imp.* and *pp.* of STRING, *q. v.*

Strut, *v. n.* [Dan. *strutte*, to strut; Ger. *strotzen*, to teem.] To swell; to bulge; to protuberate; as, *strutting* bags of money. (*Dryden*.) (*R.*) — To walk with a lofty, proud gait and erect head; to walk with an assumption of dignity; as, a *strutting* cock.

—*n.* A lofty, proud step or walk, with the head erect; affectation of dignity in one's gait; as, an ungainly *strut*. (*Arch.*) A brace; a stretching-piece.

(*Much*.) Any part of a mechanical structure whose principal property is to hold things apart; — correlative to *stay* and *tie*.

Struthion'ide, *n. pl.* [From Gr. *strouthos*; Lat. *struthio*, an ostrich.] (*Zoöl.*) A family of the order *Cursores*, composed of large birds, incapable of flight, having mere rudimentary wings, but long and stout legs; including the Ostrich, the Cassowary, and other congenial species.

Struthiop'teris, *n.* [Gr. *strouthos*, ostrich, and *pteron*, wing, or plume; from the resemblance.] (*Bot.*) A genus of plants, order *Polypodiaceae*. The Ostrich Fern, *S. Germanica*, is a fern of noble size and appearance, growing in low woods and swamps. The sterile fronds are often 5 or 6 feet high, commonly about 3, numerous, in circular clumps. Fertile fronds few, in the midst of the sterile, much smaller; the leaflets with numerous brownish, contracted segments, densely covered by the fruit beneath.

Strut'ter, *n.* One who, or that which, struts.

Strut'tingly, *adv.* With a proud, lofty gait or step.

Stru'vite, *n.* (*Min.*) A crystallized ammonio-magnesian phosphate met with in guano at Saldanha Bay, on the S. coast of Africa. It occurs in regular six-sided prisms of a pale-yellow color, which are transparent, but generally rendered opaque and blackened by organic matter.

Strychnine, **Strychnia**, (*strike'*), *n.* (*Chem.*) One of the alkaloids found in the *Strychnos nux-vomica*, and the *S. Ignatii*, or Ignatius's bean, in company with *brucine* and *igasurine*. In the former, strychnine and brucine are found in the form of lactates. The method of extraction is the following: — The rasped seeds are boiled with four times their weight of alcohol acidulated with one per cent. of sulphuric acid. The alcoholic liquid is neutralized with milk of lime in slight excess; the acid and coloring matters being thus precipitated, the basis remaining in solution. The alcohol is distilled off, and the residue treated with acidulated water, from which the two alkaloids are afterwards precipitated by ammonia. They are then converted into nitrates and crystallized, the nitrate of strychnine crystallizing out first. *S*. is one of the most powerful of the vegetable bases, precipitating many of the metallic oxides from their salts, and in many cases forming compounds with them, of which the double sulphate of strychnine and copper may be taken as an example. *S*. crystallizes from dilute alcohol in anhydrous octohedra, or in square prisms, which do not fuse on the application of heat. It is insoluble in absolute alcohol, ether, and the caustic alkalies; but it dissolves in the essential oils and in chloroform. It dissolves in 7,000 parts of cold water, giving an intensely bitter solution, which is still retained even when diluted with 100 parts of water. With the acids it forms well-defined salts, which are mostly crystalline and soluble. In minute portions, from the twelfth to the sixth of a grain, it is used as a tonic in medicine, with a special action on the nerves of motion. In doses of two or three grains, it is a most powerful and fatal poison; it is therefore frequently used in cases of murder and suicide. Its principal action seems to be on the motory nerves, producing lock-jaw and paralysis of the heart and lungs.

Strych'uos,

n. [Gr.] A genus of plants, order *Loganiaceae*, containing some of the most poisonous plants known. *S. nux-vomica*, the Koolchia-tree of India (Fig. 2438), produces *nux-vomica* seeds. These are imported into this country from Coromandel and Ceylon. — They are extremely poisonous, from containing the alkaloids *strychnine* and *brucine*. Three-quarters of a grain of the former alkaloid has been known to produce death; it is, however, a valuable stimulant of the nervous sys-

Fig. 2438. — STRYCHNOS NUX-VOMICA.

tem, and has been frequently employed in paralysis. Nux-vomica seeds are largely used by gamekeepers and farmers to destroy vermin. The bark of the Koochla-tree is also very poisonous. It was formerly confounded with cusparia or Angostura bark, (see GALIPEA;) hence it is sometimes termed *false Angostura bark*. An aqueous extract of the bark of *S. tienti* is the terrible Java poison called *upas tienti*. The juice of *S. toxifera* is the basis of the celebrated *Wourali*, or arrow-poison of Guiana. The wood of some Asiatic species is employed as an antidote to the bites of poisonous snakes, and on this account is generally called *lignum colubrinum*, or snake-wood. It has been used medicinally in intermittent fevers. The bark of *S. pseudoquina*, which contains neither *strychnine* nor *brucine*, is extensively employed in Brazil as a substitute for cinchona bark. It is frequently erroneously called *copalchi bark*. The dried ripe seeds of *S. potatorum* are called *clearing-nuts*, from being employed by the Hindoos to clear muddy water.

Strykersville, in New York, a post-vill. of Wyoming co., 30 m. E.S.E. of Buffalo.

Stuart, the royal house of Great Britain after the union with Scotland. The first of the name was the only child of Walter, the Steward of Scotland, and his wife Marjory, daughter of King Robert Bruce; he was b. 1316; commanded the second division of the Scottish army at the battle of Halidon, 19th July, 1333; concluded the treaty of Perth with Edward III., 1335; succeeded David II., under the title of Robert II., 1371, d. 1390. — His son, ROBERT III., reigned after him, and continued the peace till 1399, when the succession of Henry IV. to the throne of England led to the renewal of hostilities; d. 1406. — He was succeeded by his son, JAMES, whose successors all bore the same name — the fifth of the line becoming father of the unhappy Queen of Scots. (See JAMES; MARY.) — The other kings of this house were James the Sixth of Scotland and First of England, Charles I., Charles II., and James II., by whose deposition, in 1688, the *S.* were finally expelled the throne. — The son of the last-named, JAMES FRANCIS EDWARD, called the "Old Pretender," was acknowledged king by Louis XIV., under the title of James III., in 1701, and in 1719 married the daughter of John Sobieski, King of Poland; he made some vain attempts to recover the kingdom, and d. at Rome, 1756. He resigned his pretensions to his son, CHARLES EDWARD ("Bonnie Prince Charlie," or the "Young Pretender"), b. 1721, who fought gallantly for the throne of his ancestors, and was defeated at Culloden, 1746; d. at Rome, 1788. — The last of the *S.* was his brother, HENRY BENEDICT, who entered the Church soon after the disasters of 1745, and became titular Cardinal of York; on the death of Prince Charles Edward, however, he assumed the empty title of Henry IX. The invasion of Italy by the French republic, soon after, compelled him to seek safety in Venice, and he was there supported by a pension from the English crown. D. 1807.

Stub, *n.* [A. S. *steb*.] The stump of a tree; that part of the stem of a tree which remains fixed in the earth when the tree is felled; — applied particularly to the stump of a small tree.

— *v. a.* To grub up by the roots; to extirpate; to eradicate; as, to *stub* up turnips.

— [L. Ger. *stubben*.] In the U. States, to strike, as the foot, against the stump of a tree, a stone, &c.

Stubbed, *a.* [Swed. *stubbig*.] Short and thick, like something truncated; blunt; obtuse.

Stubbedness, Stubbiess, *n.* Bluntness; stumpiness; obtuseness; stuntedness.

Stubble, (*stüb'bl*), *n.* [Dim. of *stub*; Ger. *stoppel*; Lat. *stipula*.] The small stumps of wheat, rye, barley, oats, or buckwheat, left in the ground after reaping.

Stubbled, Stubbly, (*stüb'bl'd*), *a.* Covered with stubble.

Stubble-rake, *n.* (*Agric.*) A long-toothed rake for gathering together stubble.

Stubborn, *a.* [Icel. *stubbr*, the trunk of a tree; Sansk. *stabh*, to render immovable.] Inflexibly fixed in opinion; not to be moved or persuaded by reasons; stiff; obstinate to a degree of excess; unyielding; refractory; as, a *stubborn* mind. — Persevering; persisting; constant; steady; firm in purpose; as, *stubborn* application. — Stiff; not pliable or flexible; as, *stubborn* timber. — Intractable; obstinately resisting command, the goad, or the whip; as, a *stubborn* mule. — Firm; hardy; enduring with resolute patience; as, a *stubborn* stoic. — Refractory; not ductile; not easily melted or worked; as, a *stubborn* metal.

Stubboruly, *adv.* Obstinately; inflexibly; refractorily.

Stubbornness, *n.* State or quality of being stubborn; immovableness; inflexibility; contumaciousness; unyieldingness; perverse or unreasonable obstinacy; stiffness; want of pliancy or ductility; refractoriness, as of ores or metals.

Stubby, *a.* Abounding with stubs; short and thick; squat; stunted; as, *stubby* hairs.

Stub-end, *n.* (*Mach.*) The enlarged end of a connecting-rod, to which the strap is made fast.

Stub-mortise, *n.* (*Carp.*) A mortise only partially passing through the timber in which it is formed.

Stub-nail, *n.* A short, thick nail; a nail broken off.

Stucco, (*stük'ko*), *n.* [Ital.] (*Arch.*) A term frequently applied to various kinds of lime or cement renderings on masonry. It signifies more strictly, however, a species of plastering in ordinary cases worked up by hand to a fine face adapted to receive paint. In superior buildings this *S.* is made by the addition of other materials than the lime or plaster usually employed in order to resemble marble. In point of fact, common *S.* is nothing more than plastering which has received an

additional amount of manipulation. *Marble S.* is made with fine lime, mixed with calcareous powder, chalk, or other similar substances, in such proportions and worked in such a way as to produce a hard uniform substance, which admits of being colored, painted, and polished, so as to resemble various colored marbles.

— *v. a.* (*imp.* and *pp.* STUCCOED,) (*stük'kod*.) To overlay with stucco or fine plaster.

Stuccoer, *n.* One who works in stucco.

Stuek, *imp.* and *pp.* of STICK, *q. v.*

Stuekle, (*stük'l*), *n.* Same as STOOK, *q. v.*

Stuek-up, *a.* Self-important and affectedly dignified, without possessing real superiority; inflated with vanity or superciliousness; ridiculously puffed up and assuming airs of exclusiveness, from an overweening idea of personal importance, consequence, or position; as, a *stuek-up* parvenu. (*Colloq.*)

Stud, *n.* [A. S. *studa*; Ger. *stütze*, a prop, support.] That which is set or fixed upright; especially, a post, pillar, stay, or prop. — An ornamental knob or boss. — An ornamental button for a shirt-bosom; as, a set of diamond *studs*.

(*Mach.*) A short rod; also, a stud-bolt.

(*Arch.*) A small joist inserted in the sills and beams of a building, between the posts, to support the beams or other main timbers.

— *v. a.* To adorn with shining studs, bosses, or knobs; as, harness *studded* with plated ornaments. — To set thickly, as with studs; to set with detached or prominent ornaments; as, the heavens are *studded* with stars, a garden *studded* with flowers.

Stud, *n.* [A. S. and Icel. *stud*, a collection of horses; Ger. *stute*.] A collection of breeding-horses or mares; also, the place where they are lodged; in France, a *haras*; as, a racing *stud*.

Stud-bolt, Stud-ing-bolt, *n.* (*Mach.*) A double-threaded bolt to be screwed into a fixed part at one end, and receive a nut upon the other.

Stud'ing, *n.* Studs or joists taken collectively, or the material for their construction.

Stud'ing-sail, *n.* (*Naut.*) One of a set of supplementary sails extended in light winds beyond the leeches of the principal square sails. They are narrow and of the same height with the sail supplemented; — sometimes abbreviated, on shipboard, *stunsail*.

Stu'dent, *n.* [Fr. *étudiant*, from Lat. *studens*, *studentis* — *studeo*, to take pains about.] A person engaged in study; a scholar; a collegian; one who is devoted to learning, either in an institution or in private; as, the *students* of a university, a medical, law, or theological *student*, &c. — A bookworm; a person devoted to, or absorbed in, books and learning; as, a hard *student*. — One who studies, meditates on, or examines; as, a *student* of human life.

Stu'dentship, *n.* State or quality of being a student.

Stud-horse, *n.* [A. S. *stód-hors*.] A stallion; a stone-horse; a horse kept for breeding purposes.

Studied, (*stüd'id*), *p. a.* [From *study*.] Well considered or digested; read or examined with closeness or attention; as, the matter has been well *studied*. — Learned; erudite; qualified by study; well versed in any branch or department of learning; as, a person well *studied* in the law. — Intended; purposed; premeditated; as, a *studied* affront.

Stu'dio, *n.*; *pl.* Studios. [It., a study.] A sculptor's workshop; an atelier; — sometimes, though less properly, applied to the work-room of a painter.

Stu'dious, *a.* [Fr. *studieux*; Lat. *studiosus* — *studium*.] Given to books or to learning; devoted to the acquisition of knowledge or erudition from books; as, a *studious* scholar. — Contemplative; thoughtful; given to thought or cogitative examination. — Attentive to; careful; — preceding of; as, a man *studious* of his own interests. — Suited to thought or meditation; favorable for study or contemplation; as, *studious* cloisters. (*Milton*.) — Diligent; eager to discover something, or to accomplish some object; as, one who is *studious* to please. — Premeditated; studied; deliberately planned or formed; as, *studious* impertinence.

Stu'diously, *adv.* In a studious manner.

Stu'diousness, *n.* Quality of being studious.

Stud-work, *n.* (*Masonry*.) A wall built between studs or quarters.

Stud'y, *n.* [Fr. *étude*; Lat. *studium*, from *studeo*.] Assiduity, or close and earnest application to anything; a setting of the mind or thoughts upon a subject; — hence, application of the mental powers to books, to arts or science, or to any subject, with the view of learning or acquiring what is not before known; as, he passes his whole time in *study*. — Exclusive mental abstraction or occupation; undivided or absorbed attention or meditation; contrivance; as, it is his *study* to please the fair sex. — Subject of special or fixed attention; any particular branch of knowledge or learning that is studied. — An apartment devoted to study or to literary occupation; a reading-room; as, he is a man who seldom leaves his *study*.

(*Fine Arts*.) A work undertaken for improvement in painting or sculpture, and commonly left unfinished; — also, a finished sketch from nature; as, a *study* of a flower or tree.

— *v. n.* To be eager, zealous, diligent, or assiduous. — To apply one's self, or to pursue some course of action; to fix the mind attentively upon a subject; to muse; to cogitate; to dwell upon anything in thought. — To apply the mental faculties to the acquisition of book-lore or learning.

— *v. a.* (*imp.* and *pp.* STUDIED,) (*stüd'id*.) To be eager or zealous about; to busy one's self with, or strive after; to apply the mind to; to read and investigate for the purpose of gaining knowledge of and familiarity with; as,

to *study* law, to *study* the classics, to *study* languages. — To examine or inspect closely; to consider attentively and carefully; as, a selfish man *studies* himself first. — To con over, or to commit to memory; to form, arrange, or set in order by previous cogitation; as, to *study* a speech, address, harangue, sermon, or lesson.

Stu'fa, *n.* [It., a stove.] A jet of steam issuing from a fissure in the earth; these jets are not uncommon in volcanic districts. The name is also applied to natural vapor-baths, in which steam issues from the earth, generally accompanied by gas, and used for curative purposes.

Stuff, *n.* [Fr. *étouffé*; Dan. and Du. *stof*; Ger. *stoff*.] A mass of matter indefinitely; or, a collection of substances; the matter or material of which anything is formed.

"The workman on his *stuff* his skill doth shew." — *Davies*.

— Particularly, fabrics of the loom; woven material; textile goods not made into garments; as, what kind of *stuff* does she wear? — A potion, medicine, or mixture; as, "I did compound for her a certain *stuff*." — *Shaks*.

— Unorganized or refuse matter; — hence, nonsense; bosh; silly talk; irrational language; empty verbiage; as, he writes wretched *stuff* and calls it poetry.

(*Com.*) A light, woollen cloth formerly much used for curtains and bed-furniture.

(*Naut.*) Slush of mixed turpentine, tallow, &c., used on shipboard; as, to pay a ship's bottom with *stuff*.

— *v. a.* [Fr. *étouffer*; Ger. *stopfen*.] To fill very full; to crowd; to cram; to load or charge to excess; as, to *stuff* a bolster. — To press; to thrust or crowd into. — To fill by being put into; to swell or bulge out by putting something in; as, to *stuff* a bladder with sausage-meat. Specifically, to fill with seasoning, forcemeat, spices, or truffles; as, to *stuff* a turkey. — To stifle or obstruct, as the sense of an organ; as, his nose being *stuffed*, he cannot smell. — To form, mould, or fashion by stuffing; as, to *stuff* the body of a doll. — To fill, as the skin of a dead animal for presenting and preserving his form; as, to *stuff* an owl. — To crowd with facts or ideas; to cram mentally; — hence, to fill with something improper, fallacious, or superfluous; as, he has his head *stuffed* with absurd notions.

To *stuff* a ballot-box, in the U. States, to fill a ballot-box with illegal or fraudulent votes.

— *v. n.* To cram; to gorge; to fill greedily or gluttonously; as, some people *stuff* themselves into dyspepsia.

Stuffer, *n.* One who stuffs. — In the U. States, one who fills a ballot-box with fraudulent votes.

Stuff-gown, *n.* A gown made of a woollen fabric; — hence, in England, a junior barrister, or one not arrived at the dignity of a silk gown, like the king's or queen's counsel.

Stuffiness, *n.* State of being stuffy, surly, peevish, or obstinate.

Stuffing, *n.* That which is used for filling anything; as, the *stuffing* of a cushion. — (*Cookery*.) Stuffing or force-balls for meat, game, &c.; that which is put into meat to impart a higher zest, savor, or relish; as, when roasting a fillet of veal, do not forget the *stuffing*.

Stuff'ing-box, *n.* (*Mach.*) In a locomotive engine, a box with a recess for admitting some soft material, such as white spun yarn, to render steam-tight any rod working through this stuffing or packing. The piston-rods, slide-valve rods, regulator-rods, and pump-plunger, all work through boxes of this description. (V. Fig. 2426.)

Stuff'y, *a.* Doughty; bold; stout; mettlesome. (Scott.) — Peevish; surly; obstinate; churlish. (*Colloq.* U. S.)

Stuhlweissenburg, (*stool-wíse'en-boorg*), a town of Hungary, 16 m. from Lake Balaton, in a swampy plain in the neighborhood of the marshes of Sár-Rét. *Munuf.* Cotton cloths, flannels, leather, silk, and knives. *S.* was, from 1027 to 1527, the place where the kings of Hungary were crowned and buried.

Stukeley, in British N. America, a seaport-town in the N. of Prince Edward Island, at the mouth of Morel River in the Gulf of St. Lawrence; Lat. 46° 26' N., Lon. 62° 47' W.

Stull, *n.* A framework of timber placed in the backs of levels, and covered with boards, or small piles, to support rubbish.

Stulum, *n.* A shaft serving to drain a mine.

Stultifier, *n.* One who stultifies.

Stultification, (*-ká'shun*), *n.* Act of stultifying.

Stul'tify, *v. n.* [Lat. *facio*, and *stultus*, foolish.] To cause to appear foolish; to make a fool of. — To prove foolish or deficient of understanding; to regard as a fool, or as foolish.

(*Law*.) To allege or prove to be insane for the voidance of some act.

Stultiloquence, Stultiloquy, (*-kwens*), *n.* [Lat. *stultus*, foolish, and *loquentia*, a talking.] Foolish talk; empty or frivolous chatter; childish babble.

Stum, *n.* [D. *stom*, mnst.] Same as MUST, *q. v.* — Wine revived afresh by fermentation from a mixture of must.

— *v. a.* To revive or renew, as wine, and adding new fermentation to it by means of mnst.

Stumble, *v. a.* [D. *stropmelen*.] To strike, as the foot against a stump; to trip in walking or moving in any way upon the legs; to strike the foot so as to fall, or to hazard a fall. — To walk in a bungling, awkward, or unsteady manner; as, drunken men are apt to *stumble*. — To err; to slip or slide into a crime, error, transgression, or blunder. — To strike upon by accident or without design; to fall or alight by chance; — preceding on or upon; as, he *stumbled upon* a piece of good luck.

— *v. n.* To obstruct or impede in progress; to cause to trip or stop. — To confound, puzzle, confuse, or perplex; to gravel; to pother; to put to a nonplus; as, such terms *stumbled* many.

— *n.* A trip or sudden check in walking or running; as,

Peter Stuyvesant

1602-1682

to make a *stumble*. — A blunder; a failure; a fiasco; a state of nonplus.

Stumbler, *n.* One who stumbles; a blunderer.

Stumbling-block, **Stumbling-stone**, *n.* Any cause of stumbling; that which causes one to err or blunder.

Stump, *n.* [Swed. and Dan.; Ger. *stumpf*.] The stub of a tree; that part of the trunk of a tree remaining in the earth after the tree is felled, or the part of any plant left in the earth by the scythe or sickle. — The part of a limb or other body remaining after a part is amputated or destroyed; as, the *stump* of a leg, finger, or tooth, the *stump* of a pipe or cigar. — (*pl.*) Legs; limbs; as, he travelled thither on his *stumps*. (Colloq.) — One of two small pieces of wood set on the head of the wicket, in the game of cricket. — A short, thick roll of leather or paper, cut to a point, and employed to rub down the harsh or strong lines of a crayon- or pencil-drawing, for shading it, or for rubbing solid tints on paper from colors in powder.

Stump-oration, one who delivers an harangue from the stump of a tree, or other prominent elevation. (Amer.) — **Stump-oration**, in the U. States, an electioneering speech or political harangue delivered from a stump, or other prominent place. — To take the *stump*, or to *stump* it, to go about the country delivering public addresses for electioneering purposes; — a term derived from the old Western custom of the orator's mounting the stump of a tree, as in the backwoods, in making his speech or harangue. (American.)

— *v. a.* [Swed. *stympa*.] To curtail; to lop, as a fixed limb or branch. — To strike with the toe, as something fixed or bard. (Vulgar.) — To challenge; also, to nonplus; to puzzle; to place in a quandary. (Amer. Cant.) — To go about, delivering speeches or addresses for electioneering purposes; as, to *stump* the State. (Amer. Colloq.) — To overset, as the stump or wicket in the game of cricket.

To *stump out*, in the game of cricket, to bowl out by knocking down the stump or wicket with the ball.

— *v. n.* To walk or totter heavily, as if on stumps. — To brag; to vaunt; to make a boast.

To *stump up*, an English colloquialism, expressive of to pay cash.

Stumpage, *n.* In Maine, a tax levied on the amount of timber cut, and regulated by the market-price of lumber.

Stumper, *n.* One who stumps. — A boaster; a braggart. — A doubtful story; a canard. (U. S. colloq. and vul.)

Stumpiness, *n.* State or quality of being stumpy.

Stumps-town, in Pennsylvania, a village of Lebanon co., 35 m. N.W. of Reading.

Stump town, in W. Virginia, a village of Gilmer co.; pop. abt. 120.

Stumpy, *a.* Abounding with stumps. — Short and thick; stunted; stubby.

Stun, *v. a.* [A. S. *stunian*, to render dizzy or stupid with noise; Ger. *staunen*, to wonder, to be amazed.] To overpower, as the sense of hearing; to blunt or stupefy, as the organs of hearing; to confound or make dizzy by loud and confused sound; as, the noise of a cataract *stuns* the ear. — To make senseless or dizzy with a blow on the head; as, a good rap from a cudgel is apt to *stun* a man. — To confound or astonish completely; to overpower; to bewilder; as, he looked at me as if *stunned*.

Stung, *imp.* and *pp.* of STING, *q. v.*

Stunk, *imp.* and *pp.* of STINK, *q. v.*

Stunner, *n.* One who, or that which, stuns; — applied colloquially and vulgarly to something that fills one with admiration or confounds by astonishment; as, that horse is a *stunner*.

Stunning, *p. a.* Confusing or overpowering the auricular organs; as, a *stunning* noise. — Striking with admiration, or surprising with astonishment; as, a *stunning* girl, a *stunning* romance. (Colloq.)

Stunt, *v. a.* [A. S. *stintan*.] To stint; to hinder or check the growth of; as, to *stunt* a plant or tree, to *stunt* a child, to *stunt* a generous nature.

— *n.* That which has suffered a check in growth; specifically, a two-year old whale.

Stuntedness, *n.* State or quality of being stunted.

Stupe, *n.* (*Med.*) A fomentation; a sweating-bath.

— *v. a.* To foment; to dress with a stupe.

Stupeficient, (*fä'shent*) *n.* (*Med.*) An opiate; a narcotic; any substance producing stupor.

— *a.* Promoting stupefaction or lethargy.

Stupefaction, (*fä'k'shun*) *n.* [L. Lat. *stupefactio*.] Act of stupefying, or rendering stupid. — A stupid or senseless state; insensibility; stupor; torpor.

Stupefactive, *a.* Causing stupefaction or insensibility; deadening or blunting the sense of feeling or understanding.

Stupefiedness, *n.* State of being stupefied; stupefaction; torpor; stupor.

Stupefier, *n.* One who, or that which, stupefies.

Stupefy, *v. a.* [Fr. *stupefier*; Lat. *stupefacio* — *stupeo* and *facio*.] To deaden; to make dull or stupid; to blunt or confuse, as the faculty of perception; to deprive of motion or sensibility; as, the fumes of laudanum *stupefy* the brain. (Generally written *stupify* in England.)

Stupendous, *a.* [Lat. *stupendus* — *stupeo*, to be struck senseless.] Striking senseless by its magnitude; — hence, astonishing; wonderful; amazing; particularly, of surprising magnitude or elevation; as, a *stupendous* height, a *stupendous* theme.

Stupendously, *adv.* In a stupendous manner; in a way to excite awe or astonishment.

Stupendousness, *n.* Quality or state of being stupendous, amazing, or astonishing.

Stupeous, **Stupeose**, *a.* (*Bot.*) Resembling tow, or having long, loose scales or matted filaments like tow.

Stupid, *a.* [Fr. *stupid*; Lat. *stupidus*.] Senseless; obtuse in mind; insensible; very dull in intellect; deficient in understanding; heavy; doltish; thick-headed; as, a *stupid* person. — Dull; heavy; inanimate in style; formed without skill or genius; resulting from, or exhibiting, stupidity; as, a *stupid* speech, a *stupid* book.

Stupidity, **Stupidness**, *n.* [Fr. *stupidité*; Lat. *stupiditas*.] Quality or state of being stupid; extreme dullness of perception or understanding; mental obtuseness; insensibility; blockishness; senselessness; thick-headedness; sluggishness of the intellect.

Stupidly, *adv.* In a stupid manner; senselessly.

Stupidness, *n.* Stupidity.

Stupify, *v. a.* See STUPEFY.

Stupor, *n.* [Lat., from *stupeo*.] Numbness; deadness; extreme diminution or suspension of activity or sensibility; suppression or reduction of sense or feeling; as, the *stupor* of any physical organ. — Intellectual torpor or insensibility; moral stagnation; mental stupidity; heedlessness or indifference to one's interests; as, *stupor* of the reasoning faculty.

Stupeous, *a.* (*Bot.*) See STUPEOUS.

Sturbridge, in Massachusetts, a post-village and township of Worcester county, 60 miles W. S. W. of Boston.

Sturdily, *adv.* In a sturdy manner; with hardiness, vigor, or lustiness.

Sturdiness, *n.* State or quality of being sturdy; stoutness; hardiness; lustiness; as, the *sturdiness* of early manhood. — Brutal strength; bluffness. (*R.*)

Sturdy, *a.* (*comp.* STURDIER; *superl.* STURDIEST.) [O. Fr. *estourdi*; Fr. *étourdi*.] Stout; hardy; bluff; bluntly obstinate; brusque; — implying coarseness or rudeness; as, a *sturdy* beggar, a *sturdy*, hardened sinner, &c. — Exemplifying strength, force, or rude vigor; lusty; burly; strong; violent; laid on with strength; as, a *sturdy* ploughman, a *sturdy* stroke. — Stiff; compact; hardy; stout; strong; as, a *sturdy* tree, *sturdy* limbs.

Sturdy, *n.* (*Parriery*.) An ovine, and occasionally bovine, sickness, caused by the presence of a hydatid within the brain, and in which the animal cannot properly seek its food, loses condition, staggers when moved, turns stupidly round almost in one spot, and usually towards the side on which the hydatid lies. See HYDATID.

Sturge, (*sturj*) an island of the Antarctic Ocean, the most E. of the Balleny group; Lat. 66° 44' S., Lon. 163° 11' W.

Sturgeon, (*stür'jun*) *n.* [Fr. *esturgeon*; Lat. *sturio* or *sturio*.] (*Zoöl.*) A common name of the fishes composing the genus *Acipenser* of Cuvier, of which it is the type. The common *S. (Acipenser sturio)* is generally 6 feet long, but sometimes attains to the length of 18. It inhabits the North American and European seas, migrating during the early summer months into the larger rivers and lakes, and returning to the sea again in autumn, after having deposited its spawn. Its form is long and slender, gradually tapering towards the tail, and covered throughout the whole length by five rows of strong, large, bony tubercles, rounded at the base, and terminated above by a sharp curved point in a reversed direction. The mouth, placed under the elongated muzzle, is small and toothless; and the palatal bones form the upper jaw: the air-bladder is very large, and from it the isinglass of commerce is prepared. The pectoral fins are oval, and middle-sized; the dorsal small, and situated very near the tail; the ventral and anal fins are also small, and placed nearly opposite the dorsal. The general color is cinereous above, with dusky specks, and yellowish-white beneath. Though generally considered as a fish of slow motion, it is sometimes seen to swim with great rapidity, and also to spring out of the water with great force at intervals. In North America they appear in great abundance during the early summer months. The flesh of the *S.* is white, delicate, and firm; it is generally eaten pickled. From the roe, when properly salted and dried, is prepared the substance known by the name of *caviar*; but a very superior sort is made from a smaller species, called the *Sterlet*. The Sharp-nosed *S. (A. oxyrinchus)* of the Atlantic coast of N. America is from 4 to 8 feet long. The Lake *S. (A. rubicundus)* of the Great Lakes, is about 4 feet long, and of a rusty hue. The genus *Chimæra*, ranked by Cuvier with the Sturgeons (*Sturiacidae*), has but one known species, *C. monstrosa*, called the King of Herrings. Its gill-lid, or operculum, is merely rudimental, and concealed in the skin, while there is an approach to sharks in the structure of the gills. It pursues the shoals of herrings, and is consequently sometimes taken in herring-nets. It is about 3 feet long.

Fig. 2439. — STURGEON.

Sturgeon, a lake of British North America, 27 m. long and 6 broad, connected with Pine Island Lake by the river Saskatchewan; Lat. 54° N., Lon. 102° W.

Sturgeon, in Missouri, a post-town of Boone co., 129 m. W. N. W. of St. Louis.

Sturgeon Bay, in Wisconsin, an inlet of Green Bay, in Door co. — A city and township, cap. of Door co., on Sturgeon Bay, 44 m. N. E. of the city of Green Bay. Pop. (1895) 2,790.

Sturgeonville, in Virginia, a post-village of Brunswick co., 60 m. S. S. W. of Richmond.

Sturges Rapids, in Iowa, a village of Black Hawk co., 80 m. N. N. W. of Iowa City.

Sturgis (*stur'jis*), in Michigan, a post-village and

township of St. Joseph co., 115 m. W. of Monroe. Pop. (1897) 3,150.

Sturnidae, *n. pl.* (*Zoöl.*) The Starling family, comprising in-

sessorial birds distinguished from the family Icteridae by having a rudimentary outer primary, thus making the primaries ten instead of nine. The genus *Sturnus* comprises the Common Starling, *S. vulgaris*, of Europe, (Fig. 2440,) which is about the size of a thrush, black, with violet and green reflections, and spotted with white or fawn-color. It moves in large flocks, is easily tamed, and may be taught to sing, and even to speak.

Fig. 2440. — STARLING, (*Sturnus vulgaris*.)

Stutter, *v. n.* [Du. *stotteren*; Ger. *stottern*.] To stammer; to hesitate in uttering words; to have an impediment in one's speech.

Stuttgart (*stool'gart*), a city of Germany, cap. of the kingdom of Württemberg, on the Neseu, a small tributary of the Neckar, 38 m. E. S. E. of Carlsruhe, and 120 N. W. of Munich. It has a royal palace which contains a good collection of paintings and statues, a public library, a mint, museum, &c. Though surrounded by a wall and ditch, it is a place of no strength. *Manuf.* Leather, bats, cotton, silk, plated goods, and snuff.

Stuyvesant, PETER, was born in Holland in 1602; served in the West Indies, was director of the Dutch colony of Curaçoa, and lost a leg in an attack on the Spanish island of St. Martiu. In 1647 he was made director-general of the New Netherlands, and reached New Amsterdam (now New York) in May of that year. Under his direction boundary lines were established between the Dutch and English possessions in America; but the British encroachments persisted until, in Aug., 1664, an English fleet appeared in the bay and compelled the surrender of New Amsterdam, after which its name was changed to New York. *S.* went to Holland in 1665, but afterward returned and spent the remainder of his life on his farm, called the *Bowery*, from which the name Bowery was given to a well-known thoroughfare in New York city. Died in 1682.

Stuyvesant, in New York, a post-village and township of Columbia co., on the Hudson river, 18 m. S. of Albany.

Stuyvesant Falls, in New York, a post-village of Columbia co., 25 m. S. of Albany.

Sty, *n.* [A. S. *stigan*, to grow up.] (*Med.*) A small tumor on the ciliary ridge of the eyelid. Children are very subject to those painful little boils, which often proceed from an unhealthy condition of the body.

— [A. S. *stige*; Icel. *stia*, a repository, a recess.] A pen or inclosure for swine. — A stew; any place of bestial debauchery.

Stygian (*stij'yan*), *a.* [Lat. *Stygicus*, from Gr. *Styr*, *Stygos*, the Styx.] Pertaining, or having reference to the Styx, or river of hell fabled by the ancients; hence, hellish; diabolical; infernal; as, the *Stygian* crew.

Styl, (*stil*) *n.* [Fr.; Ger. *styl*; Lat. *stilus*, *stylus*; Gr. *stylos*, a pillar.] (*Antiq.*) A kind of pencil used by the Romans for writing on waxed tablets; it was made of brass or iron, with one end sharp for writing, and the other blunt and smooth for making casures.

(*Bot.*) That elongation of the ovarium which supports the stigma (Fig. 2014). It is an extension of the midrib of the carpellary leaf, or is formed by the rolling up of the attenuated extremity of the latter.

(*Dialling*.) The gnomon which projects the shadow on the plane of the dial.

(*Calendar*.) A manner of reckoning time; — used in reference to the Julian and Gregorian calendars. — See CALENDAR.

(*Gram.* and *Lit.*) The manner of writing with regard to language, or the choice and arrangement of words. What is called the *S.* of a writer or speaker in his characteristic manner of expression, is determined principally by the man's own intellect and character. *S.*, in order to be ranked as good, that is, to be fit for serving the uses to which language is put, should obey the fundamental laws of grammar and rhetoric. *S.* should be characterized by perspicuity, animation, and elegance. Language is held to be *perspicuous* when it has not each of three faults: it must not be *obscure*, that is, convey no meaning clearly; it must not be *ambiguous*, that is, convey more meanings than one; it must not be *unintelligible*, that is, convey no meaning at all. When language is adequate for the purpose of persuasion, it is said to be *animated*. Language, when *elegant*, gratifies the taste while exciting imaginative pleasure. In order to attain perspicuity, animation, and elegance in writing, the choice of words or phrases, the number of them, and the putting of them together, must be particularly studied.

(*Fine Arts*.) The peculiar manner in which an artist expresses his ideas, dependent upon his spiritual life

and habits; it is exhibited in his choice of forms and mode of treating them, and is determined in different ways, according to the changes of thought at different times and stages of its development. He only has a style, whose peculiarity is sufficiently powerful to determine energetically his whole artistic activity. Besides the individual style, there is also a national style—for instance, the Egyptian, the Grecian; the style of Greek Art at particular epochs, as that of Phidias or of Praxiteles. The style influences the conception, not merely of the forms, but also of the idea. *Manner* is a false blending of the personal with the artistic activity, from indolent habits or morbid tendencies of feeling, whereby the form is always modified in a similar way, without regard to the requirements of the subject.

—*Title*; appellation; method of designation or nomenclature; mode of address; official denomination of any august or important body of persons; as, he bore the rank and *style* of Right Honorable, he addressed me in obsequatory *style*, &c.—*Fashion*; mode or manner which is esteemed elegant, appropriate, or distinguished, especially in social etiquette or in authorship; degree of conformity to an accepted or a recognized criterion or standard; as, a redundant or florid literary *style*, she dresses in bad *style*, what *style* of hat will be in vogue next, &c.

Style of court, the practice or manner of procedure observed by a court in its proceedings.

Style, *v. a.* To call; to name; to denominate; to designate; to entitle in addressing or alluding to; as, Solomon 11. *styled* The Magnificent.

Styl'et, *n.* [Fr.; It. *stiletto*.] A small dagger, dirk, or poniard.

(*Surg.*) An instrument for probing wounds, fistulas, &c., and for passing setons, and the like.

Stylidia'ceae, *n. pl.* (*Bot.*) A small order of plants, alliance *Cumpanales*. *DIAG.* A 2- or more-celled ovary, stamens and style united into a column, and imbricated corolla. They consist of herbs and under-shrubs found in the swamps of Australia. Their properties and uses are unknown.

Styliform, **Styl'oid**, *a.* Resembling, or having the form of a pen, pin, or style; as, the *styl'oid* process of the temporal bone.

Stylish, (*stil'-*) *a.* Being of fashionable form or in high style; modish; distinguished; showy; genteel; as, *stylish* people;—used colloquially.

Stylishly, *adv.* In a stylish or modish manner; fashionably.

Stylishness, *n.* State or quality of being stylish, modish, or fashionable; distinction; gentility.

Stylist, *n.* A critic of, or stickler for, style; a purist or precisian in literary or artistic style; one who is a master or model of style, whether in speech or composition.

Styl'ite, *n.* [Fr.; Gr. *styli'tēs*, from *stylos*, a pillar.] (*Ecol.*) One of a peculiar class of anchorites, taking the term of *styli'tes* from the places on which they took up their solitary abodes, being the tops of various columns in Syria and Egypt. This strange mode of devotional austerity took its rise in the 2d century, and continued to be practised for a great length of time. See SIMON.

Styl'obate, *n.* [Fr., from Gr. *stylos*.] (*Arch.*) The uninterrupted base below a range of columns.

Styl'ohy'oid, *a.* [From *styl'oid* and *hyoid*.] (*Anat.*) Of, or pertaining to, the styl'oid processes and the hyoid bone.

Styl'oid, *a.* See **STYLIFORM**.

Stylomas'toid, *a.* (*Anat.*) Of, or belonging to, the styl'oid and mastoid processes.

Stylopo'dium, *n.* [Gr. *stylos*, style, and *pous*, *podos*, foot.] (*Bot.*) A fleshy disc at the base of the style in some plants, as the umbellifers.

Stylosan'thus, *n.* [Gr. *stylos*, style, and *anthos*, a flower.] (*Bot.*) A genus of plants, order *Fabaceae*. The Pencil Flower, *S. elatior*, found in dry, gravelly woods, from Long Island to Florida, has a stem mostly branched, one foot in height, remarkable for being densely pubescent on that side only which is opposite the insertion of each leaf, while the other side is smooth; bracts fringed with yellow bristles; flowers yellow.

Styp'tic, **Stip'tic**, **Styp'tical**, *a.* [Gr. *styptikos*.] (*Med.*) Astringent; that produces contraction; that restrains hemorrhage; having the quality of stopping bleeding.

Styp'tic, *n.* (*Med.*) A remedy used for checking the flow of blood. Alum and tannic acid are powerful *S.*

Styracaceae, (*sti-ra-kai'se-e*) *n.* (*Bot.*) An order of plants, alliance *Rhamnales*. *DIAG.* Monopetalous flowers, epipetalous stamens, a part at least of the ovules suspended, a long radicle, and leafy cotyledons. There are 12 genera, and about 120 species, composed of trees or shrubs, which are sparingly distributed in warm and tropical regions. They are principally remarkable for yielding stimulant balsamic resins. See **STYRAX**.

Sty'rax, *n.* (*Bot.*) The typical genus of the order *Styracaceae*. *S. benzoin*, the Benjamin-tree, yields the well-known concrete balsamic exudation commonly called *gum-benjamin*. (See **BENZON**.) *S. officinalis*, a native of Greece, the Levant, and Asia Minor, was the source of the original and classical *storax*, which has in modern times wholly disappeared from commerce. The product now called *liquidambar* comes from a species of the genus *Liquidambar*, *q. v.*

Styria, (*sti'ri-a*) [Ger. *Steiermark*.] A prov. of Austria, situated between Austria proper and Illyria; Lat. between 45° 54' and 47° 50' N., Lon. between 13° 30' and 16° 25' E.; area, 8,194 sq. m. It is a mountainous country, comprising mostly branches of the Noric, Styrian, and Carnic Alps. *Rivers*. The principal are the Enns, the Mur, the Drave, and the Save. *Prod.* Wheat, barley, oats,

rye, and in the warmer situations, maize and tobacco. Fruit, hemp, and flax are also raised. Much of the country, however, is devoted to pastoral purposes. *Min.* Lead, silver, gold, iron, coal, zinc, vitriol, marble, and building-stone. Salt is abundant, and cobalt and arsenic are also found. *Manuf.* Unimportant. *Cap.* Gratz.

Sty'role, *n.* (*Chem.*) An oily hydro-carbon obtained by distilling liquid storax. It is perfectly fluid, but has the curious property of becoming a soft, viscid, transparent solid when heated. In this state it has been called *meta-styrole*.

Styx, *n.* [Lat. and Gr.] (*Myth.*) A river of Hades, round which it flowed seven times, and over which Charon (*q. v.*) conveyed the shades of the departed. As a goddess, *S.* was the daughter of Oceanus and Tethys, dwelling in a grotto at the entrance of Hades. She was the confirmer of the most solemn oaths of the gods.

Suabin, or **Swabia**, (*swai'be-a*) the former name of one of the ten circles or great divisions of Germany, bounded W. by France, and S. by Switzerland. It is now subdivided among Baden, Bavaria, Hohenzollern, and Württemberg. *Area*, 3,675 sq. m. *Pop.* abt. 600,000.

Sua'kin, a seaport belonging to Turkey, on a small rocky island in the W. coast of the Red Sea; Lat. 19° 48' N., Lon. 37° 33' E. Once a place of wealth and importance, it is now almost in ruins, but is still the channel of communication between Arabia and the interior of Africa. *Pop.* 8,000.

Suamico, in Wisconsin, a post-township of Brown county, on Green Bay, about 7 miles north-west of Green Bay.

—A former township of Oconto co.

Suam'ico River, in Wisconsin, rises in Shawano co., and flowing E., falls into Green Bay in Brown co.

Suapure, or **SWAPURE**, (*swa-pu'ra*) a river of Venezuela, rises in the Sierra Parima; Lat. 6° S., Lon. 65° 30' W., and flows into the Orinoco River, after a W.N.W. course of 100 m.

Suasion, (*swā'zhun*) *n.* [O. Fr., from Lat. *suasio*—*suado*, to advise, exhort.] Act of persuading; persuasion; friendly advice or exhortation; as, moral *suasion*.

Suasory, (*swā'-*) *a.* [Lat. *suasorius*.] Having the power of convincing or persuading by reason or argument.

Suave, (*swāve*) *a.* [Fr., from Lat. *suavis*, pleasant.] Pleasant; sweet; attractive; affable, or agreeable in aspect or manner; as, a *suave* address.

Suave'ly, *adv.* In a suave manner; agreeably; charmingly.

Suav'ify, *v. a.* To make affable or agreeable.

Suaviloquent, *a.* [Lat. *suavis*, pleasant, and *loquens*, speaking.] Soft-spoken; having a suave or affable manner or lingual address.

Suavity, (*swāv'ē-ty*) *n.* [Fr. *suavité*; Lat. *suavitas*.] That which is to the mind what sweetness is to the tongue; agreeableness; softness; pleasantness; cordiality; urbaneness; as, *suavity* of speech or manner.

Sub, [Akin to Gr. *upo*, under, and Sansk. *upa*, to forward, near.] A Latin preposition used in English as a prefix, to signify a subordinate degree, imperfect state, or the relation of space;—under; beneath; below. When coming before *f*, *g*, *m*, *p*, and *r*, the *b* takes the form of those letters, as in *suffix*, *suggest*, *summary*, *supply*, and *surrender*.

(*Chem.*) See **CHEMICAL NOMENCLATURE**.

Subacid, *a.* Moderately acid.

Subacrid, (*-āk'-*) *a.* Acrid in a small degree.

Suba'rial, *a.* In the open air, in distinction from *submarine*.

Sub-a'gent, (*-jent*) *n.* (*Law*) The agent of a chief agent.

Subal'pine, *a.* Belonging to the regions at the foot of the Alps.

Subaltern, (*-awl'tern*) *a.* [Fr. *subalterne*, from Lat. *sub*, and *alternus*, one after the other.] Under or inferior to another; subordinate; that in different respects is inferior and superior; as, *subaltern* rank.

—*n.* One who holds a subordinate position; hence, specifically (*Mil.*), a subordinate army-officer; a commissioned officer beneath the rank of captain;—commonly abbreviated *sub*.

Subalter'nate, *a.* [L. Lat. *subalternatus*.] Succeeding by turns; successive.—Subordinate; subaltern; inferior.

Sub-alternation, (*-nā'shun*) *n.* State of being sub-alternate.

Suban'gular, *a.* Slightly angular.

Sub-ap'ennine, *a.* Under or at the foot of the Apennine Mountains;—a term applied, in geology, to a series of tertiary strata of the older Pliocene period, found at this locality.

Sub-ap'ennines, *n. pl.* (*Geog.*) A series of low hills lying at the foot of the range of the Apennines, in Italy.

Subap'ical, *a.* Under the apex; pertaining or relating to the part just below the apex.

Subaquat'ic, **Subaqueous**, (*-ā'kwe-ūs*) *a.* [Lat. *sub*, and *aqua*, water.] Being under water.

(*Geol.*) Formed in or under water; as, *subaqueous* deposits.

Subarc'tic, *a.* Belonging, or having reference to a region just below the arctic.

Subastr'al, *a.* Below the stars or heavens.

Subaudition, (*-aw-dish'un*) *n.* [From Lat. *subaudire*.] The act of understanding something without expression of the same.

Subax'illary, *a.* (*Anat.*) Under the armpit or axilla. (*Bot.*) Placed under the axil formed by a leaf with the branch.

Sub-base, **Sub'-bass**, *n.* (*Mus.*) The fundamental base or bass.

Sub-bra'chial, *a.* (*Zoöl.*) Belonging, or relating to the sub-brachians.

Sub-bra'chialis, *n. pl.* [Lat. *sub*, under, and *brachium*, arm.] (*Zoöl.*) An order of malacopterygious soft-rayed fishes which have the ventrals inserted under the pectorals, and the pelvis directly attached to the bones of the shoulder.

Subcartilaginous, (*-lāj'in-us*) *a.* Located under or beneath the cartilages.—Semi-cartilaginous.

Subcen'tral, *a.* Situated under the centre.

Sub-chant'er, *n.* (*Ecol.*) A precentor's deputy in a cathedral.

Subclav'ian, *a.* [Lat. *sub*, and *clavis*, a key.] (*Anat.*) Located under the collar-bone or clavicle; as, the *subclavian* nerves.

Sub-committee, *n.* A committee acting under directions of a head or chief committee.

Subcompressed, (*-prēst'*) *a.* Partially or not fully compressed.

Subcon'ical, *a.* Slightly conical.

Sub-con'tract, *n.* A contract arising from a previous contract.

Sub-contract'or, *n.* One who takes a portion of a contract of work from the chief contractor; as, a *sub-contractor* for tunnelling.

Subcon'trary, *a.* Contrary in a minor degree.

(*Geom.*) Belonging to, or possessing, a contrary order;—said of a section of an oblique cone when cut by a plane not parallel to the base, but inclined to the axis.

(*Logic*) A term denoting the opposition between two propositions, one of which is a particular affirmative (1), and the other a particular negative (0).

—*n.* (*Logic*) A proposition inferior or contrary in a minor degree.

Subcord'ate, *a.* Somewhat heart-shaped.

Subcryst'alline, *a.* Crystallized in an imperfect degree.

Subcut'rated, *a.* Colter-shaped.

Subcuta'neous, *a.* [Fr. *subcutané*.] Lying under the skin.

Subcutic'ular, *a.* Situated under the scarf-skin or cuticle.

Subcylind'rical, *a.* Cylindrical by approximation.

Sub-deacon, (*-dē'kn*) *n.* (*Ecol.*) In the Roman Catholic Church, an under-deacon; also, a deacon's servant.

Sub-dean, *n.* [Fr. *sous-doyen*.] A dean's substitute or vicegerent.

Sub-de'canal, **Sub-dia'conal**, *a.* Belonging, or relating to a sub-dean or his office.

Subdec'uple, *a.* Containing one part of ten.

Subdel'egate, *n.* A delegate commissioned with subordinate powers.

Subdent'ed, *a.* Indented beneath or below.

Subdeposit, (*-pōz'-*) *n.* That which is deposited beneath another thing.

Subderiv'ative, *n.* (*Etymol.*) A word derived from a derivative.

Subdivide, *v. a.* To divide into lower or smaller parts; to divide a part of a thing into more parts; to part or separate into smaller divisions; as, to *subdivide* lands.

—*v. n.* To be subdivided; to go apart into subdivisions.

Subdivine, *a.* Divine in a minor or approximate degree.

Subdivisible, (*-vīz'i-bl*) *a.* That may be subdivided.

Subdivision, (*-vīzh'un*) *n.* [Fr.] Act of subdividing or separating a thing into smaller parts.—The part of a thing made by subdividing; the part of a larger part.

Subdoun'ant, *n.* (*Mus.*) That note which is a fifth below the key-note. It is a species of governing note, inasmuch as it requires the tonic to be heard after it in the plagal cadence. In the regular ascending scale of seven notes it is the fourth; the term, however, has its origin from its relation to the tonic in the fifth below.

Subdu'able, *a.* That may be subdued.

Subduce, **Subduct**, *v. a.* [Lat. *subducere*.] To take away; to withdraw; to divest of.—To subtract arithmetically.

Subduction, (*-dūk'shun*) *n.* [Lat. *subductio*.] Act of taking away or withdrawing.—Arithmetical subtraction.

Subdue, *v. a.* [Perhaps a corruption of O. Fr. *subjuguer*; Lat. *sub*, and *jugum*, yoke.] To put, place, lay, or bring under; to subjugate; to conquer by sheer force, or by the exertion of superior power, and bring into permanent subjection; to reduce under dominion; as, to *subdue* an enemy's country.—To crush; to annihilate; to oppress or overpower so as to disable from further resistance or antagonism; as, to *subdue* an insurrection.—To overcome; to destroy or diminish the violence of; as, medical skill *subdues* a disease.—To tame; to render submissive; to reduce to mildness; to bring under discipline; to break by conquering; as, to *subdue* a rebellious temper or evil passions.—To conquer by persuasion or other mild means; as, to *subdue* refractoriness or insubordination by force of argument or entreaty.—To melt; to soften; to vanquish to pity or tenderness; as, woman's tears often *subdue* a stern man.—To make mellow; to break, as land.

Subdu'er, *n.* One who, or that which, subdues.

Subdup'le, *a.* In the ratio of one to two.

Subduplicate, *a.* (*Math.*) Noting the ratio of the square roots of the terms of a ratio.

Sub'edit, *v. a.* To edit under the supervision of a chief editor; as, to *subedit* a periodical.

Subequal, (*-ē'kwāl*) *a.* Nearly equal.

Sub'erous, **Sub'erose**, **Sub'erous**, *a.* [From Lat. *suber*, the cork-tree.] Pertaining, or relating to, or having the characteristic properties of, cork.

Suber'ic Acid, *n.* (*Chem.*) A fatty acid originally found among the products of the oxidation of cork by

nitric acid; hence its name, from *suber*, cork. It is contained in this substance in but small proportions, and is most readily obtained by the oxidation of the fats, more especially those of the stearic series. It forms a crystalline white powder destitute of odor, but having a slight acid taste. It is soluble in 100 parts of cold and in 2 parts of boiling water. It is also soluble in alcohol and ether. Heated to 257° Fahr., it melts, and runs up the sides of the vessel in which it is treated. The *suberates* of the alkalies and earths are soluble and crystallizable, and form white precipitates with the salts of the metal.

Su'berin, Su'berine, n. [From Lat. *suber*.] A name given by Chevreul to the cellular tissue of cork after the various soluble matters have been removed by the action of water and alcohol.

Suberose', a. [Prefix *sub* and *erose*.] (*Bot.*) Appearing to be partially eroded or gnawed.

Sub-family, Sub-genus, n. (*Nat. Hist.*) When the genera of a family, or the species of a genus are so numerous and diversified as to offer characters by which they may be ranged into groups, these are termed *sub-families* and *sub-genera*.

Subfossil, a. Containing or comprising bones only partially fossilized: as, *subfossil* strata.

Subglacial, (-glā'shal, a. Being under a glacier or glaciers.

Subglobose, Subglobular, a. Partially globose or globular.

Sub-governor, n. A deputy or subordinate governor.

Subhornblendite, a. Containing hornblende in a scattered state.

Subiaco, (soo-be-a'ko, a town of Central Italy, in the former States of the Church, 33 m. from Rome; pop. 6,247.

Subindicate, v. u. To indicate in a less or minor degree.

Subinfenda'tion, n. (*Law.*) Under-tenancy.

Subinflamma'tion, n. (*Med.*) A mild degree of inflammation.

Subito, (-bē'-), adv. [It. and Lat.] (*Mus.*) A term of direction; as, *subito* *volti*, turn (the leaf) quickly.

Subjacent, (-jā'sent, a. [Lat. *subjacens*, from *subjaceo* — *sub*, and *jaceo*, to lie.] Lying under, beneath, or below. — Being in a lower situation, though not immediately beneath.

Subject, a. [Fr. *sujet*; Lat. *subjectus*, *subjicio* — *sub*, and *jacio*, to throw or cast.] Thrown, brought, or situated under. — Being under the power, authority, or dominion of another. — Exposed; prone; disposed; liable, whether from inherent or extraneous causes; as, she is *subject* to headaches, this country is *subject* to extremes of heat and cold.

— *n.* That which is placed under the authority, jurisdiction, dominion, or influence of something else. — One who is under the authority, rule, or dominion of another; one who owes allegiance to a sovereign, and is governed by his or her laws.

"Every *subject's* duty is the king's; but every *subject's* soul is his own." — *Shaks.*

— That on which any mental operation is exercised; that which is treated or handled as an object of examination, thought, or discussion; that concerning which anything is affirmed or denied; as, a *subject* for inquiry or consideration. — That on which any physical operation or experiment is performed; as, a *subject* for medical treatment. — The hero of a piece; the person treated of; as, Byron is the *subject* of one of Macaulay's finest essays. — That in which anything, whether spiritual or material, inheres or exists; substance. — Hence, the mind; the cogitative faculty or agent; that being or substance which is self-conscious of its workings.

(*Logic.*) The term of which the other is affirmed or denied; as, the *subject* of a proposition.

(*Gram.*) The nominative case of a verb.

(*Fine Arts.*) That which it is the desire and aim of the artist to express; as, the *subject* of a picture.

(*Anat.*) A dead body serving as an object for anatomical dissection.

(*Mus.*) The chief melody or theme of a movement.

— *v. a.* [Lat. *subjicio*, *subjectus* — *sub*, and *jacio*, to throw, to cast.] To place or bring under the rule, influence, authority, dominion, or action of; to subjugate; to subdue; to put under or within the power of; as, to *subject* one's impulses to the control of judgment. — To expose; to make liable; as, to satisfy your demand would *subject* me to much inconvenience. — To make accountable; to submit; as, he is not obliged to *subject* his private opinions to public notice. — To make subservient.

"He *subjected* to man's service angel wings." — *Milton.*

— To cause to undergo; to tender for test or inquiry; as, to *subject* a witness to cross-examination.

Subjection, (-jēk'shun, n. [Lat. *subjection*.] Act of bringing under or subduing; act of vanquishing and bringing under the rule or dominion of another; as, the revolted provinces were finally restored to *subjection*. — State of being subject, or amenable to the power, control, authority, influence, or government of another or others; as, all people live in *subjection* to the common law.

Subjectist, n. Same as SUBJECTIVIST, *q. v.*

Subjective, a. [Late Lat. *subjectivus*.] Pertaining or relating to a subject. — Relating to that of which the thinking mind is the subject, in distinction from *objective*, or that which has reference to the object of thought. — See OBJECTIVE.

Subjectively, adv. In a subjective manner.

Subjectivism, n. (*Philos.*) Same as EGOISM, *q. v.*

Subjectivist, Subjectist, n. (*Philos.*) An EGOIST, *q. v.*

Subjectivity, Subjectiveness, n. State of being subjective. — State of having existence in the mind.

Subject-matter, n. The matter or thought brought forward for discussion or consideration in some statement, controversial theorem, &c.

Subjoin, v. a. [Lat. *subjungo* — *sub*, and *jungo* — *jugum*, a yoke.] To append; to add after something else has been spoken or written; to affix, annex, attach, or connect; as, to *subjoin* addenda to a book.

Sub judice, (-jū'di-se.) [Lat., under the judge.] (*Law.*) Under judicial consideration; pending before a judge or court.

Subjugate, v. a. [Fr. *subjuguier*; Lat. *subjugo* — *sub*, and *jugum*, yoke.] To bring under the yoke; to subject; to subdue and bring under the sway of power or dominion; to vanquish by force, and compel to submit to the authority, or absolute government, or control of another or others; as, to *subjugate* a state.

Subjugation, (-gū'shun, n. [Fr.; Lat. *subjugatio*.] Act of subjugating; act of subduing, or bringing under the yoke or absolute control of another or others.

Subjugator, n. [L. Lat.] One who subjugates; a vanquisher.

Subjunction, (-jūnk'shun, n. [From Lat. *subjungere*.] Act of subjoining; also, state of being subjoined.

Subjunctive, a. [Fr. *subjunctif*; Lat. *subjunctivus* — *subjungo*.] Subjoined or added to something before said or written.

(*Gram.*) Designating the form of a verb which fits it for being subjoined actually or virtually to another verb, and so to express condition, hypothesis, or contingency; — often used in connection with *if*, *though*, *thut*, *lest*, *unless*, *except*, *until*, &c.

— *n.* (*Gram.*) The subjunctive mood.

Subkingdom, n. A subordinate kingdom.

Sublimate, u. (*Bot.*) Woolly in a certain degree.

Sublapsarians, n. pl. (*Ecc. Hist.*) See INFALAP-SARIANS.

Sublease', n. (*Law.*) A lease by a tenant or lessee to another person.

Sublet', v. u. To under-let; to lease, as a lessee to another person; as, to *sublet* a farm.

Sublette, in Illinois, a post-village and township of Lee co., 20 m. S. E. of Dixon. Pop. (1897) 1,080.

Sublette's Lake, located in the N. W. of Wyoming, is the source of the Yellowstone river; Lat. 44° N., Lon. 110° 30' W.

Sublevation, (-vū'shun, n. [From Lat. *sublevare*, to elevate.] The act of elevating or upraising.

Sub-lieutenant, (-lev-tēn'ant, n. (*Mil.*) A second lieutenant.

Subligation, (-gū'shun, n. [Lat. *subligatio* — *subligare*.] The act of binding below.

Sublimable, u. [Fr.] That may be sublimated.

Sublimate, v. a. [Lat. *sublimo*, *sublimatum* — *sublimis*.] To raise by heat into vapor, as a solid substance, which, on cooling, returns again to the solid state; as, to *sublimate* metals. — To exalt; to refine; to heighten; to elevate; as, a *sublimated* soul.

— *n.* (*Chem.*) The product of a sublimate process.

Corrosive sublimate, bichloride of mercury. — See MERCURY.

Sublimate, Sublimated, a. Refined; raised or brought into a vaporous state by heat, and then condensed, as a solid substance.

Sublimation, (-nū'shun, n. [L. Lat. *sublimatio*.] (*Chem.*) Act, operation, or process by which solids are by the aid of heat converted into vapor, which is again condensed, and in the crystalline form. This operation is frequently resorted to for the purpose of purifying various chemical products, and separating them from substances which are less volatile.

— State of being sublimated. — Exaltation; elevation; act of refining, heightening, or improving; as, the *sublimation* of morality.

Sublimatory, a. Employed in the process of sublimation; as, *sublimatory* appliances.

Sublime', a. [Fr., It., and Sp., from Lat. *sublimis* — *sublĕvo* — *sub*, and *lĕvo*, to elevate.] Uplifted; high or exalted in place; elevated aloft; — used in a literal or material sense; as, a *sublime* edifice. — High in moral or mental excellence; elevated by nature; eminent; characterized by lofty, noble, or magnanimous traits; — expressed of persons; as, a *sublime* soul, a *sublime* hero. — High or exalted in sense, style, or sentiment; grand; dignified; solemn; august; stately; exciting awe, veneration, or the finer emotions of the soul; as, a *sublime* action, *sublime* scenery, a *sublime* conception or idea, a *sublime* spectacle. — Elate; hilarious; jocund; elevated by joy; as, in ecstasy *sublime*. — Noble; majestic; lofty or dignified in mien; elevated in manner; as, "He was *sublime* in his looks and gestures." — *Wotton.*

— *n.* That which is lifted up, lofty, exalted, or elevated; especially, the grand in the works of nature or of art, as distinguished from the *beautiful*; the emotion evoked by grandeur; a grand, majestic, or exalted style; a mode or expression of sentiment embodying lofty conceptions.

— *v. a.* To sublimate. — To exalt; to heighten; to improve; to purify; as, "Art may be *sublimed* into a pure genius." — *Dryden.*

— *v. n.* To be raised or changed into a state of vapor by heat, and then condensed by cold, as a solid.

Sublime'ly, adv. In a sublime manner; with elevated conceptions; as, "Fustian's so *sublimely* bad." — *Pope.*

Sublime'ness, n. Sublimity.

Sublime Porte, n. [Fr., lofty or magnificent gate.] The title officially given in the East to the Ottoman Porte or Turkish government. See PORTE.

Sublimification, (-kā'shun, n. [Lat. *sublimis*, and *facere*, to make.] Act of making sublime; or, state of being made sublime.

Sublim'ity, n. [Fr. *sublimité*.] State, quality, or

condition of being sublime; as, (1.) Lofty height, or elevation of place. (2.) Height in moral or mental excellence; loftiness of nature or character; moral grandeur; spiritual eminence. (3.) A feeling of combined awe and exaltation, awakened by the contemplation of scenes or objects of majesty or grandeur, or of aesthetic excellence. — Loftiness or grandeur of sentiment or style; exalted conceptions, or the expression thereof in kindred language; vastness; elevation, whether exhibited in the works of nature or of art.

Sublim'ity, in Oregon, a post-village of Marion co., abt. 15 m. S.E. of Salem.

Sublineation, (-ū'shun, n. A mark of a line or lines under another line, or under a word in a sentence.

Sublingual, (-ling'gwāl, a. Placed under the tongue; as, the *sublingual* glands.

Sublition, (-lish'un, n. [Lat. *sublinere*, *sublitum*, to smear.] (*Print.*) Act or process of laying the ground color under the more perfect color.

Sublit'oral, a. Beneath the shore.

Sublunar, Sublunary, a. [Fr. *sublunaire*; Lat. *sub*, and *luna*, moon.] Under or beneath the moon; earthly; terrestrial; pertaining or relating to this world; as, *sublunary* things.

Subluxation, (-luks-ū'shun, n. [Fr.] (*Surg.*) An imperfect dislocation.

Submarine, (-rēē'n, a. [Lat. *sub*, and *marinus*, marine, from *mare*, sea.] Being, acting, or subsisting under water in the sea; as, *submarine* plants.

Submarine telegraph. (*Elect.*) See ATLANTIC TEL.

Submaxillary, u. [Fr. *sous-marillaire*.] (*Anat.*) Lying beneath the jaw. — *Submaxillary glands*, a pair of salivary glands situated beneath, or rather behind, the lower jaw, but emitting their secretion, which resembles that of the sublingual glands, below the tongue.

Subme'dial, a. [Lat. *sub*, and *medius*, middle.] Situated below the middle.

Subme'dian, a. Lying under the middle of a body.

Subme'diant, n. (*Mus.*) The middle note between the tonic and subdominant descending; it is the greater sixth in the major scale, and the lesser sixth in the minor scale.

Submerge, (-mērj, v. a. [Lat. *submergo*.] To dip or plunge under; to sink; to put under water. — To drown; to cover or overflow with water; as, the low lands were *submerged* by the freshet.

— *v. n.* To plunge under water; — hence, to be entirely merged or incorporated; as, separate ideas *submerged* in one great idea.

Submergence, (-jens, n. Act of submerging; also, state of being submerged.

Submerse', Submersed, (-mērst, a. [From Lat. *submergere*.] (*Bot.*) Situated or growing under water, as the roots of aquatic plants.

Submersion, (-mēr'shun, n. [Fr.; Lat. *submersio*.] Act of submerging; act of putting under water, or causing to be overflowed; act of plunging under water, or of drowning; as, *submersion* of the body when bathing. — State of being submerged, overflowed, or drowned.

Submetallic, a. Partially metallic; as, a *submetallic* lustre.

Submission, (-mish'un, n. [Fr. *soumission*; Lat. *submissio*.] Act of submitting, or of yielding to power, control, or authority; surrender of the person or power to the influence, rule, or government of another; obedience; compliance with the commands or laws of a superior; as, he made his *submission* to the government. — A yielding of one's will to the power or appointment of a superior, without murmuring; acknowledgment of inferiority or dependence; humble or suppliant demeanor; state or quality of being obedient or submissive; resignation; as, pardon sought in all *submission* and humility. — Acknowledgment of a fault or transgression; confession of error or shortcoming; as, "Be not so extreme in *submission* as in offence." — *Shaks.*

(*Law.*) An agreement or understanding by which parties engaged in a suit or controversy, decide to submit their differences to the arbitrament of a specified person or persons.

Submissive, a. Pertaining to, or evincing, submission; yielding to the power, will, or influence of another or others; obedient; compliant; yielding; owning one's inferiority; humble; passive; as, a *submissive* wife.

Submissively, adv. With submission; humbly.

Submissiveness, n. Quality or state of being submissive.

Submit', v. a. [Lat. *submitto* — *sub*, and *mitto*, to send; Fr. *soumettre*.] To yield, resign, or surrender to the influence, power, rule, will, or authority of another or others. — To refer; to state, as a claim in behalf of one's self or another; to leave or commit to the discretion, judgment, or decision of another or others; as, to *submit* a case for counsel's opinion.

— *v. n.* To yield; to surrender; to cease to resist; to yield to anything disagreeable or overpowering; as, people are obliged to *submit* to circumstances. — To yield, as one's opinion to the opinion or authority of another or others. — To be subject; to yield to, or acquiesce in, the authority of another or others; as, he *submitted* with an ill grace. — To yield without murmuring; to be submissive; as, he *submits* to the will of God.

Submultiple, n. (*Math.*) Same as aliquot part. See ALIQUOT.

Subnascent, (-nās'sent, a. [From Lat. *subnasci*, to grow under.] Growing underneath.

Subnormal, n. [Lat. *sub*, and *normal*.] (*Geom.*) That part of the axis of a curve line which is intercepted between the ordinate and the normal.

Subnu'volar, a. [From Lat. *subnubilus*, somewhat

cloudy.] Under the clouds; somewhat cloudy; as, *sub-nuvolar* lights.

Subobtuse, *a.* Imperfectly obtuse.

Suboccipital, (*-ok-sip'-l*), *a.* Situated under the occiput; as, the *suboccipital* nerves.

Suboctave, **Suboctuple**, *a.* [*Sub*, and *octave* or *octuple*.] Being in the ratio of one to eight.

Subocular, *a.* [*Lat. subocularis*.] Being under the eye.

Sub-officer, *n.* An inferior or subordinate officer.

Suborbicular, **Suborbiculate**, *a.* Almost orbicular; nearly circular.

Subordinacy, *n.* State of being subordinate or amenable to control; as, to bring impulse in *subordinacy* to judgment. — A descending series.

Subordinate, *a.* [*Fr. subordonné*; *Lat. sub*, and *ordinatus*, *ordino*, from *ordo*, a series.] Placed in a lower class, rank, order, or degree; occupying a lower position; as, a *subordinate* species, a *subordinate* person. — Inferior in nature, dignity, power, importance, &c.; as, *subordinate* to the understanding.

—*n.* One who stands in class, rank, or order below another. — One of a descent in a regular series.

—*v. a.* To make subordinate or subject; to subdue; as, to *subordinate* one's temper to one's reason. — To place in an order or rank below something else; to make or consider as of less value or importance; as, to *subordinate* imagination to common sense.

Subordinately, *adv.* In a subordinate manner.

Subordinateness, *n.* State of being subordinate.

Subordination, (*-nā'shun*), *n.* [*Fr.*; *L. Lat. subordinatio*.] Act of subordinating, reducing in class or order, or subjecting. — State of being subordinate or inferior to another; state of being under control or government; inferiority of rank or dignity; subjection; as, *subordination* is the essence of military discipline. — Place of rank among subordinates or inferiors; as, "persons in their several *subordinations*." — *Swift*.

Subordinative, *a.* Conducive to, or denoting, subordination; — used conjunctively to connect or insert a subordinate sentence.

Suborn, *v. a.* [*Fr. suborner*; *Lat. suborno* — *sub*, and *orno*, *ornatus*, to equip.] To procure privily or by collusion; as, to *suborn* a spy. — To procure by indirect means.

(*Law.*) To incite or instigate in an underhand or fraudulent manner; — hence, to procure, as a person to take such an oath as constitutes perjury; as, to *suborn* a witness.

Subornation, (*-nā'shun*), *n.* [*Fr.*; *L. Lat. subornatio*.] The crime of instigating or procuring one to do a criminal or an evil action; as, political *subornation*.

(*Law.*) The procuring a person to take a false oath, amounting to perjury. The offence of subornation is not complete unless the oath be taken; but it is a misdemeanor to attempt to procure false testimony.

Suborner, *n.* [*Fr. suborneur*.] One who suborns.

Subovate, *a.* (*Bot.*) Nearly ovate or egg-shaped.

Subpetiolate, *a.* (*Bot.*) Possessing a very short petiole.

Subpœna, (*-pē'nah*), *n.* [*Lat. sub*, and *pœna*, extradition.] (*Law.*) A writ of which there are several kinds; as, for instance, *subpœna ad testificandum* is the ordinary process, both in common law and equity, to compel the attendance of a witness. *Subpœna duces tecum* differs from the above only in that it contains a clause requiring the witness to bring with him, and produce in court, books and papers. An action of damages lies against parties disobeying this writ.

—*v. a.* To serve with a writ of subpœna, in order to enforce attendance in a court of law, under a penalty in case of default; as, to *subpœna* a witness.

Subpolar, *a.* Below the poles; that is, on the lower meridian.

Subporphyritic, (*-pōr-fi-rī'tik*), *a.* (*Geol.*) In alliance with porphyry, but presenting smaller and less accurately defined crystals.

Sub-purchaser, *n.* One who buys at second-hand from a first purchaser.

Subquadrate, *a.* Almost square.

Subquadripole, *a.* In the ratio of one part to four.

Subquintuple, *a.* Containing one part to five.

Subramose, **Subramous**, *a.* (*Bot.*) Having few branches.

Subreption, (*-rēp'shun*), *n.* [*Lat. subreptio*.] The act of obtaining a favor by suppression or fraudulent representation of the facts.

Subrogation, (*-gā'shun*), *n.* [*Fr.*] (*Law.*) The substitution of one person for another in the exercise of rights, or, in particular, the substitution by a creditor of another party to exercise his rights against the debtor.

Subscapular, **Subscapulary**, *a.* [*Lat. sub*, and *scapula*, the blade-bone.] (*Anat.*) Noting the muscles, vessels, nerves, &c., that lie or pass beneath the scapula.

Subscribable, *a.* That may be subscribed.

Subscribe, *v. a.* [*Lat. subscribo* — *sub*, and *scribo*, to write; *Fr. souscrire*.] To write underneath or below; to sign with one's own hand; to give one's consent to something written, or to bind one's self by the subscription of one's name; as, a person *subscribes* a letter. — To attest by attaching one's signature beneath; as, an official document *subscribed* by a secretary. — To promise to give or contribute by inscribing one's name; as, he *subscribed* a hundred dollars to the fund.

—*v. n.* To give consent to some written document by the signature of one's name thereon; — hence, by implication, to assent; to agree; to conform; — preceding to; as, he *subscribed* to the resolution. — To promise to bestow or contribute a certain sum by the written credential of one's name; as, many people *subscribed* for the book.

Subscriber, *n.* One who subscribes. — One who enters his name as agreeing to purchase a newspaper, book, picture, and the like; as, a regular *subscriber*.

Subscript, *n.* Written underneath or below.

Subscription, (*-skrip'shun*), *n.* [*Fr. souscription*; *Lat. subscriptio*.] Act of subscribing or writing one's name. — That which is subscribed; as, (1.) The signature attached to a list or document. (2.) A paper to which a signature is attached. (3.) Act of contributing to any undertaking. (4.) Sum subscribed, or amount of sums subscribed. (5.) Consent, authority, or attestation given by underwriting the name.

Subsection, (*-sēk'shun*), *n.* A subdivision, or section of a section.

Subsecutive, *a.* [*Fr. subsecutif*.] Following in a sequence or succession.

Subsemitone, **Subtonic**, *n.* (*Mus.*) The leading note of any key.

Subseptuple, *a.* In the ratio of one to seven.

Subsequence, **Subsequency**, *n.* State of being subsequent, or of coming after something else.

Subsequent, (*-kwent*), *a.* [*Fr.*; *Lat. subsequens*.] Following in time; coming or occurring after something else at any time indefinitely; as, a *subsequent* event, at a *subsequent* period. — Following in the order of place, sequence, or succession; succeeding; consequent; next; as, a *subsequent* arrangement, a *subsequent* sentence.

Subsequently, *adv.* In a subsequent time, order, manner, and the like; at a later time; on an after occasion; occurring after something else.

Subserous, *a.* (*Anat.*) Situated under, or pertaining to the parts connected with a serous membrane. *Dungl.*

Subserve, *v. a.* [*Lat. subservio* — *sub*, and *servio*, to serve.] To serve under; to serve in subordination to; to serve instrumentally; to promote, advance, or help forward; as, to *subserve* a patron's interests.

—*v. n.* To serve in a subordinate capacity; to be subservient.

Subservience, **Subserviency**, *n.* State of being subservient; instrumental use; operation that promotes or assists some purpose.

Subservient, *a.* [*Lat. subserviens*.] Acting as a subordinate instrument; useful as a means or agent to promote a purpose; serving to promote some end or measure; as, a man *subservient* to another's will.

Subserviently, *adv.* In a subservient manner.

Subsesquial, (*Chem.*) A prefix used in chemical nomenclature, denoting the combination of constituents in the proportion of two to three; — especially, denoting the combination of two electro-negative with three electro-positive equivalents.

Subsessile, (*-sēs'sil*), *a.* (*Bot.*) Having very short foot-stalks.

Subsexuple, *a.* In the ratio of one to six.

Subside, *v. a.* [*Lat. subsido* — *sub*, and *sido*, to settle.] To settle or sink down; to fall or gravitate to the bottom, as sediment. — To abate; to become composed or tranquil; to be calmed; to fall into a state of calm or quiet; as, now the storm has *subsided*, her fears will also *subside*. — To tend downward; to sink; to become lower, as a hill.

Subsidence, **Subsidency**, *n.* Act or process of subsiding, or of sinking or falling, as the lees of liquors. — Act of gradually descending or becoming lower, as ground.

Subsidarily, *adv.* In a subsidiary manner.

Subsidary, *a.* [*Fr. subsidiaire*.] Pertaining to, or supplying, a subsidy; aiding; assistant; auxiliary; affording help; furnishing additional or extra supplies; cooperating to accomplish a result; as, *subsidiary* means.

—*n.* An assistant; an auxiliary; one who, or that which, cooperates, or contributes aid, or additional means or supplies.

Subsidize, *v. n.* To furnish with a subsidy; to secure the assistance of another, or others, by the payment of a subsidy; as, to *subsidize* an ally in time of war.

Subsidy, *n.* [*Fr. subsidie*; *Lat. subsidium* — *subsido*.] Succor; aid; assistance; cooperation; supplies or money given; — particularly, something, as money, furnished for aid in an emergency, as by a people to their ruler, or to an ally. — A sum of money paid by one prince or nation to another, to purchase the service of auxiliary troops, or the active cooperation of such foreign prince or power in a war against an enemy.

Subsist, *v. n.* [*Fr. subsister*; *Lat. subsisto* — *sub*, and *sisto*, to stand.] To be; to have existence; to inhere. — To retain the present state; to continue.

"It was a moral impossibility that the republic could *subsist* any longer." — *Swift*.

—To live; to derive support; to be maintained with the necessities of food and clothing; as, it is a sad thing to *subsist* on public charity.

—*v. a.* To feed; to maintain; to furnish with provisions or necessities; as, to *subsist* troops in an enemy's country.

Subsistence, *n.* [*Fr.*; *L. Lat. subsistentia*, from *subsistens*.] Actual being or existence.

"In Christ there is no personal *subsistence* but one." — *Hooker*.

—State of subsisting, or of being subsistent; that in which anything subsists; inherency; as, the *subsistence* of frailty in human nature. — That which supplies the means of existence to animal life; money or provisions for sustenance; livelihood; maintenance; as, he earns a scanty *subsistence*.

Subsistent, *a.* [*Lat. subsistens*.] Endued with real being; as, a *subsistent* spirit. — Inherent; as, qualities *subsistent* in bodies.

Subsoil, *n.* The bed, or stratum, of earth found between the surface soil and a base or stratum still lower. —*v. a.* To plough up the subsoil of, as land.

Substance, (*-stans*), *n.* [*Fr.*; *Lat. substantia*, from

substo — *sub*, and *sto*, to stand.] That which subsists; the being, essential, or material of a thing; body; main, material, or solid part; corporeal nature; as, an animal *substance*. — Intrinsic nature; that in which qualities or properties inhere; the permanent cause or subject of the manifestations of phenomena, whether material or spiritual; that which is *real*, as distinguished from that which is *apparent*; substratum; as, many lose the *substance* in following the shadow. — The characteristic, essential, or most important feature of anything; comprehensive summary; as, this means, in *substance*, the same thing. — Estate; property; goods; means of living; as, a man of *substance*.

(*Theol.*) The divine essence or being; — so called as being that in which the divine attributes inhere.

Substantial, (*-stān'shal*), *a.* [*Fr. substantiel*; *L. Lat. substantialis*.] Real; really or actually existing; belonging to substance; as, a *substantial* agent. — True; solid; real; tangible; not seeming or imaginary; as, a *substantial* good, a *substantial* reward, *substantial* greatness of soul. — Material; corporeal; as, a *substantial* ray. (*Prior.*) — Possessing substance or strength; solid; stout; strong; as, *substantial* garments, a *substantial* building. — Moderately wealthy; of adequate or competent means; possessed of goods or estate; responsible; as, a *substantial* citizen.

Substantiality, (*-shāl'āl'i-tē*), *n.* Quality of being substantial; state of real or tangible existence; materiality; corporeity.

Substantialize, (*-stān'shal-iz*), *v. a.* To make substantial. (*R.*)

Substantially, (*-stān'shal-ly*), *adv.* In a substantial manner.

Substantialness, (*-stān'shal-*), *n.* State or quality of being substantial; solidity; strength; firmness.

Substantials, (*-stān'shalz*), *n. pl.* Essential parts.

Substantiate, (*-stān'shī-āt*), *v. a.* To make to exist. — To verify; to corroborate; to make good or valid; to establish by proof or infrangible evidence; as, to *substantiate* an allegation.

Substantiation, (*-shī-ā'shun*), *n.* Act of substantiating, verifying, or proving; evidence; corroboration.

Substantival, *a.* Pertaining to, or partaking of the nature of, a substantive.

Substantive, (*-tiv*), *a.* [*Fr. substantif*; *L. Lat. substantivus*, *substantia*.] Betokening, or denoting, existence; as, the *substantive* verb, that is, the verb *to be*. — Solid; firm; self-dependent; as, a *substantive* manner. (*R.*)

Substantive colors. (*Dyeing.*) Those colors which remain fixed or permanent without the intervention of other substances, as mordants or bases; — in contradistinction to *ADJECTIVE COLORS*, *q. v.*

—*n.* (*Gram.*) A noun; that part of speech which denotes a substance or subject, as distinguished from an *attribute* or *predicate*; or, that part of speech which expresses something that exists, either material or immaterial.

Substantively, *adv.* As a substantive.

Substitute, *v. a.* [*Fr. substituer*; *Lat. substituo*, *substitutus* — *sub*, and *statuo*, to set up.] To put in the place of another; to change, exchange, or interchange. —*n.* One who, or that which, is substituted, or put in the place of another to answer the same purpose; specifically, one who is hired to take the place of a man drafted into military service.

Substitution, (*-tū'shun*), *n.* [*Fr.*; *L. Lat. substitutio*.] Act of substituting, or of putting a person or thing in the place of another to supply his or its place; as, the *substitution* of paper money for coin as a national currency. — State of being put in the place of another.

(*Chem.*) The formation of compounds by displacement of certain of their constituents by others possessing similar properties. The simplest example of substitution may be cited in the case of iron rusting in damp air, metallic iron gradually replacing the hydrogen of the water which is set free. Oxide of iron may, therefore, be regarded as a substitution compound of water, in which hydrogen is replaced by iron. In organic chemistry, substitution compounds are most numerous and interesting. They are mostly substances in which hydrogen is replaced by a metal, a halogen, a hydrocarbon, or even by a complicated group. The acids also form a large number of substitution compounds, of which chloracetic acid may be given as an example:

Acetic acid.	Chloracetic acid.
$\text{H}_2\text{OC}_2\text{H}_3\text{O}_2$	$\text{H}_2\text{OC}_2\text{Cl}_2\text{O}_2$

Neutral bodies also produce substitution compounds, of which benzole may be taken as a specimen:

Benzole.	Chloro-benzole.	Nitro-benzole.
C_6H_6	$\text{C}_6\text{H}_5\text{Cl}$	$\text{C}_6\text{H}_5\text{NO}_2$

The discoverer of substitution organic compounds was Gay-Lussac, who, in endeavoring to bleach bees-wax with chlorine, found that certain of the equivalents of hydrogen contained in that body were replaced by the halogen, a compound being formed, which, when burnt, emitted hydrochloric acid. The study of substitution compounds has always been most attractive to organic chemists. The researches of Laurent, Gerhardt, Hofmann, and others in this direction, have exerted a very important influence on chemistry, both as a theoretical and practical science. The whole series of coal-tar dyes, for instance, resulted entirely from the study of the substitution compounds of ammonia. In the hands of Berthelot and others, the theory has resulted in the synthetic formation of organic compounds, and the day does not appear to be far distant when numerous substances which are now obtained in minute quantities from plants and animals, will be formed from their ultimate elements in the laboratory.

(*Gram.*) Syllepsis, or the use of one word for another. (*Math.*) In algebra, the replacing of a quantity by another, or by a function of several others. The substitution is said to be *linear* when the variables of a given function are replaced by linear functions of a new set of variables.

(*Theol.*) The doctrine of Christ's vicarious suffering for the sinner.

(*Law.*) The designation of a second, third, or other heir, to enjoy, in default of a former heir, or after him.

Chord of substitution. (*Mus.*) A name given to the chords of the ninth major and minor.

Substitutional, Substitutionary. (*-tū'shon-.*) *a.* Pertaining to, or characterized by, substitution; standing in the place or lieu of another.

Substitutive, a. That may be substituted; making substitution.

Substratum, n. [*Lat.*, laid under.] (*Geol.*) A stratum lying under another. The term *subsoil* is generally applied to the matters which intervene between the surface soils and the rocks on which they rest; thus, clay is the common *substratum* or subsoil of gravel.

Substructure, (-strū'kshur.) n. [*From Lat. substructio.*] A foundation; an under structure; as, the substructure of a building.

Substyle, n. (*Dialing.*) The straight line formed by the intersection of the face of the dial with the perpendicular plane which passes through the gnomon.

Subsultus, n. [*From Lat. subsultire.*] (*Med.*) A spasmodic twitching, or convulsive motion.

Subsume', v. a. [*Lat. sub.* and *sumere*, to take.] To include under something else, as species under genus, particular under universal, &c.

Subsumption, (-sūm'shon.) n. Act of subsuming.—That which is subsumed.

Subtangent, (-tān'jent.) n. (*Geom.*) The line of any curve which determines the intersection of the tangent in the axis prolonged.

Subtenant, n. (*Law.*) A tenant who holds under one who is also a tenant.

Subtend', v. a. [*Lat. subtendo*—*sub*, and *tendo*, to stretch.] To stretch or extend under, or be opposite to; as, the chord which subtends an arc.

Subtense, n. (*Geom.*) The chord of an arc.

Subtropical, a. Warm in a very moderate degree, as water.

Subter, a. A Latin preposition, denoting *under*, applied as an English prefix in the same sense as *sub*, but in less general use.

Subterfuge, (-fūj-) n. [*Fr.*, from *Lat. subter*, and *fugio*, to flee.] That to which one resorts for shelter or escape;—hence, an evasion; a shift; a quirk; a prevarication; an artifice made use of to evade censure or the force of an argument or judgment, or to justify opinions or conduct.

Subterranean, Subterranean, a. [*Lat. subterraneus*—*sub*, and *terra*, earth.] Being or lying under the surface of the earth; situated within the earth or underground; as, a subterranean passage.

Subtiava, (soob-te-a'va.) n. In Central America, a town of Nicaragua, 40 m. S.S.E. of Leon; pop. abt. 6,000.

Subtile, (-til.) a. [*Fr. subtil*; *Lat. subtilis*, contracted from *sub-texilis*—*sub*, and *texilis*, woven.] Nice; fine; delicate; delicately constituted, or airily constructed; as, a subtile web.—Thin; tenuous; volatile; not dense or gross; as, subtile vapor.—Piercing; acute; pungent; as, subtile pain.—Expressing acuteness of mental perception; astute; shrewd; penetrating; refined; discerning; as, a subtile argument.—Cunning; crafty; artful; sly; insidious; as, a subtile opponent, a subtile distinction.

(NOTE. In the last two senses, the term *subtle* is in more general acceptance.)

Subtilely, adv. In a subtile manner.

Subtleness, n. State or quality of being subtile.

Subtilism, (-izm.) n. Fineness; acuteness; artfulness.

Subtilization, (-tū'shun.) n. Act of making subtile, fine, or tenuous.—Refinement; shrewdness; mental acuteness.

Subtilize, v. a. [*Fr. subtiliser.*] To make thin, fine, airy, or delicate; to make less dense, gross, or coarse; as, subtilized matter.—To refine; to wire-draw; to spin into niceties; as, to subtilize a definition.

—*v. n.* To refine in argument or illustration; to make nice or delicate distinctions.

"Qualities and moods some modern philosophers have subtilized on."—*Digby.*

Subtily, n. [*Fr. subtilité*; *Lat. subtilitas*, from *subtilis*.] State or quality of being subtile; thinness; fineness; exility; as, the subtilty of light.—Refinement; extreme acuteness; as, subtilty in argument.—Craftiness; artfulness; cunning; slyness.

(NOTE. The word *subtlety* is more generally used in relation to the last two senses.)

Subtle, (sūt'l.) a. (*comp.* SUBTLER; *superl.* SUBTLEST.) [*Lat. subtilis*.] Artful; crafty; sly in design; wily; insinuating; subtile;—used in reference to persons; as, a subtle enemy.—Acute; astute; shrewd; nice; as, a subtle wit.—Craftily or cunningly devised; as, a subtle scheme, a subtle contrivance, a subtle question.

Subtleness, (sūt'l-) n. Quality of being subtile.

Subtlety, (sūt'l-) n. Quality of being subtile, sly, or cunning; artfulness; insidiousness.—Astuteness; shrewdness; acuteness of intellect; nicety of distinction, definition, or discrimination.—A nice or recondite point or problem; a seeming paradox; any tenet or theorem not to be readily defined or solved.

Subtly, (sūt'lj.) adv. In a subtile manner.

Subtonic, n. (*Pron.*) A vocal or sonant consonant. (*Mus.*) Same as SUBSEMITONE, *q. v.*

Subtract', n. a. [*Lat. subtraho, subtractus*—*sub*, and *traho*, to draw.] To deduct; to withdraw or take, as a

part from the rest; as, subtract 9 from 14, and the product is 5.

Subtraction, (-trāk'shun.) n. Act or operation of subtracting, deducting, or of taking a part from the rest.

(*Arith.*) The taking of one number or quantity from another in order to find their difference;—the converse of ADDITION, *q. v.*

Subtractive, a. Tending or having power to subtract. (*Math.*) Marked by the negative sign.

Subtrahend, n. [*From Lat. subtrahere.*] (*Arith.*) The sum or number to be subtracted from another.

Subtranslucent, (-lū'sent.) a. Translucent in an imperfect degree.

Subtransparent, a. Approximately transparent.

Subtreasury, (-trezh'yū-ry.) n. A subordinate treasury or place of deposit, as of money or public revenues.

Subtriple, (trip'l.) a. In the ratio of one part to three.

Subtripliate, a. (*Math.*) Demonstrated by the cube root, as ratios.

Subularia, n. (*Bot.*) A genus of aquatic, acanulescent herbs, order *Brassicaceae*. The *Awl-wort*, *S. aquatica*, is a small plant growing on the muddy shores of ponds in Maine, and near the White Mountains; scape 2-3' high, racemose, with a few minute, white flowers on slender pedicles.

Subulate, Subulated, a. [*From Lat. subula*, an awl.] (*Nat. Hist.*) Awl-shaped.

Subungual, Subunguial, (-ŭng'gwāl, ŭng'gwī-āl.) a. [*Lat. sub*, and *unguis*, nail.] Under the nail.

Suburb, n. [*Lat. suburbium*—*sub*, and *urbs*, city.] A place, part, or region situated near to the walls or outside of a city; an outskirt;—plurally, environs; as, a house in the suburbs of Philadelphia.—Hence, the confines; the skirt; the outer part; as, "the suburbs of my jacket are gone."—*Cleveland.*

Suburban, a. [*Lat. suburbanus*.] Pertaining to or relating to, or inhabiting or being in, the suburbs of a city; as, a suburban residence.

—*n.* One who makes his abode in the suburbs of a city.

Subvariety, n. A subordinate variety.

Subvene', v. a. [*Lat. sub*, and *venire*, to come.] To come under, or happen.

Subvention, (-ven'shun.) n. [*Fr.*] Act of coming or happening under.—An aid or bounty bestowed or guaranteed by a government.

Subversion, (-ver'shun.) n. [*Fr.*; *Lat. subversio*.] Act of subverting or overthrowing; state of being subverted or overthrown; entire overturn or overthrow; utter ruin, downfall, or destruction; an overthrow of the foundation; extinction; as, the subversion of a government or state, the subversion of law, order, or morality, &c.

Subversive, a. Tending to downfall or destruction.

Subversive, (-rér'siv.) a. [*Fr. subversif*.] Having a tendency to subvert; evincing an inclination toward overthrow, ruin, or extinction.

Subvert', v. a. [*Fr. subvertir*; *Lat. sub*, and *verto*, to turn.] To overturn, or turn upside-down; to invert; to overthrow from the foundation; to ruin or extinguish utterly; as, to subvert the liberties of a free people.—To corrupt or pervert, as the mind, and turn it from truth and morality; to confound; to depose; as, to subvert religious principles.

—*v. n.* To be subversive; to cause the downfall of anything from its foundation.

Subverter, n. One who subverts or overthrows.

Subvertible, a. Susceptible of subversion.

Sub-way, n. An underground passage.

Sub-work'er, n. One who works in a subordinate position.

Succades, (sūk-kū'dez.) n. pl. [*Lat. succus*, juice.] (*Cum.*) Sweetmeats, or candied fruits.

Succedaneous, (sūk-se-dā'ne-us.) a. [*Fr. succédané*.] Supplying the place of some thing or person as a substitute; pertaining to, or acting as, a succedaneum.

Succedaneum, n.; pl. SUCCEDANEA. [*Lat.*] A substitute; one who succeeds to the place of another; that which follows or succeeds something, or is used in lieu of something else.

Succeed, (sūk-sēd') v. a. [*Fr. succéder*; *Lat. succedo*—*sub*, and *cedo*, to go.] To follow in order; to take the place vacated by; as, by the laws of primogeniture the eldest son succeeds his father.—To come after; to be subsequent to or consequent upon; to follow; to pursue; as, misfortune succeeded my efforts.

—*v. n.* To follow or come next in order; as, the seasons succeed one another.—To come in the stead of one who has vacated a place, or is defunct, or of that which has preceded; as, he succeeds to a fortune after his uncle's death.—Hence, to ascend the throne after the abdication or demise of the occupant; as, "David succeeded to the throne, to the exclusion of Jonathan." (*Locke*).—To accomplish what is attempted, designed, or sought for; to obtain the end or object desired; to terminate with advantage or success; to have a prosperous result; as, to succeed in life.—To have a good effect; to be received with general favor or popular acceptableness; as, it is possible that the undertaking may succeed.

Succeedant, a. (*Her.*) Following one another.

Succeed'er, n. A successor. (*R.*)

Succentor, (sūk-sēn'tor.) n. [*L. Lat.*] (*Mus.*) The bass-singer in a concert or musical entertainment.

Success, (sūk-sēs') n. [*Fr. succès*; *Lat. successus*—*succedo*.] Act of succeeding, or state of having succeeded; the favorable, happy, or prosperous termination of anything projected or attempted; a result which answers the design or purpose intended; fortunate issue; as, success is the world's touchstone of merit.

Success', in New Hampshire, a township of Coos co., 115 m. N.E. of Concord.

Success'ful, a. Having or yielding success; having a favorable, happy, or prosperous issue; terminating in accomplishing what is wished or intended; having the desired effect;—hence, happy; prosperous; fortunate; as, a successful enterprise, he was successful in business, &c.

Success'fully, adv. In a successful manner; with a favorable result of what is desired or attempted; favorably; happily; prosperously; fortunately; as, he conducted the negotiations successfully.

Success'fulness, n. State or condition of being successful; favorable termination; prosperous conclusion; success.

Succession, (sūk-sēsh'un.) n. [*Fr.*; *Lat. successio*, from *succedo*.] Act of succeeding; a following of things in order of time or place; consecution; sequence; series of things following one another either in time or place.—A series of persons or things conformable to some established order of precedence; as, a succession of princes or rulers, a succession of chronological events.

—Lineage; race; an order or series of descendants; as, a long line of succession.

—The person succeeding to rank, office, possession, and the like.—The power or right of coming into the inheritance of an ancestor; title or authority to enter upon the dignity, office, position, &c., held by another; as, the War of the Spanish Succession.

(*Law.*) In Louisiana, the right and transmission of the rights and obligations of the deceased to his heirs. The estate, rights, and charges which a person leaves after his death, whether the property exceed the charges or the charges exceed the property, or whether he has left only charges without property. The succession not only includes the rights and obligations of the deceased as they exist at the time of his death, but all that has accrued thereto since the opening of the succession, as also of the new charges to which it becomes subject.—(*Common Law*.) The mode by which one set of persons, members of a corporation aggregate, acquire the rights of another set which preceded them. This term in strictness is to be applied only to such corporations.

(*Mus.*) The sequence of notes in melody, as distinguished from the successive chords of harmony, called *progression*.

Succession, (War of the.) (*Modern Hist.*) Two wars, in which a great part of the European Continent was involved, are commonly known by this name: 1. That of the *Spanish Succession*, occasioned by the dispute whether the succession of Spain should devolve on an Austrian or a French prince (1702-1713); terminated by the peace of Utrecht, which placed the house of Bourbon on the Spanish throne. 2. That of the *Austrian Succession*, in which the right of Charles VI., Emperor of Germany, to settle his Austrian dominions on his daughter Maria Theresa, was contested by France, Prussia, Bavaria, and other states; terminated by the peace of Aix-la-Chapelle, 1748.

Successionist, n. An adherent to the doctrine of apostolical succession.

Successive, (sūk-sēs'siv.) a. [*Fr. successif*.] Following in order of uninterrupted course, as a series of persons or things, whether in time or place; as, the successive cycles of time, the successive Presidents of the U. States.

Successively, adv. In a successive manner.

Successiveness, n. State or condition of being successive.

Success'less, a. Without success or favorable result.

Success'lessness, n. State or quality of being successless.

Successor, (sūk-sēs'sor.) n. [*Lat.*] One who succeeds, follows, or comes after; one who takes the place which another has vacated, and sustains the like part, position, or character;—antithetical to *predecessor*; as, the rightful successor to a crown.

Succiduous, (sūk-sūd'ū-ŭs.) a. [*From Lat. succidere*.] Falling or prepared to fall. (*R.*)

Succiferous, (sūk-sif'er-ŭs.) a. [*Lat. succus*, juice, and *ferre*, to produce.] Yielding or conveying sap.

Succinate, n. [*From Lat. succinum*, amber.] (*Chem.*) A salt obtained by the combination of succinic acid and a base.

Succinet, (sūk-singkt') a. [*Fr.*, from *Lat. succinum*—*sub*, and *cingo*, cinctum, to gird.] Girded or drawn up to permit the legs to be free. (*R.*)—Condensed or compressed into a narrow compass; short; compendious; brief; concise; laconic; terse; as, a succinct style of diction.

Succinet'ly, adv. In a succinct manner.

Succinet'ness, n. State or quality of being succinct.

Succinic Acid, (sūk-sin'ik.) n. [*From Lat. succinum*, amber.] (*Chem.*) An acid originally obtained from amber by destructive distillation. It may, however, be obtained by several other methods, perhaps most readily by dissolving crude malate of lime through warm water, a small quantity of decayed cheese being added as a ferment. The mixture is kept at a temperature of about 100° for a week, carbonic acid being disengaged, carbonate and succinate of lime crystallizing out, and acetate of lime remaining in solution. The succinate of lime is washed, decomposed with hydrochloric acid, and the succinic acid crystallized from the solution. Succinic acid crystallizes in large, regular, rhombic tables. It dissolves in 5 parts of cold and 2 parts of boiling water. Alcohol dissolves it readily, but ether only sparingly. At a temperature of about 347° to 356° it melts, and if suddenly heated to 455°, it melts, boils, and sublimates completely. It forms with the bases three sets of salts, most of which crystallize readily. The succinates are characterized by giving a bulky brown precipitate with the neutral salts of sesquioxide of iron.

Succinite, (*suk'sin-ite*), *n.* [Fr., from Lat. *succinum*, amber.] (*Min.*) A garnet of an amber color.

Succutious, (*suk'sin-us*), *a.* Belonging to, consisting of, or resembling amber.

Succor, (*suk'kér*), *v. a.* [Fr. *secourir*; Lat. *sub*, and *curro*, to run.] To run to support or sustain; to help when in want, difficulty, or distress; to relieve in privation or adversity; to assist or deliver from trouble or suffering; to aid; as, to succor the destitute and oppressed.

Succor, *n.* Aid; help; assistance; relief; particularly, assistance that restores or delivers from want, penury, difficulty, affliction, or distress; as, to receive succor in time of tribulation. — The person or thing that brings relief.

Succorable, *a.* That may be succored or relieved. (*R.*)

Succorless, *a.* Destitute of relief or succor.

Succory, *n.* (*Bot.*) See CICHORIUM.

Succotash, *n.* [Narragansett Indian, *msickquatash*.] A dish, borrowed from the American aborigines, composed of green maize and beans boiled together.

Succuba, *n.*; *pl.* SUCCEBÆ. [From Lat. *succubare*, to lie under.] A term used, during the Middle Ages, to denote a female devil or witch, with whom a wizard was supposed to have intercourse.

Succubus, *n.* (*Demonology*.) A SUCCEBA, *q. v.*

Succula, *n.* (*Med.*) The nightmare. — Also, an imaginary female with whom a man in his sleep seems to have had sexual intercourse.

Succulent, *n.* (*Med.*) A cylinder with turning levers, but without any drum.

Succulence, **Succulency**, *n.* Quality of being succulent; juiciness; richness of flavor; as, the succulence of an apricot.

Succulent, *a.* [Fr.; Lat. *succulentus*, from *succus* — *sugo*, to suck.] Juicy; full of natural juices; as, a succulent rump-steak.

Succulent plants, (*Bot.*) Plants possessing a soft, juicy, or sappy stem, in distinction from those which are ligneous, hard, and dry.

Succulently, *adv.* In a succulent manner; juicily.

Succumb, (*suk-kùm*), *v. a.* [Fr. *succomber*, from Lat. *sub*, and *cumbo*, for *cubo*, to lie down.] To yield; to submit; to sink unresistingly; as, to succumb under temptation.

Succursal, *a.* [From Lat. *succurre*.] Tributary; dependent.

Succur, (*Eccl.*) In various parts of Europe, a church established by way of succor to a parochial church, regarded as insufficient for the wants of its community; — corresponding with the English *chapel of ease*.

Succussion, (*suk-kùsh'un*), *n.* [Fr., from Lat. *succutere*.] A shake; also, the act of shaking.

Succussion, (*Med.*) A method of testing the presence of a liquid in the thorax by administering a shake to the body. — Also, the motion impressed on the fetus in the womb by alternately pressing the womb with the index-finger of a hand introduced in the vagina, the other hand being applied on the abdomen.

Succussive, *a.* Characterized by a vibratory motion, especially an up or down movement, and not merely tremulous oscillation; as, the succussive motion in earthquakes.

Such, *a.* [A. S. *swilc*, *swylc*.] Of this or that kind; of the like sort or kind; resembling; similar; like; as, I never knew such a person; — preceding as before the object of reference; as, give a man such an income as may enable him to live in comfort. — The same as what has been mentioned; referring to something that has been specified; as, when I gave him my promise, I meant him to receive it as such. — The same that; — followed by as; as, this was the condition of affairs at such time as the government resigned office. — Such and such, or such or such, some; certain; — representing the object in an indefinite sense, as particularized in one way or another or one and another, not specified at the time; as, such and such practices are to be avoided.

Suchet, LOUIS GABRIEL, (*soo'shat*), Duke d'Albufera, one of Napoleon's marshals, was b. in Lyons, 1772, and rose to distinction in the wars waged by the republic in Italy. In 1800 he was major-general, and in 1805 began his career in the Spanish peninsula, where he rose to the command of a division of the army, and obtained his dual honors. He became a peer of France after the Restoration, and d. 1826.

Suchew, (*su-chu'*), a city of China, 55 m. from Shanghai. It is said to be 10 m. in circumference, and inclosed with fortifications. *Pop.* unascertained.

Suchiltepec, (*soo-chet-la-pék'*), in Central America, a town of Guatemala, 75 m. W. of New Guatemala. In the vicinity is a volcano of the same name.

Suck, *v. a.* [A. S. *sucan*, *sycan*; Icel. *singa*; Lat. *sugo*.] To draw out, as a liquid from any receptacle, by the action of the mouth and tongue; to draw by the forcible exhaustion of air. — To draw milk from with the mouth; as, an infant sucks the mother's breast. — To imbibe; to inhale; to absorb; to draw in by any process resembling suction; as, bees suck the pollen of flowers. — To draw in or drain; as, water sucked through a sponge. — To ingulf; to swallow up or draw in, as by a vortex or whirlpool.

To suck in. To imbibe; to absorb; to draw into the mouth; as, he sucked in the odor of her breath. — **To suck out**. To draw out with the mouth; to exhaust by suction. — **To suck up**. To draw into the mouth.

v. n. To draw by exhausting the air, as with the mouth, or through a tube; as, a pump sucks. — To draw the breast, as, a sucking babe. — To draw in; to imbibe.

n. Act of sucking or of drawing with the mouth. — **Pap**; milk drawn from the breast by the mouth; as, to give suck to an infant.

Suck, in Ireland, a river of Connaught, flowing S. into the Shannon at Shannon Bridge.

Suckasun'uy, in New Jersey, a post-village of Morris co., 22 m. N.E. of Trenton.

Sucker, *n.* One who, or that which, sucks. — A parasite; a sponger upon others.

(*Hydraul.*) The embolus or piston of a pump.

(*Pneumatics*.) A round piece of leather, which, laid wet on a stone and drawn up in the middle, leaves a vacuum within, which, by atmospheric pressure, makes it adhere; — commonly used by children as a plaything. — A pipe through which anything is drawn.

(*Bot.*) A branch or shoot thrown up by a plant from beneath the surface of the ground, as is common with roses, &c.

(*Zoöl.*) The common name of several species of soft-finned malacopterygious fishes included in the family *Catostomi*. They have a single dorsal, the mouth beneath the snout, lips plaited, lobed, or carunculated, and suitable for sucking. The family *Catostomi* contains also the Club-suckers of the ponds and streams of the United States, which move together in large numbers. Some of the suckers attain the weight of 10 pounds.

n. pl. (*Zoöl.*) The order of Suckers, or *Cyclostomes*, comprises chondropterygious fishes which, as regards the skeleton, are the most important of all vertebrates, their vertebrae being simply cartilaginous rings scarcely differing from one another. But one of the most characteristic features of these animals is the tongue, which moves forwards and backwards like a piston, enabling them to produce a vacuum, and thus fix themselves to solid bodies as well as to fishes. The lampreys may be taken as a type of this order.

v. a. To deprive or divest of suckers; as, to sucker Indian corn.

Suckernotch Creek, rises in Noxubee co., Mississippi, and flowing S.E., falls into the Tombigbee River at Moscow, in Alabama.

Suck'ing, *a.* Imbibing; absorbing, as first nourishment; as, a sucking politician.

Suck'ing-bottle, *n.* A bottle filled with warm milk, as artificial suck for infants.

Suck'ing-fish, *n.* (*Zoöl.*) A name sometimes given to the *Remora* and allied species. See REMORA.

Suck'ing-pump, *n.* A suction-pump. See PUMP.

Suckle, (*suk'l*), *v. a.* [Dim. of *suck*.] To give suck; to nourish at the breast; as, to suckle a child.

Suck'ling, *n.* A young child or animal nursed by the mother's milk.

Sucree, the cap. of Bolivia. See CHUQUISACA.

Su'crose, *n.* (*Chem.*) A generic name for those sugars which, though identical in composition and properties, are obtained from sources different from that of grape-sugar, or GLUCOSE (*q. v.*) It includes the sugars of the cane, beet, turnip, carrot, maple, birch, palm, waize, and others less generally known.

Suction, (*suk'shun*), *n.* [Fr., from Lat. *sugere*, *suctum*, to suck.] Act of sucking or drawing into the mouth, as liquids; also, act of drawing, as fluids into a pipe, by exhaustion of the air.

Suction-chamber. The chamber of a pump into which the suction-pipe discharges. — **Suction-pipe**. The induction water-pipe of a pump. — **Suction (or sucking) pump**. (*Hydraul.*) See PUMP.

Suctorial, *a.* Adapted for sucking; existing by suction; as, suctorial birds. — Having adhesion by suction; as, suctorial fishes, (or SUCKERS, *q. v.*)

Sucuriu, (*soo-koo-re-oo'*), a river of Brazil, rises in the prov. of Matto-Grosso, and falls into the Parana, 8 m. S. of the junction of the Tiete.

Su'datory, *n.* [Fr. *sudatoire*; Lat. *sudatorium*.] A hot bath; a vapor-bath.

a. [Lat. *sudatorius*.] Perspiring; sweating.

Sudbury, in Massachusetts, a post-village and twp. of Middlesex co., 20 m. N.W. of Boston.

Sudbury, in Vermont, a post-township of Rutland co., 45 m. S.W. of Montpelier.

Sudbury River, in Massachusetts, rises in Middlesex co., and joins the Asabet at Concord to form the Concord River.

Sud'den, *a.* [A. S. *soden*; Fr. *soudain*, from Lat. *subco*, *subitus*, to steal upon.] Happening without notice; coming unexpectedly, or without the common preparatives; unlooked-for; abrupt; as, a sudden panic, a sudden arrival. — Quick; rapid; prepared or engaged with haste or undue forcing; as, a sudden resolve.

n. Surprise; an unlooked-for event or occurrence. — **On a sudden**, or **of a sudden**. Sooner than was expected or anticipated; without the proper or usual preparatives; as, his manner changed on a sudden.

Sud'denly, *adv.* In a sudden or unlooked-for manner.

Sud'denness, *n.* State of being sudden; a coming or happening without premonition or preparation; abruptness; as, the suddenness of the event amazed him.

Sud'lersville, in Maryland, a post-village of Queen Anne co., 55 m. N.E. of Annapolis.

Sudoriferous, *a.* [Lat. *sudor*, sweat, and *ferre*, to produce.] Promoting or secreting perspiration.

Sudorific, *a.* [Fr. *sudorifique*, from Lat. *sudor*, sweat, and *facio*, to make.] Causing sweat or perspiration; as, sudorific herbs.

n. (*Med.*) A medicine that excites sweat.

Sudoriparous, *a.* [Lat. *sudor*, and *parere*, to furnish.] (*Phys.*) Producing perspiration.

S. glands, (*Anat.*) The secretory organs of the sweat, which consist of a slender, elongated, blind, glandular tube, coiled into a lobular form, and imbedded in the subcutaneous fat, and continued thence in a spiral course to the cuticle, where it opens by an oblique pore.

Su'dra, **Soo'dra**, *n.* [Hind. *sûdr*.] Among the Hindoos, the lowest of the four great social castes.

Suds, *n. sing.* [Sansk. *sudh*, to be cleansed or purified.] Water highly impregnated with soap.

To be in the suds, to be perplexed or gruelled; to be in a quandary or difficulty. (*Colloq.*)

Sue, *v. a.* [Fr. *suiivre*; Lat. *sequor*.] To follow up or after; to seek or go after; to prosecute; to seek to win; as, to sue a woman for one's wife.

(*Law*.) To seek justice or redress from, by legal process; to prosecute judicially; to proceed against in a civil action for the recovery of a real or supposed right; — also, to carry on legal proceedings; to gain by process of law; as, to sue a person for the amount of a debt.

(*Naut.*) To leave high and dry out of water, as a ship.

To sue out, (*Law*.) To petition for and take out; as, to sue out a pardon for a convicted offender.

v. n. To seek for in law; to prosecute; to make legal claim; as, to sue for damages. — To plead; to petition; to entreat; to make interest for; to make application; to seek by request; as, he went to her to sue for pardon.

(*Naut.*) To be left high and dry on the land, as a ship.

Sue, EUGÈNE, (*soo*), a French romancier, b. at Paris, 1804, was educated for the profession of medicine, and was attached, as surgeon, to the army sent to Spain under the Duke d'Angoulême. In 1825, he entered the navy in the same capacity, and was present at the battle of Navarino. At the death of his father, who had been one of the household physicians to Napoleon I., he inherited an estate of \$8,000 per annum; whereupon he quitted his profession, and soon afterwards turned his attention to literature. He became a popular writer in a very few years; but when he put forth his *Mysteries of Paris* and *The Wandering Jew*, he rose to an almost unexampled height of success. These works were read by every one who read fiction in France; they were also translated into nearly all the living languages. His subsequent works of any importance are, *Martin the Foundling*, and *The Seven Capital Sins*. D. 1857.

Sueca, (*soo-ai'ka*), a town of Spain, prov. Valencia, on the Jucar, near its mouth in the Mediterranean Sea; *pop.* 9,616.

Sue'no, **Sweyn**, three kings of Denmark: the first reigned 985–1014. The second, his grandson, received the crown of that country to the prejudice of Harald, king of Norway, 1047; d. 1074. The third usurped the throne after assassinating Canute V., 1147, and was killed in battle with Waldemar, 1157.

Suet, *n.* [Fr. *suif*; W. *swyff*.] The fat situated about the loins and kidneys, which is harder and less fusible than that from other parts of the same animal. That of the ox and sheep is chiefly used; and when melted out of its containing membranes it forms tallow, and is largely used in the manufacture of candles and the ordinary soaps. Beef and mutton S., when fused, concrete at a temperature of about 100°. Like other kinds of fat, it is a compound of carbon, oxygen, and hydrogen.

a. Containing or composed of suet; as, a suet pudding.

Suetonius, CAIUS TRANQUILLUS, (*swé-to'ni-us*), a Roman advocate, b. abt. A. D. 70; obtained the office of tribune through the influence of his friend, Pliny the Younger, and was afterwards secretary to Trajan. He is now known as an historian and miscellaneous writer, by his *Lives of the Twelve Cæsars*, and his *Notices of Grammarians, Rhetoricians, and Poets*, still extant. D. abt. 123.

Su'ety, *a.* Consisting of, or resembling, suet.

Sue'vi, *n. pl.* (*Hist.*) A powerful Gothic tribe, known to the Romans as early as B. C. 125; invaded Gaul B. C. 71, and were defeated and driven across the Rhine B. C. 53. They entered Spain in 409, and founded a kingdom. They were almost exterminated by the Visigoths in a great battle fought near Astorga in 456, and the remnant of the tribe was incorporated with them in 584. The S. in Spain became Arians in 469, and gave up their doctrines about 559–69.

Suez, (*soo'ez*), (**Isthmus of**), a neck of land, connecting Asia and Africa. It is a sandy waste, between 70 and 80 miles wide, and so low as to be covered with salt marshes or swamps. It is bounded S. by the Gulf of Suez, which forms the N.W. arm of the Red Sea, extending from its head in a N.W. direction for abt. 200 m., between Egypt and the peninsula of Sinai, with a breadth varying from 30 to 40 m. At low water, it is in many parts so shallow as to be fordable, and is memorable in sacred history as the scene of the submersion of Pharaoh and his host.

Suez Canal, a maritime or ship-canal, which crosses the isthmus of that name, and forms part of the new trade-route between Europe and the East. On the Mediterranean, in Lat. 31° 3' 37", it joins Port Saïd, a town which, founded less than 40 years ago in a dreary, arid waste, contains now more than 1,000 houses and a cosmopolitan pop. of over 13,000. On the Red Sea, in Lat. 29° 58' 37", the terminus of the canal, is Suez, which was formerly a most miserable-looking place, but now a thriving seaport-town, with a pop. of about 6,000. The

length of the canal is 160 kilometers, or 100 miles, more than one-half of which is nearly south. Its breadth is varied at the surface from 300 feet to 150; the banks sloping from a floor 72 feet wide, in the proportion of 2 to 1, up to 5 feet of the surface, and thence as 5 to 1; the latter slope permitting the waves of passing vessels to

length of the canal is 160 kilometers, or 100 miles, more than one-half of which is nearly south. Its breadth is varied at the surface from 300 feet to 150; the banks sloping from a floor 72 feet wide, in the proportion of 2 to 1, up to 5 feet of the surface, and thence as 5 to 1; the latter slope permitting the waves of passing vessels to

length of the canal is 160 kilometers, or 100 miles, more than one-half of which is nearly south. Its breadth is varied at the surface from 300 feet to 150; the banks sloping from a floor 72 feet wide, in the proportion of 2 to 1, up to 5 feet of the surface, and thence as 5 to 1; the latter slope permitting the waves of passing vessels to

length of the canal is 160 kilometers, or 100 miles, more than one-half of which is nearly south. Its breadth is varied at the surface from 300 feet to 150; the banks sloping from a floor 72 feet wide, in the proportion of 2 to 1, up to 5 feet of the surface, and thence as 5 to 1; the latter slope permitting the waves of passing vessels to

length of the canal is 160 kilometers, or 100 miles, more than one-half of which is nearly south. Its breadth is varied at the surface from 300 feet to 150; the banks sloping from a floor 72 feet wide, in the proportion of 2 to 1, up to 5 feet of the surface, and thence as 5 to 1; the latter slope permitting the waves of passing vessels to

length of the canal is 160 kilometers, or 100 miles, more than one-half of which is nearly south. Its breadth is varied at the surface from 300 feet to 150; the banks sloping from a floor 72 feet wide, in the proportion of 2 to 1, up to 5 feet of the surface, and thence as 5 to 1; the latter slope permitting the waves of passing vessels to

length of the canal is 160 kilometers, or 100 miles, more than one-half of which is nearly south. Its breadth is varied at the surface from 300 feet to 150; the banks sloping from a floor 72 feet wide, in the proportion of 2 to 1, up to 5 feet of the surface, and thence as 5 to 1; the latter slope permitting the waves of passing vessels to

length of the canal is 160 kilometers, or 100 miles, more than one-half of which is nearly south. Its breadth is varied at the surface from 300 feet to 150; the banks sloping from a floor 72 feet wide, in the proportion of 2 to 1, up to 5 feet of the surface, and thence as 5 to 1; the latter slope permitting the waves of passing vessels to

length of the canal is 160 kilometers, or 100 miles, more than one-half of which is nearly south. Its breadth is varied at the surface from 300 feet to 150; the banks sloping from a floor 72 feet wide, in the proportion of 2 to 1, up to 5 feet of the surface, and thence as 5 to 1; the latter slope permitting the waves of passing vessels to

length of the canal is 160 kilometers, or 100 miles, more than one-half of which is nearly south. Its breadth is varied at the surface from 300 feet to 150; the banks sloping from a floor 72 feet wide, in the proportion of 2 to 1, up to 5 feet of the surface, and thence as 5 to 1; the latter slope permitting the waves of passing vessels to

length of the canal is 160 kilometers, or 100 miles, more than one-half of which is nearly south. Its breadth is varied at the surface from 300 feet to 150; the banks sloping from a floor 72 feet wide, in the proportion of 2 to 1, up to 5 feet of the surface, and thence as 5 to 1; the latter slope permitting the waves of passing vessels to

length of the canal is 160 kilometers, or 100 miles, more than one-half of which is nearly south. Its breadth is varied at the surface from 300 feet to 150; the banks sloping from a floor 72 feet wide, in the proportion of 2 to 1, up to 5 feet of the surface, and thence as 5 to 1; the latter slope permitting the waves of passing vessels to

length of the canal is 160 kilometers, or 100 miles, more than one-half of which is nearly south. Its breadth is varied at the surface from 300 feet to 150; the banks sloping from a floor 72 feet wide, in the proportion of 2 to 1, up to 5 feet of the surface, and thence as 5 to 1; the latter slope permitting the waves of passing vessels to

length of the canal is 160 kilometers, or 100 miles, more than one-half of which is nearly south. Its breadth is varied at the surface from 300 feet to 150; the banks sloping from a floor 72 feet wide, in the proportion of 2 to 1, up to 5 feet of the surface, and thence as 5 to 1; the latter slope permitting the waves of passing vessels to

length of the canal is 160 kilometers, or 100 miles, more than one-half of which is nearly south. Its breadth is varied at the surface from 300 feet to 150; the banks sloping from a floor 72 feet wide, in the proportion of 2 to 1, up to 5 feet of the surface, and thence as 5 to 1; the latter slope permitting the waves of passing vessels to

length of the canal is 160 kilometers, or 100 miles, more than one-half of which is nearly south. Its breadth is varied at the surface from 300 feet to 150; the banks sloping from a floor 72 feet wide, in the proportion of 2 to 1, up to 5 feet of the surface, and thence as 5 to 1; the latter slope permitting the waves of passing vessels to

length of the canal is 160 kilometers, or 100 miles, more than one-half of which is nearly south. Its breadth is varied at the surface from 300 feet to 150; the banks sloping from a floor 72 feet wide, in the proportion of 2 to 1, up to 5 feet of the surface, and thence as 5 to 1; the latter slope permitting the waves of passing vessels to

length of the canal is 160 kilometers, or 100 miles, more than one-half of which is nearly south. Its breadth is varied at the surface from 300 feet to 150; the banks sloping from a floor 72 feet wide, in the proportion of 2 to 1, up to 5 feet of the surface, and thence as 5 to 1; the latter slope permitting the waves of passing vessels to

length of the canal is 160 kilometers, or 100 miles, more than one-half of which is nearly south. Its breadth is varied at the surface from 300 feet to 150; the banks sloping from a floor 72 feet wide, in the proportion of 2 to 1, up to 5 feet of the surface, and thence as 5 to 1; the latter slope permitting the waves of passing vessels to

length of the canal is 160 kilometers, or 100 miles, more than one-half of which is nearly south. Its breadth is varied at the surface from 300 feet to 150; the banks sloping from a floor 72 feet wide, in the proportion of 2 to 1, up to 5 feet of the surface, and thence as 5 to 1; the latter slope permitting the waves of passing vessels to

length of the canal is 160 kilometers, or 100 miles, more than one-half of which is nearly south. Its breadth is varied at the surface from 300 feet to 150; the banks sloping from a floor 72 feet wide, in the proportion of 2 to 1, up to 5 feet of the surface, and thence as 5 to 1; the latter slope permitting the waves of passing vessels to

length of the canal is 160 kilometers, or 100 miles, more than one-half of which is nearly south. Its breadth is varied at the surface from 300 feet to 150; the banks sloping from a floor 72 feet wide, in the proportion of 2 to 1, up to 5 feet of the surface, and thence as 5 to 1; the latter slope permitting the waves of passing vessels to

break on the banks as smoothly as on a sea-beach. *Depth*, 24 feet. As a work of engineering, the canal ranks with the greatest triumphs of our age. Two jetties at Port Said extend 6,940 and 6,020 feet into the Mediterranean, enclosing a harbor of abt. 450 acres in area, with a depth in the ship-channel of 25 to 28 feet. The jetties were constructed of enormous blocks of concrete weighing 22 tons each. The excavations on the canal, amounting to more than 100,000,000 cubic yards, were chiefly made by the aid of steam dredges of peculiar construction, invented by the contractors, Ball & Lavallée. The largest were of 75 horse-power, 110 feet in length, and costing \$100,000 each. Through the greater part of the line the dredgings were from the level sand-plain; in some sections, as at El Guisr, the cuttings were over 80 feet through hard rock. The solid embankments are from 5 feet to 60. Half-way across stands the newly-made city of Ismailia. At Suez the Egyptian government has a dry-dock large enough for frigates. The distance saved by the S. C. over the route by the Cape of Good Hope is nearly one-half; e.g., from the English Channel to Point de Galle, Ceylon, by the Cape of Good Hope, is 11,650 m., by S. C., 6,515. *Fares*. For each passenger, 10 francs; for freight, 10 francs per ton. A fresh-water canal, necessary for supply to the workmen who built the ship-canal, and to the town of Suez, leads from the end of the old canal at Gas-saline to Ismailia; finished in 1861, at a cost of \$140,000; 30 m. long, 65 feet wide, and 6 feet deep. 55,000 cubic feet of water are forced daily through iron pipes from Ismailia to Suez, 50 m.—*Hist.* The project for this canal is not new; but the old plan merely united the Nile with the Red Sea. Neither Sesostris, Pharaoh, Necho, nor the Romans or Arabians, proposed a direct line. In 1799, Napoleon caused the engineer La Pèrre to run a line of levels across the isthmus; but he unhappily erred in reporting a considerable difference in the levels of the two seas. In 1854, the idea of a direct line was again entertained. M. Ferdinand de Lesseps received a permit from Saïd Pasha to form "La Compagnie Universelle," which in 1859 began the canal. Its capital of \$40,000,000 was ultimately increased to \$90,000,000, and the canal was opened to commerce Nov. 17, 1869. The Empress Eugénie, with other crowned heads, attended the inauguration, and 130 vessels passed through, free of toll. The canal is open to the largest vessels, and the Peninsular and Oriental line of steamers, and others of over 4,000 tons, pass through it without difficulty. It is a monument of engineering skill and energy, and has also proved to be a profitable financial investment. In November, 1875, the 176,000 shares held by the Khedive of Egypt were bought by Great Britain for \$20,000,000, and this country has since then exercised a controlling influence over the canal, while in number of vessels and tonnage, the use of the canal by Great Britain greatly exceeds that of all other countries together. In 1886 the task of deepening and widening the canal began, and by 1890 it had been deepened to 28 feet and the width considerably increased, giving the channel a much larger capacity.

Suffer, *v. a.* [Fr. *souffrir*; Lat. *suffero*—*sub*, and *fero*.] To feel or bear, as what is painful, disagreeable, or distressing, either to the mind or body; to submit to, as grief or annoyance; as, to *suffer* great depression of spirits, to *suffer* the pain of amputating a limb.—To hold up, bear, support, or sustain; to endure without flinching; not to sink under.

"How sublime a thing it is to *suffer* and be strong."—Longfellow.
—To be affected by; to undergo; to sustain; as, to *suffer* serious loss.—To permit; to allow; to tolerate; not to forbid, taboo, or hinder; as, to *suffer* a person to speak without interruption.

—*v. n.* To bear what is irksome or inconvenient; to feel or experience mental or physical pain or distress.—To undergo punishment; as, a murderer is condemned to *suffer* death.—To be injured; to sustain loss, detriment, or damage; as, the business *suffers* by his absence.

Sufferable, *a.* That may be suffered, endured, allowed, tolerated, or permitted.

Sufferableness, *n.* State or quality of being sufferable.

Sufferably, *adv.* In a sufferable manner.

Sufferance, *n.* [Fr. *souffrance*.] State of suffering; bearing of pain, distress, inconvenience, or loss; pain endured.—A bearing with fortitude or patience; moderation; submission under unfavorable circumstances or conditions; as, "With all the *sufferance* of a tender friend." (*Olway*).—Allowance; toleration; permission; negative consent by not prohibiting or hindering; as, one is indulgent to a bore upon *sufferance*.—*Sufferance-wharf*, a wharf licensed by the customs, and where custom-house officers attend.

Sufferer, *n.* One who suffers, endures, or undergoes pain, whether of body or of mind; one who sustains loss or inconvenience.—One who allows, permits, or tolerates.

Suffering, *n.* The bearing of pain, inconvenience, or loss; pain endured; distress, loss, or injury incurred.

Sufferingly, *adv.* With suffering or pain.

Suffern's, in *New York*, a post-village of Rockland co., 32 m. N. of New York city.

Suffice, (*-fiz'*) *v. a.* [Fr. *suffire*.] To be enough or sufficient; to be equivalent to what is wished or demanded.—*v. a.* To satisfy; to content; to be enough for the wants or demands of.

Sufficiency, (*-fish'en-sij*) *n.* [L. Lat. *sufficientia*.] State of being sufficient, or adequate to the end proposed; as, he gave his reasons with readiness and *sufficiency*.—Competence; adequate means or substance.—Ability, capacity, or qualification for any end or purpose.—Supply equal to demand.—Conceit; self-confidence.

Sufficient, (*-fish'ent*) *a.* Enough to suffice; adequate to wants or demands; competent; equal to the end proposed.—Qualified; competent; fit; able; possessing adequate talents or accomplishments.

Sufficiently, (*-fish'ent*) *a.* Enough; to a sufficient extent.

Suffield, in *Connecticut*, a post-village and township of Hartford co., on the Connecticut River, 16 m. N. of Hartford.

Suffield, in *Ohio*, a post-township of Portage county.

Suffix, *n.* [Lat. *suffixus*, *suffigo*—*sub*, and *figo*, to fix.] That which is affixed or annexed; especially, a letter or syllable affixed or annexed to the end of a word; an affix; a postfix.

—*v. a.* To add a letter or syllable to a word; to append.

Suffixion, (*-fik'shun*) *n.* Act of suffixing or appending; also, state of being suffixed or appended.

Suffocate, *v. a.* [Fr. *suffoquer*; Lat. *suffoco*, *suffocatus*—*sub*, and *fax*, *faucis*, the gullet.] To stop the breath of, by compressing the throat; to choke or kill by stopping respiration; to smother; to stifle.—To extinguish; to destroy; as, to *suffocate* a fire.

—*v. n.* To become choked, stifled, or smothered.

Suffocatingly, *adv.* So as to suffocate.

Suffocation, (*-kū'shun*) *n.* [Fr.; Lat. *suffocatio*.] The act of suffocating, or the state of being suffocated.

(*Med.*) The act of choking or producing death by the interruption of the breath. The three ordinary ways in which S. may be effected are hanging, drowning, and the respiration of fixed air, or carbonic acid gas. (See ASPHYXIA, HANGING, DROWNING.) In S. by carbonic acid gas, whether arising from mines, lime-kilns, vats of fermenting liquor, &c., death takes place very rapidly. In every case of S., our attempts at re-animation should be directed to renew respiration by inflation of the lungs; to restore the animal heat by exposure to warm pure air, and by assiduous frictions of the surface; to rouse by stimuli, and by brushing the soles of the feet and palms of the hands; and when necessary, to relieve cerebral congestion by moderate and cautious bleeding.

Suffocative, *a.* Tending to suffocation.

Suffolk, (*suf'fāk*) a maritime and agricultural co., on the E. coast of England; bounded N. by Norfolk, S. by Essex, E. by the German Ocean, and W. by Cambridge; area, 1,115 sq. m. The principal rivers are the Stour, Waveney, Ouse, Orwell, and the Blyth. This co. has long been celebrated for its agriculture, the richness and abundance of its dairy produce and poultry, and its fine breed of cattle. It contains two county-towns, Ipswich and Bury St. Edmunds.

Suffolk, in *Massachusetts*, an E. co., bordering on Massachusetts Bay; area, 15 sq. m. Though the smallest, it is the most important co. of the State, comprising the township of Boston, Chelsea, N. Chelsea, and Winthrop, *q. v.* Cap. Boston.

Suffolk, in *New York*, an E. co., forming the E. extremity of Long Island; area, 959 sq. m. It has numerous bays and inlets along the coast, and is drained by the Peconic River. Surface, hilly in the N., and level along the S. coast; soil, generally fertile. Cap. Riverhead. Pop. (1897) 63,260.

Suffolk, in *Virginia*, a post-town, cap. of Nansemond co., 85 m. S.E. of Richmond.

Suffolk, *n.* [Lat. *suffragans*.] (Eccl.) An assistant bishop; a bishop considered as subject to his metropolitan.

Suffrage, (*suf'fraz*) *n.* [Fr.; Lat. *suffragium*.] An assenting voice or vote given in deciding a matter in controversy, or in the election of a person for an office or trust; as, the Radicals demand manhood *suffrage*.—Testimonial; attestation; approval.—United response or prayer.

Suffrutescent, **Suffruticose**, **Suffruticous**, *a.* [Fr.] (*Bot.*) A term applied to any plant which is not exactly either a shrub or an herbaceous plant; i. e. which has not hard woody twigs and complete buds like the one, nor perishable succulent twigs like the other.

Suffuse, (*-fūz'*) *v. a.* [From Lat. *sub*, and *fundo*, to pour out.] To spread over with something expansible, as a vapor or tincture; as, her cheeks were *suffused* with blushes.

Suffusion, (*-fū'zhun*) *n.* [Fr.; Lat. *suffusio*.] Act or operation of suffusing or overspreading, as with a fluid or tincture.—State of being suffused or spread over.—That which is suffused or spread over.

Sufi, **Sufism**, *n.* Same as SOFI, SOFISM, *q. v.*

Sugar (*shoo'gar*) *n.* [Fr. *sucré*; Sp. *azúcar*; Lat. *saccharum*.] A crystallized substance, obtained in greatest plenty from certain varieties of tropical grasses, but present to some extent in all grasses, and found in an infinite variety of other plants, and some animal matters. The sugar-cane was first made known in the West by the conquests of Alexander the Great, Nearchus, the admiral sent down the Indus, describing it as a kind of honey growing in canes or reeds. From India the sugar-cane was introduced into Arabia, Egypt, and the western parts of Asia. In 1506 sugar was introduced into the Canary Islands, and thence was taken, it was said, to the islands of the Mexican Gulf; but it is not at all improbable that the sugar-cane was a natural product of America; and it may be that it is only for the process of making sugar from it that the New World is indebted to the Portuguese and Spaniards. It has become in an eminent degree the produce of the intertropical regions of the new world, though the production of this necessary of life is increasing in some parts of India and the islands of the Indian seas. It has also been prepared from time immemorial in China.

(*Chem.*) Sugars are divided into the glucose and saccharose groups—the first group having the common

formula $C_6H_{12}O_6$, and the second $C_{12}H_{22}O_{11}$. The *saccharose* group includes the common sugars of commerce—cane, beet, sorghum, &c. Those made from the sugar-cane, beets, &c., are subdivided as sucrose; from malt, maltose; from fungi, as ergot, mycrose; from fish, scyllite; from tubers, as dahlia, syanthrose; and from various mannas, meligitose, melitose, and trehalose. The *glucose* group includes those made from grapes, several minor vegetables, honey, &c., subdivided as dextrose; from milk, lactose; from fruits, levulose; from gum arabic, arabinose; also some acidulous derivatives, as eucaly and galactose. Another classification adds a third group, *saccharoids*, with the formula $C_6H_{14}O_6$. The glucose sugars are less sweet than the saccharose, and are made commercially by treating starch with diluted sulphuric acid, securing the so-called grape-sugar and the sirup glucose. The value and origin of sugars can be largely determined by their rotatory power, as observed in the polariscope. (See POLARIZATION and POLARISCOPE.) The rotatory power of cane-sugar is +73.8°, while that made from milk-sugar exhibits +59.3°, and fruits —106°. Sugar from flesh or fish has no rotative power. Trehala manna-sugar shows the highest rotatory power, +199°, and ergot-sugar next, +192.5°.

Sugar forms an important article of food, entering largely into all vegetable aliments. Alone it does not seem capable of supporting life, although, by preventing the waste of the tissues, it may be used as a temporary palliative of hunger. Mixed with nitrogenous matter, it appears to have a fattening tendency. It is a powerful antiseptic, as exemplified in its preservative action on meat and fruit. Solution of sugar has the peculiar property of dissolving many of the metallic oxides, lime, baryta, and oxide of lead forming strong solutions when boiled with it. It exercises a powerfully reducing action on several of the metallic salts, the chromates, for instance, being reduced to sesquioxide of chromium when heated with a solution of sugar. Cane-sugar, under the influence of yeast of beer, undergoes the process of fermentation (see FERMENTATION). Treated with strong sulphuric acid, sugar parts with its water, carbonic and formic acids being eliminated, and a carbonaceous sugar melts into an amorphous transparent solid, which, if kept, gradually loses its transparency and returns to the crystalline form. Heated to about 420° sugar loses two equivalents of water, becoming converted into a brown, deliquescent, and almost tasteless substance, much used by cooks and confectioners as a coloring matter, under the name of *caramel*. If the heat be carried further, inflammable gases are emitted, a friable mass of pure charcoal being left behind. *Sugar of milk*, or *lactose*, is obtained solely from the milk of the mammalia. It is manufactured on a large scale for the use of homeopaths. The milk is coagulated and the curd separated. The whey is concentrated by evaporation, and small sticks of wood are inserted in the liquid, around which the sugar crystallizes in mammillated masses, consisting of four-sided prisms, terminated by four-sided pyramids. It possesses the least sweetening power of any of the sugars.

(*Manufacture*.) Sugar made from the cane furnishes the bulk of the Western world's supply. The stalks are cut down to the roots just before the period of inflorescence, stripped of their leaves and transported to the mill, where they are dumped on a cane-carrier, which is a form of travelling conveyor, having parallel slats connected at the extremities by endless chains. The carrier travels slowly, feeding the cane to a cutter, so-called, which is a machine having large rolls bearing on their faces coarse corrugations of hardened steel. These corrugations present elevations about two inches higher than their recesses, and, being of irregular form, they cut the cane up roughly so that it issues in bits not over six inches in length, and minus about 60 per cent. of its juice. Some establishments do not use the cutters, passing the cane directly to the mill, but it is generally admitted that the best results are obtained by a preliminary passage of the cane through the cutter. The cane-mill consists of three very heavy cast-iron rolls, set about half an inch apart. The top roll is the largest, and is called the king-roll. The cane passes between it and the two lower rolls, denominated the cane-roll and the bagasse-roll, deflectors or guides being used to direct the cane in its course. The rolls have a slightly roughened surface, made by scoring with a lathe-tool, to insure their gripping the cane instead of slipping over it. The rolls of a mill are often eight or ten feet long and three feet or more in thickness. The mill crushes out the remainder of the juice from the cane, allowing it to run into a tank, and if any of the bagasse, as the crushed cane is called, appears to retain juice it is returned and run through the mill a second time. The cane-juice in the tanks is naturally dirty and impure, and is pumped up through strainers to elevated tanks to get rid of the settlings, and then allowed to flow to the defecator. Here a small quantity of lime is added to precipitate remaining impurities, and steam is introduced to cook the albumen, that it may be retained when the purified juice is drawn off. The process of transforming pure cane-juice into sugar consists simply in evaporating the moisture, and crystallizing as much as possible of the product, that which does not crystallize being molasses. Formerly evaporation was performed in a series of open pans heated by a furnace. Norbert Rillieux, of New Orleans, improved upon this method, and introduced the vacuum-pan. When a liquid is heated in a vessel from which the air is abstracted, the liquid boils and evaporates at a much lower temperature, and Rill-

Heux found that by making his pans air-tight, and inducing a partial vacuum in the air-space of the pans, he was able to evaporate the cane-juice with a much less quantity of fuel, producing a decided economy. When a number of evaporating pans are used together, the method of evaporation is known as "multiple effect," and when four are used it is called "quadruple effect," and the three-pan system is called the "triple effect." The latter combination is considered the best, and the apparatus or series of three vacuum-pans has come to be named the "triple effect." The vacuum-pans have developed into great cylindrical boilers or tanks. Three of them are set in a row, and connected by pipes of a very large diameter. The lower half of each pan contains a series of upright copper tubes of about two inches diameter. The juice is led into the tubes, so as to fill them and occupy a portion of the space above. Steam taken from a boiler at a pressure of perhaps 5 pounds, or exhaust steam, is then let into the space between the tubes, but shut off from the top of the pan. The temperature of this steam may be somewhere from 190° to 210° F., which would be too low to boil and evaporate the cane-juice, but that a partial vacuum is maintained in the upper part of the pan. The juice therefore steams, and the resultant vapor is carried by large connecting pipes to the space about the tubes in the second pan. The steam so carried over has lost heat, and has a temperature of perhaps 160° to 175°. This is made to evaporate the cane-juice flowed into the second pan, because a better vacuum is maintained there, still further reducing the boiling point. The steam from the second pan, cooled to perhaps 135° to 150°, is made to perform the evaporation in the third and last pan, where the best possible vacuum is maintained, first by pumping and then by condensing the steam—for which there is no further use. The flowing of the juice from pan to pan is accomplished without pumping, because of the better vacuum maintained in each succeeding pan, which serves to draw the liquor along by suction, although at the latter part of the transit it is decidedly viscous. The sirup flowing from the last pan of the triple effect is next subjected to a further clarifying and skimming, as the residue of impurities is more easily eliminated in this condensed condition than at earlier stages. It then goes to another vacuum-pan for a final evaporation, which is made as complete as possible, reducing the sirup to a pasty mass that flows very slowly. It is withdrawn from this pan by means of a large valve a foot and a-half in diameter, the operation being called a strike, and the valve a strike-valve. The sticky, viscous mass is struck into cooling cans, and allowed to crystallize, the length of time which it stands determining the size of the crystals—the longer the time the larger the crystals. At this stage the crystals are stuck together more or less with molasses, and in order to separate them a mixer, with rotating paddles, is first employed, and then a centrifugal machine. This latter consists of a perforated basket, set within a case, with mechanism for rapidly whirling the basket and throwing out the molasses by centrifugal force, while retaining the crystals, which are too large to pass through the perforations. Three or four minutes' rotating at a speed of 1,000 rotations a minute suffice to separate the molasses from a basket containing 200 pounds of mixed crystals and molasses. The crystallized product obtained by this process is slightly brown, though not nearly so brown as many of the sugars which were sold on the market about 1870, when refining had not become universal. Sugar made by the above-described process would be both sweeter and cheaper to be sold in the condition in which it comes from the centrifugal machine, but fashion has dictated that it must be white, and so it has to go to the refinery.

Maple-sugar is obtained from several species of maple (see ACER). That yielding the richest juice is the *Acer saccharinum*, the rock or sugar-maple. The manufacture is stated to have originated in New England about the year 1752. It thence extended throughout the wooded portions of the country where the sugar-maple abounds, particularly in New York, Michigan, Pennsylvania, and Ohio, and on the range of the Alleghenies further south. The sugar is mostly consumed in its raw state, considerable quantities being sold in small cakes and eaten like candy. It may be easily made into the best white sugar. Its manufacture in the United States steadily increases, the product for 1894 being 7,633,036 pounds, on which a bounty was paid, and doubtless much more, which was manufactured for family use by those owning trees, in quantities too small to cause them to take the trouble to collect the bounty.

Beet-root sugar is made in large quantities in France, Germany, and Austria. Its manufacture was called into existence in the former country by the wars of Napoleon, which cut off the ordinary colonial supplies of cane-sugar. The roots employed are those of the white beet, and are gathered in October. The production of beet-sugar in America was attempted about the year 1830, by a company formed in Philadelphia, which failed from a want of practical information upon the subject. Eight years later, in 1838, a company was formed at Northampton, Mass. They produced something over half a ton of good sugar. The next attempt was made in 1864, by Messrs. Gennert, at Chatsworth, Illinois. In 1866 they had 400 acres of land planted, which yielded 4,000 tons of roots, at an estimated cost of less than \$4 per ton. The percentage of saccharine matter contained in the roots was found to be equal, if not superior, in quantity to that of the European roots. The next establishment of this kind was instituted at

Fond du Lac, Wisconsin, in 1867, and is now transferred to California. Another effort was made in 1877-78 by Mr. Jos. Wharton, a Philadelphian, upon his extensive estate in New Jersey. There are now several establishments in the country producing beet-sugar, their annual product being about 20,000 tons.

In the manufacture of sugar from beet-root, the diffusion process of extracting the saccharine matter is most commonly practiced. It consists in shaving the vegetables into slices, and placing them in a mechanism called a diffuser, which stirs them about in water, until the saccharine matter is almost wholly taken up, when the slices can be removed, the juice so obtained being defecated, saturated with carbonic acid gas, settled, filtered, and finally evaporated, after the manner of cane-juice. The process entails more detail of manufacture than with cane-juice. Many methods have been tried for simplifying the work, by crushing or macerating the beets to secure the saccharine matter, but the pulp of the beet becomes so intimately mixed with the saccharine matter that the separation becomes very tedious. Even when the beets are crushed in bags some of the pulp escapes and causes difficulty. Therefore the diffusion process is generally preferred, and by its use about 7 to 10 per cent. of crystallized sugar is obtained from the beet.

(Refining.) The refining or whitening of sugar is accomplished by boiling and filtering with lime-water and animal charcoal. The first process is the dissolving of the sugar in a cistern of hot water, the solution being then pumped into blow-up pans for defecation. The liquor is led from the defecators through a series of cylindrical filters containing bone-black, which provides the necessary animal charcoal, combined with calcareous qualities. A little ultramarine is often introduced as a blue to counteract the natural yellow, and thus assist the whitening of the product, which should trickle from the filters in a clear, colorless condition. After a time the bone-black becomes so stained that it loses its power of decoloring, when it is removed from the filter, washed in a dilute acid, then in water, and finally returned in a retort, after which it is again fit for service. After filtration and decoloring, the liquor is put through the vacuum-pans and centrifugal machine, emerging in a completed state, ready for the market. When loaf-sugar is desired, however, the mass from the strike-valve is not taken to the centrifugal machine, but to a mold, where it is cast in blocks, and after hardening cut up in a machine having a gang of small saws, set apart the diameter of the lumps. These divide the molded mass into slabs, sticks, and lumps. The refining of sugar in the United States has passed almost wholly into the hands of one company, the American Sugar Refining Company, popularly known as the Sugar Trust. It controls about a dozen refineries, handling about 2,000,000 tons annually.

(Production.) The sugar consumed in the United States is mostly imported, the West Indies, South and Central America, and the Sandwich Islands furnishing the greater part of the supply until the internal troubles in Cuba (which was the largest exporter) interfered with the growing and grinding of the cane there, since which time the industry has materially developed in the Southern States, especially Louisiana. It was begun under the fostering care of the Government, which inaugurated a system of bounties that remained in force until 1894. In that year about 600,000,000 pounds of sugar were produced in Louisiana, on which the Government paid a bounty of over \$10,000,000. The total home product for the present year, 1897, is estimated at more than a billion pounds.

The importation of sugar into the United States in the fiscal year 1894 was 3,834,843,605 pounds of cane-sugar, valued at \$11,078,848, and 510,350,276 pounds of beet-sugar, valued at \$15,793,041. The exports for the same period were 14,778,416 pounds of refined sugar, valued at \$653,052. An estimate of the annual beet-sugar production of European countries in metric tons of 2,204.6 pounds, is as follows: Germany, 1,350,000; Austria-Hungary, 845,000; France, 575,000; Russia, 650,000; Belgium, 235,000; Netherlands, 75,000; other countries, 111,000; total, 3,841,000 metric tons. An estimate of cane-sugar production in the countries of the world in metric tons, is as follows: Cuba, 150,000; Java, 480,000; United States, 500,000; Philippine Islands, 265,000; Brazil, 260,000; Hawaiian Islands, 135,000; Mauritius, 125,000; Demerara, 110,000; Egypt, 70,000; Barbadoes, 65,000; Peru, 65,000; Puerto Rico, 60,000; Trinidad, 50,000; Guadeloupe, 40,000; Reunion, 37,000; Martinique, 32,000; Jamaica, 25,000; Lesser Antilles, 25,000; total, 2,494,000 tons. According to estimates the aggregate production of beet and cane-sugar in 1893-94 was: Beet, 3,841,000 metric tons; cane, 2,960,000 metric tons; total, 6,801,000 metric tons.

Sugar, *a.* Belonging to, or made of sugar.

—*v. a.* To mix, sprinkle, cover, season, or impregnate with sugar; as, to *sugar* a cake.—To compliment; to cover with soft words or honeyed speech; to clothe with adulation; to sweeten; as, "And *sugared* speeches whispered in mine ear."

Sugar-baker, *n.* A maker of loaf-sugar.

Sugar-beet, *n.* (*Bot.*) See BETA.

Sugar-berry, *n.* (*Bot.*) See CELTIS.

Sugar-bush, **Sugar-orchard**, *n.* A collection of maple-trees selected and preserved for the purpose of extracting sugar from them.

Sugar-candy, *n.* Sugar clarified, and made transparent by crystallization.

Sugar-cane, *n.* (*Bot.*) A genus of plants, order Gramineae, the species of which are native of tropical and sub-tropical countries. The common *S. C. (S. offici-*

narium) extends in North America to 32°, and in the southern hemisphere only to 22° S. Lat., is a perennial, with a creeping root, sending up a number of culms or stems, generally 8 to 12 feet high, which have many joints, are of various colors, and about 1 to 2 inches thick. They are filled for about two-thirds of their length with a loose, sweet, juicy pith. The leaves are ribbon-shaped, 4 to 5 feet long, with a strong whitish middle nerve. The flowers are in great diffuse pyramidal panicles of a yard in length.—The violet-colored *S. C. (S. violaceum)* is particularly esteemed, and much cultivated in the West Indies. The *S. C.* is usually propagated by cuttings. For this purpose the top joints are used. The cuttings are planted in rows 3 or 4 feet apart, and at intervals of about 2 feet in the rows. The largest varieties, in rich moist soils, attain a height of 20 feet; but in poor dry soils, the height is sometimes scarcely more than 6 feet. The best varieties are ready for cutting in about 10 months from the time of planting, but other varieties require a longer period of growth, from 12 to 20 months. When the canes are fully ripe, they are cut a little above the ground, and tied in bundles to be conveyed to the mill. Fresh canes, called *rattoons*, spring from the root, so that the plantation does not require to be renewed for several years; but the canes of the first crop are the largest, and a gradual decrease of size takes place. The ordinary practice on sugar estates is to renew a part of the plantation every year.—The Chinese sugar-cane, sugar-grass, or sorgho-grass (*Holcus sorghum*, or *Sorghum vulgare*), was introduced into the U. S. in 1856, where its cultivation has extended as far N. as Maine. The sugar obtained from it is equal in quality to that from the true *S. C.*, and the quantity is very remunerative. The whole quantity of sirup now produced from this grass in the U. S. is about 20,000,000 gallons. Numerous varieties are already in cultivation; one class of them, called *Sorgo*, being derived from Chinese seed; another, called *Imphee*, from seed which was brought from Africa.

Sugar Creek, in Arkansas, a township of Logan co.

Sugar Creek, in Illinois, rises in McLean co., and flows S.W. into Salt creek.

Sugar Creek, in Indiana, rises in Clinton co., and flows into the Wabash, about 3 m. S.E. of Newport, after a S.W. course of 100 m.

Sugar Creek, in Iowa, a township of Cedar co.

Sugar Creek, in Kansas, a township of Miami co.

Sugar Creek, in Missouri, a township of Randolph co.

Sugar Creek, in North Carolina, rises in Mecklenberg co., and flowing E. falls into Catawba river, in York co., South Carolina.

Sugar Creek, in Ohio, flows into Portage river from Ottawa co.

—A township of Putnam co.

—A township of Starke co.

—A township of Tuscarawas co.

—A township of Wayne co.

Sugar Creek, in Pennsylvania, enters the Susquehanna from Bradford co.

—A township of Armstrong co., 18 miles east north-east of Butler.—A village and township of Venango county.

Sugar Creek, in Wisconsin, a post-village and township of Walworth county, 41 miles west south-west of Milwaukee.

Sugared, (*shoo'ard*), *p. a.* Sweetened with, or as with, sugar; as, a *sugared* compliment.

Sugar Grove, in Illinois, a post-township of Kane co.

Sugar Grove, in Iowa, a township of Dallas co.

Sugar Grove, in Ohio, a post-village of Fairfield co.

Sugar Grove, in Pennsylvania, a post-village and township of Warren co., 15 m. N.W. of Warren.—A township of Mercer co.

Sugariness, *n.* State or quality of being sugary or sweet.

Sugaring, *n.* Act of sweetening or covering with sugar; also, the sugar so used.—Operation or process of making sugar.

Sugarless, *a.* Free from, or lacking sugar.

Sugar-loaf, *n.* A mass of refined sugar, usually in the shape of a truncated cone.—A hat made in the form of a sugar-loaf, formerly worn by the Puritans.

Sugar Loaf, in Arkansas, a township of Boone co.—A township of Cleburne co.—A township of Marion co.—A post-township of Sebastian co.

Sugar Loaf, in New York, a post-village of Orange co., 50 m. N.N.W. of New York.

Sugar Loaf, in Pennsylvania, a village and township of Columbia co.—A post-township of Luzerne co.

Sugar-maple, **Sugar-tree**, *n.* (*Bot.*) See ACER.

Sugar Mill, *n.* (*Manuf.*) A mill for expressing the juice from sugar-canes, consisting usually of three horizontal iron rollers, two of which are set on the same horizontal plane, while the third is set over and between the other two, so as to touch both. The canes are fed in between the top roller and one of the lower ones, and there receive the first squeeze. The juice runs down into a trough formed in the base of the mill; and the canes travel on and receive their second squeeze between the top roller and the second horizontal one, after which, the juice being all squeezed out, the residuary woolly fibre, known as *bagass*, is used as fuel beneath the boiler of the engine that drives the mill.

Sugar of Gelatine, *n.* (*Chem.*) See GLYCOCINE.

Sugar of Lead, *n.* (*Chem.*) See LEAD (ACETATE OF).

Sugar-plum, *n.* A kind of candy made up in small flattened discs.

Sugar Ridge, in Indiana, a township of Clay county.

Sugar River, in New Hampshire, forms the outlet

of Sunapee Lake in Sullivan co., and flows W. into the Connecticut River.

Sugar River, in Wisconsin, rises in Dane co., and flowing S.E., enters the Pekatonica River, 7 m. from its mouth in Winnebago co., Illinois.

Sugar Run, in Pennsylvania, a post-village of Bradford co.

Sugartown, in New York, a village of Catteraugus co.

Sugartown, in Pennsylvania, a post-village of Chester co., 79 m. E.S.E. of Harrisburg.

Sugar Tree Ridge, in Ohio, a post-village of Highland co., 10 m. S. of Hillsborough.

Sugar Valley, in Ohio, a village of Preble co., 100 m. W. of Columbus.

Sugary, (*shoog'ar-y*), *a.* Tinctured or sweetened with sugar. — Sweet; tasting like, or containing, sugar; saccharine. — Fod of sugar, or of sweet things; as, a sugary tooth.

Suggest, (*sud-jest'*), *v. a.* [Fr. *suggerer*, from Lat. *sub*, and *gero*, to wear.] To intimate or mention in the first instance; to offer indirectly to the mind or thoughts; as, the idea was suggested to him by a friend. — To hint; to intimate; to present or propose diffidently or unobtrusively; as, to suggest a compromise.

—*v. n.* To seduce; to tempt; to instigate.

Suggester, (*sud-jest'er*), *n.* One who makes a suggestion or suggestions.

Suggestion, (*sud-jest'yun*), *n.* [Fr., from Lat. *suggestio*.] Act of suggesting. — That which is suggested; a hint; a first intimation, proposal, or mention; insinuation; presentation of an idea to the mind; also, formerly, secret notification or incitement.

(*Law*.) The announcement to the court, or the entering upon the record, of a fact which puts a stop to the suit in its existing form, as the death or insolvency of a party.

Suggestive, *a.* Conveying a suggestion, a hint, or intimation.

Suggestively, *adv.* By way of suggestion.

Suggestiveness, *n.* State or quality of being suggestive.

Suggsville, in Alabama, a post-village of Clarke co., 110 m. S.W. of Montgomery.

Suhl, (*sool*), a town of Prussian Saxony, 28 m. from Erfurt. *Manuf.* Fire-arms and cotton goods. *Pop.* 9,877.

Suicidal, *a.* Partaking of, or comprehending, the crime of suicide.

Suicidally, *adv.* In a suicidal manner.

Suicide, (*-sid*), *n.* [Fr.; Lat. *suicidium* — *sui*, of himself, and *cido*, to kill.] Self-murder; the act of designedly destroying one's own life. — The earliest recorded examples of self-destruction are those of Samson (B. C. 1117) and of Saul (B. C. 1055). The rank which religious suicide has held from immemorial antiquity, and still holds, in the opinion of the Hindoos, has been too often described, and is too familiar in its most notorious and painful instances, to need more than advertising to on the present occasion. Among the Greeks, Socrates, the great master of ethics, was emphatic in his condemnation of suicide. Plato speaks in a more dubious strain. Writing as a lawyer, he reprobates it; and in his arguments on the subject is to be found the well-known illustration which has figured ever since in all such discussions, in which he compares it to the desertion by a soldier of his post. Yet he expressly excepts from his censure those cases in which it is committed under the pressure of immitigable calamity. Pythagoras, at an earlier period, denied its lawfulness. In the later days of Greek philosophy, both Stoics and Epicureans found arguments for its defence in their respective principles. The influence of Greek philosophy had, as is well known, a great share in producing that tendency to suicide which distinguished the higher society of Rome in the later days of the commonwealth. The "Roman death," as it is emphatically called, was not really a national habit. The older manners of the commonwealth repudiated it. Its prevalence was owing to foreign doctrines, acting on minds affected by violent passions, engrossing luxuries, and rapid vicissitudes of fortune which distinguished that era. Although Christianity was not slow in effecting a reform in the feelings of mankind on this subject, yet some relics of the ancient sentiments lingered awhile, even in the minds of enlightened believers. The fanatical Donatists were greatly addicted to suicide, and are justly condemned on this account among others by the early writers of the Church, who considered suicide lawful only when committed by virgins to preserve their chastity. The cherished sentiments of the fathers of the Church on this subject rendered them lenient to such victims of honor; and some of them have even gone so far as to commend them. Augustine only pities them, and expressly classes all suicide as homicide. (*De Civ. Dei*, l. i. c. 19.) Prof. Von Ottinger, of Prussia, has recently published a curious work on moral statistics and Christian manners, in which he has treated the subject of suicide in an exhaustive style. It is to be regretted that the same subject has not been so fully handled as regards this country; for the conditions of life here differ in some very important respects from those of life in Europe, especially among the laboring classes. Extreme wretchedness, with no hope of escape from it, such as may be daily witnessed in European countries, and which is so fruitful a cause of suicide there, is almost unknown here; and the very few examples of it we meet with are those whose own folly and misconduct have brought it upon themselves. The statistics of Prof. Von Ottinger are based mainly upon the tables of France and Prussia, which are, perhaps, the fullest and most accurate of any nations in Europe, the municipal and communal administrations there being very careful in making up their reports. The results

which he deduces are remarkable. The first fact, which is striking, is that the ratio of suicide to population appears to increase faster than the population itself. Thus, in Prussia, in 1830, the number of suicides reported was 1,167; and in 1865 it was 3,219, which was $2\frac{1}{2}$ times greater than the ratio of the increase of the population. In France, the numbers during the same years were respectively 1,739 and 4,700, which is more than 9 times the increase of the population. A part of this apparent increase is doubtless due to the more accurate reports nowadays. The learned statistician found that the proportion of unmarried persons who kill themselves is decidedly greater than that of the married. The proportion of widowed persons is greater still. But that of the divorced and separated is the largest, it being uniformly 5 times as great as that of the married. As regards the causes of suicide, he thinks that $\frac{1}{3}$ of the cases of self-murder is caused by mental disease, 1-9 by physical suffering, $\frac{1}{4}$ by loss of property, 1-10 by the fear of punishment, shame, or a morbid conscience, 1-10 by family quarrels, 1-9 by drunkenness, gambling, and other vices. The number caused by grief or disappointed love is exceedingly small. 3-4ths of all the suicides are males. See *Suicide of Dr. Morselli*, also *S. of Dr. O'Dea* (N. Y. 1882). — (*Law*.) See Felo-de-se.

Suicidism, (*-izm*), *n.* The state of being suicidal.

Suidæ, *n. pl.* (Zool.) The Swine family, comprising *Pachydermata* highly important to man as food. The animals composing this family are characterized by having on each foot 2 large principal toes shod with stout hoofs, and 2 lateral toes which are much shorter and hardly touch the earth. The incisor teeth are variable in number; but the lower incisors are all levelled forwards. The canines are projected from the mouth, and recurved upwards. The muzzle is terminated by a truncated snout, fitted for turning up the ground. The Babyrussa, Peccary, and other allied genera are included in this family; but the type of the *Suidæ* is *Sus*, the Hog (*q. v.*)

Suigeneris, [Lat.] Of his, or its, own kind; peculiar; individual.

Suing, *pp.* of *SUE*, *q. v.*

—*n.* The act of one who sues.

Suingly, *adv.* With, or by means of, suing.

Suir, (*shure*), a river of Ireland, in Munster, rises in the Devil's Bit Mountains, co. of Tipperary, and unites with the Barrow to form the æstuary of Wexford Harbor, after a S.E. course of 100 m.

Suisun, in California, a post-village and township of Solano co., 1 m. S. of Fairfield.

Suisun Bay, in California, 15 m. long and 7 broad, connected with the San Pablo Bay on the W. by the Strait of Carquinez.

Suisun Creek, in California, flows into Suisun Bay.

Suit, (*süt*), *n.* [Fr., from *suivre*, to follow; Lat. *sequor*.] Act of suing; attempt or endeavor to gain an end or object. — Courtship; solicitation of a woman in marriage. — A number of things used together, and in a degree necessary to be united, in order to answer the purpose; a set; as, a suit of clothes.

(*Law*.) Prosecution of legal right or claim; an action; a case.

To bring suit. (*Law*.) To institute an action.

—*v. a.* To fit; to adapt; to make proper; as, to suit the deed to the word. — To be fitted to; to become; as, his style of dress suits him admirably. — To please; to gratify; to make content; as, he is well suited with his servants.

—*v. n.* To agree; to accord; to be suitable; to have corresponding qualities; — usually preceding *with* or *to*; as, reticence does not suit with his disposition.

Suitability, *n.* Quality of being suitable; suitability.

Suitable, (*süt'*), *a.* That suits or is likely to suit; fitting; neat; proper; appropriate; conformable; becoming; agreeable; answerable; convenient; adequate.

Suitableness, *n.* State, quality, or condition of being suitable; a state of being adapted or accommodated; fitness; propriety; agreeableness; correspondence; consonance; congruity; consistency.

Suitably, *adv.* In a suitable manner.

Suite, (*sweet*), *n.* [Fr., from *suivre*, to follow.] A company, or number of attendants or followers; retinue; train; as, the suite of royalty.

—A set, series, collection, or arrangement, as of objects; as, a suite of rooms.

Suitor, *n.* An applicant; a petitioner; one who sues or entreats; as, a suitor for preferment. — A wooer; a lover; one who courts a woman or solicits her in marriage; as, she had a number of suitors for her hand.

(*Law*.) One who sues or prosecutes a demand of right; one who attends a court.

Sukkertoppen, in Greenland, a headland on the W. coast; Lat. $65^{\circ} 22' N.$, Lon. $53^{\circ} 5' W.$

Sulaco Creek, in Georgia, falls into the Coosawattee River a few miles from its mouth.

Sulcate, *Sulcated*, *a.* [From Lat. *sulcare*.] (*Nat. Hist.*) Grooved; furrowed; channelled; as, a sulcated stem.

Sulcation, (*-käsun*), *n.* A channel, groove, or furrow on the surface of a body.

Suleiman Mountains, (*soo-li-man'*), a range in Afghanistan, extending from Lat. 29° to $33^{\circ} 40' N.$, Lon. $70^{\circ} E.$ Its culminating point is called the Throne of Solomon, and has a height of 11,000 feet.

Sulidæ, *n. pl.* (Zool.) See GANNET.

Sulists, *Sulistes*, *n. pl.* A people of mixed Albanian and Greek descent, who formerly dwelt in the S. corner of the pashalik of Janina (*Epirus*), in European Turkey. After having for about 15 years heroically resisted the encroachments of the Pasha of Janina upon

their independence, they were vanquished by Ali Pasha in 1801. In 1820 they fought desperately against the Turks for their old oppressor; and, ultimately, they took a glorious part in the war of Greek independence, but their country was not included by the treaty of 1829 within the Greek boundary. See ALI PASHA, and BOZZARIS.

Sulkily, *adv.* In a sulky manner; sullenly; morosely.

Sulkiness, *n.* Quality of being sulky.

Sulks, *n. pl.* Quality or condition of being sulky; sullenness; sourness; moroseness. — To be in the sulks, to be in a sullen, morose, or discontented humor.

Sulky, *a.* (*comp.* SULKIER; *superl.* SULKIEST.) Sullen; sour; heavy; obstinate; morose; as, a sulky person.

—*n.* A two-wheeled carriage for a single person.

Sulla. See SYLLA.

Sullen, *a.* [O. Fr. *soleynr*, from Lat. *solus*, alone.] Gloomy; dark; dismal; of ill omen; as, a sullen dirge. — Mischievous; unalloyed; unpropitious; as, a sullen planet. — Intractable; obstinate. — Cross; sour; morose; sullen; gloomily angry or silent; affected with ill humor; as, a sullen temper. — Heavy; sluggish; dull; as, a sullen flow.

Sullenly, *adv.* In a sullen manner.

Sullenness, *n.* State or quality of being sullen.

Sullivan, JOHN, an American general, b. in Berwick, Me., 1740, served with reputation in the republican army at the battles of Brandywine and Germantown, in 1777, and subsequently against the Indians. In 1788 he became a member of Congress, and was afterwards judge of New Hampshire. D. 1795.

Sullivan, JAMES, brother of the preceding, b. 1744, was successively justice, attorney-general, and governor of the province of Massachusetts. He was for many years president of the Historical Society of Massachusetts; and was the author of *Observations on the Government of the United States of America, a Dissertation on the Constitutional Liberty of the Press*, &c. D. 1808.

Sullivan, in Illinois, a city, cap. of Moultrie co., 24 m. S.E. of Decatur. *Pop.* (1897) 1,640.

Sullivan, in Indiana, a W. co., bordering on Illinois; area, 440 sq. m. *Rivers*. Wabash river and Basseron creek. *Surface*, level; soil, fertile. *Min.* Bituminous coal. *Pop.* (1897) 22,500. — A post-town, cap. of the above co., 26 m. S. of Terre Haute.

Sullivan in Iowa, a village of Dubuque co., 70 m. N.E. of Iowa City.

Sullivan, in Maine, a post-township of Hancock co., 90 m. N.E. of Augusta.

Sullivan, in Missouri, a N. co.; area, 650 sq. m. It is traversed by Locust Creek, the E. Fork of Medicine Creek, and by Yellow and Wolf creeks. *Surface*, mostly prairies; soil, fertile. *Capital*, Milau. — A post-village of Franklin county, 71 miles S.W. of the City of St. Louis.

Sullivan, in New Hampshire, a W.S.W. county, bordering on Vermont; area, 570 sq. m. *Rivers*, Connecticut and Ashuelot. Sunapee Lake is on its E. border. *Surface*, elevated, with occasional mountain ridges; soil, fertile. *Cap.* Newport.

—A post-township of Cheshire co., 38 m. W.S.W. of Concord.

Sullivan, in New York, a S.E. county, bordering on Pennsylvania; area, 890 square miles. *Rivers*, Delaware, Shawangunk, Neversink, Mongaup, and Beaverskill. *Surface*, mountainous; soil, fertile in the valleys. *Min.* Lead. *Cap.* Monticello. — A village and township of Madison county, 120 miles north-west of Albany.

Sullivan, in Ohio, a post-village and township of Ashland co., 99 m. N.N.E. of Columbus.

Sullivan, in Pennsylvania, a N.N.E. county; area, 430 square miles. It is traversed by the Loyalsock, Muncy, and Little Loyalsock creeks. *Surface*, elevated and covered with forests, and traversed S. by the Alleghany Mountains. *Capital*, Laporte. — A post-village and township of Tioga county, 20 miles E. of Wellsborough.

Sullivan, in Tennessee, a N.E. co., bordering on Virginia; area, 410 sq. m. *Rivers*, Holston and Watauga. *Surface*, diversified; soil, fertile. *Min.* Iron. *Cap.* Blountsville. *Pop.* (1897) 22,250.

Sullivan, in Wisconsin, a post-township of Jefferson co.

Sullivan's Island, in S. Carolina, an island in the harbor and 6 m. below the city of Charleston, on which is situated Fort Moultrie.

Sullivanville, in New York, a post-village of Chemung co., 10 m. N.E. of Elmira.

Sully, *v. a.* (*imp.* and *pp.* SULLIED,) (*sül'lid*.) [Fr. *souiller*.] To soil; to dirty; to spot; to tarnish. — To darken. — To stain; to soil, as the fairness or purity of reputation; as, virtue sullied by calumny.

—*v. n.* To be soiled or tarnished.

—*n.* Soil; tarnish; spot; as, a sully on one's reputation.

Sully, (*sool'le*), MAXIMILIEN DE BETHUNE, BARON DE ROSSNY, and DUKE DE, a French statesman, b. 1559. He

Fig. 2443.—A SULIOT.

was, in his youth, the friend and companion of Henry of Navarre, afterwards Henry IV. of France, attended that monarch throughout his long and eventful life, escaped with him from the massacre of St. Bartholomew, attended him through all his battles, and entered Paris with him. When Henry ascended the throne, *S.* was made minister of finance, and in that responsible office displayed uncommon capability and judgment. On the murder of his royal master he retired from political life, and occupied himself with his memoirs till the last day of his life. D. 1641.

Sully, THOMAS, an American artist, b. in Hordcastle, Lincolnshire, England, 1783, emigrated to the U. States with his parents, 1792, studied painting in Charleston, established himself in Richmond, Va., as a portrait-painter in 1803, removed afterwards to New York, and, in 1809, settled in Philadelphia, where he has since lived. His reputation as one of the leading American portrait-painters is founded upon numerous works, the best known of which are the full-length portraits of Dr. Benj. Rush, Commodore Decatur, Thos. Jefferson, and Lafayette. The Boston Museum possesses his celebrated picture of *Washington Crossing the Delaware*. D. 1872.

Sulmona, (*sool-mo'na*), a fortified town of S. Italy, 34 m. from Aquila. *Manuf.* Paper, shell goods, &c.

Sulphate, *n.* (*Chem.*) See SULPHURIC ACID.

Sulphatic, (*-fāl'ik*), *a.* (*Chem.*) Pertaining to, resembling, or containing, a sulphate or sulphates.

Sulphide, *n.* (*Chem.*) One of the combinations of the metals with sulphur, formerly known as *sulphuret*, and which are hardly less important, both in a chemical and economical point of view, than the oxides. A large number of these occur in nature, having a high metallic lustre, and forming valuable ores. Sulphur generally combines with the metals in varying proportions, and it generally happens that the number of oxides and *S.* of a given metal are equal. Exceptions to this, however, occur in the case of the alkalies and alkaline earths; thus there are but two oxides of potassium, sodium, and barium, whilst there are no less than five *S.* of these metals. All the metallic *S.* are solid at ordinary temperatures; most of them fuse at a red heat, and some sublime unchanged. If air be admitted to the heated sulphides, they are all decomposed, the sulphur becoming oxidized, and either passes off, leaving the oxide of the metal behind, or unites with the base forming the sulphate, which, if the heat be continued, decomposes in certain cases, leaving the oxide behind. The *S.* of the noble metals part with the whole of their sulphur, the pure metal remaining. The *S.* are all insoluble in water, with the exception of those of potassium, sodium, strontium, barium, and calcium. Sulphide of magnesium is only slightly soluble. *S.* are prepared in a number of ways:—By heating the metal or its oxide with sulphur; by decomposing the sulphates; by heating them with charcoal or in a current of hydrogen; by passing a stream of sulphuretted hydrogen through their solutions, or by adding to them a solution of an alkaline sulphide. The preparation of particular *S.* will be found described under the heads of their bases. Certain of the higher *S.*, as for instance the pentasulphides of arsenic and antimony, act as acids, forming soluble and crystallizable salts with the alkaline protosulphides. The sulph-arseniate and sulph-antimoniate of sodium are examples of this.

Sulphion, *n.* (*Chem.*) An hypothetical radicle, supposed, according to the binary theory of salts, to be the base of sulphuric acid, which is regarded as its hydride, H_2SO_4 . Sulphion would thus fall into the same category as chlorine and bromine, sulphuric acid being its hydride, as hydrochloric acid is the hydride of chlorine, the sodium salts being Na_2SO_4 , and NaCl the sulphionide and chloride of sodium. The name sulphionide of sodium, as proposed for sulphide of soda, has not as yet come into use, although the followers of the binary theory mark the change of view by using the terms sulphate of sodium, calcium, magnesium, &c. These remarks equally apply to the other oxy-acids.

Sulphite, *n.* (*Chem.*) See SULPHUROUS ACID.

Sulpho-salt, *n.* (*Chem.*) One of the salts in which the oxygen appears to be replaced by sulphur, both in the base and the acid, as in the salt, sulph-antimoniate of soda.

Sulphur, *n.* [*Lat. sulfur*; *Fr. soufre*.] *S.*, or brimstone, has been known and used from the earliest times. It is found native in mechanical combination with various earthy impurities in most volcanic districts, more particularly in Sicily and the countries bordering on the Mediterranean. The native *S.* of commerce is derived chiefly from Sicily, where it occurs in beds of blue-clayey formation. It is found native in two forms,—in transparent amber crystals, as virgin sulphur; or in opaque, lemon-yellow crystalline masses, as volcanic *S.* It is found in combination with the different metals, forming metallic sulphides, in nearly every portion of the earth. Zinc blende, iron and copper pyrites, galena, cinnabar, gray antimony, and realgar, are a few instances of the valuable ores containing *S.* In its oxidized condition, as sulphuric acid, it is also very largely distributed over the mineral kingdom. *S.* exists in many organic bodies; for example, it is always contained in albumen and the various protein compounds. Native *S.* is purified from the foreign substances mixed with it by distillation in, first, long brick furnaces containing earthen retorts communicating with receivers of the same material; and afterwards in iron retorts communicating with chambers of brickwork, in which the sulphur condenses in light flocks, known as flowers of sulphur. When melted and cast, these form the roll brimstone of commerce. Until lately the Sicilian *S.* was exported as far as California, but now the *S.* works on the shore of Clear

Lake produce 4 tons a day, a quantity sufficient for the consumption of that State, and the manufacture of the compounds of *S.* has already taken a great importance.—*S.* can also be easily extracted from iron and copper pyrites.—*Iron pyrites* forms the yellow metallic-looking substance which is often met with in masses of coal, sometimes in distinct cubical crystals, and which is to be picked up in large quantities on some sea-beaches, where it occurs in rounded nodules, rusty outside, but having a fine radiated metallic fracture. When this mineral is strongly heated it gives up part

Fig. 2444.

FURNACE FOR THE DISTILLATION OF SULPHUR FROM PYRITES.

of its *S.*; at a very high temperature one half of the *S.* may be separated; but by an ordinary furnace heat only about one-fourth can be obtained. The distillation of iron pyrites is sometimes effected in conical fire-clay vessels (Fig. 2444) closed at the wider end, and stopped towards the other with a perforated plate to allow the passage of the *S.* vapor. Each vessel contains 100 lbs. of pyrites, and yields 14 lbs. of *S.* At ordinary temperatures, *S.* is a brittle, insoluble, inodorous solid, of a lemon-yellow color, a bad conductor of heat, and a non-conductor of electricity. By friction with silk or wool, it becomes negatively electrified. It is a highly inflammable substance, burning readily in the air at about 450° or 500° Fahr., and giving off suffocating fumes of sulphurous acid gas. At 239° Fahr. it melts, forming a yellow liquid, and slightly increasing in bulk. Provided the above temperature is not exceeded, it remains nearly transparent on cooling, but becomes gradually opaque from interior molecular changes. In close vessels, it may be distilled by raising the heat to about 834° Fahr. *S.* is very remarkable as affording a striking instance of the occurrence of the allotropic condition of matter. (See ALLOTROPY.)—Hydrogen and *S.* vapor, when burnt, form sulphuretted hydrogen. Burnt in oxygen, heated with chlorine, bromine, and iodine, it unites with them, forming well-known compounds. The vapor of *S.* passed over red-hot charcoal forms bisulphide of carbon. Nearly all the metals combine with it at ordinary or increased temperatures. *S.* forms 8 oxides which, combined with water, act as acids:

Hyposulphurous acid.....	H_2SO_2
Sulphurous acid.....	H_2SO_3
Sulphuric acid.....	H_2SO_4
Thiosulphuric acid.....	$\text{H}_2\text{S}_2\text{O}_3$
Dithionic acid.....	$\text{H}_2\text{S}_2\text{O}_6$
Trithionic acid.....	$\text{H}_2\text{S}_3\text{O}_6$
Tetrathionic acid.....	$\text{H}_2\text{S}_4\text{O}_6$
Pentathionic acid.....	$\text{H}_2\text{S}_5\text{O}_6$

S. unites with chlorine in several proportions, the most important being the chloride and dichloride. The chloride, S_2Cl_2 , is prepared by transmitting a current of chlorine over melted *S.*, the resulting chloride being collected in a perfectly dry receiver. It is a dark yellow liquid, very volatile, and possesses a peculiar penetrating disagreeable odor. It emits fumes when exposed to moist air, and when dropped into water gradually decomposes into hydrochloric and sulphurous acids and free sulphur. It has a specific gravity of 1.658, and boils at 280° Fahr. It is used for vulcanizing India-rubber goods. By saturating chloride of sulphur with chlorine, a dark red liquid (SCl_2) is formed. The corresponding bromides are liquids analogous to the chlorides. The iodide is a crystalline brittle gray solid. With nitrogen, *S.* forms a bisulphide, which crystallizes in beautiful golden-yellow rhombic crystals. It detonates powerfully by percussion, or when heated to 314° Fahr. Bisulphide of carbon dissolves it readily, alcohol, ether, and oil of turpentine sparingly, and water not at all. *Equiv.*, 23; *symbol*, *S.*

Sulphuration, (*sū'fu-rā'shun*), *n.* (*Chem.*) The process by which certain silk, cotton, and woollen goods are subjected to the fumes of burning sulphur, or sulphurous acid, for the purpose of decoloring or bleaching.

Sulphureous, **Sulphurous**, *a.* Consisting of sulphur; having the qualities of sulphur or brimstone; impregnated with, or resembling, sulphur.

Sulphureously, *adv.* In a sulphureous manner.

Sulphureousness, *n.* State or quality of being sulphureous.

Sulphuretted Hydrogen, *n.* (*Chem.*) Same as SULPHIDE, *q. v.* See HYDROSULPHURIC ACID.

Sulphur Fork, a tributary of Red River, rises in Fannin co., Texas, and flowing S.E., falls into the Red River.

Sulphur Fork, in Arkansas, a township of La Fayette co.

Sulphuric Acid, OIL OF VITRIOL, VITRIOL, *n.* (*Chem.*) A very important acid which occurs in nature in large quantities, both in the vegetable and mineral kingdoms, in combination with the various bases, more particularly the alkalies, alkaline earths, and the oxides of iron, copper, lead, zinc, alumina, &c. Its mineral combinations are generally known as *vitriols*, a name which, in the case of the sulphates of iron, copper, and zinc, has been transferred to the manufactured products. *S. A.* is formed by the oxidation of sulphurous acid, or some other oxide of sulphur. In its perfectly anhydrous condition, it occurs as a white crystalline fibrous mass somewhat resembling asbestos in appearance. It can be moulded in the fingers like wax without charring the skin; it fumes in the air, and is very deliquescent, hissing violently when thrown into water; thereby becoming *S. A.* It chars wood, paper, sugar, and other similar substances, by abstracting water from them. It melts at 65° Fahr., and boils at 110° Fahr., forming a colorless vapor. It possesses no acid properties whatever, and is not regarded as such by the followers of Gerhardt, by whom it is called *sulphuric anhydride*. The vapor, when passed through a red-hot tube, is resolved into a mixture of one volume of oxygen with two volumes of sulphurous acid. With sulphur it forms several more or less definite compounds, of a brown, green, and blue color respectively, which have not as yet received sufficient investigation. There are two varieties of *S. A.* in commerce. The first of these, *fuming* or *Nordhausen S. A.*, is obtained by the distillation of the basic sulphate of iron formed by heating crystals of common green vitriol. It is a somewhat viscid liquid, generally of a light-brown color, from containing traces of organic matter, and has a spec. grav. of 1.896. It is believed to be a combination of equal parts of the anhydrous and monohydrated *S. A.*, and may be represented by the formula $\text{H}_2\text{SO}_4\text{SO}_3$. It solidifies at 32° Fahr. into a mass of transparent colorless crystals. It is chiefly used in the arts for dissolving indigo. The second variety is the ordinary *S. A.*, or *oil of vitriol*, of commerce. It is prepared in immense quantities by burning sulphur or roasting pyrites, and oxidizing the resulting sulphurous acid by means of aqueous vapor and certain oxides of nitrogen. The following experiment will illustrate the important chemical principles of the manufacture of *S. A.*, and will give an idea of the process employed in the manufacture of this acid on a large scale.

Fig. 2445.—PREPARATION OF SULPHURIC ACID.

A large glass flask or globe (A, Fig. 2445) is fitted with a cork, through which are passed—a, a tube connected with a flask D containing copper and strong *S. A.*, for evolving sulphurous acid; b, a tube connected with the flask B containing copper and diluted nitric acid (sp. gr. 1.2) for supplying nitric oxide; c, a tube proceeding from a small flask E containing water. On applying a gentle heat to the flask containing nitric acid and copper, the nitric oxide passes into the globe and combines with the oxygen of the air, filling the globe with red nitric peroxide. The nitric oxide flask may then be removed. Sulphurous acid is then generated by heating the flask containing *S. A.* and copper; the sulphurous acid will soon decolorize the red nitric peroxide, the contents of the globe becoming colorless, and the crystalline compound forming abundantly on the sides; the sulphurous acid flask may then be removed. Steam is sent into the globe from the flask containing water, when the crystalline compound will be dissolved, and *S. A.* will collect at the bottom of the globe. If air be now blown into the globe, the nitric oxide will again acquire the red color of nitric peroxide. If the experiment be repeated, the steam being introduced simultaneously with the sulphurous acid, no crystalline compound whatever will be formed, the sulphurous acid being at once converted into hydrated *S. A.*—When pure, *S. A.* is a heavy, oily, colorless, inodorous liquid, and having a specific gravity of 1.842. It is intensely caustic, and chars almost all organic substances, by abstracting water from them. Its affinity for water is very great, doubling its weight by the absorption of vapor from the air, if left exposed in any open vessel for several days. It mixes with water in all proportions. It freezes at —29° Fahr., and boils at 590° Fahr., its vapor being colorless and very suffocating, forming dense fumes in moist air. When mixed with water, it evolves considerable heat. *S. A.* is the starting-point of nearly every important chemical manufacture. Acetic, nitric,

and hydrochloric acids are made by its means; and it will be only necessary to allude to the important part it plays in the manufacture of soda from common salt, to appreciate the saying of Liebig, "that the amount of *S. A.* made in a country is a sure index of its wealth and prosperity." In the hands of the chemist it has numerous and important uses. Its salts, the *sulphates*, are among the most important chemical agents in the laboratory. In its concentrated form, it is in daily use by the scientific chemist to promote the crystallization of deliquescent substances in vacuo, from its intense avidity for water. Besides the monohydrate above described, *S. A.* forms several other well-marked hydrates; among which may be noticed the *bihydrate*, a colorless liquid, having a sp. gr. of 1.78, and solidifying in transparent colorless prisms at about 40° Fahr.; hence it is often called *glacial S. A.* It may be easily formed by mixing the monohydrate with water, until the proper sp. gr. is reached. If a very dilute acid be evaporated in vacuo until it ceases to lose weight, a definite *terhydrate* is formed, having a density of 1.632. The oil of vitriol of commerce is never pure, but contains lead derived from the leaden chambers in which it is made, arsenic, and nitric acid. The first impurity is detected on dilution, sulphate of lead (which is less soluble in dilute than in strong acid) falling down as a milky precipitate. Arsenic gives a yellow precipitate with sulphuretted hydrogen, and nitric acid a purplish-red coloration when a solution of green vitriol is added to the suspected acid. In its concentrated form, it acts but feebly on metallic bodies. When water is present, the more easily oxidizable metals are dissolved with the evolution of hydrogen. The sulphates are a numerous and important class of salts. They are mostly composed of an equivalent of acid and an equivalent of the metallic oxide. They vary somewhat in the numbers of atoms of water of crystallization, some being anhydrous, others containing as much as twelve equivalents. *S. A.* also forms acid bisalts, of which the *bisulphate of potash* may be taken as an example, $\text{K}_2\text{H}_2\text{O}_2\text{S}_2\text{O}_7$. In a few instances, basic salts are formed; as, for instance, the *basic sulphate of copper*, $\text{CuSO}_4 \cdot 5\text{H}_2\text{O}$. *S. A.* and its salts are recognized by giving a white precipitate with a soluble salt of barium, insoluble in nitric acid. *Form.* SO_3 .

Sulphuring, n. Act or art of bleaching by fumes of sulphur.

Sulphurous Acid, n. (*Chem.*) An acid formed by the union of an equivalent of sulphur with two of oxygen in a variety of ways, the most familiar being its production during the combustion of sulphur in the open air or in oxygen. The gas produced is endowed with the properties of a weak acid, and is the sole product of the combustion, provided the air or oxygen be perfectly dry. It has a pungent, suffocating odor, and when in a concentrated form cannot be breathed with impunity. It is not inflammable, and extinguishes burning bodies. It dissolves freely in water, which takes up between 40 and 50 times its bulk of the gas. The solution has the smell and taste of the gas itself, and becomes gradually converted into sulphuric acid from absorbing oxygen from the air. Crystalline hydrate, $\text{SO}_2 \cdot 9\text{H}_2\text{O}$ and $\text{SO}_2 \cdot 10\text{H}_2\text{O}$, may be obtained at a low temperature. The former melts at 40° F. Sulphurous acid gas is much used for bleaching straw and wool, the articles being moistened and suspended in a chamber in which sulphur is burning. It appears to act by forming a colorless compound with the coloring matter; for woollen goods which have been thus bleached become yellow on being washed with an alkaline soap. It is also used for preserving certain animal substances, such as vellum and catgut. It has also been employed as a disinfecting agent. At ordinary temperatures, sulphurous acid is a gas; but it may be readily condensed into a liquid by a pressure of 3 atmospheres, or by a freezing mixture of ice and salt. When the liquid acid is evaporated under the air-pump, part of it solidifies from the cold produced. The liquid acid boils at 14° F.; and if poured into water, the cold produced by its reversion into the gaseous state is so intense that the water is frozen. When required perfectly pure for laboratory purposes, sulphurous acid is made by the deoxidation of sulphuric acid. The mode generally adopted is to boil sulphuric acid with metallic copper or mercury, an equivalent of oxygen, leaving 1 portion of the acid to form an oxide with the metal. Sulphurous acid is a powerful reducing agent, liberating iodine from iodic acid, and precipitating tellurium and selenium from their acids. The *sulphites* are somewhat weak salts, presenting considerable analogy to the carbonates, the salts of the same metals being often isomorphous. With the alkalis it forms a double set of salts, containing respectively 1 and 2 equivalents of acids. Bisulphite of soda was formerly much used to neutralize the excess of chlorine; and bisulphide of lime is extensively employed in the manufacture of sugar. The *sulphates* are readily formed by passing sulphurous acid gas through water in which the carbonate or oxide of the metal is dissolved or suspended. They are decomposed by nearly all the acids, with the exception of the carbonic and boric, with the liberation of sulphurous acid. The acid sulphates of baryta, strontia, lime, and magnesia, and the neutral and acid sulphates of the alkalis, are soluble in water. Most of the others are insoluble, and may be precipitated by the addition of a soluble sulphate to their solutions. *Form.* SO_2 .

Sulphur Spring, n. In *Arkansas*, a township of Montgomery co. — A township of Polk co.

Sulphur Spring, n. In *N. Carolina*, a village of Brunswick co., 260 m. W. of Raleigh.

Sulphur Springs, n. In *Illinois*, a township of Morgan co.

Sulphur Springs, n. In *Indiana*, a post-town of Henry co., 7 m. N.W. of Newcastle.

Sulphur Springs, n. In *Mississippi*, a post-village of Madison co.

Sulphur Springs, n. In *Missouri*, a village of Jefferson co., 21 m. W. of St. Louis.

Sulphur Springs, n. In *Texas*, a post-town, cap. of Hopkins co., about 3 m. S.W. of Tarrant.

Sulphur-wort, (-wort, n.) (*Bot.*) See PEUCEDANUM.

Sulphury, a. Possessing the qualities of sulphur.

Sulpicians, (-pish'yang, n.) or PRIESTS of the MISSION of ST. SULPICE. (*Ecl.*) A Roman Catholic congregation of priests, founded in 1642 by Jean Jacques Olier, pastor of the parish of St. Sulpice in Paris, for the purpose of educating pious priests. Many of the number of this congregation, as the founder Olier, J. A. Emery, and Carrière, are counted among the greatest theologians of France. The Sulpicians conduct in France about 20 seminaries, and 2 in N. America (Baltimore and Montreal.)

Sulpicius Severus, (sul-pish'i-us, n.) an ecclesiastical historian, who flourished at the commencement of the 5th century, and was likewise distinguished for his eloquence and piety. He wrote *The Life of St. Martin of Tours*, and an *Abridgment of Ecclesiastical History*.

Sultan, n. [Ar.] The title commonly given by Europeans to the Padishah, Emperor, or Grand Signior of the Turks.

Sulta'na, Sul'taness, n. The wife of a sultan.

Sultan'ic, a. Belonging, or relating to a sultan.

Sul'triuess, n. State of being sultry.

Sul'try, a. (*comp.* SULTRIER; *superl.* SULTRIEST.) [A. S. *swolath*; Ger. *schwül*, sultry, close.] Very hot, burning, and oppressive; as, a sultry desert. — Very hot and moist, or hot, close, stagnant, and unelastic, as air; as, a sultry day.

Sultze, (sool'tza, n.) a walled town of Mecklenburg-Schwerin, 20 miles from Rostock; pop. 4,415.

Sum, n. [Fr. *somme*; Lat. *summa*.] The aggregate of two or more numbers, magnitudes, quantities, or particulars; the amount or whole of any number of things or particulars added; as, the sum of 9 and 4 is 13. — Any indefinite amount of money or currency; as, a large or small sum. — That which is most important to anything; the chief point; the substance; the amount; the compendium; the aggregate; as, money is the sum and substance of avarice. — Height; completion; as, the sum of man's well-being. — A problem to be solved, or example to be wrought, in arithmetic; as, a sum in the Rule of Three.

— *v. a.* (*imp.* and *pp.* SUMMED,) (*sūmd.*) [Fr. *sommer*; A. S. *summan*.] To compute; to collect or add, as particulars into one whole or aggregate; to bring, as two or more particular numbers into one total; — generally preceding *up*; as, to sum up figures. — To bring into a small compass or in a few words; to condense; to comprise; to comprehend; — usually with *up*; as, the judge summed up with singular ability.

(*Falconry.*) To cause to have complete plumage.

Su'mac, Su'mach, Shu'mac, n. (Colloq. *shū-mak*) (*Bot.*) See RHUS.

Sumatra, (soo-ma'tra, n.) The most W. island of the E. Archipelago, and, next to Borneo, the largest in the E. seas, between Lat. 6° N., and 4° S., and the 96th and 106th degs. of E. Lon., separated on the N.E. from the Malay Peninsula by the Straits of Malacca, and on the S.E. from Java by the Straits of Sunda, having E. the Sea of Java, and surrounded on nearly all the other sides by the Indian Ocean. It is of an elongated shape, about 1,050 m. in length; area, about 125,000 sq. m. A range of lofty mountains, 15,000 feet high, traverse the island on its western side, while vast plains, watered by immense rivers, stretch to the eastward. The climate varies according to the elevation of the land, from the scorching plains of a tropical region to the freezing cold of an arctic latitude. The wild animals are very numerous, and in no part of the East does the tiger attain more formidable dimensions; the hippopotamus, rhinoceros, elephant, bear, boar, and varieties of deer, monkeys, and many other kinds of wild and savage animals, haunt the woods or prowl over the plains. Birds and insects of all sizes and colors literally swarm. Rice, sugar, betel, cocoa-nut, millet, coffee, sago, all kinds of spice and pepper, grow profusely, while tobacco and the cotton-plant are generally cultivated. The mineral wealth of Sumatra is remarkable, gold being extensively found, as well as iron, tin, copper, sulphur, and a large number of precious stones. The native Sumatrans have been driven by the Malays into the interior, and are a peaceable, orderly, and sober people, while the mixed tribes along the coast partake more of the character of the Malay stock, from which they have sprung. Their chief manufactures are gold and silver filigree work, carving in ivory, and basket and mat weaving. The island is divided into many petty states. The European settlements, Bencoolen, Padang, and others, are on the S.W. coast. A large portion of the inhabitants of S. are Mohammedans; the rest is said to be without religious worship of any kind. S. was first visited by the Portuguese in 1509, by the Dutch in 1600, and by the English in 1602. The English settlements were ceded to the Dutch in 1825, in exchange for Malacca. Pop. estimated at 2,500,000.

Sumbawa, (soom-baw'wa, n.) an island of the Sunda group, Eastern Archipelago, separated from the island of Lombok by the Strait of Allas; Lat. bet. 8° 4'—9° 2' S., and 116° 50'—119° 15' E. Lon. Area, 5,838 sq. m. The island, nearly divided into two parts by a bay, possesses a soil of great fertility, and is now divided into the kingdoms of Sumbawa, Bima, Dampo, and Sangar. On the E. side is the volcano of Tombora, 9,000 feet high. The natives of S. belong to the Malay race; they are inoffensive and industrious. Pop. nearly 100,000.

Suubhul, (soom'bool, n.) a town of British India, presidency of Bengal, 50 m. from Bareilly; pop. 11,428.

Sum'bul, n. (*Bot.*) See NARDOSTACHYS.

Sum'less, a. Inestimable; not to be summed or computed.

Sum'marily, adv. [From *summary*.] In a summary manner; in a narrow compass, or in few words; briefly; concisely. — In a short way or method.

Sum'marize, v. a. To write or form summaries or abridgments.

Sum'mary, a. [Fr. *sommaire*, from Lat. *summa*, sum.] Containing the sum or substance; reduced into narrow compass, or into few words; short; brief; concise; compendious; as, a *summary* analysis of a book. — Hence, quickly executed; performed with dispatch; as, a *summary* operation.

— *n.* That which contains the sum or substance of a fuller account; a general or comprehensive statement; an abstract, abridgment, compendium, or recapitulation.

Summation, (-mā'shun, n.) [Fr., from Lat. *summare*.] Act of summing, or forming a total amount. — An aggregate.

(*Math.*) The operation of adding or finding the sum of several quantities.

Suu'mer, n. One who sums; a computer.

Suu'mer, n. [A. S. *sumer*, *sumor*; Ger. and Dan. *sommer*.] One of the four seasons of the year; the season which intervenes between spring and autumn; — the summer season, for the northern hemisphere, begins when the sun reaches the Tropic of Cancer, and ends at the following equinox, or lasts from about the 21st of June till about the 22d of September.

Indian summer, in the U. States, a period of warm weather late in autumn, usually characterized by a clear sky, and by a hazy or smoky appearance of the atmosphere, especially near the horizon. The name is derived from the custom of the Indians to use this time in preparation for winter by laying in stores of food, or from their belief that it was caused by a wind blowing directly from the court of the S.W. god.

Summer-complaint, (Med.) Diarrhoea occurring in summer — often applied to dysentery and cholera infantum. With some it means cholera infantum only.

— *v. a.* To pass the summer or warm season; as, to *summer* at the sea-side.

— *v. n.* To keep or carry through the summer.

Suu'mer, n. [Fr. *sommier*.] (*Arch.*) Any girder or large piece of timber supported on two strong piers or posts, and serving as a lintel to a door, a window, &c.

Suu'mer, n. In *Maine*, a post-village and township of Oxford co., 40 m. W. of Augusta.

Suu'mer-colt, n. In England, the undulating state of the air near the surface of the ground when heated.

Suu'mer-duck, n. (*Zoöl.*) The WOOD-DUCK, *q. v.*

Suu'mer-fallow, n. (*Agric.*) A fallow made during the warm months, to kill weeds.

— *a.* Lying fallow during the summer.

— *v. a.* To plough and let lie fallow.

Suu'merfield, n. In *Illinois*, a post-village of St. Clair co., 27 m. E. of St. Louis.

Suu'merfield, n. In *Michigan*, a township of Monroe co.

Suu'merfield, n. In *Ohio*, a post-village of Noble co., 100 m. S.E. of Columbus.

Summer Hill, n. In *New York*, a post-township of Cayuga co.

Summer Hill, n. In *Pennsylvania*, a post-village and township of Cambria co., 23 m. S.W. of Hollidaysburg; — A township of Crawford co., 10 m. W.N.W. of Meadville.

Summer Lake, n. In *Oregon*, abt. 10 m. long; Lat. 42° 40' N., Lon. 120° 40' W.

Sum'merliness, n. State or quality of being like summer.

Suu'mersault, Summerset, n. Same as SOMER-SAULT, *q. v.*

Suu'merset, n. In *Iowa*, a post-village of Warren co., 115 m. W.S.W. of Iowa City.

Suu'mer-tree, n. (*Arch.*) A breast-summer. See BEAM.

Suu'merville, n. In *Georgia*, a post-village, cap. of Chattooga co., 195 m. N.W. of Milledgeville.

Suu'merville, n. In *Kentucky*, a post-village of Greene co., 35 m. S.S.W. of Frankfort.

Suumerville, n. In *Michigan*, a post-village of Cass co., 11 m. W. of Cassopolis.

Suumerville, n. In *North Carolina*, a post-village, former cap. of Harnett co., 30 m. S. of Raleigh.

Suumerville, n. In *Ohio*, a village of Union co.

Suumerville, n. In *Pennsylvania*, a post-borough of Jefferson co.

Suumerville, n. In *South Carolina*, a post-village of Berkeley co., 22 m. N.W. of Charleston.

Suumerville, n. In *Wisconsin*, a village of Rock co., 50 m. S.E. of Janesville.

Suumerville, n. In *W. Virginia*, a village, cap. of Nicholas co., abt. 140 m. W. of Wheeling.

Suu'mist, n. One who sums up; one who forms a compendium.

Suu'mit, n. [Fr. *sommet*; Lat. *summitas*.] The top; the apex; the highest point; as, the *summit* of a mountain. — The highest point, pinnacle, or degree; highest elevation; as, the *summit* of ambition.

Suu'mit, n. In *Colorado*, a N.W. central co.; area, 690 sq. m. Rivers. Blue, White, and Yampah, or Beaver river. Surface, traversed in the E. by the Rocky Mountain range, of which Long's Peak attains an elevation of 12,300 ft. Min. Gold. Products. Little in agriculture; some stock raising in the valleys. Cap. Breckenridge. Pop. (1897) 2,206.

Suu'mit, n. In *Illinois*, a post-village of Cook co., about 12 m. S.W. of Chicago.

-am'mit, in the State of Iowa, a township of Marion county.

***um'mit**, in Michigan, a township of Jackson county, immediately S. of Jackson.—A township of Mason co.—A post-village of Oakland county, about 14 m. N.E. of Ann Arbor.

Sum'mit, in the State of Minnesota, a township of Steele county.

Sum'mit, in New Jersey, a post-township of Union county.

Sum'mit, in New York, a post-township of Schoharie co., 50 m. S.W. of Albany.

Sum'mit, in Ohio, a N.E. co.; area, 391 sq. m. Rivers, Cuyahoga, the head streams of the Tuscarawas river, and Wolf creek. Surface, elevated and undulating; soil, very productive. Min. Stone coal; also mineral fire-proof paint. Cap. Akron. Pop. (1897) 60,000.

—A township of Monroe co.

Sum'mit, in Pennsylvania, a township of Butler county.—A post-borough of Cambria county, about 104 miles E. of Pittsburgh.—A township of Crawford county, about 10 miles W. of Meadville.—A township of Erie county.

—A township of Somerset county.

Sum'mit, in Utah, a N. E. county; area, 3,062 sq. m. Rivers, Weber and its affluents. Surface, mountains, and in parts covered with forests. Cap. Coalville. Pop. (1895) 9,631.

Sum'mit, in Wisconsin, a township of Juneau county.—A village and township of Waukesha county, 30 m. W. of Milwaukee.

Summit Bridge, in Delaware, a post-village of New-castle co., 30 m. N.W. of Dover.

Summit Hill, in Pennsylvania, a post-borough of Carhou co., 9 m. W. of Mauch Chunk.

Summitville, in Indiana, a post-town of Madison co., about 18 m. N. of Anderson.

Summitville, in Iowa, a post-village of Lee co., 15 m. N N.W. of Keokuk.

Summitville, in Ohio, a post-village of Columbiana co., 20 m. W.N.W. of Wellsville.

Sum'mon, *v. a.* [Lat. *submoneo* — *sub*, and *moneo*, to remind.] To cite; to notify; to call or command to appear; as, to *summon* assistance. — To waru to appear in court, and defend; to call by authority to appear at a place specified, or to attend in person to some public duty, or both; as, to *summon* a jury. — To rouse or excite into action or exertion; — preceding *up*; as, to *summon up* one's energies.

Sum'moner, *n.* [Fr. *seigneur*.] One who summons or cites by authority.

—In England, the sheriff's messenger, employed to notify persons to appear in court.

Sum'mons, *n.*; *pl.* SUMMONSES. A call by authority or the command of a superior to appear at a place named, or to attend to some public duty; a citation.

(*Law*.) A writ commanding the sheriff, or other authorized officer, to notify a party to appear in court, to answer a complaint made against him, and in the same writ specify some day therein mentioned.

(*Mil.*) A command or invitation to surrender.

Sum'mons, *v. a.* To summon, or give a summons to.

Sum'ner, CHARLES, an American statesman, b. in Boston, 1811, graduated at Harvard College, 1830, was called to the bar, 1834, and elected to the Senate, 1851, as successor to Daniel Webster. His first important speech was against the Fugitive Slave Act, in which speech he laid down as a guide for political action the formula to which he has since adhered that "freedom is national and slavery sectional." In 1856 a brutal attack was made upon him in the Senate Chamber by Mr. Brooks, a member of Congress from S. Carolina, who had been incensed by Mr. S.'s denunciation of the slaveholders. The injury inflicted with a gutta-percha cane proved very serious, and was followed by a severe and long prostration, from which his recovery was not complete till 3 or 4 years later. During the discussion resulting from the secession of the Slave States, he earnestly opposed in the Senate all concession to, or compromise with, slavery, and early proposed emancipation as the speediest mode of bringing the war to a close. From March 4, 1861, for several years, he was Chairman of the Senate Committee on Foreign Relations. D. Mar. 11, 1874. See *Pierce's Life of Sumner*.

Sum'ner, in Illinois, a twp. of Kankakee co. Pop. (1897) 1,020.

—A city of Lawrence co., on the Balt. & Ohio S.W. R.R., 19 m. W. of Vincennes, Ind. Pop. (1897) 1,250.

Sumner, in Iowa, a post-village and township of Bremer county, about 21 miles N.E. of Waverly.

—A township of Buchanan county.

—A township of Iowa county.

—A township of Webster county.

—A township of Winneshiek county.

Sumner, in Kansas, a village of Atchison county, on the Missouri river, 5 m. S. of Atchison.

Sumner, in Michigan, a post-township of Gratiot co.

Sumner, in Minnesota, a township of Fillmore co.

Sumner, in Tennessee, a N. county, bordering on Kentucky; area, 536 sq. m. The Cumberland river bounds it on the S. Surface, undulating; soil, fertile. Cap. Gallatin. Pop. (1897) 25,540.

Sumner, in Wisconsin, a township of Trempealeau co., abt. 32 m. N. of Galesville.

Sum'neytown, or SUMANYTOWN, in Pennsylvania, a post-village of Montgomery county, 98 miles E. of Harrisburg.

Sump, *n.* [L. Ger., Dan. and Swed.] (*Mining*.) A pit sunk in the engine-shaft below the lowest workings.—In salt-works, a pond in which the water pumped up is retained for use.

(*Metall.*) A round pit of stone, lined with clay, for receiving the metal on its first fusion.

Sump, *n.* [Lat. *sumere*, *sumptum*, to take or assume.] (*Logic*.) The major premise of a syllogism.

Sump'ter, *n.* [Fr. *sommier*, from Lat. *sagma*, a pack-saddle, *summa*, sum, amount.] A horse or mule that carries clothes or furniture; a baggage-horse; — generally prefixed to another word.

Sump'tuary, *a.* [Fr. *somptuaire*.] Relating to expense; regulating expenditure.

Sumptuous, (*sam'ty-u-us*), *a.* [Fr. *somptueux*.] Very expensive or costly; characterized by cost or magnificence; — hence, splendid; ornate; magnificent; princely; as, he lives in *sumptuous* style.

Sumpt'uously, *adv.* In a sumptuous manner.

Sumptuousness, *n.* State or quality of being sumptuous.

Sum'ter, THOMAS, an American revolutionary general, b. in S. Carolina about 1734. He first took part in the revolutionary war as lieutenant-colonel of a regiment of S. Carolina riflemen, but after the capture of Charleston by the British, in 1780, he became brigadier-general of light cavalry, and soon distinguished himself as a partisan leader, being familiarly known among his followers as the "Carolina game-cock." After gaining several important successes over the British and Tories, to whom he became a terror, he was defeated by the British Gen. Tarleton, in Sept., 1780, at the mouth of Fishing Creek in the Catawba, Chester dist., but collecting another body of light-horse, he defeated the British under Col. Wemyss, near Broad River, Nov. 18th, and ten days later, Gen. Tarleton at Blackstocks, on Tiger River, in which latter engagement, however, he was severely wounded. He again took the field in the spring of 1781, and participated in the battle of Lantaw Springs, in which he distinguished himself, but was compelled soon after to retire from the service, owing to ill-health. He received the thanks of Congress in 1791, and was afterwards elected a member of that body from S. Carolina; was appointed U. S. minister to Brazil in 1809, and on his return two years later, was elected to the U. S. senate from S. Carolina, after which he retired into private life. D. 1832.

Sum'ter, (Fort), in S. Carolina, a fort built on an artificial island, at the entrance of Charleston Harbor, 2½ m. distant from forts Moultrie and Pinckney, on each side, and named in honor of Gen. Sumter. When S. Carolina seceded, Dec., 1860, Major Anderson, in command of the defenses of the harbor, being called upon to surrender them to the State authorities, abandoned Forts Moultrie and Pinckney, and occupied Fort S. with a garrison of about 100 men. This was considered an act of war by the Confederates, and the commander of their troops, Gen. Beauregard, attacked the fort, April 12,

Fig. 2446. — FORT SUMTER IN 1860.

1861, and compelled Major Anderson to capitulate the day following. This was the first action of the memorable war which, during four years, desolated the country. During the siege of Charleston, this fort was battered by the heaviest artillery, until its walls were completely crushed and shattered. The flag-staff was shot away fifty times, and thousands of tons of iron projectiles were mingled with the debris of the fort; but the garrison constructed a still stronger fortress on its ruins, and held it for three years against assault and bombardment, until the operations of General Sherman compelled its evacuation.

Sum'ter, in Alabama, a W. co., bordering on Mississippi; area, 910 sq. m. Rivers, Tombigbee and Noxubee rivers, and Tugaloo creek. Surface, undulating; soil, generally fertile. Cap. Livingston. Pop. (1897) 31,350.

Sum'ter, in Florida, a central co., formerly the S. part of Marion co. Cap. Sumterville. Pop. (1897) 5,363.

Sum'ter, in Georgia, a W.S.W. co.; area, 515 sq. m. Rivers, Flint river, and Kinchatoone and Muckalee creeks. Surface, level; soil, generally fertile. Cap. Americus. Pop. (1897) 23,485.

Sum'ter, in Michigan, a township of Wayne county.

Sum'ter, in South Carolina, an E. central co.; area, 1,870 sq. m. Rivers, Santee, Wateree, the head streams of Black river and Lyuel's creek. Surface, undulating and partly covered with pine forests; soil, generally fertile. Cap. Sumterville, situated 63 m. S. E. of Columbia. Pop. (1897) 46,100.

Sum'terville, in Alabama, a post-village of Sumter co., 64 m. S.W. of Tuscaloosa.

Sum'terville, in Georgia, a village of Lee co., 100 m. S.S.W. of Milledgeville.

Sun, *n.* [A. S. *soma*.] (*Astron.*) The sun is the great central body of the solar system, and the grand source of light and heat. It has an apparent motion among the stars from W. to E., along a great circle, called the *ecliptic*, making a complete circuit of the heavens in 365 days, 6 hours, and 9 minutes, though the period from equinox to equinox is some 20 minutes less, owing to the precession of the equinoxes. (See PRECESSION.) The distance of the earth from the sun has been quite recently corrected from 95,000,000 miles to about 92,521,000 miles. Its diameter is 850,100 miles, upwards of 107 times the mean diameter of the earth. The circumference of the sun is 2,671,000 miles. Its solid contents or bulk exceed that of the earth 1,405,000 times; that is to say, it would require that number of earths to make one globe of the magnitude of the sun. Its mass only exceeds that of the earth 356,000 times. The sun rotates upon its axis in the same direction as the earth, from W. to E., in about 25 days, 8 hours. When the sun is examined through a telescope, its surface is found to be marked by black spots, edged with a penumbral fringe of uniform shade. Sometimes these spots appear singly, sometimes in groups. They are not permanent, but undergo changes of form from day to day, or even from hour to hour, which is believed to indicate a gaseous form of matter. They seldom last longer than 6 weeks, and often only a few hours. When they disappear, the black center or umbra always vanishes before the penumbra. Schwabe, of Dessau, having perseveringly studied these spots for more than a third of a century, arrived at a remarkable law of periodicity affecting them. He found that they gradually increased in number up to a certain period, then decreased to a certain period, then increased again, and so on. According to this investigator, the cycle is completed in about 10 years. These spots were among the earliest discoveries of the telescope. Recent experiments with its spectrum indicates the presence in the sun's atmosphere of familiar elements. Fraunhofer discovered in the solar spectrum a series of dark lines, which are hence known as "Fraunhofer's lines." Kirchhoff, by following out the elegant process called spectrum analysis, discovered in the atmosphere of the sun several metals, including sodium, calcium, lithium, iron, &c. During the total eclipse of 1842 prominences of various forms and of a reddish color were visible throughout the contour of the moon's limb during the period of totality. These protuberances had been noticed as early as 1733; but it is only since 1842 that they have been observed with great care. From observations made during the total eclipse of July, 1860, and August, 1868, it seems proved that these rose-colored prominences, rising 125,000 miles, and even 250,000, in height, are clouds floating in the solar atmosphere. On January 3, 1897, there appeared on the sun's eastern limb a spot of appalling magnitude. It soon subtended an angle of 100", and its linear dimension was therefore 45,000 miles and its area 1,600,000,000 square miles—eight times that of the entire surface of the earth. It was for several days visible to the naked eye. According to Wilson's theory, the sun is a dark body, the spots depressions, the umbra the bottom showing the sun's dark body, and the penumbra the shelving sides. Except in considering the sun a dark body, the theory is a very reasonable one, and for 120 years has been accepted as truth; but it is now beginning to be called in question. Many astronomers assert that they have seen the spots as elevations instead of depressions, which only shows how little is known about the most conspicuous object in our universe. When examined by the telescope, the sun's entire globe is seen to be covered by millions of tiny dots, called *pores*, *rice-grains*, and *willow-leaves*. Although apparently so small, these are nearly a thousand miles in diameter. Another inexplicable phenomenon is the sun's faculae, which appear to be long, narrow, luminous ridges, thousands of miles in height and many in length. They are much brighter than the general surface of the sun, called the *photosphere*. The chromosphere is one of the sun's atmospheres at least 5,000 miles in thickness, which the spectroscopic pronounces to be red-hot hydrogen gas. It is visible with the telescope when the sun is totally eclipsed by the moon, appearing like a scarlet thread surrounding the disk for about one and a-half seconds after the beginning and before the ending of totality. It is from this chromospheric layer that the prominences are ejected, by a force inconceivable to us, with a velocity from 100 to 200 miles a second, and to a height (on one occasion) of 58,000 miles greater than the moon's distance from the earth. The corona, seen only during the total phase of eclipse, is reflected sunlight from incoherent particles of matter, the nature of which is unknown. It shines like burnished silver, in striking contrast with the scarlet tint of the prominence, both being seen at the same time. A short distance from the sun it assumes the form of streamers, which have been traced to a length of several million miles, some of which are curved, some radial, and others tangential. Still another phenomenon is "Bailey's Beads," seen only at the beginning and end of totality, whose cause has elicited much discussion. The spectroscopic has revealed the presence of 23 terrestrial elements in the sun's atmosphere, a world of hydrogen, but no oxygen. Many theories have been put forth to account for the supply of the prodigious amount of heat constantly radiated from the solar surface. One theory is that the sun is now giving off the heat

Charles Sumner

1811-1874

imparted to it at its creation, and that it is gradually cooling down; another ascribes it to combustion; a third to currents of electricity; a fourth to the compression of matter from the nebular state; and fifth, that a stream of meteoric matter, constantly pouring into the sun from regions of space near it, supplies the fuel for the evolution of its heat.

—The luminary or orb which constitutes the centre of any system of worlds.—Sunshine; a position exposed to the direct influence of solar light and heat; as, to bask in the *sun*.—Anything eminently splendid or luminous; as, "the *sun* of sovereignty."—*King Charles I.*

Under the sun. On earth; in the world; existing;—employed in a proverbial sense; as, there is nothing new *under the sun*.

Sun, *v. a.* (*imp.* and *pp.* SUNNED,) (*sünd.*) To expose to the sun's rays; to insolate; to warm or dry in the light of the sun.

Sun'apee, in *New Hampshire*, a post-township of Sullivan county, on Sunapee Lake, about 6 miles east of Newport.

Sun'apee Lake, in *New Hampshire*, on the border of Merrimac and Sullivan cos., 10 m. long and abt. 2 m. wide, the surplus waters of which are discharged through Sugar River into the Connecticut.

Sun'beam, *n.* A beam or ray of the sun.

Sun'bird, *n.* (*Zoöl.*) The common name of the genus *PREMEROPS*, *q. v.*

Sun'blind, *a.* Blind from too bright sunshine.

Sun'burn, *v. a.* (*imp.* and *pp.* SUNBURNED or SUNBURNT.) To burn, scorch, tau, or discolor by the sun; as, a *sunburnt* complexion.

Sun'burst, *n.* The name given to an Irish national emblem, representing the first beams of the sun rising above the horizon.

Sun'bury, in *Georgia*, a village of Liberty co., 30 m. S.S.W. of Savannah.

Sunbury, in *Illinois*, a post-village and township of Livingston co., 12 m. N. of Pontiac.

Sunbury, in *N. Carolina*, a post-village of Gates co., 150 m. N.E. of Raleigh.

Sunbury, in *Ohio*, a post-village of Delaware co., 20 miles N.N.E. of Columbus.—A township of Monroe county.

Sunbury, in *Pennsylvania*, a borough of Butler co., 10 m. N. of Butler.—A post-borough, cap. of Northumberland county, on the Susquehanna river, 56 miles N. of Harrisburg. Large quantities of anthracite coal, from the Shamokin region, are shipped every year from Sunbury.

Sun'cook, in *New Hampshire*, a post-village of Merrimac co., 7 m. S.E. of Concord.

Sun'cook River, in *New Hampshire*, rises in Strafford co., and flowing S.W., falls into the Merrimac River 15 m. S.S.E. of Concord.

Sun'da Islands, a name often still applied to the islands of the Eastern Archipelago which lie around the Java Sea. Sumatra (visited by Nicolo di Conti in 1449), Java (discovered by the Portuguese in 1511), Borneo (discovered by the Portuguese in 1518), Celebes (occupied by the Portuguese in the 16th century), form what are termed the Greater Sunda Islands. The Lesser Sunda Islands consist of the chain of islands extending from the E. coast of Java to New Guinea, or Papua.

Sun'day, *n.* [*A. S.* *sunnan-dæg*; *Ger.* *sonntag*; *Dan.* *søndag*.] So called because this day was anciently dedicated to the sun, or to its worship. The Christian Sabbath or Lord's Day; the first day of the week.

(*Law.*) In some of the New England States, *S.* begins at sunset on Saturday and ends at the same time the next day. But in other parts of the U. States it generally commences at 12 o'clock on the night between Saturday and Sunday, and ends in 24 hours thereafter. In some States, owing to statutory provisions, contracts made on Sunday are void; but in general they are binding, although made on that day, if good in other respects.

—*a.* Belonging to or having reference to the Lord's Day or Christian Sabbath.

Sun'day-school, *n.* See SCHOOL.

Sun'der, *v. a.* [*A. S.* *syndrian*; *D.* *zonderen*; *Icel.* *sunde*, apart.] To put an object or space between; to part; to separate; to divide; to disunite in almost any manner, either by rending, cutting, or breaking; as, to *sunder* the ties of friendship.

—*n.* A separation, division, or severance.

Sunderbunds, (*sünd'der-bunds*), a densely wooded jungle, situated on the banks of the intersecting terminal branches of the Ganges, forming the delta of that river in the presidency of Bengal. These sandy, marshy, and rank savannas are rendered doubly dangerous to man from the jungle fever always prevalent in their reeking swamps, and from the numbers of alligators and tigers who populate them.

Sun'derland, a town and seaport of England, co. Durham, on the Wear, 13 m. N.E. of Durham, and 245 N.N.W. of London. *S.* includes within its limits the towns of Bishop-Wearmouth and Monk-Wearmouth, and is a populous and prosperous place, possessing, next to Newcastle, the largest export trade of coal in the kingdom. *Manuf.* Sail-cloth, chain-cables, glass, and earthenware. Iron ship-building is also extensively carried on.

Sun'derland, in *Massachusetts*, a post-village and township of Franklin county, 82 miles north-west of Boston.

Sunderland, in *Vermont*, a post-village and township of Bennington county, 95 miles S.W. of Montpelier.

Sun'dew, *n.* (*Bot.*) See DROSERACEÆ.

Sun'-dial, *n.* An instrument to show the time of day by means of the shadow of a style on a plate. Up to comparatively recent times, the science of constructing *S.*, under the name *Gnomonics*, was an important part of a mathematical course. As long as watches were scarce and clocks not very common, the dial was in ordinary use as a timekeeper. A large number of mathematical works of the 17th century are on the subject of dialling. The *S.* consists of two parts; first, the styles, the shadow of which points out the time; and the dial, which is a plate of metal, horizontal or otherwise, on which are marked the direction of the shadow for the several hours, and their divisions and subdivisions.

Sun'-dog, *n.* A luminous spot sometimes seen a few degrees from the sun.

Sun'down, *n.* Sunset.

Sundries (*-driz*), *n. pl.* Many different articles; sundry things.

Sun'dry, *a.* [*A. S.* *syndrie*, *syndrig*, separate.] Several; different; divers; various; many; more than one or two.

Sun'field, in *Michigan*, a post-township of Eaton co., 24 m. W. of Lansing.

Sun'-fish, *n.* (*Zoöl.*) The common name of the genus *Orthogoriscus*, order *Plectognathes*, comprising fishes distinguished by their short and compressed body. The short Sun-fish, *O. mola* (Fig. 2447), of the Atlantic, attains the length of 4 feet and the weight of 500 pounds or more.

Sunfish, in *Ohio*, a township of Pike co.

Sunfish Creek, in *Ohio*, enters the Ohio River from Monroe co.

Sun'flower, *n.* (*Bot.*) See FIG. 2447. — SUN-FISH. HELIANTHUS.

Sunflower, in *Mississippi*, a W. N. W. co.; area, 720 sq. m. Rivers, Sunflower and Yazoo. Surface, level; soil, fertile. Cap. Indianola. Pop. (1897) 10,150.

Sunflower River, in *Mississippi*, rises in Coahoma co., and flowing S., enters the Yazoo, near the N. border of Warren co.

Sung, *imp.* and *pp.* of SING, *q. v.*

Sunk, *imp.* and *pp.* of SINK, *q. v.*

Sunken, (*sünk'n*), *a.* Sunk; lying on the bottom of a river or other body of water; as, a *sunken* wreck.

Sun'less, *a.* Shaded; destitute of the sun or its light.

Sun'light, *n.* The light of the sun. (Tautological.)

Sun'man, in *Indiana*, a post-village of Ripley co., 46 m. W. N. W. of Cincinnati.

Sunn, *n.* (*Bot.*) See CROTOLARIA.

Sun'ni'ness, *n.* State of being sunny.

Sun'nite, *n.* See SHITE.

Sun'ny, *a.* (*comp.* SUNNIER; *superl.* SUNNIEST.) Pertaining to, issuing from, or resembling the sun; as, *sunny* rays. — Exposed to the beams of the sun; warmed by the direct rays of the sun; as, a *sunny* situation. — Tinctured by the sun; as, *sunny* tresses.

Sun'-picture, *n.* Same as PHOTOGRAPH, *q. v.*

Sun Prairie, in *Wisconsin*, a post-village and township of Dane county, about 11 miles north-east of Madison.

Sun'-proof, *a.* Impervious to the beams of the sun.

Sun'rise, *Sun'rising*, *n.* The time at which the sun rises; the first appearance of the sun above the horizon in the morning, or the time of such appearance. — Hence, by analogy, the east or orient; — used chiefly in poetry.

Sunrise, or **SUNRISE CITY**, in *Minnesota*, a post-village of Chisago co., on the Sunrise River, 37 m. N. of Stillwater.

Sun'set, *Sun'setting*, *n.* The time when the sun sets; the descent of the sun below the horizon; evening. — Hence, figuratively, the west or occident.

Sun'-shade, *n.* Same as SUN-BONNET, *q. v.*

Sun'shine, *n.* The light of the sun, or the place where it shines; the direct rays of the sun, or the place where they fall. — A place or position warmed and illuminated by the rays of the sun, or as if by the rays of the sun; as, to bask in the *sunshine* of royal favor.

Sun'shine, *Sun'shiny*, *a.* Bright or resplendent with the rays of the sun; clear, warm, or pleasant; as, a *sunshiny* day.—Bright like the sun; as, a *sunshiny* face.

Sun'-stone, *n.* (*Min.*) A resplendent variety of felspar, of a very pale, yellowish color, found in Norway.

Sun'stroke, or **COUP DE SOLEIL**, *n.* (*Med.*) A disease affecting those who are exposed to the direct beams of a hot sun, particularly during any labor or active exercise. It is not uncommon among the English troops in India in long marches. They fall down insensible, and often die in a very short time. The nature of this complaint is not well understood. According to some, it is a sort of apoplexy, while others hold that it is more of the nature of concussion. It would appear that the sun's rays act upon the brain like a shock, suddenly and extensively influencing the nervous system, and arresting the movements of the heart. The natives of India adopt the system of pouring cold water upon the head. Sun stroke, or *Thermic Fever*, as it is termed, is solely due to the effect of heat; death follows from coagulation of the muscular structure of the heart or by its effects on the brain, the treatment being that of the reduction of the body-temperature. See *WOOD ON THERMIC FEVER*.

Sun'up, *n.* Sunrise;—correlative to **SUN'DOWN**.

Sun'ville, in *Pennsylvania*, a post-borough of Venango co., about 14 m. N. of Franklin.

Sun'ward, *adv.* Toward the sun.

Sun'wise, *adv.* In the direction of the sun's motion.

Sup, *v. a.* (*imp.* and *pp.* SUPPED,) (*sapt.*) [*A. S.* *sapan*, to sip.] To sip; to take into the mouth with the lips, as a liquid; to take or drink by a little at a time; as, to *sup* broth.

—*v. n.* To eat the evening meal; to take supper.

Supawn', *n.* [*Ind.*] Same as MUSH, *q. v.*

Super, *a.* A Latin preposition, largely used as a prefix in composition, and denoting *above*, *over*, or *in excess*.

(*Chem.*) See CHEMICAL NOMENCLATURE.

Super, *n.* [Abbreviated from *supernumerary*.] A public performer, as an actor, engaged for some special occasion, and who does not belong to the stock company of the theatre.

Superable, *a.* [*Lat.* *superabilis*, from *supero*, to overcome.] Vincible; that may be overcome or conquered; as, a *superable* antipathy.

Superableness, *n.* State or quality of being superable or surmountable.

Superably, *adv.* So as may be overcome.

Superabound', *v. n.* [*Super*, and *abound*.] To abound to excess; to be very abundant or exuberant; to be more than sufficient.

Superabund'ance, *n.* Excessive abundance; more than enough.

Superabund'ant, *a.* [*Fr.* *surabondant*.] Being more than is sufficient; abounding to excess.

Superabund'antly, *adv.* More than sufficient.

Superadd', *v. a.* To add over and above; to add to what has been added.—To add, attach, or annex, as something extrinsic.

Superaddition, (*-dizh'un*), *n.* Act of superadding; state of being superadded.—That which is added.

Superadven'ient, *a.* [*Lat.* *superadveniens*.] Coming to the increase or assistance of something.—Coming unexpectedly.

Superangelic, (*-jël'ik*), *a.* Above the angels in nature or rank.

Superannate, *v. a.* [*Lat.* *super*, and *annus*, year.] To impair or disqualify by years, or old age and infirmity; as, a *superannuated* judge.—To allow to retire from service on half-pay or a pension, on account of old age or infirmity; as, a *superannuated* soldier or servant.

Superannuation, (*-ā'shun*), *n.* State of being too old for office or business, or of being disqualified by old age; state of being pensioned off as beyond service.

Superb', *a.* [*Fr.* *superbe*; *Lat.* *superbus*, from *super*.] Grand; magnificent; stately; splendid; as, a *superb* city.—Rich; ornate; elegant; as, a *superb* costume.—Showy; pompous; grandiose; as, a *superb* spectacle.

Superbipar'tient, (*-shent*), *n.* (*Math.*) A number that divides another number nearly, but not exactly, into two parts, leaving something over after the parts are equalized.

Superbly, *adv.* In a magnificent or splendid manner; richly; elegantly; showily; as, a lady *superbly* dressed.

Superb'ness, *n.* State of being superb or splendidly magnificent.

Supercargo, *n.* (*Naut.*) The person, in a merchant ship, appointed to superintend all the commercial transactions of the voyage.

Supercel'stial, (*-lēs't'yal*), *a.* Placed above the firmament.

Supercharge, *n.* (*Her.*) A bearing placed upon another.

Superciliary, (*-sil'-*), *a.* (*Anat.*) Situated above the eyebrows.

Supercilious, (*-sil'i-ūs*), *a.* [*Lat.* *super*, and *cilium*, an eyelid.] Expressing pride or haughtiness by raising the eyebrows; manifesting hauteur, or proceeding from it; as, a *supercilious* air, a *supercilious* glance.—Haughty; dictatorial; overbearing; stuck-up; as, a *supercilious* critic.

Supercil'iously, *adv.* Haughtily; dogmatically; with an air of contempt; in a supercilious manner; as, to speak *superciliously* to an inferior in station.

Supercil'iousness, *n.* State or quality of being supercilious.

Supercrescence, (*-krēs'sens*), *n.* [*Fr.* *surcroissance*.] That which grows upon another growing thing.

Supercrescent, (*-krēs'sent*), *a.* [*From* *Lat.* *supercrescere*.] Growing on some other growing thing.

Supercretaceous, **Supracretaceous**, (*-kre-tā'shas*), *a.* (*Geol.*) Lying above the chalk.

Supercu'rious, *a.* Intolerably curious or inquisitive.

Superdum'inant, *n.* (*Mus.*) In the descending scale, the sixth of the key.

Superem'inance, **Superem'ineucy**, *n.* Distinguished eminence; state of being supereminent.

Superem'inent, *a.* Eminent in a superior degree.

Superer'ogate, *v.* [*Lat.* *supererogare*.] To do more than is required by duty.

Supererogation, (*-gā'shun*), *n.* [*Lat.* *super*, and *erogatio*, from *erogo*, to ask from.] Performance of more than duty requires.

Works of supererogation. (*Theol.*) The belief that men may acquire merit in the eyes of God by good works, beyond what are necessary for salvation.

Supererog'atory, *a.* Performed to a degree not necessitated or required by duty; as, *supererogatory* attentions.

Superessential, (*-sēn'shal*), *a.* Essential above the constitution of a thing.

Superfe'tate, *v. n.* [*From* *Lat.* *super*, and *fetare*, to bring forth.] To conceive after a prior conception.

Superfetation, (*-lā'shun*), *n.* [*Fr.*; *Lat.* *superfetatio*.] (*Physiol.*) Conception of a fetus in a uterus which already contains one; the impregnation of a woman already pregnant;—the possibility of this has been denied; but there is abundant evidence to show that it is possible at a very early period of pregnancy.

Superficial, (-fish'al, a. [Fr. *superficiel*; Lat. *superficialis* — *super*, and *facies*, face.] Being on the surface; not penetrating the substance of a thing; shallow; as, *superficial* contents. — Flimsy; shallow; not deep or profound; reaching or comprehending only what is obvious or apparent; as, *superficial* knowledge.

Superficialist, (-fish'al-,) *n.* A superficial or shallow person; a smatterer; a sciolist.

Superficiality, *n.* Quality of being superficial.

Superficially, (-fish'al-,) *adv.* In a shallow or superficial manner.

Superficialness, (-fish'-,) *n.* State or quality of being superficial; position on the surface; shallowness. — Shallowness of observation, thought, or learning; flimsiness or slightness of knowledge; sciolism.

Superficies, (-fish'ez, *n.* [Lat., from *super*, and *facies*, face.] The upper face or side of a thing; the surface; the exterior part.

Superfine, *a.* Surpassing others in fineness; very fine; most fine; as, *superfine* cloth.

Superfinesness, *n.* State or quality of being superfine.

Superfluity, *n.* [Fr. *superfluité*; Lat. *superfluitas* — *super*, and *fluo*, to flow.] Superabundance; excess. — State of being superfluous; something that is beyond what is wanted.

Superfluous, *a.* More than is wanted or required; redundant; rendered unnecessary by superabundance; more than enough or sufficient.

Superfluous interval. (*Mus.*) An interval in excess of the regular diatonic interval. — *Superfluous sound* or *tone*, a sound or tone which comprises a semitone minor more than a tone.

Superfluously, *adv.* In a superfluous manner.

Superfluouslyness, *n.* State of being superfluous.

Superhuman, *a.* Divine; above or beyond what is human; as, *superhuman* force.

Superimpose, *v. a.* To lay or impose something else.

Superimposition, (-po-zish'un, *n.* Act of superimposing, or state of being superimposed.

Superimpregnation, *n.* Same as SUPERFETATION, *q. v.*

Superincumbence, **Superincumbency**, *n.* State or condition of being superincumbent.

Superincumbent, *a.* [Lat. *superincumbens*.] Lying, resting, or pressing upon something else.

Superinduce, *v. a.* [From Lat. *super*, *in*, and *duco*, to lead.] To bring in or upon, as an addition to something.

Superinducement, **Superinduction**, (-dük'-shun, *n.* Act of superinducing, or state of being superinduced.

Superintend, *v. a.* [Lat. *super*, and *intendo*.] To direct the mind or attention to a care over; to have or exercise the charge or oversight of; to control with the power of direction; to take care of with authority; to oversee or overlook; to manage, guide, or regulate; as, to *superintend* a business.

Superintendence, **Superintendencey**, *n.* Act of superintending for the purpose of direction, and with authority to exercise control or supervision; inspection; oversight; care; arrangement; direction; guidance.

Superintendent, *a.* Overlooking others with authority; managerial.

— *n.* One who has the superintendence, or the oversight, or charge of something, with the power of direction; an inspector; an overlooker; an overseer; a director; as, a *superintendent* of police.

Superior, *a.* [Lat., compar. of *superus*, that is above.] Higher; upper; more elevated in place or location; as, the *superior* part of an image. — Higher in rank or office; more exalted in dignity or distinction; as, a *superior* officer. — Surpassing others in the greatness, goodness, or value of any quality; higher or greater in merit or excellence; as, a man of *superior* understanding. — Being beyond the power or influence of; too great or firm to be subdued or affected by; — with *to*; as, his mind proved *superior to* the crisis.

(*Bot.*) Posterior; — said of an axillary flower. — Ascending, as a radicle.

— *n.* One who is more advanced in age than another. — One who is more elevated or exalted in rank, office, or dignity than another; as, a man respected by his *superiors*. — One who surpasses others in merit, dignity, excellence, or qualities of any kind; as, Macaulay has no *superior* as a graphic historian. — The chief of a monastery, convent, or abbey.

— *pl.* (*Print.*) Small letters or figures cast at the top of the shank of types, thus (1*). They are generally used for references to marginal or foot-notes, and in mathematical works.

Superior, (*Lake*,) the most westerly and most extensive of the great lakes of the St. Lawrence basin, in N. America, being the largest existing body of fresh water. It is of a triangular form, extending between Lat. 46° 30' and 49° N., and Lon. 85° and 92° 20' W. Its length, E. to W., is about 360 m., with a mean breadth of about 80 m., so that its area may be taken at about 28,600 sq. m. The mean depth is estimated at 900 feet, and the height of its surface at about 640 feet above the Atlantic. It receives upwards of 50 rivers, but none is of much importance except the St. Louis, which enters at its S.W. extremity, and the Rivière au Grand Portage. During the melting of the snow, these and the other rivers sweep into the lake vast quantities of sand, boulder-stones, and drift timber. It discharges itself at its E. extremity into Lakes Huron and Michigan, by the river and falls of St. Mary. This lake embodies many large and well-wooded islands, the chief of which is Isle Royal. The country of the N. and E. is a mountainous embankment of rock, from 200 to 1,500 feet in height;

the climate unfavorable, and the vegetation slow and scanty. Upon the S. the land is also high, generally sandy, sterile, and the coast dangerous, subject to storms and sudden transitions of temperature, and to fogs and mists. The mean heat in June and July is about 65° Fahr., but a frightful winter prevails for nine months of the year. The boundary line between Canada and the U. S. passes from Lake Huron up the river St. Mary, the outlet of Lake Superior, through the centre of the lower half of this lake, to the mouth of Pigeon River on the N. shore, between Isle Royal and the Canadian coast. The S. coast of the lake from the outlet to Montreal River belongs to the upper peninsula of Michigan. From this river to the River St. Louis at Fond du Lac the coast belongs to Wisconsin, and thence around to Pigeon River to Minnesota. Toward each extremity the lake contracts in width, and at the lower end terminates in a bay which falls into the outlet, the St. Mary's River, at the two opposite headlands of Gros Cape on the N. and Point Iroquois on the S. Thence to the mouth of the St. Mary's at Lake Huron is about 60 m. The navigation of this river is interrupted 20 m. below its source, at the Falls of St. Mary, or, as the place is commonly called, Sault Ste. Marie. Here the river descends in a succession of rapids extending 3/4 of a mile, from 18 to 21 feet, the fall varying with the stage of the water in Lake Superior. The obstruction caused by these rapids has been overcome by a canal constructed by the U. S. government, which affords access by vessels from the lake to Lake Huron. This canal is three miles long, with a single lock. A second canal was completed in 1894, and one on the Canada side in 1895. The number of boats passing here annually is three times as many as pass through the Suez Canal, and the tonnage considerably greater. The waters of Lake Superior are singularly pure and transparent. It never freezes over, though winter navigation is prevented by the shore ice. The lake is subject to very violent storms, in which the waves sometimes reach a height of 15 to 18 feet. The Pictured Rocks—cliffs of sandstone presenting fantastic forms, and colored with bands of red and yellow—have long been noted attractions of the beautiful and picturesque lake, and are visited by thousands of tourists annually. The rocks around the lake are very ancient, belonging principally to the Laurentian and Huronian systems of the Azoic series, overlaid in some places, especially on the S. side, with patches of the Lower Silurian. The prevalent Laurentian rock is orthoclase gneiss. Among the Huronian rocks are greenstones, slates, conglomerates, quartzites, and limestones. The Lower Silurian rocks are soft sandstones. There is everywhere much evidence of glacial action. The Huronian rocks are well stored with useful minerals. The copper and iron mines of the S. side are celebrated for their extent and richness. The richest copper-mines are situated near Kee-wee-naw Point. The metal occurs principally native, and sometimes in single masses of great size. Native silver is found associated with the native copper, and sometimes intimately mixed with it. Gold has been found in small specks at Nainseau on the British side. Lead ore occurs in some places. The beds of hematite, or red iron ore, at Marquette, on the American side, are of wonderful extent. They are situated about 12 m. inland. The ore is conveyed by a railway to the harbor, thence by vessels to Cleveland, on Lake Erie, and thence by rail to Pittsburg, where it is smelted. The water of Lake S., remarkable for its coldness, purity, and transparency, is inhabited by many kinds of fish, among which are the delicious white-fish and the gray trout.

Superior, in *Iowa*, a post-township of Dickinson co. **Superior**, in *Michigan*, a flourishing township of Washtenaw co.

Superior, in *Wisconsin*, a city, port of entry, and cap. of Douglas co., near the mouth of St. Louis river, on Lake Superior, about 250 m. W. N.W. of Green Bay; Lat. 46° 38' 31" N., Lon. 92° 31' 28" W. *Pop.*, including West Superior (1895) 27,337.

Superioress, *n.* A female superior in a conventual establishment.

Superiority, *n.* [L. Lat. *superioritas*.] State or quality of being superior; quality of being more advanced or exalted, or higher, greater, or more excellent than another in any respect; preëminence; ascendancy; predominancy; as, *superiority* of social position.

Superjacent, (-jā'sent, *a.* [From Lat. *superjacere*.] Lying above; as, *superjacent* strata.

Superlative, *a.* [Fr. *superlatif*; Lat. *superlativus*.] Being borne or lifted up high above others; highest or most eminent in quality or degree; supreme; surpassing all others; as, a man of *superlative* judgment.

(*Gram.*) Expressing the highest or utmost degree in the comparison of adjectives or adverbs.

— *n.* That which is highest, or most exalted or eminent.

(*Gram.*) The highest or third degree in the comparison of adjectives or adverbs; — formed in the Teutonic languages by the additional syllable *est*, as, *fairest*; or by the use of *most* or *least*.

Superlatively, *adv.* In a superlative manner.

Supermundane, *a.* Being above the world.

Supernal, *a.* [Lat. *supernus*.] Being in a higher place or region; having a more elevated location; as, *supernal* orbs. — Celestial; heavenly; relating to, or concerning, things above; as, *supernal* power.

Supernatant, *a.* [From Lat. *super*, and *natare*, to swim.] Swimming or floating on the surface; as, drift-wood *supernatant* on water.

Supernatation, (-tā'shun, *n.* Act of floating or swimming on the surface of a liquid body.

Supernatural, *a.* Miraculous; being beyond or exceeding natural laws or powers.

Supernaturalism, (-izm, *n.* State or quality of being supernatural.

(*Theol.*) The doctrine of supernatural influence, agency, or power.

Supernaturalist, *n.* One who holds the tenets of supernaturalism.

Supernaturalistic, *a.* Pertaining to or having reference to supernaturalism.

Supernaturality, **Supernaturalness**, *n.* State or quality of being supernatural.

Supernaturally, *adv.* In a manner exceeding or transcending the established course or laws of nature.

Supernumerary, *a.* [From Lat. *super*, and *numerus*, number.] Exceeding a number specified or prescribed; as, a *supernumerary* clerk. — Exceeding a necessary, usual, or required number or quantity; as, *supernumerary* expenditures.

— *n.* One who, or that which, is beyond the number stated, or beyond what is necessary or usual; particularly, a person employed to fill the place of another. See **SUPER**.

Superordination, (-nū'shun, *n.* The ordination of a person to fill a station already occupied.

Superphosphate of Lime, (-fos'fait, *(Chem.)* A mixture consisting of burnt bones 2 parts, sulphuric acid 1 part, and water 3 parts, allowed to stand for a few days in a warm situation. It is largely used as a manure for land. See **MANURE**.

Superpose, *v. a.* [Lat. *superponere*, *superpositum*.] To lay upon, as one kind of rock on another.

Superposition, (-zish'un, *n.* [Fr.] Act of superposing; as, the *superposition* of rocks. — State of being superposed.

Supersaturate, (-yu-rāte, *v. a.* To cause surplus saturation.

Supersaturation, (-rā'shun, *n.* Process of adding beyond saturation; also, state of being supersaturated.

Superscribe, *v. a.* [Lat. *super*, and *scribo*, to write.] To write or engrave on the top, outside, or surface; or, to write one's name or address on the outside or cover, as of a letter.

Superscription, (-skrip'shun, *n.* Act of superscribing. — That which is written or engraved on the outside, as of a letter; also, an impression of letters on coins.

Supersecular, *a.* Being above worldly or secular things.

Supersede, *v. a.* [Lat. *super*, and *sedeo*, to sit.] To refrain or desist from; to avoid; to set aside; to make void, inefficacious, or useless, by superior power, or by coming in the place of; — hence, to displace or render unnecessary; to suspend; as, to *supersede* the workings of reason. (*South.*) — To displace; to replace; to come or be placed in the room of; as, an employé is *superseded* by the appointment of another.

Supersedeas, *n.* [Lat., stay or set aside.] (*Law.*) A writ that lies to stay various ordinary proceedings.

Supersedure, (-sēd'yūr, **Supersession**, (-sēsh'un, *n.* Act of setting aside or superseding.

Supersensitiveness, *n.* Over-sensitiveness; morbid sensibility.

Supersensual, (-sēn'shwal, **Supersensuals**, *a.* Above the senses.

Superstition, (-stish'un, *n.* [Fr.; Lat. *superstitio*, from *supersto*, — *super*, *sto*, status, to stand.] Literally, a standing still, over, or by a thing; — hence, a gazing upon with wonder, awe, or fear, as something occult or mysterious. — Particularly, amazement, wonder, dread — especially of the divine or supernatural; excessive fear of divine agency; unreasonable religious belief; excessive exactness or rigor in religious opinions or practice; excess or extravagance in religious rites; the doing of things not required by God, or abstaining from things not forbidden; or, the belief of what is monstrous or absurd, or belief without evidence. — False religion; worship of idols or false gods; fetichism; a rite or practice proceeding from excessive scrupulousness in religion; — frequently used plurally in this sense, as a religion. — Scrupulous exactness; over-nicety. — Belief in the direct agency of superior powers, in omens or prognostics, or in certain extraordinary or singular events or manifestations.

Superstitious, (-stish'us, *a.* [Fr. *superstitieux*; Lat. *superstitiosus*.] Belonging or relating to, manifesting, or proceeding from, superstition; as, *superstitious* ceremonies. — Given or addicted to superstition; over-scrupulous and rigid in religious observances; full of idle fancies and scrupulosities in regard to religion; as, a *superstitious* person. — Excessively exact; scrupulous beyond necessity.

Superstitiously, (-stish'us-,) *adv.* In a superstitious manner.

Superstitiousness, (-stish'us-,) *n.* Quality of being superstitious.

Superstratum, *n.*; *pl.* **SUPERSTRATA**. A stratum or layer resting on another, or on something else.

Superstruction, (-struk'shun, *n.* Act of superstructing or building upon. — That which is built upon some foundation; a superstructure.

Superstructure, (-strukt'yur, *n.* Any structure or edifice built or raised on something else; particularly, any building raised on a foundation. — Anything erected on a basis or foundation.

Supertonie, *n.* (*Mus.*) The second above the key-note.

Supervene, *v. n.* [Lat. *super*, and *venio*, to come.] To come upon, as something extraneous; to happen; to take place or occur with relation to something else.

Supervention, (-vēr'shun, *n.* Act of supervening.

Supervisal, (-vīz'-) *v. a.* Act of supervising; supervision.

Supervise, (-vīz'-) *v. a.* [Lat. *super*, and *visuo* — *video*, to see.] To look over; to oversee; to superintend; to inspect; as, to *supervise* a literary work through the press.

Supervision, (-vîzh'un,) *n.* Act of supervising or overseeing; inspection; superintendence; supervisal.

Supervisor, (-vîzh'-) *n.* One who supervises; an overseer; an inspector; a superintendent.

Supervolute, *a.* (*Bot.*) Possessing a plaited and convolute arrangement in the bud.

Supination, (-nâ'shun,) *n.* [*Fr.*; *Lat. supinatio.*] Act of lying, or state of being laid, with the face skyward. — Act or art of turning the palm of the hand upward by rotating the radius upon the ulna.

Supinator, *n.* (*Anat.*) A muscle which serves to bend the palm of the hand upward.

Supine, *n.* [*Lat. supinus*, on the back.] (*Gram.*) A name given to two cases of verbal Latin substantives, the active supine being the accusative, and the passive (the introduction to which is unnecessary) being the ablative.

a. [*Lat. supinus.*] Lying on the back, or with the face upward; — correlative to *prone*; as, a *supine* posture. — Leaning backward, in a manner to be exposed to the sun. — Reposing; drowsy; indolent; listless; apathetic; careless; thoughtless; inattentive; as, *supine* credulity.

Supineness, *n.* State or quality of being supine.

Supper, *n.* [*Fr. souper*; *Ger. suppe*, soup.] That which is sipped or supped; specifically, the evening meal.

Lord's supper. See EUCCHARIST.

Supping, *n.* Act of taking supper.

Supplant, *v. a.* [*Fr. supplanter*; *Lat. supplantare* — *sub*, and *planta*.] Literally, to trip up the heels of; as, the rocking town *supplants* their footsteps. — Specifically, to displace, or take the place or stead of; to remove by stratagem or insidious arts.

— To overthrow; to overpower; to undermine; as, to *supplant* a recognized religious faith.

Supplantation, (-tâ'shun,) *n.* [*Fr.*] Act of supplanting.

Supplanter, *n.* One who supplants or undermines.

Supple, (*sûp'pl*), *a.* [*Fr. souple*, from *Lat. supplex* — *sub*, and *plico*, to fold.] Easily bent; pliant; flexible; as, *supple* fingers. — Yielding; characterized by ready compliance; not obstinate; lax; as, a *supple* conscience. — Fawning; flattering; toadyish; obsequious; bending to the will or humor of others; as, a *supple* manner. — That which makes pliant or flexible; as, *supple* government. — *Shaks.*

v. a. To render yielding or flexible; to make soft or pliant; as, to *supple* buckskin. — To make compliant or submissive; as, a mother *supples* the will of a child.

v. n. To become soft, pliant, or flexible; as, stones *suppled* into softness.

Supplement, (*sûp'pl*), *n.* [*Fr.*; *Lat. supplementum*, from *suppleo* — *sub*, and *pleo*, to fill.] An addition to anything by which it is made more full and complete; specifically, an appendix or addendum to a book or treatise to correct its errors, or make good its deficiencies.

(*Math.*) In geometry, the *supplement* of an arc is its defect from a semi-circumference; and, the *supplement* of an angle is its defect from two right angles. Two supplemental angles are together equal to right angles.

v. u. To supply; to add something, as to a writing, &c.

Supplemental, **Supplementary**, *a.* [*Fr. supplémentaire.*] Additional; added to supply what is wanted; by way of appendix, addendum, or erratum; as, *supplemental* law, a *supplementary* writing.

Suppleness, *n.* Quality of being supple or easily bent; pliability; as, *suppleness* of the limbs. — Readiness of compliance; quality of being yielding; facility; as, *suppleness* of mind.

Suppletive, **Suppletory**, *a.* [*From Lat. supplet.*] Supplemental; supplying deficiencies; as, a *suppletory* act.

Suppletory, *n.* That which supplies a deficiency.

Suppliant, *a.* [*Fr.*, from *Lat. supplex* — *supplico*.] Supplicating; asking or beseeching humbly, earnestly, or submissively; entreating; imploring. — Manifesting entreaty or petitioning; expressive of humble supplication.

n. A supplicant; an humble suer or petitioner; one who entreats or beseeches submissively.

Suppliantly, *adv.* In a suppliant manner.

Supplicant, *a.* [*Lat. supplicans.*] Supplicating; beseeching; entreating; asking submissively; as, a *supplicant* sinner.

n. One who supplicates, implores, or entreats; a petitioner who asks or beseeches earnestly and submissively.

Supplicate, *v. a.* [*Fr. supplier*; *Lat. supplico*.] To seek for by earnest prayer; to beseech or entreat for; as, to *supplicate* mercy. — To address in prayer or supplication; as, to *supplicate* the Almighty.

v. n. To ask with earnestness or submission; to entreat; to beseech; to implore; to beg; to petition; to crave.

Supplicatingly, *adv.* By way of supplication.

Supplication, (-kâ'shun,) *n.* [*Fr.*; *Lat. supplicatio.*] Act of supplicating; humble and earnest prayer in worship. — Earnest request, entreaty, petition, or solicitation.

Supplicator, *n.* One who entreats, beseeches, or supplicates.

Supplicatory, *a.* Characterized by supplication or entreaty; humble; submissive.

Supplier, *n.* One who supplies or provides.

Supplies, (-plîz'), *n. pl.* of SUPPLY. Things provided in sufficiency; — specifically, the sums granted by Congress, or any legislative body for defraying the public expenditure for the current year; as, to vote *supplies*.

Supply, *v. a.* (*imp.* and *pp.* SUPPLIED.) [*Fr. supplier*; *Lat. suppleo* — *sub*, and *pleo*, to fill.] To afford or furnish a sufficiency for; to provide, as means or necessities; to fill up, as when any deficiency occurs; to furnish or equip with what is demanded or required; as, to *supply*

a city with victuals, to *supply* one's pocket with cash. — To serve instead, or in lieu of; to act as substitute for. — To give or bring; to furnish; to accommodate with; as, trees *supply* a welcome shade from the sun.

n. That which supplies a want or deficiency; — also, that which is furnished; sufficiency of things for need or requirement. — Particularly, necessary stores or provisions, as for the subsistence of a large number of people; — generally in the plural; as, to receive *supplies*.

— *pt.* See SUPPLIES.

Support, *v. a.* [*Fr. supporter*; *Lat. supporto* — *sub*, and *porto*, to carry.] To bear, uphold, or sustain, as weight, &c.; to keep from falling; — used in a literal or physical sense; as, the foundation *supports* the house. — To sustain or endure without being overcome, exhausted, or vanquished in strength or character; as, to *support* pain, distress, or calamity. — To solace, cheer, succor, or defend under untoward or trying circumstances; to keep from fainting, sinking, or losing heart or courage; as, he *supported* his spirits with hopeful thoughts of the future. — To act or represent creditably; to assume or sustain a rôle, or part, with distinction or success; as, to *support* the character of Othello. — To maintain; to sustain with provisions and the necessary means of living; as, to *support* and bring up a family. — To supply funds for, or the means of continuing; to carry on; to uphold by aid or countenance; to maintain; as, to *support* government, to *support* a war, contest, or controversy. — To substantiate; to corroborate; to make good; to verify; to validate; as, the evidence will not *support* the charge. — To vindicate; to maintain, sustain, or defend successfully; as, to *support* one's own interests when assailed or jeopardized. — To adhere to; to uphold by aid or countenance; to attach, as a partisan of; as, to *support* a friend, cause, or party. — To act as one's aid, attendant, or honorary assistant on some public occasion; as, to *support* a lady with one's arm, to *support* a chairman by acting as croupier, &c.

To *support* arms. (*Mil.*) To hold the rifle or musket vertically at the left shoulder, sustained by having the hammer rest on the left fore-arm, which is passed across the breast.

n. Act or operation of supporting, or of upholding or sustaining. — That which supports, sustains, upholds, or keeps from falling, as a pillar, prop, stay, or foundation of any kind. — That which maintains life; maintenance; subsistence; necessities of life, or income; continuance in any state, or preservation from falling, sinking, or failing; that which sustains any person or thing, without suffering him or it to fail, decline, or languish; that which contributes to or relieves; aid; help; succor; assistance.

Points of support. (*Arch.*) The collected areas on the plan, of the piers, walls, columns, and the like, upon which an edifice rests, or by which it is supported.

Rights of support. (*Law.*) An easement or servitude by which the owner of a house has a right to rest his timbers on the walls of his neighbor's house.

Supportable, *a.* That may be supported, upheld, or sustained; that may be borne, endured, or tolerated; as, a *supportable* loss. — That may be maintained or defended; as, a *supportable* cause.

Supportableness, *n.* State of being supportable.

Supportably, *adv.* In a supportable manner.

Supporter, *n.* One who, or that which, supports, upholds, sustains, maintains, succors, and the like. — Particularly, a partisan; an ally; an adherent; one who espouses a part or side; as, he is an able *supporter* of his party in Congress.

(*Surg.*) Same as TRUSS, *q. v.*

— *pl.* (*Ship-building.*) The knee-pieces under the cathead.

(*Her.*) Figures placed on each side of the scroll, as if to support it.

Supposable, (-pôz'a-bl,) *a.* That may be supposed, or imagined to exist; as, a *supposable* fact.

Suppose, (-pâz,) *v. a.* [*Fr. supposer*; *Lat. suppono.*] To lay down or state, as a proposition or fact that may exist or be true, though not known or believed to be true or to exist; or, to imagine or admit to exist, for the sake of argument or illustration; to assume to be true or real; as, let us *suppose* that what has been advanced is fact. — To receive as true; to credit or believe without inquiry or examination; to imagine; as, you must not *suppose* him to lack good qualities. — To imply or infer by natural or intelligent laws; to require or presume to exist or be true; as, one rogue always *supposes* roguery in another.

v. n. To think; to make supposition; to believe, consider, or imagine.

Supposer, (-pâz'-) *n.* One who supposes.

Supposition, (-zîsh'un,) *n.* [*Fr.*; *Lat. suppositio.*] Act of supposing; act of asserting, imagining, or admitting as true or existing, what is known not to be true, or what is not proved. — The position of a thing known not to be true or not substantiated; hypothesis; imagination; as, the fallibility of a *supposition*. — Conjecture; surmise; speculation; guess.

(*Mus.*) The use of two successive notes of equal value as to time, one of which being a *discord*, supposes the other to be a *concord*.

Suppositional, (-zîsh'un-) *a.* Hypothetical; conditional.

Supposititious, (-pâz-i-tîsh'us,) *a.* Substituted; put by trick, artifice, or stratagem in the place of another; counterfeit; spurious; not genuine; as, a *supposititious* child.

Supposititiously, (-tîsh'us-ly,) *adv.* By supposition; hypothetically.

Suppositive, (-pôz') *a.* Implying supposition.

n. A word expressive or implicative of supposition, as *if*.

Suppositively, *adv.* By, with, or upon supposition.

Suppository, *n.* [*Lat. suppono*, I place under.]

(*Med.*) A pill or bolus introduced into the rectum, where it gradually dissolves. Opium is sometimes usefully applied in this way to allay irritation of the bladder and the neighboring parts.

Suppress, *v. a.* [*Lat. suppresso.*] To overthrow; to quell; to put down; to subdue; to overthrow, and crush or destroy; as, to *suppress* a riot, or revolt. — To repress; to restrain; to keep in; to withdraw from vent or utterance; as, to *suppress* a sigh. — To conceal; not to disclose or reveal; to retain without communication or making public; to stifle; as, to *suppress* the truth about anything. — To hinder; to restrain; to stop from flow or circulation; to obstruct from emissions or discharges; as, to *suppress* a hemorrhage.

Suppressible, *a.* That may be suppressed.

Suppression, (-prêsh'un,) *n.* [*Fr.*; *Lat. suppressio.*] Act of suppressing, crushing, or destroying; act of holding back or retaining from vent, utterance, disclosure, or circulation; concealment; state of being suppressed; the keeping back of anything from public knowledge or notice; as, the *suppression* of an insurrection, the *suppression* of facts, of evidence, of a pamphlet, &c. — The stoppage, obstruction, or morbid retention of discharges, or of a cutaneous eruption.

(*Gram.*) A figure sometimes so called by which words are omitted in a sentence which are nevertheless to be understood as necessary to a perfect construction; as, for instance, in most languages, the repetition of a noun is avoided where it is coupled with a pronoun in one branch of the proposition; e. g. "This (horse) is my horse," or "This horse is mine" (horse). — See ELLIPSIS.

Suppressive, *a.* Subduing; withholding; tending to suppress; concealing; as, *suppressive* measures.

Suppressor, *n.* [*Lat.*] One who suppresses or subdues.

Suppurate, *v. n.* [*Lat. suppuro*, *suppuratus* — *sub*, and *pus*, *puris*, pus.] To form or generate pus or matter; as, an abscess *suppurates*.

v. a. To cause to generate pus, as a boil.

Suppuration, (-râ'shun,) *n.* [*Fr.*; *Lat. suppuratio.*] The process of producing or of forming pus, as in a wound or abscess. — Pus or purulent matter.

Suppurative, *a.* [*Fr. suppuratif.*] Promoting suppuration; having a tendency to suppurate.

n. A medicine that excites suppuration.

Supra. [Another form of SUPER, *q. v.*] A Latin preposition, used as an English prefix in certain compound words, and indicating or implying the sense of *over*, *above*, *beyond*.

Supra-axillary, **Suprafoliaceous**, (-fâ-lî-a'-shus,) (*Bot.*) Inserted into the stem above the leaf, petiole, or axil, as a peduncle.

Supradeconipound, *a.* (*Bot.*) Compound in a triple degree.

Supralapsarians, *n. pl.* (*Ecc. Hist.*) Those who, among Calvinists, assert that the fall of Adam, with all its consequences, was predestinated from all eternity; — opposed to *sublapsarians*, or *INFRA LAPSARIANS*, *q. v.*

Supralapsarianism, (-izm,) (*Theol.*) The doctrinal tenets held by the Supralapsarians.

Supravulgar, *a.* Above vulgar, plebeian, or commonplace reach or acceptance.

Supremacy, *n.* [*Fr. suprématie.*] State of being supreme, or in the highest degree of station or power; holding the most exalted place in authority, government, or power; as, the *supremacy* of the law, the *supremacy* of the crown.

Supreme, *a.* [*Fr.*; *Lat. supremus*, superl. of *superus*, upper, higher.] Highest in authority; holding the most exalted place in government or power; as, the *Supreme* Court of the U. States. — Highest; greatest, or most excellent; as, *supreme* happiness. — Utmost; greatest possible; not to be surpassed; — usually in combination with words implying or expressing a bad sense; as, *supreme* folly, *supreme* humbug, in other words, lolly or humbug in the superlative degree.

(*Bot.*) Located at the highest part or point.

Supremely, *adv.* In the highest degree; with the highest authority; to the utmost extent; superlatively.

Suquamish, the former name of a W. co. of Washington, on the Pacific, and intersected by Sawamish river. These names are now obsolete.

Sur. A prefix borrowed from the French, contracted from *Lat. super*, *supra*, and denoting *above*, *beyond*, *over*, *upon*.

Surabaya, **Sourabaya**, (*soo-ra-bî'a*), a large seaport-town of Java, on the N.E. coast, and cap. of one of the 3 provs. into which the island is divided by the Dutch; *Lat.* 7° 12' 30" S., *Lon.* 112° 44' 7" E. It is situated at the mouth of a navigable river, 1½ mile from the seashore. The river separates the European part of the town from the Chinese and the native quarter. The houses are very good, and some are elegant, particularly the country seats of private individuals. It is situated within that narrow strait which is formed by the islands of Java and Madura, and is defended by batteries. The mouth of the river is also defended. *Pop.* 125,000.

Sural, *a.* [*From Lat. sura*, the calf of the leg.] (*Anat.*) Pertaining to, or situated in, the calf of the leg; as, the *sural* artery.

Surat, (*soo-rat'*), a city of British India, and the cap. of a district of its own name, in the Bombay presidency, on the river Taptee, about 20 m. from its mouth, and 150 m. from Bombay. It is fortified, and carries on a very extensive trade.

Surbase, *n.* (*Arch.*) The upper base of a room, or, rather, the cornice of the dado.

Surbased, (-bâst,) *a.* (*Arch.*) Having a surbase.

Surbasement, *n.* (*Arch.*) The trail of any arch or vault which describes a portion of an ellipse.

Sur'-bed, *v. a.* To set edgewise, as a stone.

Surcharge, *v. a.* [Fr. *surcharger*.] To overload; to overburden; as, to *surcharge* an estate with mortgages. (*Law*.) The putting, by a commoner, of more beasts on the common than he has a right to. — (*Equity*.) The showing, as an omission in an account for which credit ought to have been given.

Surcharger, *n.* One who overburdens.

Surcingle, (*-sing'gl*), *n.* [Fr. *sur*, and Lat. *cingulum*, a belt, from *cingo*, to gird.] A belt, band, or girth which passes over a saddle, or over anything laid on a horse's back, to bind and keep it in its place.

(*Ecll.*) The girdle of a cassock, by which it is fastened around the waist.

Surcoat, *n.* [O. Fr. *surcot*.] Formerly, any garment worn over defensive armor; the term, however, is more generally applied to the long and flowing drapery of knights, anterior to the introduction of plate-armor, and which was frequently emblazoned with their family arms (Fig. 591); a tabard (*Surholt*). — The name given to a short robe, worn over the tunic or long robe, terminating a little below the knee, forming part of the costume of ladies at the close of the 11th century.

Surculose, *a.* (*Bot.*) Yielding suckers, or shoots resembling them.

Surd, *a.* [Lat. *surdus*, deaf.] (*Math.*) Involving surds; radical; as, a *surd* expression, quantity, or number.

(*Pron.*) Atonic; aspirate; toneless; not sonant or intoned; — expressed of articulate sounds, or alphabetical letters, as *s, f, p*, compared with *z, v, b*, which are sonant or vocal.

(*Arith.* and *Algebra*.) A magnitude which is inexpressible by rational numbers. Thus, the square root of 2, the cube root of 3, &c., are numbers which cannot be expressed exactly in the ordinary notation, and are represented by prefixing the radical signs indicating the operations, viz.: $\sqrt{2}$, $\sqrt[3]{3}$. Such quantities are otherwise called *irrational* or *incommensurable*.

Sure, (*shoor*), *a.* (*comp.* *SURER*; *superl.* *SUREST*.) [Fr. *sûr*; contracted from Lat. *securus*.] Positively knowing; having full certainty or confidence; believing beyond suspicion or doubt; with implicit trust or unquestioning reliance; as, I am *sure* she means well. — Certain or confident of obtaining or of retaining; as, if he continues as he has begun his success is *sure*. — Unfailing; firm; infallible; stable; steady; permanent; fit, suitable, or proper to be relied or depended on; not liable to be broken or disturbed; not susceptible of failure; as, a *sure* foundation.

To be *sure*, certainly: of course; without doubt or question; as, Then the man is more rogne than fool? To be *sure* he is. — To make *sure*, to make positive or certain; to render, manage, or contrive so that there shall be no prospect or apprehension of default or failure; as, make *sure* of the chance while you have it.

—*adv.* Certainly; infallibly; undoubtedly; firmly; without danger of falling or failing; as, "Tis pleasant, *sure*, to see one's name in print." — *Byron*.

Sure, (*soor*), *a.* a river of Belgium, joining the Moselle, 7 m. from Treves, after a course of 90 miles.

Sure-footed, *a.* Not liable to stumble or fall; as, a *sure-footed* mule.

Surely, *adv.* In a *sure*, certain, or reliable manner; infallibly; undoubtedly; positively; as, man shall *surely* die.

—Steadily; firmly; with *sure* hold or tread; without danger of stumbling or falling; as, to walk *surely*.

Surety, (*shoor'ty*), *n.* [Fr. *sûreté*; Lat. *securitas* — *securus*.] State of being *sure*; certainty; security; indubitableness; as, he knew it of a *surety*. — That which confirms, bases, or makes *sure*; foundation of stability; ground or support of confidence or security; as, what *surety* have I that you will keep your word?

(*Law*.) A person who binds himself for the payment of a sum of money, or for the performance of something else, for another, who is already bound for the same. A *S.* differs from a *guarantor* in this, that the latter cannot be sued until after a suit against the principal. It differs from *bail* in this, that the latter actually has, or is by law presumed to have, the custody of his principal, while the former has no control over him. The bail may surrender his principal on discharge of his obligations; the surety cannot be discharged by such surrender.

Suretyship, *n.* State or condition of being surety; the obligation of a person to answer for another.

Surf, *n.* [O. Fr. *surflot*, from *sur*, and *flotter*, to float.] The swell of the sea which breaks upon the shore, or upon sand-banks or rocks.

Surface, (*sur'fas*), *n.* [Fr.; Lat. *superficies* — *super*, and *facies*, face.] The upper face or side of anything; as, he does not look beyond the *surface*. — The exterior part of anything that has length and breadth; one of the limits that terminates a solid; superficies; the upper stratum of the soil; outside; as, the earth's *surface*, the *surface* of the body, &c.

(*Geom.*) The boundary of a solid, or that which has length and breadth, but no thickness. A surface may be conceived to be generated by the motion of a straight or curved line, just as the latter may be generated by the motion of a point. A surface is said to be *plane* when a right line can be applied to it everywhere and in every direction; in other cases it is called a *curved surface*.

—*v. a.* To give a smooth or plane surface to. — To work over the surface of, as ground, in prospecting for gold.

Surfacer, (*-sér*), *n.* A planing-machine for wood.

Surf-boat, *n.* (*Naut.*) Smaller LIFE-BOAT, *q. v.*

Surf-duck, *n.* SURF-COOTER, *n.* (*Zoöl.*) See SEA-COOT.

Surfeit, (*ser'fit*), *v. a.* [Fr. *sur*, and *faire*, fail; Lat.

facio, to make.] To feed with meat or drink so as to oppress the stomach and derange the functions of the digestive system; to over-feed, and produce a nausea or uneasiness in; to cram or gorge with food. — Hence, to clog; to sate; to fill with satiety and loathing; as, he *surfeits* one with his obsequiousness.

—*v. n.* To be fed till the system is oppressed, and qualmsickness or indigestion ensues; as, they *surfeited* on the good things set before them.

—*n.* (*Med.*) An indisposition caused by overcharging the stomach, by an excess in eating or drinking; generally the former, and most frequently by partaking to repletion of some kind of food. A surfeit, however, frequently occurs to persons of a very temperate habit, and from partaking very sparingly of the article that caused it. Shell-fish, cheese, dried meat, or sausages often produce what is called a *S.*, indicated by sickness, pain in the head, a hot, dry skin, and a most uncomfortable sensation generally. An emetic in all cases is the best and quickest remedy; a glass of warm water, with a teaspoonful of salt in it, will always effect the purpose if no other emetic is at hand.

—Hence, by analogy, nausea or disgust resulting from excess; satiety; gnt; as, flattery was lavished on her even to *surfeit*.

Surfeiter, *n.* One who surfeits; a glutton.

Surge, (*serj*), *n.* [From Lat. *surgo* — *surrigo* — *sub*, and *rego*, to stretch.] The rising or swelling of a wave or billow; also, a large wave, billow, or comber; a great rolling swell of water; as, the foaming *surge*.

(*Ship-building*.) In a capstan, the tapered part in front of the whelps, between the chocks, on which the messenger may surge.

—*v. a.* (*Naut.*) To render, as a rope, round a pin or kevel; as, to *surge* a hawser.

—*v. n.* To swell; to rise high and roll, as waves; as, *surging* billows.

(*Naut.*) To slip back; as, the messenger *surges*.

Surgeless, *a.* Smooth; calm; without surges.

Surgeon, (*sur'jun*), *n.* [O. Fr. *chirurgien*; Gr. *cheir*, the hand, and *ergon*, work.] One who practises surgery.

(*Zoöl.*) A fish of the genus *Acanthurus* (*A. phlebotomus*), which is 6 to 10 inches long, and has a movable spine at the base of the tail.

Surgeon-apothecary, one who unites the practice of surgery with that of the dispensation of drugs or medicines.

Surgeon-dentist, a dental surgeon.

Surgeoney, **Surgeonship**, (*sur'jun-se*), *n.* Office or employment of a surgeon in the naval or military service.

Surgeon-general, *n.* A general officer of the staff, entrusted with the entire control of the medical department of the United States army. Under Brigadier-General William A. Hammond and Major-General Joseph K. Barnes, the medical and hospital service of the United States army has become the model medico-military establishment of the world.

Surgery, (*sur'jur-y*), *n.* [Contracted from O. Eng. *surgeonry*.] That branch of the science of medicine which treats of manual operations for the healing of diseases or injuries of the body; the art of healing external diseases and injuries by manual operation. — *S.* is the oldest branch of medical science, as it was necessary to dress wounds and injuries received in the wars, while the primitive manner of living of the ancients seldom produced internal diseases. Already 50 years before the Trojan war, Melampus, Chiron, and his pupil Æsculapius, accompanied the Argonauts, and during the Trojan War two sons of Æsculapius, Machaon and Podalirius, attended the wounded Greeks. Later, the Greek and Arabic physicians combined the practice of medicine and surgery, as is shown in the works of Hippocrates, Galen, Celsus, &c. Still, during the time of Hippocrates certain surgical operations were separated from medicine, and physicians forbidden to perform them. The Arabs had a particular disgust for operations, and it was considered shameful for physicians to perform any. In the Middle Ages, the monks and priests were almost the only ones who practised this science; after the Church Council held in Paris in 1163, they were forbidden to perform any bloody operation, and surgery was again separated from medicine; by this separation the barbers and bathers took up the practice, and continued for many centuries to be the sole surgeons. The development of the study of anatomy, however, soon placed *S.* in a different position, and the renowned physicians of the day renounced it again with the study of medicine; schools were established for the tuition of medicine and surgery. *S.* is founded upon a thorough knowledge of anatomy, and, although medicine and *S.* are taught together as one science, every physician is not capable of performing the finer or the more important operations; *S.* requires particular natural qualities as well as practice and experience. See ANTISEPTIC *S.*

Surgical, (*sur'jik-al*), *a.* Pertaining, or relating to surgeons or surgery; performed or accomplished by means of surgery; as, a *surgical* operation.

Surgy, (*sur'jy*), *a.* Full of surges; rising in surges or billows; as, the *surgy* ocean.

Surinam. See GUIANA (DUTCH).

Sur'ly, *adv.* In a surly manner.

Sur'liness, *n.* Quality or state of being surly.

Sur'loin, *n.* Same as SIRLOIN, the more usual orthography.

Sur'ly, *a.* (*comp.* *SURLIER*; *superl.* *SURLIEST*.) [A. S. *surelice* — *sur*, sour, and *lic*, like.] Gloomily sour or morose in temper or manner; crabbed; churlish; rough; cross, rude, or snarling; sternly sour; as, a *surly* dog, a *surly* spirit. — Rough; dark; lowering; tempestuous; as, *surly* weather.

Surmise, (*-miz'*), *v. a.* [From Lat. *super*, upon, above, and *mitto*, to send.] To put forth, as an accusation or suspicion against a person; to suspect; to imagine without certain knowledge; to entertain thoughts that something does or will exist, but upon slight evidence; to infer or suppose.

—*n.* The thought or imagination that something may be, of which, however, there is no certain, strong, or reliable evidence; conjecture; suspicion; supposition; as, a false *surmise* evoked by envy.

Surmiser, *n.* One who surmises.

Surmount, *v. a.* [Fr. *surmonter* — *sur*, and *monter*, to mount.] To mount or rise above or higher than.

"The mountains of Olympus and Atlas *surmount* the clouds." *Raleigh*.

—To conquer, or be superior to; to overcome; to subdue; to vanquish; as, to *surmount* a difficulty. — To surpass; to exceed; to go beyond; as, "to *surmount* the reach of human sense." — *Milton*.

Surmountable, *a.* Superable; that may be surmounted or overcome; as, a *surmountable* obstacle.

Surmounted, *a.* (*Arch.*) Denoting an arch or dome which rises higher than a semicircle.

(*Her*.) A term denoting the position of a charge over which another

charge of different color or metal is laid. The annexed figures, which may respectively be blazoned: *sable*, a pile argent surmounted by a chevron gules; and *argent*, a cross gules surmounted by another *or*.

Fig. 2448.

Surmounter, *n.* One who, or that which, surmounts.

Surmul'et, *n.* (*Zoöl.*) See MUGILIDÆ.

Surmulot, *n.* [Fr.] (*Zoöl.*) The brown or Norway rat.

Surname, *n.* [Fr. *surnam*; Lat. *super*, and *nomen*, name.] The family name of an individual; an additional name which, over and above the baptismal or Christian name, becomes a family name. — An appellation supplemented to the original name. See NAME.

—*v. a.* [Fr. *surnommer*.] To style or call by an appellation added to the original name; as, William I. of England, *surnamed* The Conqueror.

Surmountal, *a.* Pertaining or relating to, or constituting, a surname.

Surpass, *v. a.* [Fr. *surpasser* — *sur*, and *passer*, to pass.] To go beyond in anything good or bad; to exceed; to excel; to outdo; to transcend; as, a success that *surpassed* one's expectations.

Surpassable, *a.* That may be surpassed or exceeded.

Surpassingly, *adv.* In a very excellent manner, or in a degree surpassing others.

Surplice, (*-plis*), *n.* [Fr. *surplis*; Lat. *superpellicium* — *super*, and *pellicius*, made of skins.] (*Ecll.*) The white outer garment worn by an officiating clergyman in the Roman Catholic, Episcopal, and certain other churches. It is a long linen robe with wide sleeves, used by all but bishops. The word *S.* was introduced about the 12th century, but the garment that it represents was an ecclesiastical vestment at an early date, and was probably derived from the white linen ephod of the Jewish priests.

Surplus, *n.* [Fr., from Lat. *plus*, more.] Overplus; superfluity; that which is left when use is satisfied; excess beyond what is prescribed or wanted; as, a *surplus* of profit.

Surplusage, *n.* Surplus; overplus; excess; as, *surplusage* of provisions beyond requirements.

(*Law*.) See INDUCEMENT.

Surprisal, (*-priz'*), *n.* Act of surprising, or coming upon suddenly or unexpectedly; or, the state of being taken unawares; as, the *surprisal* of a convoy.

Surprise, (*-priz'*), *v. a.* [Fr., from *surprendre*; Lat. *super*, and *prendre*, to seize.] To fall or come upon suddenly or unexpectedly; to take unawares; as, the troops were *surprised* by an ambuscade. — To strike or confuse with wonder or astonishment; to fill with amazement by something sudden, strange, or remarkable, either in conduct, language, or circumstance, or by the appearance of something singular or unusual; as, his absence *surprised* everybody. — To confuse; to perplex; to throw the mind into disorder by something suddenly presented to the view or to the thoughts.

—*n.* Act of surprising, or of coming upon unawares, or of taking suddenly and without preparation; as, the brigands were taken by *surprise*. — State of being surprised, or taken unexpectedly; — used, sometimes, loosely, in a legal sense, to indicate or imply fraud, or something having affinity with fraud. — An emotion occasioned by some sudden or unexpected occurrence; wonder; astonishment; amazement, in a minor or moderate degree; as, he came into a fortune to his own *surprise*.

Surprise party, in the U. States, a party of persons who assemble by agreement, and without invitation, at the house of a common friend, taking with them a supply of comestibles.

Surpriser, *n.* One who, or that which, excites surprise.

Surprising, (*-priz'*), *p. a.* Exciting surprise; unexpected; of a nature to cause a more or less degree of wonder and astonishment; as, our chief is a man of *surprising* patience, he had a *surprising* escape of it, &c.

Surpris'ingly, *adv.* In a surprising manner.

Surpris'ingness, *n.* State or quality of being surprising.

Surrebut', *v. n.*; **Surrebut'ter,** *n.* (*Law.*) See **PLEADING.**

Surrejoin', *v. n.*; **Surrejoind'er,** *n.* (*Law.*) See **PLEADING.**

Surren'al, *a.* (*Anat.*) Situated above the kidney.

Surrender, *v. a.* [*Fr. se rendre*, to yield; *Lat. super*, and *reddo*, to yield.] To yield, or give or deliver up, as possession, to the power of another upon compulsion or demand; as, to *surrender* one's self to legal authority, to *surrender* a ship. — To give up; to resign in favor of another; to cede; to resign; as, to *surrender* a property to its rightful owner. — To yield to any influence, power, or passion; — with the reciprocal pronoun; as, to *surrender one's self* to despair.

(*Law.*) To yield; to give or deliver up; to render; as, to *surrender* a fugitive from justice.

—*v. n.* To yield; to give one's self into the hands or power of another; as, Strasburg *surrendered* at last, after an obstinate resistance.

—*n.* Act of surrendering, yielding, or resigning one's person, or the possession of something, into the power of another; as, the *surrender* of a people's liberties.

(*Law.*) The giving up of a principal into lawful custody by his bail. — The extradition of a fugitive from justice by a foreign state. See **EXTRADITION.** — A deed by which the tenant of a particular estate or interest conveys such interest to the remainder-man or reversioner, immediately expectant on the determination of that estate, as, for instance, when a tenant for years gives up his lease to the freeholder.

Surrenderee', *n.* (*Law.*) The person to whom a surrender is made.

Surrenderer, *n.* (*Law.*) One who makes a surrender.

Surreption, (*-rēp'shun*), *n.* [*Lat. surreptio*.] Act or process of obtaining in a surreptitious, stealthy, or clandestine manner. — Stealth; a coming upon in an unperceived manner. (*R.*)

Surreptitious, (*-tish'us*), *a.* [*L. Lat. surreptitius* — *surreptio*, surreptus — *sub*, and *rapio*, to seize and carry off.] Performed by stealth, or without proper authority; clandestine; made or introduced in a fraudulent manner; as, a *surreptitious* copy of a book.

Surreptitiously, *adv.* In a surreptitious manner.

Surrey, a co. of England, bounded N. by Berks, Bucks, and Middlesex, S. by Sussex, E. by Kent, and W. by Berks and Hants; area, 759 sq. m. The *Way*, the *Mole*, and the *Wandle* are its chief rivers. The surface is beautifully diversified by hill and vale, but the agriculture is backward. In the N., in the vicinity of London, there are numerous market-gardens, the produce of which is sent to supply the markets of the metropolis. *Chief towns.* Croydon, Guildford, Kingston-on-Thames, and Reigate.

Surrogate, *n.* [*Lat. surrogatus, surrogare*.] A deputy; a delegate; a substitute; a proxy. — In England, an officer who acts as deputy for the chancellor of a diocese. — In certain of the U. States, an officer who exercises supervision over the probate of wills and testamentary proceedings, and the settlement of estates.

Surround', *v. a.* [*Fr. sur*, and *rond*, a round.] To encompass; to encircle; to environ; to inclose on all sides; as, to *surround* a town. — To lie or be on all sides; to fence about; as, the sea *surrounds* an island.

(*Mil.*) To invest or beleaguer, as a city or fort; to close around, as an army between hostile forces, in such a manner as to cut off its retreat.

—*n.* A method of hunting certain animals, as the buffalo, by surrounding a herd of them, and driving them over a precipice, or into a gully or ravine, or other place from which their escape is rendered impossible.

Surrounding, *n.* An encompassing or enclosing.

—*pl.* Those things which lie around some particular object; external conditions or circumstances.

Surry, in *Maine*, a post-township of Hancock co., 65 m. N.E. of Augusta.

Surry, in *New Hampshire*, a post-township of Cheshire co., 45 m. S.W. of Concord.

Surry, in *N. Carolina*, a N.N.W. co., bordering on Virginia; area, 490 sq. m. *Rivers.* Ararat, Fisher's, and Yarkin. *Surface*, hilly; *soil*, generally fertile. *Min.* Iron. *Cap.* Dobson. *Pop.* (1897) 20,250.

Surry, in *Virginia*, a S.E. co., bordering on the James river; area, 490 sq. m. *Rivers.* Blackwater, and the James. *Surface*, undulating; *soil*, sandy. *Cap.* Surry Court-House, 60 m. S.E. of Richmond. *Pop.* (1897) 9,260.

Sursolid', *n.* (*Math.*) The fifth power of a number.

—*a.* Pertaining or relating to, or involving, the fifth power of a number; as, a *sursolid* problem.

Surtout, (*-tōōl'*, or *-tōō'*), *n.* [*Fr. sur-tout*, over all.] Originally, a man's overcoat; but, in modern usage, an upper coat with wide skirts reaching down to near the knee, and enveloping the thighs.

Susuga, (*-soo-roo'ya*), a maritime town of Japan, in the island of Nippon, 90 m. from Jeddo. *Pop.* Large, but unascertained.

Surveillance, (*sur-val'yans*), *n.* [*Fr.*, from *surveiller*, to have an eye upon — *sur*, and *veiller* — *Lat. vigilare*, to watch.] A keeping watch over; inspection; oversight; as, a person held under *surveillance* by the police.

Surveillant, (*-ral'yant'*), *n.* [*Fr.*] One who watches over, or plays the spy upon, another; an overlooker.

Survey, (*-vā'*), *v. a.* [*From Lat. super*, over, and *video*, to see.] To overlook or view with attention, as from an elevated place; to inspect or scrutinize, as things at a distance; as, to *survey* the panorama of a country before one's eyes. — To scrutinize; to examine; to inspect narrowly; as, to *survey* a person from head to foot. — To measure and value; to ascertain and determine the state or condition of; as, to *survey* a stranded ship, to *survey* a building damaged by fire, &c. — To determine, as the boundaries and superficial extent of fields, estates,

territorial tracts, &c.; to examine or ascertain, as the position and distances of objects on the sea-shore, the depth of water, nature of the bottom, &c., by the application of trigonometrical principles; as, to *survey* land, to *survey* a coast or harbor. — To examine, ascertain, or determine, as boundaries, tenures, rents, value, &c.

—*n.* A general or panoramic view or prospect, as from an elevated place. — A particular or attentive view; a looking on with care or close scrutiny; a searching, official examination of all the parts or particulars of a thing, with an intent to ascertain and determine its condition, quantity, quality, or value; as, a *survey* of buildings, public works, stores or provisions, wrecked goods, &c. — Act of surveying; act or operation by which the boundaries and superficial extent of tracts of land or water, &c., are examined and determined; also, a plan and description exhibiting the dimensions, contour, position, &c., of any line or portion of country; as, the United States *Survey*. — A district assigned to the collector of the customs, under the supervision and authority of a special officer.

Trigonometrical survey, a survey on a large scale by means of a series of triangles, as for making a geometrical map of a country, or for measuring an arc of the terrestrial meridian.

Surveying, *n.* The art of determining the boundaries and superficial extent of tracts of ground, the plans of towns, the courses of roads and rivers, &c. In *S.*, a representation of all the above-named objects is made, and frequently the slopes of the hills are delineated as the whole would appear if projected on an horizontal plane. When railways or canals are to be constructed, a survey of the ground is combined with the operations of levelling, in order to obtain, besides an horizontal plane, the forms of vertical sections of the ground along the proposed course of the railway or canal, and thus to ascertain the quantities of earth to be removed. The American standard unit of land-measure is the acre, which contains 4 roods; and a rood is subdivided into 40 poles or perches, each pole containing 30¼ square yards. In *S.*, however, for linear measurements, a chain is used, consisting of 100 links; and its entire length is such that one *square chain* is equal to the *tenth* part of an acre. Surveyors usually set down their measurements of angles as in general less liable to error than the measurements of linear distances when the surface to be surveyed is extensive; the surveyor only uses the chain in order to obtain the requisite data for a trigonometrical computation. For this purpose the theodolite is the most convenient instrument; it is universally used for the measurement of angles in land-surveying; and from the nature of its construction, gives the angles reduced to the plane of the horizon, and consequently renders a calculation for that purpose unnecessary. For the purposes of sketching and filling in the details of a map, the plane table and the prismatic compass are also used; and a compass and needle accompany the theodolite, in order to determine the bearing of the several objects observed from any station with reference to the points of the horizon. In *maritime S.*, the forms of coasts and harbors, the entrances of rivers, with the position of islands, rocks, and shoals, are to be determined; also, the soundings or depths of water in as many different places as possible. In *military S.*, representations are made on paper of the general features of a country, such as the roads, rivers, hills, and marshes, in order to ascertain the positions which may be occupied as fields of battle, or as quarters, together with the facilities which the country may afford for the march of troops, or the transit of artillery or stores.

Surveyor, (*sur-vā'ur*), *n.* An overseer or overlooker; one placed to supervise or superintend others. — One who measures land, or practises the art of surveying. — One who views and inspects for the purpose of ascertaining and determining the condition, quantity, quality, or value of anything; as, a *surveyor* of ships, taxes, highways, buildings, &c. — In the U. States, an officer who ascertains the weight and quantity of goods liable to customs duty.

Surveyor-general, *n.* In the U. S., an officer having charge of the survey of the public lands of a district.

Survival, *n.* A surviving or outliving; a living beyond the life of another person, thing, or event.

Survive, (*ser-viv'*), *v. a.* [*Fr. survivre*; *Lat. supervivo* — *super*, and *vivo*, to live.] To live beyond the life of. — To outlive, as anything else; to live beyond, as any event.

—*v. n.* To continue to live; to remain alive; as, hope still *survives*.

Survivor, *n.* One who survives or outlives; a survivor.

Surviving, *a.* Yet living; continuing to live; as, he holds himself aloof from his *surviving* relatives.

Survivor, *n.* One who survives or outlives another person, or a thing or event.

(*Law.*) The longer liver of two joint-tenants, or of any two persons who have a joint interest in any kind of property.

Survivorship, *n.* State of a survivor; state of outliving another person, or a thing or event.

(*Law.*) The right of a joint-tenant, or other person who has a joint-interest in an estate, to take the whole estate upon the death of the other.

(*Assurance.*) In the doctrine of life annuities, a reversionary benefit contingent upon the circumstance of some life or lives, or of the lives falling according to some assigned order.

Sus, *n.* [*Lat.*] (*Zoöl.*) See **HOG.**

Susa, (*soo'sa*), a town of N. Italy, at the foot of the Alps, 30 m. from Turin; *pop.* 4,211.

Susa, a seaport-town of N. Africa, in Tunis, 40 m. from Hammamet. *Manuf.* Woollens, linens, and shoes. *Pop.* 10,000.

Su'sa. (*Anc. Geog.*) [*Shushan*, in Daniel, Esther, &c. derived by some from *shoshan*, a lily.] An ancient city of Persia, probably the modern Sus or Shmsn, in Lat. 32° 10' N., and Lon. 48° 26' E., situated between the Chappes or Eulaus (*Ula'* in Daniel) and the Shapur, anciently the capital of Susiana, (the *Elam* of Scripture, mod. *Khuzistan*). It is supposed to have existed as early as B. C. 600. It was the capital of Susiana, *q. v.*, and was taken, with all its treasures, by Alexander III., B. C. 331. The seat of government was transferred from Babylon to S. B. C. 330. Antigonus took S. B. C. 315.

Susannah, (*suz-ān'na*), was the wife of Joakim, and of the tribe of Judah. She followed her husband to Babylon as a captive. Two elders or judges of Israel endeavored to seduce her, and, failing in their object, they accused her of adultery. She was condemned to death; but Daniel obtained a reversal of the sentence, and succeeded in establishing her innocence. This is stated to have occurred in Babylon, abt. 600 B. C.

Su'san River, in *California*, rises in Plumas co., and flowing E., falls into Honey Lake, in Lassen co.

Susauville, in *California*, a post-town, cap. of Lassen co., 45 m. N.E. of Quincy.

Susceptibility, *n.* [*Fr. susceptibilité*.] Quality of being susceptible. — Quality of admitting or receiving either something additional, or some change, affection, or passion. — Capability; sensibility; feeling; emotion.

Susceptible, *a.* [*Fr.*, from *Lat. suscipio*.] Capable of undertaking or sustaining; capable of admitting anything additional, or any change, affection, or influence. — Tender; capable of impression; impressible; having nice sensibility.

Susceptibly, *adv.* In a susceptible manner.

Sus'col, in *California*, a town of Napier co., 15 m. N.W. of Benicia.

Susiana, (*soo-se-ā'na*), (*Anc. Geog.*) A prov. of ancient Persia, answering to the modern *Khuzistan*, and to the *Elam* of Scripture. It was conquered by Sennacherib, B. C. 688-680. Alexander III. captured its capital, Susa, B. C. 331.

Suspect, (*sus-pekt'*), *v. a.* [*Lat. suspicio, suspectus* — *sub*, and *specio*, to look, to look at.] To look at secretly or askance. — To mistrust; to distrust. — To imagine or have a slight opinion that something exists, but without proof, and often upon weak evidence or no evidence at all. — To imagine to be guilty, but upon slight evidence or without proof. — To be held to be uncertain or doubtful; to doubt; to conjecture.

—*v. n.* To have suspicion. — To imagine guilty.

Suspectedly, *adv.* So as to excite suspicion.

Suspect'edness, *n.* State of being suspected or doubted.

Suspect'er, *n.* One who harbors suspicion.

Suspect'ful, *a.* Suspicious; full of suspicion.

Suspend', *v. a.* [*Fr. suspendre*; *Lat. suspendo* — *sub*, and *pendo*, to cause to hang down.] To hang; to make to hang; to attach to something above; as, to *suspend* the body by a rope or cord. — To make to depend on. — To stay; to delay; to interrupt; to cause to cease for a time; to hinder from proceeding. — To hold in a state of hesitation or indetermination; as, to *suspend* one's judgment. — To cause to cease for a time from operation or effect; as, to *suspend* the Habeas Corpus Act. — To exclude from any privilege, or to debar from the execution of an office, or from the enjoyment of income; as, to *suspend* one from the exercise of the ministry.

—*v. n.* To cease from action or operation; especially, to stop payment, or be incompetent to meet monetary obligations; as, many firms *suspended* during the last panic.

Suspend'er, *n.* One who, or that which, suspends.

—*pl.* Braces; straps worn for holding up pantaloons.

Suspension, (*-sā'shun*), *n.* Act of suspending, or state of being suspended.

Suspense', *n.* [*Fr.*; *Lat. suspensus*, raised, from *suspendo*.] State of being suspended; particularly, a state of uncertainty, indecision, or doubt; indetermination. — Stop; cessation for a time.

Suspensibility, *n.* Capacity of being suspended.

Suspens'ible, *a.* That may be suspended.

Suspension, (*-pēn'shun*), *n.* [*Fr.*; *Lat. suspensio*, from *suspendo*.] Act of suspending, or state of being suspended. — Particularly, temporary delay, interruption, intermission, or cessation; as, (1.) Act of withholding or balancing the judgment; restraint of decision; forbearance of determination; as, to demand a *suspension* of opinion. (2.) Cessation of labor, study, pain, and the like. (3.) Stoppage of payment, whether temporary or permanent; as, the *suspension* of a mercantile house. (4.) Delay of punishment, or execution of judicial sentence. (5.) Temporary privation of powers, authority, rights, or office; as, the *suspension* of an officer from his command. (6.) Prevention or interruption of the operation of legal procedure, as, the *suspension* of a bill of attainder.

—*A* conditional withholding, delay, or interruption; as, the *suspension* of a subsidy pending the performance of a proviso.

(*Rhet.*) A retaining of an auditor in uncertainty, or in attentive expectation of what is to come after, or as to what is to be the conclusion deduced from the premises.

(*Mus.*) Act of retaining in any chord some note or notes of the preceding chord.

Points of suspension. (*Mech.*) Those points in the axis or beam where the weights are applied, or from which they are suspended. — *S. of arms.* (*Mil.*) See **TUCC.**

Suspension-bridge, *n.* A kind of bridge in which the roadway, instead of being carried over the supporting parts, is suspended from them, the supporting parts being chains or other flexible material. See **BRIDGE.**

Suspension Bridge, in *New York*, formerly a post-

village of Niagara co., on the Niagara river, 2 m. below the Falls; now part of the city of Niagara Falls.

Suspen'sive, *a.* Tending to keep in suspense or doubt.

Suspen'sor, *n.* (*Surg.*) A truss or baudage to suspend the scrotum.

Suspens'ory, *a.* Depending; hanging; suspended; as, a *suspensory* bag.—Suspending; serving to suspend; as, the *suspensory* muscle of the eye.

—*n.* Same as **SUSPENSORY**, *q. v.*

Suspicion, (*-pish'un*), *n.* [Fr.; Lat. *suspicio*.] Act of suspecting; the imagination of the existence of something without proof, or upon very slight evidence, or upon no evidence at all.

Suspicious, (*-pish'us*), *a.* [Lat. *suspiciosus*.] Mistrustful; apt to suspect; inclined to imagine without proof; as, a *suspicious* mind.—Denoting or indicating suspicion, fear, or apprehension; as, a *suspicious* countenance.—Adapted to excite suspicion; liable to suspicion; giving reason to imagine ill; as, *suspicious* proceedings, a *suspicious* innovation.—Given to, or entertaining, suspicion; as, jealousy makes women *suspicious* of each other.

Suspiciously, (*-pish'us*), *adv.* In a suspicious manner.

Suspiciousness, (*-pish'us*), *n.* Quality of being suspicious, or disposed to suspicion, or liable to be suspected; also, the quality or state of being adapted to suspect, or to excite suspicion; as, the *suspiciousness* of a man's actions.

Suspir'al, *n.* A vent or breathing-hole.—A spring or runnel of water flowing underground toward a cistern or conduit.

Suspiration, (*-rā'shun*), *n.* [Lat. *suspiratio*.] Act of sighing; also, a sigh; as, to fetch a deep *suspiration*.

Suspire, *v. a.* [Fr. *suspirer*, from Lat. *suspirare*.] To sigh; to fetch a deep, long-drawn breath or suspiration.

Susquehanna, a river of Pennsylvania and Maryland, which has its origin in Otsego and Canandaigua lakes, in western New York, and flowing E., receives the rivers Unadilla and Chenango, then, turning S., enters Pennsylvania, where it receives the Tioga, the W. branch (Susquehanna), and the Juniata, and empties itself into the Chesapeake Bay, at Havre de Grace, Maryland, 400 m. from its source, and 153 from its junction with the W. branch. It is a shallow, rapid, mountain river, with varied and romantic scenery. A canal follows its course, and great quantities of timber are floated down with the spring freshets. Near the mouth, it is famous for waterfowl, especially the Canvas-back duck, and has, also, important fisheries.

Susquehanna, in Pennsylvania, a N.E. co., bordering on New York; area, 850 sq. m. Rivers. The N. Branch of the Susquehanna, and Chocount, Meshopen, Tunkhannock, and Wyalusing creeks. Surface, hilly; soil, adapted to grazing and dairy business. Cap. Montrose. Pop. (1897) 42,260.—A township of Cambria county.—A township of Dauphin county.—A township of Lycoming county.—A post-borough of Susquehanna county, 23 m. S.E. of Binghamton.—A township of Juniata county.

Sussex, a S. maritime co. of England, bounded N. by Kent and Surrey, S. by the English Channel, E. by Kent and the Strait of Dover, and W. by Hampshire; area, 1,426 sq. m. It is intersected by two ranges of high chalky hills, known as the North and South Downs. The rivers are all small. The soil, generally light, poor, and sandy, is well adapted for pasturage and the breeding of sheep, which constitute the great staple of the co. Its breed of Southdown sheep and large red cattle are celebrated. S. has two capitals, Chichester and Lewes; the other towns of greatest importance are Brighton, Hastings, New Shoreham, Rye, and Hoveham. Pop. (1897) 565,650.

Sussex, in Delaware, a S. co., bordering on Maryland, the Atlantic, and Delaware Bay; area, 900 sq. m. Rivers. Indian, Nanticoke, and Pocomoke rivers, and Cedar, Deep, and Mispillion creeks. Surface, level; soil, fertile; Cap. Georgetown. Pop. (1897) 40,150.

Sussex, in New Jersey, a N. co., bordering on New York and Pennsylvania; area, 525 sq. m. Rivers. Delaware, Flatkill, Musconetong, Paulinskill, and Pequest. Surface, traversed by the Blue Mountains in the N.W., and by the Hamburg and Wawayanda Mountains in the S.E.; elsewhere, undulating; soil, very fertile. Min. Franklinite, red oxide of zinc, magnetic iron ore, and many other precious, useful, and rare minerals. Cap. Newton. Pop. (1895) 22,586.

Sussex, in Virginia, a S.E. co.; area, 420 sq. m. Rivers. Nottoway and Blackwater. Surface, diversified; soil, generally fertile. Cap. Sussex Court-House, 50 m. S.E. of Richmond. Pop. (1897) 12,400.

Sussex, in Wisconsin, a post-village of Waukesha co., 16 m. N.N.W. of Milwaukee.

Sussex Lake, in British N. America, N. of Lake Aylmer, is the source of Great Fish River.

Sustain, *v. a.* [Fr. *soutenir*; Lat. *sustineo*—*sub*, and *teneo*, to hold.] To hold; to uphold; to bear up; to support; to keep from falling; as, a camel *sustains* a burden, a foundation *sustains* the superstructure.—Hence, by analogy, to keep from sinking in despondence; to support; as, patience *sustains* one under trials.—To keep alive; to maintain; to bear up or keep in any condition by aid or support; to nourish; to subsist; as, provisions to *sustain* a ship's company.—To assist, help, comfort, relieve, or uphold.—To bear; to endure without falling, yielding, or breaking down; as, "A liquor that no mortal can *sustain*." Waller.—To endure; to suffer; to bear; to undergo; as, a strong body is able to *sustain* heavy toil.—To sanction; to permit to proceed or continue; not to dismiss or abate; as, the action of the government was *sustained* by Con-

gress.—To maintain as a sufficient ground; to establish the proof or conclusiveness of, as evidence; as, the counsel's plea or argument was *sustained*, to *sustain* an objection to a vote, &c.

(*Mus.*) To continue, as vocal or musical sounds through their whole length.

Sustain'able, *a.* That may be sustained.

Sustain'er, *n.* The person who, or thing which, sustains.

Sustenance, *n.* [O. Fr., support.] Act of sustaining; subsistence; maintenance; support; as, the *sustenance* of the human body.—That which sustains or supports life; food; victuals; provisions; aliment; as, enough *sustenance* for a hundred persons.

Sustentation, (*-tā'shun*), *n.* [Fr.] Act of sustaining; support; preservation from falling or sinking.—Use of food, victuals, or provisions.—Maintenance; sustenance; support of life; as, means of *sustentation*.

Sutera, (*soo-tai'ra*), a town of Italy in Sicily, 20 m. from Caltanissetta; pop. 4,620.

Suth'erland, a co. of Scotland, forming the greater portion of the northern peninsula of that part of the island. Almost the whole of this co. consists of towering mountain and barren rock, with intervening straths or glens, down whose centre glides or foams some mountain stream. The grazing of sheep and cattle is the almost sole occupation of the inhabitants. Dornoch, the cap., is the only town.

Sutherland, in Virginia, a post-village of Dinwiddie co., 10 m. S.W. of Petersburg.

Sutile, (*sū'til*), *a.* [Lat. *sutilis*, from *suo*, *sutum*, to sew.] Sewed together; done by stitching.

Sutlej, (*sut'ledj*), a river of Hindostan, and the easternmost of the five rivers which flow through the Punjab. It rises in Thibet, abt. Lat. 30° 8' N., Lon. 81° 53' E., and after a course of nearly 1,000 m., joins the Chenab, 40 m. from Bhawalpoor.

Sutler, *n.* [D. *zoeteleaar*.] A person who follows an army, and sells to the troops provisions and other necessities.

Sutling, *a.* Pertaining or having reference to sutlers. *Sutling wench*, a female sutler.

Sutshawa, (*soot-sha'ra*), a fortified town on the frontier of Moldavia, 34 m. from Kimpolung; pop. 5,427.

Suttee, *n.* [Sansk. *satī*.] The self-immolation of a Hindoo widow on the funeral pyre of her husband.—Also, the sacrificial rite of such self-immolation. It is spoken of by writers of the age of Alexander the Great. Diodorus relates an instance B. C. 300. In 1819, Lord William Bentinck abolished the rite in the British East Indian dominions.

Sutteeism, (*-izm*), *n.* In Hindostan, the practice of self-immolation among widows.

Sutter, in California, a N. co.; area, 500 sq. m. Rivers, Sacramento and Feather. Surface, diversified; soil, generally fertile. Cap. Yuba City.—A township of Sacramento county.

Sutter Creek, in California, a post-town of Amador co., 28 m. S. of Placerville.

Suttle, (*sut'tl*), *n.* (*Com.*) The weight of goods where the tare has been deducted, and on which tret is yet to be allowed.

—*v. a.* In the U. States, to act as sutler; to furnish provisions and necessities to troops.

Sut'ton, in Massachusetts, a post-vill. and twp. of Worcester co., 42 m. W.S.W. of Boston.

Sutton, in New Hampshire, a post-township of Merrimac co., 20 m. W.N.W. of Concord.

Sutton, in Ohio, a township of Meigs county, on the Ohio.

Sutton, in Vermont, a post-township of Caledonia co., 40 m. N.E. of Montpelier.

Sutton-Coldfield, a town of England, in Warwickshire, 7 m. from Birmingham. Pop. 5,612.

Sutton's Mills, in Massachusetts, a village of Essex co., 1 m. from Lawrence.

Sutural, (*sū'tyur'al*), *a.* [Fr., from Lat. *sutura*, a seam.] Pertaining or relating to a suture or seam.

(*Bot.*) Denoting parts which bear some definite relation to a suture, or line of junction between the different parts, as, a *sutural* dehiscence.

Suture, (*sū'tyur*), *n.* [Fr.; Lat. *sutura*.] Act of sewing together; also, a seam; the uniting of the parts of a thing by stitching so as to form a seam, or something which resembles a seam.

(*Surg.*) The junction of the parts of a wound by stitching.

(*Anal.*) The junction of bones by their serrated or toothed margins, as the bones of the skull.

(*Zoöl.*) Entomologically, the line at which the elytra meet, and are sometimes confluent.

(*Bot.*) The line or seam formed by the union of two margins in any part of a plant.

Sutured, (*sū'tyurd*), *a.* Possessing or presenting sutures; seamed.

Suwanee, in Florida, a N. co.; area, 640 sq. m. It is bounded on the N.W. and S.W. by the Suwanee river. Cap. Live Oak. Pop. (1897) 13,120.

Suwanee, in Georgia, a river which rises in Ware co., and flowing S.W., falls into the Gulf of Mexico, on the boundary of Lafayette and Levy cos., Florida.—A post-village of Gwinnett co., 100 m. N.N.W. of Milledgeville.

Suwarow, (*-wa'rov*), ALEXANDER WASILIEVITCH, Count, Prince Italiyski, a Russian field-marshal and generalissimo, b. in Moscow, 1729, entered the army as a boy, rose through all the grades to be a colonel at thirty-two. For his services against the Turks and his victory over the Kuban Tartars, Catherine created him a general, and for his successes over the Mussulmans in the campaigns of 1787 and 1788 he was created a count. His great achievement, however, was the siege and capture of

Ismail, one of the strongest frontier fortresses, defended by 40,000 Turks. In this frightful siege, where the streets ran blood and every inch of ground was disputed with the courage of lions, 30,000 Turks were trampled into the earth as the victors fought over their bodies, or were blown into the air from exploding mines, and 10,000 taken prisoners. The battle of Pragne, where 30,000 gallant Poles fell, and the siege of Warsaw, were his next trophies. His last campaign was in Italy in 1799, where he was opposed to Moreau, and, though compelled to retreat before the French general, his passage of the Devil's Bridge and battles on the Alps, as he led his army in safety into Germany, were masterly; for this he was created a prince of the empire. D. 1800.

Suwar'row Islands, a group in the Pacific; Lat. 13° 20' S., Lon. 163° 30' W.

Suzerain, *n.* [Fr.] A feudal or superior lord; a lord paramount; one to whom fealty is due.

Suzerainty, *n.* [Fr. *suzeraineté*, from Lat. *susum*, *sursum*.] The dominion or paramount authority of a suzerain.

Svendborg, a town of Denmark, on the island of Fünen. It has a harbor, and ship-building docks. Pop. 4,322.

S.W. Abbreviation of south-west.

Swab, (*swōb*), *n.* [A. S. *swebban*.] A mop, or bundle of yarns or rags tied together, used for cleaning floors, washing decks on shipboard, &c.

—A piece of sponge, cloth, &c., fastened to a stick or handle, for rinsing the mouth of, or giving liquid nourishment to, a sick or bedridden person.

—*v. a.* To sweep, wipe, or clean with a mop, as the floors of a house.—To wipe when wet, or after washing; as, to *swab* a ship's decks.

Swab'ber, *n.* One who swabs.

Swabia. See **SUABIA**.

Swad, (*swōd*), *n.* A vulgar colloquialism for a lump, mass, or bunch; also, a crowd. (U. S.)

Swaddle, (*swōd'dl*), *v. a.* [A. S. *swaðl*.] To swathe; to bind, as with a ligament or bandage; to bind tightly with clothes, as an infant.

—*n.* Clothes bound tight around the body.

Swad'dling-band, **Swad'dling-cloth**, **Swad'dling-clout**, *n.* A band, cloth, or clout wrapped round an infant, especially one newly born.

Swaffham, a town of England, in Norfolk, 14 m. from Lynn; pop. 4,225.

Swag, *v. a.* [Icel. *sveigja*, to bend.] To sag; to lean; to sink down by its weight.

—*n.* A swaying, oscillatory motion, as of a heavy body; a sagging motion, as of something heavy and pendent.—In England, a cant term for plunder; booty; spoil; as, the thieves carried away their *swag*.

Swag-bellied, (*-bē'llid*), *a.* Having a bulging, overhanging belly, shaking loosely from its own weight.

Swag'belly, *n.* A loose, prominent, overhanging belly.

(*Med.*) Any large tumor, developed in the abdomen, and neither fluctuating nor sonorous.

Swage, (*swāj*), *n.* A kind of anvil, on which to hammer metallic plates into given patterns.

—*v. a.* To fashion upon a swage.

Swagger, (*swīg'gr*), *v. n.* [Icel. *sveigr*, one who twists, bends, or shakes.] To move in a slinging, insolent way or manner; to exhibit an insolent or puppyish bearing or demeanor; to bluster; to bully; to boast or brag noisily; to be ostentatiously or tumultuously proud or self-conceited; as, a *swaggering* top, a *swaggering* rowdy.—*n.* An insolent or puppyish bearing or mode of walking; boastfulness or bluster of manner.

Swag'gerer, *n.* One who swaggers; a blusterer; a bully; a rowdy; a boastful, hectoring, insolent, empty-headed fellow.

Swag'gering, *a.* Boasting noisily; blustering; exhibiting an insolent or devil-me-care bearing or gait.

Swaggy, *a.* Disposed to swag or become pendent; sinking, hanging, or leaning by its weight.

Swain, (*swān*), *n.* [A. S. *swēin*, *swum*, a herdsman.] A young man resident in the country; a rustic; a country servant engaged in husbandry; a peasant; particularly a country beam or gallant;—hence, a lover;—chiefly employed in poetry.

Swains'borough, in Georgia, a post-village, cap. of Emanuel co., 98 m. N.W. of Savannah.

Swainville, in New York, a village of Steuben co., 17 m. S.E. of Hornellsville.

Swale, *v. a.* and *n.* See **SWEAL**.

Swale, in England, a gutter in a candle.—An American localism for a tract of low, and usually wet, land.

Swallow, *n.* The throat; the gullet or oesophagus.—Taste; relish; gustation; predilection; liking; as, he has a good *swallow* for flattery.—Voracity; capacity for taking in or absorbing; as, the *swallow* of political rancor. (*Prof. Wilson*).—As much as is, or is able to be, swallowed at once; as, a *swallow* of food.

—*v. a.* To receive through the gullet; to take into the stomach; as, to *swallow* food.—To ingest; to absorb; to draw into an abyss, gulf, or vortex,—generally followed by *up*; as, ships *swallowed up* by the sea, a city *swallowed up* by an earthquake.—To appropriate; to engross;—often with *up* emphatically; as, Shakspeare *swallowed up* in himself the literary glory of his age.—To receive implicitly or unreservedly; to receive or embrace without inquiry, examination, or scruple; as, a credulous man will *swallow* every idle story he hears.—To employ; to take up; to occupy; as, business *swallows* the major part of his time.—To consume; to exhaust; to seize, and waste or scatter; as, the expenses *swallowed* the receipts, leaving no margin of profit.—To engross; to engage completely; as, "The priest and the prophet . . . are *swallowed up* of wine."—Isa. xxviii. 7.

—To retract; to recant; to take back; as, he was made to swallow his own words.

Swallow, (*swol'lo*), *n.* [A. S. *swalwe*.] The common name of the insectivorous birds comprising the family *Hirundinidae*. They are distinguished by having a very short, depressed, and triangular bill, very long wings, very short tarsi, and tail generally forked. The typical genus *Hirundo* is represented in N. America by several

Fig. 2449. — BARN SWALLOW.

species, as the Barn Swallow, *H. horreorum*, which is about 7 inches long, the wings 5 inches, and the tail excessively forked. The upper parts are steel-blue, the lower light chestnut, and the wings and tail brownish-black. It is easily tamed, and soon becomes very gentle and familiar. Its song is a sprightly warble, and is sometimes continued for a length of time. — The genus *Progne* comprises the Martins. See MARTIN.

Swallower, *n.* One who swallows; emphatically, a greedy eater; a gormandizer; a glutton.

Swallow-tail, *n.* (*Carp.*) Same as DOVE-TAIL, *q. v.* (*Fortif.*) An outwork which is narrower towards the fortified place than towards the country.

Swallow-tailed, *a.* Having skirts falling behind after the manner of a swallow's tail; as, a swallow-tailed coat.

(*Carp.*) Formed in the manner of a dovetail.

Swam, *imp. of SWIM, q. v.*

Swamp, (*swomp*), *n.* [A. S. *swam*; Du. *zwan*; Dan. *sramp*, a sponge.] Spongy land; soft, wet ground; low ground filled with water; also marshy or boggy land, not usually covered with water; ground habitually so soft and moist as not to admit of being trod on by cattle, but at the same time producing particular kinds of trees, bushes, and plants. A swamp differs from a bog and a marsh in producing trees and shrubs, while the last-named yield only herbage plants and mosses.

—*v. a.* To plunge, overwhelm, or sink in a swamp, or as in something resembling a swamp. — To plunge into overwhelming or inextricable difficulties; as, his entire fortune was swamped in speculations.

(*Naut.*) To overset, capsize, sink, or cause to become filled with water; as, the high surf swamped the boat before it reached land.

Swamp-cabbage, *n.* (*Bot.*) The Skunk-cabbage. See SYMLOCARPUS.

Swamp-honeysuckle, **Swamp-plink**, *n.* (*Bot.*) A shrub, *Azalea viscosa*. See AZALEA.

Swamp-sasafraz, **Sweet-boy**, *n.* (*Bot.*) See MAGNOLIACEE.

Swamp-scott, in *Massachusetts*, a post-township of Essex co., 12 m. N.E. of Boston.

Swamp'y, *a.* Consisting of, or resembling, a swamp; low, wet, and spongy; as, swampy ground.

Swan, (*swon*), *n.* [A. S.] (*Zoöl.*) The English name of the web-footed swimming-birds comprising the genus *Cygnus*. They are found on the rivers and small pools of fresh water, and are distinguished by their graceful and majestic appearance. In some of the species the swan approach the geese in many of their characters, while the typical ones differ considerably. The leading characters of the *S.*, considered as a genus of the fam. *Anatidae*, are these: The bill is wide at the tip as at the basal part, and higher than wide at the base; the nostrils are pierced about the middle of the length of the bill, and the neck is very long, as compared with that of the other web-footed birds. The color of the plumage is in general pure white, but a black species exists. They swim rapidly, and their flight is powerful and long-continued; they live in society, but in the breeding-time they are strictly monogamous, and the pairs take up their nesting-ground at some distance from each other. They make their nests near the margin of the

Fig. 2450. — SWAN.

water, upon the ground, and attain a great age. They feed generally upon seeds, roots, and other parts of aquatic plants which are blanched and succulent by being under the water; but it is asserted by some writers that they also eat frogs, insects, and worms. Their flesh is hard, black, and rank in the old ones, and not very good in the young ones. Their skins, feathers, and down, especially the latter, are used for several purposes. There are several species. The American *S.*, *C. Americanus*, is 55 inches long, and the wings 22 inches; the color of the adult is a pure white, with the bill and legs black; the young are brown.

Swan, in *Indiana*, a post-township of Noble county.

Swan, in *Ohio*, a post-twp. of Vinton co.

Swan Creek, in *Illinois*, a post-village of Warren co., 25 m. S.E. of Quincy.

Swan Creek, in *Michigan*, enters St. Joseph's River from Branch co.

Swan Creek, in *Ohio*, enters the Maumee River from Lucas co. — A township of Fulton co.

Swan Lake, in *Wisconsin*, an expansion of Neenah River in Columbia co., abt. 3 m. long and 1/2 m. wide.

Swan Quarter, in *N. Carolina*, a post-village, cap. of Hyde co., 170 m. S.E. of Raleigh.

Swan River, in *Minnesota*, a post-village of Morrison co., on the Mississippi, 130 m. N.W. of St. Paul.

Swan River, the principal river in W. Australia, rising under the name of Avon, near Lat. 32° 30' S., and Lon. 117° E. It gave name to the first English settlement in W. Australia, founded in 1829. After watering several counties, it falls into the Indian Ocean, at a bay called Melville Water, in Lat. 32° S., Lon. 115° 42' E.

Swansea, (*swan'ze*), a seaport-town of England, in S. Wales, Glamorganshire, standing on a bay of the Bristol Channel, on the river Towy, in the midst of inexhaustible mines of coal and iron, 28 miles from Merthyr-Tydvil; Lat. 51° 37' N., Lon. 3° 56' W. By means of its harbor, and of the Towy, it commands a ready outlet for these productions of the interior. *Manuf.* Immense establishments for working in iron, copper, brass, spelter, and tin; it has also potteries on a large scale, a soap-factory, breweries, distilleries, and rope-walks. Its principal trade, however, is in the export of coal; and it has floating docks.

Swansea, in *Massachusetts*, a post-township of Bristol co., 46 m. S.W. of Boston.

Swan's-down, *n.* The fine, soft, downy feathers of the swan, used for various articles of dress, trimmings, &c.; as, a tippet of swan's-down.

(*Manuf.*) A sort of twilled fustian, resembling moleskin.

Swan's Island, in *Maine*, a post-township of Hancock co.

Swan-skin, *n.* The feathery integument of a swan.

(*Manuf.*) A kind of soft, thick flannel.

Swan-ton, in *Maryland*, a post-village of Alleghany co., abt. 40 m. W.S.W. of Cumberland.

Swan-ton, in *Ohio*, a post-village of Lucas co., 139 m. N.N.W. of Columbus.

Swanton, in *Vermont*, a post-village and township of Franklin co., 55 m. N.N.W. of Montpelier.

Swanville, in *Maine*, a post-township of Waldo co., 44 m. N.E. of Augusta.

Swan'zey, in *New Hampshire*, a post-vill. and twp. of Cheshire co., 45 m. S.W. of Concord.

Swap, (*swop*), (*imp. or pp. SWAPPED or SWOPPED*), (*swopt*), *v. a.* [Ger. *schwappen*.] To exchange; to barter; to give one thing for another; as, to swap hats. (*Colloq.*)

—*n.* [Ger. *schwap*.] An exchange; a barter; a giving of one thing in return for another. (*Colloq.*)

—*v. n.* To flap; to beat or agitate the air with a sweeping noise or motion.

Swape, *n.* See SWEEP.

Sward, *n.* [A. S. *swærd*, grass; Du. *zwoord*; Dan. *svær*.] Turf; the grassy surface of land; that part of the soil which is filled with the roots of grass, forming a kind of mat; as, the daisied sward. — Skin; rind; covering; as, the sward of bacon.

—*v. a.* To produce sward upon; to cover with sward.

Sware, **Schware**, *n.* [Ger.] (*Numis.*) A copper coin and money of account in Bremen, of the value of one-fifth of a groat, or of a quarter of a cent, American.

Swarf, *n.* The grit worn away by grindstones in grinding cutlery wet.

Swarm, *n.* [A. S. *swærm*.] A large number of small animals or insects, particularly when in motion; hence, appropriately, a great number of honey-bees which emigrate from a hive at once, and seek new lodgings together, under the direction of the queen bee. — Hence, also, by implication, a great number, especially a great number of people in motion; a multitude; a crowd; a throng; as, a swarm of applicants for offices under government.

—*v. n.* [A. S. *swærmian*.] To collect and depart from a hive in a body, as bees. — To appear or collect in a crowd; to run; to throng together; to congregate in a mob or multitude; as, people swarm to see the sight. — To be crowded; to be thronged with a number of animals in motion; as, the camp swarms with the enemy's spies. — To breed multitudes. — To be filled, as with a throng, crowd, or multitude of objects; to abound; as, a bed swarming with bugs. — To climb, as a tree, by scrambling up its trunk with the aid of hands and feet; — synonymous with the American term *shin, q. v.*

Swarthily, *adv.* Duskyly; with a dark or tawny hue.

Swarthiness, **Swarthness**, **Swartness**, *n.* State of being swarthy; tawny; of a dark or dusky complexion; as, swarthiness of visage.

Swarthmore, in *Pennsylvania*, a post-village of Delaware co., abt. 8 m. S.W. of Philadelphia. The Society of Friends have recently erected here a large, handsome building for school and collegiate purposes, called *Swarthmore* after the place of residence of George Fox.

Swarthy, *a.* Dark of complexion; black; dusky; tawny.

Swash, (*swôsh*), *n.* A swaggering, boisterous fellow; a roisterer; a swash-buckler. — A violent dashing of water. — Hog-wash; slops, collected as food for pigs. — In the U. States, a narrow sound or channel of water lying within a sandbank, or between that and the shore; — also, called *swash-way*.

—*v. n.* [Du. *zwetsen*, to boast.] To vapor, vaunt, bluster, or brag. — To splash; to dash or flow noisily; as, the sea swashes into a cavern. — To hit or strike with a thud, or dull heavy sound; as, a swashing blow.

Swash-letters, *n. pl.* (*Print.*) Letters which had their terminations projecting considerably beyond the shank, thus: K J R, &c. They have been revived of late years with the re-introduced old-fashioned types.

Swata'ra Creek, in *Pennsylvania*, rises in Schuylkill co., and enters the Susquehanna River 9 m. S. of Harrisburg, after a S.W. course of 60 m. — A township of Lebanon co., abt. 10 m. N.W. of Lebanon.

Swath, *n.* [A. S. *swæth*, *swæth*.] A band; a fillet; as, a hundred yards of swaths.

(*Agric.*) In reaping, a line, track, or row of grass or grain cut and thrown together by the scythe in mowing or cradling; as, a swath of hay. — The whole breadth or sweep of a scythe in mowing or cradling; as, a wide swath.

Swathe, (*swäth*), *v. a.* [A. S. *beswethan*, *beswethian*, to bind, from *swethe*.] To bind with a swath, band, fillet, bandage, or rollers; as, to swathe a child, to swathe a patient who undergoes the hydropathic process of packing.

Swathe, *n.* A bandage or fillet. See SWATH.

Sway, *v. a.* To wield or guide with the hand; as, to sway a sceptre or baton. — To rule; to govern; to control; to influence or direct by power or authority, or by moral force; as, to sway the destinies of a nation. — To bias; to bend; to cause to turn, lean, or incline to one side; as, a man swayed by petticoat counsels.

(*Naut.*) To hoist; to raise; as, to sway up the yards.

—*v. a.* To bear or exercise rule or sovereignty; to govern. — To possess or use weight, influence, or authority; as, a sincere friend's judgment often sways one's opinions. — To lean; to incline; to be drawn to one side by weight or preponderance.

—*n.* The swing or sweep of a weapon.

"To strike with huge, two-handed sway!" — Milton.

—Anything moving with bulk and power; as, "the sway of earth shakes like a thing unfirm." (*Shaks.*) — Weight; preponderance; turn or cast of balance; as, to turn the sway of battle. — Power; rule; dominion; sovereignty; control; ascendancy; domination; authority exercised in governing; as, regal sway. — Bias, weight, influence, or authority that leans or inclines to one side; as, the sway of time. — A Thatcher's binding-rod or switch.

Sway-backed, (*-bäkt*), *a.* With the back hollowed in, whether from abnormal malformation or as the result of injury or weakness; — said of horses, &c.

Sway'ing, *n.* (*Farriery*.) A kind of lumbago sometimes caused to the horse by a fall, or by being overburdened.

Sweal, **Swale**, *v. a.* [A. S. *swelan*.] To melt and run down the bongie, as the tallow of a lighted candle; to gutter.

—*v. n.* To dress by singeing off the hair, as a hog.

Swear, *v. n.* (*imp. SWORE, obs. SWARE; pp. SWORN.*) [A. S. *swerian*; Du. *zweren*; Ger. *schwören*.] To make or utter a solemn declaration, with an appeal to God for the truth of what is affirmed; as, "And by the gods he swore." (*Macaulay*.) — To be profane; to use the name of sacred things idly or irreverently; to make an appeal to Heaven in a wanton or irreverent manner.

(*Law*.) To promise, attest, or give evidence on oath; as, to swear to the alibi of a prisoner.

—*v. a.* To utter or affirm with a solemn invocation to God for the truth of the declaration; as, to swear on the Scriptures. — To declare, accuse, or charge upon oath; as, to swear treason against an individual. — To obtest or appeal to by an oath.

To swear the peace against. (*Law*.) To swear an oath or make legal affirmation that one is in actual fear of death or bodily harm at the hands of another person, which latter is thereupon compelled to find sureties to keep the peace.

Swearer, *n.* One who swears or takes an oath; one who calls God to witness for the truth of his asseveration. — A profane person; a blasphemer; one who uses irreverent language.

Sweat, (*swot*), *n.* [A. S. *swat*; D. *zweet*.] The moisture which issues, or which is excreted from the skin of man or other animals; perspiration. — State or condition of one who sweats; hence, by analogy, toil; labor; hard work; drudgery.

"This was but a matter of sweat and watching." — 2 Macc. ii. 26.

—Moisture evaporated from any substance; as, the sweat of grain in a ship's hold.

—*v. n.* (*imp. and pp. SWEAT, or SWEATED.*) [A. S. *swetan*.] To exude sweat or sensible moisture from the pores of the skin; to perspire; as, the sweating sickness. — To toil; to labor; to drudge. — To excrete moisture, as green plants in a heap.

To sweat coin, to reduce the value of a piece of coin by removing a portion of its surface or rim by friction, as by shaking it in a bag.

Sweater, *n.* One who, or that which, sweats or perspires. — That which promotes sweating; a sudorific.

Sweat'ily, *adv.* In a sweaty or perspiring manner.

Sweat'iness, *n.* State of being sweaty.

Sweat'ing-bath, *n.* See SUDATORY.

Sweat'ing-iron, (*-i'urn*), *n.* A piece of iron used to scrape sweat off horses.

Sweat'ing-room, *n.* A room for sweating sick persons. — In dairies, a room for sweating cheese, and promoting evaporation of the superfluous juices.

Sweat'ing-sick'ness, *n.* (*Med.*) An epidemic of great severity which appeared in England and other countries of Europe during the 15th and 16th centuries. The disease may be described as a fever commencing with heat in some one limb or in some part of the body, spreading over the whole surface, and followed by profuse and exhausting sweating, with insatiable thirst. Restlessness, nausea, delirium, and headache, with irregular action of the heart, were always present. Patients often died in from two to four hours after the sweat set in.

Sweat'y, *a.* (*comp.* SWEATIER; *superl.* SWEATIEST.) Moist with sweat: as, a *sweaty* skin. — Consisting of sweat; as, *sweaty* streams. (*Swift.*) — Laborious; toilsome; arduous; difficult; as, "Those who labour at the *sweaty* forge." — *Prior.*

Swede, *n.* [*Swed. Seensk.*] (*Geog.*) A native of Sweden.

Sweden, [*Swed. Sverige*], a kingdom of Northern Europe, comprising with Norway and Lapland the whole of the Scandinavian peninsula, of which it forms the eastern, southern, and most important portion; between Lat. 55° 20' and 69° N., and Lon. 11° 18' 30" and 24° 13' E., having N.E. Russian Finland; E. and S. the Gulf of Bothnia and the Baltic, S.W. the Sound, Cattegat, and Skagerrack; and W. and N. Norway, from which it is for the most part divided by the great mountain-chain of Scandinavia. Length N. to S. 950 m.; average breadth about 190 m.; area, 170,096 sq. m. Sweden is divided into three principal regions: *Gothland* (Gothia) in the S.; *Sweden proper*, occupying the centre; and *Norland* (by far the largest part), comprising the remainder. These three regions are again subdivided into 24 *lans*, or districts. S. is mountainous in the W., but, in general, flat; and it is remarkable that along the whole coast, from Gottenburg in the west, to Stockholm in the east, there is not a single acclivity of consequence till within a few miles of the latter. — *Climate.* Less severe than might be expected in so high a latitude. In Stockholm the average temperature throughout the year is four degrees higher than at St. Petersburg. The summers are hot, and spring is almost unknown. In the N., snow covers the ground for five or six months in the year; and the W. coasts are milder and more humid than the E. — *Rivers.* Numerous. The principal are the Dal and the Klar, rising in the mountains bordering on Norway, and flowing into the Gulf of Bothnia and the lake of Wener. The Angerman, the Umea, the Skeftea, the Pitea, the Lulea, and the Tornea, are in Lapland. — *Lakes.* Nearly one-eighth of the country is covered with lakes. The largest are the Wener, Wetter, and the Malar, all in the S. provinces. In point of size, Wener is the third lake in Europe. — *Forests.* Extensive. More than three parts of the country are under timber. The principal trees are fir, birch, with oak, elm, and beech in the more S. parts. — *Zoölogy.* The domestic animals are the same as those of Great Britain. The others are, hares and foxes, beavers, wolves, and, in the cold provinces of the north, bears, the lemming and the reindeer. Water-fowl are abundant, and the mosquitoes are as troublesome as they are in tropical countries. — *Prod.* Only about a fiftieth part of the country is cultivated. Agriculture is in a very backward state, but is being improved. The plants are similar to those of Britain. Apple, pear, and cherry trees, grow but languidly; while berries of many different kinds are produced spontaneously, and spread luxuriantly. Wheat succeeds only in the southern provinces; oats are raised more generally, and in larger quantities; but rye and barley are the kinds of grain most frequently met with. — *Min.* Abundant; comprising iron, copper, lead, coal, porphyry, some silver, and marble. Swedish iron is of superior quality, and its quantity is immense. — *Manuf.* Principally confined to articles of domestic use. They consist of woollens, cottons, paper, linens, sugar, and tobacco. Tanning is carried on to some extent, and distilling and brewing are followed, also shipbuilding; but the pottery, glass, woollens, sugar, snuff, and tobacco are merely sufficient to meet the home consumption. — *Education.* General. The university of Upsal

Fig. 2451.

SWEDISH COSTUMES, (Norland.)

was founded in 1476, and has maintained a good character, particularly for physical science. The university of Lund is of much more recent date, and on a smaller scale. There are a number of high schools, while the scientific and literary societies of Sweden are numerous, and belong chiefly to Stockholm. In the schools of the lower classes, the method of mutual instruction prevails. — *Religion.* Lutheranism is the religion of the state, and of nearly all the inhabitants; there being only about 2,000 Catholics and about 1,000 Jews. — *Government.* A constitutional monarchy. The king of Sweden, who is also king of Norway (*q. v.*), must be a member of the Lutheran Church. His person is inviolable. He has the right to declare war and make peace, and grant pardon to condemned criminals. He nominates to all appointments, both military and civil; concludes foreign treaties, and has a right to preside in the supreme Court of Justice. The king has an absolute veto against any decrees of the Diet, and possesses legislative power in matters of provincial administration and police. In all other respects, the fountain of law is the Diet. This Diet, or Congress of the realm, consists of two chambers, or estates, both elected by the people, but representing different interests. — *Finances.* The annual revenue and expenditure of the kingdom are about \$9,500,000. The public debt in 1890 amounted to \$64,220,807. — *Army.* The peace strength of the army of Sweden and Norway was estimated in 1896 at 36,077; first reserve, 90,000; second reserve, 120,000; total war strength, 240,077. — *Navy.* The navy of S. consists of 6 armored ships, 7 unarmored ships, 24 gunboats, 36 torpedo-boats, with a total of 190 guns. To this may be added the fleet of Norway, 53 vessels, 178 guns. These fleets are manned by 8,068 officers and men. — *History.* The two kingdoms, Gothland and Svealand, of which Sweden once consisted, were united in the 13th century by the failure of the royal line in the former. In 1397, by the treaty of Caluar, Sweden became subject to Margaret of Denmark, who has been styled the Semiramis of the North, and who joined the three kingdoms in one. Gustavus Vasa asserted the independence of Sweden, and ascended the throne in 1521. He bequeathed the crown to his posterity, who continued to reign, and in general with distinction; but most of them, and in particular, Gustavus Adolphus, his daughter Christina, Charles XII., and Gustavus III., discovered a romantic spirit, approaching, in the case of Charles XII., to a degree of infatuation. This dynasty ended in a prince (Gustavus IV.) who had all the eccentricity, and hardly any of the talents, of his predecessors. In 1809, this last monarch engaging in undertakings totally beyond the resources of his people, was deposed; and next year Marshal Bernadotte of France was elected crown-prince, and, in 1818, as Charles-John XIV., ascended the throne. In 1814, Norway was annexed to Sweden. (See NORWAY.) In 1857, Charles XV. succeeded his father, Oscar I., and d. in 1872, leaving the crown to his son, Oscar II., the present sovereign of Sweden and Norway. Cap. Stockholm. Pop. (1897) 4,994,500.

Swe'den, in *Maine*, a p.-twp. of Oxford co.

Sweden, in *New York*, a post-township of Monroe co., 18 m. W. of Rochester.

Sweden, in *Pennsylvania*, a post-township of Potter co., abt. 10 m. E. of Condersfort.

Swe'denborg, EMANUEL, founder of the Church of New Jerusalem, and one of the most distinguished men of science of the 18th cent., was b. in Stockholm, in 1688, and carefully educated under the care of his father, bishop of Skara, in W. Gothland, in the principles of the Lutheran Church. He was remarkable for his religious susceptibility in his youth; and his parents said that angels spoke through him. After pursuing his studies and taking the degree of Ph. D. at Upsal, he went on his travels in 1710, and visited the universities of England, Holland, France, and Germany. On his return, he was appointed assessor extraordinary to the College of Mines, and in 1719 was ennobled, upon which occasion his name was changed from Swedberg to Swedenborg. He had in the previous year achieved a great engineering feat, in the transport, over a mountain district, of several galleys and boats for service at the siege of Frederickshall. In 1721, he again travelled, to examine mines, &c. He continued his scientific studies with an ardor that placed him in the first rank of European philosophers, until the year 1743, when, as he himself affirms, a new era of his life commenced, and he was permitted to hold intercourse with the inhabitants of the invisible world. In 1747, he resigned his office in the mining college, retired from public life, and spending his time alternately in Sweden and in England, devoted himself to the publication of his theological works. These are in themselves sufficiently numerous to form a life's work, and present throughout evidences of the deepest religious feeling. The style of composition marks them as works of a master-mind. They are filled with illustrations from the scientific and metaphysical lore of their author, and present, perhaps, as remarkable a combination of science and theology as is anywhere to be met with. Though it is frequently affirmed that S. labored under a delusion, his writings show no symptoms of aberration; the last, finished but a few months before his death, being singularly clear, logical, and free from enthusiasm. He was always regarded as a learned and pious man; and it would appear that the story of his insanity rests for its support upon the word of a single enemy. He was never married; and his habits and mode of life were remarkable for their simplicity. The believers in his doctrines are now become a numerous body. (See SWEDENBORGIANS.) Of his very numerous works, it is impossible to name more than a few of the most im-

portant. In science, the *Dædaperboreus* (published 1716-18), *Opera Philosophica et Mineralia Hylis* (1734), *Ökonomia Regni Animalis*, and *Regnum Animale*; in theology, the *Arcana Cælestia*, *De Cultu et Amore Dei*, *On Heaven and Hell*, *On Conjugal Love*, and the *True Christian Religion*. D. in London, 1772.

Swedenborgians, *n. pl.* (*Eccl. Hist.*) Those persons who on religious subjects receive the testimony of Swedenborg (*q. v.*) In his work entitled *Arcana Cælestia*, and in his *Apocalypsis Revelata*, Swedenborg professes to make known what he calls the science of correspondences, or that analogy between spiritual and natural things according to which, he says, the Word of God is written. Thus, Jerusalem signifies not only the chief city of Palestine, but the Lord's Church, and more specifically the religious doctrines by which persons are united into a church. Hence, the New Jerusalem, seen by John descending from God out of heaven, signifies a New Church, or a new development of pure doctrines from the Holy Word, which will eventually regenerate the world. In these doctrines may be considered as most prominent the acknowledgment of the Lord Jesus Christ as the one God in whom is centred the Divine Trinity, and the necessity for uniting charity with faith, or, in other words, for the keeping of the divine commandments, in which is included the performance of every duty. The admirers of Swedenborg, who form a separate religious body, which they denominate the *Church of New Jerusalem*, or the *New Church*, have 67 places of worship in Great Britain, 12 in Germany, 7 in Switzerland, 4 in France, 1 in Denmark, 2 in Italy, and 8 in Australia and New Zealand. In the U. States and British N. America, the "New Church" is represented by societies or by receivers at about 620 places.

Swedenborgianism, *n.* (*Theol.*) The doctrines propounded by Swedenborg, and maintained by his followers.

Swedesborough, in *New Jersey*, a post-village of Gloucester co., abt. 12 m. S.W. of Woodbury.

Swed'ish, *a.* [*Swed. Seensk.*] (*Geog.*) Pertaining to Sweden, or to the Swedes. — *n.* The Swedish language.

Swedish Movement Cure. See MASSAGE.

Swed'ish coffee, *n.* (*Bot.*) See ASTRAGALUS.

Sweep, *v. a.* (*imp.* and *pp.* SWEEP.) [*A. S. swapan.*] To clean by brushing or passing a broom over; to brush, or rub over with a brush, broom, or besom, for removing dust or loose dirt; as, to *sweep* a floor, to *sweep* a chimney. — To carry with a long, swinging, or dragging motion; to bear along with pride or pomposity; as, she *swept* past with an air of disdain. — To drive or carry along or off on the earth; as, the flood *swept* away everything before it. — To drive, destroy, remove, or carry off numbers at a stroke, or with rapidity or violence; as, after breaking the bank, he *swept* the stakes off the table; thousands of people were *swept* off by the cholera. — To observe or run the eye or other instrument over for the purpose of taking observation; as, to *sweep* the horizon with a telescope. — To strike with a long stroke; as, oars *sweep* the water, she *swept* her fingers over the harp.

To sweep a mould. (*Founding.*) To set the sand in a mould by a template, instead of packing it around a pattern.

v. n. To pass with celerity and violence, as something broad, or brushing the surface of anything; as, heavy rain *sweeps* the streets. — To pass over or brush along with force and rapidity; as, a *sweeping* gale of wind. — To pass with pomp or ostentation; as, she appeared at court with a *sweeping* train to her robe. — To move with a long stretch or reach; as, a *sweeping* stroke. — To take in a view with progressive rapidity; to include many persons or particulars in a single act or utterance; as, a *sweeping* assertion, charge, and the like.

n. Act of sweeping. — Compass or extent of any stroke; as, to take a long *sweep* of the oars. — Circuit or range of any turning body or motion; as, the *sweep* of a door. — Reach or compass of anything flowing or brushing; as, the *sweep* of a torrent. — Violent and general destruction; as, the *sweep* of a pestilence. — Direction and dimension of any motion other than rectilinear; as, the *sweep* of a compass. — One who sweeps; specifically, a chimney-sweeper. — A pole or piece of timber moved on a fulcrum or post, employed in raising and lowering a bucket in a well for drawing water; — also written *swape*.

(*Founding.*) In loam-moulding, a movable template for forming moulds.

(*Naut.*) A circular plank fitted to support the foremost end of the tiller, or handle of a rudder, much improved by conveying the tiller-rope round it, and keeping it always tight. — Any part of a ship shaped in a segment of a circle.

pl. Large oars used on board small craft, to urge them forward during calms, or to give them additional speed during a chase.

Sweep'ingly, *adv.* In a sweeping manner.

Sweep'ingness, *n.* Quality of being sweeping.

Sweep'ings, *n. pl.* Things collected by sweeping; dregs; rubbish; as, the *sweepings* of a ship's hold.

Sweep'-net, *n.* A net for drawing over a large compass.

Sweep'stakes, *n. sing.* or *pl.* The whole money or plate staked or won at a horse-race.

Sweep'-washer, *n.* The person who extracts the residuum of precious metals from the sweepings, potsherds, &c., of refineries of gold and silver, or places where these metals are manufactured or used.

Sweep'y, *a.* Passing with a sweeping or brushing motion, or with speed and violence, over a great extent or compass at once; as, *sweepy* sway. (*Dryden.*) — Wavy. — Expanded; as, the peacock's *sweepy* train.

Sweet, *a.* (*comp.* SWEETER; *superl.* SWEETEST.) [*A. S. swet*; *Du. zoet*; *Lat. suavis.*] Saccharine; luscious;

Jonathan Swift

1667-1745

possessing an agreeable or grateful taste or flavor, resembling that of honey or sugar;—in contradistinction from *sour*, *acid*, or *bitter*; as, a *sweet* fruit. —Fragrant; odoriferous; pleasing to the sense of smell; as, a *sweet* perfume, *sweet* incense. —Soft, melodious, or pleasing to the ear; harmonious; dulcet; as, a *sweet* voice, *sweet* music. —Beautiful; attractive or pleasing to the eye; as, that girl has a *sweet* face. —Fresh; palatable; not salt; as, *sweet* water. —Not stale or rancid; as, *sweet* butter. —Not turned or sour; not mouldy; not coagulated; as, *sweet* bread, *sweet* milk; —in distinction from *butter-milk*. —Not tainted, putrescent, or putrid; as, meat kept in ice keeps *sweet* for a long while. —Soft; mild; gentle; as, "a *sweet* and virtuous soul." (Herbert.) —Charming; soft; pleasing; snave; bland; kind; obliging; as, *sweet* manners, a *sweet* smile.

(NOTE. *Sweet* enters frequently as a prefix into the composition of certain self-explaining compounds; as, *sweet*-featured, *sweet*-smelling, *sweet*-tempered, *sweet*-toned, &c.)

Sweet herbs, fragrant herbs cultivated in kitchen-gardens. —*Sweet* tooth, a penchant or especial fondness for sweetmeats, or sweet things generally. —*To be sweet* upon, to treat with marks of tender deference, or exhibit such a partiality for, or interest in, as to indicate incipient affection.

Sweet, *n.* A sweet substance, particularly that which is added to wines and liqueurs to improve them. —A perfume; that which is sweet, grateful, or fragrant in properties of smell; as, odoriferous *sweets*. —That which is pleasing or agreeable to the mind or thoughts; as, the *sweets* and sours of married life. —A pet; a darling; one who is dear to the heart of another; an appellation of endearment; as, "Be at thy chamber-window, *sweet*!" —*Carew.* —*pl.* Confectionery; candies; preserves; sugars, honey, &c.; —in England, also, applied to pastry, jellies, &c., served at the dinner-table. —Home-made wines, cordials, syrups, &c.

Sweet-bag, *n.* (Bot.) See LAURUS.

Sweet-bread, *n.* The pancreas of an animal, especially of a calf, dressed and used for food.

Sweet-briar, **Sweet-brier**, *n.* (Bot.) See EG-LANTINE.

Sweet-cal'abash, *n.* (Bot.) See PASSIFLORA.

Sweet-cal'amus, **Sweet-cane**, *n.* (Bot.) See CALAMUS.

Sweet-cicely, (-sis'-) *n.* (Bot.) See OSMORRHIZA.

Sweet-corn, *n.* A variety of the maize or Indian corn, possessing a sweet taste.

Sweeten, (*sweet'n.*) *v. a.* [A. S. *swetan*, *geswetan*.] To make sweet or agreeable to the taste; as, to *sweeten* coffee, to *sweeten* a glass of punch. —To make pure and salubrious by destroying noxious ingredients; as, to *sweeten* the atmosphere of a sick-room. —To make warm and fertile; as, to dry and *sweeten* soils. —To restore to purity or palatableness; as, to *sweeten* water or provisions. —To soften to the eye; to make subdued or delicate; as, to *sweeten* lights and shadows in a picture. —To make pleasing, acceptable, or grateful to the mind; as, love *sweetens* life. —To make mild, propitious, gentle, or kind; as, the gift of a new dress often *sweetens* a wife's temper. —To make less irksome, laborious, or painful; as, "She thy cares shall *sweeten* with her charms." (Dryden.) —To add to the amenities or agreeable qualities of; as, children *sweeten* domestic joys.

—*v. n.* To become sweet.

Sweet'ener, *n.* One who, or that which, sweetens; as, sugar is a *sweetener* of tea. —One who palliates, mollifies, or reconciles; that which serves to moderate acerbity or assuage animosity. —An auctioneer's assistant employed to make fictitious bids for articles, to decoy others into bidding higher.

Sweetening, (*sweet'n-ing*) *n.* Act of making sweet. —That which sweetens, or makes sweet.

Sweet-fern, *n.* (Bot.) See COMPTONIA.

Sweet-flag, *n.* (Bot.) Same as CALAMUS, *q. v.*

Sweet-gale, *n.* (Bot.) See MYRICACEE.

Sweet-gum, *n.* (Bot.) Same as LIQUID AMBAR, *q. v.*

Sweet-heart, *n.* A lover or mistress.

Sweet'ing, *a.* A sweet, luscious apple. —A darling; a pet; —a term of fondness.

Sweet'ish, *a.* Moderately sweet or agreeable to the taste.

Sweet'ishness, *n.* Quality of being sweetish.

Sweet'land, in *California*, a post-village of Nevada co., 8 m. N.W. of Nevada City.

Sweet'land, or SWEETLAND CENTRE, in *Iowa*, a post-township of Muscatine co.

Sweet'ly, *adv.* In a sweet manner; agreeably; charmingly; gratefully.

Sweet-mar'joram, *n.* (Bot.) See ORIGANUM.

Sweet'meat, *n.* [A. S. *swetmete*.] Fruit candied or preserved with sugar; confectionery made with sugar; a bon-bon; —generally in the plural.

Sweet'ness, *n.* Quality of being sweet, in any of its senses; as gratefulness to the taste or to the smell; fragrance; agreeableness to the ear; melody; agreeableness of manners; softness; mildness; obliging civility; suavity; amiableness, as of temper.

Sweet-oil, *n.* A popular colloquialism for olive-oil.

Sweet-pea, *n.* (Bot.) See LATHYRUS.

Sweet-pota'to, *n.* (Bot.) See BATATAS.

Sweet-root, *n.* (Bot.) Licorice-root. See GLYCYRRHIZA.

Sweet-rush, *n.* (Bot.) The sweet-flax. See ACORUS.

Sweet-scented, (-sent-,) *a.* Fragrant; odoriferous; having a sweet or delicate scent; as, a *sweet-scented* flower.

Sweet-scented shrub, (Bot.) See CALYCANTHACEE.

Sweet-sop, *n.* (Bot.) Same as SWEET-APPLE, *q. v.*

Sweet-springs, in *W. Virginia*, a post-village of Monroe co., 15 m. S.S.E. of Lewisburg.

Sweet-stuff, *n.* A colloquialism for sweetmeats of any or of all kinds; as, children are fond of *sweet-stuff*.

Sweet-sultan, *n.* (Bot.) An annual flowering-plant; *Centaurea moschata*.

Sweet Water, in *Georgia*, a post-village of Gwinnett co., 95 m. N.W. of Milledgeville.

Sweet-Water Creek, of *Georgia*, enters the Chattahoochee River from Campbell co.

Sweet-william, *n.* (Bot.) See DIANTHUS.

Sweet-willow, *n.* (Bot.) The Sweet-gale. See MYRICA.

Sweet'-wood, *n.* (Bot.) See OREODAPHNE.

Sweet'-wort, (-wurt,) *n.* Any plant possessing a sweet taste.

Swell, *v. a.* (*imp.* SWELLED; *pp.* SWELLED; SWOLLEN or SWOLN is nearly obs.) [A. S. *swellan*; D. *zwellen*; Icel. *svella*, to swell.] To enlarge; to grow larger; to dilate or extend the exterior surface or dimensions of by matter added to the interior part, or by expansion of the inclosed substance; as, a bladder *swells* by inflation; a boil or bruised part *swells*, &c. —To increase in size, compass, or extent by any addition or reinforcement; as, a river *swells* into a flood after heavy rains. —To rise, heave, or be driven into waves or billows; as, it blew a gale, accompanied by a *swelling* sea. —To be bloated or puffed up; as, a bull *swells* with rage at the sight of anything of a red color. —To belly; to be distended or inflated; as, a *swelling* sail. —To be turgid, tumid, euphuistic, or bombastic; as, a *swelling* style of diction. —To bulge out; to protuberate, as the belly of a cask. —To be elated or uplifted in mind; to rise into haughty or arrogance; as, to *swell* into state. (Dryden.) —To grow upon the view; to become insensibly larger; as, a *swelling* scene. (Shaks.) —To look big; to strut; to carry a pompous or arrogant air; to act in an ostentatious or self-sufficient manner; as, a parvenu *swells* with self-importance in parade of his money-bags.

—*v. n.* To increase the size, bulk, compass, or dimensions of; to cause to rise, dilate, expand, enlarge, or increase; as, winds *swell* the curled waters. (Shaks.) —To aggravate; to heighten; to intensify; as, to *swell* an assertion or accusation. —To raise to arrogance; to uplift to a degree of vulgar prosperity, as that derived from riches.

(Mus.) To augment in force or intensity of sound, as a note.

—*n.* Act of swelling. —Extension or enlargement of bulk; protuberance. —Rise; elevation, as of height. —Increase; force; intensity; power; —said of sound; as, "Music's voluptuous *swell*." (Byron.) —Reinforcement of force or power in style or diction; as, the *swell* of a rhetorical sentence. —A gradual ascent or elevation of land; as, a tract rising into gentle *swells*. —A wave or billow; more generally, successive or large waves; as, a heavy *swell* set into the bay. —The fluctuating or heaving motion of the sea after a tempest; as, the ship encountered a heavy ground-*swell*. —A showy, dashing, well-dressed man; usually, implying one who affects an air of jauntiness or dandyism, combined with a dash of self-conceit; a fop; as, a tip-top Broadway *swell*.

(Mus.) A combination of the crescendo and diminuendo, or a gradual increase and decrease of the volume of sound; —usually noted thus ~~~~~

Swelling, *a.* Tumid; turgid; inflated; bombastic; as, *swelling* language.

—*n.* Act of enlarging or increasing in bulk; inflation. —Prominence; protuberance; a bulging out. —A rising or augmentation by passion; as, the *swellings* of anger, grief, or pride.

(Med.) A tumor or any morbid enlargement of the natural size; as, a *swelling* in the face.

Swell-mob, *n.* A generic term for well-dressed thieves, pick-pockets, &c.; as, he was taken for a member of the *swell-mob*.

Swell'er, *v. a.* [O. Eng. *swelte*, to faint; A. S. *sweltan*, to die.] To be overcome and languid with heat; to be ready to perish from excess of heat; as, *swell'ering* cattle.

—*v. a.* To oppress or nearly stifle with heat; to make faint, weak, or sick, by a heated, close atmosphere; as, a *swell'ering* day in August.

Swept, *imp.* and *pp.* of SWEEP, *q. v.*

Swerve, *v. a.* [D. *zwerfen*, to wander; A. S. *hweorfan*, to turn.] To turn aside from any line prescribed, or from a rule of duty or regulation; to depart from what is set down or established by law, duty, custom, or usage; to deviate; as, to *swerve* from the path of rectitude. —To ply; to bend; to incline; as, the tide of battle *swerved*. —To swarm; to shin; to climb upward by a wriggling motion; as, he *swerved* the tree.

Swiecieany, (*swet-se-a'-ne*), a town of Russian Poland, 45 m. from *Vilna*. Pop. 5,627.

Swieten'ia, *n.* (Bot.) A genus of plants, order *Cedrelaceae*. The species *S. Mahogani* supplies the well-known valuable wood called *mahogany*, which is so largely employed for household furniture and cabinet-work. It is imported chiefly from Honduras and Cuba, and also to a certain extent from other West Indian islands. Its bark possesses febrifugal properties.

Swift, *a.* (*comp.* SWIFTER; *superl.* SWIFTEST.) [A. S. from *swifan*, to wander.] Speedy; quick; rapid; fleet; nimble; moving with rapidity, celerity, or velocity; moving a great distance or over a large space in a short time; as, a *swift* horse, a *swift* vessel, a *swift* pedestrian. —Ready; prompt; with alacrity; as, "To mischief *swift*." Milton. —Speedy; expeditious; that comes without halt or delay; as, *swift* destruction.

(NOTE. *Swift* sometimes forms the prefix of certain self-explanatory compounds; as, *swift*-footed, *swift*-paced, *swift*-winged, and the like.)

—*n.* The current of a stream; as, *swifts* and rapids.

Swift, *n. pl.* Reels or bobbins, used in the winding of yarns, thread, &c.

(Zool.) The common name of the family *Cypselidae*, tribe *Psirostreres*, comprising small dull colored birds,

which have the general appearance of swallows, but differ from the latter in many essential characteristics. The Swifts have a much smaller and shorter bill, with the edges greatly inflected; the nostrils are superior instead of lateral, and without bristles; the wing more falcate, and with ten primaries instead of nine; the tail with ten feathers instead of twelve; the feet are weaker, the hind toe more or less versatile, and the anterior toes usually lack the normal number of joints; and there are peculiarities in their vocal organs. There are several American species. The American Chimney Swallow, *Chatura pelagica*, "is peculiarly our own," says the great American ornithologist, Wilson, "and strongly distinguished from all the rest of our Swallows by its figure, flight, and manners. This Swallow, like all the rest of its tribe in the United States, is migratory, arriving in Pennsylvania late in April or early in May, and dispersing themselves over the whole country wherever there are vacant chimneys in summer sufficiently high and convenient for their accommodation. The nest of this bird is of singular construction, being formed of very small twigs, fastened together with a

Fig. 2452.

AMER. CHIMNEY SWALLOW.

strong adhesive glue or gum, which is secreted by two glands, one on each side of the hind head, and mixes with the saliva. With this glue, which becomes hard as the twigs themselves, the whole nest is thickly besmeared. The nest itself is small and shallow, and attached by one side or edge to the wall, and is totally destitute of the soft lining with which the others are so plentifully supplied. The eggs are generally four and white, and they have generally two broods in a season.

Swift, JONATHAN, Dean of St. Patrick's, a British author, B. in Dublin, 1607, and, after a few years spent as a private tutor in Sir William Temple's family, in 1692 took his M.A. degree at Oxford, and soon after his priest's orders in the University of Dublin, returning to Sir Wm. Temple's house, where he remained till 1698. The next year he attended Lord Berkeley to Ireland as his private secretary, where he soon after received a prebendary and several clerical appointments. In 1710, he joined the Tory party, and began to edit the *Examiner*. In 1726 he published his *Gulliver's Travels*, and from time to time threw off those stinging and vindictive satires against his political adversaries that kept him in perpetual feud and disquietude. For the last four years of his existence a mental darkness reduced him to incapacity, and he d. idiotic, 1745, the greatest part of his property being left to endow a lunatic asylum in Dublin, known as Swift's Hospital. As a writer, S. must be judged by the standard of the time and morals of society at the epoch in which he lived; but that his ideas were gross and his tastes depraved, even for that degenerate age, a dozen pages of any one of his popular works will incontestably prove.

Swift'er, *n.* (Naut.) A rope used to confine the bars of the capstan in their sockets, while men are turning it. —A rope used to encircle a boat longitudinally, to strengthen and defend her sides from the impulsion of other boats. —A shroud fixed on the starboard and port sides of the lower masts, above all the other shrouds, to give the masts additional security.

—*v. a.* (Mach.) To stretch by tackles, as shrouds.

Swiftly, *adv.* In a swift manner.

Swift'ness, *n.* Quality of being swift; rapid motion; celerity; speed; velocity; fleetness; quickness; expedition; —a term of general application to every kind of motion, and, also, to everything susceptible of movement; as, the *swiftness* of a swallow, the *swiftness* of a river, the *swiftness* of a race-horse, *swiftness* of thought.

Swift River, in *Massachusetts*, a stream of Hampshire co., flows S., joining the Ware River to form the Chicopee River, in the N. border of Hampden co.

Swift River, in *New Hampshire*, rises in Grafton co., and falls into the Saco River in Carroll co.

Swig, *v. a.* and *n.* [A. S. *swilgan*, to swallow.] To drink by copious draughts; to guzzle; to suck or quaff greedily; to *swig* brandy and water. (Colloq.)

—*n.* A deep or copious draught.

(Naut.) A pulley having ropes which are not parallel.

Swig, *v. a.* [Ger. *schweigen*, to silence.] To castrate, as a ram, by binding the testicles so tight that they mortify and drop off.

Swill, *v. a.* [A. S. *swilgan*, to swallow; Dn. *zwellgan*, to swallow.] To swallow large draughts; to *swig*; to drink in a greedy, guzzling manner; as, to *swill* beer. —To inebriate; to swell or distend with copiousness or fullness; as, *swilled* insolence.

—*v. n.* To drink grossly or greedily; to drink to excess.

—*n.* Large draughts of liquor or drink taken in excessive quantities. —The wash, or mixture of liquid substances given to swine; —also written *swillings*.

Swill'er, *n.* One who drinks intemperately.

Swill'ings, *n. pl.* Same as SWILL, *q. v.*

Swim, *v. n.* (*imp.* SWAM; *pp.* SWUM.) [A. S. *swimman*.] To be supported on water or other fluid; to float; not to sink; as, cork *swims*. —To move progressively in water by means of the motion of the hands and feet, or of fins; as, he *swam* across the river. —To be borne along by a current; as, they *swim* with the tide of popular opinion. —To glide along with a smooth current, or with a waving motion; as, the *swimming* gait of a Span-

ish woman.—To experience dizziness or vertigo; to have a waving motion of the head, or a similar sensation, or a reeling of the body; as, the head *swims*.—To overflow; to have plenty or abundance; as, to *swim* in pleasure.

Swim, v. a. To pass by swimming; as, to *swim* a creek. —To immerse in water so that the lighter parts may swim; as, to *swim* wheat for seed.—To make to float; to cause or compel to swim; as, to *swim* cattle across a river. —*n.* Act of swimming; a gliding motion resembling that of a person swimming.—Duration of time, or extent of distance, passed in swimming; as, a ten-mile *swim*. —The sound or bladder of a fish.

Swim'ner, n. One who, or that which, swims.

(*Far.*) A protuberance on a horse's leg.

(*Zoöl.*) One of an order of swimming-birds, or NATATORES, *q. v.*

Swim'ming, n. [*A. S. swimman*, to swim.] The act or art of moving through the water by means of the limbs. It is one of the most important branches of gymnastics, and although easily acquired, depends somewhat on the natural buoyancy of the body. The best place for learning to swim is in deep water. The learner should always bear in mind that the stroke which is to sustain and propel him must be compound; that is, the action of the legs and arms should be simultaneous. It must not be made on the surface of the water, nor must the individual kick up his heels in the air behind him. The sweep of the arms and legs should always be made under water, and rather deeply so with the legs. The back should never be allowed to rise with the stroke, except as the whole body rises, but should be kept hollow, slanting, and steady. In making the stroke, the palms of the hands are placed together, and pushed straightforward like the bow of a boat, about an inch under the surface; at the same moment the knees are drawn up widely beneath the body. In the next motion the hands sweep back the water in such a manner as to bring the whole of the arms into action from the shoulders to the hands; at the same moment the legs are thrown back, and the feet vigorously pushed against the water beneath. The hands ought to be swept out as far as possible, without straining the shoulders and blade-bones. After this motion is made, the action is relaxed, and a fresh stroke is commenced. It should be remembered by the learner, that the principal propelling power is in the legs, the arms and hands being principally used for sustaining the head above the surface. In general the use of corks, bladders, &c., should be avoided, as they frequently interfere with the learner's confidence in the natural buoyancy of his body. Among modern feats of *S.* may be mentioned the crossing of the Hellespont by Lord Byron, who accomplished the feat in an hour and ten minutes, with the tide not in his favor. All animals in *S.* do not vary much from their motion in walking, but man is obliged to change his motion altogether. The Russians, Poles, and other Slavonic tribes swim in a manner somewhat resembling the motion of dogs in the water, making a separate effort with each of the four extremities.

Swim'mingly, adv. In an easy, gliding manner, as if swimming;—hence, smoothly; without obstruction; with great success; as, the business goes on *swim'mingly*. (Not elegant.)

Swim'mingness, n. Act or state of swimming.

Swindle, (swin'dl.) v. a. [*Dn. swindlen*, to trade recklessly; *Ger. schwindeln*, fraud.] Literally, to render giddy, and in that state to defraud; specifically, to cheat and defraud grossly, or with deliberate artifice; as, to *swindle* a man out of his share of business profits. —To toss money to decide who shall pay for drinks; as, to *swindle* for glasses round. (Colloq. and vulgar.)

—Act, process, or operation of defrauding by systematic artifice or imposition; as, a gigantic *swindle*. —A tossing to decide payment for liquor. (Colloq.)

Swin'dler, n. [*Ger. schwindler*.] A cheat; a rogue; one who defrauds grossly, or who makes a practice of defrauding others by imposition or deliberate artifice; one who obtains money or goods under false pretences.

Swind'ling, n. The practice of a swindler.

Swin'don, n. A town of England, co. of Wilts, 29 m. from Bath; pop. 5,824.

Swine, n. sing. and pl. [*A. S. swin*.] A hog; a pig; in the plural, hogs collectively. See *SUIDÆ*.

Swine'fordstown, n. in Pennsylvania. See *MIDDLEBURG*.

Swine'herd, n. A keeper or tender of swine.

Swinemünde, (sve-ne-moon'de.) a maritime town of Pomerania, at the mouth of the Swine, 36 m. from Stettin. It is the outlet of Stettin, where large vessels unload their cargoes for that place. Pop. 5,811.

Swine'-pox, n. (Med.) Same as CHICKEN-POX, *q. v.*

Swing, v. n. (imp. and pp. swung) [*A. S. swengan*.] To move to and fro, as a body suspended in the air; to wave; to vibrate; to oscillate; as, a pendulum *swings* backward and forward.—To practise swinging; as, children *swing* on a rope.—To be hanged; to suffer death judicially by strangulation; as, he who deliberately murders another shall *swing* for it. (Colloq.)

(*Naut.*) To move or float.—To turn round while at anchor; as, the ship *swung* round with the tide.

—*v. a.* To move to and fro; to wave; to flourish; to brandish; as, a lion *swings* his tail, a man *swings* his arms when walking.—To cause to swing, wave, or vibrate; to whirl round in the air; to swirl; to wave; to cause to oscillate; as, a smith *swinging* a red-hot piece of iron about with pincers.

—*n.* Act of swinging; oscillation; a waving or vibratory motion; as, the *swing* of a bell.—Alternate motion to and fro; as, the *swing* of one's arms when walking.—

An apparatus for persons to swing in.—Influence or impetus of a body in motion; as, the *swing* of a battering-ram.—Unrestrained liberty or license; free, unfettered course; untrammelled tendency or action; as, youthful follies will have their *swing*, in the full *swing* of genius, &c.

Swing'-beam, n. (Mach.) A cross-piece sustaining the body of a railroad-car, and suspended in such a manner from the framing of a truck, that an independent lateral motion is accorded to it.

Swing Bridge, n. A movable bridge, consisting of two parts, which meet midway between the abutments, each turning upon a centre pivot so as to allow a ship or vessel to pass when necessary.

Swinge, (swing') v. a. [*A. S. swingan*, to swing, whip.] To castigate or whip soundly; to bastinado; to flagellate; to punish or chastise; as, to *swinge* a culprit with the lash.

Swingeing, (swing'ing,) a. Huge; immense; very large; as, a *swingeing* cheese.

Swinge'ingly, adv. In a swingeing manner.

Swingel, Swip'le, (swing'gl.) n. [*A. S. swingel*, a whip, scourge.] That part of a flail which strikes the grain in threshing.

Swinger, n. One who swings.

Swing'ing, n. Act of swinging; act of using a swing.

Swingle, (swing'gl.) v. a. [*A. S. swinglung*, a whipping.] To clean or dress, as flax, by means of the swingle.—To poll or lop the tops off without uprooting, as weeds.—In wire-drawing, a wooden spoke attached to the barrel that draws the wire.

—*n.* A wooden instrument, knife-shaped, about two feet in length, and having one thin edge;—used for cleaning and dressing flax.

Swingle-tree, n. Same as WHIFFLE-TREE, *q. v.*

Swing'ing-tow, n. In flax-dressing, the coarse part of the fibre, separated from the finer by swinging and hatching.

Swing'-plough, (-plow,) n. (Agric.) A plough destitute of a fore-wheel under the beam.

Swing'-wheel, n. (Horol.) The wheel, in a time-piece, which drives the pendulum.

Swin'ish, a. [*From swine*.] Befitting, resembling, or characteristic of swine;—hence, gross; hoggish; brutal; as, *swinish* gluttony.

Swin'ishly, adv. In a swinish or hoggish manner.

Swin'ishness, n. State or quality of being swinish.

Swin'ton, n. in Illinois, a post-village of Kane co., abt. 50 m. N. W. of Chicago.

Swipe, n. A sweeping blow.

Swiple, n. Same as SWINGEL, *q. v.*

Swirl, v. a. and n. [*Icel. swirra*.] To whirl, or cause to circumscribe, as in an eddy or vortex; as, leaves *swirling* in the air.

Swiss, n. [*Fr. Suisse*.] The language of Switzerland;—a mixed patois of French and German.

—*sing. and pl.* A native or inhabitant of Switzerland; a Switzer;—plurally, the people of Switzerland.

Switch, n. [*Ger. zweig*, a branch, twig.] A small flexible twig, rod, or branch; as, an ashen *switch*.

(*Railroads.*) A movable part of two opposite rails, for transferring a car or truck from one part to another.

—*v. a.* To beat, strike, or lash with a small twig or rod; as, to *switch* a lad.—To trim, as a hedge; used in some parts of England.—To transfer from one track of a railroad to another; to turn by a switch;—generally before off; as, to *switch off* a train of cars.

Switch'el, n. A beverage concocted of molasses and water.

Switch'ing, n. Act or operation of transferring, as a train, from one railroad track to another.

Switch'ing-engine, n. In the U. States, a locomotive-engine employed in the switching of cars and making-up of trains.

Switch'man, n.; pl. SWITCHMEN. One who tends a switch on a railroad.

Switz'er, n. A native or inhabitant of Switzerland.

Switzerland, (Ger. Schweiz, Fr. La Suisse.) (*Anc. Helvetia*, including part of *Rhetia*.) An inland and mountainous country of Central Europe, having Germany on the N., Austria on the E., Italy and France on the S., and France on the W. It lies principally between the 46th and 48th degs. of N. Lat., and the 6th and 11th of E. Lon. Its greatest length N. and W. is 210 m.; greatest breadth, N. and S., 140 m.; area, 15,992 sq. m. The republic is composed of 25 sovereign states, which form 22 cantons, as follows:

Schwyz (from which the country takes its name),	Berne,	Schaffhausen,	Ticino,
Uri,	Zurich,	Freiburg,	St. Gall,
Unterwalden,	Lucerne,	Soleure,	Thurgau,
	Glarus,	Basle,	Aargau,
	Zug,	Grisons,	Neuchâtel,
	Appenzell,	Vaud,	Valais,
			Geneva,

In the management of their internal affairs, these cantons are entirely independent of each other. *S.* is the most mountainous country in Europe, having the Alps not only along the whole of its S. and E. frontiers, but throughout the chief part of its interior; the only extensive tract of level ground, or rather of vales, with mountains of more moderate height, being to the W. in the cantons of Basle, Zurich, and part of Berne. Even there, however, the extreme frontier is formed by mountains, the Jura ridge extending in a long line from N. to S. Of the valleys the most remarkable is that of the Rhone, which is at once the widest, and surrounded by the highest mountains.—*Mountains.* The Alps, varying in height from 5,000 to 8,000, 10,000, 12,000, and over 15,000 feet. Among them are Monte Rosa, Mount St. Gothard, the Great St. Bernard, and the Simplon, which are not equal in height to several mountains of the interior, such as Mount Cervin, the Jungfrau

(Figs. 2454 and 2455), the Finsteraar-horn, the Furca, the Schreckhorn, the Wetterhorn (Fig. 2453), and the Galenstock. The Alps branch out into a number of lateral chains, and exhibit at their base, on their ascent, and

Fig. 2453. — THE WETTERHORN (or Hasli-Jungfrau.) (11,402 feet high.)

towards their summit, every variety of temperature and product; rich grain fields or luxuriant pastures extending along the lower part of many of these mountains. The middle consists of pastures less productive, but containing a great variety of plants; while the summits are often composed of rocks, craggy, inaccessible, devoid of vegetation, and covered with enormous masses of ice and snow. (See ALPS.)—*Glaciers.* The glaciers occupy the plains or hollows which separate the peaks of the highest mountains, being lakes of frozen snow, accumulated to a vast height, or rather depth, and detaching, from time to time, enormous masses, called avalanches, which roll down with a frightful noise. The formation of glaciers takes place near the line of perpetual congelation (about 8,000 or 9,000 feet above the sea); although, in a winter of unusual rigor, their ramifications extend considerably lower. In the long Alpine range are reckoned no less than 400, extending from 16 to 18 miles in length, by 1 or 2 in breadth.

Fig. 2454. — THE WENGERN-ALP,

(a sloping pasture on the way from Grindelwald to the Jungfrau.)

Their depth can with difficulty be ascertained; but is supposed to vary from 100 to 600 feet. The total extent of their surface has been calculated at 1,000 sq. m. (See GLACIERS.)—*Rivers.* Numerous, but rapid, and therefore mostly unnavigable. The principal are the Rhone, the Ticino, the Aar, the Rhine with its tributaries, the Thur, the Limmat, the Reuss, and the Aar. *Lakes.* Numerous and beautiful. The principal are those of Geneva, or Lemman, Constance, Neuchâtel, Bienne, Zurich, Wallenstadt, Waldstädter, or Lucerne, Thun, and Brienz. Many of these have a blue appearance, owing to their great depth, while the scenery by which they are surrounded is distinguished for its great beauty.—*Climate.* Extremely variable.—*Zoology.* The summits of the Alps are frequented by the chamois, the wild goat, the white and red foxes. The bear, the wolf, and the marmot, are also found. Of birds, the eagle and the vulture appear, and the lakes abound with fish.—*Prod.* Agriculture is followed principally in the valleys, where wheat, barley, oats, maize, flax, hemp, and tobacco, are produced. The fruits of most frequent occurrence are grapes, chestnuts, pines, peaches, walnuts, and cherries; in the colder situations, apples and pears; and in the southern valleys, the almond and fig; the latter, however, in small quantities. Cheese, butter, tallow, hides, form the chief articles of export from the pastoral districts. After large cattle the animals chiefly raised are goats, sheep, and hogs.

Minerals. There are mines of silver, copper, iron, and lead, in different parts; also quarries of rock-salt. Marble, porphyry, alabaster, crystal, and sulphur, are occasionally found in the mountains. The principal salt-springs are at Bex, in the valley of the Rhone. There are, besides, many mineral springs.—**Manuf.** Linen, lace, thread, woollens, and cottons; clocks and watches have long been staple articles at Geneva and Neuchâtel; while leather, gloves, silks, porcelain, pottery, toys, tobacco, and snuff, are made in various places.—**Education.** *S.* has universities at Basel, Bern, Geneva, and Zurich, besides a polytechnic school at Zurich, and a military academy at Thun. Instruction is obligatory for all children between 7 and 14 yrs. The total number

Fig. 2455. — THE FALL OF STAUBBACH.
(near Lauterbrunnen. — The Jungfrau in the distance.)

of public schools is over 7,000, with abt. 480,000 pupils.—**Races.** Mostly Teutonic, but also Greek-Latin. The German, in various kinds of patois, is spoken by upwards of a million and a half; the French is spoken on the Jura, and on the table-land W. of the lakes of Bienné and Morat; and S. of the Alps the Italian is spoken.—**Govt.** The republic of *S.*, formerly a league of semi-independent states, or *Staatenbund*, has become a united confederacy, or *Bundesstaat*, since the year 1848. The Constitution vests the supreme legislative and executive authority in a Congress of two chambers, a *Ständerath*, or State Council, and a *Nationalrath*, or National Council. The first is composed of 44 members, chosen by the 22 cantons of the Confederation, 2 for each canton. The *Nationalrath* consists of 135 representatives of the Swiss people, chosen in direct election, at the rate of one deputy for every 20,000 souls. A general election of representatives takes place every three years. Every citizen of the republic who has attained the age of 20 years is entitled to a vote; and any voter, not a clergyman, may be elected a deputy. Both chambers united are called the *Bundes-Versammlung*, or Federal Assembly, and as such represent the Supreme Government of the republic. The chief executive authority is deputed to a *Bundesrath*, or Federal Council, consisting of seven members, elected for three years, by the Federal Assembly. Every citizen who has a vote for the National Council is capable of becoming a member of the executive. The president and vice-president of the Federal Council are the first magistrates of the republic, occupying relatively the position of president and vice-president of Switzerland. Both are elected by the Federal Assembly for the term of one year, and are not re-eligible till after the expiration of another year. The election takes place at a united meeting of the State Council and the National Council. The Federal Assembly alone has the right to declare war, to make peace, and to conclude alliances and treaties with other nations. Independent of the Federal Assembly, though issuing from the same, is the *Bundes-Gericht*, or Federal Tribunal. It consists of nine members, elected for six years by the Federal Assembly. The Federal Tribunal decides, in the last instance, all matters in dispute between the various cantons of the republic, as well as between the cantons and the Federal Government, and acts in general as high court of appeal. There is no standing army in Switzerland, but every citizen is obliged to serve as a soldier, and military drill is taught at all the schools. The effective force of Switzerland, January, 1897, numbered 495,000 men. The annual national revenue and expenditure are estimated at about \$13,000,000.—**Religion.** The Swiss Reformation spread chiefly from Basle, Berne, and Geneva, and the chief Protestant districts are the countries communicating with these towns. The Alpine region is almost entirely Roman Catholic, the seven Catholic cantons being Lucerne, Zug, Schwyz, Uri, Unterwalden, Valais, and Ticino. Out of every 1,000 Swiss, 411 are Roman Catholics, 587 Protestants, and 2 Jews.—**Hist.** After the conquest of Helvetia by Julius Cæsar, the Romans founded in it several flourishing cities, which were afterwards destroyed by the barbarians. On the decline of the Roman empire, it successively formed a part of the kingdom of Burgundy and the dominions of the Merovingian and Carolingian kings; while the E. part of *S.* became first subject to the Allenanni, and subsequently it was wholly included in the German empire under Conrad II. in 1037. The house of Hapsburg had, from an early period, the supremacy over all the E. part of *S.*; and it

preserved its ascendancy till about 1307, when Uri, Schwyz, and Unterwalden entered into a confederacy for mutual aid against Austria, which compact was confirmed after the defeat of Leopold Duke of Austria, at the battle of Morgarten, in 1315. From 1332 to 1353, Lucerne, Zurich, Glarus, Zug, and Berne joined the confederation. Aargau was conquered from Austria in 1415; the abbey and town of St. Gall joined the other cantons in 1451-54; Thurgau was annexed in 1460; Freiburg and Solothurn admitted in 1481; the Grisons in 1497; Basle and Schaffhausen in 1501; and Appenzell in 1513. About this time Ticino was conquered from the Milanese, and Vaud taken from Savoy by the Bernese, in 1560. The remaining cantons were not finally united to the confederation till the time of Napoleon; and the compact, by which all were placed on a perfect equality, only dates from the peace of 1814. Following the political and religious troubles which culminated in the adoption of the liberal constitution of 1848, and from which we have quoted, Neuchâtel declared itself independent of the King of Prussia in his title of Prince of Neuchâtel. The canton was declared a republic, with a constitution similar to that of the other Swiss States. The King protested, but in vain, and in 1857 he finally relinquished his claim. In May, 1874, another revision of the constitution was adopted. By it civil marriages are compulsory, establishes complete liberty of creed, prohibits the appointment of new bishops except under federal approval, excludes Jesuits, forbids new convents, and authorizes the gov't. to expel dangerous foreigners, &c. *Cap. Berne. Pop.* (1897) 3,222,050.

—In *Indiana*, a S.E. co., bordering on the Ohio; area, 230 sq. m. *Cap. Vevay. Pop.* (1897) 14,250.

Swivel. (*swiv'el*.) *n.* [A. S. *swifan*, to revolve; Icel. *swif*, a revolving handle.] That which is so fixed as to turn or sweep round; specifically,

(*Mech.*) A kind of ring made to turn round in a staple or other ring.—*Swivel-joint*, a joint composed of two pieces which turns round, with respect to each other, on a longitudinal pin or axis, as in a chain, to prevent twisting.

(*Ord.*) A gun fixed on a swivel, by means of which it may be directed to any object; they are principally used on shipboard;—called, also, *swivel-gun*.

—*v. a.* To turn on a staple, pin, or pivot.

Swivel-bridge. (*-brîj*.) *n.* Same as SWING-BRIDGE.

Swivel-eyed. (*-îd*.) *a.* Having the eyes oblique or askint.

Swivel-hook. *n.* A hook that turns in the end of an iron block-strap, for readily taking the turns out of a tackle.

Swizzle. (*swiz'zle*.) *v. a.* To drink plentifully; to swill; to guzzle.

—*n.* Ale and porter mixed.

Swob/ber. *n.* Same as SWABBER. *q. v.*

—*pl.* (*Gamers.*) In Whist, four privileged cards, used only incidentally in betting on the game.

Swollen. (*swoln*.) *Swoln*, obs. *pp.* of SWELL, *q. v.*

Swoon. *v. a.* [A. S. *aswunan*.] To faint; to sink into a fainting fit, in which there is an apparent suspension of the vital functions and mental powers.

—*n.* Act of swooning;—also, a fainting; syncope.

—*adv.* In a swooning or syncopal manner.

Swoop. *v. a.* (*imp.* and *pp.* SWOOPED.) (*swôopt*.) [From *sweep*.] To fall on at once and seize; to pounce upon while on the wing; as, a kite swoops a pigeon.—To take or seize with a sweeping action; to catch up; as, to swoop up loose money.

—*v. n.* To stoop, or descend with closed wings from a height upon prey or quarry, as a hawk or eagle.

—*n.* A falling on or seizing, as of a rapacious bird on his prey;—hence, by analogy, the sudden sweeping away of anything; as, he lost all his money at one swoop.

Swoop. *v. a.* and *n.* Same as SWAP, *q. v.*

Sword. (*sôrd*.) *n.* [A. S. *sword*, *seyrd*; Du. *zwaard*; Icel. *sverth*; Ger. *schwert*.] A warlike, offensive weapon, worn at the side, and used by hand either for thrusting or cutting.—Hence, figuratively, destruction by war, vengeance, or justice; as, to ravage a country with fire and sword.—Hence, also, the emblem of authority and power, or of triumph and protection; as, "Justice quits the balance, and resigns the sword." (*Dryden*).—The military power of a state or nation, as typified by the sword.

Sword-blade. *n.* The cutting part of a sword.

Sword-cane. *n.* A cane that forms a sheath for a sword.

Sword-cutter. *n.* A metal-worker who makes swords.

Sword-dance. *n.* A favorite dance among the Scots Highlanders, in which two naked swords are placed on the ground cross-wise, for the dancers to step between.

Sword-fight. **Sword-play.** *n.* A combat with swords; a trial of skill in fencing.

Sword-fish. *n.* (*Zoöl.*) See XIPHIAS.

Sword-knot. (*-not*.) *n.* A knot of ribbon fastened to the hilt of a sword.

Sword-law. *n.* Government by the sword; military despotism.

Sword-player. *n.* A fencer; one who exhibits his skill in the use of the sword.

Sword-shaped. *a.* (*Bot.*) Fusiform; as, a sword-shaped leaf.

Swordsman. *n.*; *pl.* SWORDSMEN. A fighting man; a soldier.—Specifically, a person skilled in the use of the sword;—also, a professor of the science of fencing.

Swords'manship. *n.* State of being a swordsman; skill in the use of the sword.

Swore. *imp.* of SWEAR, *q. v.*

Sworn. (*swôrn*.) *pp.* or *p. a.* from SWEAR, *q. v.*

Sworn enemies, parties at irreconcilable feud with

each other.—*Sworn friends*, close or constant friends and allies.

Swum. *imp.* and *pp.* of SWIM, *q. v.*

Swung. *imp.* and *pp.* of SWING, *q. v.*

Sybarite. *n.* A term used metaphorically to designate an effeminate voluptuary; so called from the inhabitants of Sybaris, formerly a town of Italy, on the Gulf of Tarentum, who were said to have been so enfeebled by sensual indulgence that they became an easy prey to the Crotonians, a people comparatively insignificant in point of numbers, by whom their city was levelled to the ground, B. C. 310.

Sybaritic. **Sybaritical.** *a.* [Fr. *sybaritique*; Gr. *sybaritikos*.] Pertaining to, or resembling, the ancient Sybarites;—hence, luxurious; effeminate; wanton; sensual.

Sybaritism. (*-izm*.) *n.* The habit or practice of extreme luxury or voluptuousness.

Sycamine. *n.* [Lat. *sycaminus*.] A Scriptural name for the mulberry-tree;—sometimes confounded with the *sycamore*.

Sycamore. (*sik'a-môr*.) *n.* [Fr.; Lat. *sycamorus*; Gr. *sykamoros*, the Fig-mulberry.] (*Bot.*) A name applied in the U States to the *Platanus occidentalis* (see PLATANUS), and in Europe to a species of Maple, *Acer pseudoplatanus*, of which there are several distinct and beautiful varieties known. The *S.* of Scriptures is a species of Fig, *Ficus sycamorus* (see FIGUS), a native of Egypt, where it becomes a considerable timber-tree. Its branches spread out widely, affording a grateful shade, and the trees are therefore planted by the seashore, and by the roadsides. The figs, which are sweet and delicate, are produced in clustered racemes on the trunks and limbs, instead of the new shoots.

Sycamore. in *Illinois*, a thriving city and township, cap. of De Kalb co., 208 m. N.E. of Springfield. *Pop.* (1897) 3,450.

Sycamore. in *Ohio*, a township of Hamilton county. A post-village and township of Wyandott co., abt. 45 m. S.W. of Sandusky City.

Sycamore Creek, or Slough, in *California*, rises in Colusa co., and flows into the Sacramento River, 60 m. S. of Shasta City.

Sycamore Creek, in *Michigan*, rises in Ingham co., and falls into Red Cedar River at its confluence with Grand River.

Sycamore Creek, in *Tennessee*, flows into the Cumberland River from Davidson co.

Sycamore-moth. *n.* (*Zoöl.*) A species of moth, whose larvæ prey upon the leaves of the sycamore.

Sycee. **Sycee-silver.** (*sîs-sê'*.) *n.* In China and the E. Indies, silver bullion stamped with the mark of the office whence it issues, and used as currency.

Sychnocarpus. (*sik-no-kar'pûs*.) *a.* [Gr. *sychnos*, frequent, and *karpos*, fruit.] (*Bot.*) Having the capacity of bearing frequent crops of fruit without perishing, as trees, shrubs, and perennials.

Syco'ma. *n.* [Gr., from *sykon*, a fig.] (*Med.*) A fig-shaped tumor.

Syc'onus. *n.* [Gr. *sykon*, a fig.] (*Bot.*) A collective fruit, formed of an enlarged and more or less succulent receptacle, which bears a number of separate flowers. The fig is an example. The flowers are almost entirely inclosed by the enlarged, hollow, pear-shaped receptacle; and what are commonly called seeds are in reality one-seeded fruits resembling *Achenia*.

Sycophancy. (*sik-o-fan'se*.) *n.* [Gr. *sykophantia*.] The character, behavior, or conduct of a sycophant;—hence, servility; obsequious flattery; toadyism; currying favor by tale-bearing and other meanness.

Sycophant. (*sik-o-fan't*.) *n.* [Fr. *sycofante*; Gr. *sykophantes*, said to be from *sykon*, a fig, and *phainô*, to inform against.] In its original sense, the name of an informer against those who stole figs, or exported them from Attica contrary to law.—Hence, in modern usage, a false accuser; a mean tale-bearer or informer in general; a parasite; an obsequious flatterer; especially, a flatterer or toady of men high in rank or station;—hence, also, an impostor; a deceiver; a humbug.

—*v. a.* To act the part of a sycophant toward; to flatter meanly or obsequiously; to toady officiously; to curry favor with by tale-bearing and informing of others; also, to vilify; to calumniate; to deceive by backbiting.

—*v. n.* To play the sycophant;—also *sycophantize*.

Sycophantic. **Sycophantical.** *a.* Pertaining or relating to, or like, a sycophant; tale-bearing; more generally, courting favor by mean adulation; parasitic; toadyish; obsequiously or sneakily flattering; as, a *sycophantic* hanger-on.

Sycophantic plants. (*Bot.*) Parasitic plants.

Sycophan'tish. *a.* After the manner of a sycophant. **Sycophantism.** (*-fan'tizm*.) *n.* Sycophancy; mean adulation or bare-faced flattery.

Sycophan'tize. *v. n.* See the verb SYCOPHANT.

Syc'o'sis. *n.* [Fr. *sycose*; Gr., from *sykon*, a fig.] (*Med.*) A tubercular eruption upon the scalp or bearded part of the face. It sometimes forms a very troublesome obstacle to shaving.

Syd'nam. THOMAS, a celebrated English physician; b. 1624, d. 1689. His writings have been often republished, the edition entitled *Opera Medica*, which appeared at Geneva in 1716, being the best.

Syd'erolite. *n.* (*Ceramics*.) A kind of Bohemian earthenware, resembling the pottery called *Wedgwood-ware*.

Sydney. (*sîd'ne*.) the oldest city of Australia, and the cap. of the New South Wales colony, a large, important, and rapidly increasing town, situated on the S. side of a lovely bay called Fort Jackson; Lat. 35° 55' S., and Lon. 151° 25' E. The streets of *S.* are long and spacious, the buildings well erected, and the town adorned with many

very superior public institutions or erections of a beautiful architectural design. The shops of *S.* are particularly fine, indeed imposing, and in many instances hardly second to those of our large cities. *S.* is the residence of the governor of the state, and may be regarded as the great centre of literature for all the Australian colonies, New Zealand, and adjacent British islands, and is in every respect the metropolis of British Australia. Wool constitutes its staple export; and next to this are oil, spermaceti, whalebone, and valuable timber. The harbor of Port Jackson is navigable for vessels of any burden for about 7 miles above the town, or 15 miles from the entrance, and possesses the best anchorage in the world. An International Exposition was held in *S.* in 1882; the building and contents were destroyed by fire. Loss est. at \$2,500,000.

Syd'ney, now ANTIGONISH, in Nova Scotia, an E. co., bordering on the Gulf of St. Lawrence. Cap. Antigonish.—A seaport, cap. of Cape Breton co., on the Atlantic, about 200 m. N.E. of Halifax.

Syd'norsville, in Va., a p. v. of Franklin co.

Sy'ne. (*Anc. Geog.*) A city on the S. frontiers of Egypt, towards Ethiopia, between Thebes and the cataracts of the Nile, and now called *Astoman*. In its vicinity are quarries of the Egyptian granite called *Syenite*, which furnished the material for numerous obelisks and colossal statues.

Syenite, *n.* (*Min.*) See STENE.

Sykes'ville, in Maryland, a post-village of Carroll co., 32 m. W. of Baltimore.

Sylacan'gar, or **Sylacan'ga**, in Alabama, a post-village of Talladega co., 65 m. N. of Montgomery.

Syl'amore, in Arkansas, a post-township of Stone co. Pop. about 820.

Sylla, or **Sulla**, LUCIUS CORNELIUS, (*sil'la*), a celebrated Roman general and statesman, was descended from a branch of the once illustrious family of the Corneli; passed his youth in dissipation; and having obtained wealth by the bequests of a courtesan and of his mother-in-law, he aspired to political distinction, and in 107 B. C. was chosen questor. He served with reputation under Marius, in Africa, in Pontus, and on various other occasions; and he rose to the consulship in the forty-ninth year of his age. At its expiration he set sail for the East; and having landed in Thessaly and received the submission of several Greek cities, he besieged and took Athens, and slaughtered multitudes of its inhabitants. He then proceeded to Asia; and after repeatedly defeating Mithridates, he concluded a very advantageous treaty with that powerful enemy. During his 3 years' absence from Italy, his enemies had regained the superiority in Rome. Marius had been recalled; the blood of the friends of *S.* had been shed in torrents; he himself had been proscribed, and his property confiscated. Meanwhile Marius died; and as soon as *S.* returned with his victorious army, they entered Rome and began the dreadful work of retaliation. At length, having glutted his vengeance by the murder or proscription of many thousand citizens, and the desolation of many Italian cities, he celebrated his bloody deeds by a triumph, exceeding in splendor any that preceded it, and caused himself to be named dictator, B. C. 81. He now ruled without restraint, repealed and made laws, abolished the tribuneship, added 300 knights to the senate, and admitted 10,000 slaves of persons proscribed to the rights of citizenship. Having governed the Roman world 2 years as dictator, he voluntarily laid down his power, and retired to private life. But resuming his early habits of debauchery, he was attacked with a disgusting disease; and he died B. C. 78, aged 60.

Syllabic, **Syllabical**, (*sil'ic*), *a.* [*Fr. syllabique*; *Gr. syllabikos*.] Pertaining, or having reference to a syllable or syllables; as, *syllabic* accentuation.—Consisting of, or characterized by, a syllable or syllables; as, a *syllabic* augment.

Syllabically, *adv.* In a syllabic manner.

Syllabicate, *v. a.* To form into syllables.

Syllabication, (*-kă'shun*), *n.* [*Lat. syllaba*, and *ficio*, to make.] Act of forming syllables; also, act or method of dividing words into syllables.

Syllabify, *v. a.* (*imp. and pp. SYLLABIFIED*.) To form or divide into syllables; to syllabicate.

Syllabist, *n.* One who forms words into syllables; one skilled in syllabification.

Syllable, (*sil'la-bl*), *n.* [*Fr. syllabe*; *Lat. syllaba*; *Gr. syllabē*—*syn*, and *lambanō*, *elabōn*, to comprehend or comprise.] (*Pros.*) Several letters taken together, so as to form one sound; or, a part of a word consisting of one, two, or more letters, uttered with a single impulse of the voice, and forming a perfect sound.—One or more letters which represent such syllables in written composition, and which may or may not correspond to a syllable in spoken language.—Something proverbially written or spoken short, laconic, or concise; as, a story without one *syllable* of truth in it.

Syllabus, (*sil'la-būs*), *n.*; *Eng. pl. SYLLABUSES*; *Lat. pl. SYLLABI*. [*Lat.*, from the root of *syllable*.] An abstract; a compendium containing the heads of a discourse, treatise, &c.; an epitome.

Syllep'sis, *n.* [*Lat. and Gr.*, a taking together.] (*Rhet.*) A trope by which a word is taken at once in the literal and the metaphorical senses.

(*Gram.*) A name sometimes given to that idiom of the Greek and Latin languages whereby an adjective predicated of a masculine and feminine substantive is made to accord in gender with the former; e. g. *rex et regina beati*.

Sylleptic, (*sil'lep'tik*), **Syllep'tical**, *a.* Pertaining or relating to, or containing syllepsis.

Syllep'tically, *adv.* In a sylleptical manner.

Syllogism, (*sil'lo-gizm*), *n.* [*Fr. syllogisme*; *Lat.*

sylogismus; *Gr. syllogismos*—*syn*, and *logizomai*, to reckon.] (*Logic*.) A bringing together of premises, and drawing a conclusion therefrom; a form of reasoning or argument, consisting of three propositions, of which the first two are respectively called the *major* and *minor* premises, and the last the *conclusion*, which necessarily follows from the former.

Syllogistic, (*sil'lo-jis'tik*), **Syllogis'tical**, *a.* [*Gr. syllogistikos*.] Pertaining or relating to a syllogism; consisting of a syllogism, or of the form of reasoning by syllogisms; as, *syllogistic* arguments.

Syllogis'tically, *adv.* In the form, or by means, of syllogisms.

Syllogize, (*sil'lo-jīz*), *v. a.* To reason by syllogisms.

Syllogizer, *n.* A reasoner by syllogisms.

Sylph, (*sil'f*), *n.* [*Fr. sylphe*; *Gr. sylphē*, a kind of grub or beetle.] An imaginary spirit inhabiting the air; a fairy.—Hence, by analogy, a woman of fairy-like aspect or proportions; as, she is a perfect *sylph*. (*Colloq.*)

Sylph'id, **Sylph'ide**, *a.* Resembling a sylph; fairy-like; as, a woman of *sylphide* form.

—*n.* [*Dim. of sylph*.] A little sylph; a fay.

Sylph'like, *a.* Resembling a sylph.

Sylva, (*sil'vah*), *n.*; *pl. SYLVÆ*. [*Lat. sylva*, *silva*, a wood or forest, also a crowded mass.] The forest-trees characterizing any region or country.

(*Bot.*) A word purporting to be a botanical description of the forest-trees of any region or country; as, Evelyn's *Sylva*.

(*Poet.*) A poetical composition conceived in a kind of start or transport.—A miscellany or olio of poetical pieces.

Sylvan, **Sil'van**, *a.* Belonging, or having reference to a sylva; arboreal; forestal; hence, rural; rustic; bucolic; as, a *sylvan* life.—Woody; umbrageous; bosky; abounding in forests or in trees; as, a *sylvan* scene.

—*n.* [*Lat. sylvanus*, from *sylva*.] A satyr; a faun; a fabled deity of the woods;—hence, rarely, a rustic; as, lawless *sylvans*.

Sylvan, in Michigan, a post-village and township of Washtenaw co.

Sylvan, in Wisconsin, a post-township of Richland co., abt. 70 m. W.N.W. of Madison.

Sylvania, in Georgia, a post-town, cap. of Scriven co., 60 m. S.E. of Augusta.

Sylvania, in Missouri, a post-village of Dade co., about 48 m. W.N.W. of Springfield.

Sylvania, in Ohio, a post-village and township of Lucas co., 11 m. W.N.W. of Toledo.

Sylvania, in Pennsylvania, a post-borough of Bradford co., about 24 m. S. of Elmira, N. Y.

—A township of Potter co.

Sylvanus, (*sil'vai'nus*), (*Myth.*) A rural Latin deity, who is generally represented as half a man and half a goat. He was sometimes represented as holding a cypress in his hand.

Sylvester I., Pope in 314, D. 323, and was canonized.

SYLVESTER II., (*Gerbert*), a native of Auvergne, was of an obscure family, but received a superior education, studying first in the monastery of Aurillac, and afterwards in Spain. He was made abbot of Bobbio by the Emperor Otto II., and became very distinguished as a teacher. His attainments in science procured him the reputation of a magician. Among the numerous useful inventions attributed to *S.* is the balance-clock, which was in use till the adoption of the pendulum in 1650. *S.* was tutor to Otto III., and subsequently head of the school of Rheims, which he made one of the first in Europe. Robert, afterwards king of France, was among his pupils. He was called to the papal chair on the death of Gregory V., and administered the affairs of the church with much prudence and moderation. He was the first French pope. D. at a great age, 1003.

SYLVESTER III., was an anti-pope set up in 1044.

Sylves'ter, in Wisconsin, a post-village and township of Greene co., 35 m. S.W. of Madison.

Syl'vic Acid, *n.* (*Chem.*) One of the two acids of which common rosin or *colophony* consists. It is dissolved by hot alcohol, and crystallizes in colorless prisms.

Sylvicola, or **Dendro'ica**, *n.* (*Zoöl.*) A genus of birds, family *Sylviolidae*, has the bill attenuated, depressed at the base, compressed from the middle, distinctly notched, bristles short but distinct, tarsi long, the hind claw long, the wings long and pointed, the second quill usually a very little longer than the first, tail slightly rounded, and always with a white spot. More than 20 species belonging to this genus are found in the U. States. The Blackburnian Warbler, *S.* or *D. blackburnie* of N. America E. of the Missouri, is 5½ inches long, the wing less than 3 inches, the back black, throat bright-yellow, and a patch on the wing and outer tail-feathers white.

Sylviolidae, or **SYLVIADÆ**, *n. pl.* (*Zoöl.*) The Warbler family, comprising a large number of small inessential birds, with rather long and slender bills, with the tip slightly curved and toothed; and it contains a large proportion of the species which are most remarkable for their power of song. The chief peculiarity which runs through this numerous family, is the very small size and delicate structure of its individuals. Excepting the Humming-birds, we find among these elegant little creatures the smallest birds in the creation. The dimin-

utive Golden-crests, the Nightingale, the White-throat, and the Wood-wren, are all well-known examples of genuine Warblers. The groups of this extensive family, spread over all the habitable regions of the globe, are destined to perform an important part in the economy of nature; to them appears intrusted the subjugation of those innumerable minute insects which lurk within the buds, the foliage, or the flowers of plants; and, thus protected, escape that destruction from swallows, to which they are only exposed during flight.

Symbol, (*sim'ol*), *n.* [*Lat. symbolum*; *Gr. symbōlon*—*syn*, and *ballo*, to throw, bring, or put together.] The sign or representation of any moral or intellectual thing by the images or properties of natural things; a type; an emblem; a figure; as, an anchor is the *symbol* of hope, a lamb is the *symbol* of meekness.—A significant letter or character; as, the Indian letters are commonly *symbols*.

(*Math.*) A certain mark or figure by which a number, quantity, or operation is represented.

(*Theol.*) The creed, or an epitome of the articles of religion; an abstract or compendium of faith or doctrine.

(*Chem.*) See ATOMIC THEORY.

(*Bot.*) In their description of plants, botanists use certain signs or abbreviations to convey information in the most ready way on certain general facts which have to be recorded, or to express particular attributes in the subject under description. The signs or symbols in most frequent use are the following:

♂ = male.
♀ = female.
♂ ♀ = hermaphrodite, or bisexual.
♂-♀-♀ = polygamous.
♂ ♀ = diœcious.
♀ = monœcious.
♂-♀-♀ = triœcious.
○ or ○ = annual.
○ or ♂ = biennial.
℥ = perennial.
℥ = a tree or shrub.
∞ = an indefinite and considerable number of anything.

! placed after a person's name indicates that an authentic specimen from that person has been seen.

* at the end of a citation denotes that a point is fully described in the place referred to.

v.v. = seen alive.

v.s. = seen in a dried state.

v.c. = seen cultivated.

v.sp. = seen wild.

''' When these signs are placed after a number, they express a foot, an inch, or a line respectively; thus, 5' = 5 feet; 5" = 5 inches; 5''' = 5 lines.

Symbolic, **Symbolics**, *n. sing.* (*Theol.*) The science of creeds; symbolism.

Symbolic, **Symbolical**, *a.* Pertaining or relating, in the nature or character of, or serving as, a symbol; figurative; representative; exhibiting or exemplifying by resemblance or typical signs; as, idols are *symbolical* of paganism.

Symbolical delivery. (*Law.*) The delivery of something as a representation or sign of the delivery of some other. (*Bourier.*)—*Symbolical philosophy*, that philosophy which is expressed by hieroglyphics or ideographic characters.

Symbolically, *adv.* In a symbolical manner.

Symb'olism, (*-izm*), *n.* A system of symbols, types, or representations.

(*Theol.*) An exposition or comparison of symbols or creeds; the science of creeds.

(*Chem.*) A combining together of parts or ingredients.

Symb'olist, *n.* One who employs, or expresses by, symbols.

Symbolis'tic, **Symbolis'tical**, *a.* Characterized by the application of symbols; as, *symbolistic* verse.

Symbolization, (*-zā'shun*), *n.* Act of symbolizing.

Symb'olize, *v. a.* [*Fr. symboliser*.] To be symbolical; to have a resemblance of qualities or properties; as, air and water are *symbolizing* elements. (*Boyle.*)—To agree; to be identified with the same creed or religious faith. (*R.*)

—*v. a.* To represent by a symbol or symbols.—To make representative or typical of something; as, "Some *symbolize* the same from the mystery of its colors." (*Browne.*)—To cause to accord in properties or qualities.

Symbological, (*-lōj'ic*), *a.* Versed in, or partaking of the character of, symbolism.

Symbology, (*sim-bōl'ō-jē*), *n.* [*Gr. symbolon*, symbol, and *logos*, treatise.] The art of symbolic expression.

Sym'i, (*sy'me*), an island near the coast of Asia Minor, 15 m. from Rhodes, Lat. 36° 30' N., Lon. 27° 54' E.; ext. 6 m. long, and 6 broad. It is usually barren, but every piece of ground is cultivated. The whole number of inhabitants reside in the town, which is built near the top of a high rocky mountain. Pop. 7,000.

Symmachus, QUINTUS AURELIUS, (*sim'ma-kus*), a prefect, pontiff, and augur of Rome in its declining age, remarkable for his eloquent appeal against the ruin threatened by the triumph of Christianity; he is the author of *Epistles* still extant, and became consul under Theodosius in 391.

Symmes, (*simz*), in Ohio, a post-township of Hamilton county.—A township of Lawrence county.

Symmes' Creek, in Ohio, rises in Jackson county, and falls into the Ohio 5 miles east of Burlington.

Symme'trian, *n.* One eminently studious of symmetry, or proportion of parts. (*R.*)

Fig. 2456.
BLACKBURNIAN WARBLER.

Symmet'rical, *a.* [Fr. *symétrique*.] Having, presenting, or involving symmetry; harmonious in proportion of its parts; having its parts in due proportion in a dimensive sense; as, a *symmetrical* body.

(*Math.*) Characterized by corresponding parts or relations.

(*Bot.*) Having an equal number of parts of each sort, or in each set or circle of organs, as five sepals, five petals, and five stamens.

S. determinant. (*Math.*) A determinant in which those constituents are equal which are symmetrically situated with respect to the principal diagonal. — *S. function.* (*Alg.*) A function of two or more quantities is said to be *symmetrical* with respect to those quantities if, independently of their particular values or any relation subsisting among them, the function is unaltered when any two of the quantities whatsoever are interchanged.

Symmet'rically, *adv.* In a symmetrical manner.

Symmet'ricity, *n.* State or quality of being symmetrical.

Symmet'rician, (*-trish'an*), **Sym'metrism**, *n.* Same as SYMMETRICIAN, *q. v.*

Sym'metrize, *v. a.* [Fr. *symétriser*.] To make symmetrical or proportional in its parts; to reduce to symmetry.

Sym'metry, *n.* [Gr. *symmetria* — *syn*, and *metron*, measure.] State or quality of having one part commensurate with another; a due proportion of the several parts of a body to each other; the union and conformity of the members of a work to the whole; harmony of parts; that relation of equal and similar figures which refers to their position merely, and consists in their uniformity, as regards the answering of one portion to another; proportion; harmony.

(*Bot.*) That kind of arrangement in which the number of parts of one series corresponds with that of the other series; as, for example, when a flower has five petals, and five, or ten, or fifteen stamens.

(*Fine Arts.*) See PROPORTION.

Sym'n's Corners, in *Ohio*, a post-village of Butler co., 4 m. S. of Hamilton.

Sympathet'ic, **Sympathet'ical**, *a.* [Fr. *sympathétique*.] Pertaining, having, expressing, or evoking sympathy; having common feelings with another; susceptible of being affected by feelings like those of another, or of feelings in consequence of what another has experienced; as, a *sympathetic* soul.

(*Med.*) Produced by sympathy or affinity; — said of certain symptoms or affections superinduced by the presence of similar ailments in other, or remote parts of the same body.

Sympathetic ink. See *INK*. — *Sympathetic nerve* and *ganglia*. (See *NERVE*, *GANGLION*.) — *Sympathetic sounds*. (*Acoustics.*) Sounds elicited from solid bodies by the reverberatory action of some sonorous body, such vibrations being conveyed by means of the air or some intervening solid body.

Sympathet'ically, *adv.* In a sympathetic manner.

Sympathist, *n.* A sympathizer; one who sympathizes. (*R.*)

Sympathize, *v. a.* [Fr. *sympathiser*.] To have or to feel sympathy; to experience a common feeling, as of bodily pleasure or pain; as, the mind *sympathizes*, in most cases, with the sensations of the body. — To be affected by feelings similar to those of another, consequent upon cognition of such person being so affected; as, to *sympathize* with the grief of a widowed mother.

Sympathizer, *n.* One who sympathizes; a sympathist.

Sympathy, *n.* [Fr. *sympathie*; Gr. *sympatheia* — *syn*, and *pathein* — *paschō*, to receive an impression from without, one's self being passive.] Fellow-feeling; feeling in affinity with that felt by another; the quality of being affected by the condition of another, with feelings correspondent in nature, if not in degree. — A consonance or agreement of affections or inclinations, or a conformity of natural temper, which brings two persons into harmony of disposition toward each other; — correlative to *antipathy*. — Pity; commiseration; kindness or compassion of feeling evinced toward one who suffers; as, I felt a sincere *sympathy* for him in his distress.

(*Med.*) A correspondence of various parts or organs of the body in similar sensations, symptoms, or affections; or, an affection of the whole body, or some part of it, in consequence of an injury or disease of another part, or of a local affection.

(*Fine Arts.*) Generally, the conformity of parts to each other; specifically, in painting, the effective union or blending of colors.

Symphonic, (*sim-fon'ik*), *a.* [From *symphony*.] Symphonious.

(*Mus.*) Pertaining or relating to, or characterized by the manner of, a symphony; as, the *symphonic* style of composition.

Symphonious, (*-fō'ni-ūs*), *a.* Accordant; harmonious; consonant; agreeing in sound.

(*Mus.*) Symphonic.

Symphonist, *n.* A composer of symphonies.

Symphonize, *v. a.* To be in harmony, agreement, or accordance with. (*R.*)

Symphony, (*sim'fo-ne*), *n.* [Fr. *symphonie*; It. *simfonia*; Gr. *symphōnē* — *syn*, with, and *phōnē*, sound.] Union, consonance, or harmony of sounds agreeable to the ear, whether such sounds are vocal or instrumental, or both; as, "The trumpets . . . warlike *symphony*." *Dryden*.

(*Mus.*) Among the ancients, the word *S.* indicated a union of concerted sounds, and was used in contradistinction to *antiphony*, which was employed when half the consonants were in the octave or double octave, to

the other half. In modern music, however, the word *S.* is applied to certain instrumental compositions, containing various movements, and designed for a full band. As specimens of this species of composition, we may mention Beethoven's "Symphonia Pastorale," and his *S.* in C minor. Mendelssohn, Mozart, and Haydn also excelled in the composition of symphonies.

Symphoricar'pus, *n.* [Gr. *syn*, together, *phero*, to bear, *karpōs*, fruit.] (*Bot.*) A genus of plants, order *Caprifoliaceae*, consisting of small herbs, with entire leaves and small flowers. *S. racemosus*, the Snow-berry or Indian Currant, is a smooth, handsome shrub, 2-3 feet high, common in cultivation, and native in N. Y., Canada, &c. It has a rose-colored corolla, with the throat filled with hairs; berries large, round, or ovoid, of a snowy white, and very ornamental when mature.

Symphysiotomy, **Symphysiotomy**, *n.* [Gr. *symphysis*, and *tomē*, cutting.] (*Surg.*) Fig. 2457. SNOW-BERRY. The operation of dividing the symphysis pubis for the purpose of facilitating labor; the Sigaultian section.

Symphysis, (*sim-fī'sis*), *n.* [Gr. *syn*, with, and *phyein*, to grow.] (*Anat.*) A term applied to the junction of certain bones, or to joints not admitting of motion; as, the *symphysis* of the pubis.

Symphytum, (*sim-fī-tum*), *n.* [Gr. *symphus*, I unite, because believed to agglutinate the lips of wounds.] (*Bot.*) A genus of plants, order *Boraginaceae*. *S. officinale* is the herb Comfrey, which has always been reputed vulnerary. The young leaves and shoots are sometimes eaten as table-vegetables. When bruised, comfrey forms an excellent bandage for broken limbs, on account of the starch and mucilaginous matters it contains.

Sympiesometer, *n.* [Gr. *sympiezō*, I compress, and *metron*, measure.] (*Physics.*) An instrument for measuring the weight of the atmosphere by the compression of a column of gas.

Symplocarpus, *n.* [Gr. *symploka*, connection, and *karpōs*, fruit.] (*Bot.*) A genus of perennial, aquatic, acaulescent herbs, order *Lemnaceae*. The Skunk Cabbage, *S. fetidus*, is a common plant of Canada, New England, and the Middle and Western States, growing in swamps, meadows, and ditches, renowned for its odor, which is scarcely less offensive than that of the animal whose name it bears. Early in spring, the swelling spathe is seen emerging first from the ground or water, more or less covered with purplish spots, its edges partly unfolded, and its point incurved. It encloses the spadix, which is oval, covered with flowers of a dull purple. The leaves, which arise after the flowers, are of a bright green, numerous, becoming very large.

Symploce, (*sim'plo-se*), *n.* [Lat., from Gr. *symplokein*, to twine together.] (*Gram.*) The repetition of a word at the commencement and another at the termination of successive clauses; as, *My friend and myself went fishing; My friend went home and left me fishing.*

Symplocet, *n.* (*Bot.*) A genus of plants, order *Styracaceae*. Some species are used in dyeing yellow, as *S. tinctoria*, called Horse-sugar or Sweet-leaf; its root is bitter and aromatic. Others, as *S. alstonia*, are employed as tea, on account of a slight astringency in their leaves.

Symposiac, (*sim-pō'zi-ak*), *a.* [Gr. *symposiakos*.] Pertaining or relating to a symposium, or to symposia; having reference to computations, drinking-bouts, or merry-makings; occurring where boon-companions are revelling together; as, *symposiac* mirth.

— *n.* A tournament of discussion or conversation, as of savans or philosophers at a banquet or convivial meeting.

Symposiast, (*-pō'zi-ast*), *n.* A participator with others in a carousal or merry-making.

Symposium, (*sim-pō'zi-am*), *n.*; *pl.* SYMPOSIA. [Lat.; Gr. *symposion* — *syn*, and *posis*, a drinking.] A drinking-bout enlivened by songs and conversation; a merry-making; a jovial feast; a carouse; a revel.

Symptom, (*sim'tam*), *n.* [Fr. *symptome*; Gr. *symptoma* — *syn*, and *ptō*.] Properly, something that befalls or happens in concurrence with another thing, as an attendant.

(*Med.*) That which indicates the presence of disease; any affection which accompanies disease; a perceptible change in the body or the animal functions, indicative of disease; as, he exhibited *symptoms* of apoplexy.

— A sign; a token; a mark; an indication; that which points to the existence of something else; as, seditious meetings are often the *symptom* of a forthcoming insurrectionary outbreak.

Symptom'ic, **Symptom'ical**, *a.* Pertaining or having reference to symptoms; happening concurrently with something; indicating the existence of another thing; as, suspicion is *symptomatic* of a weak mind.

(*Med.*) Noting a disease which proceeds from some prior disorder in some part of the body; according to symptoms; as, a *symptom'ical* diagnosis of disease.

Symptom'ically, *adv.* In a symptom'ical manner.

Symptomatology, (*-tōl'o-je*), *n.* [From Gr. *symptoma*, and *logos*, treatise.] (*Med.*) The doctrine or theory of symptoms; that branch of medical science which treats of the symptoms of diseases; semeiology. — See DIAGNOSIS and PROGNOSIS.

Synæresis, **Syneresis**, (*sin-ēr'-*), *n.* [Gr., from

syn, with, and *airein*, to grasp.] (*Gram.*) The contraction of two syllables into one by the formation of a diphthong, or by rendering one of them mute; as, for example, *Atræides* for *Atræides*.

Synagog'ical, *a.* Pertaining, or having reference to a synagogue.

Synagogue, (*sin'a-gōg*), *n.* [Fr.; Gr. *synagōgē* — *syn*, and *agō*, to lead.] A congregation or assembly of Jews, met for the purpose of public worship, or for the performance of religious rites. — The house appropriated to the religious worship of the Jews. — The tribunal of the seventy Jewish elders. See SANHEDRIM.

Synalepha, (*-lē'fah*), **Synalæ'pha**, *n.* [Gr. *synalophē*, from *aleiphē*, I anoint, from the melting together of two sounds.] (*Gram.*) In classical prosody, the usage by which, when a word ends with a vowel, and the next begins with a vowel, the final syllable of the one runs into the first of the other. — See ELISION.

Synallagmatic, *a.* [From Gr. *synallagma*, a contract.] (*Civil Law.*) Imposing reciprocal obligations upon the parties concerned; as, a *synallagmatic* agreement.

Synan'therous, *a.* (*Bot.*) With the stamens united by their anthers.

Synanthus, *a.* [Gr. *syn*, together, and *anthos*, flower.] (*Bot.*) Appearing in flower and leaf at the same time, as certain plants.

Synarchy, *n.* [Gr. *syn*, with, and *archē*, rule.] Joint rule; co-sovereignty. (*R.*)

Synarthro'dial, *a.* Pertaining, or relating, to synarthrosis.

Synarthrosis, *n.* [Gr., from *arthron*, a joint.] (*Anat.*) The immovable connection of one bone with another.

Synaxis, *n.* [Gr.; Fr. *synaxe*.] A congregation; — also, anciently, the Holy Supper.

Syncarpium, *n.* [Gr. *syn*, and *karpōs*, fruit.] (*Bot.*) A fruit consisting of many carpels consolidated and adhering to a central receptacle or growing point, as in the Magnolia.

Syncarpous, *a.* (*Bot.*) Denoting the carpels of a compound pistil, when they are completely consolidated into an undivided body, as in the Orange.

Synecategorematic, *n.* [Gr. *syn*, with, and *kategorēma*, a predicate.] (*Logic*) A word which cannot be employed by itself as a term, but must be conjoined with another or others for that purpose. Such are adverbs, prepositions, nouns in other cases beside the nominative, &c.

Synchondro'sis, *n.* [Gr. *syn*, and *chondros*, cartilage.] (*Anat.*) The junction of one bone with another by an intervening cartilage.

Synchondrotomy, *n.* (*Surg.*) Same as SYMPHYSEOTOMY, *q. v.*

Synchore'sis, *n.* (*Rhet.*) A concession granted for the purpose of reserving a stronger retort.

Synchronal, (*sin'kro-nal*), *a.* [Gr. *syn*, and *chronos*, time.] Simultaneous; happening at the one time; synchronons.

— *n.* That which is coincident with something else, or which happens at the same time.

Synchronical, (*sin-kron'ik-al*), *a.* Synchronal; simultaneous; occurring at the same time.

Synchron'ically, *adv.* In a synchronical manner.

Synchronism, (*sin'kro-nizm*), *n.* [Gr. *syn*, together, and *chronos*, time.] Coincidental occurrence in time of two or more events.

(*Chron.*) The tabular arrangement of history according to dates, by which contemporary persons and things in different countries are brought together.

(*Paint.*) A representation of two or more events, happening at different times, in the same picture; — a favorite practice among the mediæval painters; as, for instance, the Prodigal Son is frequently represented leaving his father's house, banqueting with his companions, and feeding swine — all in the one work of art.

Synchronistic, *a.* Arranged in accordance with contemporaneous existence; as, *synchronistic* tables in chronology.

Synchroniza'tion, (*sin'kro-ni-zā'shun*), *n.* Simultaneousness of events.

Synchronize, *v. n.* To accord in time; to be simultaneous.

Synchronology, (*sin'kro-nōl'o-je*), *n.* [Gr. *syn*, together, *chronos*, time, and *logos*, account.] Contemporaneous chronology.

Synch'ronous, *a.* Simultaneous; synchronal.

Synch'ronously, *adv.* Same as SYNCHRONICALLY, *q. v.*

Synchysis, (*sin'ky-sis*), *n.* [Gr., from *syn*, with, and *chysis*, a pouring; Fr. *synchise*.] An aberration or derangement of any kind, as of words in a sentence, or of bile in the stomach.

Synclinal, *a.* [From Gr. *syn*, with, and *klinein*, to incline.] Having a downward inclination from opposite directions, so as to effect a junction in a common focus.

(*Geol.*) When strata dip towards a common line of depression, the axis is termed *synclinal*, and the depression so formed is described as a trough or basin.

Synecopal, (*sin'ko-pal*), *a.* Pertaining or relating to, or resembling, syncope.

Synecopate, *v. a.* [Gr. *syn*, and *koptō*, to cut off.] To contract, or cut down, as a word, by withdrawing one or more syllables from the middle.

(*Mus.*) To prolong, as a note begun on the unaccented part of a bar, to the accented part of the next bar; or to end, as a note of one part in the middle of a note of another part.

Synecopation, (*sin'ko-pā'shun*), *n.* (*Gram.*) The contraction of a word by taking a letter, letters, or a syllable from the middle.

(*Mus.*) Act of synecopating.

Syncope, (*sin'kō-pe*), *n.* [Gr. *synkopē* — *syn*, and

kopto, to cut short.] A sudden pause, cessation, or suspension. (R.)

(Mus.) See **SYNCOPE**.

(Gram.) An elision or contraction, retrenching one or more letters or a syllable from the middle of a word; as, *whatsoever* for *whatsoever*, *Fra's* for *Francis*, &c.

(Med.) A fainting fit. See **FAINTING**.

Syn'copist, *n.* One who syncopates or contracts words.

Syn'copize, *v. a.* To syncopate. (R.)

Syn'cratism, *n.* Same as **SYNCRETISM**, *q. v.*

Syncretic, (*sin-kret'ik*), *a.* Associating or blending together different systems, as of philosophy, religion, or ethics.

Syncretism, **Syn'cratism**, *n.* [Fr. *syncretisme*, from Gr. *synkretismos*.] Attempt to establish a comprehensive scheme intended to unite or blend harmoniously one with the other principles or parties in irreconcilable antagonism.—Specifically, in philosophy, the blending of the tenets of different schools into a universal system. A party among the Platonists, at the revival of letters, to which belonged Ammonius, Pico della Mirandola, Bessarion, and other eminent men, have received the name of **Syncretists**.

Syn'cretist, *n.* [Fr. *syncretiste*.] (Ecc. Hist.) A follower of the doctrines of George Calixtus, a Lutheran divine of the 16th century, who endeavored to found a system which should unite the different professors of Christianity. The opinions of Calixtus raised a strong controversy in the Lutheran Church. A new confession of faith was drawn up in Saxony for the purpose of excluding his partisans; but his doctrines, however, did not long survive his death, although they were not without effect on the spirit of the age.

(Philos.) See **SYNCRETISM**.

Syncretis'tic, *a.* Belonging or relating to syncretism.

Syn'crisis, (*sin-kri-sis*), *n.* [Gr., a comparison.] (Rhet.) A figure of speech which brings opposite persons or things into comparison.

Syndactyl, (*sin-dak'til*), *n.* [Gr. *syn*, with, and *daktylos*, a toe or digit.] (Zool.) One of a tribe of perching birds which have the external and middle toe united as far as the second joint. See **ALCEDINIDÆ**.

Syndesmography, (*sin-des-mög'ra-fe*), *n.* [Gr. *syndesmos*, ligament, and *graphein*, to depict.] (Anat.) A description of the ligaments that connect the bones of the skeleton.

Syndesmology, *n.* [Gr. *syndesmos*, and *logos*, treatise.] (Anat.) A treatise upon the connecting ligaments of the skeleton.

Syndesmo'sis, *n.* [Gr. *syn*, with, and *desmos*, a band, ligature.] The union of one bone with another by means of ligaments.

Syndesmotomy, *n.* [Gr. *syndesmos*, and *tomē*, a cutting.] (Anat.) Act, art, or process of dissecting the ligaments.

Syndic, (*sin'dik*), *n.* [Fr.; Gr. *syndikos*—*syn*, with, and *dike*, justice.] An officer of government, invested with different powers in different countries; also, a delegate chosen to represent, or transact business for, others.

—In France, under the old régime, officers delegated by the municipalities as agents or mandatories. Such also were the *syndics* of trading companies. The auditors of a bankrupt, under French law, appoint *syndics* or directors from among their number, corresponding with the English *assignees*. [of Geneva.]

—In Switzerland, the title born by the chief magistrate.

Syndicate, *n.* (*sin'dik-at*.) An association formed to promote a particular enterprise. [L. Lat. *syndicatus*.]

A council, or body of syndics.

Syndrome, (*sin-dro-me*), *n.* [Gr., from *syn*, and *dromos*, a course.] Concurrence, or concurrent action.

(Med.) The combination or coincidence of symptoms in a disease.

Synecdoche, (*sin-ek'do-kē*), *n.* [Gr. *synekdochē*—*syn*, and *ekdechomai*, to take or understand in a certain sense.] (Rhet.) A figure in which the whole is put for a part, or part for the whole. It is a species of *trope*. There are six ordinary instances of *S.*: 1. When genus is put for species (as *being* in the sense of *man*). 2. When species is put for genus. 3. When the essential whole is put for one of its parts. 4. When the matter, or form, is put for the whole being. 5. The whole for a part. 6. The part for the whole.

Synechia, (*sin-ē-ki'ah*), *n.* [Lat.; Gr. *synechia*—*syn*, and *ekchein*, to have.] (Med.) A disease of the eye in which the iris adheres to the cornea, or to the capsule of the crystalline lens.

Synephronesis, (*sin-fo-nē'sis*), *n.* [From Gr. *syn*, and *ekphronēin*, to cry out.] (Gram.) A contraction of two syllables into one; synizesis.

Syn'epy, *n.* [Gr. *synepeia*—*syn*, and *epos*, a word.] (Rhet.) The mutual joining of words in uttering the clauses of sentences.

Synergetic, (*sin-er-jēt'ik*), *a.* [Gr. *synergetikos*—*syn*, with, and *ergon*, work.] Coöperating, or working in combination or association.

Syn'ergism, (*jizm*), *n.* [Gr. *syn*, and *ergein*, a word.] (Theol.) The doctrine that the divine grace requires a correspondent action of the human will in order to become effectual; which doctrine, or something resembling it, is termed *Semi-Pelagian* in early ecclesiastical history;—some sentiments expressed by Melancthon, toward the close of his life, would appear to have introduced *S.* into the Lutheran Church.

Synergist, (*sin'er-jist*), *n.* A believer in the doctrine of Synergism.

Synergist'ic, *a.* Pertaining or relating to Synergism.—Coöperating; acting in combination; synergetic.

Synergy, (*sin'er-je*), *n.* [Gr. *syn*, with, and *ergein*, to labor.] (Med.) The associated competent action of every organ of a particular system; as, the renal *synergy*.

Syne'sius, of Cyrene, an ancient father, and bishop of the church, who flourished at the beginning of the 5th century. His works, consisting of about 150 epistles on philosophical and polemical subjects, are in high esteem with the learned.

Syngenesia, (*sin-je-nē'zha*), *n.* [From Gr. *syn*, together, and *genesis*, birth.] (Bot.) The 19th class of the system of Linnæus, including all plants whose stamens are united by the anthers.

Syngnathidæ, *n. pl.* (Zool.) A family of fishes, in which are usually included all the **LOPHOBANCHIATÆ**, *q. v.*

Syngraph, (*sin'graf*), *n.* [Gr. *syngraphē*—*syn*, and *graphō*, I write.] (Law.) A document signed by both or all the parties to a deed, contract, or bond; and of which a duplicate original is kept by each.

Synize'sis, *n.* [Lat. and Gr., from *syn*, with, and *izein*, to seat.] (Med.) A closed pupil; an obliteration of the pupil of the eye.

(Gram.) Same as **SYNEPHRONESIS**, *q. v.*

Synneurosis, (*nū-rō'sis*), *n.* [Fr. *synnerose*, from Gr. *syn*, and *neuron*, a sinew.] (Anat.) The junction of one bone with another by means of an intervening membrane.

Synod, (*sin'od*), *n.* [Fr. *synode*; Gr. *synodos*—*syn*, and *hodos*, a way, a journeying.] A meeting, assembly, council, or convention.

(Ecc.) Specifically, a council or assembly of ecclesiastics to consult on theological matters; as, the *Synod of Dort*. (See **DORT**).—*S.* are generally divided into four kinds, viz.: 1. *General* or *Ecumenical*; 2. *National*; 3. *Provincial* (see **CONVOCATION**); and 4. *Diocesan*.

—In the Presbyterian church, an assembly composed of two or more presbyteries.

Syn'odal, *n.* A constitution formed in a provincial or diocesan synod.

Synod'ic, **Synod'ical**, **Syn'odal**, *a.* [Fr. *synodique*.] Pertaining, or having relation to a synod.

(Astron.) Pertaining, or having reference to the period in which two or more heavenly bodies pass from one conjunction to another; as, the *synodical* revolution of a planet.

Synodic month. See **LUNAR MONTH**.

Synod'ically, *adv.* In a synodical manner; by synodical authority.

Syn'odist, *n.* One who adheres to a synod.

Synomomy, (*sin-ōm'ō-se*), *n.* [Gr. *synōmosis*.] A sworn brotherhood; a secret fraternity or society.

Synonym, **Synonymy**, (*sin'ō-nim*), *n.*; *pl.* **SYNONYMS**, or **SYNONYMES**. [Fr. *synonyme*; Gr. *synōnūmia*, likeness of name—*syn*, and *onōma*, an appellation.] A word equivalent to, or having the same intrinsic signification as, another word of the same language. Strictly speaking, words having exactly the same signification are not to be found in any language unless one of them has been borrowed from another language; but in this case the shades of difference are often so slight that words may be frequently used for one another, and this interchange produces a pleasing variety in composition, necessary in poetry. The chief works on this subject are, the *Onomastikon* on Greek; Dumesnil ou Latin; Blair, Crabbe, and Taylor on English; Stosch and Eberhard on German; and Giraud, Beauzée, Roubaud, and Guizot on French synonyms.

Synonymic, (*sin-ō-nim'ik*), *n.* (Gram.) The explanation of synonyms.

Synonym'ic, **Synonym'ical**, *a.* Pertaining or having reference to synonyms, or synonymics; synonymous.

Synonymicon, (*sin-ō-nim'i-kon*), *n.* A vocabulary of synonyms.

Synonymist, *n.* One who collects and elucidates synonymous words.

(Bot.) One who collects and classifies the synonyms of plants.

Synonymize, *v. a.* To express the same meaning in different words; to express by the use of synonyms.

Synonymous, (*sin-ōn'y-mis*), *a.* Relating to synonyms.—Expressing the same meaning; conveying the same sense or signification; expressing the same idea; equivalent to the same thing; as, "Wave and billow, mead and meadow, are called *synonymous* words." Watts.

Synonymously, *adv.* In a synonymous manner.

Synonymy, *n.* [Fr. *synonymie*.] Quality of being synonymous.

(Rhet.) A figure which serves to amplify diction by an employment of synonyms.

Synop'sis, *n.*; *pl.* **SYNOPSIS**. [Lat.; Gr. *syn*, and *opsis*, a view.] A collective view of any subject; a generalized prospect; an outline of the nature or contents of a whole; a collection of things or parts so arranged as to exhibit the whole or the principal features in a general view; a summary; an epitome; as, a *synopsis* of Natural History.

Synop'tic, **Synop'tical**, *a.* Relating to a synopsis; affording a general and comprehensive view of the whole, or of the principal parts of a thing, as of a book.

Synop'tically, *adv.* In a synoptical manner.

Synosteology, (*ōl'ō-jē*), *n.* [Gr. *syn*, together, *osteon*, bone, and *logos*, account.] (Anat.) A treatise upon the joints of the human body.

Synosteo'sis, *n.* [Gr. *syn*, and *osteon*, bone.] (Anat.) Junction or combination by osseous connection.

Synosteo'tomy, *n.* [Gr. *syn*, with, *osteon*, bone, and *tomē*, a cutting.] (Anat.) Dissection of the joints.

Synovia, *n.* [Fr. *synovie*; Gr. *syn*, with, and *ōn*, egg.] (Anat.) The fluid which lubricates the cartilaginous

surfaces of the joints; it is glairy, and resembles the white of egg.

Synov'ial, *a.* [Lat. *synovialis*.] Pertaining, or relating to the synovia.

Syntac'tic, **Syntac'tical**, *a.* [Gr. *syntaktikos*.] Pertaining, or having reference, to syntax, or the construction of sentences; according to the rules of syntax, or grammatical construction; as, *syntactical* rules.

Syntac'tically, *adv.* In a syntactical manner.

Syntax, (*sin'taks*), **Syntax'is**, *n.* [Fr. *syntaxe*; Lat. = Gr. *syntaxis*—*syn*, and *taxis*, from *tassō*, *tarō*, to put in order.] (Gram.) The grammatical construction of sentences, or the due arrangement of words in sentences, according to established usage. See **GRAMMAR**.

Syntect'ic, *a.* Pertaining, or relating, to syntaxis, or consumption of the animal body; syntetic.

Syntere'sis, *n.* [Gr., a watching closely—*syn*, and *terein*, to guard.] (Med.) Preventive treatment, as of a disease. (Metaph.) Conscience viewed as the internal repository of the laws of right.

Synteret'ic, *a.* [Gr. *syntēretikos*, guarding.] (Med.) Preserving health, or preventing disease.

Syntet'ic, *a.* [Fr. *syntétique*; Gr. *syntētikos*.] Pertaining, or having reference, to syntetis; syntetical; wasting with consumption.

Syntex'is, *n.* [Lat.; Gr. *syn*, with, and *lēkein*, to consume.] (Med.) Consumption; a wasting of the body, as from consumption; colliquation.

Synther'mal, *a.* [Gr. *syn*, with, and *thermē*, heat.] Possessing the same degree of heat.

Syn'thesis, *n.*; *pl.* **SYNTHESES**. [Lat.; Fr. *synthèse*; Gr. *syn*, and *tithēmi*, to put, set, or place.] A compounding or mixing; composition; the putting of two or more things together, as in compound medicines.

(Chem.) The putting together of different bodies to form new ones possessing distinct properties. It is directly opposed to *analysis*, which is the process of separating bodies into their proximate or ultimate constituents. The synthetic production of inorganic compounds, such as sulphuric acid and sulphate of iron, from their elementary constituents, are every-day instances of the practice of this part of chemical science. Of late years, the researches of Rollie, Wöhler, Strecker, Berthelot, and a number of other eminent chemists, have shown that the *S.* of numerous organic compounds, hitherto of a purely organic origin, may be formed from their elementary constituents. Thus Rollie has succeeded in forming acetic acid, Wöhler urea, Strecker saurine, Berthelot alcohol, formic acid, and a number of other substances of more or less complicated composition.

(Logic.) That process of reasoning in which we advance by a regular chain from principles before established or assumed, and propositions already proved, till we arrive at the conclusion;—correlative to *analysis*.

(Surg.) The operation by which dislocated or divided parts are reunited.

Syn'thetist, *n.* One who uses synthesis, or who follows synthetic methods.

Synthetic, **Synthetical**, *a.* [Gr. *synthetikos*, skilled in putting together.] Pertaining, or relating, to synthesis; consisting in synthesis, composition, or combination; as, a *synthetic* method, in distinction from the *analytical*.

Synthetically, *adv.* In a synthetic manner.

Syn'thetize, *v. a.* To put together;—opposed to *analyze*. (R.)

Syn'tomy, *n.* [Gr. *syntomia*—*syn*, and *temnein*, to cut.] Brevity; terseness; curtness; conciseness; laconism.

Syntonic, *n.* [Gr. *syntonos*—*syn*, with, and *temnein*, to stretch.] (Mus.) Sharp; acute; intense. (R.)

Syphering, (*si'fer*), *n.* (Ship-building.) The operation of lapping one edge of a plank over the edge of another for bulkheads.

Syphilis, (*si'fi-lis*), *n.* [Etymol. uncertain; perhaps coined from Gr. *syphlos*, crippled, disabled, defective.] (Med.) The venereal disease proper; the pox.

Syphilitic, *a.* Pertaining, or having reference, to syphilis; infected with syphilis; as, a *syphilitic* sore.

Syphilitically, *adv.* In a syphilitic manner.

Syphilization, (*-zā'shun*), *n.* Saturation of the system by inoculation with syphilis.

Syphilize, *v. a.* To inoculate with syphilitic matter.

Syph'loid, *a.* Resembling syphilis.

Syphon, (*si'fon*), *n.* See **SIPHON**.

Sy'ra, (anc. *Syros*), a mountainous but fertile island of the Grecian Archipelago, in the middle of the Cyclades, near Delos; Lat. 37° 22' N., Lon. 24° 34' E.; area, 65 sq. m. Pop. 30,000. The cap. is of the same name, and has a population of 20,996. It is the principal city of the Archipelago, and has steamers plying to and from Constantinople.

Syracuse, (*sir'a-kūz*), a city of Italy, in Sicily, on the E. coast of the island; Lat. 37° 3' N., Lon. 15° 27' 3" E. Founded by a colony of Corinthians about 736 B. C. *S.* was one of the most celebrated cities of antiquity. The part of the ancient city now inhabited is insulated, walled, and entered by drawbridges. *S.* contains many remains of antiquity, such as baths, walls, gates, and the Palace of Sixty Beds constructed by Agathocles. The harbor exists in all its beauty; it is capable of receiving vessels of the greatest burden, and of containing a very numerous fleet. Though at present entirely neglected, it might easily be rendered a great naval and commercial station. The exports are limited to wine, oil, hemp, nitre, and some wheat. The wine called *Syracuse*, though made in different parts of Italy, is a luscious red wine of the muscadine kind. This city was taken by the Romans 200 B. C., and by the Saracens in 878. In 1639 an earthquake nearly destroyed it. It is the birthplace of Plato, Simonides, Zeno, and Cicero; of Theocritus and Moschus, the poets; and of Archimedes, the philosopher. Pop. 20,176

Syr'acuse, in *Illinois*, a village of De Kalb co., 70 m. W. of Chicago.

Syracuse, in *Indiana*, a post-town of Kosciusko co., 128 m. N.E. of Indianapolis.

Syracuse, in *Iowa*, a village of Bremer co., about 12 m. N.W. of Waverly.

Syracuse, in *Missouri*, a post-village of Morgan co., 43 m. W. of Jefferson City.

Syracuse, in *Nebraska*, a post-village of Otoe co., about 25 m. W. of Nebraska City.

Syracuse, in *New York*, a fine and thriving city, cap. of Onondaga co., on Onondaga Lake, and on the Erie Canal, 80 m. S.E. of Rochester; Lat. 43° 4' N., Lon. 76° 12' W. From its central position, it is a favorite point for holding State conventions, and hence is styled the *City of Conventions*. It is the depôt of the greatest salt-producing region in the Union; and also contains numerous manufactories of silver-ware, tin-ware, sheet-iron, coach and wagon factories, iron furnaces, machine shops, manufactures of farming implements, woollen goods, leather, &c. Syracuse has a handsome court-house, a State arsenal, and a State insane asylum. Seat of Syracuse University. Pop. (1897) 101,460.

Syracuse, in *Ohio*, a post-village of Meigs county, on the Ohio River, about 6 miles south-east of Pomeroy.

Syren, *n.* A frequent orthography of SIREN, *q. v.*

Syria, (*sir'ea*.) [Ar. *Esh'sham*, the *Aram* of the Scriptures.] A large division of Asiatic Turkey, including Palestine, and lying along the coast of the Mediterranean, which bounds it on the west; while on the north Mount Taurus and its branches divide it from Asia Minor; and on the east is a vast and trackless desert, stretching northwards from Arabia, between Lat. 31° and 37° 35' N., and Lon. 34° and 38° 45' E.; area, 144,433 sq. m. It is divided into the pashalics of Aleppo or Haleb, Tripoli or Tarablooz, Acre or Akka, Gaza, and Damascus, named from their respective capitals. On the south is Palestine. The leading feature in the physical aspect of Syria consists in the great mountain-chain traversing it from S. to N., and known, from its highest pinnacle near Tripoli and Beyrout, under the name of Lebanon, or Libanus. Connected with the Jebel-Akrah, which stretches towards the N., it forms a continued range, running into Mount Taurus on the frontier of Asia Minor. While Lebanon faces the Mediterranean, a parallel chain, called Anti-Libanus, looks eastward upon the Syrian desert. Thus Syria, in its inhabited districts, may be considered as a country of valleys, many of which are extremely fertile. Of these, the plains of Haouran in the E., Antioch and Aleppo in the N., and Sharon in the S., may be noticed for their richness. *Rivers*. The Jordan, Azy, or Orontes, and the Litany. *Lakes*. The principal are those of Genessareth

habitants. Few countries present a greater variety of population. Its open plains separated by no defined boundary from Arabia, Persia, and Asia Minor, are, here and there, covered by the wandering population of those respective countries. Turks and Greeks form, as elsewhere, the basis of population in the cities. The only tribes which can be considered as appropriate to Syria are the tenants of the heights of Lebanon. The most remarkable of these are the Druses and the Maronites. The Mohammedans are the most numerous in the secondary towns and the rural districts. In the earliest periods of Jewish history, Syria was formed into a powerful kingdom, having Damascus for its capital. Its most remarkable district, however, consisted of a tract on the sea-coast, entitled Phœnicia, in which commerce flourished to a degree unexampled in ancient times. After the conquests and death of Alexander the Great, Syria was erected by his lieutenant, Seleucus, into a separate kingdom; but under Antiochus, it was reduced by the Romans. It then fell under the Saracen sway, and afterwards became one of the richest appendages of the Turkish empire. The celebrated Djazzar Pasha, successor of powerful Arabian sheiks, who, from about 1750, had exercised an almost independent power, joined with the British in resisting the invasion of Napoleon I. After the demise of Djazzar, the power reverted to the Porte, and Suleiman was appointed pasha. In 1861, in the district of the Lebanon, the old feuds between the Maronite and Druse populations broke out, and the result was a terrible slaughter on both sides. *Estimated pop.* 2,000,000.

Syriac, (*sir'i-ak*.) *a.* [Lat. *Syriacus*, from *Syria*; Fr. *Syriaque*.] (*Geog.*) Pertaining or relating to Syria, or its language; as, the *Syriac* rendering of the Bible.

n. The language, or, more properly the ancient language, of Syria.

Syriacism, Syrianism, (*sir'i-a-sizm*.) *n.* An idiom of the old Syriac language.

Syrian, (*-sir'-*.) *a.* [Fr. *Syrien*; Lat. *Syrius*.] (*Geog.*) Syriac; belonging or having reference to Syria, or to its people.

n. (*Geol.*) A native or inhabitant of Syria.

Syringa, *n.* [Gr. *syrix*, a pipe or tube.] (*Bot.*) A genus of plants, order *Oleaceæ*, of which familiar examples occur in the various Lilacs of our gardens. The native country of some of these is not well ascertained, although the genus appears to be confined to S.E. Europe and Central and E. Asia. They are deciduous shrubs with entire leaves, and terminal more or less pyramidal panicles of usually sweet-smelling flowers. The Common Lilac, *S. vulgaris* (Fig. 2459), is the largest species and also one of the most familiar and most beautiful of our spring-flowering ornamental shrubs. The Persian Lilac, *S. persica*, is smaller, seldom growing more than 6 or 7 feet high.

Syringe, (*sir'inj*.) *n.* [Fr. *siringue*; Gr. *syrix*, *syrix*.] An instrument consisting of a tube and piston; especially, an instrument for injecting liquids into animal bodies, into wounds, &c., or an instrument in the form of a pump, serving to draw in any fluid, and then to expel it with force.

Garden syringe, a large syringe used for ejecting liquids upon plants, shrubs, &c.

v. a. To inject by means of a syringe. — To wash and cleanse by injection of liquids from a syringe; as, to *syringe* a wound.

Syringine, *n.* (*Chem.*) See LILACINE.

Syringotomy, *n.* [Gr. *syrix*, a hollow sore, and *temnein*, to cut.] (*Surg.*) The operation of cutting for the fistula.

Syrinx, *n.* [Gr., a pipe.] (*Mus.*) The Pandean pipes. See PANDEAN.

Sysran, (*sis-ran'*.) a town of European Russia, govt. of Simbirsk, 78 m. from Simbirsk; pop. 8,872.

Syrup, (*sir'up*.) *n.* A common orthography of *SIRUP*, *q. v.*

Syssarcosis, *n.* [Fr. *syssarcose*; Gr., from *syn*, with, and *sarx*, *sarkos*, flesh.] (*Anat.*) The junction of bones by intervening muscles.

Systaltic, *a.* [From Gr. *systellon*, to draw together.] (*Physiol.*) Susceptible of, or superinduced by, alternate contraction and dilation; as, the *systaltic* action of the heart.

System, (*sis-*.) *n.* [Gr. *systema* — *syn*, and *histemi*, to place or set.] A whole compounded of several parts or members; a complete whole; an assemblage arranged or adjusted into a regular whole or entirety; or, a whole plan or scheme consisting of many things connected in such a manner as to create a chain of mutual dependencies; or, an harmonious arrangement of bodies with respect to one another, and of the laws by which their motions, functions, or developments are supposed to be regulated; as, a *system* of government, ethics, philosophy, botany, and the like; the solar *system*, &c. — Hence, the universe, as being the entire scheme of

created things regarded as constituting one grand and complete plan or whole. — Regular or methodical plan, mode, or order; as, to conduct business on a thorough *system*.

(*Fine Arts*.) A collection of the rules and principles upon which an artist works.

(*Astron*.) An hypothesis of a certain order and arrangement of the celestial bodies, by which their apparent motions are explained.

(*Mus.*) An interval composed, or supposed to be composed, of several lesser ones, as an octave, which is a *system*.

(*Physiol.*) The totality of bodily parts, performing an identical or an analogous or connected function; as, the digestive *system*; also, the body as a cooperative unity or whole; as, his *system* is out of order.

Systematic, *a.* Pertaining or relating to system; consisting in, or characterized by, system; methodical; designed with regular adaptation or subjection of parts to each other, and to the scheme of the whole; as, a *systematic* way of doing business, a *systematic* course of reading. — Proceeding according to system or appropriate or regular method; as, a *systematic* swindler. — Cosmical; pertaining or having reference to the system of the universe; as, *systematical* phenomena.

Systematically, *adv.* In a systematic manner.

Systematism, (*sis'tem-a-tizm*.) *n.* Reduction of facts or principles to a system.

Systematist, *n.* One who devises a system; or, one who reduces things to a system.

Systematize, *v. a.* To reduce to a system or regular method; as, to *systematize* plants.

Systematizer, Systemizer, *n.* One who reduces things to a system; a systematist.

Systematology, (*-tol'o-je*.) *n.* The doctrine of, or a treatise on, systems.

Systemic, *a.* Pertaining to, or characterized by, system.

(*Med.*) Designating the circulation of the general system of the body, beginning at the left ventricle and aorta, and ending at the venæ cavæ and right auricle.

Systemization, (*-zi'shun*.) *n.* Act or operation of systematizing; — also, the reduction of things to system, or regular method.

Systemize, *v. a.* Same as SYSTEMATIZE, *q. v.* (R.)

Systole, (*sis'to-le*.) *n.* [Fr.; Gr., from *systellō*, to draw together — *syn*, and *stellō*, to sound.] (*Gram.*) In prosody, the shortening of a long syllable.

(*Physiol.*) The contraction of the heart and arteries for expelling the blood and carrying on the circulation; — correlative to *diastole*.

Systolic, *a.* Pertaining or having reference to systole, or contraction.

Systyle, (*sis'til*.) *n.* [Fr.; Gr. *sytylos* — *syn*, and *stylos*, pillar.] (*Arch.*) A term applied to a building in which the pillars are closely placed, but not quite so close as in the pycnostyle, the intercolumniation being only two diameters, or four modules, of the columns. — A temple or other edifice which has a row of columns set close together around it, as in the case of the Parthenon, at Athens.

Syzran, a town of European Russia, govt. of Simbirsk, on the Volga, abt. 150 m. below the town of Simbirsk, in the middle of a district teeming with agricultural produce.

Syzygies, (*siz-y-jiz*.) *n. pl.* [Fr. *syzygie*; Lat. and Gr. *syzygia*.] (*Astron.*) The places of the moon or planets when in conjunction or opposition with the sun.

Line of syzygies, the straight line connecting the earth and a heavenly body, particularly the moon, when the latter is in conjunction or opposition.

Szaj'belyite, *n.* (*Min.*) A native hydrated borate of magnesium, lately discovered in limestone, in Hungary.

Szalonta, (*za-lon'ta*.) a town of Hungary, co. of Bihar, 22 m. from Grosswardein; pop. 7,916.

Szarygrad, (*zar-grad*.) a town of European Russia, govt. of Podolia; pop. 7,600.

Szathmar-Nemethi, (*zat-mar-nem'et-e*.) a town of Austria, in E. Hungary, on the S., 60 m. from Debreczin; pop. 12,000.

Sze-Chuen, (*se-choo-en'*.) [Chi., four streams.] A prov. of China, between Lat. 26° and 33° N., Lon. 101° and 110° E. Area, 166,800 sq. m. The surface is mountainous, and watered by the Yang-tse-kiang and its tributaries. *Prod.* Sugar, rhubarb, silk, musk, &c. *Cap.* Ching-too-foo. Pop. 28,000,000.

Szegedin, (*zeg'den*.) one of the most important towns of Hungary, opposite to the confluences of the rivers Theiss and Maros, 118 m. from Pesth by railway. *Manuf.* Soda, tobacco, coarse cloth, &c. It carries on an extensive river-trade in wood and corn with Transylvania and the Banat, and its markets rank next to those of Pesth and Debreczin.

Szekely-Keresztur, (*ze'ke-le ke-res'tur*.) a town of Transylvania, on the Great Kukul, 12 m. from Segesvar; pop. 5,600.

Szekszard, (*zek-zard*.) a town of Hungary, on the Sarvitz, 162 m. from Vienna; pop. 8,700.

Szenta, (*zen'ta*.) a town of Austria, on the Theiss, 16 m. from Zombor; pop. 15,000. Here, in 1696, Prince Eugene gained an important victory over the Turks.

Szentes, (*zen'tees*.) a town of Hungary, near the Theiss, 30 m. from Szegedin; pop. 25,000.

Szolnok, (*zol-nok*.) a town of Hungary, on the Theiss, 54 m. from Pesth.

Sztanicsies, (*stan'i-chich*.) a town of Hungary, on the Bacs, 10 m. from Zombor; pop. 5,400.

Szurul, (*zoo-rool*.) the highest summit of the Lower Carpathians, between Wallachia and Transylvania, near the Rothenthurm Pass. *Height*, 7,547 feet above sea.

Fig. 2458. — GAZA.

and El Huleh, both in the valley of Jordan. There are, besides, some smaller lakes near Damascus. — *Climate*. Varied. Along the coast the heat is great, even where the mountains are covered with snow. In the N. and E. the climate is colder; but, at Aleppo, frosts are rarely severe. In summer, the samiel, a wind like the simoom of the desert, sometimes sweeps over the country, when earthquake-shocks are felt. — *Produce*. Wheat, barley, maize, millet, lentils, and sesamum; cotton and the mulberry flourish on the coast, and silk is produced on the slopes of Lebanon. Its fruits are held in especial esteem, particularly the oranges of Tripoli, the figs of Beyrout, and the pistachios of Aleppo. As we ascend the sloping sides of Lebanon, all the varieties of European climate are successively experienced. The vine is reared by care to great perfection; and silk and wines which rival those of Italy and France, are produced. Olives and tobacco are also cultivated successfully, and to a great extent. The other products are sugar, indigo, and scammony, and other gums. Madder is also produced, and sheep form a principal part of the wealth of the inhabitants. Sponge is fished on the Mediterranean coast; but other fisheries are comparatively unimportant. The commerce of Syria is greatly impeded by the want of good roads. As it is the high-road, however, from Bagdad, Mosul, and Erzeroum, to Mecca, it is traversed by caravans, carrying its own and the products of Asia Minor, Mesopotamia, and Persia, to be exchanged here for European manufactures and cochineal. Scanderoun, Tripoli, Saida, and other ports on the Mediterranean, are the residence of a few Frank merchants, and carry on a limited intercourse with Europe. — *In-*

(A variety of *S. vulgaris*.)

S.--SECTION II.

SAFE

Sabeth'a, in *Kansas*, a post-village of Nemaha co., 16 m. E. by N. of Seneca; has manufactures of plows, wagons, furniture, and cheese. *Pop.* (1895) 1,488.

Sa'ble Is'lands. (*Geog.*) There are two Sable Islands—one near Cape Sable, at the southeastern corner of Nova Scotia, and the other, and far more important, 110 m. E. of the center of the Nova Scotian coast, in 44° N. Lat., and 60° W. Lon. This is a very low-lying island, which is gradually sinking, so that the light-houses built upon it are constantly undermined and swept away. During the present century it has been reduced from 40 to 20 m. in length. There are sand-banks near it which probably were once a part of it; and the whole region is so dangerous to navigation, and has caused the wreck of so many boats, that the island is known as "The Sailors' Grave."

Sac'charin. *n.* (*Chem.*) A white crystalline compound, $C_7H_5NO_3S$, 300 times as sweet as cane-sugar, discovered in 1879 by Remsen and Fahlberg, of Johns Hopkins University, and named by them anhydro-orthosulphaminebenzoic acid. It may be prepared by oxidizing orthotoluene, a product of coal-tar, with potassium permanganate. When taken into the system it passes through unchanged. It may prove a desirable substitute for sugar to persons suffering from diabetes.

Sachs. BERNARD, neurologist, was born in Maryland, Jan. 2, 1858; graduated at Harvard; studied medicine at Strasburg, Berlin, Vienna, and London; returned to New York, and was made professor of nervous diseases in New York Polyclinic (1888); neurologist at Montifera Home (1890); and 1893 to Mount Sinai Hospital; president of the American Neurological Association (1894). His published works are chiefly monographs containing an account of original investigations, especially in the nervous diseases of children.

Sack'ville (LIONEL SACKVILLE WEST), BARON, diplomatist, was born July 19, 1827, at Bourne Hall, Cambridgeshire, Eng.; entered the diplomatic service in 1847, and for more than 40 years was constantly employed in this profession; was minister plenipotentiary to the U. S. in 1881, and again in 1887; negotiated, in conjunction with Mr. Joseph Chamberlain and Sir Charles Tupper, the fisheries treaty of Washington (1888); received his passports from the U. S. government (1889) and was recalled to England, as the result of an injudicious letter to a Mr. Osgoodly, alias Murchison.

Sacr-, Sacri-, Sacro-. An initial compounding element, derived from *sacrum* (*os*) (*q. v.*).

Safes and Safe-locks. Safes are usually distinguished as either fire-proof or burglar-proof. For the former purpose the framework of the safe is made of iron, with a filling of some non-conducting material. The nature of this material has been the subject of many patents, and the difference in its composition and arrangement is the principal distinguishing feature of the various makes. Powdered alum and gypsum, plaster of Paris, concrete, clay, various salts and vaporizing substances have been used most commonly. As a matter of fact, no safe is absolutely fire-proof, as there is a degree of heat which will overcome the best of them, but they are made to withstand all the heat to which it is reasonable to suppose they will be subjected. If embedded in brickwork, additional protection is afforded.

Burglar-proof safes, so-called, are made on three general systems. In one, the whole structure is made of a solid mass of steel, usually alloyed with chromium, or some toughening alloy, which admits of the steel being brought to a great degree of hardness. Of this class are the spherical safes, often made with screw-doors, which are closed by screwing them up tightly, leaving very small chance for the introduction of explosives, and rendering drilling tedious and difficult because of their extreme hardness. Another class of safes are formed by a framework of steel bars, about which is cast molten iron or steel, so as to enclose the whole. In drilling into such a safe, the drilling tool is sure, after going a little way, to strike a place where the metal is soft on the one side and hard on the other. This causes the drill to work over toward the soft metal, and as such drills are necessarily hard and brittle, a very little of such twisting of the hole breaks the drill, and no further advance can be readily made in that hole. A third class of safes are made by forming alternate layers of steel and wrought-iron, and some of these also contain layers of hard cast-iron. The majority of burglar-proof safes are now made according

to the latter plan, or some similar combination of plates. A common method is to build up a safe from half-inch plates, each plate being formed of alternate layers of iron and steel, or of soft steel and hard steel. The walls of the safe are built up of such plates in such a manner that the joints of the lower plates are always covered by the next plate above. The bolts are also made short, so as to join but two plates, and are always in a different position in each plate. The top plate is usually an inch thick, and contains more steel than the others, and as the bolts are also made of combined steel and iron, drilling of a safe so made becomes very difficult. It is possible for a good mechanic with good tools to drill into any safe, if he have sufficient time, and once a hole is bored, an explosive can be used to burst the walls. The manufacturers, therefore, simply try to make safes which cannot be drilled inside of fifteen hours' time, which is assumed to be the longest period during which any safe will be left unguarded. Safe-doors are fitted with great exactness, so that there may be no opportunity to blow in any form of powdered explosive. The edges are also made in steps, which adds to the difficulty of effecting an entrance in this way. Very heavy doors are usually hung on ball-bearings, in order that they may be swung without too great effort.

The locks most used with safes are the combination, permutation, and time-locks. In the most familiar and simple forms a series of notched rings is placed within the door, directly operable by turning a central knob on the outside. This outside knob turns in a plate bearing a series of numbers, and the inside notched rings are set so that when the knob is turned to certain numbers, they are brought into position to allow the fall of tumblers. When the knob has been turned to each of the numbers representing each of the notched rings, all the tumblers fall, and the bolts of the door may be shot by turning the handle. This form of lock presents one objection. It necessitates the placing of a hole part way through the safe-door for the mechanism, and this becomes an object of attack, for if a safe-breaker can get at the hole and introduce an explosive, he can blow open the safe. The time-lock can be arranged to overcome this danger. Its principle is simple, a clock or watch-mechanism being provided, and so adjusted that when the watch is wound up it sets a stop-plate or the like at a certain hour, so that it is impossible to operate the lock until the watch passes the time at which the stop-plate is released, thus allowing the lock to be operated. The Yale time-lock has two watches set in the safe-door, the dial of each having pins marked for every hour. Any or all of these pins can be pulled out a little, and during each hour marked by a pulled-out pin the watch allows a weighted lever to stop the operation of the bolts. The second watch is connected with the first, and works similarly, the only object in having two being to provide an extra one that may be used should the first break down or stop. The only key required with this lock is a minute watch-key for winding. So far as known, no time-lock has ever been picked. An expert workman from a lock factory can usually open any permutation or combination lock after a little time.

Safety Appliances for Mines. The miner's safety-lamp (see DAVY) was probably the first invention of any consequence designed to reduce the number of dangers to which the toilers underground are subjected. The introduction of wire rope for hoisting the cages was another great safeguard, while the hand-brake, for stopping the windlass in case of accident to the hoisting machinery, was still another step in advance. Other improvements looking to the safety of the cage are hooks for clutching side supports if the rope breaks. An approved form of device for this purpose, which insures absolute support for the cage should the rope fail, consists of the use of thrust-pieces arranged to project from the sides of the cage against projections in the timbering of the shaft, by the release of a spring, which flies out the instant the rope's tension is released. Tool cages are also so shaped as to prevent accident from handles, &c., carelessly allowed to project from the cage. Landing-dogs have been provided for support at the different levels at which the cage may stop, positively holding the cage irrespective of the hoisting apparatus. The one shown in the illustration has the dogs thrown out to support the cage. By throwing the lever into the position indicated by the dotted lines, the support is withdrawn. The landing-dogs, as recently constructed, may be

SAHA

operated by electrical connection from the engine room, an indicator being placed there to show the engineer who does the hoisting the position of every dog, so that he cannot be misled; neither can the dogs be withdrawn, as by evil intent, without his being informed of the fact. The danger in mines from explosions has been largely diminished by the introduction of safety-fuses, designed so that they cannot explode the blast in less than a certain time, and by electrical fuses, which are set off from a distance. The

Fig. 3056.—LANDING-DOG.

dangers from bad air are largely overcome by improved mechanism for ventilating, supplying every portion of a mine with fresh air.

Safety-chain. *n.* A slack chain attaching a truck to a car-body to prevent dangerous swaying, or to hold cars together in case of accident to the coupling.

Safety-grate. *n.* A perforated plate over the fire-box of a railroad-car to retain the burning coals in case the car is overturned.

Safety-hatch. *n.* The door of a hatchway or elevator-shaft, closed automatically by the passing of the cage, or by the burning of a rope in case of fire.

Safety-ink. *n.* An ink for use on checks or other important papers which, if tampered with, will at once disclose the fact in some way, as by change of color.

Safety-match. *n.* A match tipped with a substance that will only ignite by intense heat, or by friction on a specially prepared surface.

Safety-paper. *n.* A paper chemically or mechanically prepared so that its color or texture will be changed by its being tampered with, or so made as to prevent the photographing of the writing or printing on it.

Safety-pin. *n.* A pin for fastening clothing, having its point covered with a sort of sheath to prevent its pricking or scratching, and held in place by a spring.

Safety-tank. *n.* A tank of water so placed as to extinguish the fire of a car-stove in case of accident.

Sage. RUSSELL, capitalist, was born in Oneida co., N. Y., Aug. 4, 1816; amassed a fortune by shrewd railroad investments; has also been interested in the elevated railway system of New York city, and in various cable and telegraph companies. He was a congressman from New York in 1853-7.

Sagnache (*sü-wäch'*), in *Colorado*, a S. central co.; area, 3,240 sq. m.; drained by the Sagnache and Cochetopa rivers. Surface, partly mountainous, and comprises a large part of the San Luis Park, in which the soil is fertile. Gold, silver, and lead mining. *Cap.* Sagnache. *Pop.* (1897) 3,450.

Saha'rampur. (*Geog.*) A district and city in the northwest provinces of British India, between the Ganges river and the Jumna; the town is 125 miles by rail north of Delhi; it has an old Rohilla fort, a fine Mohammedan mosque, St. Thomas' Church, various government buildings, a botanic garden, and is the station for the hill sanitarium of Masuri. The population of the city was 63,194 in 1891, and the population

of the district 1,000,000. The district is fertile and well adapted to grain, being the most northern portion of the Doab, or great alluvial plain; its area is 2,221 square miles.

Sahib (*sü'hëb*), *n.* [Hind. master.] A term like the English Mr. or Sir, used in India and Persia in addressing foreigners, or as a title of respect in speaking of a Hindn or Moslem.

Sailor's Snug Harbor. An asylum for aged and infirm seamen, founded in 1807, and situated on the north shore of Staten Island, in the city of New York. It is arranged for 1,000 inmates, and usually contains from 700 to 800, who are comfortably cared for in beautiful buildings and grounds, maintained by the income of a bequest made by Captain Richard Randall of property in the heart of the city, the value of which has increased from \$40,000 early in the century to over \$18,000,000.

St. Elias, Alps, Ascent of. This gigantic peak, near where the 141st meridian touches the shore of Alaska, was first seen and named by Bering, in 1741, in honor of the patron saint of the day (July 20, O.S.). Subsequent voyagers regarded the peak and its attendant range, now called St. Elias Alps, which are visible far out at sea, with vast interest. La Pérouse (1786) halted his expedition long enough to let his astronomer calculate its height at 12,660 feet. Malaspina (1792) more carefully computed its altitude at 17,847 ft. The U. S. Coast Survey charts (1874) make it 19,500 ft. Little attempt to reach the mountain itself was made until a century later, however, when the late Lieutenant F. Schwatka, U.S.N., led an expedition equipped by *The New York Times* in an attempt to climb it. As the party included Prof. Wm. Libbey, Jr., and Mr. H. W. Serin-Karr, much has been published in regard to its experiences, although it reached only the foot-hills. Another party, in 1888, reached an altitude of about 11,500 ft. These were followed by the first really scientific attempt at an exploration of these ice-guarded alps—the expedition sent in 1890 by the National Geographical Society, under Israel C. Russell, of the U. S. Geological Survey. This expedition did a large amount of accurate surveying and excellent work upon the mountains, but was prevented by extraordinary storms from ascending higher than about 14,000 ft. It demonstrated that the whole range is an uplift of sedimentary rocks, elevated since the Tertiary epoch, and that consequently the early reports of smoke and flames issuing from it arose from the imagination. It has no crater nor any evidence of volcanic origin or disturbance. "The breaking of the rocks and their upheaval is an event of such recent date that erosion has scarcely modified the forms which the mountains had at their birth. The formation of glaciers followed the elevation so quickly that there was no opportunity for streams to act. . . . The crests of the mountains are always sharp and angular. . . . The peaks on the summits of the St. Elias range are either pyramids or roof-like crests with triangular gables. These forms have resulted from the weathering of the schist, in which the planes of bedding are crossed by lines of jointing." (Russell.) Though Russell was prevented from reaching the summit of Mt. St. Elias, he determined the altitude closely as "18,100 plus or minus a probable error of 100 ft." This question of altitude was set at rest in 1897, and Russell's geological and topographical conclusions were confirmed, by an expedition led with wisdom and success by an Italian, Prince Louis of Savoy, accompanied by Swiss and Italian mountaineers. These experienced men, putting into service Alpine knowledge and methods, achieved the ascent on July 31, 1897, and found its altitude (determined by mercurial barometer) to be 18,060 ft. Unless this should be exceeded by Mt. Logan, an unclimbed summit of the same range near by, this makes St. Elias the second highest peak of North America, Orizaba, in Mexico (18,270 ft.), standing first. Henry G. Bryant, of Philadelphia, also attempted the ascent of Mt. St. Elias, in July, 1897, but was unfortunately prevented by the illness of some of his party from doing so.

Saint Gaudens, AUGUSTUS, sculptor, was born in Dublin, Ireland, March 1, 1848; removed to New York, in infancy; studied drawing at Cooper Institute and at the Academy of Design (1865-66); in Paris, at the École des Beaux-Arts (1867-70); spent 2 years in Rome, then returned to New York. He has executed many statues and portrait-busts, among them statues of a minor Farragut and Abraham Lincoln; and busts of William M. Evarts, Theodore D. Woolsey, and Gen. Sherman. He was a member of the jury of acceptance in the sculpture department of the U. S. fine-art exhibit at the Columbian Exposition, in 1893.

St. Gothard Pass. (*Geog.*) The road that crosses this pass of the Alps runs from Lake Lucerne, in Switzerland, to Lago Maggiore, in Italy. The pass, 6,936 feet above the level of the sea, is on a mountain knob of the Alps which holds the sources of the Rhine and the Rhone, the Ticino and the Renss, and so sends the water from its melted snow to the German Ocean, the Mediterranean, and the Adriatic. The route through the pass was first used by the Longobardi, in the 6th century, but down to 1820 it was but 13 feet wide. In 1820-24 it was widened to 18 feet and smoothed for carriages. Near the summit of the pass are two hotels and a hospice, the latter for poor travellers. There is a railway tunnel about 3,000 feet below the pass, constructed 1872-80, which is $9\frac{1}{4}$ miles long, 26 feet wide, and 21 high. The St. Gothard railway and tunnel cost £9,000,000, of which Switzerland contributed as a subvention £1,120,000, Italy £2,200,000, and Germany £1,200,000. The remainder of the cost was raised by

shares and a mortgage. The road has proved a great success financially, the shareholders' dividends increasing every year.

St. John, JOHN PIERCE, publicist, was born in Brookville, Franklin co., Ind., Feb. 25, 1833; moved to California, and was in the midst of the Indian disturbances; travelled in Mexico, South America, and the Sandwich Islands; returned to Charleston, Ill. (1860), and studied law; took part in the Civil War, attaining the rank of colonel; removed to Kansas (1869); was State senator (1873-74); governor of Kansas (1879-83); candidate of the Prohibition party for President (1884).

St. Louis, a West African town on an island near the mouth of the Senegal river; it is the capital of the French colony of Senegal, and has a commerce amounting to about \$5,000,000 a year. Bridges connect it with N'dar Tote, a summer watering-place on the right bank, and with Bonetville, the railroad terminus, on the left bank. Ocean steamers cannot land at St. Louis on account of shifting bars at the mouth of the Senegal, so goods and passengers are forwarded by railroad from Dakar, on Cape Verde, 100 miles to the southwest. The population is about 20,000.

St. Martin's Summer. The English equivalent of the American Indian summer, a period of warm, hazy weather coming late in the fall, about the time of St. Martin's Day, November 11.

St. Mary's, in Kansas, a post-village of Pottawatomie co., 23 m. N.W. of Topeka; has flour and lumber mills. Pop. (1895) 1,196.

St. Mary's, in Pennsylvania, a post-borough of Elk co., 10 m. E. of Ridgway; has saw and planing mills, flour mills, tanneries, &c.; coal, lumber, and brick are the leading shipments. Pop. (1897) 2,120.

Saint Nicholas, *n.* See SANTA CLAUS.

St. Paul, in Nebraska, a city, cap. of Howard co., 22 m. N. of Grand Island; has large flour mills. Pop. (1897) 1,485.

St. Paul Park, in Minnesota, a post-village of Washington co., 17 m. S.W. of Stillwater. Pop. (1895) 1,173.

St. Regis Falls, in New York, a post-village of Franklin co., 11 m. S. of Moha. Pop. (1897) 1,262.

Saint-Saëns (*sän-song'*), CHARLES CAMILLE, composer, was born in Paris, France, Oct. 9, 1835; studied at the Paris conservatory, and distinguished himself as an organist and composer; became organist of the Church of St. Merri (1853), of the Madeleine, Paris (1858-77); composed several operas, among them *Samson and Delilah*, and many shorter pieces. He published his musical criticisms in a volume under the title, *Harmonie et Mélodie* (1885). He was elected a member of the Institute, Feb. 19, 1881.

Saintsbury, GEORGE EDWARD BATEMAN, literary critic, was born at Southampton, England, Oct. 23, 1845; a graduate of King's College, London, and Merton, Oxford; taught for ten years, his specialty being French and English literature. His criticisms of French literature are especially valuable.

Sais, a town of ancient Egypt on the right bank of the Rosetta Branch of the Nile. It was a great seat of learning, much visited by Greek philosophers, and it gave its name to the 24th, the 26th, and 28th Egyptian dynasties, founded by natives of the town. During the 26th dynasty it became the capital of Lower Egypt and rose to great splendor. Its chief local deity was Neith, to whom there was a famous temple. The ruins of Sais are near the modern village of Sa-el-hugar.

Sala, GEORGE AUGUSTUS, journalist and author, was born in London in 1828; began his literary work with Charles Dickens' *Household Words*; he founded *Temple Bar*; was afterward connected with the *Daily Telegraph* as its regular correspondent; in the U. S. during the Civil War; in France, 1870-71; in Russia, 1876, and in Australia, 1885. In 1892 he started *Sala's Journal*. Many of his newspaper letters have been collected in book form. His latest book was *Things I Have Seen, and People I Have Known*. Died Dec. 8, 1895.

Salamanca, in New York, a post-village of Cattaraugus co.; has machine shops of three railroads, a large tannery, and embroidery factory, and is largely engaged in the lumber business. Pop. (1897) 4,050.

Saleswoman, *n.* A woman who is employed in selling goods in a store or elsewhere. The vulgar term "saleslady" should be avoided. No one speaks of a *salesgentleman*.

Salida, in Colorado, a post-town of Chaffee co., 97 m. W. of Pueblo; has large railroad shops, and abundant deposits of silver, iron, and copper. Pop. (1897) 3,200.

Salina, in Kansas, a city, cap. of Saline co., 47 m. W. by S. of Junction City; has numerous mills, machine shops, and factories. Salt and gypsum quarries in the vicinity. Here are the Kansas Wesleyan University and the Salina Normal University. Pop. (1895) 5,703.

Salinas, in California, a post-town, cap. of Monterey co., about 18 m. E. of Monterey. Trade center for a fertile agricultural valley. Pop. (1897) 2,650.

Saline, in Kansas, a central co.; area, 720 sq. m.; intersected by the Kansas, Smoky Hill, and Saline rivers. Surface, undulating, chiefly prairie; soil, fertile; numerous salt springs. Cap. Salina. Pop. (1895) 17,475.

Saline, in Nebraska, a S. E. co.; area, 576 sq. m.; drained by Big Blue river and tributary streams. Surface, undulating; soil, fertile. Cap. Wilber. Pop. (1897) 22,450.

Salisbury (*sälls'bür-y*) (ROBERT ARTHUR TALBOT GASCOIGNE CECIL), MARQUIS OF, statesman, was born at Hatfield, Herts, Feb. 13, 1830; educated at Eton and Christ Church, Oxford; was elected a fellow of All Souls' College; member of Parliament for Stamford, from 1853 to April 12, 1868, when he succeeded to the marquise; was known as LORD ROBERT CECIL

until June 14, 1865, when he assumed the courtesy title of Viscount Cranborne. He was secretary of state for India from July, 1866, to March 2, 1867; and again in Feb., 1874. At the close of the war between Turkey and Serbia, differences arose between Russia and Turkey, and the Marquis of S. was sent as special ambassador to the Porte; and he and Sir Henry Elliott acted as joint plenipotentiaries of Great Britain at the conference of Constantinople. On April 2, 1878, he became secretary of state for foreign affairs, and clearly enunciated the policy of the English government with regard to the Eastern question. Soon afterward he and the Earl of Beaconsfield represented Great Britain at the conference of Berlin. He went out of office with his party, defeated at the general election of April, 1880. After the death of Lord Beaconsfield, the Conservative peers held a meeting, and elected the Marquis of S. leader of the Conservative party in the House of Lords; since then his career has been identified with that of his party. When Mr. Gladstone resigned on June 9, 1885, Lord S. took office as Premier. After the general election of Nov., 1885, he resigned without meeting Parliament. He vigorously opposed Mr. Gladstone's policy, and after the second general election in 1886, once more became Premier; resigned in 1892, after the Conservative defeat in the general election; came into power again, June 26, 1895, being called to form a Conservative cabinet after the defeat of Lord Rosebery's government in the House of Commons. Lord S. in his younger days was a frequent contributor to the *Quarterly Review*. He is a student of the physical sciences, and has a fine laboratory at Hatfield, where his work for recreation is worthy of a professional hand. He is the most distinguished Conservative statesman since Beaconsfield. He was elected chancellor of the University of Oxford in 1869, and warden of the Cinque-Ports in 1896.

Salisbury, in Missouri, a post-village of Chariton co., 21 m. W. of Moberly. Pop. (1897) 1,725.

Salmon of North America and Salmon Can'ning Industry. Perhaps no family of fishes is more interesting or more important than that of the salmon (*Salmonidae*). Its representatives are almost everywhere abundant throughout the north temperate and arctic zones, and especially so on the northwestern coast of North America. Made to include the smelts (*Argentiniids*) and the Oriental salangids, as has been done by most ichthyologists, the family includes about 125 species; but if these two families are separated, as is now preferred, the salmon family embraces less than 100 species, known as salmon, trout, charr, whitefishes, graylings, &c. (See TROUT and WHITEFISH.) Most of these are game-fish, all are highly regarded as delicate and nutritious food, and many of them sustain important commercial fisheries and preserving factories in various parts of the world. The present article will be restricted to those species, chiefly American, popularly known as salmon. The salmon (*Salmo salar*), a marine, anadromous fish, ascending all suitable rivers in northern Europe (Scandinavia) and in North America north of the Merrimac; formerly it abounded as far south as the Hudson. Many still reach market from the Penobscot and other rivers of Maine and the Maritime Provinces. It is "sometimes permanently landlocked in lakes, where its habits and coloration . . . change somewhat, when it becomes variety *sebagus*." It is considered the first in rank among game-fishes by anglers, who take great pride in its skillful capture. Certain preserved rivers of Scotland and Norway, and the Upper St. John and Miramichi rivers in New Brunswick, are regarded as the best salmon streams. This is the only Atlantic salmon. All the following belong to Pacific waters and to a different genus, *Oncorhynchus*, which differs from *Salmo* in the structure of the vomer and an increased number of fin-rays, especially in the tail; it includes five species, often called the king salmon, as follows: (1) *O. gorbuscha*, gorbuscha, or humpback. This is the smallest (3 to 6 lbs.). Bluish above, silvery below, the posterior and upper parts with many round black spots, and the dorsal hump much developed in the males; scales very small. From the Sacramento north, and Siberia. The males in the fall are red and more distorted than those of any other species. (2) *O. keta*, dog salmon. Weight about 12 lbs. Dusky above, sides paler, with little luster; no defined spots; males in the fall distorted and brick-red. San Francisco to Kamchatka. Neither this nor the humpback has any value to civilized people, because they run only in the fall, when they are worthless. (3) *O. kisutch*, silver salmon. Weight, 3 to 8 lbs. Bluish-green, sides silvery, unspotted. Abundant from San Francisco northward, ascending streams a short distance, and of some value in Puget Sound and northerly in early autumn. (4) *O. nerka*, blue-back, redfish, or Fraser river salmon. Weight, 5 to 8 lbs. Scales large; color clear, bright blue above, sides silvery; lower fins pale, upper dusky; no spots; males in the fall deep crimson red. Columbia river to Kamchatka, ascending streams in the spring to great distances, and often frequenting mountain lakes in the fall. This is one of the commonest, best, and most valuable of the salmon. (5) *O. chonicha*, the quinnat, chonicha, Columbia, or Sacramento salmon. Weight, 16 to 100 lbs., averaging about 22 lbs. in the Columbia, where it is especially abundant. Color, dusky above, often tinged with olive, and slaty on the head; back, dorsal fin, and tail profusely covered with round black spots. California to Alaska and Northern China, ascending all the large streams in spring and summer, moving up, without feeding, until the spawning season, by which time many of those which started first have

travelled more than 1,500 miles. After spawning, most or all of those that have reached the upper waters perish from exhaustion before regaining the sea. This is by far the most valuable of all the Pacific Coast salmon, and also the one whose deep red flesh is most toothsome.

These Pacific salmon will rarely take a hook, and afford the angler little sport. They are caught in seines, gill-nets, hand dip-nets, &c., in pounds, by spearing, in revolving scoops or "wheels" (now illegal in some States), and by various ingenious contrivances among the Indians, large tribes of whom subsist almost wholly upon their flesh—fresh, dried or smoked. It was foreseen, long ago, that the wholesale destruction of salmon entering the rivers of California and the Columbia basin would soon deplete and later extinguish this most valuable fish, unless moderation was exercised. Laws have therefore been passed in each of the Pacific Coast States, and in British Columbia, restricting the seasons at which salmon may be caught, forbidding certain engines of destruction, reserving closed spawning-grounds, and otherwise protecting the annual reproduction of the fish. In addition to this, the United States Fish Commission has in operation three propagating stations, at Baird and Fort Gaston (Redwood) in California, and Clackamas, Ore., where salmon eggs are hatched, and the fry used to restock abandoned streams, or to introduce the species into the Eastern waters. It is probable that similar remedial methods must soon be applied to Alaska, where enormous quantities of salmon (especially quinnat) are caught annually, and where it is especially necessary that this fish should not become extinct, because it forms the main food-supply of the whole native inland population. In respect to salmon in Alaska, Dr. Tarleton H. Bean, one of the specialists of the U. S. Fish Commission, makes the following recent summary:

"The red salmon [*i. e.*, quinnat] is now the most important species for canning and salting in Alaska, and its flesh is so red as to win for it a reputation not warranted by its edible qualities. The largest and finest species is the king or quinnat salmon, which occurs abundantly in the larger rivers, such as the Yukon and the Nushagak. The humpback is the smallest, most abundant and most widely distributed of Alaskan salmon. It is not taken for canning purposes, but being one of the most palatable species in the fresh-run condition it is destined to become of great importance in that connection. The silver salmon is used to some extent for canning, but far less than the red salmon, while the dog salmon is regarded by the whites as one of the least important of the group."

The canning of salmon (preserving their cooked flesh in hermetically sealed tin cans) is one of the most important maritime industries of the Pacific coast from San Francisco north, but especially in the Sacramento and Columbia valleys, and along the coast of British Columbia and southern Alaska. The canneries employ during the summer a large and motley collection of white, Chinese, Japanese, and Indians of both sexes, and the total production approaches 1,800,000 cases of 48 1-lb. cans each, of which British Columbia furnishes nearly one-third. Statistics gathered by the U. S. Fish Commission showed that in 1889 the salmon catch in California, Oregon, and Washington aggregated nearly 50,000,000 pounds, for which the fishermen received over \$2,000,000. Of this the canneries utilized over 41,000,000 pounds, and filled 622,057 cases, having a market value of \$3,703,838. Similar figures for Alaska in 1892 show that 650,000 cases were packed; and British Columbia canneries packed nearly as much, the value of this product there, in 1893, being \$3,150,709. The process of canning is rapid, and is aided by machinery throughout. "The fish are thrown from the arriving scows to a latticed floor, or loaded directly into the trucks and rolled into the cannery. The cleaner seizes a fish, and in 2 seconds trims and cleans it—beheading, detailing, and rendering it with so many strokes of his long, thin knife. It is washed, scraped, cut in sections the length of a can, packed, soldered, steamed, tested, vented, steamed again, resoldered, lacquered, labelled, and boxed. The tin is taken up in sheets, and an ingenious machine punches, rolls, and fits the covers to the cans, which roll down an inclined gutter of melted solder which closes the edges. The experts can tell, by a tap of the finger, if each can is air-tight. If not hermetically closed, the contents rapidly change, burst the cans in transit 'below,' or explode unpleasantly in distant markets."

The most picturesque presentation of this industry is in Alaska, where a score of canneries exist along the coast. Miss E. R. Scidmore, whose words are quoted above, describes them further as follows:

"The seining and outdoor work are done by white men, a few Indians being sometimes employed under them. While industrious to a degree, the Tlingit cannot be depended upon; and the native is too apt to strike, to start upon a prolonged potlatch, or go berrying or fishing on his own account, in the height of the salmon run. In the skillful manipulation of the cans and machines within doors, neither he nor the white man can approach the automatic exactness and dexterity of the Chinese, who, being paid by the piece, take no account of a day's working hours, and keep the machinery moving as long as there are fish in the cannery. . . . The Alaska canneries are not held to any restrictions as in British Columbia, not taxed or hindered in any way. They may take any piece of ground they see fit in tracts of 160 acres, and receive a patent after paying \$1.25 an acre and the cost of survey. There is no tax upon cannery boats, no limit to the size of net-meshes, no close season, and the salmon

inspector, who is supposed to prevent the placing of weirs and traps in the streams, has no vessel at his command with which to enforce the laws. The canneries drain the country of their natural wealth; make no permanent settlements, nor any improvements; spend almost nothing of their profits in the Territory; and are a fruitful source of trouble and corruption among the native people."

Salvage Regulations. (*Marit. Law.*) In all countries salvage is allowed to persons who save a ship or boat, or its cargo, or the lives of persons belonging to it, from danger or loss, either from shipwreck or capture, or abandonment. The amount of such salvage or remuneration is settled by maritime law, and depends upon the amount of risk encountered and enterprise shown by the salvors in going to the assistance of a ship; upon the imminence of the danger from which the vessel or the cargo is saved; upon the amount of work, ability, and time used in the rescue; upon the worth of what is rescued, and upon the degree of success in the accomplishment. The admiralty and maritime jurisdiction, which settles all questions of salvage in the United States and Great Britain, extends not only over the high seas, but over the seacoasts and navigable rivers as far as the ebb and flow of the tide. In order to be entitled to salvage the service performed must be voluntary, as distinguished from the efforts of the master and crew of the rescued vessel, who are under agreement to do their utmost for its safety; or even the efforts of the passengers, for it is considered that in case of a common danger it is the duty of all to do what they can for the common safety. If, however, the efforts of any passenger or member of the crew surpass what can justly be expected of him under the circumstances, he is usually judged to have earned a right to salvage. The effort of salvors must also be effective in order to earn reward, except when their services have been called for and engaged by the ship in peril. In that case their title to salvage is in proportion to the effort made, whether successful or not; in all other cases, the undertaking being at their own risk, is only rewarded in proportion to its success. If part of a salvage service is accomplished by one company of rescuers and the rest by another, the salvage must be divided between them, unless it can be proved that the first company had entirely abandoned the effort, in which case the reward is all given to the second. On the other hand, if, while one set of rescuers is at work, another joins in the enterprise, the law favors the first comers, and the second have to prove that their aid was either actually necessary or at least beneficial before they can claim reward. No salvage at all can be collected for help which the master of a boat can prove to have been given against his will and protest, or in the absence of risk or damage; although, if he consents to receive aid, salvage may be collected when the danger, though actual, was not imminent. Where one ship rescues another ship, or its cargo, the owner of the rescuing ship (even if he chance to be part owner of the injured ship as well), the master, and all the members of the crew are entitled to share in the reward. It is not necessary that all the seamen should actually have taken part in the rescue, as long as they were in readiness to do so. Pilots can seldom collect salvage; it is their duty to render assistance, and usually they can only collect their fees for pilotage. The same is true of tugs and steamers, unless they endanger themselves in bringing in an injured boat, or unless the boat is a derelict (that is, permanently deserted by master and crew), in which case the first to take possession is entitled to collect a very large salvage, which formerly was always one-half of the value of the deserted boat, but now varies, sometimes being less, but very seldom more. The recapture of a boat which has been taken by an enemy is rewarded with salvage if it is effected before the boat is condemned as a prize, and when there is sufficient cause for thinking that it would have been condemned, but a claim for salvage on any grounds may be annulled or lessened by neglect or blunders of the salvors, resulting in injury to that which has been saved. Unless they have special contracts, the salvors must also share any unavoidable depreciation in value of the rescued property occurring before the settlement of their claim, which is not like that of a creditor, which must be satisfied in full, but, for the time, is that of a partner. Until their claim is settled, however, they have a lien upon the property saved, and can bring suit against its owner; a maritime lien is independent of possession, and consequently is the simplest way of assuring payment of salvage. No reward can be collected in the United States for the saving of life unless in connection with property, but in some cases such reward has been adjudged in England.

Salvation Army. In 1865 Rev. William Booth, who had left the Methodist Church to devote himself more fully to revival work, began a series of open-air meetings in East London, and succeeded in rousing enough interest to enable him to found the *East London Mission*, and to rent a hall. His work gradually attracted outside attention and aid, and he was able to broaden the field of his mission and to establish branches. In 1869 he changed its name to the Christian Mission, and in 1878 the government of its widespread divisions and sub-divisions had become so cumbersome under the Methodist polity, which had been followed, that a conference decided to change the name of the whole system to the *Salvation Army*, and to adopt a complete military organization and government, with William Booth as general, having full controlling power. The novelty of the military idea and titles attracted attention, and

so did the martial music, with the parades and open-air preaching of the uniformed Salvationists. At first, although making many converts among the poor, they met with little except ridicule from the better classes, but gradually, as it became evident that they were reaching a grade of people for whom other religious societies were doing comparatively little, the Salvation Army became recognized as one of the most effective religious and philanthropic organizations in existence. In doctrine the Salvation Army follows the fundamental beliefs of the evangelical churches, preaching repentance, forgiveness, and redemption, emphasizing the acceptance of Christ as an atonement for sin, but purposely avoiding a formal creed and all those details of dogma over which the evangelical churches disagree. Every Salvationist is taught that he is a part of a church militant, and that he must make it his personal responsibility to bring about the conversion of everyone with whom he comes in contact. The officers, moreover, are specially set apart and maintained by the others, in order that no care shall come between them and the salvation of souls. They are trained in the knowledge of spiritual ways and means, and the giving of their commissions is a religious ceremony. Women and men have equal rights and duties, there being no position in the army which a woman may not fill. The service is purely voluntary; recruits must give satisfactory evidence of conversion, and must sign "the articles of war," in which they promise to live for God and the army, to be obedient to lawful orders, and to lead pure lives; they are then expected to take up active work, but they may retire from the army at any time. Every corps, division, and territory supports itself, and no salaries are promised, the officers receiving only what they actually need. Besides regular members of the army, there is an auxiliary league, made up of those who are unable to take active part in the work, but wish to give it the support of their names, money, or influence.

From 1878 to 1891, the army increased from 80 corps and 127 workers, or "officers," to 4,291 corps and 10,617 officers, of whom 4,539 were in Great Britain, and 1,331 in the U. S. The movement in the U. S. dates from March, 1880, when Commissioner George Scott Railton, and a company of seven workers, came from England and began it. In spite of a secession, in 1884, the force increased rapidly; in 1894 the army was established in 620 cities and towns, and numbered 754 corps, counting the outpost. In 1896 Mr. and Mrs. Ballington Booth, who were then in command in America, were ordered away; not wishing to leave the field of work with which they had identified themselves, they resigned from the main army and started a division called the *Volunteers of America*, under their own control. On Jan. 1, 1897, this new organization had already grown to three regiments of ten battalions, with 150 staff officers, distributed among 76 cities and towns, with 130 organized posts. In 1897 the main army had increased to 5,469 corps, with about 15,000 officers, of which 675 corps and 2,125 officers are in the U. S. In 1890 Gen. Wm. Booth published *In Darkest England, and the Way Out*, giving a minute account of a philanthropic scheme which has since come into partial operation with great success. Its proposed "city colony," into which outcasts are to be received and offered work, and its "farm colony," to which those found anxious to work are sent from the city colony, are already practically established in the form of numerous homes, shelters, factories, and farms; and the "over-sea-colony" is likely soon to be arranged for. All the property of the army is held by the general, as trustee; the strictest accounts are kept, and published yearly. The revenue of the army comes from numerous business enterprises, among them the publication of its papers, pamphlets, books, and song-books, from collections in the meetings, and from other gifts. The *War Cry* is its best-known publication, having a circulation of over 400,000 in Great Britain alone, and also being issued locally, under the same, or a similar name, in all parts of the world where the army is represented.

Salvini (*sāl-vē'ny*), TOMMASO, tragedian, was born in Milan, Italy, in 1830; received an excellent literary education from his father; adopted the theatrical profession, and played first at the Royal Theater, in Naples; afterward, for 6 years, was a member of a troupe, and played in several of the leading Italian theaters; was for some time with Madame Ristori. He made his greatest success in 1865, at Florence, at the celebration of the six-hundredth anniversary of Dante's birth, the play being *Francesca da Rimini*, with Madame Ristori as *Francesca*. Florence presented him with a statuette of Dante. He visited the United States in 1875 and in 1881, his *Othello* attracting universal attention, and the almost unanimous praise of art critics. His last appearance in England was in 1884. He was knighted by King Victor Emanuel.—His son, ALEXANDER SALVINI, achieved some success as a tragedian, especially in *The Three Guardsmen*; died Dec. 15, 1896.

Samana (*sah-ma'nah*). A peninsula, bay, and splendid harbor on the E. coast of San Domingo, West Indies. On Jan. 10, 1873, this portion of the island came into the control of a company of American capitalists, who had, by treaty with the government of San Domingo, purchased the rights of sovereignty over it, together with other important concessions, such as the right to organize a police and navy for protection, and of carrying a flag; but on March 25, 1874, all the rights of the company were confiscated for non-payment of the stipulated annual rent. See HAYTI.

Sams'ui, a small town in the province of Kwangtung, China, on the West, or Si, river, not far above its mouth. It has been recently created an open port by

the Chinese government, and though at present unimportant in itself, it stands at the junction of three river systems and is connected by creeks and canals with the river on which Canton is situated, so that it must eventually become an important point of distribution, through which will pass much of the imports and exports of the provinces of Kwausi, Yun-nan, and Kweichow.

San An'gelo, in *Texas*, a post-town, cap. of Tom Green co. Pop. (1897) 2,820.

San Die'go, in *Texas*, a post-town, cap. of Duval co., 53 m. W. of Corpus Christi. Pop. (1897) 2,025.

San Eliza'rio, in *Texas*, a post-town of El Paso co. Pop. (1897) 1,495.

San Jacin'to, in *Texas*, a S.E. co.; area, 649 sq. m.; bounded N.E. by Trinity river. Surface, undulating, heavily timbered; soil, varied. Cap. Cold Spring. Pop. (1897) 8,150.

San Juan', in *Colorado*, a S.W. co.; area, 500 sq. m.; drained by Uncompahgre river, and other small streams. Surface, mountainous. Has rich mines of silver and gold; copper, galena, and coal are also found. Cap. Silverton. Pop. (1897) 3,450.

San Juan, in *New Mexico*, extreme N.W. co., adjoining *Colorado* and *Arizona*; area, 6,008 sq. m.; intersected by San Juan river. Surface, plateaus and hills, with several well-watered valleys; soil, fertile in valley, and on mesas when irrigated. Has coal and limestone; not much timber. Cap. Aztec. Pop. (1897) 2,075.

San Juan, in *Utah*, extreme S.E. co.; area, 9,178 sq. m.; bounded W. by *Colorado* river, and intersected by San Juan river. Surface, mountainous; good, fertile soil; timber limited. Stock raising is the chief occupation. Cap. Bluff. Pop. (1895) 500.

San Juan, in *Washington*, a N.W. co., comprising the island of San Juan and other islands in the Strait of Juan de Fuca and Gulf of Georgia, near the north end of Puget Sound; area, 600 sq. m. Surface, northern part mountainous and heavily wooded; southern part mostly rolling prairie; soil, fertile. Min. Silver, copper, and galena. Cap. Friday Harbor. Pop. (1897) 2,460.

San Mig'uel, in *Colorado*, a S.W. co.; area, 1,300 sq. m.; intersected by Dolores and San Miguel rivers. Surface, principally mountainous, with excellent stock ranges and a small area of farming land. Cap. Telluride. Pop. (1897) 5,500.

Sanatorium, *n.* [Low Lat., *sanatorius*, health-giving.] A place to which people resort for the preservation or restoration of health; especially, in tropical climates, an elevated summer-residence station.—An institution, or hospital, for the treatment of disease or the care of invalids; usually so located as to render available the use of natural therapeutic agents or conditions.

San'born, in *Iowa*, a post-town of O'Brien co., 25 m. W. of Spencer; has railroad roundhouse and repair shops. Pop. (1895) 1,242.

Sanborn, in *South Dakota*, a S.E. central co.; area, 580 sq. m.; intersected by the Dakota river. Surface, gently rolling prairie; soil, dark, rich sandy loam. Cap. Woonsocket. Pop. (1895) 4,326.

Sand Beach, in *Michigan*, a post-village of Huron co., on Lake Huron, 62 m. N. of Port Huron; has extensive manufactures of flour, salt, and lumber, and is the chief grain market for the northern peninsula of Michigan. Here is a government breakwater which encloses one of the best harbors on the Lakes. Pop. (1894) 1,273.

Sand'-blast, *n.* A process invented by C. Tilghman, of Philadelphia, about 1870, in which a stream of sand is introduced into a rapid jet of steam or air so as to acquire a high velocity, and is then directed upon a hard substance so as to cut or wear away its surface. The apparatus has been found useful for a variety of industrial purposes, such as lettering stone, ornamenting glass, cutting holes in crockery, &c. To produce ornaments or inscriptions on stone, either in relief or intaglio, a stencil of iron or caoutchouc is held or cemented to the stone, and the sand jet is applied with an even and steady motion over the whole surface, so that all the exposed parts may be cut to the same depth. The apparatus used consists essentially of a receptacle or hopper filled with sharp sand, and fed down through a tube until it reaches a point where a blast of air or a jet of steam under pressure joins it and carries it along in a flexible tube to be directed over the work. In using steam as the impelling force, appliances are provided for directing it away again, so that the sand is practically dry when it strikes the work. If a slight effect only is required, as in obscuring the face of glass or in frosting metal, a pressure of only a few pounds to the inch is sufficient, and by keeping the work at a considerable distance from the nozzle of the blast the sand is spread and a large surface is quickly covered. If deep cutting is required, however, a pressure of 100 or 150 pounds of air is often used. The tendency of the sand is to cut every hard and brittle substance, but to leave every soft and yielding substance uninjured. Hence rubber, lace, paper, &c., may be used for patterns, and the hands may be thrust under the blast with impunity if the finger-nails be protected by soft leather or the like.

Sand'-lot, *n.* A plot of sandy soil; specifically, such a lot in San Francisco where gatherings were held and addressed by Dennis Kearney, a labor agitator, and who thence became known as the *Sand'-lot* orator. The Constitution of California, adopted in 1879, under the influence of this agitation, has been called the *Sand'-lot* Constitution.

Sand'man, *n.* (*Nursery lore*.) The mythical being that causes children to be sleepy, who are told when they rub their eyes that "the sandman is around."

Sand'pipe, or **Sand'gall**, *n.* (*Geol.*) A deep cylindrical, vertical cavity, penetrating calcareous rock in England, France, and elsewhere, and filled with sand or gravel. One was mentioned by Lyell as being 12 feet in diameter and over 60 feet deep. Lyell attributes them to the chemical action of water charged with carbonic acid, derived from the vegetable soil and the roots of trees, on the chalk below.

Sand'pipers, *n. pl.* (*Ornith.*) A group of shore-birds (*Totaniæ*), including those in which the bill is straight or slightly upturned, and the toes at the base partly webbed. They occur inland, along the beaches of lakes and margins of streams, but are most numerous along the seashore, running swiftly back and forth with the ripples, and finding their food between tide-marks by thrusting their bills, which are highly sensitive at the point, into the sand in search of small animals. Their colors are usually in neutral tint, beautifully disposed when closely examined, but inconspicuous at a distance; some, however, have brighter dresses. They gather in small flocks, and are exceedingly alert, some member of the company being always on the watch, and ready to alarm the rest by loud shrieks, a cause of frequent discomfiture to sport-men when shooting along shore or in the marshes, and finding their game repeatedly warned by officious sandpipers. All are migratory in temperate regions, and many go to the remotest arctic shores and islands to breed, being seen in the U. S. only during the migrations, and several are circumpolar in their distribution. The ruff and some others develop a remarkable outgrowth of feathers on the breast and neck in the males during the breeding season, and they expand these in a manner intended to be terrifying when engaged in fighting, in which a large part of their time seems to be spent. Another one, the Alaskan pectoral sandpiper, can fill its esophagus with air until it is swollen almost as large as its body. This is a part of its love-making, and it is accompanied by short, erratic flights, and the utterance of very sweet and prolonged notes. These birds lay their eggs on the beach sand, with little or no nest beneath them; and the four eggs are darkly spotted, and sharply conical in form. Few of the species are considered of much value to sportsmen. The most common, widespread, and closely resident species in the U. S. is the tip-up, or teeter-tail, of every stream, lake, and coast.

San'ford, in *Florida*, a city of Orange co., on St. John's river, 193 m. S. of Jacksonville; has large saw mills, machine shops, and cigar factories. Ships oranges and early vegetables north. Pop. (1897) 2,150.

Sanford, in *Maine*, a post-town of York co., 36 m. W.S.W. of Portland; has manufactures of woollen goods. Pop. (1897) 4,000.

Sanita'tion, *n.* The devising and carrying out of methods for promoting the public health, by the use of preventive measures, the destruction of disease-germs, and the securing of the enforcement of hygienic rules and regulations.

Sank'ey, IRA D., evangelist, was born in Lawrence co., Pa., Aug. 28, 1840. Always musical, he led a church choir in New Castle, and was active in the Y. M. C. A.; met Mr. Moody at a convention in Indianapolis, and from that time worked with him in the evangelistic field, being the possessor of a fine baritone voice, and exceedingly popular. He has published *Sacred Songs and Solos*, which has had a wide circulation.

Santa A'na, in *California*, a post-village, cap. of Orange co., 33 m. S.E. of Los Angeles; in a fruit-growing district. Pop. (1897) 4,250.

Santa Claus, or **Klaus**, *n.* [Du. for *Saint Nicholas*, the patron saint of children.] (*Nursery lore*.) The mythical friend of children; the short, fat, and jolly old man who on Christmas Eve is supposed to drive over the roofs in a sleigh, drawn by reindeer, and to descend the chimneys to fill the stockings with toys and goodies.

Santa Mon'ica, in *California*, a post-village of Los Angeles co., on the Pacific Ocean, 17 m. W. of Los Angeles; a summer resort and shipping port. Pop. (1897) 2,125.

Santa Paul'a, in *California*, a post-town of Ventura co., 16 m. from Ventura. Pop. (1897) 1,150.

Sap'head, *n.* (*Colloq.*) A soft-headed person; fool; simpleton.

Sap'ient, **Sapient'ial**, *a.* [Lat. *sapiens* (gen. *sapientis*), wise.] Possessed of wisdom or sagacity; sage.

Sapiential Books. In ancient Jewish literature, the didactic books, comprising *Proverbs* and *Ecclesiastes* of the Old Testament, and the *Book of Wisdom* and *Ecclesiasticus* in Apocrypha.

Sap'rophyte, *n.* (*Bot.*) An organism which grows on rotting vegetable matter, as certain fungi and plants, like the Indian-pipe, that contain no chlorophyll.

Sarasa'te, MARTIN MELITON, violinist, was born in Pampluna, Spain, March 10, 1844; entered the Paris Conservatory (1856), and won first prizes for solfeggio and violin; entered Reber's harmony class, and won a *premier accessit* in 1859; soon after he abandoned composition for violin practice; gave concerts all over Europe with great success; visited America, North and South, in 1890 and 1894.

Sarc, **Sarco**-. An initial compounding element, derived from the Gr. *sarr* (gen. *sarkos*), flesh.

Sar'cey, FRANCISQUE, dramatic critic, was born at Dourdan, France, Oct. 8, 1828; has been dramatic critic of *Figaro*, *Revue Nationale*, and *Temps*; has written several novels, and 2 volumes of reminiscences. *My Youth* (1885), and *Souvenirs of My Age* (1892). Also published *The Theater* (1893).

Sardon', VICTORIEN, dramatist, was born in Paris, Sept. 7, 1831; has written many successful plays, including *Fedora*, *Theodora*, and *La Tosca*, which were written for Mme. Bernhardt, and also played by Fanny Davenport. His *Gismonda* was produced by Mme. Bernhardt, in Paris, in 1894; and his *Madame Sans Gêne* was presented in New York in 1895. He was decorated with the Legion of Honor in 1863, and elected a member of the French Academy in 1877.

Sargasso Sea. The name given to several immense areas of floating meadows found in mid-ocean in different parts of the globe, and formed by a sea-weed called by the botanists *Sargassum bacciferum*, and popularly Gulf-weed, Sea-lentils, Sea-grasses, and Sargasso. The most celebrated occupies the greater portion of that breadth of the Atlantic Ocean between the coast of Africa and the region of the West Indies, from 20° to about 65° of west longitude, and from the parallel of 20° to that of 45°. It was first discovered by Columbus, unless indeed the Phœnicians fell in with it during their early voyages, as seems possible from a passage in Aristotle. Dr. Collingwood, who has recently published an interesting account of that Sargasso Sea, compares its area to that of the Mississippi Valley; and this immense bed of floating sea-weed was at one time supposed to be derived from plants originally attached to the bottom, and subsequently torn off by some severe storm; but it is now understood that the plants composing it increase by rapid growth, although in this condition they never produce either roots or fruit. This meadow of sea-weed is remarkable not only for the immense extent of vegetation, but for the great variety of animal life abounding in its midst. Innumerable species of crustacea, many annelids, mollusca, polyzoa, polyps, and fishes are found in it. Investigations of patches of the weed always furnish a fruitful field of research to naturalists. It is mentioned as an interesting circumstance that all the animals found harboring in the Sargasso sea-weed are of the same general tint as that of the weed itself, assimilating themselves so closely that it is sometimes difficult to distinguish them at first sight. It is not at all improbable that, in view of the immense amount of minute animal life in these localities, many of our wandering fishes, such as various species of mackerel, etc., find in such places those breeding regions that we have hitherto sought for in vain. The position of the Sargasso Sea in the Atlantic, as well as similar patches in other oceans, is believed to be determined by the course of the greater oceanic currents, as it occupies the eddy formed by the northern drift of the Gulf Stream toward the west, and its southward branch, which is deflected from the Banks of Newfoundland, and extends to the south, by the way of the Azores, along the coast of Africa. Another tract of the Sargasso Sea is found in the Pacific, off the coast of Lower California; and still another extends along in the Antarctic waters from Australia to the Falkland Islands. *Sargassum* is eaten in China and other parts of the East.

Sargent, EPES, journalist, was born at Gloucester, Mass., Sept. 27, 1813; was editorially connected with Boston and New York papers; issued a series of school text-books, and wrote several dramas and poems. Of the latter the best known is, *A Life on the Ocean Wave*. Died Dec. 31, 1880.

Sargent, JOHN SINGER, painter, was born of American parents at Florence, Italy, in 1856; studied under Carolus Duran, in Paris; received second-class medal at the Salon in 1881; medal of honor at the Paris Exposition of 1889; and Cross of the Legion of Honor in the same year. He is particularly strong in portrait-painting. His *La Carmencita* was purchased by the French government in 1892.

Sargent, in *North Dakota*, a S.E. co.; area, 864 sq. m. Agriculture is the leading industry. Cap. Forman. Pop. (1897) 5,550.

Sar'ny, NAPOLEON, artist, was born in Quebec, Canada, in 1821. He was successful first as a lithographer; but after the Civil War opened a photographic studio in New York city, and became the most popular and voluminous artist in his line; his collection of photographs, the accumulation of 30 years, numbered over 60,000, and included the portraits of the most notable Americans, and many distinguished foreign visitors. Died Nov. 9, 1896.

Sa'ros, *n.* (*Astron.*) A cycle of eclipses; being 18 years, 10 days, 7 hours, and 42 minutes, during which period all eclipses, whether solar or lunar, occurring during one saros are repeated during the next saros, and nearly in the same order. This cycle was known to the Chaldeans, but the cause was not ascertained until a long time after. The cause arises from a lack of exact coincidence between 223 synodical periods of the moon = 6,585,321 days = 18y. 10d. 7h. 42m. and 19 revolutions of the sun with respect to the moon's node = 6,585,772 days. The difference between the periods is 10h. 49m., during which time the sun moves 28' relative to the moon's node. From these curious circumstances the following phenomena result. Suppose, for a solar eclipse, that the sun and moon are near the descending node, and just within the eclipse limits; there will then be a very small eclipse at the north pole. Now, at the beginning of the next saros, the sun and moon will be near together again, but 28' nearer the node, and the same eclipse will take place again, but happening nearer the node, the shadow will pass across the earth a little farther south than it did before. Again, after the lapse of another sarosic cycle, the sun and moon will once more be within the eclipse limit, but 28' still nearer the node, and therefore the eclipse will be still farther south. Now, after this eclipse has appeared some 33 to

35 times, requiring about 650 years, the eclipse will take place at the node and on the equator. After appearing a like number of times south of the equator, it will pass off the earth at the south pole, after having appeared some 65 to 70 times, occupying nearly 1,300 years. If during the saros there have been 4 leap years, the interval between the recurrence of the eclipse will be 18y. 10d. 7h. 42m., and one day more if the 29th of February has occurred 5 times. The above remarks apply to not only one eclipse, but to all, solar and lunar, that come in at the descending node, or at the ascending node. In the latter case, however, the eclipse will come in at the south pole, and pass off the earth at the north pole. At whatever day, therefore, an eclipse takes place, it will occur again in 18 years and 10 or 11 days. By this means, which the ancients called the saros, they were enabled to roughly calculate the occurrence of eclipses. It must be borne in mind that the moon's nodes make a retrograde revolution around the sky in 18y. 218d. 21h. 22m. 46s., and but for this motion there would be no saros. If the direction of the moon's nodes from the earth's center were always the same, eclipses would occur in opposite months, as do the transits of Mercury and Venus. See NODE; ECLIPSE; MOON.

Sartain', JOHN, engraver, was born in London, Eng., in 1808; came to America, and settled in Philadelphia in 1830; introduced mezzotint engraving; practiced oil and miniature painting on ivory and vellum, and practiced mingled line, mezzotints, and stippling in his plates. He was the editor of *The Foreign Semi-monthly Magazine*, and the founder of *Sartain's Union Magazine*. He designed the monument to Washington and Lafayette in Monument Cemetery, Philadelphia. Died Oct. 2, 1897.—His daughter, EMILY SARTAIN, is the principal of the Philadelphia School of Design for Women.

Saskatchewan, Province of. See NORTHWEST TERRITORIES.

Sateen', *n.* [From *satén*.] A woollen or cotton fabric, with a glossy surface in imitation of satin, made thin and light, or stout and heavy, for different uses, as for dresses, linings, &c.

Sat'ellites, *n. pl.* (*Astron.*) The only satellite known to the ancients is the earth's moon, which is the nearest satellite to the sun, Mercury and Venus having none. The next satellites discovered were four of the planet Jupiter, by Galileo, in 1610. Their discovery marked an eventful era in astronomy at a time when men's minds were wavering between the ancient and modern ideas of the structure of the universe; it exerted a powerful influence, and afforded an argument of overwhelming force in favor of the truth of the Copernican system, and against the dogma that had so long held sway, that this little speck of matter, the earth, is the center of the universe, and that the sun, and all the planets, and stars, and comets, and nebulae revolved around it as a guiding and controlling center. On Jan. 7, 1610, with his little spyglass, Galileo saw what

against Galileo's discovery: "There are seven holes in a man's head—two eyes, two ears, two nostrils, and a mouth—and there are seven days in a week, and seven notes in music, and seven metals, and therefore there are seven planets, and can be but seven. Now, this whole system falls to the ground if the number of planets be increased." (See JUPITER.) As the earth has one moon, and Jupiter four, efforts were early made to discover satellites to Mercury, Venus, Mars, and Saturn; but no success rewarded the search until 1655, when Huyghens discovered one to Saturn, which received the name Titan. In 1671, Cassini discovered Japetus, and the following year Rhea, and in 1684 he added two more, Tethys and Dione. Nearly 100 years elapsed before an addition was made to the number known, when Sir William Herschel, in 1789, discovered two others, bringing the number up to seven. The last were named Minus and Enceladus. Fifty-nine years later, Bond, of Harvard College Observatory, discovered Hyperion, making eight in all. Mimas is the nearest to the planet, Titau is the brightest, Hyperion is the faintest, and Japetus is the most distant and has the longest period of revolution, 79d. 7h. 33m. Uranus has four satellites—out six, as was formerly supposed. Two were found by Herschel, and two by William Lassell. But little is known about them except that their revolutions are performed in a retrograde direction. Their names are Ariel, Umbriel, Titania, and Oberon. Their sidereal periods are: Ariel, 2d. 12h. 28m.; Umbriel, 4d. 3h. 27m.; Titania, 8d. 16h. 55m.; Oberon, 13d. 11h. 6m. Neptune, as far as known, has but one moon, which, like those of Uranus, revolves in a retrograde direction; it has never been honored with a name. It was discovered in 1846 by Lassell. Its sidereal period is 5d. 21h. 8m., and it shines as a star of the 14th magnitude. The earth, like Neptune, has but one moon. She completes her sidereal revolutions around the earth in 27d. 7h. 43m. 11.5s., at a mean distance 238,830 miles from the center of each. The above period is from star to star, and not from new moon to new again. As during the time the sun has been advancing easterly nearly a degree a day, the moon, to overtake the sun, must make more than a complete revolution, to do which requires 2d. 5h. 0m. 52s. This added to the length of the sidereal period makes the synodic period (or month) 29d. 12h. 44m. 3s. (See MOON.) As the moon rotates on her axis in exactly the same time that she revolves around the earth, one side is constantly presented to the earth. It has always been conceded that neither Mercury, Venus, nor Mars had a satellite, and great was the astonishment when (1887) Prof. Asaph Hall, of the Naval Observatory, Washington, announced the discovery of two little moons to Mars, bringing the number of known satellites in the solar system up to 21 members. They have been named Phobos and Deimos. The distance of Phobos from the surface of Mars is but 3,700 miles. A magnifying power, therefore, of 3,700 diameters would bring it to within one mile, near enough to distinguish inhabitants if any existed. Its diameter is estimated to be from 20 to 25 miles. As Mars rotates in 24h. 37m., and the satellite revolves around him in 7h. 39m., it results that the latter rises in the W. and sets in the E. Let the reader stop a moment and reflect what is involved in the idea of a month of only a little over 7½ hours' duration, the moon, in only a little longer time than that, going through all its changes from new to full, and to new again, passing like a rocket across the sky from west to east. Deimos performs its revolution in 30h. 17m. 54s., at a distance of 12,000 miles from the surface of Mars. As the time of revolution exceeds that of the rotation of Mars, it must rise in the E. and set in the W. Its diameter is too small to measure, but is thought to be only from 5 to 10 miles, being the smallest heavenly body known, except the meteoroids. There is not the remotest probability that a satellite will ever be discovered to either Mercury or Venus, as they would have been seen during the transits of those planets across the sun if any existed.

Satol'li, FRANCIS, a Roman Catholic prelate, and diplomat of the Holy See, was born in Perugia, Italy, in 1841. On the accession of Pope Leo XIII., S., who had been his pupil in the diocesan seminary, was chosen his chief assistant in the work of promoting theological studies; by successive promotions, he became archbishop of Lepanto; in 1889, was sent by the Pope to represent him at Baltimore, in the matter of the Catholic University, at Washington; in 1893, was appointed apostolic delegate to the U. S.; in 1896, was made a cardinal, Sebastian Martinelli succeeding him as delegate. He has written a *Course of Philosophy* on the *Summa* of St. Thomas, and various philosophical essays.

Sat'urday, *n.* [Lat. *dies Saturni*.] The seventh or last day of the week; the day of the Jewish Sabbath; the day following Friday and preceding Sunday;—so called from being dedicated by the Romans to Saturn.

Satureja (*sit-ur-e-já*), *n.* [Gr. *saturei*, satyrs.] (*Bot.*) A genus of plants, order *Lamiaceae*. It includes the herb known as savory, of which two sorts, the *summer* and the *winter*, are cultivated, both highly esteemed in cookery for their powerful aromatic flavor.

Sat'urn, *n.* [Lat. *Saturnus*, said to have been so called from *sata*, sown lands, because the god presided over agriculture.] (*Myth.*) One of the oldest, and the principal of all the deities, was the son of Coelus and Terra, and the father of Jupiter, and his brothers the Titans. Being displeased with his father's sovereignty, S. rebelled against the authority of Coelus, and attacking him with a pruning-hook, inflicted a severe injury on his person, and, after deposing his parent and liberating

his brothers, whom Coelus had imprisoned in the bowels of the earth, he married Rhea and ascended the throne of heaven. Saturn, knowing by his celestial prescience that a fate would happen to himself similar to that which had overtaken his father by his means, should he have a son old enough to covet his sceptre, resolved to destroy all his children, and so avert the dreaded evil. Accordingly, he devoured every son born to him by Rhea directly on its birth. Rhea, having for a time submitted to this unnatural proceeding, was at length resolved to save some of her children by deceiving her lord and husband, and instead of a babe, sent the cannibal-god a substitute, which he devoured with equal satisfaction. The poets assert that Rhea sent Saturn a stone on each occasion; whatever it may have been fabled to be, she contrived to save and rear, in ignorance of their father, Jupiter, Neptune, and Pluto. The former, in time becoming conscious of his birth, asserted his right to the throne, and, driving his parent from heaven, assumed the absolute sovereignty of the universe. The dethroned monarch fled to Italy, and, sharing his earthly kingdom with Janus, established the Golden Age. Saturn is represented as an aged man, bent by the weight of years, holding in his right hand a scythe, with a serpent biting its own tail—emblem of time and eternity; and in his upraised left he grasps the body of a child, which he appears conveying to his mouth.

Saturna'lia, *n. pl.* [Lat.] (*Rom. Antiq.*) The festival of Saturn, celebrated about the middle of December, as a period of unrestrained license and merriment for all classes.—Hence, any period or occasion of general license, particularly one in which the lower classes of society are allowed unlimited freedom or association with their superiors; as, the Roman carnival is a kind of *Saturnalia*.

Saturna'lian, *a.* [From Lat. *Saturnalia*.] Pertaining, or relating, to the Saturnalia.—Hence, of loose and unrestrained jollity; sportive; dissolute; of rampant intemperance of manners or enjoyment; as, *Saturnalian* revelry.

Satur'nia, *n.* (*Zoöl.*) A genus of lepidopterous insects, family *Bombycidae*, has the antennae widely flattened only in the males, and the larva has small warts crowned with long prickles or branching spines, and these prickles sting severely. The American species, *Proserpina*, *S. maia*, expands about three inches, and both pairs of wings are crossed by a broad yellow-white band, near the middle of which, on each wing, there is a kidney-shaped spot of black, with a whitish crescent.

Saul'ey, LOUIS FELICIEEN JOSEPH CAIGNART DE, numismatist and Orientalist, was born in Lille, France, March 19, 1807; received a military education; became keeper of the Artillery Museum, at Paris (1842); was widely known as an antiquary; became a member of the Academy (1842); travelled in Iceland, Greenland, Syria, and Palestine, and wrote numerous volumes bearing upon his journeys, and relative to his special researches. Died Nov. 4, 1880.

Sault (*soo*) **Ste. Marie.** (*Geog.*) The name applied by French explorers and fur-traders, from 1660 onward (first visited by Nicollet, in 1634), to the rapids near the head of the St. Mary's river, by which Lake Superior discharges into Lake Michigan. It was a favorite residence of the Chippewa Indians, on account of the constantly good fishing, and hence was chosen by the earliest frontier traders as a post; and afterward it became one of the most important centers of the Northwestern fur trade, and a place of military importance in the early border-wars, and again in 1812-14. Since then a U. S. military post has been maintained on the Michigan side, and important towns have grown up on this, as well as on the Canadian, side of the river. The American town was greatly stimulated about 1840 by the opening of copper mines in northern Michigan, and later (1853-55) by the building by the State of the first ship-canal around the Sault; it was 350 feet long, had two locks, cost \$100,000, and greatly increased the Lake Superior trade. A few years later enlargement was required, and the old structure was replaced by a single lock of great size, built by the Federal government, which now owns and controls the whole affair as a free canal; it was 515 feet long, 80 feet wide, and 60 feet deep. The growth of commerce compelled a third increase, and in 1894 a second parallel canal was opened beside the old one. Both are taxed to their utmost during the season of navigation to pass vessels going to and from Lake Superior, which represent over one-eighth of the total commerce of the U. S., and carry 2¼ millions more tons of freight annually than the total tonnage passing through the Suez Canal. In 1889 the towns were connected by a railroad bridge spanning the rapids, and forming a link in the "Soo Line," or route of the Canadian Pacific Railway from Toronto and Montreal to St. Paul, Duluth, and Marquette; and in 1895 the Canadian government opened a ship-canal on the western side of the rapids, the gates of which are operated by electricity. The water-power afforded by the rapids is now extensively used for manufacturing purposes, especially in flour milling and wood-working industries—mainly making wood-pulp. The population of the American town is about 12,000, and of the Canadian 5,000. Excellent hotels make them attractive as summer resorts, where a cool climate and fine fishing are always to be enjoyed.

Sauu'ders, in *Nebraska*, a S.E. co.; area, 740 sq. m.; bounded N. and E. by Platte river. Surface, undulating plain; timber scarce; soil, fertile. Products, Wheat, corn, oats, potatoes, hay, and considerable live stock. Cap. Wahoo. Pop. (1897) 25,200.

Saur-, Sauro-. An initial compounding element, derived from the Gr. *sauros*, lizard.

Fig. 3057.

no human eye had ever before beheld—three bodies in a line near Jupiter, two on the E. side and one on the W., as in No. 1. These he took to be stars. On the following night three also were visible, but, strangely to him, all were on the west side, and in a line, as in No. 2. On the evening of the 10th (the 9th having been cloudy) his surprise was still greater to find but two, both on the E. side (No. 3). On the 13th four were visible, one on the E. and three on the W., as in No. 4. No wonder the man was filled with astonishment at such an array of contradictions to law and order. No discovery in astronomy ever created so much excitement and discussion. The populace called the telescope a diabolical one; refused to look at the pestilent worlds. The climax of stupidity and bigotry was reached by one Sizzi, who published the following bombastic harangue

Saurio'sis, *n.* [Gr. *sauros*, lizard.] (*Pathol.*) A form of ichthyosis (*q. v.*) in which the skin has an appearance like that of a lizard.

Sawdust, Utilization of. The numerous uses which can be found for a product which is originally a waste is well illustrated by sawdust. Its most natural and general application is as a fuel, and many furnaces have been constructed for use in saw-mills, designed to be fed wholly or partially with sawdust fuel, so that the waste product of the saw's work is made to furnish the power to drive it. Sawdust is also mixed with glutinous material, pressed into blocks, and sold as a fire-kindler. It is useful for strewing wet on wooden floors, so that they may be swept without raising a dust.

Fig. 3058.—BRANCH OF ORANGE TREE WITH SCALE INSECTS.
The *Icerya purchasi*, as they appear soon after death (two-thirds natural size).

As a polishing material it is highly valued, being used by jewellers, brass-finishers, tin-plate manufacturers, and in other trades; boxwood and beechwood sawdust are preferred by jewellers, as being free from turpentine or resinous matter. As a material for packing, stuffing, and filling, sawdust is in great demand; it is useful for filling in walls, tending to deaden sounds which would otherwise come through, and especially in cities for strewing on the floors of beer-saloons, restaurants, markets, &c., to absorb moisture and prevent both dampness and dust.

Sawing-machines, *n. pl.* (*Mech.*) The great majority of machines used for sawing employ circular saws, though band-saws and straight-bladed saws are in common use for work to which they are specially suited. When first made the circular saws were sometimes constructed of great diameter, as the severing of a three-foot log, for instance, required a saw of a little more than six feet in diameter. Now, sawing-machines for making deep cuts are usually provided with two opposing circular saws, one being set a little in advance of the other, but rotating in the same direction, so that lumber fed in on the level will be wholly severed. This arrangement has a double advantage: only about one-half as much material is required to make two circular saws of a given diameter as for a saw of double the diameter, and the thickness of the saws being reduced, it is not necessary to cut so wide a kerf, thus saving both lumber and power—the latter because of reduced friction. The thinner a saw-blade can be made, and yet retain strength to do its work, the better. Band-sawing machines are made with a flat, endless blade bent over two large wheels, which are ordinarily rubber-tired, in order to afford a large frictional grip on the saw-blade. Several pairs of rollers are used to govern the feed, with adjustable guides to keep the band in place; or, if the work is heavy, a deflector may be used. The drag-saw is the most common form of straight-bladed saw used in a machine. It is a large saw used for severing logs, and the machine operates it in imitation of the movement it would receive in hand-sawing, dragging it back and forth with a crank motion. The machines used by lumber-dealers in sawing up and reducing the size of their stock are called resawing-machines. Most of these have but one circular blade, because they are not designed for making broad cuts. Sometimes the cross-cut saws are hung from an overhead swinging-frame, the work being mounted on a separate table below. These are called swing-saws, or pendulum-saws. For various small operations in sawing, the saw-table is ordinarily employed. This is a table with a top that may be adjusted to any convenient angle, and elevated more or less above the saw, which is commonly of small size, and projects through a slit in the table's top. Machines for sawing metal employ circular blades, both toothed and with smooth circumference. In either form they operate mostly by friction, being rotated at very high speeds. Band-saws are also used on metal, principally for cutting out parts, as crank-centers, or the like. Many sawing-machines have blades made up in gangs, for performing a large number of similar cuts at a single operation. These are arranged in numerous ways, to suit the special work in hand, as sawing of laths, scantling, &c., forming comb-teeth, or doing some other operation in special industries. For small, light work, the jig-saw is customarily used, having an upright reciprocating blade, working through a table, on which the work is placed, and turned about to make irregular or circular cuts.

Sawyer, in Wisconsin, a N.W. co.; area, 1,368 sq. m.; drained by Chippewa and West Chippewa rivers, and contains numerous lakes. Surface, generally level; soil, fertile. Hardwood timber. Logging and lumbering are the chief industries. Cap. Hayward. Pop. (1895) 3,741.

Saxe, JOHN GODFREY, poet, was born in Highgate, Vt., June 2, 1816; became a lawyer and filled several politi-

cal offices, but is best known as a writer of witty and humorous poems, and as a popular lecturer. He wrote *The Money King*, and *The Proud Miss McBride*; several clever burlesques of classical myths, *Pyramus and Thisbe*, *Phaeton's Ride*, &c., and many shorter poems in whimsical vein. His later years were clouded with melancholy, and he lived in seclusion until his death, March 31, 1887.

Sax'ton, JOSEPH, inventor, was born in Huntingdon co., Pa., March 22, 1799; made many inventions and improvements in the construction of clocks; made the clock for the tower of Independence Hall, Philadelphia, and superintended the construction of the machinery and balances for the Philadelphia Mint. While in

England (1828-1837) he made the machine by which the first electric spark was obtained; also made much of the apparatus used by Wheatstone. He invented a deep-sea thermometer, a self-registering tide gauge, and an immersed hydrometer. Died Oct. 26, 1873.

Say, JEAN BAPTISTE LÉON, statesman, was born in Paris, June 6, 1826; devoted himself to the study of political economy, and was for many years the editor of the *Journal des Débats*. He cordially favored the republic after the fall of Napoleon III., and in February, 1871, he was returned to the National Assembly; in June following became prefect of the Department of the Seine; on Dec. 7, 1872, was made minister of finance by M. Thiers, an office which he filled under successive administrations for the next ten years, except for brief periods when he filled the office of senator. He wrote several works on political subjects. In 1874 he was elected a member of the French Academy of Moral and Political Sciences. Died April 21, 1896.

Scal'age, *n.* An allowance of a certain percentage in weight on different sorts of dry hides for scalings which may fall off. The usual allowance is about 16 per cent.

Fig. 3059.—SCALE INSECTS ON THE ORANGE.
On leaf, *Mytilaspis citricola*, natural size: a, scale of female, dorsal view; b, scale of female, with ventral scale and eggs; c, scale of male—enlarged.

Scale In'sects. Fruit trees, and many ornamental shrubs and plants are often greatly injured by scale insects (*Coccidæ*), which fasten themselves upon the bark, piercing it with a sort of sucker or beak, through which they feed upon the juices of the plant, which is not only weakened by loss of sap, but is injured by the mere presence of the insects, which usually secrete a horny, resinous, waxy, or powdery scale, which is glued fast to the leaf or bark, covering all the stomata or breathing pores. Scale insects, or bark lice, as they are more comprehensively called, constitute a striking group of insects, remarkable for the peculiarities of

their development. In this family the females never progress to the winged state; on the contrary, in many of the species, after a short larval period, they undergo a change of form, and retrograde, becoming, when adult, mere living egg sacks, with organs only of the simplest sorts, such as are needed for reproducing their kind, and to support an almost plant-like existence. The males, on the other hand, advance farther and pass through the usual metamorphoses of insects, finally appearing in the winged state. They differ, however, from other insects of their order (*Homoptera*) by possessing but one pair of wings, the hind pair being aborted, and reduced to stumps, which are provided with a hook that grapples the forewing, and apparently aids in steadying or directing flight. The existence of the male after reaching the adult stage lasts at most but a day or two, during which he takes no food, being unprovided in this final stage with mouth or digestive organs of any sort.

The scales of some bark lice afford products useful in the arts; the white wax of commerce, and lac, from which shellac is made, are substances of this sort. The dried-up bodies of certain other species yield purple or red dyes, of which the best known in modern times is cochineal. Many of the species, and especially the naked kinds, eject honey-dew (*q. v.*), a sweetish liquid, which is greedily lapped up by ants, bees, and many other insects. Some forms of honey-dew solidify into "manna," which is given as a food to invalids, and has a limited use in pharmacy. These few economical benefits are more than balanced, however, by the great injury which bark lice cause to useful trees. The orange and nearly all deciduous trees are subject to their attacks, which are not only constant, but sometimes increase like an epidemic, seriously threatening some branch of horticulture. Such was the case in California a few years ago, when the fluted, or cottony-cushion scale, had been imported from Australia, and was killing whole orchards, besides infesting roses, camellias, and nearly every tree and shrub in the State. Fortunately all scale insects have predaceous or parasitic insect enemies which, as a rule, keep them within a certain boundary, limiting their harmfulness, which, even thus limited, is still greater than any other class of injurious insects.

The orange is particularly subject to the attacks of bark lice, its dense shade and the succulence of its young growth rendering it attractive to them. The long scale (*Mytilaspis gloverii*), the purple scale (*Mytilaspis citricola*), the red scale of Florida (*Aspidiotus ficus*), the red scale of California (*Aspidiotus aurantiae*), the white scale (*Aspidiotus nerii*), and the chaff scale (*Parlatoria pergandii*), among the armored scales, in which the scale is shield-like, covering the insect above and wholly or partially protecting it beneath, all live upon the orange, and are among the most difficult to exterminate by artificial means, for the upper scale is impervious to most liquids, and is not soluble in acid

or alkaline solutions unless strong enough to injure the plant; there are times, however, before the scale is formed, or at the period of moulting, when spraying is effective, and if the insects on a tree were in the same stage of existence at the same time, it would be easy to exterminate them; unfortunately they are at all stages, so that it seems almost impossible to destroy them completely, although much may be accomplished against them.

Beside the *Diaspires*, or armored scales, there are two other groups of scale insects, of which one is the *Lecaninae*, consisting of bark lice either naked, with tough-

ened, scale-like skins, or covered with a thick coating of waxy material, but having no true scale; the other is the *Coccinae*, a division including soft-bodied bark lice called "mealy-bugs," because of their loose coverings of white, fibrous, or powdery wax. The scale insects of the *Lecanidae* are somewhat easier to combat than the armored scales, on account of their inferior protection; five species, the black scale (*Lecanium oleæ*), the turtle-backed scale (*Lecanium hesperidum*), the hemispherical scale (*Lecanium hemisphaericum*), the wax scale (*Ceroplastes floridensis*), and the barnacle scale (*Ceroplastes cirripediformis*), occur on the orange. The mealy-bugs rival even the armored scales in destructiveness; the common mealy-bug (*Dactylopius adonidum*) is a well-known pest of the garden and greenhouse, attacking nearly all plants, even pines and evergreens, and undoubtedly including the orange and its kind, at least in the gardens of southern Europe. In the U. S., however, this species has not been known to infest orange groves, but its place is supplied by a very closely related form, the destructive mealy-bug (*Dactylopius destructor*). The fluted or cottony-cushion scale (*Icerya purchasi*, see Fig. 3058) is also a mealy-bug, and these two, like the common garden insect, attack, with disastrous results, almost all varieties of fruit and shade trees, as well as shrubs and herbaceous plants of the most widely differing sorts.

Beside these scales which, although they may infest other plants, are especially known as injurious to the orange, there are many other bark lice which do not affect the orange, but are very injurious to other fruit trees. The San José scale is probably the best known, as well as the most dangerous, of these. It is an armored

hibits the sale of fruits of any kind affected with any insect, fungus, or blight injurious to the fruit interests of the State. Fumigating with hydrocyanic gas, spraying with various washes, and the introduction, when possible, of new insect and fungoid enemies of the various scales, are recommended in detail by the various bulletins of the Department of Agriculture, which is making a constant and energetic study of the entire subject. See INSECTICIDES.

Scan'dian, *a.* A shortened form of *Scandinavian*, suggested by Skeat as equally explicit and much more convenient.

Scan'dium, *n.* [Lat. *Scandia*, Scandinavia, because found in certain Swedish minerals.] A chemical element discovered by Nilson in 1879, but not yet isolated. Its salts are white or colorless, and have an acid, astringent taste. *Symbol*, *Sc*.

Schaff, PHILIP, clergyman, was born in Coire, Switzerland, Jan. 1, 1819; educated at Tübingen, Halle, and Berlin; began to lecture on theology at Berlin in 1842; in 1844 went to America as professor of Church History and Exegesis in the theological seminary at Mercersburg, Pa.; was placed on trial for heresy, on account of his liberal views; was acquitted by the Synod of York, Pa. In 1854 he represented the German Reformed Church of the U. S. at the ecclesiastical diet in Frankfurt, and in the Swiss pastoral conference at Basle. In 1862 he was appointed a lecturer at Andover Seminary, and in 1870 he was made professor of Apologetics and Symbolics in the Union Theological Seminary, New York; in 1872 was transferred to the chair of Hebrew, and in 1875 to that of Sacred Literature; the last-named office he filled actively until 1893, when

observatory of Milan (1862); became known by his remarkable discovery of the relation between the orbits of comets and meteors, and his observations on the planet Mars have brought him into prominence within more recent years. He has published *Astronomical Theory of Shooting Stars* (1867), and *The Precursors of Copernicus in Antiquity* (1873).

Schis'iophone, *n.* [Gr. *schisis*, clearing, and *phone*, (Elec.) An instrument for detecting flaws or other structural defects, as in iron rails. It consists of an automatic hammer and an induction balance.

Schisto- (*skisto-*). An initial compounding element derived from the Gr. *schistos*, cloven.

Schizæa (*ski-zé'ah*), *n.* (Bot.) A genus of ferns, order *Schizaceæ*, bearing the sporangia on one side of close distichous spikes, which are separate segments at the apex of the fronds. They are very curious plants, often with dichotomously branched, wiry-looking fronds; and are widely dispersed, occurring in North and South America, the West Indies, India, New Holland, the Pacific islands, and the Cape of Good Hope. *S. flabellum*, of Brazil, and some other species form very handsome fan-shaped fronds, with a fringe of the fertile appendages on the upper margin. The segments of these appendages are beautiful objects under a microscope. Another species, *S. pusilla*, inhabits the sandy pine-barrens of New Jersey, in very rare places, and is the only species in North America. It bears insignificant, grass-like fronds, the upstarting fertile spikes of sporangia, on delicate stems, being the most conspicuous part of the plant.

Fig. 3061.—SCHIZÆA FLABELLUM.

Schizo- (*skizo-*). An initial compounding element, derived from the Gr. *schizo*, to cleave or split.

Schleich'er, in Texas, a W. co.; area, 1,500 sq. m.; drained by the San Saba river. Unorganized. *Pop.* (1897) 220.

Schley, WINFIELD SCOTT, U. S. N., was born in Frederick co., Md., Oct. 9, 1839; graduated at the Naval Academy, and went into active service during the Civil War, and afterward was instructor at Annapolis for a term of years, with an interim of service on the Asiatic station. From 1876 to 1879 was on the Brazil station; in 1884 commanded the Greely Relief-ships, *Thetis*, *Bear*, and *Alert*, and brought back Greely and 6 others from Grinnell Land. He attained the rank of captain in 1888.

Schnas'se, in South Dakota, a N.W. co.; area, 1,580 sq. m. Grazing is the leading industry. Unorganized.

Scho'field, JOHN McALLISTER, U. S. A., was born in Chautauque co., N. Y., Sept. 29, 1831, graduated at West Point (1853); in April, 1861, entered the volunteer service as major of the 1st Missouri Volunteers, and was appointed chief of staff of General Lyon. He served throughout the war, being promoted major-general of volunteers (1862), and thereafter in command of various divisions in the field. In 1864 he commanded the 23d army corps, in Sherman's army, in Georgia; afterward he defeated Hood's army in Tennessee; in 1865 was sent with his corps to North Carolina; captured Wilmington, was present at the surrender of Johnston's army, and executed the details of the capitulation; commanded the military district of Virginia (1866-68); succeeded Stanton as secretary of war, June 2, 1868, holding that office until March 12, 1869, when he was appointed major-general U. S. A., and ordered to the Department of the Missouri. He commanded the Department of the Pacific (1870-76), and (1882-83), in the interim being commandant at West Point; was in command of the Department of the Missouri (1883), and of the Department of the Atlantic (1886). In 1888, as senior major-general, he became general-in-chief of the U. S. A. The grade of lieutenant-general having been specially revived by Congress, he was appointed to that rank by President Cleveland, Feb. 6, 1895; retired Sept. 28, 1895.

Schrein'er, OLIVE (CROWWRIGHT), writer, was born in South Africa, the daughter of a Lutheran clergyman. Her *Story of an African Farm* made her literary reputation. She married Mr. Crowwright in 1894, and in 1895 and 1896 was active in her opposition to the South African policy of Mr. Rhodes.

Schu'mann, CLARA JOSEPHINE, pianist, daughter of Frederick Wieck, was born in Leipzig, Sept. 13, 1819, made her debut as a pianist when 10 years old, became a superior interpreter of Chopin's music; visited England in 1856, in 1865, and frequently afterward, was principal teacher of piano at the Frankfurt Conservatory, and composed a number of piano-forte pieces. She was married (1840) to Robert Schumann, the composer, a union of rare congeniality and mutual inspiration. She survived her husband many years. Died May 20, 1896.

Schur'man, JACOB GOULD, educator, was born in Freetown, Prince Edward Island, May 22, 1854; was educated in Canada, England, Scotland, France, and Germany; became president of Cornell University in 1892.

Fig. 3060.—SCALE INSECTS ON THE ORANGE.

On leaf, *Mytilaspis gloverii*, natural size; a, scale of female, dorsal view; b, scale of male; c, scale of female, with ventral scale and eggs—enlarged.

scale (*Aspidiotus perniciosus*) which was probably introduced into the U. S. from Japan, first making its appearance in California. It now occurs nearly all over the country, infesting all fruit trees and a great many forest trees and ornamental shrubs. It lives upon all parts of the plant, limbs, leaves, and fruit, lying very close together, even overlapping as the plant becomes badly infested, presenting the general appearance of a grayish, slightly roughened, scurfy deposit. The San José scale was formerly supposed to differ from all other scales in the peculiar reddening effect which it produces around it on the skin of the fruit and upon tender twigs, and although this sometimes occurs with other scales, it is particularly characteristic of this insect and renders it easy to distinguish. The almost microscopic young scale might easily elude the most careful search, but the bright encircling ring makes it a conspicuous object. If the tree survives the attack, the infested wood eventually becomes knotty and irregular, partly from loss of sap, and partly, without doubt, from the poisoning of the sap as indicated by the discoloration. Young peach trees will ordinarily survive the scale only two or three years; pears are sometimes killed outright, but generally maintain a feeble, sickly existence for three or four years, making little or no growth.

All scale insects, being inconspicuous, are easily distributed from one region to another, chiefly by means of nursery stock, but the San José scale, from occurring on the fruit, is the most readily spread of all; the danger from it is now so thoroughly recognized by entomologists that they are urging the necessity of legislation to enforce active measures against it, and bills to that end have already been presented before the legislatures of New York and one or two other States, and the California State Board of Horticulture pro-

he was retired as professor emeritus. His last public appearance was at the Parliament of Religions in Chicago, in Sept., 1893. Dr. S. was chosen president of the American committee on Bible revision (1871), and upon the completion of the work (1875) he went to England to look after its publication; the same year he attended a conference of Old Catholics, Greeks, and Protestants in Bonn, the purpose of which was to promote Christian unity. Dr. S. wrote several works, mainly historical and exegetical, some of which have been translated into many languages, especially those of the foreign mission fields. Died Oct. 20, 1893.

Scharwen'ka, XAVER, pianist and composer, was born at Samter, East Prussia, Jan. 6, 1850. He was a pupil and teacher at Kullak's academy, and played in concerts at Berlin (1869), in England (1879), and later in the U. S. In 1891 he established a school of music in New York city. He has published a number of concertos, sonatas, songs, &c., and ranks as one of the leading piano-forte virtuosi in America.

Schenek (*skēnk*), ROBERT CUMMING, soldier and diplomat, was born in Franklin, Ohio, Oct. 4, 1809; graduated at Miami University; studied law, and practiced at Dayton, Ohio; was a member of Congress from 1843 to 1851; in 1851 was appointed minister to Brazil, and afterward filled other diplomatic missions to South America. In 1861 he was appointed a brigadier-general of volunteers; served actively until Dec., 1863, gaining the rank of major-general; resigned at that time, and resumed his seat in Congress, remaining until 1869, was minister to England (1871-76); returned to the U. S. and practiced law in Washington, D. C. Died March 23, 1890.

Schiaparelli, GIOVANNI VIRGINIO, astronomer, was born in Savignano, Italy, March 4, 1835; director of the

Schurz (*shoorts*), CARL, politician and journalist, was born in Liblar, near Cologne, Prussia, March 2, 1829; was educated at Bonn, but becoming actively involved in the insurrectionary movement in 1849, he left Germany and (1852) removed to the U. S., finally settling in Wisconsin (1859), where he practiced law, and became interested in the newly formed Republican party; was a stirring campaign speaker in 1860; was sent as U. S. minister to Spain in March, 1861, but resigned in December to enter the Federal army; in May, 1863, he was a major-general, and commanded a division at the second battle of Bull Run; afterward saw active service at Chancellorsville, Gettysburg, and Chattanooga. He was elected U. S. senator from Missouri in 1869. In 1877 he was appointed secretary of the interior; afterward edited the *New York Evening Post* (1881-83). He was a conspicuous opponent of Blaine in 1884; in 1896 he made many speeches in favor of the Republican nominees.

Schnyler, EUGENE, author and diplomatist, was born in Ithaca, N. Y., Feb. 25, 1840; educated at Yale and at Columbia Law School; appointed consul at Moscow (1867), and was thereafter constantly in the diplomatic service, chiefly in Russia and Turkey. He lectured in 1885, and wrote many books relative to these countries; was appointed consul-general at Cairo in 1889, and died there July 18, 1890.

Schnyler, in *Nebraska*, a city, cap. of Colfax co., 76 m. W. of Omaha; has large flour mills, sugar and syrup works, &c. *Pop.* (1897) 2,500.

Schwatka, FREDERICK, U. S. A., arctic explorer, was born in Galena, Ill., Sept. 29, 1849; graduated at West Point (1871); served on the frontier as lieutenant of cavalry till 1877, meanwhile taking a degree in medicine in New York, and being admitted to the bar in Nebraska. In 1878-80 he commanded the expedition to King William's Land; explored in Alaska in 1884 and in 1886; in Mexico (1889), and in Alaska again (1891); ended his life by suicide, Nov. 2, 1892.

Schwein, GEORG AUGUST, explorer and naturalist, was born in Riga, Russia, December 9, 1836; educated at Riga and Heidelberg; explored northern Africa to investigate the flora and fauna of that region; has written extended descriptions of his discoveries, and has sent valuable collections of specimens to Germany.

Schwein, EDMUND ALEXANDER DE, a Moravian bishop, son of Lewis D. de Schweinitz; was born at Bethlehem, Pa., March 20, 1825; educated at Bethlehem and at Berlin, Germany; was a prominent pastor in the Moravian Church, and as bishop (after 1870) was president of the Northern Conference of that Church in America. Died Dec. 18, 1887.

Schweinitz, LEWIS DAVID DE, botanist, was born in Bethlehem, Pa., Feb. 13, 1780; educated in Germany; became Moravian pastor at Salem, S. C.; devoted attention to botany, and discovered 1,400 new species of American plants, of which 1,200 are fungi; wrote catalogues and descriptions of the same in 1818 and 1832. Died Feb. 8, 1834.

Schwenkfelders, *n. pl.* (*Ch. Hist.*) A sect founded by Kaspar Schwenkfeld, in Silesia, in the 16th century, but now found chiefly in Pennsylvania, U. S., where there are about 1,000 members. They are strict in discipline, choose their ministers by lot, reject infant baptism, and the Roman Catholic, Lutheran, and Zwinglian teachings regarding the Eucharist.

Sciænidæ (*si-en'i-dê*), *n.* (*Ichth.*) A large and important family of bony marine food-fishes, the croakers, many of which reach a large size. They inhabit all warm seas, and number about 125 species, of which 25 belong to North American waters. All are carnivorous, and most of them make a peculiar noise, called variously croaking, grunting, drumming, or snoring. This sound, Jordan tells us, is supposed to be caused by forcing air from the air-bladder (unusually large and complicated in this family) into one of its lateral horns. The body in this family is compressed, more or less elongated, and covered with rather thin ctenoid scales, including the head. Mouth small or large, the teeth in one or more series; canines often present, but no molar or incisor teeth, nor any on the vomer, palatines, pterygoids, or tongue. Gills, 4, a slit behind the fourth; gill-rakers; branchiostegals, 7. Dorsal fin deeply notched or divided

Fig. 3062.—WEAƧFISH.

into 2 fins, the soft dorsal the longer and compressible into a groove; anal, with 1 or 2 spines; ventral, thoracic, 1, 5; pectoral, normal; caudal (tail), usually not forked. First among prominent American species is the fresh-water drum—the only one of the family not marine; it is a large fish (*Haploidenotus grunniens*), well known from the Great Lakes to Texas, but poor eating. *Pogonias* is a West Indian genus. *Sciæna*, the typical genus, contains some familiar and highly esteemed fishes, as the silver perch or yellowtail (*S. punctata*), and channel or red bass (*S. ocellata*) of the Atlantic Coast, and the roncadors of the Pacific Coast. The spots, valued in the Southern States, form the genus *Liostomus*; and in genus *Menticirrhus* are found the kingfish (*M. nebulosus*) and whittings of the Eastern coast, and the bagara (*M. undulatus*) of the West coast. Another large and valuable sciænid of California is the white sea-bass,

sea-trout, or corvina (*Atractoscion nobile*), which reaches a weight of 60 or 70 pounds of firm rich flesh. Here come in also the Eastern weakfishes, and other California corvinas and sea-trout in the genus *Cynoscion*; and other genera might be mentioned. On the whole, this is one of the most useful of the families of food-fishes.

Scintillometer, *n.* [*Lat. scintilla*, a spark.] A device attached to a telescope for determining the amount of scintillation of a star, by causing the image to describe a circle, and noting the regularity or irregularity, and varying color of its path.

Sciop'ticon, *n.* [*Gr. skia*, shade, and *optikos*, of seeing.] A term of magic lantern invented in America; the first to employ a two-wick paraffine lamp. Three, four, and five wicks have since been employed.

Scler, **Sclero**-. An initial compounding element, derived from the *Gr. sklêros*, hard.

Sclero'sis, *n.* [*Gr.*] (*Path.*) Induration of the cellular tissue.

Seo'bey, in *South Dakota*, a W. co.; area, 1,045 sq. m.; bounded S. by Big Cheyenne river and its North Fork. Grazing and coal mining are the chief industries. *Pop.* (1897) 148.

-scope. A terminal compounding element, derived from the *Gr. skopos*, watcher; used mainly in names of instruments of observation.

-scopy. A terminal compounding element, derived from the *Gr. skopia*, watching; used in names of sciences and studies that involve observation.

Scorch'er, *n.* (*Colloq.*) That which is hot enough to scorch; applied to the weather, &c.—A burning or withering invective.—Something capable of high speed, as a race-horse, or bicycle, or the rider that achieves it.

Scorch'ing, *p. n.* A roughing out of tools on the dry grindstone before they are hardened and tempered; so called on account of the heat produced.—Riding at a high speed, or racing, as by a bicyclist.

Scoresby, WILLIAM, arctic explorer, clergyman, and student of electric magnetism, was born near Whitby, England, in 1789. At 11 years old he began sailing in the Greenland seas with his father, who was captain of a whaler, and he finally succeeded his father, spending the time between voyages in studying at Edinburgh University. In May, 1806, he sailed farther north than anyone had sailed before, and after making important observations on electricity in the arctic regions, returned to influence Sir Joseph Banks, president of the Royal Society, to induce the government to send out an exploring expedition into the arctic seas—the first ever sent, starting in 1817. In 1820, after having made 17 voyages to Greenland, he published his observations in two volumes, called *History and Description of the Arctic Regions*; in 1822 he surveyed 400 miles on the east coast of Greenland, and, after one more trip, published another book, *The Journal of a Voyage* (1823), and then left the sea to study for the ministry; when nearly 40 he graduated, and afterward filled pastorates at Liverpool, Exeter, and Bradford, doing valuable philanthropic work, but not losing his interest in magnetism; many of the 60 papers which followed his name in the lists of the Royal Society are connected with this subject, and, in order to get additional facts by which to test his theories, he made voyages to America in 1844 and 1848, and went to Australia in 1856. The result of all this research was embodied in *Magnetical Investigations* (1852), and in a posthumous book, *Journal of a Voyage to Australia for Magnetical Research* (1859). In addition to this scientific writing, he published many religious works and papers, and a biography of his father. His own life has been recorded by his nephew, Dr. R. E. Scoresby-Jackson. Died in 1857.

Scoresby Land, (*Geog.*) A portion of eastern Greenland, named by Nansen in honor of William Scoresby.

Scot'land, in *South Dakota*, a city of Bon Homme co., 12 m. N.E. of Tyndall; has some manuf., and is a shipping point of a grain and stock-raising district. *Pop.* (1895) 1,048.

Scotland, **Church of**. (*Eccles. Hist.*) Nowhere did the Reformation make more rapid progress than in Scotland. Inasmuch, however, as the leader of the Reformation in Scotland was John Knox, the obedient disciple and ardent follower of Calvin, the father of Presbyterianism, the Reformation in Scotland was that of Calvin and not of Luther. The Reformers were persecuted by the Scottish government; there were burnings at the stake and fines and imprisonment, but the Reformers kept up the struggle, especially during the minority of Mary, the young queen of Scots, when the regent was her mother. With her had been associated, as co-regent, James Hamilton, second Earl of Arran, but he resigned in 1554. In the year 1559, the Reformers felt themselves strong enough to set the regent at defiance. A parliament met at Edinburgh on the 1st of Aug., 1560, in which the Reforming party had the complete ascendancy. Acts were passed by which the jurisdiction of the Pope was abolished, the mass was prescribed, and a Confession of Faith drawn up by Knox and his associates, and therefore strongly imbued with Calvinism, was ratified. The principal office-bearers of the church were declared to be ministers, elders, and deacons. Its chief governing, as well as legislative and judicial power, was entrusted to a General Assembly, which met yearly or half-yearly and was composed of the superintendents, ministers, and lay commissioners. Thus the Church of Scotland was constituted and established much as it is at this day. The bishops were subsequently restored for a time, and Cromwell prohibited the meetings of the General Assembly. At the Revolution of 1689, when William and Mary were called to the throne, Episcopacy was abolished, and at the end of

that year a General Assembly was held, the first which had been allowed to meet since the one which was dissolved by the order of Cromwell. Presbyterianism was re-established. With the exception of some years in the reign of William III., the Assembly has continued to meet annually since the Revolution, and to transact business when it was not in session by a commission named by itself for that purpose. Quarrels arose from time to time on the question of patronage—that is, the right of presentation to benefices—and there were small secessions early in the 18th century, but in 1843 there was a great split which led to the formation of "The Free Church of Scotland," which carried off about one-half the members of the Establishment and became a rival communion in most of the parishes. The desirableness of a union between the Established Church and the Free Church is constantly discussed, but the two bodies seem farther apart than ever.

Scott, THOMAS ALEXANDER, railroad manager, was born in London, Pa., Dec. 28, 1824; was connected with the Pennsylvania Railroad Co. from the beginning, and became vice-president, and finally president of the road. He was also president of the Union Pacific R. R. During the Civil War he was for a time assistant secretary of war, having charge of questions regarding transportation; for his services he received a colonel's commission. Died May 21, 1881.

Scott's Bluff, in *Nebraska*, a W. co.; area, 756 sq. m.; traversed by North Platte river. *Surface*, rolling; *soil*, a very fertile sandy loam. *Cap.* Gering. *Pop.* (1897) 2,121.

Scott'dale, in *Pennsylvania*, a post-borough of Westmoreland co., 17 m. S. of Greensburg; has iron foundries, rolling mill, gas and water-pipe works; in a bituminous coal field. Coal, coke, and iron are extensively shipped. *Pop.* (1897) 3,125.

Scottsborough, in *Alabama*, a post-village, cap. of Jackson co., 41 m. E. of Huntsville; in a cotton and grain-raising, and coal and iron mining district. *Pop.* (1897) 1,085.

Scran'ton, in *Mississippi*, a post-town, cap. of Jackson co., ½ m. from the Gulf of Mexico, and 40 m. S.W. of Mobile, Ala. Lumber is extensively shipped. *Pop.* (1897) 1,445.

Screven, in *Georgia*, an E. co., adjoining South Carolina; area, 786 sq. m.; bounded E. by Savannah river, S.W. by Ogeechee river, and intersected by Brier creek. *Surface*, nearly level; *soil*, sandy; extensive pine forests. *Cap.* Sylvania. *Pop.* (1897) 16,250.

Scrib'ner, CHARLES, publisher, was born in New York city, Feb. 21, 1821; founder of the house of Charles Scribner & Company, now Charles Scribner's Sons. Died August 26, 1871.

Scriptorium, *n.* A writing-room, especially a room in a monastery or abbey, set apart for writing or the copying of manuscripts, illuminating, &c.

Seud'der, HORACE ELISHA, author, was born at Boston, Mass., Oct. 16, 1838; educated at Williams College, and became a teacher; his first literary work was for juvenile readers; his later work is principally within the field of critical essays, his themes being literary and biographical. In 1890 he succeeded T. B. Aldrich as editor of the *Atlantic Monthly*.

Scur'ry, in *Texas*, a N.W. central co.; area, 900 sq. m.; intersected by Colorado river, and also drained by Neal's and Deep creeks. *Surface*, undulating; *soil*, fertile and well watered. *Cap.* Snyder. *Pop.* (1897) 1,626.

Search'-light, *n.* An electric arc-light of great candle-power, arranged with a parabolic projector to throw its beams so that the rays are almost wholly gathered in one direct line, forming a path of light that may be projected for miles. Search-lights were devised and originally used on war-vessels for detecting the approach of an enemy in the dark, and especially for discovering the night attacks of torpedo boats. Experiments made with them for this purpose indicate that they are only a partial protection against the stealing up of a torpedo boat, which may sometimes approach without discovery. They are used also by large ships as an aid to navigation at night, and by batteries designed for coast defence. By their aid, ships of a squadron can carry on night-signalling with flags, each vessel illuminating its own signals. They also serve for night-signalling at sea, conveying intelligence by flashes on the clouds to vessels below the horizon. Search-lights have also been used on land for exhibition and advertising purposes. One exhibited at Chicago, in 1893, had a 5-foot projector, polished with almost as much care as the object-glass of a telescope. Its beam was visible 85 miles away, and at a distance of 8 miles its light was sufficient for the reading of fine print. The construction of the arc-lamp used in a search-light is similar to the ordinary arc-light, but the mounting is peculiar. A short cylinder or drum is provided as a case, and mounted on trunnions like a cannon, with mechanism for training it toward every point of the compass, also for directing it at an upward or depressed angle. Some search-lights are arranged to be trained by hand, but the best are operated by an electric motor, which is arranged to rotate the whole apparatus at certain regular speeds, so as to sweep the whole horizon.

Searle, ARTHUR, astronomer, was born in London, Eng., Oct. 21, 1837; removed to the U. S. and graduated at Harvard (1856); was assistant professor of Astronomy there for 16 years, and in 1887 became full professor. He has written many papers for scientific journals in the U. S. and in Europe.

Sea'well, MOLLY ELLIOTT, author, was born in Virginia in 1859; has contributed stories and essays to current magazines, and has published several books, the latest being *The Sprightly Romance of Marzac* (1896).

Sec'ond Adventists. (*Eccles. Hist.*) A general name given to six slightly different Protestant sects in America, all characterized by the belief in the visible reappearance of Christ at some time in the future. They differ among themselves as to whether the return will be visible to the entire world, or the entire church, or to certain elect "first fruits" of the church. Originally the Adventists were followers of William Miller (1781-1849), and were called Millerites. Miller predicted the end of the world and the beginning of the millennium in October, 1843, and a great many people had such faith in his prophecy that they neglected to harvest their crops and spent the months preceding the appointed time in religious exercises in preparation for their ascension to heaven. On the failure of the prediction some of the followers of Miller lost their faith in the second advent, while others concluded that an error in calculation had been made. Since that time various other dates have been set, but in spite of mistakes and disappointments, the Adventists have increased from 50,000 in 1843 to over 60,000 in 1890, and over 70,000 in 1897. The denominations into which they are divided are as follows: (1) *The Evangelical Adventists*, a small sect which claims to be the original organization, and dates from 1845; they believe in a form of purgatory and in eternal punishment. (2) *The Seventh-day Adventists*, numbering nearly half of the total number, and also dating from 1845; their peculiarity is that they set no date for the future coming of Christ. (3) *The Church of God*, a small branch which seceded from the Seventh-day Adventists, in 1866. (4) *The Life and Advent Union*, a small organization dating from 1848, but not completed until 1864. It is reported as one of the two societies of Adventists having members in Great Britain. (5) *The Age-to-Come Adventists*, dating from 1851, and having members in Canada. (6) *The Advent Christians*, dating from 1861, and extending widely through this and other countries; numerically it is not quite so strong an organization as that of the Seventh-day Adventists, but it is far stronger than any of the other sects. The Adventists are all congregational in church government and hold evangelical views on general religious questions. They practice immersion and are very strict in their rules of life. Alcohol and tobacco are strongly discountenanced, and many amusements are forbidden.

Sedan', in *Kansas*, a post-village, cap. of Chantanooga co., 30 m. W. by S. of Independence. *Pop.* (1895) 1,085.

Sedg'wick, JOHN, U. S. A., was born in Cornwall, Conn., in 1813; graduated at West Point; served in the Mexican War; in August, 1861, was commissioned brigadier-general of volunteers, and assigned to the Army of the Potomac. After the battle of Antietam, was promoted major-general; fought bravely through the severest contests of the next two years; killed at the battle of Spotsylvania Court House, May 9, 1864. A monument to his memory was erected at West Point in 1868.

Sedgwick, in *Colorado*, extreme N.E. co., adjoining Nebraska; area, 650 sq. m.; intersected by South Platte river. *Surface*, hilly along river, level tableland; *soil*, fertile. *Cap.* Julesburg. *Pop.* (1897) 1,650.

Sedgwick, in *Kansas*, a S. co.; area, 1,008 sq. m.; intersected by Arkansas and Ninnesah rivers. *Surface*, nearly level prairie; *soil*, fertile. *Cap.* Wichita. *Pop.* (1895) 39,108.

See'ley, SIR JOHN ROBERT, historian, was born in London in 1834; graduated at Christ College, Cambridge; was professor of Latin in University College (1863), and of Modern History at Cambridge (1869); widely known for his work, *Ecce Homo* (1865); also published *Natural Religion* (1882). His writings since then have been mainly historical criticisms. He was knighted in 1894, and died Jan. 13, 1895.

See'lye, JULIUS HAWLEY, educator, was born in Bethel, Conn., Sept. 14, 1824; became professor of Mental and Moral Philosophy at Amherst College (1858), and after 1877 was president of the college for 12 years. From 1874 to 1877 he was a member of Congress. His high personal character served to raise the standard of education, of public opinion, and political action. Died May 12, 1895.

Se'guin, ÉDOUARD, physician, was born at Clamecy, France, Jan. 20, 1812; studied medicine, and made special study of the cause and philosophy of idiocy; founded the first school for idiot children at Paris (1839); emigrated to America after 1848, continued his special work, and became known as a specialist in nervous diseases. Died Oct. 28, 1880.

Seidl (*zid'l*), ANTON II., musical conductor, was born in Budapest, Hungary, May 6, 1850; educated at Leipzig, and at Bayreuth under Richter and Wagner; became conductor of the Leipzig Opera House, and also conducted Neumann's Nibelungen opera troupe (1882); removed to New York (1885), and became conductor at the New York German Opera House; in 1891 succeeded Theodore Thomas as conductor of the Philharmonic Society.

Seign'iorage, *n.* [O. Fr. *seigniorage*.] Something claimed as a prerogative by a sovereign or superior; specifically, an ancient royalty whereby the crown claimed a percentage on bullion brought to the mint to be coined; the profit derived from issuing coins at a rate above their bullion value; a charge made by the government for coining bullion.—Any royalty, share of profits, or proportion of proceeds of sales.

Seismology and Seismic Instruments. (*Physics*.) The study of earthquakes and their causes is a comparatively new science, and has received much attention in Italy, where the presence of Vesuvius has been a constant stimulus, but the Japanese appear to

have taken the lead in the study during recent years. Prof. Sekiyo, of Japan, has succeeded in reconstructing a model of the complex motion of an earth particle during an earthquake. John Milne, of London, who was for a number of years professor of mining and geology under the Japanese government, has been prominent in forwarding the study, having founded the Seismological Society of Japan in 1886, and printed a work on earthquakes, besides constructing an improved seismograph. The society named has issued considerable literature designed to throw new light on the science.

The instruments used for measuring or recording tremblings of the earth are known as seismographs, seismometers, and seismoscopes. Seismographs properly furnish a tracing which is a record of the number, succession, direction, amplitude, and duration of successive shocks. Seismometers measure the force of the shock, and are sometimes provided with devices for giving other details. Seismoscopes are designed simply to detect and note the fact of a tremor of the earth, usually with some indication of the time. Various seismic instruments are made which partake more or less of the characteristics of all three of the divisions above noted. One of the earliest and most simple forms was a bowl of treacle, or other viscous liquid, whose disturbance by an earthquake shock left a mark where the liquid had risen against the side of the bowl. The mark so made served to show the direction of movement, and, to some extent, its force. Mallet and Palmieri made seismoscopes on the same principle, using mercury in glass tubes. An early Chinese form of seismometer consisted of a large vessel having eight dragon-heads about its circumference. Within the mouth of each dragon was a ball, nicely balanced, and designed to fall out into the mouth of a bronze frog waiting below whenever an earthquake shock disturbed the apparatus with a movement in that direction. Another simple form consists of a set of tubes of varying length set upright on bases in a bed of hard sand, so that the severity of a shock is noted by the length of the shortest tube that falls, and the direction by the positions in which the fallen tubes lie in the sand. Galilei's seismograph, at the Meteorological Observatory at Velletri, Italy, employs a sensitive pendulum for visual observation, another pendulum for making a tracing on smoked paper, a weight and spring, with recording style, for noting vertical movement, a clock stopped by a falling cone to note the time and direction of the first shock, and a magnetic device for measuring the electrical disturbance, the whole being set on a marble base in a glass case. Gray and Milne, and Ewing have developed the best modern seismometers. All of these instruments use an improved form of pendulum to produce a steady point. If a common pendulum be used to make a tracing of a seismic disturbance, it is evident that its first movement will be correct, because of its inertia; but being once swung, it tends to keep up a regular swinging beat, and the balance of the record is confused with the movements caused by the shock combined with the natural swing. As a result it is impossible to judge accurately from a record so made. The steady-point pendulum overcomes this difficulty by an ingenious mechanism consisting of an inverted unstable pendulum acting with an ordinary stable pendulum to neutralize the natural swing. The most recent seismometers use three of these steady-point pendulums—one arranged to give east and west, another north and south, and a third up and down vibrations. An accurate record is thus obtained of all the movements, and the time and magnetic disturbance are registered by other devices. For recording exceedingly minute tremors special forms of instruments are used, more delicately constructed, and known as micro-seismometers or tromometers. The more violent earthquakes cannot be absolutely measured, as the vertical movement is so great as to constitute a distinct wave-motion, which is beyond the measuring ability of any instrument as yet constructed.

Seis'moscope, *n.* [Gr. *seismos*, an earthquake, and *scope*.] A simple form of earthquake-recorder; a device that indicates the occurrence and direction of an earthquake by the fall of a column, the movement of some suspended or balanced body, or the sway of liquids.

Selenotrop'ic, *a.* [Gr. *selēnē*, the moon, and *tropikos*, turning.] (*Bot.*) Turning toward the moon; a term applied to plants that appear to be influenced by moon-light.

Se'ligman, EDWIN ROBERT ANDERSON, economist, was born in New York, April 25, 1861; educated at Columbia College, and in European universities; became professor of Political Economy and Finance at Columbia College (1890); has published, *Railway Tariff and the Interstate Commerce Law* (1887); *Taxation of Corporations* (1890); *On the Shifting and Incidence of Taxation* (1892), &c.

Sel'ma, in *California*, a post-town of Fresno co., 15 m. S.E. of Fresno City; in a fertile farming and fruit-growing country, with raisin and canning interests. *Pop.* (1897) 1,450.

Sem'asphere, *n.* [Gr. *sēma*, sign, and *sphere*.] An electric signalling apparatus attached to a balloon.

Semat'ic, *a.* [Gr. *sēma* (gen. *sēmatos*), a sign.] Of the nature of a sign; giving warning; significant; especially, in animal coloration, distinguishing for purposes of warning or recognition.

Sem'brich, MARULLA, operatic vocalist, was born in Lemburg, Austria, Feb. 15, 1858; a popular and successful artist in Europe, who was heard in America during 1883-84, and received with enthusiasm in New York in such rôles as *Martha*, *Lucia*, *Constance*, &c.

Seminar', *n.* [Lat. *seminarium*, seed plot.] An assemblage of students pursuing studios under a special teacher, or taking some specific course in an institution.

Semmes, RAPHAEL, naval officer, was born in Charles co., Md., Sept. 27, 1809; resigned his commission in the U. S. navy (1861) to join the Confederate forces as a privateersman. His first exploits were with the steamer *Sunder*. In 1863 he took command of the *Alabama*, and captured and destroyed 62 American merchantmen. In 1865 he was arrested, by order of the secretary of the navy (Welles), but was released without trial. After the war he practiced law in Mobile, Ala. Died August 30, 1877.

Send'-off, *n.* The causing of a person or thing to go forth or start, especially with expressions of approval, good-will, &c.; as, the bride had a good *send-off*; the exhibition had a favorable *send-off*.

Sen'eca, in *Missouri*, a post-town of Newton co., 16 m. S.W. of Neosho; has lead and zinc mines, &c. *Pop.* (1897) 1,321.

Señorita (*sān-yor-rē'tā*), *n.* [Sp.] A young lady; a term like the English *Miss*.

Sensitom'eter, *n.* An instrument for measuring or determining the sensitiveness of a photographic film. Spurge's is of the pendulum type, the horizontal reciprocating motion given to the recording pencil being waved by appropriate mechanism in accordance with the sensitiveness of the plate tested. Warnerke's depends upon a comparative test, a number of squares of gelatin of varying transparency being exposed before the plate to be tested for a set time.

Sept, **Septi**-. An initial compounding element, derived from the Lat. *septem*, seven.

Septo-. An initial compounding element, derived from the Gr. *septos*, putrid.

Septo-. An initial compounding element, derived from the Lat. *septum*, partition.

Ser'iculture, *n.* (*Agric.*) The cultivation of silkworms lies at the basis of the silk industry; and as the insects are hardy, and proper food (mulberry leaves) for them can be supplied in all the warmer parts of the U. S., large expectations were indulged in the earlier years of the Republic that this would become a profitable household industry here. Experience has not justified these forecasts. Earnest efforts made in New England nearly a century ago were followed by occasional revivals of effort in the South and West, latest and most sincerely in California, to which the Department of Agriculture rendered large assistance; but all have proved unsuccessful. This is due not to any unsuitability in climate or food, but to the fact that the American people are unwilling and unable to devote the necessary time or attention to the care of the silkworms and the subsequent processes, in competition with the cheap labor and experience of the Chinese and Japanese, who are likely always to retain the foremost place in this industry.

Ser'igraph, *n.* [Lat. *sericum*, silk, and *graph*.] An instrument of American invention for testing the uniformity of raw silk.

Serim'eter, *n.* (*Mech.*) An instrument for testing the tensile strength of silk threads, and noting the elastic stretch and breaking point. It consists of an upright box in which the thread is stretched, the upper end being made fast to a bell-crank that controls a pointer on a quadrant scale. The bell-crank is held back by a spring, which is stronger than the thread to be tested, and the pull is given by clips below, one of the clips indicating on a vertical scale the elastic stretch, while the breaking strain is noted on the quadrant.

Sermonol'ogy, *n.* A methodical account of sermons or of their preparation; sermons taken collectively; as, the *sermonology* of the day.

Ser'romotor, *n.* [Lat. *serra*, a saw, and *motor*.] A small motor for operating the reversing-gear of a large marine engine; also, the motor and reversing-gear taken together.

Sesqui-. An initial compounding element, derived from the Lat. *sesqui*, one and a half. In chemistry it denotes that three atoms of one element have combined with two of another to form the compound; as, *sesquioxide* of iron, Fe_2O_3 . In many numerical words it denotes ratio in which the remainder is unity, as 5 to 4.

Set'-unt, *n.* A nut placed against another to hold it in place; a safety-nut.

Se'ton, ELIZABETH ANN, founder of the first community of Sisters of Charity in the U. S., was born in New York city, Aug. 28, 1774; was married (1794) to William Seton; after his death she joined the Catholic Church (1805); in 1809 founded the community and school at Emmetsburg, Md. Died Jan. 4, 1821.

Sev'en Won'ders of the World. See **WONDERS**.

Sev'en-thir'ties, *n. pl.* (U. S.) Government notes issued in 1861, 1864, and 1865, bearing interest at 7-30 per cent., and redeemable in three years.

Sevier', in *Utah*, a central co.; area, 1,872 sq. m.; drained by Sevier river; crossed by Wahsatch Mountains in the west; extensive sage plains; *soil*, fertile when irrigated. *Cap.* Richfield. *Pop.* (1895) 7,893.

Sew'all, ARTHUR, ship-builder, was born in Bath, Me., Nov. 25, 1835; succeeded his father in the business of ship-building; was also interested in the Bath Iron Works, and in 1893-94 was president of the Maine Central R. R. Co.; was prominent in Democratic politics, and was candidate for Vice-President on the ticket with William J. Bryan (1896).

Sew'ard, in *Nebraska*, a S.E. co.; area, 576 sq. m.; drained by Big Blue river and its branches. *Surface*, undulating, prairie and woodland; *soil*, fertile. *Cap.* Seward. *Pop.* (1897) 21,550.

Seward, in *Nebraska*, a post-village, cap. of Seward co., 25 m. N.W. of Lincoln; has flour mills, foundry, machine shops, and elevators. *Pop.* (1897) 3,100.

Sewell, WILLIAM JOYCE, soldier and politician, was born in Ireland in 1835; removed to the U. S. in early life; at the outbreak of the Civil War became captain of a company of New Jersey volunteers; served with distinction throughout the war, gaining the brevets of brigadier- and major-general; after the war became connected with the Pennsylvania R. R. Co.; was elected State senator in 1872, 1875, and 1878; was U. S. senator (1881-87), and re-elected (1895) for the full term of 6 years.

Sewerage, *n.* (*San. Engin.*) The disposal of the sewage in cities and towns constitutes one of the most important items of municipal management, having a direct bearing upon the health of residents, and being usually more or less under the control of boards of health and sanitary commissions. The systems that have been tried are: (1) removal in pails and tanks, which is generally unsatisfactory, laborious, and expensive; (2) defecating by mixture of dry fecal matter with dry earth and ashes, which lessens the labor of removal, but leaves all liquid sewage to flow on the surface or into cesspools; (3) pumping away through pipes by pneumatic suction, which has the advantage of also drawing away sewer-gas, but has failed of general adoption, owing to expense, &c.; (4) removal in pipes by gravitation and a flow of water. The last system is the one generally approved and adopted, the methods of application and arrangement being varied greatly, according to local conditions. In some cases the underground drains or sewers constructed to carry off the sewage from dwellings, &c., are designed to carry also the rain-water, and in others only a part of the rainfall is introduced into the sewers. At one time considerable prejudice existed against the use of a single set of pipes for carrying off the entire rainfall with the sewage, but later experience has shown that in large cities the rainfall, taking the wash of the streets, is almost as foul as the flow from the soil-pipes of dwellings, and that there was no good reason for separating them. It is now, therefore, the most common practice, in designing a system of sewerage, to calculate on carrying the entire rainfall of the district, as well as the waste-water and soil. The water-supply system of the territory, and the maximum daily use thereof, with its probable increase, must all be taken into consideration. The sewers should be constructed to carry away the maximum amount that is likely to be flooded into them in sudden rain-storms, which are usually the severest tests to which they are subjected. The flow of all sewers varies, however, with the hour of the day and the time of year. Five to seven o'clock in the morning is the time of greatest average flow, and the day flow very largely exceeds that of the night. Midsummer and midwinter are also periods of extreme flow, the former because people use more water for bathing and cooling, and the latter because they allow faucets to run to lessen danger of freezing. The grades of a sewer are of the utmost importance, and to secure the proper inclinations it is necessary to begin with a survey of the territory, ascertaining the correct elevation of all points, and laying out grades for all parts of the system or its probable extensions, so that each may have a sufficient inclination to carry the contents at a rate of flow not less than three miles an hour, and double that if practicable. In cases where it is impossible to secure a proper grade, as in a section of low land, the whole section must be laid out and made subservient to a pumping-plant for removing the sewage, as fast as it flows, to a higher level. The size and form of a sewer-pipe has much to do with the rate of flow. With circular pipes, seldom containing more than a few inches of water, the larger the diameter the slower is the flow. The rate of flow in large pipes can be hastened, however, by narrowing the cross-section at the lower side, so that the pipe is of egg-shaped section, with the smaller part downward. The rate of flow of a few inches of water in such a pipe is nearly double that in a pipe of circular section, hence it tends to flush itself that much better. Where pipes are laid with very little inclination frequent flushing should be provided for by automatic mechanism. It is sometimes very difficult for a sanitary engineer to decide on appropriate grades under the limitations laid upon him. His pipes must properly be laid so as to be below the cellar-floors of all the buildings in the district, and they must always descend in some direction, yet cannot be carried below the final point of discharge. As a consequence, he must commence at the higher points and work downward, always keeping above his final level, or, if that prove impossible, he must lay out a low sub-district for flow by pumping.

Two kinds of sewer-pipe are in general use, vitrified earthenware and cast-iron. These are serviceable for all sizes under 2 feet; above that it often becomes preferable to construct an arched brick sewer, lined with cement. If the sewer is of earthenware, it should be salt-glazed, with bell-joints, carefully fitted; if the pipe is iron, the joints should be calked and leaded; if brickwork is used, a non-absorbent brick should be chosen. Numerous vents are required in a sewer, to allow the escape of noxious gases. In closely populated districts the best place for these has been found to be through the soil-pipes in buildings to the roof. Man-holes, lamp-holes, and catch-basins must also be constructed at intervals. Man-holes are essential for getting in to make repairs and remove obstructions. Lamp-holes are useful for locating leaks and obstructions. They are commonly formed by placing a T in the pipe, and

extending the shaft upward to the street level, where it is capped over. Catch-basins are placed at street corners and low points where the street water is led into the sewer. They consist of rectangular basins, several feet in diameter, for retaining anything that may be swept from the street by a heavy shower of rain which is too bulky to be admitted to the sewer.

The most convenient method of disposing of the sewage of a city is usually to lead the sewer-pipes to empty into some stream of water. This is done in many cases, but the practice is often damaging to other interests, being objected to by residents farther down the stream, and being deadly to any fishing industry that may exist. As a result, it is frequently necessary to obtain rights over tracts of low land, and convey the sewage there, utilizing it as liquid manure to aid the growth of crops, or as a filtering-plant to purify the sewage, so that the water which eventually finds its way to running streams is wholesome. The purification of sewage has been worked out by chemists to the last degree; so thoroughly, in fact, that a system has been perfected for purifying the sewage water of a city, and returning it to the water-supply for use as drinking-water, in an absolutely pure, distilled condition. The objection to such a system, arising from unpleasant associations and fear of accidental contamination and resultant spread of disease, has prevented its adoption. Where the sewage is disposed of by flowing onto land, irrigating ditches are provided, with stops to direct the water up side ditches and retain it until it soaks into the soil. If the object is simply to use the land as a filter, a sandy soil is desirable, and various chemicals may be employed to assist the purification, as a layer of compound of magnetic oxide of iron with carbon, a yard of which is capable of purifying 500 gallons of sewage per day. Where it is necessary that liquid sewage should stand in open ditches or tanks, chemical precipitation is resorted to for the purpose of assisting the subsidence of the solid particles before decomposition takes place. Milk of lime is the most common agent employed, though almost all the earthy salts have been tried. After precipitation, the comparatively clarified fluid is allowed to run off, and the solid glutinous remainder, technically called sludge, is either buried, burned, or carried out to sea. For a description of the house-connections with sewers, see PLUMBING, SANITARY.

Sex, **Sexi**-. An initial compounding element, derived from the Lat. *sex*, six.

Sexual Selection, (*Biol.*) The phrase devised by Charles Darwin to express one of the means concerned in the development of animal forms, accounting for certain sexual differences in many species. "This form of selection," he stated in his *Origin of Species*, "depends not on a struggle for existence (see NATURAL SELECTION) in relation to other organic beings or to external conditions, but on a struggle between the individuals of one sex, generally the males, for the possession of the other sex. The result is not death to the unsuccessful competitor, but few or no offspring. . . . Sexual selection, by always allowing the victor to breed, might surely give indomitable courage, length to the spur and strength to the wing to strike in the spurred leg, in nearly the same manner as does the brutal cock-fighter, by the careful selection of his best cocks." It is thus something outside of, yet not wholly apart from, natural selection, concerning itself with the development of special colors, ornaments—as the extra plumes and special adornments of many male birds—weapons, or means of defence, possessed exclusively by the males, regarded as the result of a selection by the females among their suitors of these handsomest or best armed. This adornment is above and beyond, to some degree, the requirement of the species for successfully maintaining itself in its environment, and results from competition within its own ranks. "When," says Mr. Darwin, returning to the subject at greater length, in Part II. of his *Descent of Man*, "we behold two males fighting for the possession of the female, or several male birds displaying their gorgeous plumage and playing strange antics before an assembled body of females, we cannot doubt that, though led by instinct, they know what they are about." The theory supposes, first, that the winner is always chosen as her mate by the waiting female; second, that he is as good as the rest in respect to general fitness, as well as best in his peculiar sexual attractions—gay colors, crest, means of fighting, &c.—and, third, that these external sexual qualifications (which often are assumed only during the breeding season) are transmissible to offspring. So many difficulties have been presented to the acceptance of all these propositions that the theory is not now held to be of so much force as Mr. Darwin thought it, but is relegated to a somewhat lower place, as one of the phases of natural selection.

Seyffarth, GUSTAVUS, archaeologist and Egyptologist, was born in Uebigau, Saxony, July 13, 1796; studied with Champollion, the French Egyptologist; claimed to have been the first interpreter of the Rosetta Stone. Died Nov. 17, 1885.

Seymour, in *Iowa*, a post-town of Wayne co., 15 m. W. of Centerville; has coal mines, and ships live stock and grain. *Pop.* (1895) 1,537.

Seymour, in *Texas*, a post-town, cap. of Baylor co., 55 m. S. W. of Wichita Falls. *Pop.* (1897) 1,330.

Shadowgraph, *n.* A skiagraph or radiograph. See illustration at ROENTGEN RAYS.

Shaler, NATHANIEL SOUTHGATE, geologist, was born in Newport, Ky., Feb. 22, 1841; a graduate of Lawrence Scientific School at Harvard; was subsequently instructor there, and connected with the Museum of Compara-

tive Zoölogy; in 1887 was appointed professor of Geology at Harvard; and in 1895 was chosen president of the Geological Society of America. His latest books are: *Nature and Man in North America* (1892); *Sea and Land* (1894); and *American Highways* (1896).

Shannon, in *South Dakota*, a S.W. co.; area, 1,080 sq. m. Unorganized.

Shaper, or **Shaping-machine**, *n.* (*Mech.*) A small form of planing-machine for working in metal, having the cutting tool customarily mounted in a reciprocating tool-rest driven by a crank with a short stroke and a quick return. It is so named because much used in shaping odd forms and parts of machines of irregular outline. The lathe proper cuts only circles, cones, and spirals; the planer proper cuts only in straight lines; but the shaper can be made to cut U-forms, S-curves, and other irregular figures. It is usually driven by stepped pulleys, and has an adjustable table or tables, to which the work is clamped.

Sharkey, in *Mississippi*, a W. co.; area, 425 sq. m.; drained by Big Sunflower river and Deer creek. *Surface*, nearly level; *soil*, fertile. *Cap.* Rolling Fork. *Pop.* (1897) 9,265.

Shaw, ALBERT, journalist, was born in Ohio, July 23, 1857; in 1891 became editor of the American edition of the *Review of Reviews*.

Shaw, HENRY WHEELER, humorist, better known as JOSH BILLINGS, was born in Lanesboro, Mass., April 21, 1818; published numerous rambling newspaper articles, in exaggerated phonetic spelling; also published a travesty on the *Old Farmer's Almanac*, which he called *Josh Billings's Farmer's Almanac*. In 1863 he began to lecture, in his peculiar style, with equal success, his observations being always droll and sometimes witty. Died Oct. 4, 1885.

Shawnee, in *Ohio*, a post-village of Perry co., 43 m. S. by E. of Newark. *Pop.* (1890) 3,266.

Shawnee, in *Oklahoma*, a post-village of Pottawatomie co., 33 m. from Noble. *Pop.* (1897) 3,700.

Shays' Rebel, (*Am. Hist.*) The poverty and exhaustion of the country following the Revolutionary War, making the necessary State and Federal taxes a grievous burden, caused great discontent and public threats of secession in various parts of the new Union. A combination of circumstances made this discontent especially great and outspoken in western Massachusetts; and toward the end of 1786 an uprising took place there, under the leadership of Daniel Shays (born 1747), who had been an officer in the Continental army. Worcester was seized, and the higher courts expelled from the city; operations were extended elsewhere, and an attempt made to seize the Federal arsenal, but this was successfully resisted without bloodshed. Meanwhile Governor Bowdoin, of Massachusetts, had summoned a large militia force commanded by General Lincoln, which marched against the insurgents in and west of the Connecticut Valley, speedily dispersing them. Several of the leaders were arrested, tried, and condemned to death, but public opinion sanctioned amnesty, and none were executed. Shays moved to New York State, and died there in 1825.

Sheathbill, *n.* (*Ornith.*) A remarkable bird (*Chionis minor*) of Kerguelen's and neighboring islands, regarded as most nearly allied to the plovers. It is white, about the size of a pigeon, with black bill and yellow feet. The bird has the behavior and flight of a pigeon, and is remarkably fearless and trustful, coming almost within reach of any whalers or other visitors who land upon its lonely domain. The remarkable feature of the bird is its bill, which bears upon the top and around its base a saddle-shaped excrescence or sheath, continued backward into a sort of carunculated hood covering the face. Its food is green seaweed, small animals found on the beach, and sea-birds' eggs. An allied species inhabits the Crozets.

Fig. 3063.—WHITE SHEATHBILL.

Shebang, *n.* (*Slang, U. S.*) A gambling-house, saloon or store, as a loafing-place or shelter; by extension, any inferior house; and by further extension, the house and its contents; hence, the whole of any concern or business.

Sheffield, in *Alabama*, a city of Colbert co., 2 m. from Tusculumbia. *Industries*. Coal and iron mining; iron furnace; brick, lumber, and other manufactures. *Pop.* (1897) 3,150.

Shelby, in *Michigan*, a post-village of Oceana co., 31 m. N. by W. of Muskegon. Ships peaches, apples, and small fruits. *Pop.* (1894) 966.

Sheldon, in *Iowa*, a post-town of O'Brien co., 58 m. N.N.E. of Sioux City; has flour mills, and is surrounded by a rich agricultural and stock region. *Pop.* (1895) 2,416.

Shenandoah, in *Iowa*, a post-town of Page co., 18 m. S. by W. of Red Oak; has foundry and machine shop, carriage shops, canning factory, and railroad repair shops. The Shenandoah nurseries are the largest in the West, having over 200 acres in trees and plants. *Pop.* (1895) 3,134.

Shenandoah, in *Pennsylvania*, a post-borough of Schuylkill co., 12 m. N. of Pottsville. Some of the largest collieries of the Schuylkill anthracite region are here, and coal is extensively shipped. *Pop.* (1897) 17,250.

Shep'ard, ELLIOT FITCH, lawyer and journalist, was born in Jamestown, N. Y., July 25, 1833; in 1861 enlisted the 51st Regiment of N. Y. infantry, known as the "Shepard Rifles;" was attorney for the N. Y. Central R. R. Co., and the first president of the New York State Bar Association. In 1888 he purchased a controlling interest in the *New York Mail and Express*. Died Mar. 24, 1893.

Sher'idan, in *Indiana*, a post-town of Hamilton co., 28 m. N.W. of Indianapolis. *Pop.* (1890) 1,134.

Sheridan, in *Kansas*, a N. W. co.; area, 900 sq. m.; drained by the Saline river, and the North and the South Forks of Solomon river. *Surface*, nearly level prairie, suitable for grazing and agriculture. *Cap.* Hoxie. *Pop.* (1895) 2,673.

Sheridan, in *Nebraska*, a N.W. co.; area, 2,180 sq. m.; drained by the Niobrara river. *Surface*, diversified; mostly level, or gently rolling; well watered and timbered. *Products*. Wheat, corn, oats, barley, vegetables; live stock. *Cap.* Rushville. *Pop.* (1890) 8,687.

Sheridan, in *Wyoming*, a N. co.; area, 2,775 sq. m.; drained by Tongue river, Clear creek, and numerous other creeks. *Surface*, about half mountainous, rest hilly and undulating; soil, very fertile. *Mts.* Lead, gold, silver, tin, and quicksilver. Pine timber abundant. *Cap.* Sheridan. *Pop.* (1897) 4,000.

Sher'man, FRANK DEMISTER, poet, was born in Peekskill, N. Y., May 6, 1860; educated at Columbia and Harvard; became a fellow in Columbia (1887), and later instructor in the Columbia School of Architecture. He is a frequent contributor to current magazines, and has published several volumes of short poems in delicate lyrical styles of verse.

Sherman, JOHN, statesman, was born May 10, 1823, in Lancaster, O.; studied law and practiced at Mansfield, O.; was a member of Congress from 1855 to 1861, when he was elected to the U. S. Senate; from that date was a senator by re-election, except for the period of 1877-81, when he was secretary of the treasury, and in this office was influential in securing a resumption of specie payments. He was prominently before the people as a candidate for nomination to the Presidency in 1880 and again in 1888. In 1895 he published *Recollections of Forty Years in House, Senate, and Cabinet*; in March, 1897, he was appointed secretary of state by President McKinley.

Sherman, in *Oregon*, a N. co.; area, 510 sq. m.; bounded E. by John Day river, N. by Columbia river, and W. by Des Chutes river. *Cap.* Moro. *Pop.* (1897) 3,000.

Shick'shinny, in *Pennsylvania*, a post-borough of Luzerne co., 15 m. W. by S. of Wilkesbarre; a mining town. *Pop.* (1897) 1,664.

Shil'aber, BENJAMIN PENHALL, humorist, was born in Portsmouth, N. H., July 12, 1814; was editor of various papers from 1847 to 1856; is best known by his pen-name of MRS. PARTINGTON, and the series of character sketches that were written under the title of *Life and Sayings of Mrs. Partington, Ike and His Friends*, &c. Died Nov. 25, 1890.

Shin'shiu, *n.* [Jap. "True Doctrine."] The name of a powerful sect of Japanese Buddhists, having their headquarters in the great West Hongwanji temple at Kyoto, the center of Japanese Buddhism. The founder of the sect was a man of good family, Shinran Shonin (1173-1262 A. D.), who studied as a lad in one of the seminaries of the magnificent temples of Hieizan, in Kyoto. The sect finds salvation in the "extinction of passion," a doctrine at once the cause and effect of salvation, which salvation is called Nirvana. The doctrine of "help from another" is also taught, and Amita, or "the boundless" Buddha, is relied on for the completion of merits and a rebirth into Paradise. There is less difference between laymen and priests in this sect than in any other, the latter being allowed to marry and to eat flesh and fish.

Shin'to, *n.* [Also called Kami-no-Michi, meaning "The Way of the Gods."] The indigenous cult of the Japanese, though it can hardly be called a religion. It has no ethical nor doctrinal code, no idol worship, no priests nor priesthood, no teachings concerning a future state. It consists entirely of a deification of heroes, emperors and great men, the divine ancestors of the Mikado and his people, together with the worship of certain objects and forces in nature. The divine ancestors, the spirits which inhabit heaven or still reside in temples and wayside shrines, controlling the affairs of mortals, are known as "kami." The word is usually translated "deity" or "god," but our language has no proper equivalent. Kami are only superior beings. It is doubtful if immortality is one of their attributes. Some of them, we are told, die or disappear. They are by no means always good or virtuous, but they possess many human characteristics. The principal divinity is the sun-goddess Amaterasu, from whom the Mikado is held to be descended. When Buddhism arrived from the West in the sixth century, it swallowed Shinto entire, adopting wholesale the Shinto pantheon, but substituting for the simple form of worship a gorgeous ritual and magnificent temples. When the Shogunate was put down and the Mikado restored to power in 1868, efforts were made to restore Shinto to its original simplicity, and it became the only state religion. Buddhist temples were stripped, "purified," and handed over to Shinto keeping. The revived religion, however, proved too feeble to supplant Buddhism and quickly lost ground. Shinto temples are quite destitute of ecclesiastical paraphernalia. A metal mirror generally stands on the altar, but even this is a Buddhist innovation. The spirit of the enshrined deity (if so he can be called) is supposed to be in a case, and exposed to view

on the day of his annual festival only. The worship consists in washing the face in a font, striking a bell, throwing a few cash into the money-box, and praying silently for a few seconds. Nevertheless, to perform these simple rites long pilgrimages are often taken to famous shrines and the summits of sacred mountains. The fact is that Shintoism is principally an engine of government.

Ship-mon'ey, *n.* (*Eng. Hist.*) An impost levied in the early part of the 11th century on maritime towns and counties for providing and equipping a fleet for the protection of the coast. An attempt made by Charles I. to revive and enforce this imposition, which had fallen into disuse, was resisted by John Hampden, with others, and Hampden was prosecuted and condemned, though four of the judges dissented. There were rebellious demonstrations among the people, and in 1640 S. was declared by Parliament to be illegal, and Hampden's sentence was annulled.

Shi'ras, GEORGE, jurist, was born in Pittsburg, Pa., Jan. 26, 1832; educated at Yale and Yale Law School; practiced law in Pittsburg, and was concerned in many important cases; was a Presidential elector in 1888; in 1892 was appointed associate-justice of the U. S. Supreme Court.

Shik'way, or **Skaguay** (*skag'wā*). A ship-landing and miners' town on Chilkat Inlet, at the head of Lynn Canal, Alaska, at the entrance to White Pass. It came into sudden existence in 1897, when White Pass began to be used by travellers to the Yukon gold fields (see YUKON, SECTION II.); and takes its name, usually corrupted to Skagway or Skaguay, from the Indian name of the small stream flowing down the cañon and emptying into the sea at this point. See also WHITE PASS.

Shod'dy, *n.* (*Man.*) The name technically given to the fiber of shredded waste woollen or worsted stuff, rags, &c., suitable for conversion into coarse cloths, blankets, carpetings, &c. Woollen rags, no matter how old and worn, are a valuable commodity to the manufacturer. They are sorted into two special kinds—the rags of worsted goods and the rags of woollen goods, the former being made of *combing*, or long-staple wools, and the latter of *carding*, or short-staple wools. The former are those properly known as *shoddy*-rags, and the latter are called *mungo*. Both are treated in the same way; they are put into a machine called a willow-machine, in which a cylinder, covered with sharp hooks, is revolving, and the rags are so torn by the hooks that in a short time all traces of spinning and weaving are removed, and the material is again reduced to wool capable of being reworked. It was formerly used as a means of adulteration and cheapening woollen cloths; but it is now found of greater advantage in making a class of light cloths adapted for mild climates and other purposes. The name is also applied to the cloth or fabric made from the fiber.

Shoe'bill, *n.* (*Ornith.*) A remarkable, heron-like wading-bird (*Baleniceps rex*) of the Soudan, having an enormous, duck-like bill, ending in a strong hook upon the upper mandible. The general color is dusky gray, with the bill yellow, and the legs and feet blackish. They spend their time in the water of the great marshes about the sources of the Nile, in pairs or small flocks, but if disturbed will rise high in the air and alight upon tall trees. They feed on fish and reptiles, especially water-snakes, and also on floating carrion. They nest in the reeds, close by the water's edge.

Shoemak'ing, *n.* The manufacture of shoes by the factory system, with the aid of machines, has almost entirely superseded the hand-made article. For many years hand-sewed shoes held their own, owing to better sewing, which added to the wearing qualities of the shoes, but since the Goodyear method came in the similarity to hand work has greatly diminished the demand for hand-sewed shoes. The processes incident to the manufacture of a shoe are the sorting of the leather, cutting out of parts with dies, crimping of uppers, stitching together of uppers and linings, insertion of button-holes or eyelets, rolling and channelling of soles, beating out and preparing the welt, lasting, sewing, nailing on of heels, trimming, burnishing, and finishing. The most important of these operations are the lasting (see LASTING-MACHINE, SECTION II.), and the sewing of the vamp or upper to the sole. The first successful shoe-sewing machine was that invented by Gordon McKay, having a device for operating from the inside of the shoe in concert with the needle from the outside. The McKay Sewing Machine Association obtained a monopoly of this principle for many years, and leased its machines on royalties of from $\frac{1}{2}$ to 3 cents a pair, reaping enormous profits until the expiration of the primary patents in 1881. The Goodyear-McKay machine was an improvement on this, being adapted to the sewing of welted shoes. The Goodyear system involves a double operation—an inseamer sewing the welts, and an outsole-stitcher stitching together the soles and welts. The outsole mechanism includes a curved awl, which feeds the shoe along, a needle that does the sewing, and a looper and "thread-finger" to do the locking, together with a take-up device for insuring the tension of the thread, which must be uniform to insure good results. Sewing so done is similar to hand work, and equally durable. The cutting out of the parts that go to make a shoe is done largely by means of dies, mounted in machines. Special machines are made for forming some of the parts, as the rands and welts. The sole-pieces and lifts are sorted as to quality by hand, but as to thickness by the electrical sole-sorter, which separates them into grades, varying not more than one-thousandth of an inch in thickness. The stitching of

uppers and linings is accomplished on sewing-machines very similar to the standard household type, and the button-holes are made with button-holing attachments. Eyelets are clamped in with machines. Soles are wet and partly dried, and then rolled to give them pliability and shape. The channelling-machine cuts a flap around the edge of the sole, and an inside channel to make a space for the threads used in sewing. The uppers are then brought to the lasting-machine, and the insole and outsole tacked on, the stiffening or shank being also inserted, after which the last is removed, and as soon as the flap has been cemented over the channel the shoe goes to the sewer. The heel lifts are then nailed on, and the shoe is put on a last, and the sole and stiffening are hammered to secure proper shape. The heel is shaped on a trimmer, being clamped and subjected to the action of a trimming knife. Burnishing follows, usually with hot polishing instruments, after which the shoe is ready for any finishing operations in the way of decoration, stamping of number or maker, &c. Other methods of fastening the sole, which are not so much employed as formerly, are pegging and wire-screwing. Pegging is done with a machine that takes the pegs from a wooden strip. This strip is of the same width as the required length of the pegs, and is sharpened on one edge, so that the pegs can be formed by splitting them off as the strip is introduced into the machine. The wire-screwing machine connects the soles by means of bits of screw-threaded wire, cut from a coil. Other machines sometimes used in shoe manufacture are crimping appliances for moulding uppers or vamps, vamp-folding machines, seam-rubbers, peg-cutting, and nail-rasping machines, skiving machines, &c. A shoe commonly passes through the hands of six to ten workmen in the process of making. Boots require more hand work, as the machines are not so adaptable to their construction. India-rubber shoes are made from soft vulcanized rubber on a canvas base.

Sho'gun, *n.* [Jap. *sho*, to lead; *gun*, army.] See JAPAN. **Shoshone'**, in *Idaho*, a post-village, cap. of Lincoln co., located on the Union Pacific R.R., 145 m. S.E. of Boise City; has large railroad car shops and other industries. *Pop.* (1897) 1,220.

Shoshonean Family, *Indian*. (*Anthrop.*) The most important linguistic family of Indians of the interior basin of the Western United States. Within historic times Shoshonean tribes dwelt somewhat east of the Rocky Mountains in Wyoming and in southern Colorado, and overran the western central part of Texas. Northward and westward this family spread over the whole of the Great Basin, including both Rocky Mountains and Sierra Nevada, north to central Oregon, and still farther along the Rocky Mountains, covering an area as large as that of the Siouan family (*q. v.*), by which it was being steadily crowded westward. The principal tribes, related by language in this group, are the Bannock and Shoshoni in Idaho; Comanche, formerly in Texas and eastern New Mexico, now in the Indian Territory; Pai-Ute, valley of the Rio Colorado; Paviotso, western Nevada and southern Oregon; To-bikhar, southern California (missions); Tnsayan, inhabiting the Moki towns; and the Uta, or Ute, which occupied the mountains of Colorado and Utah, and are now gathered on reservations there. About 16,250 members of this family survive.

Shoshong'. See KHAMA.

Shovel-board, **Shove'-board**, or **Shuffle-board**, *n.* A game in which counters, disks, or pieces of money are shoved over a smooth surface on which nine squares are marked off, the object being to send the pieces among the partitions, where they count according to the numbers on which they rest.

Shreve, in *Ohio*, a post-village of Wayne co., 9 m. S.S.W. of Wooster. *Pop.* (1897) 1,180.

Shuma'gin Islands. (*Geog.*) A small cluster of islands discovered by Lieutenant Waxel (1741) in Lat. 55° N., Lon. 160° W., south of the Alaskan peninsula, with the Unga straits separating them from the mainland. They were named for one of Waxel's sailors, who was buried there. The larger islands of the group are Unga, Nagai, Popoff, Karovin, Big and Little Konushii, and Simeonoff. The small town of Unga, on the island of Unga, is the only settlement. The total area of the islands is about 600 square miles; they are mountainous and nearly barren, but they have many good salmon streams; there are cod banks near by, and the indented coasts offer good harbors. Lignite has been discovered on Unga.

Siberia, Railway Progress in. The natural features and resources of Siberia are outlined under RUSSIA, in SECTION I. It remains here to speak of the remarkable development in transportation and commerce there, due to the recent building of the Trans-Siberian Railway. That remote region—misunderstood by most persons, whose idea of it is that it is everywhere a savage wilderness, inhabited only by barbarous nomads, with here and there a colony of wretched convicts and their unhappy guards—has, at the latest estimates, about 5,000,000 inhabitants, mainly distributed along the valleys of the great rivers, where several cities exist that have a more modern character than many of the old towns of Europe. The imports of these cities from Europe amount to not less than 300,000 tons of merchandise annually, a large part of which is distributed through the remoter regions by means of some 125 steamboats navigating the lakes and rivers, and by trains of wagons and sledges drawn by horses and camels, or by caravans of pack animals. A similar quantity of goods, largely derived from China and Tibet, are gathered at the principal centers and shipped to Europe in return.

Railway building in Russian Asia has been advanced with much energy of late, for military as well as commercial reasons. The interests of the empire on the Pacific coast needed strengthening against the rising power of Japan, and the uncertain outcome of China's development under European and American influences. The competition of Russia with England for predominating influence, if not actual possession, in Central Asia, and the reasonable protection and development of what is already hers there, required railway connection with Europe. One such line across the steppes of Turkestan passes from the Caspian Sea through Merv and Bokhara to Samarcand (890 miles), and will probably be continued to Tashkend. This was built by the government, and is known as the Transcaspian line. The Trans-Siberian line, designed ultimately to extend unbrokenly from Moscow to the Pacific coast of Asia, is now completed so far as to furnish a connected route of steam-travel, partly by rail and partly by river-steamboat, from Europe to Vladivostok, excepting a link east of Lake Baikal, and is rapidly proceeding to completion. It has been built and will be completed wholly by the Imperial government as a strategic measure, but is expected, of course, to repay its cost by the development of civilization and commerce along its route. It is of the standard Russian gauge (4 ft. 10½ in.), most solidly built as to road-bed, provided everywhere, as fast as it proceeds, with culverts and short bridges of solid masonry and long bridges of steel; has steel rails and the most modern switches and appliances; and the stations, even at the remotest termini, are usually of stone, and always substantial and comfortable. No temporary makeshifts were employed to facilitate rapid progress, such as wooden trestle-bridges and imperfect road-bed, as in Western American railroads, to be replaced later by more durable structures, but everything was made complete as the road advanced, even to laying out flower-beds around the stations. One means of rapid progress in construction, however, was the laying down of a temporary track in advance on the frozen ground and across the ice of rivers, great and small; this was done sometimes 200 or 300 miles ahead of proper construction, and by this means material was distributed so far ahead that permanent construction was easy during the succeeding summer, besides the facilitating of traffic. A large amount of American machinery, especially locomotives (wood-burning), has been made use of; and American methods were largely copied in erecting the road through conditions essentially similar to those of the Great Plains and Rocky Mountain regions. This road connects with the European system at Chelyabinsk, in the Ural Mountains—a low, wooded range presenting no engineering difficulties. From here an older line extends northward to the mining region about Ekaterinburg, which is connected across the Urals with the head of navigation on the Volga at Perm, in Russia; and also by a line eastward to the capital city Timmen (*q. v.*), and with Tobolsk, an old and large city on the Irtysh. This line has been built for several years. At Chelyabinsk are extensive workshops, railway depots, and offices. Thence the transcontinental line strikes due east, crossing the Ishim at Petropavlovsk, 600 miles to Omsk, on the Irtysh. Thence, ascending the valley of the Om river to Kainak, and passing over the imperceptible divide separating the Irtysh drainage from that of the Obi, the latter river is reached at Kolival, whence branches are to be built southward to Barnaul, Kuznesk, and Birs, on the Turkestan frontier, whence a large trade will be derived. Crossing the Obi on a great bridge, which is one of the greatest engineering difficulties of the route, the line turns northward down the valley to Tomsk, about 500 miles east of Omsk. All of this distance is level prairie land, with scattered patches of forest, chiefly birch, and looks almost lifeless, although this region is really the most populous part of Siberia. Tomsk is a large, modern, growing, active, and wealthy city, commanding the commerce of the valley of the Obi, the largest of the great Siberian rivers. Here the line turns due east again, and crosses the steppes nearly 400 miles, through Marinsk, on the Chulyum river, to Krasnoyarsk, a large modern city on the west bank of the Yenisei river. Thence the course of the railroad is east to Udinsk, and thence southeast to Irkutsk, the capital of Siberia, on the Angara river, 670 miles east of Krasnoyarsk. This region consists of a succession of river-valleys draining into the Yenisei, and divided by low ridges. The forests here are extensive and valuable, and it is expected that the opening of the country to settlement and trade will cause it to become one of the most populous and productive parts of all Siberia. The lowlands are very fertile, and well adapted to wheat and all the agriculture that accompanies wheat-growing. Irkutsk (*q. v.*) is the largest city of Siberia, is situated on the Angara river, only a few miles from its outflow from Lake Baikal (*q. v.*), and has a population of about 50,000. It is the official and military headquarters of Asiatic Russia, and the terminus of the western division of the transcontinental line, which was completed thus far early in 1898, and will rest at this southern shore of Lake Baikal for the present. A line of steamers on this great lake carries passengers and freight in summer, while lines of mail-coaches and caravans of freight-sledges in winter perform the same service on the ice and snow of the great highway. This road and the course of the proposed railway leaves the lake at its southeast end near the mouth of the Selenga river, ascends that valley to Werkne Udinsk, where it breaks through the Altai range (the continental watershed between the Arctic

and Pacific slopes), and thence strikes east over forested highlands to Chita, 600 miles from Lake Baikal, or nearly 700 miles from Irkutsk. Chita is a place of importance, and the capital of the Trans-Baikal provinces, having substantial and handsome official buildings, and a peculiarly cosmopolitan collection of merchants. It is at the head of navigation of the Shilka, a tributary of the Amour, and here the Trans-Baikal division of the railway will terminate for the present, connecting with steamboats. The Amour river (*q. v.*) is navigable for nearly 2,000 miles from its mouth, and from June to October forms the great summer route of travel, while from December till April its frozen surface makes the highway for sledge-travel. In the intervening periods between these seasons all through travel nearly ceases, as there are no good roads along the banks. The distance down the river from Chita to Stretensk, the next important town, is 400 miles, and thence it is 600 miles, passing Albazin and Blagoveshensk (the latter the capital of Amour province) to Khabarovka (*q. v.*, SECTION II.), at the mouth of the Ussuri river, where the transcontinental line leaves the Amour and turns southward to the coast. This city is the terminus of the railway just completed, which extends to the sea at Vladivostok, a distance, by rail, of about 500 miles. This was one of the earliest portions built, all the material having been sent by sea to Vladivostok, and construction proceeding inland, first to the Imam river, the head of steamboat navigation on the Ussuri, and later down the right bank of that stream to Khabarovka. This eastern terminal link, however, will not be a part of the through transcontinental route, since Russia has arranged with China for right of way through Manchuria. As at present planned, the Manchurian line will branch southward from the old route to Nestschinsk, 100 miles below Chita, and take an undetermined southeast course to some harbor on the Korean coast, or on the Gulf of Pi Chi Li.

Sibley, HENRY HASTINGS, was born in Detroit, Mich., Feb. 20, 1811; studied law, but later became a purchasing agent for John Jacob Astor's fur company, in which he acquired an interest in 1834. From 1849 to 1853 he was delegate in Congress from the Territory of Minnesota; and upon the admission of Minnesota as a State (1858), he was elected the first governor. During the Sioux Indian war (1862) he commanded the expedition against the Indians, being commissioned brigadier-general, and brevetted major-general. For the last 20 years of his life he resided in St. Paul, retired from official pursuits, but actively interested in educational and other local projects. Died Feb. 18, 1891.

Sibley, HENRY HOPKINS, soldier, born in Louisiana, May 25, 1816; graduated at West Point (1838); served in Florida and in Mexico; took part in several expeditions to Utah, and against the Navajos; entered the Confederate army (1861), gaining the rank of brigadier-general. From 1869 to 1873, served as brigadier-general under the Khedive of Egypt. Died Aug. 23, 1886.

Sibley, HIRAM, financier, was born in North Adams, Mass., Feb. 6, 1807. He was influential in organizing the Western Union Telegraph Co., and secured a line to the Pacific coast, by special Act of Congress. He founded the Sibley College of Mechanic Arts of Cornell University, and Sibley Hall of Rochester University. Died July 12, 1888.

Sibley, in Iowa, a post-town, cap. of Osceola co., 74 m. N.N.E. of Sioux City. Pop. (1895) 1,282.

Sickles, DANIEL EDGAR, soldier, was born in New York city, Oct. 20, 1823; admitted to the bar (1844); elected to the State legislature (1847); was city attorney of New York (1853); elected to the State senate (1855), and to Congress (1857 and 1859). During the Civil War was commander of the Excelsior Brigade, and was conspicuous for gallantry in the Peninsular campaign and subsequent notable battles of the war. For brilliant service at Fredericksburg he was promoted major-general, and commanded the 3d Army Corps at Gettysburg, where he lost a leg, July 2, 1863; was retired in May, 1869, and appointed U. S. minister to Spain one month later; in 1873 resigned this position and returned to New York, where he held several political offices until 1890; was member of Congress (1893-1897).

Siemens, ERNST WERNER, BARON, physicist and inventor, was born in Hanover, Germany, Dec. 13, 1816; educated in the military schools; became lieutenant of artillery (1837); while still holding this appointment, he devoted his attention to the study of practical chemistry and the physical sciences; became the inventor of the process of electro-plating, and of various appliances in telegraphic machines. He originated the use of gutta-percha as an insulator of telegraph wires and cables, and with Prof. Hilmy succeeded in laying the submarine mines with electric ignition for the protection of the harbor of Kiel from the Danish fleet. He founded the celebrated telegraph works of Siemens & Halske, in Berlin, with branch works in London and St. Petersburg; has made numerous experiments and inventions in electrical and chemical processes. He received his patent of nobility from the Emperor Frederick III., and the degree of Doctor from the University of Heidelberg, besides many other honors and distinctions. He wrote, from time to time, papers that appeared in the *Transactions* of learned societies. Died Dec. 6, 1892.

Sier-ra, in New Mexico, a S.W. co.; area, 3,116 sq. m.; drained by Rio Grande del Norte. Surface, mountainous; soil, fertile where cultivated. Min. Gold, silver, copper, lead. Cap. Hillsboro. Pop. (1897) 4,240.

Signal Service. (U. S. Govt.) That department of the army, navy, or any public service which has charge of communication by means of signals. Modern military signalling is based on a system originated by A. J. Myers, and first put in practice by him in 1860, when he was appointed first signal officer of the U. S. army; it was tested and developed during the Civil War, a camp being formed at Georgetown, D. C., in 1861, where instruction was given in signalling, and detachments were prepared to attend each army. The signal service was not given a separate organization, however, until 1863, when a large corps was authorized for the duration of the war.

In 1866 the service was reorganized and much reduced; in 1870 an important addition was made to it in the form of a meteorological division to take observations and receive constant weather reports in order to notify the country by telegraph and signalling of the force and movements of storms. This meteorological work was an important branch of the Signal Service for 21 years, and gained a universal reputation for the reliability of its forecasts; in 1891 it was given a separate organization as the WEATHER SERVICE (*q. v.*), and placed in the Department of Agriculture. The present status of the Signal Service was also settled in 1891 by a law providing that there shall be a chief signal officer, with the rank of brigadier-general, and a commissioned force of 1 major, 4 captains, and 4 first lieutenants, with an enlisted force of 50 sergeants; this force is already considered rather small, and would require additions in case of war.

The school for instruction in military signalling is now at Fort Riley, Kansas, where a course of 6 months is given in the principles of all signal codes, including those of the navy, instruction being also given in cryptography, photography, topography, electricity, and the management of field telegraphs, balloon trains, heliographs, flags, torches, lanterns, rockets, bombs, and search-lights. As the code for visual signalling is founded on the telegraphic system of dots and dashes, there are also thorough instruction and practice in ordinary telegraphy. Members of the signal corps have recently carried on extensive experiments in signalling with kites, with such success that they will probably be added to the means of signalling already in use, as, with favorable atmospheric conditions, they prove effective in lifting signals to a visible height and occasionally replacing balloons in carrying up observers. (See KITE, SECTION II.) The system of signalling by flags consists in waving a flag to the right for a dot, to the left for a dash, and to the front for a space, in the Morse code. Each motion compasses an arc of 90°, returning after each to the vertical.

In the various systems of signalling with light, the dots and dashes are represented by the number of the flashes and their length. Naval signalling is facilitated by use of the Signal Book and the Drill Book, which contain numbered lists of words and sentences, geographical information, and tactics, so that it is only necessary to signal the number, instead of the message. At night, green and red fire-balls, or stars, are used if the distance is short, and electric lights if the distance is long, the search-light signal even reaching ships below the horizon line, by reflection from the clouds.

When signalling is carried on in the presence of the enemy it must be done in cipher, the members of the corps being prepared to encipher and decipher messages by their training in cryptography. The military field telegraph train, consisting in the U. S. of a battery wagon and three sections, each including a lance truck and a wire wagon, and the balloon train, which, at Fort Riley, is made up of three wagons carrying tubes of compressed hydrogen, and one wagon for the balloon and its outfit, are important factors of modern Signal Service equipment. The observer who goes up in a captive balloon to study the movements of the enemy carries with him a telephone kit, by means of which he communicates with the assistant, who is paying out the cable below from the balloon wagon, and directs the height of the ascent. The balloon car is also furnished with all the instruments necessary for taking and recording observations, a camera being included. The constant motion of the balloon renders it comparatively safe from the shots of the enemy.

Signatures. Doctrine of. (*Anthrop.*) A belief, still feebly surviving in medicine from medieval days, when it was universally credited, that all objects in nature beneficial to man bore some marks indicative of the remedial service to which each ought to be put. Thus the mandrake (genus *Mandragora*) owed the long list of virtues with which it was endowed by superstition primarily to its divided root, sometimes resembling a human body; and ginseng, still regarded in the Orient as a medicine of high value, and also imbued with magic powers, owes its reputation to a similar shape. On this principle it was asserted that the properties of substances were frequently denoted by their color—white was cooling, red was heating, &c. For disorders of the blood burnt purple, pomegranate seeds, mulberries and other red ingredients were dissolved in the patient's drink; and for liver complaints, as jaundice, yellow substances were recommended. Large books were written in support and elucidation of this doctrine, and no one doubted it (in print, at least) until the close of the 16th century. Every part and organ of the body and each ill found a remedy in one or more particular objects thus fancifully selected; but plants were most in vogue, and their natural effect upon the human system served to sustain the thesis. Thus the European eye-bright (*Euphrasia officinalis*) was supposed to be good for the eye, owing to a black

pupil-like spot in the corolla; it is still sold in rural English shops for that purpose. As the generation of ferns was not understood, they were said to be seedless; but as analogy forbade the theory that a plant could be propagated otherwise than by seeds, it was supposed that a fern's seeds were invisible; hence any one possessing them would acquire the power of invisibility, and this idea enters largely into Teutonic legends and poetry, and is expressed by Shakespeare when (I. Henry IV., II. 1) he makes *Gadshill* say: "We have the receipt of fern-seed, we walk invisible."

A large number of examples are given by Thistleton Dyer, in his *Folk-Lore of Plants*, where also the literature of the subject is reviewed. A few of these follow. "The walnut was regarded as clearly good for mental cases from its bearing the signature of the whole head; the outward green cortex answering to the pericranium, the harder shell within representing the skull, and the kernel in its figure resembling the contour of the brain. . . . The pith of the elder, when pressed with the fingers, 'doth pit and receive the impress of them thereon, as the legs and feet of dropsical persons do,' therefore the juice of this tree was reckoned a cure for dropsy. . . . Similarly the heart trefoil or clover (*Medicago maculata*) was so called because, says Coles in his *Art of Simpling*, not only is the leaf triangular, like the heart of a man, but also because each leaf contains the perfect image of an heart, and that in its proper color—a flesh-color. It defendeth the heart against the noisome vapor of the spleen." Heart's-ease is a similar instance, and the list might be lengthened to include every plant that had anything striking in its external appearance or habit, such as the use of the trembling aspen leaves as a cure for palsy, ague, &c. The superstition still survives to some extent.

Sile'sia, *n.* (*Fabrics.*) A thin, twilled cotton cloth used for dress and coat linings; also a fine brown holland which is glazed for window shades. The latter was originally made in Silesia, hence the name, which in America is now almost exclusively applied to the thinner fabric.

Silliman, BENJAMIN, chemist, geologist, and physicist, was born in Connecticut in 1779; graduated at Yale College (1796), and became professor of Chemistry in 1802, retiring as professor emeritus in 1853. He founded the *American Journal of Sciences and Arts* (known as *Silliman's Journal*), and conducted it for 20 years. He was an able lecturer in his special field, and wrote several valuable text-books. Died in 1864.

Silliman, BENJAMIN, son of the elder Benjamin Silliman, was born in Connecticut in 1816; graduated at Yale (1837), and, after teaching in the Sheffield Scientific School and in Louisville, succeeded his father as professor of Chemistry at Yale; he was made one of the State chemists of Connecticut in 1869; became associate editor of the *American Journal of Sciences and Arts*, and wrote many scientific articles. Died in 1885.

Silver City, in *New Mexico*, a post-village, cap. of Grant co., 10 m. S.W. of Fort Bayard. Gold, silver, copper, and lead are mined here. *Pop.* (1897) 2,750.

Silverbow, in *Montana*, a S.W. co.; *area*, 915 sq. m. *Surface*, largely mountainous, with but little level ground; principally noted for its immense mines of silver and copper ore. *Cap.* Butte City. *Pop.* (1897) 30,500.

Sim'la, A district and town of the northern part of British India; the town, 170 m. N. of Delhi and 7,000 feet above the sea-level on the southern slope of the Himalayas, is noted as a sanatorium, and as the summer headquarters of the Indian government since 1864. It was first settled in 1819, and first visited officially in 1827; there are now two vice-regal residences, good government buildings, and town hall, and good European schools. The houses are mostly cottages, and stand far enough apart to get the air. The average annual temperature is 57.8°; the regular population about 15,000 (1890), with a great increase in summer. The population of the district in 1897 was nearly 50,000. *Area*, 18 sq. m.

Simp'son, MATTHEW, clergyman, was born in Cadiz, O., June 20, 1811; educated at Madison College, and became a circuit preacher in Pennsylvania; was a college professor from 1837 till 1852, when he was elected a bishop of the Methodist Episcopal Church; in 1857 travelled in Europe and the Holy Land. In 1859 he acted as president of Garrett Biblical Institute, Evanston, Ill., but removed to Philadelphia, and during the Civil War was a spirited and effective orator for the Union cause. He officiated at the funeral services of President Lincoln. During his later years he travelled much in Europe and in Mexico, chiefly on missions relating to his office as bishop. He published *One Hundred Years of Methodism* (1867); and *Cyclopedia of Methodism* (1878). Died June 18, 1884.

Sims, GEORGE ROBERT, journalist, was born in London, Sept. 2, 1847; a popular newspaper writer and dramatist, known by his successful plays, *The Lights o' London*, *Romany Rye*, and *In the Ranks*.

Sims, JAMES MARION, surgeon, was born in Lancaster co., S. C., Jan. 25, 1813; took his degree in medicine from Jefferson College (1835), became a specialist in the treatment of diseases of women, and opened a hospital in New York city (1855), securing an appropriation of \$50,000 from the New York legislature. He spent seven years in Europe (1861-68), practicing in England and in the Continental cities; also returned to Europe during the Franco-Prussian War to organize the Anglo-American Ambulance Corps; returning to New York, where he remained thereafter, becoming one of the board of surgeons of the Woman's Hospital.

He was a frequent contributor to medical journals. Died Nov. 13, 1883.

Single Tax, (*Pol. Econ.*) A plan of taxation proposed by Henry George (*q. v.*), in a book by him, entitled *Progress and Poverty*. This plan is to abolish all taxation save that on land values. His theory proposes the collection of all public revenues from one single source, what in political economy is termed "rent," the value of land itself, irrespective of the value of any improvement in or on it; or, to adopt another form of statement, his theory proposes the appropriation of the "unearned increment of land values" to public uses, by means of taxation. He urges the adoption of his theory on two grounds—governmental expediency and social justice. He maintains that the common-sense way for the State or any of its subdivisions to obtain revenues is by a single tax on the value of land; that the attempts of governments to raise revenue by other taxes are stupid and barbarous; that taxes on imports, taxes on internal production or exchange, taxes on capital in any of its forms, nearly all license taxes, and all that part of real estate taxes that rests on buildings and improvements do not really fall on those who pay them to the State, but, with added interest and profits, finally fall upon the ultimate user or consumer. His contention is that a tax on the "value of land is not a tax on land, but on an advantage accruing on specially desirable land, which can in no case go to the land user as user; that a tax on the value of land must fall on the owner, whoever he may be, taking from him, not in proportion to anything his labor or capital may have contributed to the general wealth, but only in proportion to the unearned income which the adjustments of the State give him the special privilege of receiving." This unearned income is called by the proposer of the theory the "unearned increment" which grows by all public improvements, material, political, and even moral, and by private improvement, since, he contends, the erection of a beautiful dwelling, the opening of a good hotel or well-appointed store, or of a mine or factory, or even improvement in the personal qualities or conditions which make people more desirable neighbors, localize an advantage that becomes tangible in land values. This unearned increment, it is asserted, is a natural growth, born of civilization and increasing with its advance; belonging to the society itself as distinguished from its individual members by the same right of property which gives to the individual the ownership of his product. "It is the natural provision for the natural need of public revenues; a fund secreted by the social organism to meet the wants, analogous to those of the physical body for sustenance, which come with its definite appearance and grow with its growth."

Siouan (*soo'än*) **Fam'ly, In'dian.** (*Ethnol.*) This linguistic family comprises the Indians formerly ranging over the basin of the Missouri and Arkansas rivers. They were the tribesmen of the plains reaching from the Mississippi and Lake Michigan (at Green Bay) westward to the foot of the Rockies, where they were steadily pressing back the Shoshonean tribes (*q. v.*), and northward into the Canadian plains. At the south the Caddoans resisted their advance south of the Arkansas, and eastward the Algonquians and Muskogean have latterly kept them west of the Mississippi; but in comparatively late prehistoric times probably most of the Siouan tribes dwelt east of the Mississippi river, where remnants, such as the Catawbas, Waterrees, and Tutelos, in Virginia, and the Biloxis, of the coast of Mississippi, were discovered by white explorers. The principal tribe was that of the Dakotas, of the Missouri valley, and their name is used by many writers as a synonym of "Sioux," because the latter word is a (Chippewa) term of reproach. Among the Dakotas are a series of powerful local divisions, such as Santee, Sisseton, Wahpeton, Yankton, Yanktonnais, and Feton. In the last is found such famous and closely-allied bands as the Brule, Sans Arc, Blackfeet, Minneconjou, Ogallala, and Uncpapa Sioux. Other tribes, ranking with the Dakota, are the Assinaborn, Omaha, Ponca (or Ponka), Kaw, Osage, Quawpaw, Iowa, Ojibwa, Missouri (or Missouria), Winnebago, Mandan, Minnetaree (often called Gros Ventre), Crow (or Absaroke), Tutelo, Biloxi, Catawba, and Woccon. Several of these tribes are extinct, and nearly all are domiciled upon reservations away from their ancestral homes; but some remain in substantially the same place, strength, and habits, as when they were first met by whites, whom they have since fought with a fury and success equal to no other Indian race. Their present total number is about 43,000.

Sioux (*soo*), in *Nebraska*, an extreme N.W. co., adjoining Wyoming and South Dakota; *area*, 2,046 sq. m.; intersected by *L'ean-qui-court* river. *Surface*, partly hilly, partly undulating; *soil*, a very fertile, sandy loam. Has timber. *Cap.* Harrison. *Pop.* (1897) 2,720.

Sir'us, *n.* [*Alpha Canis Majoris*, generally called the "Dog Star." (*Astron.*)] This star, always shining with imperial luster, is the brightest one in the celestial vault, and is the best known to the mass of mankind of any of the bright first-magnitude stars. It was formerly supposed, from its great brilliance, that it was the nearest star to our system. Its small parallax (if any) has proved the fallacy of this belief; many attempts have been made to ascertain its parallax, but they are so discrepant that no confidence whatever can be attached to any results attained, a fact strongly proving that between the two qualities—brightness and distance—there is no necessary relation. For aught we know, however, there may be stars of the sixth magnitude that are nearer than any of the first. Even the amount of their proper motions affords no

data on which to base an opinion as to their distance. "The runaway star," as Newcomb calls it (1830 of *Groombridge's Catalogue*), though invisible to the naked eye, has the largest proper motion of any known, amounting to 7" annually, at the supposed rate of 200 miles a second, requiring 185,000 years to complete the circuit of the sky. If any reliance at all can be placed on the parallax of Sirius, its distance from us must be at least a million times the sun's distance from the earth, or 93,000,000,000,000 miles; therefore, it would take an express train, running 50 miles an hour, nearly 250,000,000 years to reach it. Sirius is a binary star, the components revolving around each other in 49.4 years. Its companion was discovered in 1862, by the late Alvan G. Clark. From inequalities of its proper motions it was long before supposed to have a companion, which was finally discovered, and at the computed place. Sirius at the present time is moving toward our system, or in the line of sight, at the rate of 20 miles a second. When the sun in his eastern annual journey approaches so near Sirius as to render that star invisible, dog-days are said to commence, and when the sun has so far passed it as to render Sirius again visible, dog-days are said to end. In ancient times this period commenced Aug. 5; but owing to precession of the equinoxes it now commences July 3 and ends July 11, lasting 40 days. (See PRECESSION). During the precessional period of 25,700 years, they will commence in all the 12 months of the year. The statement, handed down from book to book, that Sirius is 80 times the size of the sun has nothing to support it; that it is larger, is undoubtedly true. The star is classified as of 1-10 magnitude. The maximum distance between the components is about 11", and the minimum 2.33"; period, 49.4 years; brightness of companion, eighth magnitude. The position of Sirius for 1900 is R. A. 6h. 40m. 44s., Dec. 16° 33' 57".

Sisal (*se'sahl*), *n.* (*Com.*) The heniquen fiber, or *S. hemp*, an important export of Yucatan, from the port of Sisal, whence the name. Several cultivated species of the native *Agave* furnish this fiber, which is largely used for cordage, and particularly for ships' cables, as it resists the action of salt-water for a long time. It has been known to the Mayas for hundreds of years, and has been largely grown by them, as the plants flourish in arid ground which would support no other fiber-yielding plant.

Sit'ing Bull, a chief and medicine-man of the Sioux Indians of Dakota, was born about 1837; was from early manhood an implacable foe of the white race, and became a leader of the hostile members of the tribe who engaged in the massacre in Minnesota in 1862. For fourteen years he was constantly on the warpath, and organized the expedition in which General Custer and his entire force perished, while Sitting Bull and his band escaped to Canada. On promise of pardon he surrendered to General Miles in 1880; returned to Dakota and renewed his efforts to stir up trouble; in 1890 his arrest was attempted, and, in the fight of resistance that ensued, he was killed Dec. 15, 1890.

Six'ty Mile, (*Geog.*) A gold-bearing stream tributary to the Yukon, entering from the southwest near the mouth of White river. Also a mining village at its mouth. See YUKON DISTRICT.

Skagit, in *Washington*, a N.W. co.; *area* 1,916 sq. m.; traversed by Skagit river. Good agricultural land. *Cap.* Mt. Vernon. *Pop.* (1897) 10,000.

Skaguay. See SHKAGWAY.

Skates, *n. pl.* The first skates used were bones tied to the shoes. Wooden skates, shod with iron, were introduced in England from the Netherlands, about the middle of the 17th century. These were strapped to the foot. Later, spikes and screws were provided for fixing the skates more solidly to the heel. About 1865 the prevailing style of skate in the United States had a broad iron or steel runner curled up in front of the toe, and fitted with a wooden body-piece in which were slots for the passage of the straps. A very similar skate is still used in England to some extent, but in the United States these have given way to the steel club-skate, which has a runner slightly curved on the skating edge, securely riveted to a sole-plate and heel-plate, in which are slots for adjustable clamps, which are made to grip the sole and heel of a shoe by means of a screw and toggle-lever mechanism. The English and German forms of skates have much lower and flatter runners than those used in the U. S. The Norwegians use the skee more than the skate. (See SNOWSHOES.) Wheeled skates were at first known as parlor-skates, but when they became common they took the name of roller-skates. The ordinary form has four small wooden wheels, with axles pivoted to a wooden base, the whole being fastened to the foot by straps. They were widely used during the skating-rink "craze" of 1883-6. A road-skate, having two wheels, for use on concrete and asphalt roads, is now used in England. The wheels are each about 4 inches in diameter, and have rubber or pneumatic tires. As they elevate the foot to a position which strains the ankle, braces are run from each side of the sole-plate to a knee-piece, preserving the skater from injury by turning of the ankle-joint. Another form of road-skate has two small wheels under the foot on one side, and a large wheel of about a foot in diameter on the other side. The large wheel has a central pinion driven by a curved rack on the sole-piece, so that the skater may add to his speed by rocking his foot—that is, alternately depressing and lowering the toe. This is really a little tricycle carried by the foot that drives it.

Skeat, WALTER WILLIAM, philologist and Anglo-Saxon scholar, was born in London, Nov. 21, 1835; educated at King's College School, and Christ College, Cambridge,

graduating in 1858; became a fellow of his college (1860), and mathematical lecturer there (1864); was elected the first Elrengton and Bosworth professor of Anglo-Saxon at Cambridge (1878), and re-elected to a Christ College fellowship (1883). By his exhaustive labors on Langland and Chaucer he has contributed more than any other scholar of his time to a sound knowledge of Middle English. His chief work is an *Etymological English Dictionary* (1882), to which he added *Principles of English Etymology* (1887-91). He has published editions of many early English texts, including very full reprints of *Piers Plowman*, with critical and explanatory notes; the *Canterbury Tales*, and other writings of Chaucer, &c., which have been issued by the Clarendon Press, the Scottish Text Society, and other philological and dialect societies.

Skiagraph. *n.* A photographic picture obtained by means of the Roentgen rays; a radiograph. Called also skotograph and shadowgraph. See illustration at ROENTGEN RAYS.

Skiagraphy. *n.* The art of taking pictures by means of the Roentgen rays; the taking of shadow-pictures or skiagraphs. In older senses the word is used to signify the art of correctly shading a picture, also the finding out the time of day by means of shadows.

Skiroscope. *n.* An apparatus containing a fluorescent screen for changing the Roentgen rays into light, and enabling an observer to see through opaque substances when penetrated by the rays. (See illustration at ROENTGEN RAYS.) It is similar to the fluoroscope of Edison, being a pasteboard box with four sides diverging from a small end, intended to fit the eye, to a large end, which is composed of a rectangular fluorescent screen. The interior of the box is covered with black paper, its whole object being to exclude exterior light so that only the light coming from the screen may be visible. The screen is of cardboard, and bears a coating of crystals of some fluorescent substance, as calcium tungstate, or potassium platino-cyanide. In using the skiascope the observer looks through it at the object placed between him and the Crookes tube. The Crookes tube having been excited by an electric current, the cathode rays from the terminal button are changed into Roentgen rays, which emanate from the tube, pass clear through the opaque object viewed, and on through the fluorescent screen of cardboard, where the rays are changed into light, so that the observer is enabled to see through the object, which may be a human being, and discern the form of the bones, &c., the extent of his vision being limited only by the penetrating power of the Roentgen rays. See ROENTGEN RAYS; FLUORESCENCE.

Sko'beleff. MIKHAIL DMITRIYEVICH, soldier, was born in the Riagan district, Russia, about 1843; educated in the military school at St. Petersburg; from 1863 to 1877 was one of the most distinguished officers of the Russian army, attaining the rank of major-general. Died July 7, 1882.

Sla'ter, in *Missouri*, a post-village of Saline co., 12 m. N.E. of Marshall. Pop. (1897) 2,475.

Slaught'or-houses, or Abattoirs. One of the features of Rome, at the time of its glory, was the great meat-market, where was concentrated all the butchering and selling of meat, under control of a guild. Similar arrangements existed elsewhere in the ancient empire, but fell into disuse during the confusion of the Middle Ages. As early as the 16th century, Paris endeavored to regulate the slaughtering of animals by law; but these measures were either of no avail or were not enforced, while the city continued to grow, until at the beginning of the present century the numerous slaughter-houses, and loose, cruel arrangements for importing and killing food-animals had become a nuisance and a menace to health. Under the command of Napoleon I., the city authorities, by a commission, set apart ground in the outskirts of the city, and erected the five great abattoirs still in existence at the several points. These cover in the aggregate 38 acres, and contain over 250 slaughter-houses, besides a great number of yards where the animals wait to cool off, and buildings in which the meats and various by-products are prepared, offices, &c. They are regulated under a carefully made code of laws, and constantly inspected by expert agents of the city. This example has been followed by most continental towns, but Great Britain was slow to realize its value. It was not until 1852 that the abominations of Smithfield market, where "no fewer than 243,537 cattle and 1,455,249 sheep were sold" in that year, "to be afterwards slaughtered in the crowded courts and thoroughfares of the metropolis," impressed themselves upon Parliament sufficiently to secure any remedy. This came, to some extent, however, when, in 1854 the cattle market was removed to the vast, new, and improved suburban market in Islington; but even here no public, police-regulated slaughter-houses were provided, and to this day isolated private establishments do all the slaughtering for London. Scotland, however, is much in advance of this and other English cities. Edinburgh erected, in 1851, a public abattoir embodying all known improvements, which still supplies the needs of the city, and where all animals are killed, and the meat prepared under strict supervision, no private slaughtering in the city or its suburbs being permitted. This institution pays a profit to the city treasury. Glasgow long ago adopted the same system, great municipal slaughter-houses superseding all private establishments. In that city, further, "all the wholesale marts for produce, meat, animals, and fish are in the city's own hands, and are so managed as to yield net revenue, while facilitating the work of the public food-inspectors, and

contributing to the healthfulness of the city." The slaughtering of animals in the city of New York is confined by law to establishments permitted by the Board of Health. The permits granted at the close of 1892 were: 42 for the slaughter of cattle, 27 for sheep, 9 for hogs, and 3 for poultry; total, 81. The buildings used are large, modern abattoirs on the water-side, built by individuals or corporations; and by law, in 1896, they were confined to certain small specified localities. The new charter of the Greater New York, dating from Jan. 1, 1898, removes this restriction, simply requiring that slaughter-houses shall be on or near the water-side, and leaving all responsibility, as to location, to the Board of Health. The law requires as to these slaughter-houses: (1) No blood or offal shall be allowed to pass into the sewers. (2) The house must be cleaned up as soon as the day's work is completed; and all material offensive, or liable to become so, must be removed immediately. (3) Floors and pavements of cattle-yards, hog-yards, and stock-yards must be water-tight. (4) Floors and walls must be in good repair, and killing-beds and pens water-tight. (5) Rooms where offensive odors are produced shall be constructed so that these are carried off by fans or blowers, and either discharged under water or through, and not over, the glowing coals of the furnace. (6) All pipes for odors, scrubbers, and disinfecting and deodorizing apparatus, must be carefully examined daily. The Board of Health inspections of slaughter-houses in 1896 were 9,956. The number of cattle, sheep, &c., slaughtered in New York in 1896 was as follows: Cattle, 436,580; weight, 310,408,380 pounds; sheep and lambs, 1,476,534; weight, 75,303,230 pounds; hogs, 998,896; weight, 160,822,256 pounds; besides 26,595,000 pounds of poultry. There were also brought into the city, in 1896, 330,000,000 pounds of dressed meats, including 139,000,000 pounds beef; 11,840,000 pounds calves; 36,036,000 pounds sheep; 15,750,000 pounds hogs, and 104,688,000 pounds poultry.

Slavs, n. pl. [Ger. *Sklare*.] (*Ethnol.*) A group of the Aryan stock in the races of mankind, vaguely spoken of by the ancients as Scythians and Sarmatians, now constituting some three-tenths of the inhabitants of Europe, and embracing the Bulgarians, Croats, Czechs, Montenegrins, Poles, Russians, Servians, and Wends.

Sleep'y Eye, in Minnesota, a post-village of Brown co., 14 m. W. of New Ulm. A center of local trade. Pop. (1895) 1,958.

Sleep'y Hol'low. Pocantico creek flows into the Hudson river about half a mile north of the village of Tarrytown, N. Y., and its narrow valley is called Sleepy Hollow. It is the scene of one of Washington Irving's best-known sketches, *The Legend of Sleepy Hollow*, to be found in *The Sketch Book*. The old mill and the old Dutch church of which he wrote are still standing, and the quiet, peaceful character of the country is little changed. In the newer portion of the cemetery around the old church is the grave of Washington Irving. See IRVING.

Slidell, JOHN, lawyer, was born in New York city, in 1793; graduated at Columbia College, studied law, removed to New Orleans; was elected to Congress (1842) as a States-right Democrat; was a U. S. senator from 1853 to 1861; left the Senate when his State seceded; in Sept., 1861, was appointed Confederate minister to France, and set out with James M. Mason for Southampton; were seized on the high seas by Captain Wilkes, of the U. S. N., and brought as prisoners to Boston, where they were confined in Fort Warren until Jan. 1, 1862, when they were released on the demand of the English government. They proceeded to Paris, but failed to secure recognition for the Confederate States from the French government. Napoleon III., however, gave his personal sympathy and aid in negotiating a loan of \$15,000,000 for the Confederate States, and securing a ship, the *Stonewall*, for its navy. After the war S. resided in England, and died there July 29, 1871.

Slide-rule, n. (*Mech.*) A rule for making mechanical calculations, being constructed of two or more sliding (or sometimes rotating) pieces, bearing graduations, so arranged that some function of a number on one piece may be formed opposite to it on another piece. The scales on opposing pieces are graduated to the logarithms of the numbers on them, so that products difficult of calculation by other means may be obtained and read by a mere shifting of the slides.

Sloane, WILLIAM MILLIGAN, educator and writer, was born in Richmond, O., Nov. 12, 1850, son of the Rev. James R. W. Sloane; graduated at Columbia College (1868); went to Berlin to study philology (1872); was secretary to Hon. George Bancroft, then American minister to Germany; returned to America, and became a professor at Princeton. During 1895 he published a critical *Life of Napoleon Bonaparte*, in the *Century Magazine*, the material for which he had collected from the government archives of France, Great Britain, and Italy. He wrote also *The Life and Works of J. R. W. Sloane* (1888); *The French War and the Revolution* (1893); and edited the *Life of James McCosh* (1896). He was the editor of the *New Princeton Review* (1885-88), and one of the editors of the *American Historical Review*. In 1896 he was appointed Seth Low professor of History in Columbia University.

Sloid, or Sloyd, n. [Sw. *slöjd*, skill, dexterity.] A system of elementary manual training originating in Finland, but adopted in Sweden about 1876, and since introduced into this and other countries. It uses wood only as the material to be manipulated, and consists of a series of exercises carefully graduated from the simplest use of tools—as whittling out a flower-stick—to com-

plex work in joinery. Its aim is not to teach a trade, but to educate the pupil, to insure a healthy and harmonious physical and intellectual development, and the acquirement of a dexterity that will be useful in every vocation of life.

Slot-machines', n. pl. (*Mech.*) The success of the nickel-in-the-slot weighing machines, between 1880 and 1890, resulted in the development of a long line of slot-machines for vending various small articles. Prominent among these were the chewing-gum machines, gambling machines, phonographic machines, &c. The number and variety of the machines introduced led many to regard them as a new thing, whereas, in reality, the invention is a very old one, and it is even claimed that the ancient Egyptians used some form of slot-machine for dispensing holy water in their temples. The modern introduction of so many machines of this class is due to the fact that the weighing machines proved profitable, and led many to believe that there was an unworked field for further profitable investment. A long line of patents have been issued for various mechanisms for operating slot-machines, the interior mechanism being all that has been patentable. A common form of device has been a balance, which was tipped by the weight of the coin placed in the slot, and thus made to release a drawer, slide, or door, affording access to one of the articles offered for sale. A still better arrangement, which is used in some form or other in most of the machines of recent date, consists in making use of the coin as a part of an unlocking mechanism. For instance, if there is a slide on the machine for pushing out one article at a time, it is so made that ordinary pushing fails to accomplish any result; but if the proper coin be dropped in, it slips into a notch in the slide, and when the slide is again pushed it carries the coin with it, and the upper projecting edge of the coin serves to catch and release an inner gate, dropping out one of the articles vended. The coin then rolls into a cash-drawer, and a spring resets the slide, leaving the machine ready for another purchase.

Many machines have been made with sharp, sliding jaws, designed to detect lead coins, and convey them away without delivering the product; but the device is not wholly satisfactory, and the machines are, as a rule, at the mercy of all dishonest persons provided with circular metal blanks the size of the required coins. The lack of earning ability in many of the machines which have been placed on the market seems to be wholly attributable to the lack of probity on the part of the public. Many people, otherwise honest, have deemed it smart to beat a slot-machine, and boys and mischievous persons seem to take an especial delight in subjecting the machines to abuse. Probably the weighing machines have paid better than any other class of vending machines, and they have been introduced in railway stations, ferry-houses, hotels, and other public places all over the civilized world. The reduction of price, from five cents to one cent, has probably added to their earning capacity, as there is no direct expense with this machine for the thing sold, the cost being the same per day, without reference to the number of people who stand on the scales to be weighed. The chewing-gum machines, and the phonographic and kinetoscopic machines appear to have yielded a profit, and various gambling machines have earned money for a time, a permanent income from them being impossible, however, as they are not patentable, and the introduction of every gambling machine that paid has always been followed by a host of imitations, so that the profits were cut up, usually ending by police interference.

One gambling machine, which is known as the "Jack-pot," is said to have paid enormously for a short time, so seductive were its methods. This machine had a glass front, and when a nickel was dropped in it descended along a slide in full view, its course being checked and turned by projecting pins, so that it was liable to fall into any one of about 20 positions. About one-fourth of the nickels fell into a cash drawer for the benefit of the owner of the machine. The rest of them fell into a glass-covered case, and were released when one of the nickels happened to fall into one of the twenty positions, when a heap of nickels rolled out and became the property of the person who had gambled the last nickel. The machine was started in the morning with a dollar's worth of nickels, and the sight of the cash, perhaps to be obtained for five cents, proved a great temptation to gamblers. Having dropped in a few nickels without result, a gambler always felt obliged, if he had the money, to keep on until he secured at least one lot of nickels, and in this way nearly every patron of the machine averaged to drop in a dollar each time he tried it, and to get back 75 cents, while there were enough to win a few dollars with a few nickels to keep up the patronage. This machine was introduced into the saloons in nearly all the large cities of the U. S. about 1894, but was speedily stopped by local authorities.

Other gambling machines have been operated by throwing dice and shifting playing cards mounted so as to show a hand of five cards at every change. Postage-stamp machines, newspaper-vending machines, cigar machines, and a variety of others have been introduced, and withdrawn as unprofitable. The stamp machines, which sold two 2-cent stamps for a nickel, failed because the stock of stamps could not be exposed to view without inciting burglary, and if hidden the public were often afraid to buy, as the stock was not certainly in the machine. The cigar machines contravened revenue laws, and the newspaper machines were the especial butt of the newsboys, who crippled them

as fast as they came out. The experience of the promoters of the various machines which have been marketed seems to indicate that only those machines which sell an article having little or no intrinsic cost can be made profitable. It is also necessary to place the machines in the care of some person, in some interior place. If allowed to remain out in the streets over night, the known presence of a cash-drawer somewhere in the interior always incites burglary of the machine.

Smalley, GEORGE WASHBURN, journalist, was born in Franklin, Mass., June 2, 1833; graduated at Yale (1853); studied law at Harvard Law School, and practiced in Boston until 1861; from 1861 to 1863, was war correspondent of the New York *Tribune*, accompanying the Federal army, and writing descriptions of battles with picturesque effect. In 1863 he took a position in the editorial department of the *Tribune*, and afterward went to London to establish a London bureau. He returned to the U. S. in 1895 and became American correspondent for the London *Times*.

Smear'case, *n.* [Ger. *schmierkase*.] An article of food made by mixing dry curds with milk or cream; cottage cheese.

Smiles, SAMUEL, writer, was born at Haddington, Scotland, in 1812; published *Self Help* in 1859; *Character* (1871); *Thrift* (1875); *Duty* (1880), and *Life and Labor* (1887), all of which are inspiring and stimulating to wholesome effort. He has also written many biographies of self-made men, particularly of the industrial classes, the first of which series was a *Life of George Stephenson* (1857), and the latest, *Jasmin*, the barber-poet and philanthropist (1891), and *A Publisher and His Friends* (1891), incidents in the life of John Murray. In addition to these works, S. has published two volumes of an historical character, *The Huguenots in England* (1867), and *The Huguenots in France after the Revocation of the Edict of Nantes* (1873). In 1878 he received the degree of LL. D. from the University of Edinburgh.

Smith, ANDREW JACKSON, U. S. A., was born in Bucks co., Pa., April 28, 1815; graduated at West Point; served on the frontier; held the rank of major in 1861; became colonel and then chief of cavalry in the Department of the Missouri, and later in the Department of the Mississippi; saw active service, and rose in rank to be major-general of volunteers (1864), being recognized as one of the best generals in the field; was mustered out of the volunteer service at the close of the war; and resigned his commission in the regular army in 1869; but by Act of Congress in 1889 was reappointed colonel of cavalry, and placed on the retired list.

Smith, CHARLES EMORY, journalist, was born in Mansfield, Conn.; graduated at Union College (1861); engaged in editorial work in Albany, N. Y.; in 1880, became editor of the Philadelphia *Press*; was U. S. minister to St. Petersburg (1890-92).

Smith, FRANK HOPKINSON, artist, author, and engineer, was born in Maryland, Oct. 23, 1838. As an engineer he has built many public works, some of which were under government contract; he has done some superior work in water-colors; and has published several books: *Well-worn Roads* (1886); *Old Lines in New Black and White* (1886); *A Book of the Tile Club* (1887); *Colonel Carter of Cartersville* (1891); and *Tom Grogan* (1895).

Smith, GOLDWIN, author and educator, was born at Reading, England, Aug. 13, 1823; educated at Eton and Oxford; made a brilliant university record; became regius professor of Modern History at Oxford, remaining there until 1866. During the Civil War in America he visited the United States; was a prominent champion of the Federal cause. In November, 1868, he accepted the chair of English and Constitutional History at Cornell University, and filled this post until 1871, when he removed to Toronto, Canada, where he has since resided, engaged more or less in editorial work in Canada, and writing also for the English reviews. Though affiliating with the Liberal party in Canadian politics, Prof. S. has taken radical ground in opposition to the Home Rule policy of Mr. Gladstone. His published works embrace lectures on history, literary and political criticisms, translations from the Greek poets, essays and reviews on ethical and religious subjects, and other magazine articles. His latest books are: *Guesses at the Riddle of Existence* (1896) and *Political History of England* (1897).

Smith, HOKE, lawyer, was born in Newton, N. C., Sept. 2, 1855; admitted to the bar (1873); in 1887 became president of the Atlanta *Evening Journal Co.*, which supported tariff reform. In 1893 President Cleveland appointed S. secretary of the interior; but not sympathizing with the administration on the financial question, he resigned in August, 1896.

Smith, ROSWELL, publisher, was born in Lebanon, Conn., March 30, 1829; graduated at Brown University; studied law and settled in Lafayette, Ind. In 1870, with Dr. J. G. Holland, founded *Scribner's Monthly*; in 1881, having gained a controlling interest in the magazine, he changed its name to the *Century Magazine*, and became founder and president of the Century Publishing Co. *St. Nicholas* was founded by him in 1873. He also organized the *Century Dictionary* enterprise. Died April 18, 1892.

Smith, SAMUEL FRANCIS, clergyman and hymn-writer, was born in Boston, Mass., Oct. 21, 1808; graduated from Harvard; one of the class commemorated in Dr. Holmes' poem, *The Boys*; studied theology at Andover, and entered the Baptist ministry; in 1875-76, and again in 1880-82, he visited the chief missionary stations in Europe and Asia. He wrote many hymns; those best known are: *My Country, 'tis of Thee*, and *The Morning Light is Breaking*. Died Nov. 16, 1895.

Smith, in Kansas, a N. co.; area, 900 sq. m.; intersected by the North Fork of Solomon river, and also drained by Beaver, Cedar, and Oak creeks. *Surface*, chiefly rolling prairie; *soil*, fertile. *Cap.* Smith Center. *Pop.* (1895) 14,019.

Smith College. (*Educ.*) A non-sectarian institution for the higher education of women, at Northampton, Mass. It was founded in 1875 by Miss Sophia Smith, of Hatfield, Mass., who died June 12, 1870. She was the niece of Oliver Smith (1766-1845), who founded the "Smith Charities," in the same city, which expends the interest of over \$1,000,000 in marriage portions to poor young couples, &c. Besides giving \$387,468 to Smith College, Miss Smith endowed a preparatory school at Hatfield, Mass., with \$75,000. There are at the college three courses—classical, literary, and scientific, each occupying four years. There are also schools of music and of art, the former requiring three years and the latter four. Students and teachers meet daily for worship, and the study of the Bible is part of the course. Eighteen buildings adorn the extensive grounds, besides an observatory and a botanical garden. In 1895 there were 60 instructors and 850 students, with a library of 6,000 volumes, and the revenue of the college, in that year, was \$124,600.

Smithson, JAMES, philanthropist, was born in England about 1754, a natural son of Hugh Smithson, third duke of Northumberland; graduated at Oxford (1786) with high rank as a chemist; travelled on the Continent, making scientific observations, and collected many gems and minerals; was elected a member of the Royal Society of England and of the French Institute. He bequeathed his property, about £120,000, to a nephew, on the condition that should the latter die without heirs, the property should be "left to the U. S. for the purpose of founding an institution at Washington, to be called the Smithsonian Institution, for the increase and diffusion of knowledge among men." The nephew died in 1835, without heirs, and the property came into the possession of the U. S. Government, amounting to \$508,318.46. S. died June 27, 1829.

Smoke-consumption, *n.* Manufacturers of furnaces have given great attention to arrangements and devices looking to the consumption of the solid particles that so easily escape up a chimney with the gases caused by combustion. These particles are principally finely divided carbon, or pellicles of carbon containing inflammable gas. If these can be retained in the furnace, the distribution of sooty smoke and cinders over the neighborhood is avoided, and their consumption is also an economy of fuel. The primary principle involved in accomplishing such perfect combustion involves the use of the proper amount of air in the furnace to secure complete burning of the fuel. If the amount of air reaching bituminous fuel is insufficient, the effect is that only partial distillation results, and a thick black smoke and tar-like soot are carried up. If insufficient air be given to anthracite or other carbonaceous fuel, the gases are only partially oxidized, and the same is true of wood fuel, with the added drawback that tar-like and acid products are carried off. On the other hand, if too much air be introduced in a furnace, the tendency is to reduce the heat of the furnace, and a great body of air is uselessly heated and passed up the chimney, while the lack of heat in the furnace is liable to cause incomplete combustion of the fuel. It is best that the air should be heated before reaching the fuel, as it otherwise chills the combustible gases and they are not perfectly burned. The plan of having the fresh fuel thrown on top of that which is red hot is a bad one, as the smoke should pass over a mass of live, burning fuel before ascending. This is recognized in the base-burning stoves, mechanical stokers, and many forms of furnaces. The several methods utilized to secure perfect combustion are: (1) Introduction of the fuel in a manner that insures the passage of the gases of combustion through a mass of red-hot fuel. (2) The admission of a second draft to inflame such unconsumed portions of combustible matter as are carried from the fire. (3) The projection of fine jets of steam into the upper part of a furnace, to carry down again unconsumed particles. (4) The use of a rotating grate on which the fuel is always fed from the front, so that the smoke coming from the fresh fuel is obliged to pass over that which is more thoroughly heated. (5) The employment of a dead plate, on which the fresh fuel is placed, and allowed to heat until it becomes coked, when it is pushed on to the grate, the smoke that arises during the coking being forced to pass over the red-hot coals beyond.

Smut, *n.* (*Agric.*) A fungous affection of wheat, barley, oats, and other cereals, deriving its name from the black sooty mass into which the diseased parts of the host-plant are converted. Smut is produced by a fungus of the gen. *Ustilago*, allied to the gen. *Uredo*, and characterized by its simple spores springing at first from delicate threads or produced in the form of closely-packed cells, which ultimately break up into a powdery mass, and destroy the inflorescence, where it fructifies. It commences its growth long before the sheath opens to give liberty to the inflorescence. The spores are dispersed over the whole country, but the disease is not communicated from one plant or field to another of standing grain, attacking, instead, the sprouting seed. Washing smutty seed in a solution of blue vitriol, one pound or more to a gallon of water, and then sowing in clean soil, prevents the disease. As soon as the seeds are sown, ordinarily the spores are ready in the soil to contaminate the young plant. We have in vain attempted to impregnate grain with smut, though rubbing healthy seeds with the spores of "buut," the English name for the "stinking-smut,"

seldom or never fails. The probability is that the smut-spores require a long season of rest before their germination takes place, whereas buut-spores develop their peculiar spawn a few hours after being sown. Smut occurs in all parts of the world where cereals are cultivated, and causes much loss. It is subject to slight variations according to the different plants upon which it is developed, but not such as to justify the separation of several species. On Indian corn it attains an enormous size, measuring frequently some inches in diameter.

Smyth, CHARLES PIAZZI, astronomer, was born in Naples, in 1819; educated in England, and adopted astronomy as a life-study; in 1845 was appointed first astronomer royal for Scotland in the Royal Observatory, Edinburgh, which position he filled until 1888, when he was retired by his own request, and granted a pension.

Snohomish, in Washington, a city, cap. of Snohomish co., 48 m. by water N. of Seattle; has extensive lumbering interests. *Pop.* (1897) 2,550.

Snowden, JAMES ROSS, numismatist, was born in Chester, Pa., in 1810; graduated from Dickinson College; studied law; was a member of the Pennsylvania legislature (1842-44); State treasurer (1845-47); treasurer of the U. S. Mint at Philadelphia (1847-50), and director of the Mint (1853-61). He gave his whole attention to the study of old coins and the history of coinage in all times and countries, and wrote several works relative to this subject. Died March 21, 1878.

Snow-plow, *n.* The introduction of railways in northern climates has necessitated the manufacture of snow-plows, which have been highly developed on American railways. For comparatively light snow-falls, cars equipped with rotating sweepers are satisfactory, and are much used by street railway companies. For deeper snows a car with a very stout, wedge-shaped front is used to force the snow to either side, by the push of a locomotive. Where great drifts are encountered this form is inefficient, and the rotary or centrifugal snow-plow is employed. This consists of a stoutly-built car, containing an engine and boiler arranged to drive a forwardly projecting shaft. On this

Fig. 3064.—CENTRIFUGAL SNOW-PLOW.

shaft is mounted a mechanism resembling an enormous auger, having flanges of increasing diameter, and very broad for its length; this auger projects from the front of the car, the point being a little more than a foot above the rails. When this plow is pushed before a locomotive into a snow-drift, and the auger rapidly rotated by its own engine, it bores right into the drift, throwing the snow out centrifugally, and avoiding that packing of the snow which results from using a wedge-like plow. These centrifugal plows are often built of fifty tons weight, and since their introduction the interference with railway travel by snow-drifts has been much lessened.

Soddy, in Tennessee, a post-village of Hamilton co.; has several mills. Coal and iron ore abound here. *Pop.* (1897) 1,255.

Soko'to, a large province in the western Soudan, embracing the lower valley of the Niger, and its largest eastern tributary, the Benue. Its coast extends from the Bight of Benin east to Old Calabar, and Bonny is the best-known port. Its inhabitants number about 10,000,000, consisting of Fulahs (the ruling class), semi-civilized Mohammedan Hausas, and pagan negroes. The sultan resides chiefly at Sokoto, on the northern frontier.

Solenoid, *n.* (*Physics.*) A simple form of electromagnet, made use of in electrical experiments. It is ordinarily constructed of a helix of stout copper-wire having the ends of the wire turned in so as to pass along the axis of the helix to the middle, where they are brought out between two of the turns, and can be attached to the terminals of a battery in any required way. The different parts of the helix are insulated from each other either by using covered wire, or by using stiff wire and bending it so that the parts may not be in contact.

Solution, *n.* (*Physics.*) The change of solid or gaseous matter into liquid form by combination with a liquid. The action is due to cohesion, sugar dissolving in water because its molecules have less adhesion among themselves than they have for the molecules of the water. A combination of this sort, being unaccompanied by any discovered chemical change, is called a *physical solution*. It is contended by some, however, that all solu-

tions are *chemical solutions*, involving some chemical change, and that when salt, sugar, &c., are dissolved in water a hydrate or a mixture of hydrates is formed, and that the molecules of the dissolved substance are not free, as they are in a physical solution properly so-called. Solutions of metals are common, being used in electro-plating. A change of temperature frequently follows the combining of matter by solution.

Soma'iland. (*Geog.*) The "land of the Somali," that extreme triangular eastern part of Africa, between Abyssinia and British East Africa, terminating in Cape Guardafui. Its eastern coast and southern interior are under an Italian protectorate, and the British "protect" a large northern part, fronting on the Gulf of Aden, with Berbera as its principal port. The interior is a dry, nearly treeless series of plateaus, through which the Jub, Web, and several other large rivers course in deep cañons from the mountains of Abyssinia and Gallaland, whence the sources of the Blue Nile flow northward. The Somali are a tall, well-formed, light-colored Hamitic race, speaking a distinctly Hamitic language, not yet reduced to writing, and living a nomadic, pastoral life, with vast herds of camels, sheep, goats, and horses. They are bold hunters (the region abounds in big game) and fierce warriors, whose policy has been to keep out all foreigners. They believe and practice a loose form of Mohammedanism, and have been mixed largely in the southern part with Gallas and other negroes, and northward with Abyssinians. Sportsmen have been the principal explorers thus far; and large parts of the interior remain unvisited by Europeans. In winter some 30,000 people assemble at Berbera, and lesser transitory hordes at other ports, and engage in trade, buying European goods with myrrh, frankincense, hides, ostrich-feathers, and similar natural products, and exchanging camels and other live stock.

Som'ervell. in *Texas*, a N.E. central co.; area, 200 sq. m.; intersected by Brazos river. *Surface*, rolling; *soil*, fertile. Celebrated for its flowing wells, over 200 in number, yielding from 40 to 500 gallons per minute of water strongly impregnated with sulphur, iron, and chalybeates. *Cap.* Glen Rose. *Pop.* (1897) 3,980.

Soph'ocles. EVANGELINUS APOSTOLIDES, Greek scholar, was born in Tsangaranda, Thessaly, March 8, 1807; having emigrated to America, he entered Amherst College in 1829; became tutor at Harvard (1842); full professor of Ancient, Byzantine, and Modern Greek (1849), filling this chair to the end of his life. He published several text-books of the Greek language. Died Dec. 17, 1883.

Sore'head. *n.* (*Pol. Slang.*) One who is aggrieved by some action of his party, or one who is disappointed in seeking office, and consequently finds fault with or deserts the organization.

Soth'ern. EDWARD ASKEW, actor, was born in Liverpool, England, April, 1830. He achieved a great success as *Lord Dundreary*, in *Our American Cousin*, in 1858; later, he was equally successful in other rôles, notably *David Garrick*, *The Crushed Tragedian*, and *Brother Sam*. Died Jan. 20, 1881.

Soth'ern. EDWARD HUGH, actor, second son of E. A. Soth'ern, was born at New Orleans, La., Dec. 6, 1859; made his debut (1876) with his father at Abbey's Theater, New York. His earlier successes were in the plays *One of Our Girls*, *The Love Chase*, and *A Scrap of Paper*; his latest are *Lord Chumley*, *Captain Letterblair*, *The Prisoner of Zenda*, and *An Enemy to the King*. In these last two plays he has had as leading lady Miss Virginia Harrod, to whom he was married Dec. 3, 1896.

So'thic. *n.* (*Astron.*) A period of 1,460 years, during which, after the Egyptian calendar of 365 days to the year, the seasons will pass through all the twelve months of the year. As the solar year, however, is 365d. 5h. 46m. 47s., this system entailed an annual error of 5h. 48m. 47s., which in 1,460 years amounted to an entire year, as above stated. It would have been fortunate had the year been exactly equal to a certain number of days without a remainder. As, however, it is not, it is necessary to adopt an artificial value for it so near the truth as not to admit of the accumulation of an error amounting to a day in a long period of time. This is accomplished by the beautiful working of the Gregorian calendar, viz.: that every common year that is divisible by 4 without a remainder, and every centennial year divisible by 400 without a remainder, shall be leap years, consisting of 366 days, all the others to have but 365 days. This is far more exact than the Julian calendar of 365 $\frac{1}{4}$ days to the year, which, however, was accurate enough for a short period of time, as its annual error amounted to but 11m. 13.95s. The Gregorian year is 365d. 5h. 49m. 12s., which exceeds the solar by 25.95s., an error which amounts to only a day in 3,325 years. The Gregorian is not the most exact method of intercalation that could be devised, but is the most simple and convenient. Between 1796 and 1804 there were no leap years, nor will there be between 1896 and 1904. The next time there will be an interval of 8 years between two consecutive leap years will be A. D. 2100.

Sou'f'le. *n.* [*Fr. souffler*, to puff.] A low whispering sound or murmur heard on auscultation of some organ or part of the body, due to the movement of air or fluids within.

Sou'f'le (*sūf-flū'*), *a.* [*Fr.* (*Cerom.*) A term applied to pottery-decoration, meaning spotted or mottled by having liquid color blown on it, as through lace or net-work.

(*Cookery.*) Made light and frothy, and set thus by heat; as, omelette soufflé.

—*n.* A light, puffy pudding made with whites of eggs and other ingredients.

Soul'ful. *a.* Filled with or manifesting life, energy, spirit, power, or feeling; emotional; spiritual.

Sound'-lens. *n.* A lens-like apparatus which may be made to focus the waves of sound as a glass lens focuses rays of light. A bladder filled with carbon dioxide is supported in a ring frame, so as to give it the form of a double-convex lens. If then a watch, or something making a slight sound, be held at a distance of some feet, and the ear of the listener on the opposite side of the lens at an equal distance, the sound focus is readily found, at which point the ticking or other noise is distinctly heard, though otherwise beyond earshot.

Sou'sa. JOHN PHILIP, orchestra and band leader and composer, was born in Washington, D. C., in 1854; when not yet 12 years old, he played in theater orchestras; at the age of 13 he became infatuated with the life of a circus musician, and surreptitiously joined a travelling company of performers, playing in the circus band. Upon the discovery of this adventure his father apprenticed him to the Marine Corps for a term of five years. This discipline led to his connection with the Marine Band, of which he ultimately became the leader. In 1892, with the assistance of David Blakely, S. organized the band now known by his name, and gave the first public concert by the new organization in Stillman Music Hall, Plainfield, N. J., with a brilliant success that was accepted as a good omen for the new venture. His performances since have proved immensely popular, and financially successful. His marches are played by all bands, and an opera, *El Capitan*, has met with general favor.

South. University of the. (*Educ.*) This institution, located at Sewanee, Tenn., was founded by Leonidas Polk, bishop of Louisiana, and chartered in 1858. It was not opened, however, as its buildings and endowments were lost during the Civil War. Yet it still possessed 10,000 acres of land, and in 1868 a small school was started by Bishop Quintard, of Tennessee, to which have been added, in 1870, a college department; in 1873, a theological department; in 1892, a medical school, and, in 1893, a law school. Although the university has been hampered by lacking funds, it has steadily developed. It is under the control of a board of trustees, consisting of the bishops and 3 elected trustees from 15 dioceses of the Protestant Episcopal Church in the Southern States, and the administrative head is called the vice-chancellor. In 1895, there were 29 instructors and 296 students, with 36,000 volumes in the library. Its income in that year was \$30,000. As students are expected to come principally from the Southern States, and as the situation of the university is high and healthy, studies are pursued all summer, and the long vacation is in the winter time.

South African Repub'lic. (*Geog.*) Formerly called Transvaal—that is, on the other side of the river Vaal, which forms its southern boundary. The northern boundary is the river Limpopo, which separates it from "Rhodesia." On the west are Khamaland and Bechnaualand (*q. v.*). On the south of the Vaal are Zululand, Natal, and the Orange Free State. The Republic is wholly an inland country, being 100 m. from the sea at the nearest point. Its length is 425 m., its greatest breadth from east to west 375 m., its total area 119,139 sq. m. The country is a high, healthy and undulating plateau, sloping inland from the mountains forming its eastern frontier, of which the height is 700 ft., with a seaward face abrupt and precipitous. The center of the Republic is traversed by several mountain ranges running at right angles to the main chain, the chief being the Magaliesberg, with an average height of 5,000 ft., some peaks rising to 9,000 ft. Here is the water-shed of both the Vaal and Limpopo systems.

The greater part of the country is well adapted for farming and stock-raising, especially the high, well-watered plains of the southern portion. The wheat raised in the country is of the finest quality, and there are about 50,000 acres under cultivation. Under irrigation, fruit trees, the sugar-cane, coffee, indigo, and tobacco thrive. The mineral wealth of the country is very great. The southern and southwestern parts are the great centers of South African gold-mining, and in a few years have made South Africa the third largest gold-producer in the world. The output in 1895 was 2,494,487 ounces. Iron has been found, and a silver mine close to Pretoria yields over 9,000 tons of ore annually. Copper, cobalt, and plumbago are found in many places. The Republic has a white population estimated, in 1897, at 250,000, and a black population estimated at 375,000, composed of East Bechnanas and other Kaffir tribes. The capital is Pretoria (*q. v.*). At the end of 1896 there were running 452 m. of railway, with 360 m. under construction and 500 m. projected. The lines already opened connect Pretoria with Cape Town, Natal, and the Portuguese boundary. The country has 1,952 m. of telegraph, and the South African Republic joined the Postal Union in 1892.

At the extreme southern extremity of Portuguese East Africa is Tongaland. The northern part of this, by an agreement between England and Portugal, in 1890, was annexed to Portugal. Directly to the east of Tongaland, on the edge of the upland regions, is Swaziland, so named from a chief named Swazi. In November, 1893, by a convention between Great Britain and the Transvaal, Swaziland was annexed to the Republic. The Constitution of the South African Republic, as amended in 1895, gives the executive power to a President, elected for 5 years by all first-class burghers, and assisted by a Council of five members. The legislative power of the state is vested in the two Volksraaden, of

24 members each, elected for 4 years, one-half retiring every two years. The electors comprise 2 classes—first-class and second-class burghers. The first-class burghers, who vote for both Volksraaden, comprise all male whites, residents of the Republic before May 29, 1876, who took part in the wars of 1881 and 1894, and their male children from the age of 16. The second-class burghers, who vote only for the second Volksraaden, include the naturalized male alien population and their male children from the age of 16.

The earliest settlers in the Republic were the Boers, descendants of Dutch and French Huguenot settlers, who finding the government of the British in Cape Colony intolerable, emigrated northward and established a republic in 1840, their leaders being Maritz, Potgieter, and Prætorius. The Republic was acknowledged by Great Britain in 1852, and existed until 1877, when the British government annexed it to the Cape Colony. Against this the Volksraaden protested. No attention being paid to their protest, the Boers took up arms, and, as a result of the war, recovered, in 1881, their independence, by a convention in which the suzerainty of the British crown was recognized. This convention causing a great deal of friction, a treaty was signed in London (Feb., 1884) which, President Krueger says, does not recognize the suzerainty, although the British authorities say differently. The Republic remained at peace until Dec., 1895, when Leander S. Jameson, administrator of the South Africa Company's territory, made a raid into the Republic's territories. His advance was soon checked by a force of Boers. Jameson being obliged to surrender, was taken to England, tried, convicted, and sentenced to imprisonment for 15 months. (See RHODES, CECIL J.) Some years after the London treaty of 1884, the discovery of gold led to an immediate influx of a miscellaneous population. These various elements were named by the Boers, Uitlanders, meaning outlanders or foreigners. They now number, it is estimated, 150,000. They clamor for a right of citizenship, which the government of the Republic does not think it wise to grant them. It was with the aid of this dissatisfied element that Jameson expected to overturn the government of the Boers.

South Beth'lehem. in *Pennsylvania*, a post-borough of Northampton co., on S. side Lehigh river, opposite Bethlehem; has extensive manufactures of iron and steel, including armor plate, and zinc works, brass foundry, shovel factory, silk and knitting mills, &c. Seat of Lehigh University. *Pop.* (1897) 14,950.

South Bos'ton. in *Virginia*, a post-town of Halifax co., 32 m. E. by N. of Danville.

South Dako'ta. a State of the American Union, bounded N. by North Dakota, E. by Minnesota and Iowa, S. by Nebraska, and W. by Montana and Wyoming, lying between Lat. 42° 28' and 45° 57' N. (the general S. boundary being the parallel of 43° N.); and between Lon. 96° 26' W. and 104° 3' W. The extreme breadth N. to S. is 240 miles, extreme length E. to W. 386 miles, land area 76,700 sq. m.—*Phys. Conditions.* The State is crossed by the Missouri river, which divides it into two nearly equal portions. The Big Sioux river flows through the E. portion, forming the E. boundary for 75 m. It has a rapid current, and descends 110 feet in the rapids known as Sioux Falls. The Dakota (or James) river is a sluggish stream, flowing midway through the eastern section. The principal western streams are the Cheyenne, Grand, White, Bad, and Moreau. The surface of the State generally slopes downward toward the southeast, in which direction all the streams flow. The section east of the Missouri is generally level or gently rolling, with a small hilly area in the northeast, and another in the central region near the Missouri. West of this stream the upward slope of the land becomes more decided, the elevation culminating in the Black Hills, a mountainous region in the southwest, of about 100 by 60 miles in extent, its highest point being Harney's Peak (9,700 feet). The western section in general is more rolling and broken than the eastern, but has much level area. Southeast of the Black Hills, and near the headwaters of White River, is a striking geographical feature known as the Bad Lands (*Mauvaises Terres*, Fr.), which extend for a considerable distance into Nebraska. This is an elevated region of alluvial origin, whose indurated earth has been worn into innumerable cuts, cañons, and depressions by water action, its rocks presenting at a distance a remarkable appearance of walls, castles, and other architectural features. It abounds with interesting fossils. The soil of the river bottoms is highly fertile, while the gently sloping land of the eastern section, and the valleys and intervals of the Black Hills region are rich in the elements of fertility.—*Min.* The State is rich in minerals, the Black Hills containing gold, silver, tin, and other valuable substances. The gold yield has been large, and was materially increased in 1895 through the yield of rich mines opened near Hill City. The gold yield up to the present time has been over \$60,000,000, and that of silver slightly over \$1,000,000. Tin exists abundantly in the Harney's Peak and Nigger Hill localities, and a mill for its production was opened in 1890, but the ore is difficult to reduce, and its working has not prospered. There are at various points valuable quarries of red quartzite, and extensive deposits of clay and chalkstone, from which a superior quality of Portland cement is made. Manganese exists, but has not been much worked.—*Agric.* The chief industries of South Dakota are stock-raising and agriculture, the live stock of the State being valued at over \$26,000,000, while the culture of the soil is diligently prosecuted, the State in 1890 having 50,158 farms, com-

taining 6,959,293 acres of improved land, which, with improvements, were valued at \$107,166,335. The principal cereal crops for the year 1895 were: Indian corn, 12,423,442 bushels; wheat, 29,261,088 bushels; oats, 18,154,774 bushels. The deficiency of the rainfall is made up for in a considerable section of the State by an abundance of artesian water, there being an extensively distributed water-bearing stratum, from which the water rises with such force as to furnish power to small manufacturing. It is also used to furnish a water supply for towns, and, as above said, for irrigation.—*Manuf.* The manufacturing interests are but little developed, the capital employed in production in 1890 being \$3,207,796. The cheapness of power, however, in the artesian well districts is stimulating productive industries of a kind capable of being worked by the power derived from these wells. Four trunk lines of railroad enter the State, with a dozen or more minor ones, furnishing abundant means of transportation, the total length of road being over 3,000 miles.—*Political Divisions.* South Dakota is divided into 78 counties, as follows:

Armstrong,	Delano,	Lake,	Roberts,
Aurora,	Deuel,	Lawrence,	Sauborn,
Beadle,	Dewey,	Lincoln,	Schnasse,
Bou Homme,	Douglas,	Lugenbeel,	Scobey,
Boreman,	Edmunds,	Lynau,	Shannon,
Brookings,	Ewing,	McCook,	Spink,
Brown,	Fall River,	McPherson,	Stanley,
Brulé,	Faulk,	Marshall,	Sterling,
Buffalo,	Grant,	Martin,	Sully,
Butte,	Gregory,	Meade,	Todd,
Campbell,	Hauiliu,	Meyer,	Tripp,
Charles Mix,	Hand,	Miner,	Turner,
Choteau,	Hanson,	Mitchell,	Union,
Clark,	Harding,	Moody,	Wagner,
Clay,	Hughes,	Nowlin,	Walworth,
Codington,	Hutchinson,	Pennington,	Washburn,
Custer,	Hyde,	Potter,	Washington,
Davison,	Jackson,	Pratt,	Yankton,
Day,	Jerauld,	Presho,	Ziebach,
	Kingsbury,	Ritchart,	

Principal Cities and Towns.—Sioux Falls, Yankton, Pierre (the capital), Aberdeen, Huron, Watertown, Lead City, Deadwood, Mitchell, and Rapid City.—*Gov.* The legislative authority resides in a Senate and House of Representatives, which meets biennially, the sessions being limited to 60 days. The executive authority resides in a governor elected for 2 years, and a lieutenant-governor chosen for the same term. The governor has power to veto separate items in a bill; bills not returned by him within three days of their reception become laws. The executive officials include also a secretary of state, auditor, treasurer, superintendent of instruction, attorney-general, and commissioners of school and public lands, all elected for terms of 2 years. The judicial authority resides in a Supreme Court, Circuit and County Courts, justices of the peace, and courts required for cities and incorporated towns. Privilege of suffrage is enjoyed by all male citizens of the U. S., and aliens who have declared their intention of becoming citizens, and who have resided in the State, county and precinct for defined periods of time. Women are privileged to vote at any election held for school purposes. A State prohibition law was passed in 1891, and was declared constitutional by the Supreme Court in 1892.—*Educ.* Congress, on creating the State of S. D., required that tracts of land aggregating 2,823,320 acres should be set aside for the support of public schools, fixing its minimum price at \$10 an acre. There are 90,000 pupils enrolled in the public schools. Advanced education is provided for by a number of institutions, including the University of South Dakota, at Vermillion; Dakota University, at Mitchell; Pierre University, at E. Pierre; Sioux Falls University, at Sioux Falls, a number of other colleges and academies, and a State Agricultural College and State School of Mines. Other institutions include a Deaf and Dumb Asylum at Sioux Falls, hospitals for the insane at Yankton and Redfield, a Soldiers' Home at Hot Springs, a Reform School at Plankinton, a State Penitentiary at Sioux Falls, and an asylum for the blind at Gary.—*Hist.* The country afterward known as Dakota was crossed by the expedition of Lewis and Clarke (1804-06), who spent a winter in camp with the Mandan Indians near the site of the present town of Mandan. The upper Missouri was first ascended by a steamboat, the *Yellowstone*, in 1832. Fremont crossed the country in 1839, and it was explored in 1855 by Lieut. Warner for the U. S. government. The region had been acquired as part of the Louisiana Purchase, and in 1849, on the creation of the Territory of Minnesota, the eastern part of the Dakotas was included in the assigned area. The Territory of Dakota was created in 1861, and in 1868 Wyoming Territory was formed from part of its area. A scientific expedition, escorted by troops under General Custer, entered the Black Hills in 1874, and gave the first authentic information about the mineral wealth of that region. Population now grew rapidly, and in 1883 a convention to frame a State Constitution for Dakota met at Sioux Falls. Dissensions between the people of the two sections of the Territory followed, and in 1888 it was decided to divide the territorial area into two States, under the names of North and South Dakota. The bill for their admission passed Congress, and was signed by the President, Feb. 22, 1889. In 1890-1891 the Indian Messiah excitement led to troubles with the Sioux Indians, and in 1892 the Yankton Sioux ceded to the government a large part of their reservation between the Missouri and Choteau rivers. Pop. (1880) 98,268; (1890) 328,808.

South Fork, in *Pennsylvania*, a post-borough of Cambria co., 26 m. S. of Ebeusburg. Pop. (1897) 1,350.

South Glens Falls, in *New York*, a post-village of Saratoga co. Pop. (1897) 1,710.

South Holland, in *Illinois*, a post-village of Cook co. Pop. (1897) 1,220.

South Omaha, in *Nebraska*, a city of Douglas co., 4 m. from Omaha; has extensive stockyards and meat-packing establishments, and large rendering houses. The number of hogs slaughtered is only exceeded in two cities of the country. Pop. (1897) 12,500.

South Pittsburg, in *Tennessee*, a post-village of Marion co., 27 m. W. of Chattanooga; has blast furnaces, machine-shops, flour-mills, &c. Pop. (1897) 1,750.

South St. Paul, in *Minnesota*, a city of Dakota co., on Mississippi river, 3 m. from St. Paul; has manufacturing interests. Pop. (1895) 2,135.

South Stillwater, in *Minnesota*, a post-village of Washington co. Pop. (1895) 1,453.

South Williamsport, in *Pennsylvania*, a post-borough of Lycoming co., ½ m. from Williamsport. Pop. (1897) 3,100.

Southampton, in *New York*, a post-town of Suffolk co., on Atlantic coast of Long Island, 10 m. S.W. of Sag Harbor. A summer resort. Pop. (1897) 1,520.

Southport, in *North Carolina*, a city, cap. of Brunswick co. Pop. (1897) 1,310.

Southworth, EMMA DOROTHY ELIZA NEVITT, was born at Washington, D. C., Dec. 26, 1819; has written about 60 novels, the first being entitled, *The Irish Refugee* (1849). Among her later books are: *The Lost Heir of Lindlghow* (1872); *Red Hill Tragedy* (1877), and *The Phantom Wedding* (1878). Died in 1897.

Spaghet'ti, *n. pl.* [Ital.] An article of food, made of paste; similar to macaroni, but smaller and cord-like.

Spalpeen, *n.* [Ir. *spailpén*.] A good-for-nothing fellow, a rogue; a term of severe reproach.

Specular, *a.* [From Lat. *speculum*, a mirror.] Having the qualities of a speculum or mirror; having a smooth reflecting surface.—Affording view. (R.)—Aiding the sight, as a magnifying glass.

Specularia, *n.* (Bot.) A genus of plants, order *Campanulaceae*. The most conspicuous species, *S. speculum*, the Venus' Looking-glass, is a pretty border flower named from the form of the blue corolla, which resembles a little round, concave mirror (*speculum*).

Speculate, *v. n.* [Fr. *spéculer*.] To contemplate: to consider a subject by turning it in the mind, and viewing it in its different aspects and relations.

(Com.) To purchase land, goods, stock, or other things, with the view or expectation of selling the articles at a profit.

Speculation, *n.* [Fr.; Lat. *speculatio*.] Mental view of anything in its various aspects and relations; contemplation; intellectual examination.—Train of thoughts formed by meditation; mental scheme; theory; views of a subject not verified by fact or practice.

(Com.) Act or practice of buying stocks or goods, &c., in expectation of a rise of price and of selling them at an advance.

Speculativist, *n.* A speculator; a theorizer.

Speculative, *a.* [Fr. *speculatif*.] Given to speculation; contemplative; formed by speculation; theoretical; ideal; not verified by fact, experiment, or practice.—Pertaining to view. (R.)

(Com.) Pertaining to speculation in stocks, goods, &c.

Speculatively, *adv.* In contemplation; with meditation; ideally; theoretically; in theory only, not in practice.—In the way of speculation in goods, &c.

Speculativeness, *n.* The state of being speculative.

Speculator, *n.* [Lat.] One who speculates or forms theories.

(Com.) One who buys goods or other things with the expectation of a rise of price, and of deriving profit from such advance.

Speculatory, *a.* [Lat. *speculatorius*.] Exercising speculation.—Adapted for viewing.

Speculist, *n.* One who considers or observes. (R.)

Speculum, *n.*; *pl.* SPECULA. [Lat., from *specere*, to behold.] (Opt.) The reflector formed of polished metal, in distinction to one made of glass, to which the term *mirror* is generally applied. Tin and copper, the materials employed by Newton in the first reflecting telescope, are preferable to any other metal for the production of large specula, the best proportion being 4 atoms of copper to 1 of tin; in fact, 1264 parts of copper to 589 of tin. Copper in excess imparts a reddish tinge, while zinc in excess renders the fracture granulated and less white. When speculum metal is perfect, it should be white, glassy, and flaky.

(Surg.) An instrument which has the property of dilating the part to which it is applied, and, by means of a reflecting glass, expressing the nature of the disease which lies beyond the reach of the naked eye. The *S.* is chiefly used in cases of disease of the neck, of the uterus, and the vagina itself.

(Zool.) The bright spot on the wings of ducks, &c.

Speech, *n.* [A. S. *specc*, *spræc*; Du. *spraak*; Ger. *sprache*.] The faculty of uttering articulate sounds or words, as in human beings; the faculty of expressing thoughts by words or articulate sounds.—Language; words as expressing ideas.—A particular language, as distinct from others.—Talk; mention; common saying.—Formal discourse in public; oration; address; harangue.—Any declaration of thoughts.

Speech, Visible, (Educ.) The reading of spoken utterances by watching the motions of the lips, larynx, &c., has been scientifically studied for a number of years. The ability to comprehend with the eye instead of the ear is invaluable to deaf persons, and to bring about proper instruction for the deaf involves a deeper study and a wider knowledge of the principles of visible speech than are now prevalent. There are deaf

persons who have become so clever in speech-reading as to be able to carry on a conversation as readily as people with perfect hearing, but they are largely aided in their understanding by the gestures and facial manners of a speaker. It is the consonants that give form and character to the lips in sounding, and as, unfortunately, at least nine of the labial consonants are distinguishable only by sound, the deaf person is at a serious disadvantage in lip-reading. These nine are b, d, f, l, m, n, p, t, and v, and are serious stumbling-blocks, while the gutturals, as k, c, g, h, ng, and ch, are quite as bad, being rarely distinguishable from each other, and very difficult to discover at all. The deaf lip-reader is under the continual difficulty of being obliged to judge from the context or association between pan and mad, money and putty, man and mat, Flushing and Fletcher, &c. These complications exist in every sentence, and are as confusing as are pain and pane, or rein and rain, to a student of English. For the better study of the mechanical movements requisite to speech, four instruments have been designed—the phonoscope, labiograph, laryngograph, and kymographion. The phonoscope provides instantaneous and continuous photographs of the mouth and lips during the utterance of words, and is described at PHONOSCOPE. The labiograph and laryngograph employ mechanical devices for holding pads against the lips and larynx respectively, so that their movements may be communicated through a small pneumatic tube to the kymographion, which is a recording instrument, having a cylinder on which is placed a smoked paper to receive the tracing of a small bamboo splint that is influenced by the pressure in the pneumatic tube. In this manner tracings are secured of the movements accompanying different sounds, and the minutest differences may be noted and studied, with the object of bringing them to the attention of the deaf, and assisting them to an exact comprehension of what is spoken. One of the great difficulties in the way of correct and easy lip-reading is the prevailing tendency to only half enunciate the words of a sentence. Those who are studying a new language, and trying to speak it, are made familiar with this difficulty, which passes unnoticed by many persons. Melville Bell and his son, Alexander Graham Bell, have done much in the way of developing a proper understanding of visible speech. The elder Bell made a thorough study of elementary sounds, and published valuable tables, as did also Henry Sweet, A. J. Ellis, Storm, Sievers, and others. Melville Bell also published a book on *Visible Speech*, in 1867, and W. D. Whitney a commentary on the same, in 1876. Alexander Graham Bell, who took a special interest in the subject and became an expert instructor of deaf mutes, introduced his father's system into the U. S., and deserves much credit for its propagation here, his work in this direction having been largely overlooked because of his fame in connection with the invention of the speaking-telephone. Edward M. Gallaudet, also, of the Columbia Institution for the Deaf and Dumb, at Washington, D. C., has done much to propagate the system.

Speechful, *a.* Voluble; loquacious; full of words or speech. (R.)

Speechification, *n.* The act of making a speech; used humorously.

Speechify, *v. n.* To make a speech—(in contempt, or vulgar).

Speechless, *a.* Destitute or deprived of the faculty of speech.—Dumb; mute; silent; not speaking for a time.

Speechlessness, *n.* State of being speechless; muteness.

Speechmaker, *n.* One who makes speeches.

Speed, JAMES, jurist, was born in Jefferson, Ky., March 11, 1812; graduated at Catholic College, Bardonia (1828); admitted to the bar, and practiced in Louisville, and taught in the law department of the University of Louisville; was kept out of politics by his anti-slavery sentiments. He opposed secession, and was influential in preserving Kentucky from seceding; aided in recruiting troops for the Union army; was State senator (1861-63); attorney-general for the U. S. (1864-66); resigned because of his disapprobation of President Johnson's course. Died June 25, 1887.

Speedway, *n.* A roadway, in or near a large town or city, specially prepared and reserved for fast driving.

Spellbinder, *n.* (Humorous.) An effusive political orator or stump-speaker, so called from his supposed power to hold an audience *spellbound*. (A term first applied in the U. S. in the political canvass of 1888.)

Spencer, HERBERT, philosopher, founder of the system of synthetic philosophy, was born in Derby, April 27, 1820. His father was a teacher of mathematics, and fond of the natural sciences, especially giving attention to entomology; he educated his son at home, and trained him in habits of observation. The boy was an only surviving child, and of fragile health, but fond of making experiments and collections of specimens in natural history. His uncle, Thomas Spencer, rector of the parish of Hinton, was also for a time his tutor. His distaste for classical studies, as well as his poor health, deterred him from taking a university course; instead, he entered the office of a railway engineer, where he remained 8 years, in the meantime following out his own philosophical speculations, and writing a series of letters to the *Nonconformist* on *The Proper Sphere of Government*. The ideas thus early set forth were further elaborated in his book, *Social Statics* (revised edition, 1892). In 1859 S. prepared a prospectus of his system of synthetic philosophy, and the next year announced it to the world. He was 33 years at work upon it, and it had then far

Herbert Spencer

1820-

exceeded the compass of his original design. The work falls into 5 divisions: 1. The Proper Scope and Limitations of Philosophy; 2. Biology; 3. Psychology; 4. Sociology; 5. Morals and the Laws of Social Development. As the work went on, controversy kept pace; the reflective criticism of the day centered upon S.; even those who rejected his doctrines recognized him as one of the most commanding intellects of the world. To the accomplishment of his task he devoted all his strength, resources, and time; he refused all distractions from his work, declined academic honors and memberships in learned societies, and prolonged his life by careful regard for his delicate health. His books have been translated into French, many of them into most of the European languages, and some into Japanese and Chinese. Besides the volumes specifically embodying his system of philosophy, he wrote many works on live topics—essays on style, manners, progress, science, &c.; his treatise on *Education* (1861) has gone through more editions than any other of his works, and has exerted a marked influence in educational circles.

Spencer, JOHN CANFIELD, lawyer, was born in Hudson, N. Y., Jan. 8, 1788; admitted to the bar (1809); held many legal-political offices in New York State until 1840; was U. S. secretary of war (1841-43); secretary of state (1843-44). He resigned the latter portfolio because of his objection to the annexation of Texas. Died May 18, 1855.

Spencerville, in Ohio, a post-village of Allen co., 12 m. S. of Delphos. Pop. (1897) 1,500.

Spink, in South Dakota, a N. E. co.; area, 1,505 sq. m.; drained by James (or Dakota) river. Surface, undulating; soil, fertile. Cap. Redfield. Pop. (1895) 8,964.

Spin'ner, FRANCIS ELIAS, financier, was born in Mohawk, N. Y., Jan. 21, 1802; was auditor of the port of New York (1845); member of Congress (1855-61); treasurer of the U. S. (1861-75); resigned this office June 30, 1875. Died Dec. 31, 1890.

Spirit Lake, in Iowa, a post-village, cap. of Dickinson co., 56 m. N.W. of Algona. A summer resort. Here is the State fish hatchery. Pop. (1895) 1,056.

Spirometer, *n.* An instrument or mechanism for measuring the capacity of the lungs. It is ordinarily constructed on the principle of a gas-holder, having a lower chamber of water, in which is placed a cylinder closed at the top, open at the bottom, and arranged to rise and fall as a pressure of air is blown in from a tube. A gauge is provided for showing the number of cubic inches of air driven in at one expiration from the lungs.

Spitzbergen, (*Geog.*) An archipelago consisting of West Spitzbergen, Northeast Land, Stans Foreland, Wiche Island, Barents' Land, Prince Charles Foreland, and a great number of smaller islands, lying half way between Greenland and Nova Zembla, 400 m. N.N.W. of the North Cape of Norway, between 76° 30' and 80° 30' N. Lat., and 10° and 30° E. Lon. It was discovered in 1596 by William Barents, but was long considered a part of Greenland. The Russians had known it much earlier under the name of Grumant, and hunted there. For four centuries it was only of interest to whalers and seal-fishers, but within the present century it has attracted much attention as a field of scientific research, and in connection with polar expeditions, which have wintered there or used it as a point of departure for sledges. There have been various summer settlements of fishermen along its shores, and colonies of Russians at one time passed a good many consecutive winters there; but only a few exploring parties have ever succeeded in wintering without great loss. Some recent reports upon the interior of the islands claim them to be far more habitable than has been thought, however, and all records show that the climate is warmer than that of the corresponding latitudes in Greenland and Smith Sound. The sea is comparatively shallow around the archipelago, on account of a submarine platform of rock from which the islands rise, and consequently the ice piles up along the coast, except for a few months in summer, when the Gulf Stream, which flows along the west of the islands, opens a passage by which ships can approach. During the 17th and 18th centuries the whale and hair-seal fisheries were of much importance, but both whales and seals have been almost exterminated. Vegetation is scanty, but animal life abounds, although the number of species is few, including reindeer, ice fox, and, among birds, geese, loons, petrels, and gulls, in vast flocks. Ice fields cover a great part of the land, and sharp peaks rise out of them—the "needle-like mountains" which gave the place its name.

Spofford, AINSWORTH RAND, librarian, was born in Gilmanton, N. H., in Sept., 1825. He was a bookseller and publisher in Cincinnati; edited there the *Daily Commercial* (1859); was appointed assistant librarian in 1861, and librarian in 1865. To S. is due the legal reform of 1870 through which copyrights are issued from the national capital, instead of from the offices of district clerks. The Congressional Library in 1865 contained 70,000 volumes; in 1895 the number was over 700,000, besides about 250,000 pamphlets. S. resigned in 1897, and was succeeded by John Russell Young, remaining as assistant librarian. He published *Library of Choice Literature* (1881); *Practical Manual of Parliamentary Law* (1884); and *Library of Historic Characters and Famous Events* (1894).

Spofford, HARRIET E. (PRESCOTT), author, was born in Calais, Me., April 3, 1835. S. has been a constant contributor to current magazines and newspapers, her work including poems, and a variety of prose essays and sketches. Her latest book is *A Scarlet Poppy* (1894).

Spokane Falls, in Washington, a city, cap. of Spokane co.; has very great water-power, and large man-

ufactures of flour, oatmeal, lumber, lime, cement, and bricks; has also foundries and machine shops, potteries, soap and cracker factories, &c. Trade center for eastern Washington, Oregon, and northern Idaho. Pop. (1897) 30,000.

Spontaneous Combustion, (*Physics*.) The ignition and burning of substances by internal heat without artificial aid. It is due to rapid oxidation, a heat being thus engendered sufficient to ignite oiled rags, pyrites, ores, phosphorus, charcoal, and various mineral, and in rare instances even animal substances. In the case of oily rags, wool, &c., it is due to the rapid oxidation of the oil, which is exposed to the air much more fully than when enclosed in a can or other common vessel. Those pyrites in which the protosulphide is associated with bisulphide of iron, as found in the Yorkshire and Nova Scotia coals, are most subject to spontaneous combustion, especially when the coal is subjected to moisture. Freshly burned charcoal, owing to the condensation of oxygen in its pores, is also liable to heating above the critical point. Phosphuretted hydrogen and some other gases, as the vapor of petroleum before refining, are liable to ignition spontaneously. Dry phosphorus will melt and take fire on the slightest friction, as by being moved or touched. Woody fibers, cotton, jute, hay, leaves, &c., when massed in a moist condition, incline to develop heat owing to what is known as eremacausis, or vegetable decomposition, and the heat sometimes rises to a dangerous point. Cargoes of jute have always been considered dangerous by vessel-owners. The great fire at London Bridge in 1861 is attributed to the spontaneous ignition of a mass of jute. There are numerous substances which, when very finely powdered and heated, take fire on any subsequent exposure to the air. (See PYROPHORUS.) It is familiarly known that strong nitric acid applied to hay, straw, &c., renders them spontaneously combustible. Some liquids, as cadocyl, readily take fire in the air. Its readiness to combine with oxygen that gives the tendency to heating and ignition, and any circumstances that increase the extent of exposure to oxygen add the probability of combustion.

Sprague, in Washington, a post-town, cap. of Lincoln co., 41 m. S.W. of Spokane Falls; ships horses, cattle, and produce. Pop. (1897) 1,880.

Spring City, in Pennsylvania, a post-borough of Chester co., 31 m. N.W. of Philadelphia; has manufactures of stoves, paper, glass, terra cotta, foundry facings, &c. Pop. (1897) 2,150.

Spring City, in Utah, a city of Sanpete co. Pop. (1895) 1,226.

Spring Valley, in New York, a post-village of Rockland co., 31 m. N. of New York. Pop. (1897) 1,210.

Springdale, in Arkansas, a post-village of Washington co. Pop. (1897) 1,000.

Springfield, in Minnesota, a post-village of Brown co. Pop. (1895) 1,116.

Spring Valley, in Illinois, a city of Bureau co., 104 m. S.W. of Chicago. In a coal-producing region. Pop. (1897) 4,100.

Spurgeon, CHARLES HADDON, preacher, was born at Kelvedon, Essex, England, June 19, 1834; son of a Congregational minister. At the age of 16, S. adopted Baptist views, and became very active in religious work, preaching and exhorting; and not long after was pastor of the chapel at Waterbeach. In 1853 he was called to the pastorate of the New Park Street Chapel, Southwark, London. The chapel was soon found to be too small; it was twice enlarged, but the number of attendants constantly increasing, it became necessary to build the Metropolitan Tabernacle, which was opened in 1861—a structure with double galleries, and a seating capacity of 6,000. S. founded a "pastor's college" for training evangelists, an orphanage, a colportage society, and almshouses in connection with his church, and supervised them all himself. He also established a book fund, which was superintended by his wife, and which, in ten years, supplied indigent ministers with over 80,000 volumes. From 1885 to 1891, S.'s sermons were in process of publication, reaching at the latter date 37 volumes, containing in all 2,188 sermons, while enough sermons remained to carry on the series to 49 volumes. Besides his sermons, he published *The Treasury of David*, a commentary on the Psalms; and an exposition of St. Matthew's Gospel; and the popular evangelical books: *John Ploughman's Talk*, *John Ploughman's Pictures*, *The Cheque-Book of the Bank of Faith*, and *Salt-Cellar*. He also wrote interesting narratives of his work in the New Park Street and the Tabernacle congregations. Died at Mentone, in the Riviera, Jan. 31, 1892.

Squeteague, The weakfish. See SCLENIDE.

Stadia Surveying, (*Civ. Eng.*) A method of surveying in which stadia-rods and wires are employed; used largely in the United States and in Switzerland. The transit, theodolite or other telescopic instrument used is provided with special horizontal stadia-wires, so called, which are in reality usually supplanted by a glass plate bearing accurately ruled lines. The stadia-rod is a sighting-rod bearing graduations which bear a definite relation to the lines on the glass in the telescope, the most common ratio being one that at a distance of 100 feet brings one foot on the rod to correspond with the distance between two lines. By sighting through the telescope to the rod, therefore, and observing the number of feet or fractional parts of a foot seen between the stadia-wires, the distance is easily read, a foot and a quarter on the rod indicating 125 feet, and so on. The principle will be recognized as based on the geometrical rule that the lengths of the parallel lines subtending an angle are always proportioned to their

distances from the apex of the angle. The number of wires or lines used is usually two, but sometimes more are employed, and the method of reading varied accordingly.

Stafford, in Kansas, a S. central co.; area, 792 sq. m.; drained by small tributaries of Arkansas river. Surface, chiefly undulating prairie; timber along streams; soil, fertile. Cap. St. John. Pop. (1895) 8,339.

Stafford Springs, in Connecticut, a post-borough of Tolland co., 25 m. N.E. of Hartford; has woollen and other manufactures. Here are mineral springs of medicinal value, much resorted to. Pop. (1897) 2,420.

Stage-fright, *n.* Fear or trepidation in coming before an audience, frequently felt even by experienced actors and orators.

Stage-struck, *a.* Smitten with a passion for theatrical life; possessed by a desire to become an actor.

Stain'er, SIR JOHN, musician, was born in London, Eng., July 6, 1840; became organist of St. Michael's College, in 1856; of Magdalen College, Oxford, in 1859; of University Church, Oxford, from 1850 to 1872, and of St. Paul's Cathedral, London, from 1872 to 1888. He composed a large number of hymns and services, and has published a *Dictionary of Musical Terms* and a work on the *Music of the Bible*. Among his cantatas are *The Daughter of Jairus* and *St. Mary Magdalene*. He was knighted in 1888, and appointed professor of Music at Oxford.

Stamp-mill, *n.* See ORE-CRUSHING AND DRESSING MACHINERY.

Stamps, Postage, (*Hist.*) The first regular use of postage stamps began in Great Britain on May 6, 1840, as a result of the earnest efforts of Sir Rowland Hill for postal reform. Adhesive stamps for such purposes as paying a tax on checks, receipts, legal documents, &c., had long been in use in Great Britain, and the effort to force the colonies to pay a similar tax without giving them representation in Parliament was one of the main causes which led to the American Union. But the advisability of collecting letter postage in this way was long in making itself felt, it being customary to prepay the postage in cash at the office, the postmaster then stamping the letter as prepaid. In the U. S. the post-office authorities in large cities kept regular book accounts with the leading merchants, bills being rendered at the end of each month for postage on the mail matter sent during the month. A method for collecting postage by means of a ticket or band attached to the letter was attempted in France as early as 1653, but failed to commend itself to the public, and was soon abandoned. In 1818-19 something resembling a postage stamp was used in Sardinia, but this was not used to send letters by government mail, but to indicate the amount of tax paid for the privilege of sending them through some other channel. The first suggestion of a postage stamp in Great Britain was made by James Chalmers, of Dundee, some time before their actual introduction. But the adhesive label offered by him was not accepted, and the first stamps actually employed were those introduced by Sir Rowland Hill in 1840.

The first method employed was the use of prepaid envelopes, engraved by W. A. Mulready, and known as the Mulready envelope. The design represented Britannia as sending letters to all parts of the world. Ridicule soon drove these envelopes out of existence, and adhesive stamps took their place. The useful example set by Great Britain found its first imitators in the U. S.—not by the government, but by the proprietors of local delivery companies, who began to offer postage stamps for sale in 1842, the first of these being the City Dispatch Post, of New York city, which in August of that year sold its outfit to the U. S. government, which employed the same stamp, a three-quarter face portrait of Washington, the inscription being changed to read "United States City Dispatch Post." It was not, however, until 1847 that the U. S. government adopted the stamp system for its general postal service, though the postmasters of various towns had previously, on their individual responsibility, printed and sold postage stamps. Brazil was the first government (1843) to follow Great Britain in issuing stamps for general use in the postal service. France first issued them on Jan. 1, 1849, and Belgium and Bavaria in November of the same year. Prussia and Hanover adopted the new system in 1850, and Switzerland in the same year, though some of the Swiss cantons had introduced them previously. The other nations now rapidly fell into line—France in 1850; Italy and Denmark, 1851; Portugal, 1853; Norway, 1854; Russia, 1857; Sweden, 1858; Greece, 1861; Turkey, 1863. The first Canadian stamps were issued in 1851. Mexico followed in 1856, and the several South American republics at successive periods, beginning with Chile in 1852, and ending with Paraguay in 1870. The use of the stamps was, in the meantime, taken up by the other countries of the world, including the English colonies in Australia and Africa, India, Egypt, &c., until no nation remains with the least pretence to civilization which has not its postal service and its characteristic stamps.

The U. S. has the distinction of having at one time a greater variety of stamps than any other country in the world, the issues for general use (1873 to 1884) consisting of 13 different stamps, 13 envelopes, and 2 wrappers, while each department of the government had its own series, amounting to 106 in all, besides which there were 7 postage-due and 24 newspaper and periodical stamps. The collection of stamps began as soon as it was perceived that a variety of stamps were coming through the mails from different countries, and the great numbers that have since been issued has made this an

interesting and absorbing occupation, the slightest variation in printing, stamping, &c., being now observed, until some collectors have made as many as 50 variations of a single stamp. The custom of issuing memorial stamps, as on the occasion of the 50th anniversary of Queen Victoria's accession to the throne, has added new interest to the habit of collecting. As examples of the beauty and variety of postage stamps now issued, attention may be called to the accompanying colored plates.

Stanberry, in *Missouri*, a post-town of Gentry co., 13 m. W. of Albany, has railroad machine shops. Pop. (1897) 2,185.

Stand-pipe, *n.* A vertical pipe, into which water is pumped, of sufficient height to give it a head, either to supply elevated points at a distance, or to supply a boiler against the pressure of the steam.—A pipe serving as an air-chamber or air-cushion on the eduction side of a steam pump.—A pipe leading from a gas-retort to the hydraulic main.

Stanford, LELAND, capitalist and philanthropist, was born in Watervliet, N. Y., March 9, 1824; admitted to the bar (1849); went to California overland and engaged in gold-mining (1852); in 1856 settled in business in San Francisco. He was one of the organizers of the Central Pacific R. R. Co., was made its president, and superintended the construction of the line. He was elected governor of California, on the Republican ticket, in 1861, and from 1884 until his death was a U. S. senator. He amassed a fortune of more than \$50,000,000, and gave property to the value of \$20,000,000 to found, at Palo Alto, a university in memory of his son, to be called the Leland Stanford Junior University (*q. v.*). Died June 21, 1893.

Stanley, DAVID SLOANE, U. S. A., was born in Cedar Valley, Ohio, June 1, 1828; graduated at West Point (1852), and served on the frontier. In 1861 he was in the Missouri Department of the Federal army, and for merit was appointed brigadier-general. In 1863 he was placed in command of the Army of the Cumberland, and was promoted major-general. After the war he remained in the regular army, with rank of colonel; served again on the frontier, and was promoted brigadier-general, and given command of the Department of Texas and New Mexico. Retired June 1, 1892.

Stanley, HENRY MORTON (originally named JOHN ROLLANDS), African explorer, was born in Denbigh, Wales, in 1841; at 15 years of age he arrived in New Orleans as a cabin boy, and entered the employ of Mr. Stanley, a wealthy merchant, whose name he afterward assumed. Before 1861 his roving disposition had carried him to California, and he had had adventures among Indians on the plains. He enlisted in the Confederate army; was captured, and then entered the Federal navy, reaching the rank of ensign by the time the war closed. In 1866 he secured an engagement with the *New York Herald*, which paper sent him to report upon the Cretan revolution. In 1867 he joined General Napier's Abyssinian expedition, and in 1868 became distinguished as a news-correspondent by getting his report of the battle of Magdala printed in London ahead of the official dispatches. He then was engaged in reporting the revolution in Spain against Queen Isabella; and while there (1869) he received from James Gordon Bennett the terse order to "find Livingstone." His prompt obedience to the order and the success of his expedition are matters of familiar history. His second African exploring expedition resulted in the founding of the Congo Free State. S.'s most famous expedition is that which he last made, and which was known as that for the relief of Emin Pasha. It is believed that a deep political scheme for the strengthening of British hold upon South Africa lay under the surface of this avowedly humane enterprise, and that Emin Pasha did not desire to be relieved, but was virtually taken a most unwilling captive. In 1890 a large territory, within the southern end of which Emin had exercised a personal jurisdiction, was added to British territory, and is now known as British East Africa, having a conjectural area of over 500,000 sq. m. In May, 1890, S. was in London, and that summer was made D.C.L. by Oxford. Soon after he married Dorothy Tennant, a gentlewoman of artistic fame. During the following year he lectured in the U. S.; he then returned to England, and was naturalized, and became a candidate for Parliament for North Lambeth; was defeated (1892), but was returned for that district in 1895. He has published *In Darkest Africa* (1890), and several other works; *How I Found Livingstone* (1872); *Through the Dark Continent* (1878); *Congo, and the Founding of Its Free State* (1885); *Slavery and the Slave Trade in Africa* (1893); *My Dark Companions and Their Strange Stories* (1893).

Stanley, in *South Dakota*, a W. central co.; area, 1,155 sq. m.; bounded N. and E. by Missouri river. Surface, undulating; soil, generally fertile. Products, wheat, rye, barley, hay, live stock, &c. Cap. Fort Pierre. Pop. (1895) 511.

Stanward, HENRIETTA ELIZA VAUGHAN (pseudonym, JOHN STRANGE WINTER), novelist, was born in York, Eng., Jan. 13, 1876; daughter of Rev. Henry Vaughan Palmer. Her father was at one time an artillery officer, and she had an opportunity to observe military life, which enabled her to portray camp-life in a realistic way. Her literary work began with a series of sketches, afterward published in a volume under the title *Cavalry Life* (1881). The story that made her reputation is *Boote's Baby*, which appeared in 1886. Other stories are: *Mignon's Secret* (1886); *A Siege Baby* (1887); *Beautiful Jin* (1888), and *Boote's Children* (1888). In 1891 she founded *Winter's Weekly Maga-*

zine. She was married (1884) to Arthur Stannard, a civil engineer.

Stanton, ELIZABETH CADY, reform advocate, was born in Johnstown, N. Y., Nov. 12, 1815; daughter of Daniel Cady; was married (1840) to Henry Brewster Stanton, the noted Abolitionist. With Lucretia Mott, she held the first woman's suffrage convention at her home in Seneca Falls, N. Y., in 1848; from that time she was unceasingly active in the cause of woman's rights; she addressed conventions and influenced legislation. She was president of the National Woman's Suffrage Association, and of the International Council of Women, in 1888. With Susan B. Anthony and Matilda J. Gage, she published *The History of Woman's Suffrage* (1886).

Stanton, in *Kansas*, a S. W. co.; area, 672 sq. m.; drained by the North Fork of Cimarron river and tributary streams. Surface, generally level; soil, very fertile. Cap. Johnson. Pop. (1895) 613.

Star, *n.* [*A. S. steorra*; *Ger. stern*; *Lat. stella*; *Gr. aster*.] (*Astron.*) A general term applied to any celestial body, including the planets. In astronomy, however, the word is used to designate only those self-shining bodies which are situated beyond the limit of solar attraction, and which are also called *fixed stars*, to distinguish them from the planets and their satellites, though it is recognized that the fixation is apparent only, not real. The stars differ greatly in distance and brilliancy, the latter being partly due to difference in size and largely to difference in distance. For convenience in study they are divided into classes called *magnitude*, the most brilliant being called stars of the *first magnitude*, the next in brilliance of the *second magnitude*, and so on downward, those lower than the *sixth* and *seventh* being invisible to the naked eye. The stars are very irregularly distributed through the heavens, being in some parts thinly scattered, while in other regions they are abundant, and in the Milky Way they are densely crowded. Two very important considerations concerning the stars are those relating to their numbers and distances.—*Distance*. Some few of the stars have an apparent motion, due to the actual motion of the earth in its orbit, they changing place slightly as the earth shifts from side to side of its orbit. The minute angle thus made permits their distance to be approximately measured. By careful measurement of the *parallax*, or seeming motion so caused, the star Alpha Centauri has been found to be 24,000,000,000 miles from the solar system. This stupendous distance is that of the *nearest* star. The distances of about a dozen more remote ones have been doubtfully made out, but nearly all the stars are so very distant as to have no recognizable parallax. There is no other means of judging of their distance, since difference of *magnitude* may be due to actual difference in size. Yet it is probably largely due to difference in distance, and many of the visible stars are believed to be inconceivably remote, extending through possibly endless depths of space.—*Number*. Only about 6,000 stars can be distinguished with the naked eye—though the Milky Way seems made up of vast multitudes merged together. Large telescopes reveal probably about 100,000,000. This number has been again increased from 5 to 10 times by the aid of photography. One method of computation, founded on the assumption that there are about 3 times as many stars of each magnitude as of the next larger, yields the following result: If we reckon 20 stars as of the first magnitude, the sum total to the 18th magnitude would be over 10,600,000,000. Such a mode of computation is not very trustworthy, yet the actual number of stars is doubtless something enormous, myriads of the more remote ones probably lying far beyond human ken.—*Constitution*. Yet almost infinitely distant as are many of the stars, man has been enabled, by aid of the spectroscope, to learn something regarding their constitution from the character of their light. Each star is in some degree a counterpart of our sun, shining by its own light, though there seem to be many variations in light-giving power. And spectroscopic study, which has taught us much regarding the elements present in the sun, has enabled us to extend this investigation to the stars and nebulae. It will suffice to say here that hydrogen is a common and abundant element, and that the presence of various other elements has been discovered. (See SPECTRUM ANALYSIS.) For the resolution of some of the seeming nebulae into clusters of stars, and the proof by the spectroscope that others are actual nebulae, see ASTRONOMY, and NEBULAE.—*Motion*. The term *fixed stars* has been proved not to indicate a fact, but only an appearance. In addition to the seeming motion due to parallax, many of the stars have been found to possess a real motion, and there is much reason to believe that they all are moving rapidly through space. The sun and its attendant planets are positively known to be moving at an exceedingly high rate of speed toward a certain quarter of the heavens, and probably each star with its planetary system, if any, has a similar motion, these motions differing in speed. The most rapid motion yet detected is that of No. 1830 of *Groombridge's Catalogue*, a star of the 6.5 magnitude, which shifts its place 7" per annum. Its actual speed is doubtless very great.—*Double and Multiple Stars*. Many of the stars which appear single to the naked eye appear double when seen through the telescope, while in other cases they are triple, quadruple, and in still higher numbers. This was at first thought to be due to their lying in the same line of sight, but it is now known that many of the double and multiple stars have an actual physical connection, being associated in pairs or groups, revolving round each other, or round their common center of gravity. They are stellar systems, presenting an analogy to our

solar system. The fact of such a mutual revolution of double stars was first announced by Sir William Herschel in 1803, and startled the scientific world. It has since then been abundantly proved, and many double and multiple groups have been discovered. It is an interesting fact that Alpha Centauri, the nearest of the stars, is a double, one of the two stars of which it is composed revolving around the other in about 80 years. The period of revolution of some doubles is far less than this, and in some of the cases one of the stars is invisible, being a dark star whose presence is only known by its effect on the appearance of its bright companion. An example of this will be given below.—*Temporary and Variable Stars*. Stars occasionally appear, remain for a short time, and then disappear. A late example of these was Nova Andromeda, which suddenly appeared in the center of the great Andromeda nebula, being first seen on Aug. 31, 1885. In 1892 Nova Auriga similarly appeared, grew fainter, then brightened, and in August changed into a nebula. The brightest of the temporary stars was the Pilgrim star of 1572, which was as brilliant as Venus, and became visible by daylight. It is not improbable that the appearance of these temporary stars is due to sudden outbursts of incandescent hydrogen in formerly very faint stars, their subsequent disappearance being due to the consumption of the hydrogen, or loss of its incandescence. Variable stars appear due to a different cause. These do not suddenly appear and afterward disappear forever, like the temporary stars, but simply vary their light, in some cases fitfully, in others periodically. Algol is a notable example. For 200 years its variability has been recognized, and takes place with great rapidity. It remains of the second magnitude for 2d. 20h. 49m., then in about 4 hours it decreases to the fourth magnitude, then in a little over 4 hours it regains its former brightness. The cause of its variability has been revealed by the spectroscope, which proves that it has a dark or very faint companion, by which it is periodically occulted. The fact of its revolution is shown by the shifting of its spectral lines toward the violet or red ends of the spectrum as it advances or recedes during its revolution. Another remarkable variable is Omicron Ceti (Mira), which has a somewhat irregular period of about 11 months. It is, at its brightest, of the second magnitude, grows fainter for 3 months until invisible to the naked eye, remains thus for 5 months, then during 3 months regains its former brightness.

Star Showers. (*Astron.*) Shooting stars have been seen in all ages of the world, but until recent times the cause of their appearance, especially in showers, was involved in profound mystery. The limited scope of this article will not admit of an extended description of all the facts connected with this extraordinary phenomenon; for many omitted details associated with the subject, see METEORS. No shooting star can be seen except while undergoing combustion by friction with the earth's atmosphere; before entering it they are small, dark bodies, very properly named (by Prof. H. A. Newton) *meteoroids*. How small they are we do not know, but the smallest are probably not larger than grains of wheat. As not one has ever reached the earth, being entirely consumed by the time they reach within 40 miles of it, we are ignorant of their nature and composition. Modern science has taught us much regarding the source whence they come directly to us; but of their primary origin nothing whatever is known. We only know that every one is a naturalized foreigner, once forming part of a comet's tail. No comet can gather its tail to itself again, and as it is formed of an infinite number of meteoroids, they are left behind, the planetary spaces, and probably the stellar, having been filled with them by the countless millions of comets which during past ages have visited our system. Each tiny particle revolves around the sun in as regular an orbit as do the planets, but with the difference that, like their parent, some revolve direct and others retrograde.

Shooting stars are seen every night with greater or less frequency; but the problem that concerns us here is, why they periodically appear in showers, astonishing half the world with the appalling numbers seen in every part of the sky. As the November 15th star shower is the grandest of all, for there are many, a description of it will serve, with some modification, for all the others. Suppose that ages ago a comet visited our system, moving in an elliptic orbit, and that it threw off a tail, perhaps 50 or 100 million miles in length (which of course was left behind), and suppose also that after appearing several times these abandoned tails formed a continuous ring of immense extent around the sun. It would be possible for the ring to have such an inclination and perihelion distance that the earth in its annual journey would pass through it, producing an annual shower of somewhat uniform brilliancy (regardless of the length of their periods), of which the August 10th is an example. Now, if this comet should burst, as did Biela's comet, and form a dense swarm of meteoroids of several million miles in width and many million miles in length, the earth's passage through it would account for the great showers that history records, as on Nov. 12, 1799; Nov. 13, 1833; Nov. 14, 1866, and which will be repeated in 1899, in all probability on the morning of Nov. 15. History mentions this shower as far back as A. D. 902. Owing to the motion of the node, the greater shower, which in modern times takes place in November, occurred then in October. The period of the meteors is about 33 1/4 years, causing the earth to pass through the ring every year in a new place, and every 33 years through the

POSTAGE STAMPS OF FOREIGN NATIONS.

PLATE I.

- 1 HONG-KONG (1880), 2 Cents.
- 2 MAURITIUS (1847), 2 Pence.
Rare. Stamp-dealers' price for original, \$2,000.00.
- 3 BRITISH GUIANA (1889), 1 Cent.
- 4 MOLDAVIA (1858), 81 Parale.
Rare. Stamp-dealers' price for original, \$1,500.00
- 5 NEW SOUTH WALES (1888), 1 Penny.
- 6 INDIA (1892), 1 Rupee.
- 7 HUNGARY (1874), 2 Kreutzer.
- 8 ICELAND (1882), 3 Aur.
- 9 BRITISH HONDURAS (1888), 2 Cents.
- 10 HAWAII (1851), 13 Cents.
Rare. Stamp-dealers' price for original, \$500.00.
- 11 SALVADOR (1896), 5 Centavos.
- 12 SWITZERLAND (1862), 2 Centimes.
- 13 JAPAN (1879), 2 Sen.
- 14 ST. HELENA (1894), Half-penny.
- 15 ARGENTINA (1888), Half-centavo.
- 16 PARAGUAY (1892), 2 Centavos.
- 17 AFGHANISTAN (1881), 1 Abassy.
- 18 AZORES (1895), 2½ Reis.

center of the swarm. The earth will probably pass through one end and produce a fine shower on either Nov. 14 or 15, in 1898, through its center in 1899, producing the great shower, and through the other end in 1900, producing another fine display. The earth passes diagonally through the ring, at an angle of $170^{\circ} 44'$, and the shower, which will commence about midnight, will last as long as the earth is passing through it, some five or six hours, and no longer.

As the motion of the meteoroids is retrograde, and the earth direct, it is the front side of the earth that plunges into them, causing the display to be in the morning hours. On the other hand, those producing the Nov. 27, or "Biela's comet," meteors, move direct, and consequently overtake the earth, approach from the rear, as it were, causing the shower to occur in the evening hours. The velocity with which the meteoroids of the Aug. 10 and Nov. 27 showers enter into our atmosphere is, omitting the effect of the earth's attraction, equal to the difference between the orbital motions of the earth and the meteors; whereas in the case of the Nov. 15 shower, they meet with a relative velocity equal to the sum of both. In the latter case, the two must meet with a rate of speed of some 50 miles a second, and this is undoubtedly increased by the earth's attraction at least 100 miles a second and perhaps much more. The earth's atmosphere serves as a shield to prevent our being bombarded by the rain of these missiles.

It is not known which continent will be favorably situated to witness the display in 1899. In 1833 the American was the favored one, and in 1866 it fell to the European. The New World, however, enjoyed a fine show the next year (Nov. 14), during which the writer counted 1,400. The radiant of this show is at the sickle of Leo. There are two showers from Biela's disrupted comet, one on Nov. 25, with a radiant in Cassiopeia, the other on Nov. 27, with radiant in Perseus. These meteoroid orbits are of immense extent; that of Nov. 14 reaches to beyond Uranus, and the August orbit to beyond Neptune. If a meteor is seen in any part of the sky, whether its visible path be long or short, it, if traced backward, will meet those of the others, like the radii of a circle, at the radiant. No recorded shower has ever equalled that of 1833. The remembrance of that awful night still clings to the writer's memory. It was estimated that at any one point throughout the continent at least 300,000 shooting stars were visible. It will certainly recur on the mornings of either the 13th, 14th, or 15th (opinions favor the latter date), but never in the evening, but from midnight to dawn. The statement that every shooting star was once part of a comet sounds more like romance than science. The elements of Swift's comet of 1862 agree in every particular with those of Aug. 10 showers, while those of Tempel's comet of 1866 agree with the Nov. 15 meteor orbit, not to cite other coincidences.

Stark, in North Dakota, a S.W. co.; area, 1,310 sq. m.; intersected by Heart river. Herding and dairying are the leading industries. Cap. Dickinson. Pop. (1897) 3,500.

Starr, in Texas, an extreme S. co., adjoining Mexico; area, 2,570 sq. m.; bounded S. by Rio Grande del Norte. Surface, nearly level; soil, fertile in the valley of the Rio Grande, rest of country suited for stock-raising, which is the chief occupation. Cap. Rio Grande. Pop. (1897) 11,100.

Stead, WILLIAM THOMAS, writer and publisher, was born in Embleton, England, July 5, 1849. In 1871 he became the editor of the *Northern Echo*; assistant editor of the *Pall Mall Gazette* in 1880, and editor-in-chief in 1883, holding that position until 1889, when he resigned in order to found the *Review of Reviews* (London) in 1890. He also founded (1893) *Borderland*, a monthly devoted to the study of psychical phenomena. He published several works in the interest of social reforms; in 1893 published *If Christ Come to Chicago*, a book that created a profound sensation at that time.

Steamships, *n. pl.* It is believed that the first vessel ever propelled over the water by steam was built in 1785-6 by James Rumsey, of Charleston, in what is now West Virginia. The boat and her machinery were constructed in Frederick co., Md., and launched on the Potomac river, a public trial being given March 14, 1786. Both Gen. George Washington and Gov. Thomas Johnson, of Maryland, were interested in the success of the enterprise, and records of the undertaking appear in many State papers. John Fitch propelled a boat on the Delaware by steam-paddles in 1786, and later used side-wheels and propellers. Robert Fulton has been generally recognized by historians as the builder of the first steamboat; but Fulton's steamboat, the *Clermont*, was not launched on the Hudson until 1807, and in those very waters he was preceded two years by Col. A. S. Stevens, who built and ran a steam-launch, a portion of whose mechanism is still preserved in the Stevens Institute, in Hoboken. It is noteworthy that these first American steamboats represented the three most interesting types of marine steam propulsion. Fitch tried both side-paddles and propellers. Rumsey's boat made use of jet-propulsion (*q. v.*), employing a steam-engine and pump for drawing in water at the bows, and forcing it out at the stern. This is at once the simplest and the most wasteful method of propelling a steamboat, but it has been recently perfected, and is in use in the life-boat service of Great Britain and Holland. Stevens' boat was a twin screw-propeller, representing the type that within recent years has broken all ocean speed-records. Fulton's *Clermont* was a side-wheeler, and being a larger and better boat than either of its prede-

cessors, and having a more powerful engine, made a better record, and was voted a success. Her length was 133 feet, beam 18 feet, capacity 160 tons, and speed about 5 miles an hour. The boiler and engine were exposed on the deck, without shelter, while the paddle-wheels were not covered by boxes. Col. John Stevens, of Brooklyn, built a steamboat, the *Phoenix*, which was launched only a few days later than the *Clermont*, and which made the first ocean voyage, steaming from Brooklyn to Philadelphia.

The first steam-propelled vessel built in the Old World was a twin pleasure-boat, with a paddle and engines, the machinery being constructed by William Symington, in 1788. She was run on Dalswinton Loch, Dumfriesshire, by Patrick Miller. Miller and Symington, in 1789, built a larger boat, which had 12-horse power, and made a speed of 7 miles per hour. Symington also built an engine and a screw-propeller for a canal-boat, the *Charlotte Dundas*, which was tried in Scotland, in 1801, and shortly abandoned, because it washed the banks, causing damage which was too serious to allow of further experimenting. In 1811-12 Henry Bell, of Helensburgh, Scotland, built the *Comet*. She was 40 feet long, about 25 tons burden, and was driven by an engine of 3-horse power. The very slow rate of progress made by the early steamers seems to have been largely owing to an entire lack of appreciation of the amount of power required to drive a vessel at a fair speed. This vessel of Bell's was quite successful, and was used for many years.

By 1808 there were three steamboats on the Hudson river, plying between New York and Albany, and in 1811 a steamer was launched on the Mississippi. By 1815 steamboat lines were established on the Great Lakes and the St. Lawrence river. In 1819 an American-built sailing-vessel, the *Savannah*, was fitted with steam-power, and crossed the Atlantic from Savannah to Liverpool, in 28 days, using the steam-power but a part of the time. From this date the construction of steamships became general. In 1825 the steamer *Enterprise* went from England to Calcutta. In 1831 the *Royal William* went across, from Quebec to England, in twenty-five days, relying more upon steam than sail, and in 1838 the *Sirius* crossed to New York in seventeen days. She was passed on the voyage by the *Great Western*, which sailed from Bristol, England, the port in which she was built, three days after-ward, April 7, 1838, and arrived on the 23d, fifteen days out. In 1838 the British government contracted with Cunnard, Burns & Co. to supply three steamers for the performance of two voyages monthly, but it was not until 1840 that the celebrated Cunnard Line was established. The first vessel built for the newly-formed company was the *Britannia*. Ten years after came serious opposition in the establishment of the American Collins Line, with the *Arctic*, *Baltic*, *Atlantic*, and *Pacific*, 3,000 tons each. This line was unfortunate in every other way except speed, the *Arctic*, with Mr. Collins and many hundreds of passengers, being lost in collision with the *Vesta*; and in 1856 the *Pacific* set out, and never was heard of again. By 1858 the company was ruined, and the line was given up. The Inman Line was next established, in 1850, the first vessel of which was the *City of Glasgow*, which was the first screw steamer to cross the Atlantic in winter. In 1856 were formed the Allan and the Anchor Lines; the Guion Line was established in 1863, and seven years after-ward the White Star floated its pioneer ship *Oceanic*. Since that date numerous other lines have been established, notably the American Line, which has a fleet of the finest steamships sailing under the Stars and Stripes.

The paddles or side-wheels were the favored means of propulsion on early steamboats, and were generally adopted in spite of the demonstration in 1838, by John Ericsson, that the screw-propeller was the better mechanism. The great objection to the paddle-wheel is that its floats or blades, in entering the water, are so inclined that force is wasted in pushing down the water, while in coming out of the water they lift a considerable portion and throw it high in the air. All this is a loss, and it is not wholly overcome by the feathering paddle-wheels, which were introduced to correct the mechanical deficiencies noted. The feathering-wheel was made to present its blades perpendicularly to the water, but was not wholly correct in theory, besides being complex and liable to get out of order. The screw-propeller applies the power on a correct principle, and is much more simple in practice, being less bulky, and less liable to injury. (See PROPELLER). Two other forms of propelling mechanism that have been tried with good results are a rear paddle-wheel, which is useful in navigating very shoal waters, and the steam-turbine, which has recently been applied with success to torpedo-boats (*q. v.*).

Steam-vessels may be divided into *steam-launches*, used as pleasure-boats and for harbor-navigation, &c.; *steam-yachts*; *torpedo-boats*; *tugs*, having very powerful engines, for maneuvering large craft about harbors; *tow-boats*, with stout frames, for drawing tows in rivers; *ferry-boats*, double-ended, having saloons on both sides, and a driveway through the center; *river-steamers*, mostly freight-boats, with some passenger accommodations; *inland-river passenger-boats*, often having several decks, and sumptuous appointments, as those on Long Island Sound; *warships* (see BATTLESHIPS); *CRUISERS*; *NAVY*, &c.), and *ocean steamers*, the latter being more properly called *steamships*, though the uses of the words steamer, steamboat, and steamship are much confused.

One of the best and latest types of ocean steamship is exhibited in the *St. Paul* and *St. Louis*, twin vessels, the first of their kind built in the U. S. The *St. Paul*

made a new record on her own route between Southampton and New York—6 days, 0 hours, and 31 minutes, the average speed being over 21 knots (24 $\frac{1}{4}$ miles). They are the fastest boats of their size and engine-power in the world, though the *Lucania* and *Campania*, English-built vessels of the Cunnard Line, with 50 per cent. more horse-power, exceed them in speed, and the *Kaiser Wilhelm der Gross*, of the North German Lloyd Co., on her maiden trip (Sept. 21-26, 1897), beat the *St. Paul's* record from Southampton to New York, by covering the distance in 5 days, 22 hours, and 15 minutes. All of these steamships, however, are of much greater tonnage than the *St. Paul*.

A description of the *St. Paul* will serve to give a general idea of all the well-appointed ocean steamships. Her length is 554 ft.; beam, 63 ft.; depth, 42 ft.; tonnage, 11,629; engines, 20,000-horse power. Twin screw-propellers with 3 blades are used, each driven by a separate engine. Numerous other smaller engines are used about the vessel, for operating pumps, driving dynamos, &c. The 10 boilers have a heating-surface of 30,000 ft., and supply the twin-engines with steam at a pressure of 200 pounds. The steam is used by quadruple expansion, 6 cylinders being employed in each engine, as the high-pressure and low-pressure cylinders are paired in tandem, with a single piston-rod, so that 4 cranks serve for each set of 6 cylinders. The consumption of coal is 310 tons per day. There are 4 ventilating plants, carrying currents of fresh air to every compartment. 32 lifeboats, a cutter, and a gig are provided for emergency. The decorations of the saloons, dining-halls, and staterooms are superb. There are 5 decks in all, with accommodations for 1,370 passengers and a crew of 400. The framing is of steel, there being a double bottom, and 17 water-tight compartments that preclude sinking unless about half the ship's bottom was stove in. These compartments are arranged so as to separate the engines and each of the boilers, to prevent disabling of the ship by flooding of the engine-rooms. The arrangement is such that there are 2 complete driving mechanisms, wholly separated, so that if one breaks down from any cause the other is available. The electrical equipment includes 5 dynamos, numerous small motors, 1,780 electric lights, a provision of electric bells, and about 20 miles of wiring. The masthead, port and starboard lights, &c., are all controlled from switch-boards, and the whistles are sounded by push-buttons. In the chief-engineer's room are indicators, electrically connected, to show the rate of the shaft-revolutions and the position of the rudder. Rudder-indicators are also placed in other parts of the vessel. The steering-wheel is operated without effort. It controls a small pump that drives a column of glycerin through pipes to a cylinder, where the pressure affects a steam-valve, and the steam is directed so as to do the actual work of moving the rudder.

The development of steamships as measured by construction may be summarized as follows: Up to 1845, wooden construction; then iron began to come into use; about 1855 the screw began to replace the paddle-wheel; between 1865 and 1870 compound engines were introduced; about 1875 steel commenced to replace iron for the structural work; about 1880 triple-expansion engines furthered the development; in 1885 twin-screws came into use, and since then forced drafts and quadruple expansion have been developed. The largest steamship ever built was the *Great Eastern*, launched in 1858, her length being exactly one-eighth of a mile, and breadth over paddle-boxes 118 feet; displacement, 32,160 tons; cost, \$3,650,000; speed, 11-13 knots. She was too big to pay dividends, but owing to her size proved convenient for laying submarine cables, and was fitted with tanks and engaged in that work for many years. In 1884 she was used as a collier, and later was broken up. Modern construction, developed on practical lines, has almost caught up with this leviathan of the deep, as shown by the dimensions of the *Kaiser Wilhelm der Gross*, above mentioned, which has a length of 648 feet, or only 32 feet less than the *Great Eastern*; a beam measurement of 66 feet, and a depth of 43 feet. The displacement is 20,000 tons, a little less than two-thirds that of her mammoth predecessor. The engines are of 30,000-horse power. (See illustration under MARINE ENGINE.) The White Star Line has under construction (1897) an immense steamship, the *Oceanic*, which, it is expected, will surpass all now afloat in the matter of speed, if not economy. The development of ocean steamships is also measured by the record speeds achieved in crossing the Atlantic, and these have been widely published for many years, the regular reductions in time exciting much public interest. Each of the prominent transatlantic steamship lines has endeavored at one time or another to maintain the fastest steamships, thus securing the cream of the passenger traffic. About 1850 the contest was inaugurated between the Cunnard and the Collins Lines, and in May, 1851, the *Pacific*, of the Collins Line, made the first transatlantic trip in less than 10 days, crossing from New York to Liverpool in 9d. 20h. 16m. The *Arctic*, of the same line, took the record the following year within 9d. 17h. 12m. In 1855 the *Vanderbilt* cut the record to 9d. 8h. The *Scotia*, of the Cunnard Line, was the first to cross in less than 9 days, slicing the record in 1863 to 8d. 3h. The Inman (now the American) Line brought the figures below 8 days in 1869 with the *City of Brussels*, the time being 7d. 22h. 3m. The 7-day record was not broken until 1882, when 3 flyers were competing for honors—the *Alaska*, of the Guion Line; *City of Rome*, of the Inman; and *Servia*, of the Cunnard. The *Alaska* carried off the honors in 6d. 18h. 37m. In October, 1883, she made the best day's run up to that time, 430 knots. The record since then

for daily runs by knots is: *Aurania*, 440; *America*, 447; *Etruria*, 503; *Paris*, 515; *St. Louis*, 522; *Lucania*, 560; and *Kaiser Wilhelm der Gross*, 564 knots. The list of record-breakers on the New York and Queenstown route, measuring from Sandy Hook to Roche's Point, about 2,800 miles, follows:

Date.	Steamer.	Days.	Hours.	Min.
1866	Scotia	8	2	48
1869	City of Brussels.....	7	22	3
1873	Baltic	7	20	9
1875	City of Berlin.....	7	15	48
1876	Germanic.....	7	11	37
1877	Britannic	7	10	53
1880	Arizona	7	7	23
1882	Alaska.....	6	18	37
1884	Oregon.....	6	11	9
1884	America.....	6	10	0
1885	Etruria	6	5	31
1887	Umbria	6	4	42
1888	Etruria	6	1	55
1889	City of Paris	5	19	18
1891	Majestic	5	18	8
1891	Teutonic	5	16	31
1892	City of Paris	5	15	58
1892	City of Paris	5	14	24
1893	Campania	5	12	7
1894	Lucania.....	5	8	38
1895	Lucania.....	5	7	23

The fastest passage on the Havre-New York route of 3,170 miles, is credited to *La Touraine*, in 6d. 14h. 26m. With one exception, every transatlantic line now has vessels which make the trip ordinarily in less than 7 days.

Steam-turbine, n. (Mech.) The DeLaval steam-turbine attracted considerable attention at the Chicago Exposition in 1893. It was constructed on the principle of a turbine water-wheel, but very much smaller, consisting of wheels having deflecting plates, so that they might be driven by the impact of the steam admitted near the center and discharged at the periphery. The steam was thus made to drive the wheels by its escaping force, rather than by its pressure, as in a steam-engine. In order to insure good results it was necessary to rotate the wheels at a tremendous speed, and to reduce this by gearing or belting to a speed moderate enough for practical uses. A wheel of four inches diameter developed five horse power when driven at a speed of 50 rotations a second. In 1897 the Thornycraft torpedo boat *Turbinia* was fitted with the Parsons steam-turbine, and was so successful as to break all records for nautical speed. This turbine, usually built with double wheels, between which the steam enters, exerting an equal pressure in either direction along the shaft, and thus avoiding side friction against the bearings. In applying the turbine to torpedo boats, however, the steam was all introduced from the front side of the turbines, to balance the thrust of the screw-propellers, and a balance thus effected which entirely overcame the thrust, so that no thrust-blocks were used, and a great amount of friction saved. It was found necessary to reduce the speed of the steam-turbines to 2,100 revolutions per minute to accommodate them to the slower motion necessary for the screws. Steam can be worked expansively with steam-turbines by simply leading it in a large pipe from one set of turbines to another, until the development of its force is exhausted.

Sted'man, EDMUND CLARENCE, poet and literary critic, was born in Hartford, Conn., Oct. 8, 1833; studied at Yale, but did not graduate; the degree of A.M. was conferred on him in 1891. In 1852 he entered upon journalism, as editor of the *Norwich Tribune*, and later of the *Winsted Herald*. Afterward he was one of the *New York Tribune* staff of writers. During the Civil War he was field correspondent of the *New York World*. In 1864 he engaged in banking in New York city. He has published many volumes, both of original work and of critical editions and compilations of English and American literature. His largest work is *A Library of American Literature*, in 11 volumes (1883-90), edited with Ellen M. Hutchinson. His *Poets of America* appeared in 1885, and in 1887 he published the 13th edition of his *Victorian Poets*, since revised and extended by a supplementary chapter (1891). In 1896 he published also *Victorian Anthology*.

Steele, in North Dakota, an E. co.; area, 720 sq. m.; drained by Maple river and the Middle and South Forks of Goose river. Surface, rolling prairie; some timber; soil, very fertile. Cap. Sherbrooke. Pop. (1897) 4,140.

Steel'ton, in Pennsylvania, a post-borough of Dauphin co., 3 m. E. of Harrisburg; has important manufactures of steel rails, forgings, architectural steel, &c. Pop. (1897) 11,500.

Stein'itz, WILLIAM, chess-player, was born in Prague, Bohemia, May 14, 1836. He became so proficient that he was called the chess champion of the world, having won either first or second place in every tournament from 1862 to 1894, when he was defeated by Emanuel Lasker. He settled in the United States in 1883, and founded there the *International Chess Magazine*. He also published, in 1889, *Modern Chess Instructor*.

Step'hens, in Texas, a N. central co.; area, 900 sq. m.; intersected by the Clear Fork of Brazos river. Surface, hilly; soil, in the bottoms fertile. Cap. Breckinridge. Pop. (1897) 5,120.

Step'niak, SERGIUS MICHAEL DRAGOMANOFF, said to be the *nom de guerre* of SERGIUS KARTSCHEFFSKY, a Russian revolutionist and exile, was born in the Ukraine in 1841, of a Cossack family belonging to the lesser nobility. He was a student at Kiev, and in 1865 became an instructor in History there, but was removed from his chair in 1873, on account of his advocacy of greater liberty. In 1876 he gave offence to the minister of justice, and was obliged to flee from the country; he first went to Geneva, but in 1885 took refuge in London. He published several books—*The Turks, Within and Without*; *Underground Russia* (1883), a study of Nihilism; *Russia Under the Cæars* (1885); *The Career of a Nihilist* (1889), a novel, &c. Died Dec. 23, 1895.

Ster'ling, in Kansas, a post-village of Rice co., 18 m. N.W. of Hutchinson. Pop. (1895) 1,815.

Sterling, in South Dakota, a W. central co.; area, 1,185 sq. m.; intersected by Big Cheyenne river. Grazing is the leading industry. Pop. (1895) 149.

Ste'vens, in Kansas, a S.W. co.; area, 728 sq. m.; drained by Cimarron river. Surface, level; soil, fertile. Abundance of gypsum, soapstone, and brick clay. Cap. Hugoton. Pop. (1895) 684.

Stevens, in Minnesota, a W. co.; area, 576 sq. m.; intersected by Pomme de Terre river. Surface, rolling prairie; numerous lakes. Cap. Morris. Pop. (1895) 6,543.

Ste'venson, ADLAI EWING, lawyer, was born in Christian co., Ky., Oct. 23, 1835; admitted to the bar (1858); held various local and State offices; elected to Congress (1878) as a Democrat; first assistant postmaster-general (1885-89); Vice-President of the United States (1893-97); member of the Bimetallic Commission (1897).

Stevenson, ROBERT LOUIS BALFOUR, novelist, was born in Edinburgh, Scotland, Nov. 30, 1850. His father was Thomas Stevenson, one of the family of famous lighthouse engineers, who designed that his son should follow the same profession, but the boy's ill health compelled a change of plans. Robert took the university course in Edinburgh; in 1871 began to study law, but gave up that study and went to Mentone in the Riviera. From that time he spent his life in search of health, visiting noted resorts all over the world, and incidentally gathering material for the literary productions he afterward gave to the world. His most imaginative book is *Treasure Island*; the most unique book of the century is his psychological study of *Dr. Jekyll and Mr. Hyde*. He also wrote *Kidnapped, David Balfour (Catonina)*, and *The Master of Ballantree*, connected stories dealing with Jacobite Scotland and Scotch character. He was a constant contributor to current magazines, and issued many volumes of stories, sketches, and poems. In 1879 he went to California, where he married a widow; her son, Lloyd Osbourne, became S.'s collaborator, companion, and literary executor. In 1887 he removed to Samoa, and bought an estate overlooking Upolu, in the island of Apia. He named his place Vailima, and upon the mountain side there he died (Dec. 3, 1894) and was buried.

Stew'art, ALEXANDER TURNER, merchant, was born in Lisburn, Ireland, Oct. 12, 1803, removed to New York (1823), and taught school for two years; went into mercantile business (1825), and in 1867 owned the largest dry-goods house in the U. S. He was a benevolent man, contributing liberally to relief funds and charitable societies. His fortune was estimated at about \$40,000,000. Died April 10, 1876.

Stewart River. An important tributary of the Yukon (q. v.), entering it from the N.E. about 100 miles below the junction of the Lewes and Pelly. Its sources are in the main range of the Rocky Mountains, and its length is about 200 miles through rough, forested hills. Traces of gold have been found in its higher gravels, and small placers have been worked near its mouth.

Still'man, WILLIAM JAMES, journalist and art critic, was born in Schenectady, N. Y., June 1, 1828; graduated at Union College (1848); devoted himself to painting, and studied in Europe in 1849. From 1852 to 1855 he was in Paris studying; in 1861-65 he was U. S. consul in Rome; consul in Crete (1865-69), and after that time correspondent of the *London Times* in Greece and Rome, and art critic of the *New York Evening Post*. He has been a constant contributor to leading magazines, and has published several volumes.

Still'water, in Oklahoma, a post-village, cap. of Payne co., 35 m. from Guthrie; has flour and saw mills. Pop. (1897) 1,200.

Stim'son, FREDERIC JESSUP (pseudonym, J. S. OF DALE), lawyer and writer, was born in Dedham, Mass., July 20, 1855, graduated at Harvard (1876); was admitted to the bar (1878); from 1884 to 1885 was assistant attorney-general of Massachusetts. He has published several novels, the latest being *King Noanett* (1896), and several works on legal subjects.

Stock'holm Exposit'ion. The handsome capital of Sweden was rendered specially attractive during much of the year 1897 by an exposition of arts and industries, located near the heart of the city on one of the seven islands on which Stockholm is built, and attracting large numbers of spectators by the completeness and beauty of its display. The main building, known as Industrial Hall, stood in the center of the grounds, its roof adorned with odd-shaped cupolas, which were visible from every part of the city. From this edifice a high white viaduct led to the building devoted to the exhibit of machinery, and near by were erected the handsome Art Gallery, Fishery Hall (in which was exhibited in compact form one of the most important in-

dustries of the seagirt land), the building devoted to naval and military affairs, the tourist pavilion, forestry building, and edifices for the display of the products of mining, horticulture, electrical engineering, &c. The keynote of this World's Fair was picturesqueness. The characteristics of the Chicago Fair evidently gave suggestions to its architects and designers, and while its buildings were on a smaller scale than those of that stupendous display, they were all removed from the commonplace. They were quaint rather than large in effect, delicate rather than gorgeous in decoration, antique and picturesque rather than massive. Machinery Hall, the building around which most of the other structures were grouped, and the Art Gallery most nearly approached the magnificence of scale of the structures of the Columbian Exposition. Among the several features of the Fair, one of the most attractive was that known as Gama Stockholm, or Old Stockholm, a representation of the Stockholm of 1593 which was singularly exact in its details, even to the draw-bridge chains and the filigree-work of the ancient shop signs. The material for this interesting restoration of the city of over three centuries ago was obtained from old prints, historical descriptions, and the architecture of ancient buildings which still exist in the older part of the present city. Another feature which recalled the most attractive element of the Chicago Fair—the Midway Plaisance—was that known as Skansen, really a park, but incorporated into the exposition grounds in much the same manner. This was given the character of a great open-air museum, with birds and animals from all quarters of the globe, and buildings of ancient days brought from out-of-the-way places in the Northland, some of them near the arctic circle. Notable among these was the old Bell-tower built in Ostergothland 150 years ago, and transported in sections to the exposition. In addition, there were collections of rare and curious relics of the days of the Vikings, while the scene was given vitality and brilliancy by the presence of hundreds of peasants in quaint and gorgeously-colored costumes. Of the special celebrations of the exposition, the most interesting was that of Midsummer Eve and Midsummer Day, the special fête period of the year to the Northland people. The festivities of the peasants on this occasion were kept up almost unceasingly for 36 hours, beginning with the midsummer pole-dances, and concluding with the observance of St. John's Day, the 24th of June. The merry-making, including dances (introducing the peculiar steps and attitudes of the peasantry from all parts of Sweden, Norway, and Lapland), processions, feasts, songs, and recitations of heroic sagas, amid the picturesque surroundings of little lakes and streams, wooded groves, the flowing river, and the magnificent hills that overflow the city, made up a scene of indescribable charm. The architecture of the smaller buildings was exceedingly odd and effective, they comprising queer-shaped water-kiosks, tiny buildings with Russian ornamentation, while the buildings erected for the police and the exposition employes were built after the quaintest fashion, with steep, peaked roofs painted bright green, and sides of red or brown. Little attempt was made at electrical display, for the reason that at 10 or 11 at night the light of a Stockholm midsummer-day is still sufficient to fade out the brightest electric light, while even at midnight a newspaper can be read with ease in the open air. We have spoken mainly of the external effect, in which alone any special originality is now possible in a National or World's Fair, the display of the objects of art and industry bearing a strong similarity wherever shown. It will suffice to say that the exposition included displays in engineering, machinery, building trades, implements, transportation, navigation, fisheries, sport, travel, fine arts, education, hygiene, scientific appliances, &c. The main hall, in which the bulk of the industrial exhibits were shown, was claimed to be one of the largest wooden structures ever built, and had a dome 300 feet high. The Machinery Hall, of glass and iron, had a floor area of about 100,000 sq. ft. There were large halls for each of the three Scandinavian countries, Norway, Sweden, and Denmark, and smaller ones for other countries. Fisheries formed one of the most comprehensive exhibits, on account of the importance of this industry in Sweden, and the displays of forestry and agricultural products were large and attractive. The exposition closed in October, after a very successful season, during which it was visited by a large number of appreciative sight-seers, estimated at about 600,000.

Stock'ton, FRANCIS RICHARD, novelist, was born in Philadelphia, Pa., April 5, 1834. He entered upon a literary career about 1866, and was on the staff of the *Philadelphia Post*, *New York Hearth and Home*, *Scribner's Monthly*, and *St. Nicholas*. He wrote his stories for children for the *Riverside Magazine*, and afterward published them in a volume under the title of *The Ting-a-Ling Stories* (1870). In 1879 he published the *Rudder Grange* stories; then followed many others bearing the same stamp of quaint humor and originality of conceit. The most striking of his stories is *The Lady or the Tiger?* (1884).

Stockton Springs, in Maine, a post-town of Waldo co. Pop. (1897) 1,190.

Stod'dard, RICHARD HENRY, poet, was born in Hingham, Mass., July 2, 1825. In 1849 and in 1852 he published volumes of verse; afterward published *Songs in Summer* (1857); *The King's Bell* (1862); *The Book of the East* (1867), and *Lion's Cub* (1891). He also edited Griswold's *Poets and Poetry of America* (1872), &c. From 1860 to 1870 he was on the literary staff of the *New*

Steamship St. Paul—International Navigation Co.
A MODERN AMERICAN-BUILT OCEAN STEAMSHIP.

York World, and in 1880 was appointed literary editor of the New York Mail and Express.

Stone, Lucy, reform advocate, was born in West Brookfield, Mass., Aug. 13, 1818; graduated at Oberlin College (1847), and began her life-work of advocating woman's suffrage; was also an earnest anti-slavery lecturer. In 1855 she was married to Henry B. Blackwell, but by previous arrangement retained her maiden name. With few intermissions, she was constantly engaged in the lecture field and organizing local woman's suffrage societies. Died Oct. 18, 1893.

Stone, in Arkansas, a N. co.; area, 619 sq. m.; bounded N.E. by White river. Surface, hilly; soil, fertile. Cap. Mountain View. Pop. (1897) 7,415.

Stone Age. (Anthrop.) Public attention became attracted to the subject of prehistoric man by the discovery of the relics of the Swiss lake-dwellers (see LAKE-DWELLERS) in 1853, although long previously implements made of stone, evidently of human workmanship, had been exhumed from the peat-bogs and shell-heaps of Denmark. In 1859 M. Boucher de Perthes found arrow-heads, knives, scrapers, ax-heads, &c., in the valley of the Somme, in France, and set scientific men searching the fields, gravel-beds, and caves of all parts of the world for similar relics of prehistoric peoples, while geologists were importuned to state the geological horizon or relative age of the places of the different finds. Up to the time of these disclosures, which now show that in every habitable part of the world thus far explored there lived a long-forgotten human race or

vived, for certain things, as flint arrow-heads, into the next epoch, and, for that matter, still survive, but the examples are of poorer quality. The men of this period were of small size, with rather short limbs, and great strength, to judge by the skull of Neanderthal (*q. v.*) and a few other fossil bones. He was spread over all Europe, at least during the quaternary (pleistocene) geologic epoch, which immediately preceded our own, and was separated from it by a period of cold. It was in this latter and colder part of the period that men seem to have resorted for shelter to the caves, in whose accumulated floors so many evidences of their residence, occupation, and abilities have been preserved. Coeval with them were an elephant, now extinct (the mammoth, *q. v.*), a rhinoceros, the great cave-bear, a large beaver, and many other extinct species of quadrupeds; and in the latter part of the period the reindeer was common all over southern and western Europe, and several other kinds of animals which, if yet extant, are now confined to the arctic region or to the summits of lofty mountain-ranges.

A remarkable feature of this Palæolithic man was his artistic sense and ability, as manifested in southern France, where this art "consisted sometimes of sculpture done in the round; sometimes of engravings and etchings on stone, bone, or horn, . . . and also in the making of the bone and horn implements, such as points, harpoons, daggers, needles, &c. The decoration was sometimes of geometric designs made by curved or straight lines; by festoons, zigzag, or herring-bone; or by the same figures made by dots or points. The principal and wonderful manufacture of art in this epoch was the representation of living things. Sometimes the animals represented are at rest, but many times they are in action. Hunting scenes are depicted. . . . A mammoth is found engraved on a piece of ivory (part of his own tusk); a cave-bear was engraved on a flat plate of schist; a poignard was made of reindeer horn, the handle of which is in the form of a reindeer himself. . . . The implements and utensils of everyday use were objects of an art by no means contemptible, even as compared with those of our times." Considering this skill and ability, it is extraordinary that he seems otherwise to have remained such an ignorant savage, leaving no monuments to show that he ever built houses for the living or made tombs for the dead; and it is very doubtful whether he knew how to make pottery.

Neolithic man introduced a new order of things. What became of Palæolithic man few relics are left to indicate. It is the opinion of some students that in Europe, at least, he had completely disappeared; others think that he was overwhelmed and submerged in the inroad of a new and more highly developed race, or that he migrated to the arctic north and became the ancestral source of the Eskimo race. The Neolithic man of Europe, at any rate, was a different and superior being, who not only chipped his arrow-heads, but made other more diverse and effective implements of stone by grinding and polishing them. This is the "polished stone" age. That he came from the East into Europe seems undoubted. There he increased until he overspread the whole country, and developed far toward civilization. "The population," says Boyd Dawkins, "was probably large, divided into tribal communities, possessed of fixed habitations, and living principally on their docks and herds, acquainted with agriculture, and subsisting in a less degree on hunting and fishing. The arts of spinning, weaving, mining, and pottery-making were known, and that of boat-building had advanced far enough to allow of voyages being made from France to Britain and from Britain to Ireland. Traffic was carried on by barter, and stone axes were distributed over areas far away from those in which the stone was found. Tombs were also built, some of imposing grandeur (see MEGALITHIC MONUMENTS), for the habitation of the dead in the after-world, in which the spirits were supposed to lead a life not very different from that of the living, and at which they were worshiped. . . . The Neolithic implements imply that the Neolithic civilization was long established, and it yielded place to a higher

and in many cases almost beyond it, by reason of their use of copper and general advance in civilization, is indisputable.

Stone Circles. See MEGALITHIC MONUMENTS.

Stoneboro, in Pennsylvania, a post-borough of Mercer co. Has extensive coal mines. Pop. (1897) 1,550.

Stonehenge, *n.* See CELTIC ARCHITECTURE, and MEGALITHIC MONUMENTS.

Stone wall, in Texas, a N. co.; area, 900 sq. m.; intersected by Brazos river and its Salt Fork; soil, fertile. Mesquit timber. Cap. Rayner. Pop. (1897) 1,180.

Story, WILLIAM WETMORE, lawyer, sculptor, and poet, was born in Salem, Mass., Feb. 12, 1819, son of Joseph Story, the jurist; graduated at Harvard, and practiced law until 1845; studied in Rome, mastered the details of sculpture, and devoted his life to art; he also published several books; a volume of *Poems* (1856); and a second volume of *Poems* (1885); *Conversations in a Studio* (1890); and *A Poet's Portfolio, Later Reading* (1894). Died Oct. 7, 1895.

Straits Settlements. A British colony on the Malay Peninsula, particularly along the Straits of Malacca. It comprises Singapore, Malacca, Penang, Keeling Islands, and Christmas Island, besides exercising a protectorate over several native states. In 1897 the population was about 554,440, of which nearly a third are Chinese, and a large number are natives of India. The total area is 1,542 sq. m., and the productions are tin, spices, sugar, rice, and tapioca. The exports amount to nearly \$40,000,000 yearly, but the imports to about three times as much. Tea, coffee, and cinchona are produced in some of the dependent native states.

Strangeria, *n.* (Bot.) A very remarkable genus of Cycadaceæ, *S. paradoxia* being the only known species, and one quite distinct from any other of the order in

Fig. 3065.—NEOLITHIC PERIOD.

10, flint graver from Dordogne, France. races, which made weapons, hunting, fishing, agricultural, and household implements out of stone, and apparently used no metals, save occasionally copper, archaeologists had classified the past inhabitants of the earth as living in the Iron Age, immediately preceding the present or Steel Age; or in the Bronze Age which preceded that, and was characterized by the use of weapons and tools made of a bronze-like composition, the use of iron not yet having been discovered. In conformity with this, the name *Stone Age* was given to the preceding prehistoric epoch, when men used only stones, shells, bones, wood, pottery, and the like, in lieu of articles made of metals. It was soon perceived, however, that subdivisions must be made, since the relics differed greatly. The Stone Age is therefore now divided into three periods: (1) Eolithic; (2) Palæolithic; (3) Neolithic.

The first is the oldest and least known. The implements assigned to it are of the rudest type, and occur in gravels and other formations which seem to carry the history of man back into the pre-glacial Tertiary times; but all the conclusions of those who advocate this division and its antiquity are open to doubt.

The second, *Palæolithic*, is simply characterized by the fact that all its implements were made by chipping until (if wanted) a cutting edge or point was procured. Not one of the Palæolithic men seems to have known enough to sharpen his tools by grinding or rubbing them; it must be noted, however, that his methods sur-

culture in Greece and Italy long before it passed away from central and northern Europe. . . . The arts which they introduced have never been forgotten, and all subsequent progress has been built upon their foundation." In America the Palæolithic period is vague and doubtful, some believing, with Dr. Charles C. Abbott, that that eminent archaeologist's discoveries in the river-gravels near Trenton, N. J., point to a truly Palæolithic period, while others deny that such a period can be found here. That the Indians, when discovered by Europeans, were distinctly Neolithic,

its fern-like foliage. It is a Natal plant, with a thick napiform trunk and a few coarse pinnate leaves, the fructification being in cones.

Streator, in Illinois, a city of La Salle co., 96 m. S.W. of Chicago; has manufactures of glass, brick, and tile, flour, lumber, and vitrified clay goods; also large shipments of coal. Pop. (1897) 13,650.

Stricker, in Ohio, a post-village of Williams co., 47 m. W. by S. of Toledo; has mineral springs of medicinal value. Pop. (1897) 1,190.

Stuart, RUTH McENERY, writer, was born in Avoyelles parish, La., May 21, 1849; married Alfred O. Stuart (1879), a planter of Arkansas. She is a frequent contributor to magazines, and has published collections of her stories under the titles: *A Golden Wedding*, &c. (1893); *Carlotta's Intended* (1893); *The Story of Babette* (1894); *Sonny* (1896), and *Gabrilinks*, in collaboration with Albert Bigelow Paine (1896).

Stuart, in Iowa, a post-village of Guthrie co., 40 m. W. by S. of Des Moines; has railroad repair shops. Pop. (1895) 2,118.

Stutsman, in North Dakota, a S.E. central co.; area, 2,304 sq. m.; drained by James river. Surface, undulating prairie; soil, fertile. Stock raising is a leading occupation. Cap. Jamestown. Pop. (1897) 5,750.

Stuttgart, in Arkansas, a post-village of Arkansas co., 60 m. S.E. of Little Rock. Pop. (1897) 1,224.

Submarine Boat. (Naut.) A vessel which can be navigated under water, with the object of safely carrying a crew to a desired point, free from observation. Boats of this kind have been constructed from time to time for more than a hundred years, and the later types of them appear to be navigable with some degree of safety. David Bushnell, of Saybrook, Conn., is supposed to have been the first to construct a practical boat of this sort, during the Revolutionary War. His patriotic

object was to carry cans of gunpowder under British craft, and blow them out of the water. His vessel was named the *Turtle*, being shaped like that reptile. The shell contained enough air to supply an occupant for about an hour. At the bottom, opposite the entrance, was placed a quantity of lead for ballast. The operator sat upright and moved his boat forward and backward by means of a screw-propeller moved by hand. There was a like screw on the top by which he could govern his ascent to the surface. An aperture at the bottom with its valve admitted water for the purpose of descending, and two force-pumps served to eject the water within when necessary for ascending. The vessel was made air-tight, furnished with glass windows for the admission of light, with ventilators and air-pipes, and was so ballasted with lead fixed at the bottom as to render it solid and obviate all danger of overturning. Above the rudder was a place for carrying a powder magazine. Within the magazine was an apparatus constructed to run any proposed period under twelve

also serves as a man-hole by which the crew enter and depart. The elevation and depression of the boat is not wholly dependent upon the propellers, water-tanks being provided, into or out of which the water may be pumped as it is needed for ballast. The electric motor operates at 200 volts, and at a speed of 900 revolutions. It is made reversible, so that it may be used as a dynamo when it is desired to charge the batteries. This vessel has made numerous successful trips, and remained under water, with two occupants, for three hours at a time. A submarine wrecking boat, designed to roll along the bottom of the sea like a locomotive, was launched at Baltimore, Md., in Aug., 1897, by Simon Lake. She was christened the *Argonaut*. This craft is 36 feet long, and 9 wide, with a displacement of 54 tons. She is designed to explore the ocean bottom for sunken treasures. The accompanying cut explains the details of the machine. She is to carry six men. The hull is built of steel, and strongly ribbed to withstand a pressure of 130 pounds to the square inch, which is the

Fig. 3068.—LAKE'S SUBMARINE BOAT "ARGONAUT."

hours; when it had run out its term it opened a strong lock resembling a gun-lock, which gave fire to the powder. With this craft the operator could sail within a short distance of a vessel without danger of being detected, and could sink quickly, and stay for a considerable time under water. This vessel was used several times in the endeavor to attach explosives to the bottoms of British vessels about New York, but the difficulty of introducing the powder within the copper sheathing rendered the attempts abortive, though it was demonstrated that the *Turtle* could be steered and directed under water with a fair degree of accuracy.

Most of the submarine boats which have been built are designed for torpedo warfare, and are described as *TORPEDO BOAT (q. v.)*. The general principles upon which the modern submarine boats are constructed may be summarized as follows: (1.) Means for remaining under water, the vessel being made air-tight, and sealed; this is usually accomplished by providing a vent for foul air, and drawing a supply of pure air from compressed tanks. (2.) Motive power; the electric storage battery supplying a motor is commonly used. (3.) Safe means for raising and depressing the craft at will; this is accomplished partially by the propelling screws, which are usually arranged to give upward and downward motion as well as fore and aft, and also by the use of water-tanks, into or out of which water may be pumped. Other methods are the carrying of a heavy keel or weight, which may be dropped in case of emergency, and the increasing of the air-space in the boat by means of expandible cylinders thrust into the water. (4.) Balance, or the maintaining of an even keel, and permanent depth. Lieutenant Peral, of the Spanish navy, designed an ingenious mechanism for this purpose. He employed an aneroid barometer, whose sensitiveness to increase of pressure as the vessel descended might be made to change the direction of the immersion-screws. The water-pressure was communicated to the barometer by means of a curved tube, extending through the shell of the boat, this tube being very sensitive to change of pressure, which deformed it, the deformation being arranged to change an electric switch, and alter the direction of the screws. To maintain the relative positions of the bow and stern, a contact-pendulum was employed, which swung against a forward contact if the bow descended, making an electrical connection that switched the propeller-blades so as to correct the deflection, and operated in a reverse manner against a rear contact.

A modern submarine boat, built for experimental purposes, and which attracted much attention at the time, was Geo. C. Baker's electrical boat, launched on Lake Michigan in 1892. The propeller screws of this craft are placed at the side, near the center of gravity, and the direction of their thrust can be changed so as to push the boat under water or elevate it, as well as to go forward or backward. The power is taken from storage battery cells, which are charged by means of a steam-engine when the vessel is above the surface. Some details of construction can be gathered from the illustration. The displacement of the boat is 75 tons. The shell is of wood, six inches thick, with a sheathing of metal. The bracing is of stout oak beams. The conning-tower, or turret, through which the steersman's head protrudes when sailing awash, is furnished with five glass plates, affording a view in all directions. It

pressure at a depth of 300 feet. The wrecker is divided into four compartments—the engine and living room, the divers' room, with an air-lock adjoining, and the lookout and operating chamber in the bow. In the engine-room will be placed the steam-engine which is to operate the vessel when she is running on the surface. When under water an electric motor, supplied by storage batteries, will be used. Under the forward part of the craft are driving-wheels, like those of a traction locomotive. The air wheels run loose and support the weight. The saving in energy by using the wheels, instead of the propeller, when submerged, is calculated at 50 per cent. In the engine-room are to be placed the storage tanks, in which the atmosphere will be compressed to a density 70 times greater than the normal. Foul air, as it settles to the bottom of the hull, will be pumped out. In the engine-room are also steam and electrical pumps for handling the water ballast. Forward of the living room, and reached through air-tight doors, is the divers' compartment. In the floor of this is a door which drops downward to permit any-

Fig. 3069.—THE BAKER SUBMARINE ELECTRIC BOAT.

one to leave the room and go out on the bottom of the sea. This bottom door can never be opened until there is a pressure of air in the apartment equal to the pressure of water on the outside of the craft, and it is arranged with an air-lock for further safety. In the divers' room will be placed a telephone, a hose reel, a diver's hoisting engine, and all wrecking tools necessary. Forward of the divers' room is to be the lookout apartment, in which the atmosphere will be normal. This is the pilot house when travelling on the bottom. In it the operator in charge of the vessel will control the hoisting derrick rigged on the bow, control the divers, and direct the craft. On the nose of the vessel will be placed a 2,000-candle power search-light, and lesser beams are to be put on the starboard and port bows. Incandescent lamps are placed throughout the vessel to furnish light. Two heavy circular anchors are to be placed in the bottom of the hull to assist in depression.

To sink the wrecker, five tanks in the vessel are nearly filled with water and the weights are lowered to

the bottom of the sea. Then the cables are wound into the boat and she is drawn down. This is the method of going down to a sunken ship whose location is known. The wrecker retains a reserve buoyancy, and in case of accident the anchor chains may be cut loose, and the craft rises to the surface. When out on searching expeditions the tanks will be filled with sufficient water to keep the locomotive on the bottom, and the traction wheels will drive her forward. The search-light will show the path across the hard, sandy beaches which girt the coasts, and also bring out the lines of sunken hulls. The derrick on the bow is to be operated by a man in the forward compartment. The latter has glass windows. The diver has only to place the hooks on the objects, and the man in the boat hoists the load and swings it over the freight cars and deposits it. These cars are shaped like giant revolver cartridges, with a door in the center of their backs. When loaded the cars are coupled together and attached to the locomotive. The train then climbs up the beach to the dry land, or the whole train can be pumped out, when it will rise to the surface and proceed to harbor, like a tugboat and a tow of barges.

The Migliardi brothers, of Foce, Italy, launched a submarine boat in 1892 for fishing and exploring. She was driven by an electric motor and screw-propeller, and was designed to carry five passengers to a depth of 300 feet; but there is no record of her actual performance. The structure was of steel, with several air-tight compartments, and an air-tank containing a supply sufficient for six hours. Her length was 27 feet, height 11½ feet, and beam 7 feet. Numerous other submarine boats are being constructed, several governments fostering their development.

Sugar Notch, in Pennsylvania, a post-borough of Luzerne co. Pop. (1897) 2,885.

Sullivan, SIR ARTHUR SEYMOUR, musical composer, was born in London, May 13, 1842; received his first systematic instruction in music at the Chapel Royal, St. James', and was still a chorister when, at the age of 14, he gained the Mendelssohn scholarship; studied two years with Bennett and Goss; then studied at Leipsic for three years; returned to England (1861), and devoted himself to composition. His first works were ambitious, and included the cantatas *Kenilworth* and *Marmion*. His world-wide reputation was made by his light operas, of which *H. M. S. Pinafore* was the leading success, and most of which were composed to librettos written by W. S. Gilbert. He has also written several songs and hymn-tunes of world-wide popularity, and has been an extensive composer of oratorios and sacred dramas. He was knighted at Windsor (1883), and awarded the Legion of Honor in France (1878). From 1876 till 1881, he was principal of the National Training School (now the Royal College) of Music.

Sully, in South Dakota, a central co.; area, 1,050 sq. m.; bounded N. by Missouri river, and also drained by Okoboji and Medicine creeks. Surface, undulating; soil, fertile. Cap. Onida. Pop. (1895) 1,641.

Summers, in West Virginia, a S. co.; area, 400 sq. m.; intersected by Greenbrier and New (or Kanawha) rivers. Surface, mountainous; soil, fertile in places; some coal and good building-stone. Cap. Hinton. Pop. (1897) 14,150.

Summerville, in South Carolina, a post-town of Berkeley co., 22 m. N.W. of Charleston. A winter

resort for invalids, because of the balmy air and picturesque surroundings. Pop. (1897) 2,525.

Summit, in Mississippi, a post-town of Pike co., 75 m. S. by W. of Jackson; ships lumber, fruit, and cotton. Pop. (1897) 1,710.

Sumner, WILLIAM GRAHAM, political economist, was born in Paterson, N. J., Oct. 30, 1840; graduated at Yale (1863); studied at Göttingen and at Oxford; was ordained a minister of the Protestant Episcopal Church, and until 1872 was assistant rector of Calvary Church, New York city; was called to the chair of Political Economy and Social Science in Yale. He has been a frequent contributor to standard periodicals, and has published several works bearing upon political economy.

Summer, in Kansas, a S. co.; area, 1,188 sq. m.; intersected by Arkansas river, and drained by Chikaskia and Ninnescah rivers. Surface, chiefly prairie; soil, fertile. Cap. Wellington. Pop. (1895) 24,138.

Sun'-worship, n. (*Anthrop.*) That a rude and ignorant people should worship the sun is not surpris-

ing, since it is the source of light and warmth, the two things which make the earth inhabitable. Accordingly it was an object of worship from the earliest times. The old Aryan tribes, the ancient Persians, the Brahmans of India, the Pueblo Indians of North America, and especially those of Mexico, all believed that the sun and its companion, the moon, were the great rulers of the world. In Egypt sun-worship was carried to a great extent. The Peruvians of old, who worshipped every aspect of nature, paid their chief honors to the sun. The worship of the sun lingered long even under the shadow of Christianity, which was skillful to turn its rites to profit.

Superior, in *Nebraska*, a city of Nuckolls co., 28 m. S. of Edgar; has flour mills and other industries. *Pop.* (1897) 1,815.

Surveying, Photographic. The application of photography to surveying is useful in that it dispenses with angular measurements on the ground by a surveying corps and transfers them to the office, where they can be worked out under more favorable surroundings. An accurate rectilinear lens affords a true perspective, and the focal length being fixed, the point of sight noted, and vertical and horizon lines located on the plate, the azimuth of the principal point may be known. From this the azimuth of any other point on the photograph can be calculated, as well as the angular distance from the horizon. The equipment of a photographic surveyor consists, in addition to the regular outfit, of two cameras, one for himself and the other for his assistant. The primary triangulations having been obtained in the usual manner, he locates camera stations and makes second triangles where desirable, and measures the azimuth of at least one well-defined point in each photograph, so that from this azimuth the direction of the principal point may be deduced. The camera is specially prepared for the work, having the plates so fixed by screws that the focal length is invariable and plates notched for the location of the horizon and perpendicular. Each plate is numbered for convenient reference. Half-plate negatives so obtained are enlarged in printing to about double size, and the paper is carefully dried to prevent distortion. Having taken at least two photographs of the same ground, the surveyor selects a number of points that can be identified in both views, and numbers them alike. These points are then noted on the plot, which is laid out on the plane-table principle. Photographic surveying was principally confined to the Rocky Mountain region and the line of the Canadian Pacific Railway previous to 1892, but has since come into much more extended use, and was adopted for a large part of the work of the International Boundary Commission between British and United States territory on the Alaskan frontier in 1894.

Sutro, ADOLPH HEINRICH JOSEPH, mining engineer, was born in Aix-la-Chapelle, April 29, 1830. He removed to New York (1850), and at once started for the gold-fields of California. In 1860 he visited the Comstock mine, and devised a tunnel that would ventilate and drain all the mines of that region. After 9 years of preliminary effort, the work was begun in Oct., 1869, and the tunnel was finished in 1871. S. made a fortune from the enterprise, and settled in San Francisco, where he spent millions in benefactions. In 1893 he was elected mayor of the city, and did much to institute municipal reforms.

Sutton, in *Nebraska*, a city of Clay co., 68 m. W. by S. of Lincoln; has some manufactures. *Pop.* (1897) 1,720.

Sutton, in *Texas*, a W. co.; area, 1,620 sq. m.; drained by Llano and Devil's rivers; has a large area of level, rich, tillable soil; plenty of timber. *Cap.* Sourora. *Pop.* (1897) 1,000.

Swain, in *North Carolina*, a S. W. co.; area, 425 sq. m.; drained by Little Tennessee and Tuckasee rivers. *Surface*, mountainous; Great Smoky Mountain on the northwest. *Cap.* Bryson City. *Pop.* (1897) 6,880.

Swatow, a seaport of China, which was opened to foreign trade by the treaty made at Tien-tsin in 1858, although the actual opening did not begin until 1869. It stands on the north bank of the river Han about five miles from its mouth. It is in the province of Kwangtung, the most southerly province of China, in which is also Canton. The dialect of Swatow, however, is unintelligible to natives of Canton. The people of Swatow are a disagreeable race, quarrelsome and hostile to foreigners. Great quantities of sugar are grown in the neighborhood of the town, which has immense sugar-refineries. On an average, sugar to the value of \$5,500,000 is exported. It is the chief item of export. Besides it, tobacco, nankeens, joss paper, grass-cloth made from a kind of hemp fiber, and tea are sent abroad. Its imports are bean-cake and beans, opium, rice, metals, cotton, hemp, silks, woollens, and wheat amounting in 1890 to \$21,000,000. In 1893, 93,095 native passengers left the port, more than half of whom went to the Straits Settlements. The population of the city (1897) is about 36,000.

Sweet Potato. (*Bot.*) The sweet potato (*Ipomoea batatas*, formerly *Batata edulis*) is not allied to the Irish potato, but belongs in the morning-glory family. It is probably of American origin, but having been long in cultivation in all the tropical and sub-tropical countries, its native place is uncertain. It was intro-

duced into Spain in 1519, and the roots, either steeped in wine or candied, were considered to have tonic qualities. It is not the *Batata Virginiana* which the English herbalist Gerard described in 1597, as his accompanying figure shows that to have been an Irish potato, but it was known in England previous to the Irish potato, and the accounts of the two plants are very much confused, the sweet potato (*Batatas*) giving its name to both. It requires a warmer climate than the Irish potato, and so has never come into general cultivation in Europe, but is chiefly grown in the Middle and Southern United States, Mexico, in Central and South America, India, China, Japan, and the Malayan Archipelago. In the United States its cultivation has greatly increased during the last twenty years, in 1895 the area of fields being 524,588 acres, which yielded 43,950,261 bushels of potatoes. Many tropical and sub-tropical varieties of sweet potatoes are known as yams.

Sweet Springs, in *Missouri*, a city of Saline co., 23 m. N. W. of Sedalia. *Pop.* (1897) 1,265.

Sweetwater, in *Wyoming*, a S. co.; area, 10,230 sq. m.; drained by Green river. *Surface*, partly mountainous, crossed by the Rocky Mountains; has the largest and most valuable coal mines west of the Mississippi. *Cap.* Green River. *Pop.* (1897) 5,500.

Swift, LEWIS, astronomer (and editor of the leading astronomical articles in this work), was born Feb. 29, 1820, in Clarkson, Monroe co., N. Y. William Swift, an ancestor, emigrated to America from Bocking, England, about 1630, and settled in Sandwich, Mass., where he died in 1644. The ancient motto of the Swift family was "Festina Lente" (hasten slowly). The grandfather of the subject of this sketch, Rowland Swift, was born Dec. 10, 1753, and died Jan. 20, 1849. He was a soldier of the War of Independence, serving at Bunker

Fig. 3070.—LEWIS SWIFT, PH.D., F.R.A.S.

Hill, and in other battles of the war. His brother Zephaniah, an eminent lawyer and jurist of Connecticut, was speaker of the legislature of that State in 1792, and U. S. minister to France in 1799. Gen. Heman Swift was a member of Gen. Washington's staff. Gen. Lafayette presented him his scarf and epaulettes, which are now in possession of some of his descendants.

Gen. Lewis Swift, eldest son of Rowland, was born in 1784 in Lebanon, Conn., and moved to Clarkson in 1809, a locality which was then a wilderness, and where the family suffered severely from the hardships and privations of frontier life. His son Lewis, at the age of 12, had the misfortune to dislocate his hip by a fall. It was never set, and he was lamed for life. His education, except for three years at the Clarkson Academy, was gained at a primitive country school.

After the death of his father, in 1846, he became a travelling lecturer on the subjects of electricity, electromagnetism, and the magnetic telegraph, themes at that time comparatively new. He married in 1850, and some years afterward became so interested in astronomy, through a perusal of the works of Dr. Thomas Dick, that he resolved to make this science his life-study. His observations began with a 3-inch refractor of his own construction, which three years afterward was replaced by a 4½-inch refractor, with which all of his comets but two were discovered. In 1862, after years of search, he discovered a periodic comet of about 120-year period, which had a tail 25° in length, ranking as one of the noted comets of this century. When the elements of the August 10th starshower were computed, they were found to be identical with those of this comet. He soon discovered another, which afterward was found to have been previously discovered in Europe. Removing to Rochester in 1872, he next discovered a

bright comet, which later was found to have been detected a few days previously by Coggia, in Enrope. For five years his observing place was on the roof of an immense cider mill, where he discovered six comets, a success which won him the appellation "the comet-finder." For three of these comets he was awarded by the Imperial Academy of Science of Vienna three gold medals. In 1881 the Lalande prize, consisting of a silver medal and 500 francs, was bestowed on him by the Institute of France. Soon after, for the discovery of a comet of the short period of only 5½ years, Mr. H. I. Warner, who afterward built the Warner Observatory, gave him his check for \$500, the largest prize ever received for the discovery of a comet. For subsequent discoveries he received from him \$400, and was sent by him to observe an eclipse in northern California. Since then he has received three bronze medals from the Astronomical Society of the Pacific, and more recently (April, 1897) a large bronze medal and a draft for \$121.52 from the Royal Astronomical Society of England, called the Mrs. Jackson Gilt Prize. In 1879 the degree of Ph.D. was conferred on him by the Rochester University. In 1882 he assumed the directorship of the Warner Observatory at Rochester, wherein was mounted his 16-inch refractor, costing \$11,000, the gift of citizens of Rochester, including also a sidereal clock costing \$500, and a spectroscope of the value of \$1,000. After these instruments were mounted, comet-seeking with the 4½-inch was in a measure abandoned, and the discovery of new nebula substituted. His list of nearly 1,000 of these attests his industry and keenness of vision. Prof. Swift has observed three total eclipses of the sun, viz., in 1869 at Mattoon, Ill.; in 1878 at Denver, and in 1889 in northern California. His seeming discovery of two intra-Mercurial planets at the Denver eclipse attracted widespread attention. In 1894, after the financial failure of Mr. Warner, he moved with his family and instruments to the Lowe Observatory, Echo Mountain, Cal., where he still resides as its director.

Swift, in *Minnesota*, a W. co.; area, 653 sq. m.; intersected by Chippewa and Poudre de Terre rivers. The central and S. parts are level or slightly undulating prairie; E. and N. parts high, rolling prairie, adapted to wheat-raising; very little timber; soil, a rich black loam, clay or gravel subsoil. *Cap.* Benson. *Pop.* (1895) 11,846.

Swinburne, ALGERNON CHARLES, poet, was born in London, England, April 5, 1837; educated at Eton, and Balliol College, Oxford. He left Oxford before taking his degree, and went to France and Italy, where he was associated for some time with the poet Landor. On his return to England he devoted himself to writing, and was much in the society of Dante Gabriel Rossetti and William Morris. His first book, *The Queen Mother and Rosamond* (1861), had attracted little notice, but in 1864 he issued *Atalanta in Calydon*, which at once gave him reputation as a poet of unusual gift of melody and lyrical invention. Since then he has published a volume every year, and often more than one, his works comprising nearly all phases of poetical composition, from the didactic to the dramatic. His earlier poems were subjected to sharp criticism and popular disapproval for the extremely sensuous tone that pervaded them; his latter work has given less cause for this reprehension, but the unfavorable impression produced by his first poems, and by the uncourtly and revolutionary nature of many of his opinions, prevented him from being made poet laureate after the death of Tennyson, an honor that his poetic genius in many respects merited. In addition to his poetical writings, Mr. S. has published literary criticisms, and a volume of *Prose Miscellanies* (1866).

Swing, DAVID, clergyman, was born in Cincinnati, O., Aug. 23, 1830; graduated at Miami University (1852); was professor of Languages there (1853-56); pastor of the Fourth Presbyterian Church in Chicago (1866-74). In the latter year a charge of heresy was preferred against him, and he was tried by the Presbytery, and acquitted of the charge; but he soon resigned, and from 1878 held independent services in Central Music Hall. Died Oct. 3, 1894.

Swisher, in *Texas*, a N. W. co.; area, 900 sq. m. *Cap.* Tulia. *Pop.* (1890) 100.

Synergism, n. See MONERGISM.

Syracuse University. (*Educ.*) A Methodist Episcopal co-educational institution, founded in 1848, at Lima, N. Y., under the name of Genesee College. It was removed to Syracuse, N. Y., and its name changed, by reason of considerable subscriptions by citizens of Syracuse, the city giving it \$100,000. It has a medical department and a college of law, opened in 1895. It had in 1896, 121 instructors, 1,174 students, and 46,540 volumes in its library. Its income in that year was \$126,550.

Szegedin (*zeg'den*), one of the most important towns of Hungary, opposite to the confluences of the rivers Theiss and Maros, 118 miles from Pest: by railway. *Manuf.* Soda, tobacco, coarse cloth, &c. It carries on an extensive river trade, but in 1879 was nearly destroyed by an inundation of the Theiss. It was the seat of the Hungarian revolutionary government in 1849, and was held by the Turks in the 16th and 17th centuries. *Pop.* (1890) 87,210.

T The twentieth, and a mute letter, and sixteenth consonant in the English language, is formed by a quick and strong expulsion of the breath through the mouth upon a sudden drawing back of the tongue from the fore part of the palate, with the lips at the same time open. The strength with which the breath is emitted in pronouncing *t* is all that distinguishes its sound from that of *d*. As *t* and *d* are so nearly related, it is natural that they should take each other's places, as is the case also with *t* and *s*, on account of the similarity of their pronunciation. *T* is also interchangeable with *th* and *st*, with *c*, *p*, *l*, and *nd*. It is frequently dropped at the end of words, and also in the middle of words when flanked with vowels. *Ti* before a vowel has the sound of *si*, or rather *shi*, and is often changed to *s*, *sh*, *ch*, &c. When, however, *ti* is preceded by *s*, as in *question*, it retains its proper sound. *T*, as a numeral, stands for 160, and with a dash over it, for 160,000.

Tbandage. (*Surg.*) A bandage shaped like the letter *T*, and used chiefly for application to the groin. — *To suit or fit to a T*, to answer the purpose perfectly.

Taasinge. (*ta'sing*), an island of Denmark, to the S. of Funen; area, 27 sq. m. Pop. 5,000.

Tab, *n.* A tag; the end of a lace; the latchet of a shoe; — also, a border to a lady's bonnet.

Tab, a river of Persia, separating the provs. of Fars and Khuzistan, and, after a course of 150 m., entering the Persian Gulf, 20 m. from Hindian.

Tab'anus, *n.* (*Zoöl.*) A genus of the family *Cestridiæ*, *q. v.*

Tabard, *n.* [*W. tabar*; *It. tabarro*, a mantle.] A sort of tunic or mantle formerly worn, covering the body before and behind, and reaching below the loins, but open at the sides from the shoulders downward; also, a herald's coat, as represented in Fig. 1277.

Tabaret, *n.* A thick, satin-striped silk, used for hangings.

Tabasco, in Mexico, a S.E. state, bordering on the Gulf of Mexico, between Lat. 17° and 18° 40' N., Lon. 91° 20' and 94° 40' W., having E. Yncatan, S. Chiapa, and W. Tehuantepec; area, 15,609 sq. m. Rivers. Tabasco, Usumasinta, Chiltepec, Das Bocas, Tupilco, Santa Anna, Tonala, Uspahan, and Gnachapa or Paso. Surface, low and flat, with abundance of oak, cedar, mahogany, and ironwood trees; soil, very fertile. Climate, excessively hot. Prod. Maize, sugar-cane, cocoa, dyewoods, coffee, and cotton. Principal towns. San Juan Battista, and Frontera de Tabasco.

Tabasco, a river which rises in Guatemala, and flows into the Gulf of Mexico, after a N. course of 250 m.; Lat. 18° 35' N., Lon. 92° 37' W.

Tabasheer, *n.* [*Pers.*] A silicious deposit in the joints of the bamboo. (See *BAMBUA*.) It is remarkable for its low refractive power. Thus, Sir D. Brewster has shown that in a sphere of *T*, one inch in diameter, the focal distance for parallel rays of light is four feet, while in a similar sphere of glass, it is but half an inch from the surface of the sphere.

Tabatin'ga, a town of Brazil, on the Amazons; Lat. 4° 35' S., Lon. 70° 20' W.

Tab'by, *a.* Having a wavy, watery, or more variegated appearance. — Diversified in color; brindled; as, a *tabby* cat.

—*n.* (*Manuf.*) A term formerly applied to certain figured silks and other goods upon which an irregular pattern had been stamped, either by the pressure of engraved rollers, or by folding the stuffs in such a way as to produce, by the mutual pressure of their fibres, an inequality of surface, which, by reflected light, gave rise to the appearance called *watering*.

(*Misoury.*) A compost consisting of lime, shells, gravel, and stones, in equal proportions, mixed with a sufficiency of water; and which, when duly powdered and mixed, and after being laid on and dried, becomes as hard as stone itself.

—A cat of a tabby color. — Colloquially, an old maid; a gossip; a woman given to tattling.

—*v. a.* (*imp.* and *pp.* *TABBIED*.) (*tab'bid*.) To water, or to give a watery appearance to, by the process of calendering; as, to *tabby* poplin.

Tabefaction. (*-fak'shun*.) *n.* [From *Lat. tabeo*.] A losing of flesh, or wasting away, as by disease; a form of atrophy.

Tabellian. (*-bèl'yan*.) *n.* [*Lat. tabellio*, from *tabella*, dim. of *iabula*, a board.] An officer of the old Roman empire who had charge of public documents; — answering to our notary public.

Tab'erg, in New York, a post-village of Oneida co., 25 m. W.N.W. of Utica.

Taberna, (*ta-bair'na*.) a town of Spain, in Valencia, 4 m. from Valencia; pop. 4,500.

Tabernacle, *n.* [*Lat. tabernaculum*, a tent.] In its original signification, a tent; and hence the patriarchs are said to have dwelt in *T*, or tents. In a stricter sense, there were in the camp of Israel under Moses two *T*.: the tent of the congregation, in which the people assembled for the dispatch of their ordinary secular affairs, and the *T*. of the Lord, or the tent of testimony, or simply the *T*. This last was an oblong, square structure, ten cubits in breadth, ten in height, and thirty in length, set up by the express command of God, for the performance of religious worship, sacrifices, &c., by the Israelites during their wanderings in the wilderness, and was used by them for the same purpose in the land of Canaan till the building of the Temple. The sides and west end were composed of boards or planks of shittim-wood,

overlaid with plates of gold, having bases of brass; while the east end, at which was the entrance, was covered by a curtain of fine linen richly ornamented with needlework, and above it was also covered with curtains. The whole was so constructed that it could be readily taken down and carried away. It was divided into two parts: the first, called the Holy Place, twenty cubits long and ten wide, in which were the table of shewbread, the golden candlestick, and the golden altar of incense; the other, the Sanctuary, or Holy of Holies, in which was the ark of the covenant. Around the *T*. was a large oblong court, one hundred cubits in length, and fifty in breadth (Fig. 1446), encompassed by pillars overlaid with plates of silver, on which hung curtains of fine linen. This was the "court of the *T*." The "Feast of *T*," or of tents, was designed to commemorate the dwelling in tents in the wilderness, and it was also a feast of thanksgiving for the harvest. It was the last of the three great annual feasts which required the presence of all the people at Jerusalem, and it lasted for eight days, from the 15th to the 22d of the seventh month (Tisri, corresponding to our October). During its celebration, the people dwelt in tents or arbors made of the leafy branches of certain trees. It was observed with great demonstrations of joy, and numerous sacrifices were offered up during its continuance.

(*Ecc.*) In the Roman Catholic Church, a small structure of marble, metal, or wood, placed at the posterior part of the altar, and of costly material and workmanship. Even when the exterior structure is of marble or metal, there is commonly an inner receptacle of wood (properly cedar) lined with silk. The *T*. is appropriated exclusively to the reservation of the Eucharist, and it is prohibited to keep within it any other object, however sacred, as the chrism, relics of saints, the altar-vessels, &c. A lamp is constantly kept burning before the *T*, which is ordered to be kept at all times carefully locked, the key being retained by the clergy, to whom it is forbidden to entrust it to any lay person, even the sacristan or other official of the church.

Tab'ernacle, *v. n.* To dwell; to reside for a time; to be housed.

Tab'ernacla, in New Jersey, a village of Burlington co., 12 m. S.E. of Mount Holly.

Tabernac'ular, *a.* Pertaining, or relating, to a tabernacle, more especially the Jewish Tabernacle. — Lattice; presenting the appearance of lattice-work.

Tabes, (*tab'ez*.) *n.* (*Med.*) Same as *ATROPHY*, *q. v.*

Tab'id, *Tabetic,* *a.* [*Fr. tabide*; *Lat. tabidus*.] Belonging or having reference to, or wasted by, *tabes*.

Tab'lature, *n.* [*Fr.* from *Lat. tabula*.] (*Anat.*) A division or parting of the skull into two tables.

(*Paint.*) A painting in a single piece, comprehended in one view, and formed according to one design.

(*Mus.*) A mode of writing music for a particular instrument by means of certain letters placed on parallel lines, each of the lines representing a string of the instrument. It is not now a usual mode of writing.

Table, (*tab'l*.) *n.* [*Fr.*; *Lat. tabula*; *W. tab*, a surface.] A flat surface of some extent, or a thing that has a flat surface, like the side of a board; a slab. — An article of household furniture used for a great variety of purposes, as for holding dishes of meat, for writing on, &c. — Hence, fare; an entertainment of provisions placed on a table to be partaken of; as, he keeps a good *table*. — The company of persons sitting at table, or partaking of entertainment; as, "to set the *table* on a roar." (*Shaks.*) — A tablet; a surface on which anything is written or traced; — hence, sometimes, a memorandum-book; as, he entered the items in his *tables*. — Hence, a picture or something that exhibits a view of anything on a flat surface. — Hence, in a great variety of applications, a condensed statement which may be comprehended by the eye in a single view; a systematic scheme or schedule; a synopsis; the presentation of many items or particulars in one connected group; as, (1.) (*Chem.*) A catalogue of substances and their properties. (2.) (*Bibliol.*) A syllabus; an index. (3.) (*Astron., Phys., &c.*) In the first place, denoting merely a collection of numbers, exhibiting the measures or values of some property common to a number of different bodies in reference to some common standard. Thus, we have *tables* of specific gravity, of refractive powers, of the expansion of substances by heat, &c. — In another signification, expressing a series of numbers which proceed according to some given law expressed by a mathematical formula. Of this kind are the logarithmic *tables*, *tables* of the powers or roots of the different numbers; of the sines, cosines, and other angular functions; of astronomical refractions; of the equations of the planetary orbits, &c. (4.) (*Math.*) Any collection and arrangement in a condensed form of many particulars or values, for ready reference, as of weights, measures, currency, &c.; also, a series of numbers following some law, and expressing particular values corresponding to certain other numbers on which they depend, and by means of which they are taken out for use in computations, as annuity *tables*, interest *tables*, and the like. — (*Arch.*) A smooth, simple member or ornament of various forms, but most usually in that of a long square. (*Weale.*) — (*Anat.*) One of the two bony laminae, or layers, of the skull. — (*Glass manufacture.*) A flat, circular sheet of crown glass. — Among lapidaries, the upper flat surface of a diamond or other precious stone, the sides of which are cut in angles. — (*Fine Arts.*) Same as *perspective plane*. See *PERSPECTIVE*. — (*Games.*) The board on which draughts or backgammon

is played. — One of the sides or divisions of a folding-board; as, to play into the left-hand *table*; — also, the game itself; as, "Monsieur . . . plays at *tables*." (*Shaks.*)

Tables of a girder or chord. (*Civ. Engin.*) The upper and lower horizontal members. — **The Lord's Table**, the sacrament or communion of the Lord's supper. See *EUCCHARIST*. — **To lay on the table**, in parliamentary or legislative parlance, to lay as a report, petition, motion, and the like, on the table of the Speaker, or presiding officer — in other words, to postpone, by a vote, the consideration of. — **To turn the tables**, to change the condition or fortune of persons in contest or contention; — used as a metaphor, from the vicissitudes attendant on gaming.

Table, *v. a.* To lay or place on a table. — To form into a table or catalogue; to tabulate. — To enter upon the record; — used in congressional parlance; as, to *table* a motion.

(*Corp.*) To scarf. See *SCARF*.

(*Ecc.*) In the Presbyterian Church, to enter upon the docket; as, to *table* charges against a minister.

—*v. n.* To board; to supply with food or entertainment.

—*a.* Relating to a table; plane; level.

Tableau, (*tab-lô'*.) *n.*; *pl.* TABLEAUX, (*tab-lôz'*.) [*Fr.*, from *Lat. tabula*, a painting.] A picture; a vivid or life-like representation. Particularly, the representation of some scene by means of persons grouped in appropriate poses, and keeping perfectly silent and motionless; — often called *tableau vivant*.

Table Bay, *n.* An inlet of the Atlantic Ocean, in S.W. Africa. Cape Colony occupies its shores, with Cape Town, at the back of which is Table Mountain, Lat. 33° 53' 2" S., Lon. 18° 24' 5" E.

Table-bed, *n.* A bed made in the form of a table.

Table-beer, *n.* Small beer; beer for the table, or for common use.

Table-bell, *n.* A small hand-bell used at table.

Table Bluff, in California, a post-township of Humboldt co., abt. 12 m. S.S.W. of Eureka.

Table-book, *n.* Tablets; a book for jotting down notes by means of a pencil.

Table-cloth, *n.* A cloth for covering a table, particularly at meals.

Table-cover, (*-kuv'er*.) *n.* A cloth laid on a table between meal-times.

Table-d'hôte, (*tab'bl-dôt*.) *n.* [*Fr.*, literally, the host's table.] An ordinary; a common table for guests at an hotel.

Table-diamond, *n.* A diamond cut with a flat surface.

Table-land, *n.* Same as *PLATEAU*, *q. v.*

Table-linen, *n.* Linen table-cloths, napkins, and the like.

Table-money, *n.* In the military and naval service, an allowance of money, sometimes paid to officers in addition to their pay, for mess charges, table expenses, &c.

Table Mound, in Iowa, a township of Dubuque county.

Table Mountain, in California, an elevation in Marin co., sometimes called Tamel (or Tamal) Pais, 2,600 ft. high. — An eminence in Tuolumne co., 30 m. long, 500 ft. high, and abt. 1,200 ft. wide, contains gold mines.

Table Mountain, in S. Carolina, Pickens dist., attains an elevation of 4,000 ft. above the sea. On one side is a precipice of abt. 1,100 ft. perpendicular.

Table Rock, in Nebraska, a post-village of Pawnee co., abt. 32 m. S.W. of Brownville.

Table-shore, *n.* (*Naut.*) A low, level shore.

Table-spar, *n.* (*Min.*) Same as *TABULAR SPAR*, *q. v.*

Table-spoon, *n.* A large spoon used at table.

Table-spoonful, *n.*; *pl.* TABLE-SPOONFULS. Enough to fill a table-spoon.

Tab'let, *n.* [*Fr. tablette*, dim. of *table*.] A small table or flat surface. — Something flat on which to write, paint, draw, or engrave.

—*pl.* A small pocket note-book.

(*Med.*) Something made up in a square, solid form; a lozenge; a troche.

Table-talk, (*-tawk*.) *n.* Conversation at meals; chat at dinner.

Table-talker, *n.* One who chats or converses at table.

Table-turning, *n.* See *SPIRITUALISM*.

Tab'ling, *n.* A forming into tables; a setting down in order.

(*Shipbuilding.*) Letting one piece of timber into another, in the same manner as the beams are put together; scarfing.

(*Naut.*) A broad hem made on the skirts of sails by turning over the edge of the canvas, and sewing it down.

Tab'o, in Missouri, a post-village of La Fayette co., 36 m. S.E. of Independence.

Tabo'ga, an islet of the Republic of Colombia, in the Bay of Panama, 10 m. S. of Panama.

Tabognilla, (*ta-bo-gheel'ya*.) an island in the Bay of Panama, abt. 1½ m. N.E. of Taboga.

Tabon', an island of Chili, N.E. of the island of Chiloe; Lat. 42° S., Lon. 73° 10' W.

Taboo', *n.* Among the South-Sea islanders, a term denoting something consecrated, sacred, not to be touched. — Hence, something prohibited or interdicted.

—*v. a.* To interdict approach or use; as, a match-making mother *taboos* an ineligible suitor for her daughter's hand.

Tab'or, *v. a.* To make, as a sound with a tabor.

Tabor. (*taí'bor*), *n.* (*Mus.*) A small drum, usually forming an accompaniment to the pipe. — They are both played by the same performer, the tone of the pipe being regulated by the fingers of the left hand, while the *T.* is played with the other. They were at one time very popular amongst the lower classes in most European countries.

Fig. 2460. — TABOR.

Tabor, (Mount), a mountain of Syria, in Palestine, between the towns of Nazareth and Tiberias, stands nearly alone, in the N.E. part of the plain of Esdraëlon, and overtops all the adjacent mountains, commanding the most magnificent prospect in the Holy Land. It is about 1,000 feet high. From an early period it was regarded as the Mount of Transfiguration, but this opinion is now generally abandoned, as there is strong evi-

Fig. 2461. — MOUNT TABOR,
(From the plain of Esdraëlon.)

dence of its summit having been then occupied by a city; and travellers are disposed to look for the scene of this supernatural incident further north, in the neighborhood of Hermon. In the times of the Crusaders, *T.* was studded with churches and monasteries, relics of which, as well as of Roman and Saracenic structures, still remain. At the foot of Mount *T.* Napoleon I. gained a victory over the Turks.

Tabor, in Iowa, a post-town of Fremont co., about 12 m. N. of Sidney.

Taborites. *n. pl.* (*Eccl. Hist.*) The denomination of the most violent party among the Hussites, who had for leader John Ziska. They were so called from Tabor, a hill of Bohemia, upon which they encamped during the struggle which they maintained against the civil and ecclesiastical power.

Tabouret. *n.* [*Fr.*] A stool; a convex seat without arms or back, resembling a tabor. — An embroidery frame.

Right of the tabouret, under the old French régime, the privilege of sitting on a tabouret in presence of the sovereign, — a distinction accorded to certain distinguished personages only.

Tabriz, or **Tebritz.** (*ta-breez'*), a city of N. Persia, and the cap. of the prov. Azerbaijan; Lat. 38° 2' N., Lon. 46° 12' E. It stands in a plain among forests, and is about 3½ miles in circumference. It has fine gardens, a citadel, the remains of a mosque, numerous bazaars, and caravanserais. *T.* is an extensive entrepôt of trade between Persia, India, Russia, and Constantinople. *Pop.* 70,000.

Tabular. *a.* [*Lat. tabularis*, from *tabula*, table.] In the form of a table; having a flat surface; as, a *tabular* rock. — Having the form of laminae or plates; as, *tabular* nodules. — Set in squares. — Tabulated; set down or arranged in a table or schedule; as, *tabular* figures. — Computed by the use of tables; as, *tabular* right ascension.

Tabularization. (*-za'shun*), *n.* Act of tabularizing; also, state of being tabularized.

Tabular Spar. *n.* (*Min.*) Same as WOLLASTONITE.

Tabularize, *v. a.* To reduce to a tabular form; to tabulate.

Tabulate. *v. a.* [*L. Lat. tabulare*, from *tabula*.] To reduce to tables or synopses. — To shape with a flat surface.

Tabulation. (*-la'shun*), *n.* Art or act of forming tables; act of throwing data into a tabular form; as, the *tabulation* of statistics.

Tacamahac, Tacamahaca, (*ták-a-ma'hák*), *n.* (*Bot.*) A balsamic bitter resin, different varieties of which are attributed to *Leica Tacamahaca*, to *Elaphrium tomentosum*, and to *Calophyllum Inophyllum*. East Indian *tacamahac* is the resin of *Calophyllum Calaba*. The name is also given to the resin obtained from the buds

of the Tacamahac poplar, *Populus balsamifera*. See *POPULUS*.

Tacazze, (*ta-kat'sai*), a great river of Abyssinia, rising near Lat. 12° N., Lon. 39° 30' E., and afterwards joining the Nile near Gooz, in Lat. 17° 45' N.

Tacca'ceæ, *n. pl.* (*Bot.*) An order of plants, alliance *Narcissales*. *DIAG.* Tabular, half-tripetaloidous flowers and fleshy albumen. They consist of perennial, herbaceous plants separated into 2 genera and 8 species, natives of damp places in the hot parts of India, Africa, and the South-Sea Islands. The most interesting plant of the order is *Tacca oceanica*, the roots of which yield the starch known as Tacca starch, Tahiti arrowroot, or Otaheite salep. Cakes made of this product are much eaten by the natives of the Society Islands. See *ARROW-ROOT*.

Tace. [*Lat.*] Be silent! silence!

Tacet, (*ta'set*), *v. impers.* [*Lat.*, it is silent.] (*Mus.*) A term denoting that through the movement to which it is affixed in any part, that part is to lie still, or be silent during its performance.

Tachometer, (*-kom'e-tür*), *n.* [*Fr. tachomètre*, from *Gr. tachos*, speed, and *metron*, measure.] A contrivance for the purpose of measuring the velocity of a moving body.

Tachydidaxy, (*tak'y-di-dax-y*), *n.* [*Gr. tachys*, quick, and *didaxis*, teaching.] A short method of imparting instruction. (*R.*)

Tachydrite, *n.* [*Gr. tachys*, and *ydor*, water.] (*Min.*) A very deliquescent salt, resembling Carnallite, which occurs in roundish masses of a yellow color in the compact Anhydrite of Stassfurt. It has a hydrated chloride of calcium and magnesium.

Tachygraphy, *n.* Same as *STENOGRAPHY*, *q. v.*

Tachylite, *n.* [*Gr. tachys*, quick, and *lithos*, stone.] (*Min.*) A kind of Isopyre of a velvet-brown or black color, found on the Säsebühl, near Dransfeld, forming small masses in Basalt and Wacke. It is a silicate of alumina and protoxide of iron. The name has reference to its rapid fusibility.

Tacit, (*täs'it*), *a.* [*Fr. tacite*; *Lat. tacitus*, from *taceo*, to be silent.] Silent; implied, but not expressed.

Tacitly, *adv.* In a tacit manner; silently; without words; by implication; as, he *tacitly* acquiesced.

Taciturn, *a.* [*Fr. taciturne*.] Habitually silent or reticent; not free or inclined to converse; not apt to talk or speak; as, a *taciturn* person.

Taciturnity, *n.* [*Fr. taciturnité*.] Habitual silence or reserve in speaking; reticence; — the opposite of *loquacity*.

Taciturnly, *adv.* In a taciturn or reticent manner.

Tacitus. CAIUS CORNELIUS (*tas'i-tus*), a celebrated Roman historian, born A.D. 56, and, being descended of a good family, passed early through the usual military grades to the dignity of prætor, and in 97 was elected consul. How or when he died is uncertain. His great works were, *A Life of Agricola*; *Manners and Customs of the Germans*; *Dialogues and Oratory*; *A History of Rome from Galba to the Death of Domitian*; and *Annals of the History of Rome from the Death of Augustus to Nero*. *T.*'s writings are a rich storehouse of political and philosophical wisdom. He displayed a profound acquaintance with human nature, and the subtlest influences that affect the human character and conduct. His style is remarkable for conciseness, vigor, apparent abruptness, and occasional obscurity; and his writings, like all the productions of great minds, charm most those who study them best. They have been translated into almost every European language.

Fig. 2462. C. C. TACITUS.

Tacitus, MARCUS CLAUDIUS, a Roman emperor, elected on the death of Aurelian, A. D. 275, when in his 75th year. He was descended from the great historian, and had been twice consul; but he reigned only 6 months, in which short space he displayed singular wisdom, vigor, and moderation. He was assassinated at Tyana, in Cappadocia, 276.

Tack, *v. a.* [*Fr. attacher* = *Sp. atacar*, and *It. attaccare*.] To fasten or attach to anything; as, to *tack* a condition to an agreement. — To fasten slightly, as by nails or tacks; as, to *tack* one piece of cloth to another. — [*It. taca*; *Arwur tack*.] A small sharp-pointed nail, having a broad, circular head; as, tin *tacks*.

(*Naut.*) A rope used to confine the foremost lower corners of the courses and stay-sails, or the outer lower corners of studding-sails; also, that part of the sail to which the tack is usually fastened. — The course of a ship, as indicated by the position of her sails; thus, a ship is said to be on the *starboard tack* when she is close-hauled, having the wind on the starboard side; and on the *port tack* when the wind is on the port side. — *v. n.* (*Naut.*) To change a vessel's course by bringing her head to the wind, and shifting the tacks of the sails from one side to the other; as, to *tack* to port. — *v. a.* (*Naut.*) To change the course of, as a ship, by shifting tacks and position of the sails and rudder.

Tack'er. *n.* One who tacks; one who attaches or makes an addition.

Tack'ing. *n.* (*Naut.*) The changing of a ship's course.

Tack'ing. (*Eng. Law.*) A right which mortgages possess in some cases of consolidating their securities.

Tackle. (*ták't*; pron. by sailors, *tá'kl*), *n.* [*D. and Ger. takel*.] (*Naut.*) An apparatus consisting of one or more pulleys rove with a single rope, which latter is termed

a *fall*. The pulleys are called *blocks*; the shell, or frame, contains the *sheaves* of the pulley which turn on a pin. When a tackle is in use, one end of the fall is made fast, and called the *standing-end*; the other is hauled upon, and is called the *running-end*.

Overhauling a tackle is separating the blocks; while, *fluting blocks* is bringing them close together by hauling on the fall. (See *BLOCK*.) — The chief simple tackles used are a *whip*; *whip upon whip*; *gun-tackle*; *luff-tackle*; but many other combinations of pulleys are also used. — Ropes and other instruments used in action or for equipment; as, he resolved to take up his *tackle* and go.

(*Naut.*) The rigging and working apparatus of a ship.

Ground-tackle. (*Naut.*) See *GROUND-TACKLE*. — **Gun-tackle.** See *GUN-TACKLE*. — **Jack-tackle,** a small tackle employed in hauling down the tacks of the principal sails.

— *v. a.* To harness, as a horse into a wagon. (*Colloq.*) — To lay hold of; to seize; to encounter; as, *tackle* to one's work.

Tack'ling. *n.* Instruments of action; as, fishing-tackling. — Harness; the accoutrements of an animal fastened to a carriage, wagon, &c.

(*Naut.*) Furniture of the masts and yards of a ship, as cordage, sails, &c.

Tacna, a town of Peru, dept. of Arequipa, on the Tacna River, 40 m. N. of Arica; Lat. 18° S., Lon. 72° 10' W.; *pop.* 12,000.

Tac'o, in Alaska, a town on the coast, opposite Admiralty Island; Lat. 57° 54' N., Lon. 133° 37' W.

Tac'ony, in Pennsylvania, a suburb of Philadelphia, on the Delaware, 10 m. N. of the City-Hall.

Tacony (or Frankford) Creek, in Pennsylvania, rises in Montgomery co., and flowing S., enters the Delaware at Bridesburg.

Tac'ora, a mountain of Bolivia, dept. of La Paz, abt. Lat. 17° 10' S., Lon. 70° W., 18,890 ft. high.

Tacso'nia, *n.* [From *Tacso*, the Peruvian name.] A genus of ornamental shrubby climbing plants, order *Passifloraceæ*, having the general appearance of *Passiflora*, and the same structure of stamens, pistil, and fruit, but differing in the great length of the cylindrical tube of the calyx, which is furnished with two crowns, one at the throat and the other near its base. In *T. manicata*, a very handsome species, the tube scarcely exceeds in length that of a passion-flower. The species are natives of Central America and the W. Indies. The fruit of *T. mollissima*, *tripartita*, and *speciosa*, are eaten.

Tact, *n.* [*Fr.*; *Lat. tactus*, the sense of feeling.] Touch; feeling. (*R.*) — Hence, sometimes, the stroke in beating musical time. — Skill or address in adapting to circumstances words and actions; peculiar skill or faculty; nice perception, intuition, or discernment; adroit management; dexterity; knack.

Tact'able, *a.* That may be touched or felt. (*R.*)

Tactic, Tactical, *a.* [*Gr. taktikos*.] Pertaining or having reference to tactics; relating or belonging to the art of military or naval dispositions for battle, evolutions, &c.

Tactically, *adv.* In a tactical manner; according to tactics.

Tactician, (*ták-tish'an*), *n.* [*Fr. tacticien*.] One versed in tactics; hence, by implication, an adroit manœuvrer; a skilful manager.

Tactics, *n. sing.* [*Fr. tactique*; *Gr. taktikos*.] (*Mil. and Navy.*) The science of moving bodies of troops, or vessels, in the actual presence of, and contact with, an enemy.

Tact'ile, *a.* [*Fr.*; *Lat. tactilis*.] That may be touched; also, pertaining or having reference to the organs, or the sense, of touch; as, *tactile* qualities.

Tactil'ity, *n.* [*Fr. tactilité*.] State or quality of being tactile; perceptibility by touch; tangibleness.

Taction, (*ták'shun*), *n.* [*Fr.*; *Lat. tactio*, from *tango*, *tactus*, to touch.] The act of touching; touch; contact.

Tact'less, *a.* Wanting or without tact.

Tactual, (*ták'tyu-al*), *a.* [From *Lat. tactus*.] Belonging to the sense, or the organs, of touch; consisting in, or derived from, touch.

Tacu'ba, or **TACUBAYA**, a town of Mexico, 7 m. N.E. of the city of Mexico; *pop.* abt. 3,000.

Tacum'ga, or **LACTACUNGA**, a town of Ecuador, 55 m. S. of Quito; *pop.* abt. 10,000, chiefly Spanish and Mestizo.

Taen'sah, in Illinois, a village of Christian co.

Tadmor or Thadmor. See *PALMYRA*.

Tad'pole, *n.* [*A. S. tade*, a toad, and *pola*, *Lat. pullus*, a young animal.] A frog in its first state from the spawn; a polliwig or polliwig. See *BATRACHIA*.

Tael, (*täl*), *n.* In China, a piece of money equivalent to about \$4.50; also, a weight of 1½ oz. avoirdupois.

Ta'en, (*tän*), *a.* A contraction of *taken*, used chiefly in poetry.

Tænia, *n.* (*Zoöl.*) See *TAPE-WORM*.

Tænioid, (*tæ'ne-oid*), *a.* [*Lat. tænia*, ribbon, and *Gr. eidos*, form.] Formed like, or resembling, a ribbon. — Pertaining or relating to the tænia or tape-worm.

Taffelneh, a fortified maritime town of N. Africa, Morocco, 30 m. from Mogadore; *pop.* 3,500. — The cap. of the same name is 5 m. to the N.W.

Taf'feta, Taf'fety, *n.* [*Fr. taffetas*.] A thin, glossy, silken fabric, extensively used in France for window-curtains.

Taf'rail, (*täf'rel*), *n.* [*D. tafereel*, panel.] (*Naut.*) The uppermost rail of a ship's stern.

Taf'fy, *n.* Same as *TOFFY*.

Taf'ia, Taf'ia, *n.* [*Fr.*] A variety of rum prepared in the W. Indies by the fermentation of the molasses of cane-sugar.

Taf'let, Taf'lelt, one of the four great divisions of Morocco, *q. v.*

Taftou, in Pennsylvania, a post-village of Pike co., 175 m. N.E. of Harrisburg.

Tafton, in Wisconsin, a village of Grant co., about 18 m. N.W. of Potosi.

Taftsville, in Vermont, a post-village of Windsor co., 34 m. S. of Montpelier.

Tag, *n.* [Swed., Goth. *tagg*.] A metallic point put to the end of a string; as, the *tag* of a stay-lace. — A label or direction card. — The cue; the end or catchword of an actor's speech. (*Simmonds*). — Hence, something mean and paltry; the rabble. (See *TAG-RAG*). — In some parts of England, a young sheep of the first year. — A child's play.

—*v. a.* To fit with an end or metallic point, as a lace. — To append to; to adapt, as one thing to another; as, to *tag* on a word to a sentence. — To join or fasten.

—*v. n.* To follow closely, as something belonging; — often before *after*.

Tag-belt, **Tag-sore**, *n.* A disease under the tail of a sheep.

Taganrog, a town of European Russia, in the govt. of Ekaterinoslav, near the N.W. extremity of the Sea of Azov. It has a harbor and fortress, maritime and commercial courts, a naval hospital, and a lazaretto. Its port was formed by Peter the Great, and the Emperor Alexander I. died here in 1825.

Tages, (*tai-jes*). (*Myth.*) A grandson of Jupiter, and the first who taught the twelve nations of the Etruscans the arts of augury and divination. He was said to have arisen from a clod of earth turned up by the plough of an Etruscan laborer, and to have assumed human shape in order to instruct the Etruscans in that knowledge of omens and of incantations for which they afterwards became so celebrated.

Tagetes, *n.* (*Bot.*) The French Marigold, a genus of showy annual plants, order *Asteraceæ*, the species of which are natives of Mexico, Peru, and Chili, but are also grown in China and India. The scent of the com-

Fig. 2463. — *TAGETES SIGNATA SUMILA*.

mon species is strong and offensive, but *T. signata sumila* (Fig. 2463), and the continuous flowering *T. tenuifolia*, with very finely cut leaves, has a more agreeable balsamic smell.

Tagger, *n.* One who, or that which, joins one thing to another. — Anything pointed like a tag. — A thin kind of tin plate.

Taghanic or **Taghkanne Mountains**, in New York, a range extending from the Green Mountains, along the E. border of New York, to the Highlands.

Taghkanic (*tag-kan'ic*), in New York, a post-town of Columbia co., 10 m. S.E. of Hudson. Pop. (1890) 1,062.

Taglia, (*tai'ya*, *n.* (*Mech.*) A system of fixed pulleys collected in one common block, and also of a system of movable pulleys in a separate block, to which the weight is attached, with one string going round all the pulleys, and having one of its ends fixed to a point in the system, and the other end going from one of the fixed pulleys drawn by the power.

Tagliacostian Operation, *n.* (*Surg.*) Same as RHINOPLASTY, *q. v.*

Tagliacozzo, (*tai-ya-kot'so*), a town of S. Italy, on the Isule, 20 m. from Aquila. Pop. 4,724. In 1269, Charles d'Anjou here defeated Conradin, and ended the rule of the Hohenstaufen dynasty in Italy.

Tagliamento, (*tai'ya-men'to*), a river of N. Italy, rises in the Alps, and, after a course of 100 m., entering the Adriatic Sea near its N. extremity. On its banks, the French, under Napoleon Bonaparte, defeated the Austrians, under the Archduke Charles, March 16, 1797. Massena gained another battle here in 1805.

Taglioni, MARIA, (*tai-yo'ne*), a dancer, of Italian descent, b. in Stockholm, 1804. She made her *début* in 1827, at the French Opera, where she achieved a great success, and increased her fame by visits to most of the capitals of Europe, appearing in London in 1838. In the exquisite, airy style of her performance, dancing might truly be said to be the "poetry of motion." She married Count Gilbert de Voisins, and in 1847 retired from the stage, and has since resided in Italy. D. 1884.

Tag-log, *n.* An entangled lock.

Tag-rack, *n.* The rabble; the dregs of the people.

Tag-tail, *n.* A worm with a tail of a different color. — A sycophant; a toady; a parasite.

Tagus, (*tai'gus*). [*Sp. Tago*.] The largest river in the Spanish peninsula, which, rising between the Sierra de Albarracin and the Sierra Molina, on the frontier of Aragon and New Castile, flows S.; then, holding a W. course through the rest of Spain, enters Portugal, when, pursuing a more S. direction, it passes Lisbon, forming the mag-

nific-ut harbor of that city, and, spreading into a splendid estuary, finally mingles its waters with the Atlantic, after a course of 400 m. Above the capital of Portugal it has a width of 5 m.; at the city a breadth of 2 m.; but, in consequence of its deep banks and impetuous current, the T. is but little adapted to mercantile purposes, and is at present only navigable to Abrantes.

Tahiti, or **OTAHEITE**, the chief of the Society Islands, is 32 m. long, about 120 m. in circumference, and consists of two peninsulas, connected by an isthmus about 3 m. broad, but which is submerged at high water. Pop. 14,500, of whom more than 13,000 are natives. The chief town is *Papeete*, with a safe harbor. The French estab. themselves here, 1846, and T. is now under a French protectorate. For hist., &c., of T., see SOCIETY ISLANDS.

Tai, (*tai* or *ti*), the name of several cities of China, principally in the N. provinces.

Tail, *n.* [*A. S. tagel, tagl*.] The part of an animal which terminates its body behind, hanging loose from the extremity of the vertebrae, and generally covered with hair. — The lower part of anything, noting inferiority; as, "The Lord shall make thee the head, and not the tail." (*Deut. xxviii. 13*). — The reverse side of a coin; — seldom used, except in the expression "heads or tails" in tossing a piece of money to decide some point by its fall. — Anything hanging long, as a catkin. — Retinue; the train of followers belonging to a Highland chief.

(*Anat.*) That tendon of a muscle which is attached to the movable part.

(*Arch.*) The bottom of any member, or of a slab or tile.

—*pl.* See *TAILING*.
(*Bot.*) A downy or feathery appendage to certain seeds, formed of the permanent elongated style. — Any elongated, flexible, terminal part, as a petiole or peduncle.

(*Surg.*) A partial incision; — called also *tailing*.

(*Mus.*) The part of a note which runs perpendicularly upward and downward from the head; the stem.

(*Naut.*) A strap connected with a block, by which it may be secured to a rope, spar, &c.

Tail of a gale or *storm*. (*Naut.*) The abatement or closing part of a gale, &c. — *Tail of a lock*, on a canal, the entrance into the lower pond. — *To turn tail*, to flee; to run away; to be guilty of cowardice.

(*Law.*) [*Fr. taillo*.] Abridgment; limitation. — *Estate in tail*, a limited fee; or, an estate limited to certain heirs, and from which the other heirs are cut off or precluded.

—*v. a.* To pull, haul, or draw by the tail.

To tail in, or *on*. (*Arch.*) To attach or secure by one of the ends into a wall or some other support; as, *to tail in* a beam.

Tail-board, *n.* The movable board at the hinder part of a cart or wagon.

Tailed, (*tai'ld*), *a.* Possessing a tail.

Tailing, *n.* (*Arch.*) The part of a projecting stone or brick inserted in a wall.

—*pl.* In winnowing grain, the lighter parts blown to one end of the heap.

Taille, *n.* [*Fr. from tailler*, to cut.] (*Law.*) A portion taken out of an estate, as, in England, an estate tail. — In the old French jurisprudence, any imposition levied by the king or any other lord on his tenants. The exceedingly unfair and oppressive nature of the T. was one of the causes which led to the French revolution.

Tailless, *a.* Without a tail.

Tailor, *n.* [*Fr. tailleur*, from *tailler*, to cut; L. Lat. *talliator*.] One who cuts out and sews cloth; one whose occupation is to cut out and make men's garments.

—*v. n.* To follow the business of a tailor; to practise making men's clothes; as, he is in the *tailoring* line.

Tailor-bird, *n.* (*Zoöl.*) A name applied to some species of soft-billed Indian birds belonging to the genus *Sylva*, family *Sylviolidae*, and celebrated for the ingenious way in which they prepare their nests. See *BIRD*, and Fig. 360.

Tailoress, *n.* A female tailor.

Tailoring, *n.* The work or the business of a tailor or tailoress.

Tail-piece, *n.* A piece at the end, as of a series of engravings; an appendage. — A piece of ebony or other material appended to the end of a violin or other similar instrument, to which the strings are fastened.

—*pl.* (*Print.*) Ornaments, in wood or metal, placed in short pages, partly to fill up the vacancy.

Tail-race, *n.* The channel through which water runs from a mill after passing the wheel.

Tail-stock, *n.* The sliding block or support, in a lathe which carries the tail-screw and adjustable centre, the *head-stock* being that part by which the mandrel is supported.

Tail-vice, *n.* A small hand-vice, with a tail or handle.

Tail-water, *n.* The waste water discharged from the buckets of a water-wheel in motion.

Taint, *v. a.* [*Fr. ténir*; Lat. *tingo, tinctis*.] To stain, dye, sully, or tarnish; as, a man of *tainted* honor. — To imbue or impregnate, as with some extraneous matter which serves to transfigure the native qualities of the substance. — To corrupt; to infect; to vitiate; to poison; as, putrid garbage *taints* the atmosphere.

—*v. n.* To be tainted, infected, or corrupted; to be brought into contact with something which serves to corrupt. — To be affected with incipient rottenness; as, *tainted* meat.

—*n.* A stain; a tincture. — Infection; corruption; depravation; as, a scrofulous *taint* in the blood. — A slur, stain, or blemish upon character or reputation; as, the *taint* of treason.

Taint, *n.* A lance-thrust which fails to hit the object intended. — The bungling or dishonorable breaking of a lance in the jousts.

Taintless, *a.* Pure; free from taint or infection.

Taintlessly, *adv.* In a taintless manner.

Tai-wan-foo, the capital of the island of Formosa, on a large alluvial plain on the S.W. coast, in Lat. about 23° N. It is a large straggling town, surrounded by a high battlemented wall, 6 m. in extent. The commerce of the town was once considerable, but owing to the silting up of the harbor, trade has entirely departed, and no European vessel of the smallest burden can enter the so-called port. Pop. large but decreasing.

Tajac'u. Tajas'u, *n.* (*Zoöl.*) Same as PECCARY, *q. v.*
Tajumulco, or **TAXAMULCO**, in Central America, a town of Guatemala, at the base of the volcano of Tajumulco; pop. abt. 2,500.

Take, *v. a.* (*imp. TOOK*; *pp. TAKEN*.) [*A. S. lacan*; allied to Lat. *tango*, to touch.] Used in a sense of more or less activity; — to lay hold of; to get hold or gain possession of in almost any manner; to seize; to grasp; to assist one's self to with the hands or otherwise; hence, specifically, to get into one's power for keeping by force or artifice; to procure the custody or control of; to make captive or prisoner; — also, to befall or come upon; as, to *take* an infection, to *take* that which does not belong to one, &c.; — also, to attack; to seize; to fasten on forcibly; as, to *take* a city, to *take* a ship, he was *taken* with sickness, &c. — To captivate with pleasure; to engage or entrap the affections, interest, or sympathies of; to charm; to cast a glamour over; as, he was very much *taken* with the lady's appearance. — To choose; to elect; to make choice or selection of; — also, to have recourse to; to turn to; to betake or apply one's self to; — in this latter sense frequently used intransitively; as, the badger *takes* a hole, a person *takes* shelter, one is obliged to *take* such and such a course, &c. — To employ; to occupy; to use; hence, to require; to demand; to exact; as, it will *take* me some time to finish the work, it *takes* so much money to get to Europe. — To copy; to draw; to imitate pictorially; to delineate; to sketch; as, to *take* a person's portrait. — To draw; to derive; to deduce; as, an inference *taken* from premises. — To adopt; to assume; to receive, as any temper or disposition of mind; to enjoy or experience, as any sensation or emotion; to yield to, or permit one's self to accept; to receive, as an impression; — used in general definitions, confined by the following complement, in many phrases of a somewhat idiomatic character; as, I *take* the liberty of calling your attention to it, to *take* an objection or resolution.

"Shall I not *take* mine ease in mine inn?" — *Shaks.*

— Employed in a more or less passive sense: — To receive or accept, as what is offered; to admit; not to refuse, decline, or reject; as, his word may be *taken* with confidence, to *take* paper currency in place of coin, &c. — To swallow, as meat, or drink, or medicine; to partake of; as, to *take* one's dinner, to *take* a pill, allow me to *take* wine with you, and the like. — To leap, surmount, or pass over; not to balk at or refuse; to undertake and accomplish with readiness; as, the horse *took* all before him going across country. — To tolerate; to endure; to bear without repugnance or resentment; to submit to without objection or repudiation; as, to give a joke and *take* a joke, he is not the man to *take* an insult tamely. — To receive, as an impression, into the mind; to admit, as meaning; to understand in a particular sense; to interpret; to regard or look upon; to embrace, as an idea; to allow; to entertain an opinion; to suppose; not to dispute; as, I *take* him to be a good sort of man, tinsel is sometimes *taken* for gold.

— To admit; to agree with; to submit; to receive; — employed in general senses; as, to *take* a certain shape, to *take* one at one's word, &c. — To conduct; to transfer; to convey, move, or remove; to assume; to recover, &c.; — used along with prepositions. — *To take advantage of*, to avail one's self of a favorable state of things to the prejudice of; as, to *take advantage* of a woman's confidence. — *To take aim*, to aim; to direct the eye or weapon; as, to *take aim* at a mark. — *To take air*, to be made public or be disclosed, as something intended to be a secret. — *To take along*, to carry, conduct, lead, or convey; as, he *took* his wife *along* with him. — *To take arms*, or *take up arms*, to begin war; to commence hostile operations; as, "To *take arms* against a sea of troubles." (*Shaks.*) — *To take away*, to remove; to shift off; to cause deprivation or withdrawal of; as, to *take away* a vintner's license, to *take* a person's life away. — *To take breath*, to cease, as from toil, in order to be recruited or refreshed. — *To take care*, to be careful or solicitous; — preceding *of*, or *for*. — *To take care of*, to care for; to have the charge, superintendence, or supervision of; as, he *takes care* of his money. — *To take down*. (1.) To reduce in height or elevation; to bring down, as from a high or higher place; as, to *take down* a picture; — hence, to depress; to bring lower in place; as, to *take down* an arrogant individual. (2.) To imbibe; to swallow; as, to *take down* a form of punch. (3.) To pull to pieces; to demolish or dismantle; as, *take down* a scaffold, to *take down* a ship's rigging. (4.) To record; to note or write down; as, to *take down* a speech delivered in Congress. (5.) To assail; to make an attack or onslaught upon. — *To take effect*, to be efficacious; to have the result or effect intended; as, the medicine *took* the desired effect. — *To take fire*, to become kindled, ignited, or inflamed. — *To take from*. (1.) To detract; to derogate; as, a concession *takes from* the integrity of a demand. (2.) To deduct; to subtract; as, *take 2 from 8*, and 6 remains. (3.) *To take ground to the right*, or *left*. (*Mil.*) To move, as troops, to the right or left. — *To take heart*, to gain confidence or courage; as, notwithstanding many reverses, he *took heart* again. — *To take heed*, to be cautious, careful, or wary; as, "Take heed of a mischievous man." (*Ecc. xi. 33*). — *To take hold of*, to grasp; to seize; to fix or lay a grip on; as, to *take hold*.

of an offender. — *To take horse*, to mount in the saddle; to ride or proceed on horseback. — *To take in*. (1.) To enclose; to fence; to put a barrier round; as, to *take in* a patch of land. (2.) To comprise or comprehend; to encompass, encircle, or embrace; as, to *take in* the details of a scheme. (3.) To contract; to circumscribe; to bring into a smaller compass; to braid or furl; as, to *take in* a tucker, to *take in* sail. (4.) To cheat; to swindle; to gull; to dupe; to circumvent; to deceive; as, to be *taken in* by an impostor. (Colloq.) (5.) To admit; to receive; as, a leaky ship *takes in* water. (6.) To absorb or receive into the mind or understanding; as, let him *take in* the instructions you give him. — *To receive* at regular or stated times; as, to *take in* a book published in numbers. — *To take in hand*, to put into application or operation; to undertake; to attempt to perform or execute; as, he *took in hand* more than he had power to accomplish. — *To take in vain*, to use, employ, or utter, as in an oath or imprecation; as, to *take God's name in vain*. — *To take leave*, to make one's adieu; to bid farewell; as, he went away without *taking leave*. — *To take notice*. (1.) To observe or remark with particular attention. (2.) To denote by some act that observation is made; as, much *notice* was *taken* of his impropriety. — *To take oath*, to swear in a solemn or judicial manner; to make legal affirmation; as, to *take oath* on the Scriptures. — *To take off*. (1.) To remove, as from the outside, or from the top of anything; as, to *take off* one's hat. (2.) To amputate; to cut or lop off; as, to *take off* a limb, to *take off* a decayed branch. (3.) To destroy; as, how many lives have been *taken off* in fevers. (4.) To invalidate; to remove; as, to *take off* the gist of a proposition. (5.) To withdraw; to call or allure away; as, one's thoughts cannot, sometimes, be *taken off* from a sad theme. (6.) To imbibe; to swallow; to perform the act of deglutition; as, to *take off* a glass of claret. (7.) To purchase; to receive, as a commodity, to take in trade; as, I *took* a parcel of tea *off* his hands. (8.) To copy; to delineate; to reproduce; as, "They *take off* all their models in wood." (Addison.) (9.) To impersonate; to imitate; to mimic; also, to burlesque; as, to *take off* another's eccentricities of manner. (10.) To dispose of; to find place or position for; as, "More are bred scholars than preferments can *take off*." (Bacon.) — *To take on*, to take upon one's self; to assume; as, he *takes on* himself the entire responsibility. — *To take one's own course*, to have one's own way; to pursue such measures as are dictated by one's own mind; as, a wilful man will persist in *taking his own course*. — *To take out*. (1.) To remove from within any place; to withdraw; to separate; as, to *take out* the intestines in dissecting a dead body. (2.) To remove; to clear or cleanse from; as, to *take out* ink-stains from linen. — *To take a paper*, or *serial publication*, &c., to receive regularly, on paying the amount of subscription, as, to *take* the "New York Herald." — *To take part*, to participate in; to share; as, he *takes part* in the national prejudice against foreigners. — *To take part with*, to unite, join, or identify one's self with; as, he *took part* with the Confederates during the war. — *To take place*. (1.) To happen; to occur; to come to pass; as, when will the extinction of the Woman's Rights Movement *take place*? (2.) To prevail; to have result or effect; as, the altercation wound up with a general fracas *taking place*. — *To take root*. (1.) To vegetate; to live and grow; as, a plant *takes root*. (2.) To be founded, established, or consolidated; as, Republican principles have *taken strong root* in this country. — *To take sides*, to become an adherent or partisan of one of two parties in mutual antagonism; as, to *take sides* with the weak against the strong. — *To take stock*. See STOCK. — *To take advantage of*, to employ to advantageous effect; to avail of an advantage presented by; as, he *takes advantage of* the fall in gold. — *To take the air*, to walk or ride in the open air; to take out-door exercise; as, an invalid *takes the air* on a sunny day. — *To take the field*. (Mil.) To enter upon the operations of a campaign; as, the French *took the field* against Germany. — *To take to heart*, to be sensibly affected by; to feel acutely or poignantly; as, she *took her husband's death to heart*. — *To take up*. (1.) To lift; to raise; to upheave; to elevate; as, to *take up* a heavy weight. (2.) To buy or borrow; to purchase, as for speculation; as, to *take up* redeemable securities. (3.) To begin; as, to *take up* a sudden friendship. (4.) (Surg.) To bind or fasten with a ligature. (5.) To engross; to engage; to employ, as the attention with; as, novel-reading *takes up* the best of her time. (6.) To take or adopt for a permanent settlement; as, to *take up* one's rest in the Christian religion. (7.) To seize; to capture; to arrest; to catch and take into custody; as, to *take up* a felon. (8.) To admit; to believe; to entertain; as, "the ancients *took up* experiments on credit." (Bacon.) (9.) To reprimand; to censure; to answer by reproach; as, he *took him up* roundly for his impertinence. (10.) To begin where another left off; as, "I *take it up* where the history has laid it down." — Dryden. (11.) To fill; to occupy; as, bulky articles *take up* much room. (12.) To manage or carry on in the place of another; to assume; as, I *took up* my friend's quarrel. (13.) To comprise; to include; to comprehend; as, the history *takes up* the first half of the century. (14.) To adopt; to assume; as, he *took up* his old trade again. (15.) To collect; to exact or claim payment of, as a tax; as, to *take up* the yearly tribute. — Knolles. (16.) To favor; to espouse the cause of; to receive, admit, or adopt for the purpose of rendering assistance; as, he has *taken up* with the government after all that has passed. (17.) To pay and receive; as, to *take up* a promissory note. — *To take up arms*, to enter upon open or overt resistance; to begin hostile operations; as, the people rose and *took up arms*. — *To take up one's connection*, to end one's association or relations. — *To take*

upon one's self. (1.) To undertake; to assume; to claim authority; as, he *took upon himself* to interfere unnecessarily. (2.) To make self-appropriation of; to permit the imputation to one's self of; as, he *took upon himself* the payment of his son's debts. — *To take up the gauntlet*, see GAUNTLET.

— *r. a.* To move or direct the course; to go; to proceed; to betake one's self; to resort to; as, being hotly pursued, the thief *took* to his heels. — *To please*; to be acceptable; to gain reception; as, a really good novel seldom *takes* with the public. — *To have the intended or natural effect*; as, "Putrid earth will best in vineyards *take*." (Dryden.) — *To catch*; to seize; to fix, or become infixed; as, the bait laid out for him did not *take*. — *To take after*. (1.) To copy; to imitate; to follow as a model; as, a true Englishman *takes after* the John Bull pattern. (2.) To be like; to resemble; as, the son *takes after* his father. — *To take in with*, to resort to. — *To take on*. (1.) To be violently or uncontrollably affected; as, she *took on* terribly in a fit of jealousy. (2.) To act or assume a part or impersonation; to assume or perform a character; as, "I *take* not on one here as a physician." (Shaks.) — *To take to*. (1.) To be fond of; to apply to; to become attached to, or enamored of; as, children *take* to those who *take* to them, he *took* to drinking and dissipation. (2.) To betake to; to have recourse to; as, after trying his hand at trade, he *took* to the study of law. — *To take up*, to adopt; to follow up; as, on the father's death, his son *took up* the business. — *To take up with*. (1.) To be contented to accept or receive; to receive and make the best of; as, in important matters we should not *put up with* mere probabilities. (2.) To dwell; to reside with; as, he is not the most agreeable person to *take up with*.

Take, *n.* In fishermen's parlance, the quantity of fish taken at one haul or catch; as, a good *take* of cod.

(Print.) The quantity of copy taken in hand by a compositor at one time.

Take-in, *v.*; *pl.* TAKE-INS. An imposition; a swindle; a fraud; that by which one is taken in, duped, or defrauded.

Take-off, *n.*; *pl.* TAKE-OFFS. An imitation after the manner of a caricature.

Taker, *n.* One who takes or receives; as, a money-taker. — One who catches or apprehends; as, a thief-taker. — One who subdues or causes to surrender; as, the *taker* of a fortress.

Taking, *a.* Alluring; attracting; enticing; as, a *taking* manner.

— *n.* Act of gaining possession; a seizing; apprehension; seizure. — Agitation; excitement; perturbation of mind; as, when the news was imparted to her, she fell into a *taking*.

Takingly, *adv.* In a taking or attractive manner.

Takingness, *n.* The quality of pleasing.

Talaria, *n.*; *pl.* [Lat. *tabris* — *talis*, ankle.] (Myth.)

Winged sandals represented as attached to the feet; — mainly considered as an attribute of the god Mercury.

Talavera de la Reyna, (*ta-la-vai'ra dai la-rai-na*.) a town of Spain, in New Castile, on the Tagus, 58 m. S.W. from Madrid; pop. 8,700. It is noted for the victory gained over the French by the Anglo-Spanish under the Duke of Wellington, July, 1809.

Talbot, JOHN, LORD, a celebrated English military commander, b. at Bletchmore, 1373. In 1414 he was appointed lord-lieutenant of Ireland, where he suppressed a rebellion, and brought the chief, Donald Macmorrough, to England. In 1420 he attended Henry V. to France, and was present with him at his two sieges and triumphant entry into Paris. In the next reign he laid siege to Orleans, where his name struck terror into the French soldiers; but the appearance of Joan of Arc turned the scale, and the English army retreated. The battle of Patay completed the disaster, and T. was made prisoner. At the end of three years and a half he was exchanged, and again led the English to victory. He took many strong places, and carried his arms to the walls of Paris, for which he was created Earl of Shrewsbury. He was again sent to Ireland, and, on his return to France, he was marching to the relief of Châtillon, when his usual good fortune forsook him, and he and his son fell on the field of battle, 1453. The English on this occasion were wholly routed, and their expulsion from France soon followed.

Talbot, in Florida, an island off the N.E. coast, opposite the mouth of St. John's River, 9 m. long and 2 broad.

Talbot, in Georgia, a W. co.; area, 360 sq. m. Rivers, Flint river, and Parclahaga, Beaverdam, and Upatoi creeks. Surface, diversified; soil, generally fertile. Cap. Talbotton. Pop. (1897) 14,440.

Talbot, in Maryland, an E. co., bordering on the Chesapeake Bay; area, 285 sq. m. The Choptank river borders on the E. Surface, level; soil, fertile. Cap. Easton. Pop. (1897) 21,290.

Talbotton, in Georgia, a post-village, cap. of Talbot co., 32 m. N.E. of Columbus.

Talbotype, *n.* A photographic process, so called in honor of its inventor, Mr. Fox Talbot; — also called *calotype*. See PHOTOGRAPHY.

Talc, *n.* [Ger. *talk*.] (Min.) A magnesian mineral occurring in crumbling, laminated, and tabulated masses of a greenish or yellowish white. It resembles mica, but is much softer, and although flexible, is not elastic. It is used in the manufacture of crayons, for crucibles, as a grease absorbent, and in making porcelain. Much of the so-called commercial T. is mica. T. also enters into the composition of many rocks, such as T. schist, chlorite-schist, steatite, serpentine, &c. Chemically considered, it consists principally of silicate of magnesia.

Talca, a town of Chili, on the Maule, 40 m. N.E. of Chillan; pop. 17,900.

Talean', in S. America, an island off the W. coast of Chili, between the island of Chiloe and the mainland; Lat. 42° 47' S., Lon. 72° 58' W.

Tal'cite, *n.* (Min.) The same as NACRITE, *q. v.*

Taleky, **Taleose**, **Taleous**, (*täl'ky*.) *a.* Like talc; consisting of, or containing, talc; as, a *taleky* substance.

Tale-slate, *n.* Lustrated tale. See TALE.

Tale, *a.* [From *till*; A. S. *tellan*.] Something told, related, or narrated; an oral recital; as, "Every tongue brings in a sev'ral *tale*." (Shaks.) — A story; an anecdote; a narrative; the rehearsal of a series of events or adventures, commonly some trifling incident, or a fictitious narrative; a fable; an incident; as, the *Tale* of a Tub. — Reckoning; account set down; number computed; as, "The ignorant measure by *tale*, and not by weight." (Hooker.) — Information; a telling; disclosure of anything secret; as, to tell *tales* out of school.

Tale-bearer, *n.* A person who officially tells *tales* or repeats what he has heard to the disadvantage or annoyance of another person; one who impertinently communicates intelligence or anecdotes, and makes mischief among people by his officious meddling.

— *a.* Officiously imparting information.

— *n.* The act of communicating information officiously; betrayal of secrets in an underhand manner.

Taled, *n.* (Jewish Antiq.) A kind of habit worn by the Jews, especially when repeating prayers in the synagogues.

Talegalla, *n.* (Zool.) A large gregarious Rasorial bird, which may be considered as the representative of the Turkey in Australia. It is also known under the name of Brush Turkey, Wattler Turkey, and New Holland Vulture.

Talent, *n.* [Fr.; Lat. *talentum*; Gr. *talanton*, a thing weighed, a balance.] (Antiq.) Among the ancient Greeks, a weight which was much used in the computation of money. It contained 60 minæ; but its value varied in different states. The *Attic talent* was equivalent to about \$990; the *Æginetan* to \$1,555. — Among the Hebrews, a weight and denomination of money equivalent to 3,000 shekels, or about \$1,980.

— Faculty; natural gift or endowment; eminent ability; superior skill, or power of accomplishment or execution; — a metaphorical word, used generally in the plural, and said to be borrowed from the scriptural Parable of the *Talents*.

Talented, *a.* Possessing skill or talent; accomplished; as, a *talented* writer.

Tales, (*täl'lez*.) *n.*; *pl.* (Law.) If, by reason of challenges or other causes a sufficient number of jurors do not appear at a trial, either party may pray a *tales*; i. e., may pray the judge at the trial to allow a sufficient number of qualified men who happen to be present (*tales circumstantibus*) to be joined with the other jurors to make up the twelve. In practice this seldom arises, except in the case of special jury trials, when the talesmen are taken from the common jury panel in the same court.

Talesman, *n.*; *pl.* TALESMEN. (Law.) A person called upon to supply a deficiency when a tales is awarded.

Tale-teller, *a.* A tale-bearer; a tell-tale; also, a narrator of tales or fictitious stories.

Tale-wise, *adv.* In the manner of a tale or story.

Taliaferro, (pronounced *tol'le-ver*.) in Georgia, a N. E. central co.; area, 185 sq. m. Rivers, Little, and Ogeechee. Surface, undulating; soil, generally fertile. Min. Sulphuret of iron, magnetic ore, and gold. Cap. Crawfordsville.

Talion, *n.* [Fr., from Lat. *talis*, such.] Retaliation. See TALIONIS. See LEX.

Talipot, **Talipot palm**, *n.* (Bot.) See CORYPHA.

Talisman, (*täl'iz*.) *n.*; *pl.* TALISMANS. [Fr.; Gr. *talisma*, an incantation, from *telô*, to complete, to finish.] Among the Orientals, a figure cut in metal, stone, &c., supposed to have been made with particular ceremonies, and under particular astrological circumstances, and to possess various virtues, but chiefly that of averting disease or violent death from the wearer. — Hence, in a more general sense, any portable object endowed with imaginary influence in exercising evil, &c.; hence, anything which acts as a charm or propitious token; an amulet.

Talisman'ic, **Talisman'ical**, *a.* Magical; pertaining or relating to a talisman or amulet; possessing the peculiar virtues of a talisman, or preservative against evils by occult influence.

Talk, (*tauk*.) *v.* *a.*, (*imp.* and *pp.* TALKED.) (*taukd*.) [Dan. *tolke*; Ice. *tolka*; Dan. *tolk*, an interpreter; Gr. *dialôgô*, to converse with.] To speak, as in familiar discourse, when two or more persons interchange thoughts or ideas; to converse freely or without ceremoniousness; to indulge in colloquy; to chat; as, "They always *talk* who never think." (Prior.) — To confer; to reason; as, he *talked* with him to no purpose. — To speak idly or impertinently; to prate; to chatter; as, "Hypocrites *talk* of purity." (Milton.) — To talk of, to tell; to recount; to describe; to give account; as, travelers in strango lands *talk* of the wonders they have seen. — To talk to, to advise, exhort, or reprove gently; as, it is useless to *talk* to a headstrong youth. (Colloq.)

— *r. a.* To speak with ease and fluency; to use or employ for conversation or communication; as, to *talk* Spanish. — To speak; to utter; to mention in speech; as, to *talk* bosh or arrant nonsense. — To spend, waste, or consume in talking; — frequently before *away*; as, to *talk away* an evening. — To talk over, to discuss; to talk about in a deliberative manner; to confer upon; as, to *talk over* future plans or arrangements.

— *n.* Act of talking; familiar conversation or colloquy; mutual speech or discourse; that which is spoken by one person in fluent or unconstrained converse, or the mutual converse of two or more; chat; as, much *talk*

and little sense.—Report; rumor; hearsay; as, people have raised a *talk* about it.—Subject of discourse or public conversation; as, his doings are the *talk* of the city.—Among the North American Indians, a public conference; a pow-wow; as, to hold a *talk*.

Talkative, (*tauk'-tiv*), *a.* Giving to much talking; loquacious; full of prate or chatter; garrulous; prattling; as, a *talkative* woman.

Talkativeness, (*tauk'-tiv*), *n.* The habit of talking or speaking much in conversation; loquacity; garrulity.

Talker, (*tauk'-er*), *n.* One who talks; notably, one who is eminent for his, or her, conversational powers; as, a really writer is seldom an eloquent *talker*.—A loquacious or garrulous person, whether male or female; a prattler; a prater; a chatter-box; also, a boaster; a braggart; a teller of improbable stories;—used in a sense of contempt or derision; as, the loudest *talkers* are usually the least doers.

Talking, (*tauk'-ing*), *n.* Loquacious; garrulous; given to talking; as, "Talking age."—*Goldsmith*.

—*n.* Act of conversing familiarly or without constraint; as, she is fond of *talking*.

Tall, *n.* [*W. tal*; *Ar. tala*, long.] High in stature; lofty; high and slender;—usually applied to that which grows—as, a *tall* man, a *tall* tree.

Talladega, in *Alabama*, a N.E. central co.; *area*, 784 sq. m. *Rivers*, Coosa river, and the Chocolocco and other creeks. *Surface*, diversified; *soil*, fertile.—A city, cap. of the above co., 95 m. N.E. of Montgomery. *Pop.* (1897) 2,440.

Talladega, in *Arkansas*, a township of Jefferson co.

Tallahassee, in *Florida*, a city, cap. of the State and of Leon co., 190 m. E. of Mobile; Lat. 30° 28' N., Lon. 84° 36' W. *Pop.* (1897) 4,340.

Tallahatchee, a river of *Mississippi*, rises in Tippah co., and unites with the Yallahusha to form the Yazoo at Leflore, in the W. of Carroll co., after a S.W. course of 250 m.—A N.W. co.; *area*, 635 sq. m. It is traversed by the Tallahatchee river. *Surface*, level; *soil*, fertile. *Cap.* Charleston. *Pop.* (1897) 15,350.

Tallaho'ma, in *Iowa*, a village of Lucas co., about 8 m. W. of Chariton.

Tallahoma, a river of *Mississippi*, rises in Jasper co., and flowing S., enters Leaf River near Augusta in Perry co.

Tallapoosa, a river of *Georgia* and *Alabama*, rises in Paulding co., Georgia, and falls into the Coosa, abt. 10 m. N. of Montgomery, after a S.W. course of 250 m.

Tallapoosa, in *Alabama*, an E. co.; *area*, 700 sq. m. *Rivers*, Tallapoosa, and Hiteebec, and Sawkehatchee creeks. *Surface*, undulating; *soil*, generally fertile. *Cap.* Dadeville.

Tallapoosa, in *Georgia*, a city of Haralson co., 160 m. N.W. of Milledgeville. *Pop.* (1897) 1,860.

Talleyrand-Perigord, CHARLES MAURICE, PRINCE DE, (*tal'-le-rand*), an illustrious French statesman, b. in Paris, 1754; an accident in early life compelled him to dedicate his talents to the church, but, being elected in 1788 to the bishopric of Autun, he was called upon, in virtue of his office, to take his seat in the Etats Généraux, from which event is to be dated the rise of that political distinction which made his name illustrious through the whole of Europe for 35 years. In 1835 he retired from political life, and d. 1838.

Tallien, JEAN LAMBERT, a prominent character in the French Revolution, b. in Paris, 1769. He was one of the promoters of the September massacres, and for his services was returned to the convention. He voted for the death of Louis XVI., defended Marat, and, being sent on a mission to Bordeaux, he threw the city into hopeless misery by the most atrocious proscription and massacres. At length, however, he formed an attachment for Madame de Fontenai, a lady of great personal charms, whose family name was Cabarrus; and his heart of stone was somewhat softened by her pleadings. He was recalled on account of his milder proceedings, and Madame de Fontenai was thrown into a dungeon by Robespierre. The tyrant offered her life and liberty if she would betray Tallien. But she rejected the proposal; and sent privately this note to T.: "The minister of police has announced to me that to-morrow I am to appear at the tribunal, that is to say, that I am to ascend the scaffold. I dreamt last night that Robespierre was no more, and that my prison-doors were opened. A brave man might have realized this dream; but, thanks to your cowardice, no one remains capable of its accomplishment." T. answered, "Be as prudent as I shall prove brave; and, above all, be tranquil." The next day he hurried to the tribune, and, after an animated picture of the atrocities of Robespierre, he suddenly turned to the bust of Brutus, and, invoking the genius of the Roman patriot, he drew a dagger from his bosom, and swore that he would bury it in the tyrant's heart, if the representatives of the people had not courage to order his immediate arrest. The moment was critical; the fate of T. hung on a thread; but the assembly joined him, and Robespierre perished on the scaffold. T., who now married Madame de Fontenai, continued to be an active member of the legislature till 1798, when he accompanied Bonaparte to Egypt, but he was afterwards little noticed by the Emperor, and d. in great poverty, 1820.

Tallier, *n.* One who keeps tally.

Tallmadge, in *Michigan*, a post-township of Ottawa county.

Tallmadge, in *Ohio*, a post-village and township of Summit co., 5 m. E.N.E. of Akron.

Tallness, *n.* State or quality of being tall; height of stature; loftiness.

Tallow, (*tal'lo*), *n.* [*Dan. tælg*.] The melted and purified suet of the ox or sheep, used in the manufac-

ture of common candles. It consists of various portions of stearine, palmitin, and olein, according to its origin. Mutton T. is of a much firmer consistence than that of the ox, from containing less olein and more stearin.

Mineral or mountain tallow, (*Min.*) Same as HALCHETTITE.—**Piney tallow**, a vegetable adipose substance extracted from the fruit of the piney-tree.—**Vegetable tallow**, a kind of fatty matter, resembling tallow, obtained from various plants.

—*v. a.* (*imp.* and *pp.* TALLOWED (*tāl'lod*.) To grease or smear with tallow.

—Among graziers, butchers, &c., to fatten; to cause to have a large quantity of tallow; as, to *tallow* cattle or sheep.

Tallow-eater, (*-käch*), *n.* A low, mean fellow;—also, a mass of fat rolled up into a lump.

Tallow-chandlery, *n.* The trade or occupation of a maker of tallow candles, also, the place where such business is carried on.

Tallow-er, *n.* An animal disposed to form tallow internally.

Tallow-face, *n.* A person who has a pale, sickly complexion.

Tallowing, *n.* Among farmers or graziers, the act, art, or practice of feeding animals with a view to the accretion of tallow; or, the property in animals of producing tallow.

Tallowish, *a.* Pertaining to, or resembling tallow.

Tallow-tree, *n.* (*Bot.*) See STILLINIA.

Tallowy, *a.* Greasy; having the properties of tallow.

Tallulah, in *Mississippi*, a post-village, former cap. of Issaquena co., 70 m. N.W. of Jackson.

Tally, *n.* [*From Fr. tailler*, to cut.] A piece of wood on which notches or scores are cut, as the marks of a number, such pieces or sticks being formerly used in keeping accounts, the buyer or debtor having one stick, marked with notches or scores, indicating the quantity of goods or the price, and the seller or creditor having another, exactly corresponding.—Hence, one thing made to suit another; a match; a mate.

—*v. a.* To score with correspondent notches;—hence, to fit; to suit; to make to correspond; as, we found the two accounts to *tally* one with the other.

(*Naut.*) To haul aft, as the sheets of the main- and fore-sail.

—*v. n.* To correspond; to suit; to be fitted; as, your idea exactly *tallies* with mine.

Tally-trade, *n.* A system of dealing carried on in large towns, by which shopkeepers furnish certain articles or commodities on credit to their customers, who agree to pay the stipulated price by certain weekly or monthly instalments.

Tal'ma, FRANÇOIS JOSEPH, a celebrated French tragedian, b. in Paris, 1763. His naturally ardent temperament and artistic power found ample scope for development during the tremendous drama of the French Revolution, and he rose to higher fame than any of his predecessors on the stage. Napoleon loaded him with proofs of his favor, and he was no less honored and esteemed by Louis XVIII. D. 1826.

Tal'ma, *n.*; *pl.* TALMAS. A kind of large cape or roquelaure, worn both by males and females.

Talmud, *n.* [*Heb.*, doctrine.] A work which contains those rules and institutions by which, in addition to the Old Testament, the conduct of the Jews is regulated. It is in fact the interpretation which the ancient rabbins have affixed to the law of Moses. It is called the traditional or unwritten law, as distinguished from the written law given to Moses. They are, however, both regarded as of like antiquity, both having been given to Moses on Mount Sinai. After the second destruction of Jerusalem, under Adrian, and the consequent dispersion of the Jews, fears were entertained lest the oral traditions should be lost; and hence arose the necessity of committing them to writing, in order to their preservation. It is generally agreed that Rabbi Jordah, surnamed "the Holy," made the first permanent record of them about A. D. 190, and 120 years after the destruction of Jerusalem. This was the *Mishna*, or text, and to this a twofold commentary, or series of commentaries, were subsequently added; the one called the Babylonian Gemara, the other the Jerusalem Gemara. The former was begun by Rabbi Asche, who d. 427, and completed by Rabbi Jose some fifty years later. The Gemara of Jerusalem embodied the notes of the Palestinian Jews, and proceeded from the Academy at Tiberias. It is believed to have been written about the close of the 4th century. Thus we have the Babylonian and Jerusalem T., having the same text, but different notes.

Talmudic, **Talmudical**, **Talmudistic**, *a.* [*Fr. talmudique*.] Pertaining, or having reference to, the Talmud.

Talmudist, *n.* One versed in the Talmud.

Tal'on, *n.* [*Fr.* and *Sp.*, the heel, from *Lat. talus*, the ankle.] The claw of a bird or fowl.

(*Arch.*) An ogee.

Tal'pide, *n.* (*Zoöl.*) See MOLE.

(*Surg.*) A tumor under the skin or cuticle, commonly called a mole.

Talus, *n.* [*Lat.*, the ankle.] (*Geol.*) The sloping heap of debris or fragments accumulated at the foot of a steep rock.

(*Anat.*) Same as ASTRAGALUS, *q. v.*

(*Arch.* and *Fortif.*) The inclination or slope of a work, as the outside of a wall, where its thickness is diminished by degrees as it rises in height.

(*Surg.*) A variety of club-foot, in which the heel rests on the ground, and the toes are drawn toward the leg.

Tama, (*tāh'ma*), in *Iowa*, an E. central co.; *area*, 720 sq. m. *Rivers*, Iowa River, and Deep, Salt, and Wolf

creeks. *Surface*, undulating; *soil*, generally fertile. *Cap.* Toledo. *Pop.* (1895) 22,966.

Tamability, *n.* Quality of being tamable; tamableness.

Tamable, *n.* That may be tamed or subdued.

Tamableness, *n.* State or quality of being tamable.

Taman, an island in the S. of European Russia, govt. of Tanrida. It is formed by the straits of Taman, the sea of Azov, and the Black Sea. It has numerous mud volcanoes. The *Gulf of T.* is to the E. of the Strait of Yenikale.

Taman'dua, a town of Brazil, prov. of Minas-Geraes, 100 m. W. of Ouro Preto; *pop.* abt. 10,000.

Tamaqua, (*tam-aw'qua*), in *Pennsylvania*, a post-township of Schuylkill co., 15 m. E.N.E. of Pottsville; *pop.* abt. 6,000.

Tamarack, *n.* (*Bot.*) A name of *Larix tenuifolia*. See LARCH.

Tamarica, *n.* (*Bot.*)

The *Tamarisk* family, an ord. of plants, alliance *Violales*. *DIAG.* Polypetalous flowers, a many-leaved calyx, hypogynous petals, distinct styles, consolidated fruit, and 00 basal seeds, without albumen. The plants of this ord. usually grow by the sea-side, and are most abundant in the basin of the Mediterranean. There are 3 genera, and 43 species. *Tamarix mannifera*, probably a variety of *Tamarix Gallica* (Fig. 2464), produces a saccharine substance, which is known under the name of *Mount Sinai Manna*. This is supposed to be an exudation produced by an insect which inhabits the plant.

Tamarind, *n.* (*Bot.*) See TAMARINDUS.

Tamarindus, *n.* (*Bot.*) A genus of plants, order *Fibaceæ*. The well-known tamarind is the fruit of the species *T. indica* (Fig. 2465). It contains an agreeable, acidulous, sweet, and reddish-brown pulp, which is employed medicinally in the preparation of a cooling, laxative drink. When the pulp is mixed with sugar, it forms a delicious preserve.

Tamarin, *n.* (*Zoöl.*) See JACCHUS, and MARMOUSET.

Tamarisk, *n.* (*Bot.*) See TAMARICACEÆ.

Tamaulipas, (*ta-mow-lee'-pas*), in *Mexico*, a N.E. state, bordering on Texas, having N.W. Colahuila, E. the Gulf of Mexico, S. San Luis Potosi and Vera Cruz, and W. Nuevo Leon and San Luis Potosi; *area*, 30,334 sq. m. *Rivers*, Rio Grande, Fernando or Tigre, Borbon, Santander, and the Tampico. *Surface*, level in the N., elsewhere diversified; *soil*, generally fertile. *Climate*. Unhealthy along the coast, but temperate and healthy in the interior. Vast numbers of cattle, horses, sheep, &c. are reared. *Min.* Iron, silver, and salt. *Cap.* Ciudad Victoria. *Pop.* (1897) 201,250.

Tambour, (*tamb'oor*), *n.* [*Sp.* and *Port.* *tambor*; *Pers.* *tambūr*; *Ar.* *tombār*, lyre.] (*Mus.*) A small drum used by the Biscayans as an accompaniment to the flageolet.

—A kind of small, circular frame, somewhat in the shape of a drum for working embroidery upon;—also, a species of embroidery in which threads of gold and silver are worked in leaves, flowers, &c.;—otherwise called *tambour-work*.

(*Fortif.*) A work in the shape of a redan, generally made of wood, and arranged like a stockade.

(*Arch.*) The wall of a circular temple surrounded with columns.—The vase or naked ground on which the leaves of the Corinthian and Composite capitals are placed, and which bears some resemblance to a drum.—The circular vertical part above or below a capital. (*Guilt.*)—A lobby or vestibule, inclosed with folding-doors, to break the current of wind from without, as at the entrance of a church, banking-house, and the like.

—*v. a.* To embroider on a tambour-frame.

Tambourine, (*tam-boor-rēn'*), *n.* [*Fr. tambourin*.] (*Mus.*) A musical instrument of the drum species (Fig. 755). It is composed of a piece of parchment, stretched on the top of a hoop furnished with little bells, and sounded by the hand, fingers, or elbow.

Fig. 2464.—COMMON TAMARIX. (*Tamarix Gallica*.)

Fig. 2465.—TAMARINDUS INDICA. (Fruit.)

Tamboff, (*tam-bo*.) a city of European Russia, cap. of a govt. of the same name, on the Tzna, 270 m. from Moscow. *Manuf.* Woollens, canvas, linen, and alum. *Pop.* 23,000.

Tame, *a.* (*comp.* TAME, *superl.* TAMEST.) [A. S., Du., Dan., and Swed. *tam*.] That has lost its native wildness and shyness; accustomed to the presence of man; domesticated; as, a *tame* rabbit, a *tame* bird. — Depressed; spiritless; quiet; subdued; as, "labor *tame* and dull." (*Shaks.*) — Destitute of vim, nerve, spirit, or animation; dull; flat; insipid; vapid; as, a *tame* discourse, a *tame* poem.

—*v. a.* [A. S. *tamian*; Du. *temmen*.] To domesticate; to reclaim; to familiarize; to civilize; to reduce from a wild to a domestic state; as, to *tame* an elephant, to *tame* a refractory subject. — To subdue; to conquer; to depress; to repress; as, a wife *tames* a husband who submits to be henpecked.

Tame, *v. a.* To broach, tap, taste, or try, as liquor. — To deal out; to apportion; to distribute; to divide; as, to *tame* stacks of corn.

Tameless, *a.* That cannot be tamed; wild; untamable.

Tame, *adv.* In a tame or docile manner. — Meanly; servilely.

Tame, *n.* Quality of being tame, docile, or gentle; meek or unresisting submission; lack of manly pluck or spirit; — also, a state of domestication; as, the *tame*ness of a beast or bird, the *tame*ness of a miserable coward.

Tamer, *n.* One who tames, subdues, or makes docile.

Tam-er-lane. See **TIMUR**.

Tamiagua, (*ta-me-a-gwa*), in Mexico, state of Tampico, a lake, 60 m. long and 25 m. broad, separated N. by a narrow isthmus from the Lake of Tampico. — A seaport-town, 70 m. S. E. of Tampico; Lat. 21° 16' N., Lon. 97° 17' E.

Tam-ine, **Tam-iny**, *n.* A kind of highly glazed woollen cloth. — Also, a strainer or bolter made of such material.

Tam-kin, *n.* Same as **TAMPION**, *q. v.*

Tamp, *v. a.* [Fr. *tamponner*.] To plug, stop, or fill up, as a hole bored in a rock for blasting. — Hence, to drive in or down by a succession of gentle strokes; as, to *tamp* stones so as to macadamize a road.

Tam-pa, in Florida, an important city, cap. of Hillsborough co., at the head of Tampa Bay, on the direct rail and sea route to Cuba. *Pop.* (1897) 22,650.

Tampa, (**Bay of**), in Florida, the largest inlet of the Gulf of Mexico, about Lat. 27° 45' N. It is 40 m. long, and, towards the interior, is divided into two branches, called Little Tampa Bay and Hillsborough Bay.

Tamper, *n.* (*Mining*) One who tamps.

—*v. n.* To meddle or intermeddle; to be busy; to have to do without fitness or necessity.

"'Tis dangerous *tampering* with a muse." — *Earl of Roscommon*.

—To deal; to practise privily or secretly; — hence, to use bribery; as, a voter who has been *tampered* with.

Tampering, *n.* Act of meddling or practising secretly or clandestinely; as, a *tampering* with a woman's affections.

Tampico, (*tam-pe'ko*), a river of Mexico, running, after an E. course of 200 m., into the Gulf of Mexico; Lat. 22° 15' N., Lon. 97° 46' W. — Also a LAKE, or shallow lagoon, communicating on the E. with the Lake of Tamiagua.

Tampico, or SANTA ANA DE TAMAULIPAS, a seaport-town of Mexico, state of Vera Cruz, on the N. shore of the lake of the same name, 250 m. from Vera Cruz. It carries on an important trade with the U. States. *Pop.* 7,850.

Tampico, in Indiana, a village of Howard co., 4 or 5 m. S. S. E. of Kokomo. — A post-village of Jackson co., abt. 34 m. N. W. of Madison.

Tampico, in Ohio, a post-village of Darke co., abt. 9 m. S. W. of Greenville.

Tamping, *n.* (*Mining*.) The act of filling up a hole in a rock preparatory to the blasting operation. — Also, the material, usually soft stone, placed upon the charge of gunpowder to confine its force, which would otherwise pass up the hole.

Tamping-iron, *n.* (*Mining*.) A tool used for beating down the earthy substance in the charge used for blasting.

Tam-pion, *n.* [Fr. *tampon*.] (*Mil.*) The stopper of a cannon or other piece of ordnance.

(*Mus.*) A plug used as a stopper for the upper end of an organ-pipe.

Tam-pion, *n.* (*Surg.*) A plug or stopper introduced into a natural or artificial cavity of the body in order to stop hemorrhage.

Tam-tam, *n.* [Hind. *tam-tam*.] An Indian drum or gong, made of an alloy of copper and tin.

Tamus, (*ta'mus*), *n.* (*Bot.*) A genus of plants, order *Dioscoreacea*. *T. communis* is the common black bryony, a beautiful twining hedge-plant. It has a large fleshy root, which is sometimes used as a topical application to bruised parts to remove the marks. Taken internally, it acts as a diuretic, and also, it is said, as an emetic and cathartic.

Tam-worth, a market-town of England, in Staffordshire, at the junction of the Tame and Anker, 7 m. from Lichfield. *Manuf.* Cotton-spinning, calico-printing, lace, and wool-manuf. *Pop.* 5,000.

Tam-worth, in New Hampshire, a post-township of Carroll co., 52 m. N. N. E. of Concord.

Tan, *v. a.* (*imp.* and *pp.* TANNED.) (*tänd*.) [Fr. *tanner*.] To soak, impregnate, or imbue with a decoction of oak bark — to make of the color of a decoction of oak bark, as leather. — To make brown; to imbrown by exposure to the rays of the sun; as, a *tanned* complexion.

—*v. n.* To become tanned; as, these hides *tan* quickly.

—*n.* [Fr. *tan*.] The bark of the oak, &c., bruised and

broken by a mill for tanning hides; — so called both before and after use. — A yellowish-brown color, resembling that of tan. — A yellowish tingeing of the skin by exposure to the sun; as, hands tinctured with *tan*.

Tanace-tum, *n.* (*Bot.*) The Tansey, a genus of plants.

order *Asteraceæ*.

The common Tan-

sey, *T. vulgare*

(Fig. 2466), na-

tive of Europe, is

naturalized in old

fields and road-

sides. Its stem is

clustered, 2-3

feet high, and

branched above

into a handsome

corymb of yellow

flowers, (in Aug.)

The whole plant

has a strong and

aromatic smell

and a very bitter

taste. The seeds

are anthelmintic.

A variety called

double tansey oc-

curs, furnished

with dense and

crisp leaves.

Tan-a-clif, *n.* The

most N. river of

Europe, entering

the Arctic Ocean

in Lat. 70° 30' N.,

Lon. 28° E., after

a course of 150 m.

Tan-a-ga, in the N. Pacific Ocean, one of the Aleutian

Islands, Andreanov group, W. of Kanaga; Lat. 51° 59'

N., Lon. 178° 10' W.

Tan-ager, *n.* (*Zoöl.*) The common name of the *Tana-*

gra, a group of in-

sesorial birds, of

which there are

several genera, and

numerous species,

all peculiar to

America, and which

are conspicuous

for their brilliant

colors. They have

a conical beak and

short wings; re-

presenting the

Finches, &c., of

Europe and Asia

in their conforma-

tion and habits, and

in the nature of

their food.

Tan-a-ro, a river of N. Italy, in Piedmont, rising near

the Col de Tenda, in the S. Alps, and, after a course of

140 m., falling into the Po, 10 m. from Alexandria.

Tan-cock, (*GREAT* and *LITTLE*), in *Nova Scotia*, two

islands in Mahone Bay, 30 m. S. W. of Halifax.

Tancred, (*tan'kréd*), a chief of the Crusades, who

headed a vast army collected from Apulia and Calabria,

and founded the principality of Galilee on Lake Tiberias.

He is one of the heroes of Tasso, and his exploits date

from 1096 to 1112.

Tan-dem, (*Horseman's Latin*). Horses are harnessed

tandem when they are placed single, one before another.

But *tandem* properly refers to *time*, and not to *length of*

line.

Tan-ney, in Missouri, a S. S. W. co., bordering on Arkan-

sas; area, 660 sq. m. Surface, diversified and well watered.

soil, fertile. *Cap.* Forsyth. *Pop.* (1897) 8,550.

Tang, *n.* [*Ice*, *tang*.] A strong, rancid, or offensive

taste or smack; — particularly, a flavor of something

extraneous to the thing in question; as, whisky matured

in a sherry-butt acquires a *tang* of the cask. — Relish;

taste; gout; smack; flavor; as, there was not the least

tang of religious bigotry in anything he said or did. —

That which leaves a sting or acute feeling of pain be-

hind; as, women often have a tongue with a *tang*. — The

handle or haft of anything; — particularly, the tongue

of a buckle. — A sharp sound; a twang. — The sting of

a wasp or bee.

—*v. n.* To cause to ring or sound loudly.

To tang bees, to induce a swarm of bees to settle by

making a loud, clanging noise.

—*v. n.* To ring; to make a ringing sound.

Tangency, (*tän-jen-se*), *n.* State or quality of being

tangent; — also, a contact or touching.

Tan-gent, *n.* (*Geom.*) A right line passing through

two consecutive points of a curve. If we conceive a

right line to rotate around one of its intersection points

with the curve until another intersection point comes

to coincide with the first, it will in the last position be-

come a tangent.

Tangent-scale, (*Geom.*) An instrument or sight used

in pointing cannon.

—*a.* Touching; coming into contact with.

(*Geom.*) Touching at a single point; as, a *tangent* line.

Tangent plane, (*Geom.*) A plane which touches a

surface in a straight line or single point without cut-

ting it. — *Tangent screw*, (*Mech.*) An endless screw,

applied as a tangent at the edge of a toothed wheel,

with which the screw gears, and by each revolution of

the screw the wheel is turned on its axis the distance

of one tooth of the wheel from the next one. Screws of

this kind are useful for minute adjustments, as a con-

siderable amount of rotation in the screw gives but a

small amount of rotation to the wheel.

Tangential, (*tan-jen'shal*), *a.* Pertaining, or relating,

to a tangent; in the direction of a tangent.

Tangential force, (*Mech.*) A force which, in its ac-

tion, gives a tendency to a revolving body to fly off in a

tangent to its orbit.

Tangentially, *adv.* In the direction of a tangent.

Artificial or logarithmic tangent, (*Math.*) The loga-

rithm of the natural tangent of an arc. — *Natural tan-*

gent, a decimal designating the length of the tangent of

an arc, the radius being considered unity.

Fig. 2466.
TANSEY, (*Tanacetum vulgare*.)

Tanghin'ia, *n.* (*Bot.*) A genus of plants, order *Apocynaceæ*, containing only one species, the Tanghin, *T. venenifera*, a native of Madagascar. The fruit is a drupe, of which the kernel is so deadly a poison, that although not larger than an almond, one kernel is sufficient to destroy twenty people.

Tangibility, (*jī-bil'-i*), **Tan'gibility**, *n.* State or quality of being tangible.

Tangible, *a.* [Fr., from Lat. *tango*, to touch.] That may be touched; perceptible to the touch; palpable; tactile; as, a *tangible* body. — That may be possessed or realized; susceptible of apprehension by the mind; as, a *tangible* reason, excuse, benefit, &c.

Tangibly, *adv.* So as to be touched.

Tangier, (*jeer*), (*anc.* *Tinja*), a fortified seaport of Morocco, situate on the Straits of Gibraltar, a few miles from the E. of Cape Spartel; Lat. 35° 42' N., Lon. 5° 50' W. *Pop.* abt. 8,000. The Bay of Tangier is encumbered by the ruins of the mole and fortifications, and is not very safe during winter, in westerly winds.

Tangier's Islands, in Virginia, nearly opposite the mouth of the Potomac River, in the Chesapeake Bay.

Tangipaha, a river of Louisiana, flows S., and enters Lake Pontchartrain on the border of Livingston and Tammany parishes.

Tangipao, a parish of Louisiana.

Tangle, (*tang-gl*), *v. a.* [Swed. and Goth. *tagel*.] To unite or knit together confusedly, as hair, wool, or grass; to interweave or interlock, as threads, so as to make it difficult to unravel the knot; to entangle. — To implicate; to ensnare; to entrap; as, "Tangled in amorous nets." (*Milton*). — To embarrass; to bring into an imbroglio; as, "Tangled in forbidden ways." (*Crashaw*). —*v. n.* To be entangled or united confusedly.

—*n.* A knot of hairs, threads, or other things united confusedly, or so interwoven as not to be easily disengaged or extricated; as, yarn in *tangles*.

(*Bot.*) See **SAMINARIA**.

Tangly, *a.* Knotted; intertwined; intricate. — Besprent with tangle or sea-weed.

Tanis, (*ta'nis*), a ruined city of Egypt, on an arm of the Nile, at its delta, 12 m. from Menzaleh. The Plain of Tan, or "Field of Zoan," where Moses performed his miracles, is now a desert waste.

Tan-ist, *n.* [Gael *tamiste*.] Formerly, in Ireland, the proprietor, governor, or captain of a tract of land.

Tan-ists, *n. pl.* A religious sect in China, founded by Lan-Tsze, a celebrated philosopher, whose doctrines hold a place second only to those of Confucius. Lan-Tsze, according to the most trustworthy accounts, was an historian and archivist of a king of the Chow dynasty, and went, about 600 B. C., to the W. parts of China, where he appears to have become acquainted with the worship of Fo, or Buddha, and, at Han-Rwan, wrote the *Tan-tih-King*, or "Book of Reason and Virtue." He is supposed to have died 523 B. C. The doctrines of Lan-Tsze differ from those of Confucius, indeed possess a higher scope, the object of the latter being the practical government of man through a code of ethics, that of Lan-Tsze the rendering of man immortal through the contemplation of God, the repression of the passions, and the perfect tranquillity of the soul. The moral code of the *Tan* (*i. e.*, the Eternal Reason or Supreme Principle) sect is excellent, inculcating all the great principles found in other religions — charity, benevolence, virtue, and the free-will, moral agency, and responsibility of man. Since the 2d cent. A. D., the sect has continued to spread in China and among the Indo-Chinese nations; and many monasteries and nunneries have been brought into existence.

Tanjore, (*tan-jor'*), a town and fortress of British India, cap. of a dist. of same name, 170 m. from Madras; Lat. 10° 42' N., Lon. 79° 11' E.

Tank, (*tangk*), *n.* [Fr. *étang*, a pond; Sansk. *tanāga*, a fish-pond.] A reservoir of standing water; a large basin or cistern.

(*Naut.*) A case of sheet-iron for the stowage of water on shipboard.

(*Mach.*) That part of the tender of a locomotive-engine which contains the water. Tanks vary in size, according to the power of the engine to which they are attached, and are from about 500 to 1,600 gallons in capacity.

Tankard, (*tang'kárd*), *n.* [Fr. *tancard*.] A large vessel for the reception of liquors; also, a drinking-mug with a cover; as, a *tankard* of London porter.

Tankard-turnip, *n.* A kind of turnip that stands at some elevation above the ground.

Tank-engine, (*-én-jin*), *n.* A locomotive-engine which carries its own water and fuel, thus dispensing with the use of a tender. [rowed by women.]

Tankia, *n.*, or **TANKA**, a Chinese boat abt. 25 ft. long.

Tank-iron, (*-i'ān*), *n.* Plate-iron, thinner than boiler-plate, and thicker than sheet-iron or stove-pipe iron.

Tan-na, an island of the S. Pacific Ocean, belonging to the group of the New Hebrides; Lat. 19° 32' S., Lon. 169° 44' E. It is abt. 22 m. in length and 10 in breadth, and was discovered by Capt. Cook in 1774.

Tan-nate, *n.* [Fr.] (*Chem.*) A compound of tannic acid with a base.

Tanner, *n.* [Fr. *tanneur*.] One who tans hides.

Tannersville, in New York, a post-village of Greene co., 45 m. S. S. W. of Albany.

Tannersville, in Pennsylvania, a post-village of Monroe co.,

tained in the materials used for tanning leather. The most important of them have been examined and found to possess an acid reaction, and to differ considerably in their properties, according to their sources. The best known of them is *gallo-tannic acid*, which is generally known by the name of *T.* or *tannic acid*, as its name signifies. It is obtained from the nut-gall of the oak, which contains two-thirds of its weight of this acid. The nut-galls are reduced to powder, and digested with an equal weight of washed ether. The decanted liquid separates on standing into two portions, the denser of which is of a yellow color, and consists of ether holding gallo-tannic acid and various coloring matters in solution. On evaporation it yields a pale buff residue of amorphous gallo-tannic acid. It is freely soluble in water. It reddens litmus-paper, and dissolves the carbonates with effervescence. With the bases it forms salts known as the gallo-tannates, none of which are crystalline. The basis of ordinary writing-ink is gallo-tannate of iron. Its most remarkable compound is that which it forms with *gelatin*, which constitutes the basis of leather. Gallo-tannic acid is used as a mordant in dyeing and in photography. The other varieties of tannic acid are *moritannic acid*, found in fustic (*Morus tinctoria*), *quercitannic acid*, existing in oak-bark, *quinotannic acid*, contained in cinchona-bark, *caffiotannic acid*, found in coffee, and a few others of little importance.

Tanning. See LEATHER (MANUFACTURE OF).

Tansborough, in *New Jersey*, a village of Gloucester co., 35 m. S.W. of Trenton.

Tan'sy. *n.* (*Bot.*) See TANACETUM.

Tan'talic Acid. *n.* (*Chem.*) See TANTALUM.

Tantalidæ. *n. pl.* (*Zoöl.*) A family of Gallatorial birds, the chief of which inhabit tropical latitudes, living almost entirely on the swampy banks of rivers and lakes. The genus *Tantalus* is characterized by having the head, in the adult, entirely destitute of feathers. It includes the Wood Ibis (*T. loculator*) of the Southern States, is 45 inches long, the wing 18 inches; the color white, quill and tail a metallic blackish-green. They live in flocks, in the swampy districts, feeding upon fish and aquatic reptiles. The genus *Ibis* has the bill very long, moderately thickened at the base, and curves downward towards the tip. Among the American species are the Red or Scarlet Ibis (*I. rubra*) (Fig. 2467) of S. America and the W. Indies, accidentally in the U. States; and the White Ibis, or White Curlew (*I. alba*) of the S. Atlantic and Gulf States, rarely northward, which is 25 inches long, the wing 11, and the bill 7 inches; color white. This species feeds largely upon crawfish. The Sacred Ibis, or Egyptian Ibis (*I. religiosa*), is an African bird, 30 inches in length, and covered with white and black plumage. It was one of the birds worshipped by the ancient Egyptians, and called by them *Hac*, or *Hib*, and by the modern Egyptians *Abou-Hannes* (i. e., Father John). It was supposed, from the color of its feathers, to symbolize the light and shade of the moon, and its body to represent the heart; its legs described a triangle, and with its beak it performed a medical operation; from all which esoteric ideas it was the avator of the god Thoth and Hermes, who escaped in that shape the pursuit of Typhon, as the hawk was that of Ra, or Horus, the sun. Its feathers were supposed to scare, and even kill, the crocodile. It appeared in Egypt at the rise, and disappeared at the inundation of the Nile, and was thought, at that time, to deliver Egypt from the winged and other serpents which came from Arabia in certain narrow passes. As it did not make its nest in Egypt, it was thought to be self-engendering and to lay eggs for a lunar month. According to some, the basilisk was engendered by it. It was celebrated for its purity, and only drank from the purest water, and the most strict of the priesthood only drank of the pools where it had been seen; besides which, it was fabled to entertain the most invincible love of Egypt, and to die of self-starvation if transported elsewhere. Its flesh was thought to be incorruptible after death, and to kill it was punishable with death.

Fig. 2467. — SCARLET IBIS, (*Ibis rubra*.)

Tantalite. *n.* [*Fr.*] (*Min.*) Same as COLUMBITE.

Tantalization. (*-zû'shun*.) **Tan'talism.** (*-izm*.) *n.* Act of tantalizing.

Tan'talize. *v. a.* [*From Lat. TANTALUS, q. v.*] To torment by presenting some good to the view of and exciting desire therefor, but continually frustrating the expectations by keeping that good out of reach; to tease; to vex; to irritate; as, a tantalizing woman.

Tan'talizer. *n.* One who tantalizes, teases, or torments.

Tan'talizingly. *adv.* In a tantalizing manner.

Tan'talum. *n.* (*Chem.*) A very rare metal, also known as *columbium*, found in certain minerals, the *tantalites* and *ytrotantalites*. Being so rare, and occurring in

such small quantities, its characteristics as a metal have not been much studied. It is obtained by decomposing the chloride at a red heat with ammonia. It is a black infusible powder, which assumes a metallic luster when burnished. Heated in air it burns, becoming converted into tantalic acid. *T.* forms two oxides, the principal one being tantalic acid, Ta_2O_5 . Tantalic acid is a white infusible substance, uniting with the bases to form salts, known as tantalites. A sesquichloride and a sesquisulphide of *T.* have been obtained. *Symbol Ta.*

Tan'talus. (*Myth.*) A king of Lydia, son of Jupiter. He was father of Niobe and Pelops, by Dione, one of the Atlantides, and is represented by the poets as punished in Hades with an insatiable thirst, and placed up to the chin in the midst of a pool of water, which flowed away as soon as he attempted to taste it. There hung also above his head a bough, richly loaded with delicious fruit, which, as soon as he attempted to seize it, was carried away from his reach by a sudden blast of wind. He was thus punished either for theft, cruelty, and impiety, or lasciviousness; for the causes are variously stated.

(*Zoöl.*) See TANTALIDÆ.

Tantalus's cup. A philosophical toy consisting of a cup, in the bottom of which is adapted a siphon concealed by the hollow figure of a man representing Tantalus, and by means of which the water poured into the cup is drawn off, so that if the water supplied to the cup is not faster than is drawn off by the siphon, the cup will never be filled up.

Tan'tamount. *a.* [*Lat. tantus*, so great, and *Eng. amount*.] Equal; equivalent in value or signification; as, a denier is often tantamount to a refusal.

Tantivy. *adv.* [*Lat. tanta vi*; said to be from the note of a hunting-horn.] A full swing, stretch, or speed; rapidly; swiftly; as, "Hark forward; tantivy!" — a term used among English fox-hunters. — *To ride tantivy*, to ride at full speed.

n. A rapid, rattling, tear-away gallop.

Tan'trum. *n.* [Generally in the plural.] A burst of ill-humor; a mock-heroic air; a fit of spleen. (*Colloq.*)

Taormina. (*ta'or-me'na*.) (*anc. Taurominium*), a seaport of the island of Sicily, in the Val di Demoua, on the E. coast, 26 m. from Catania. It has many remains of antiquity, among which may be noticed a theatre, capable of containing 40,000 spectators, and an aqueduct and reservoir, which supplied the ancient city with water. *Pop.* 4,436.

Taos, in New Mexico, a N.E. co., bordering on Colorado. *Rivers.* Rio Grande and Canadian. *Surface.* mountains in the W., elsewhere undulating; *soil*, generally fertile. *Cap.* Taos. *Pop.* (1897) 10,260.

Taos, in Missouri, a post-village of Cole co., abt. 9 m. S.E. of Jefferson City.

Taouza, one of the Society Islands.

Tap. *v. a.* (*imp. and pp. TAPPED*.) (*täpt*.) [*A. S. tæppan*.]

To draw out, as liquor, from a cask; to pierce or branch, as a cask, and insert a tap; to open, as a cask, and draw liquor therefrom; to pierce for letting out a fluid; to box or bore into; as, to tap a barrel of ale. — Hence, figuratively, to draw or extract from in any analogous way; as, to tap a person to elicit information.

n. [*Swed.* Goth. *tapp*, a siphon.] A pipe for drawing liquor from casks; also, a plug or spile for stopping a hole pierced in a cask. — Liquor which is measured out, as through a tap; as, he has got a tap of capital beer at his house. — A place attached to an inn or brewery where malt liquor is retailed; a tap-room; a bar; as, he goes to smoke his pipe in the tap.

(*Mech.*) A hardened steel screw with a square head, so that it may be turned by a wrench; it is grooved from end to end, and is also slightly tapered; — used for cutting an internal screw, as that of a nut, &c.

On tap, ready to be drawn; as, porter on tap. — Furnished with a tap; as, a barrel of ale on tap.

Tap. *v. a.* [*Fr. taper*.] To touch lightly; to strike gently; to hit with something small, or with a very gentle blow; as, to tap one on the shoulder with a cane. — To renew the sole or heel of; as, to tap a boot.

v. n. To strike or deliver a gentle blow or knock; as, servants should tap at a door before entering a room.

n. A gentle hit or knock; a slight blow with something small; as, a tap with the finger on a window-pane. — The piece of leather fastened upon the sole or heel of a boot or shoe, when undergoing repairs.

Tap-bolt. *n.* A bolt headed at one end and threaded on the other, to be screwed into some fixed part, instead of passing through the part and receiving a nut.

Tapajos, or **Tapayos.** (*ta-pa'yose*.) a river of Brazil, in the prov. of Para, deriving its copious sources from numerous branches rising in the interior mountains of Brazil. It is one of those great rivers which come from the south to feed the Amazon. Its course is N. for more than 600 m., between the Chingu and the Madeira, and it falls into the Amazon in Lat. 2° 24' 50" S., Lon. 55° W.

Tape. *n.* [*A. S. tæppe*.] A narrow fillet or band; a narrow piece of woven textile fabric, used for strings, &c.; as, a packet of papers fastened with tape.

Tape-line. *n.* A painted or varnished tape, marked out with inches, &c., and inclosed in a metallic case; — used by measurers.

Taper. *a.* Conical; pyramidal; regularly narrowed toward the point; becoming small toward one end; as, taper fingers.

Taper. *n.* [*A. S.*; *It. doppiere*, a torch.] A small wax candle, or a small light. — Also, a tapering form of structure; as, the taper of a pyramid.

v. n. To diminish or become gradually smaller toward one end; as, a spire tapers to a point.

v. a. To make gradually smaller in diameter.

Tapering. *a.* Becoming gradually smaller in diameter toward one end; diminishing by degrees toward a point.

Taperness. *n.* State of being taper.

Tap'etry. *n.* [*Fr. tapisserie*, from *tapis*, a carpet; *Lat. tape*; *Gr. tapes*, *tapetos*, also *dapis*, *dapidos*, a carpet.]

A kind of rich hangings, commonly composed of wool and silk, having pictorial representations wrought in them. This species of curtain covering for walls was known among the inhabitants of eastern countries at an extremely remote era. The most grotesque compositions and fantastic combinations were commonly selected for the display of the talents of workmen in this department of oriental art, which was afterwards imported into Greece. At length, the refined taste of Athens became visible in the structure of tapestries. The old grotesque combinations no longer, as formerly, covered their surfaces, but were confined to the borders only; and the centre received more regular and systematic representations. In modern times, this description of embroidery has been executed with very great success, and has often employed the talents of the greatest masters in the art of painting. In Flanders, particularly at Arras (whence the term *arras*, signifying *tap'etry*), during the 15th and 16th centuries, the art was practised with uncommon skill, and tapestries were executed there after the design of Raffaele in his cartoons. The first manufacture of *T.* in Paris was established under Henry IV., in 1606 or 1707, by several artists whom that Monarch invited from Flanders. Under Louis XIV., the manufacture of the Gobelins was instituted. Tapestry-work is distinguished by the workmen into two kinds, — that of high and that of low warp; the looms, and consequently the warps, being differently situated in the one case from what they are in the other; those of the *low warp* being placed flat and horizontal to the horizon, and those of the *high warp* erected perpendicularly. See *BAZEUX TAPESTRY*, *GOBELINS*, &c.

v. a. To furnish or adorn with tapestry; as, a tapestried room.

a. Made of, or resembling tapestry; as, a tapestry carpet.

Tapestry-carpet, an elegant and cheap kind of twoply or ingrain carpet, in which the warp or weft is printed before weaving, so as to produce the figure in the cloth.

Tape-worm. *n.* (*Zoöl.*) The common name of the articulated animals composing the family *Cestoidæ*, ord. of *Trematods*. This family embraces the tape-like worms, narrow toward the head and widening behind, which in their mature state live only in the intestines of vertebrate animals. They occur in all the classes of vertebrates; and generally different species are inhabited by different species of cestoids; and sometimes two or three species of cestoids inhabit the same species of vertebrate at the same time, and in some cases the same intestine. Some are scarcely visible; others, the largest, attain in some cases the length of one hundred feet. The width is nearly an inch in some of the widest. The eggs of a cestoid never hatch in the same intestine in which the cestoid lives, but only after they have been taken into the stomach of another and suitable animal. Thence the embryos pierce their way into the blood-vessels, and are carried by circulation of the blood into various parts of the body, where they develop into larvae called hydatids. The so-called *measly pork* is pork containing these hydatids, — that is, measly hogs are such as have their muscles more or less filled with the larvae of cestoids or tape-worms; and if the flesh of such hogs be eaten before cooking, which kills the hydatids, the man or animal eating it takes these hydatids into his intestines, where they are sure to develop into *T.* And so in regard to all animals which have *T.*; they get them by eating other animals in whose tissues there exist hydatids; and the way those animals afflicted with the hydatids get the latter is, as stated above, by swallowing with their food or drink some of the infinitesimal small eggs of the *T.* Two hundred species of cestoids have already been described. The most frequent of those which inhabit man is the Common *T.* (*Tenia solium* of Linnaeus), which derives its Linnaean title from the erroneous idea that it is always a solitary worm. The full-grown *T.* has been known from the earliest times, and is described by Hippocrates, Aristotle, and Pliny; but its organization and mode of development have only been properly understood during the last years. The segments of which it is composed vary in size, and number from 800 to 1,000, the earlier immature ones being extremely narrow, and the sexually mature joints (or those capable of realizing an independent existence) commencing at abt. the 450th segment. From 10 to 35 feet may be regarded as representing its ordinary length; its breadth at about the widest part being one-third of an inch. The head is very small and globular. On examining it with a low magnifying-power, it displays four circular-looking discs, in front of which is a conical proboscis, armed with a double crown of hooks. The head is succeeded by a very narrow neck, which is continued into the anterior or sexually immature part of the body, in which traces of segments first appear in the form of fine transverse lines, which are gradually replaced by visible joints

Fig. 2468.

Head, neck, and upper joints of *Tenia solium*, magnified; a, the circle of hooks; b and c, two of the sucking discs; d, the neck.

These joints or segments represent the body, and each mature segment contains both male and female organs of generation. A mature *T.* in the intestinal canal may give rise to a series of anomalous symptoms, including vertigo, noises in the ears, impairment of sight, itching of the nose and anus, salivation, dyspepsia, and loss of appetite, colic, pains over the epigastrium and in different parts of the abdomen, palpitation, syncope, the sensation of weight in the abdomen, pains and lassitude in the limbs, and emaciation. Many cases are on record in which hysterical fits, chorea, epilepsy, convulsions of various kinds, and even mania, have been induced by the irritation excited by this parasite, and have ceased at once on its removal. But distressing as these symptomatic phenomena may be, their injurious effects are trifling as compared with the troubles which follow the deposition and growth of the larval form within the body, especially when the cysticerci find a home in the more important vital organs. There are at least a hundred cases on record in which the cysticerci (the embryo of the worm) has caused death by its development within the human brain. In the present state of our knowledge, it is impossible to diagnose these cases; and even if a correct diagnosis were possible, nothing could be done in the way of treatment.

Tap-house, n. A tavern where liquor is served from the tap.

Tapio'ca, n. See MANIHOT.

Tapir, n. (Zool.) The name of a genus of Pachydermatous quadrupeds, family *Rhinocerotidae*. In its general form and contour, the *T.* reminds us of the Hog; but it is sufficiently distinguished from that animal by its snout, which is lengthened into a flexible proboscis, that looks like the rudiment of the trunk of the elephant, and partly serves the same purpose. The anterior feet have four toes, but the posterior only three; and these have only their tips cased in small hoofs. The eyes are small and lateral, and the ears long and pointed. The American tapir (*Tapirus Americanus*) is the largest animal of S. America, and is found in all parts of that continent, though most abundant in the forests of Guiana, Brazil, and Paraguay. It is of a deep brown color throughout, approaching to black; between three and four feet in height, and from five to six in length. The hair of the body is scanty, very short, and closely depressed to the surface. The innermost recesses of deep forests are the chosen haunts of this species, which is not gregarious, and shuns the society of man. It is for the most part nocturnal in its habits, sleeping or remaining quiet during the day, and at night seeking its food, which, in its natural state, consists of shoots of trees, buds, wild fruits, &c. Its enormous muscular power, and the tough thick hide which defend its body, enable it to tear its way through the underwood in whatever direction it pleases. It is very fond of the water, and frequently resorts to it. Its disposition is peaceful and quiet; and though it will defend itself vigorously, and in so doing inflict severe wounds with its teeth, it never attempts to attack either man or beast, unless hard pressed. The flesh is dry, and has a disagreeable flavor. The Indian *T. (Tapirus indicus)* of Sumatra and adjacent regions, is larger than the American species.

Fig. 2469. — AMERICAN TAPIR, (*Tapirus Americanus*.)

Tapir, n. (Zool.) The name of a genus of Pachydermatous quadrupeds, family *Rhinocerotidae*. In its general form and contour, the *T.* reminds us of the Hog; but it is sufficiently distinguished from that animal by its snout, which is lengthened into a flexible proboscis, that looks like the rudiment of the trunk of the elephant, and partly serves the same purpose. The anterior feet have four toes, but the posterior only three; and these have only their tips cased in small hoofs. The eyes are small and lateral, and the ears long and pointed. The American tapir (*Tapirus Americanus*) is the largest animal of S. America, and is found in all parts of that continent, though most abundant in the forests of Guiana, Brazil, and Paraguay. It is of a deep brown color throughout, approaching to black; between three and four feet in height, and from five to six in length. The hair of the body is scanty, very short, and closely depressed to the surface. The innermost recesses of deep forests are the chosen haunts of this species, which is not gregarious, and shuns the society of man. It is for the most part nocturnal in its habits, sleeping or remaining quiet during the day, and at night seeking its food, which, in its natural state, consists of shoots of trees, buds, wild fruits, &c. Its enormous muscular power, and the tough thick hide which defend its body, enable it to tear its way through the underwood in whatever direction it pleases. It is very fond of the water, and frequently resorts to it. Its disposition is peaceful and quiet; and though it will defend itself vigorously, and in so doing inflict severe wounds with its teeth, it never attempts to attack either man or beast, unless hard pressed. The flesh is dry, and has a disagreeable flavor. The Indian *T. (Tapirus indicus)* of Sumatra and adjacent regions, is larger than the American species.

Tapis, (tā'pē), n. [Fr.] A carpet; also, formerly, the cover of a council-table.

To be on, or upon, the tapis, to be the subject of discussion or debate; on the table, or under consideration.

—v. a. [Fr. tapisser.] To cover with figures, as in tapestry.

Tap-lash, n. The dregs of sediment of liquor.

Taplings, n. pl. (Agric.) The strong double leathers that secure the ends of each piece of a flail.

Tapnet, n. A kind of basket made of rushes, in which figs are imported.

Tappahan'nock, in Virginia, a port of entry, cap. of Essex co., 50 m. N.E. of Richmond; pop. abt. 500.

Tappan Bay, in New York, an expansion of the Hudson River, between Rockland and Westchester cos., 12 m. long, and 4 m. wide.

Tappantown, in New York, a post-village of Rockland co., 130 m. S. of Albany. It was the scene of the execution of Major Andre in 1780.

Tap'pet, n. (Mach.) A small lever or projection intended to tap or touch lightly something else, with a view to change or regulate motion.

Tapping, n. The act of one who taps; as, the tapping of a cask of beer.

(Surg.) The popular name for the operation known to surgeons as *paracentesis*. It is only performed when it is necessary to relieve some internal organ by drawing off the fluid or water that surrounds and oppresses it, as in dropsies of the chest and belly, and sometimes in cases of water on the brain. In the first two instances an external incision is made through the cuticle, either in the central line of the abdomen, or along the upper margin of one of the ribs, when an instrument like a small bayonet, covered with a silver tube, called a trochar and cannula, is thrust into the cavity; the trochar is then withdrawn, leaving the tube or cannula in the wound, through which the fluid flows into a vessel held to receive it.

Tap-room, n. A room in a tavern, in which beer is served from the tap.

Tap-root, n. (Bot.) The main root of a plant, which strikes perpendicularly into the soil.

Tap-rooted, a. (Bot.) Having a large, simple, conical root, which forms a centre round which the divisions are arranged.

Tap'ster, n. [A. S. tǣppere, a butler.] A drawer of ale or other liquor; one who serves liquor in a tap or tap-room.

Taptee, (tap-tē'), a river of India, rising near Baitool, in the centre of the peninsula, and entering the Gulf of Cambay near Surat.

Ta'qua-nut, n. (Bot.) The fruit of the *Phytalephos macrocarpa*.

Taquari, or TACOARY, (ta-kwa-rē'), in Brazil, a river of Matto Grosso, joins the Paragnay River, in Lat. 20° 20' S., Lon. 58° W., after a W. course of 400 m.

Tar, n. [A. S. tyrra; L. Ger. tar; Du. leer; Heb. tsari, balsam of Gilead.] A dark-brown or black viscid liquid obtained in the destructive distillation of organic matters. There are three principal kinds of tar; wood tar, obtained in the manufacture of wood vinegar and wood spirit by the destructive distillation of wood; *Stockholm tar*, largely used in the arts, as in ship-building, &c., which is obtained by a rude distillation per descensum of the roots and other useless parts of the resinous pine; and coal tar, obtained during the destructive distillation of coal in the manufacture of coal-gas. The tars are extremely complex mixtures. Wood tar yields, on repeated fractional distillations, paraffin, eupion, picamar, kapnomor, cedriret, and creosote. The residue left in the retort constitutes pitch, and from it the two hydrocarbons chryson and pyren have been obtained. Coal tar by distillation furnishes carbolic acid or phenol; cresylic alcohol; xylitic alcohol; the liquid hydrocarbons benzol, toluol, xylol, cumol, and cymol; the solid hydrocarbons naphthalin, paranaphthalin, and paraffin; rosolic and brunolic acids; and the basic compounds aniline, cepitine, pyridine, picoline, lutidine, collidine, parvoline, coridine, rubidine, viridine, leucoline, cryptidine and pyrrol.

—A sailor, so called from his tarred clothes. (Colloq.)

—v. a. (imp. and pp. TARRED.) (tard.) To smear with tar.

Tara, (tā'ra), a parish of Ireland, in the co. of Meath, Leinster, 2 miles from Skreen. Pop. 422. The hill of this name was, in remote antiquity, a principal seat of the Irish kings.

Tara, a town of Siberia, govt. of Tobolsk, on the Irtysh, 135 m. from Omsk; pop. 5,000.

Tarancon, (ta-ran'kone), a town of Spain, prov. of Toledo, 42 m. from Madrid; pop. 5,500.

Tarantella, n. [It.] A swift, delirious sort of Italian dance in whirling six-eight measure.

Tarantism, Tarantismus, n. (Med.) A feigned or imaginary disease in Apulia, characterized by excessive avidity for dancing to the sound of instruments, which was ascribed by the vulgar to the bite of the tarantula. The gesticulations, contortions, and cries, which were the accompaniment of the dance, somewhat resembled those observed in St. Vitus' Dance, and other epidemic nervous diseases of the Middle Ages, with which *T.* was contemporaneous.

Taranto, (anc. Tarentum), a town of S. Italy, prov. of Terra d'Otranto, situated on a rocky islet, formerly an isthmus between the *Mare Piccolo* (Little Sea), an extensive harbor on the E. or landward side of the town, and the *Mare Grande* (Great Sea), or Gulf of Taranto, on the W. The natural channel between the two seas has been spanned by a long bridge of seven arches, rendering the *Mare Piccolo* quite useless as a harbor, and forcing ships to anchor in the outer roads, which are much exposed to the S. and S.W. winds. *T.* has manufactures of velvets, linens, and cottons, but little commerce. The *Mare Piccolo*, however, is still famous (as of yore) for its immense abundance of shell-fish, and a large portion of the pop. derives its subsistence from the oyster and mussel fisheries. *Tarentum* was founded abt. 700 B. C., by colonists from Sparta. It was long a wealthy seat of commerce; but being reduced by the Romans in 209 B. C., it never recovered its importance. Pop. 27,546.

Tarantula, n. [It. tarantola; Fr. tarentule.] (Zool.) A species of spider (*Lycosa tarantula*), fam. *Araucidae*. The *T.* is a native of the south of Europe. Its bite is extremely venomous, and is equal, in the severity of the pain it inflicts, to the sting of a wasp. It lives on the ground, generally under stones or in holes in the earth, and does not construct regular webs to catch its prey, but lies in wait for it, or issues forth on predatory excursions, rushing back to its hole when it has secured it.

Tarare, (tā-rār'), a manufacturing town of France, dept. Rhone, at the foot of Mont Tarare, one of the highest summits of the Beaujolais range, 21 m. N.W. of Lyon. The muslius of *T.* are famous for their fineness. Pop. 9,712.

Tarascou, (tā-rās'kōn), a town of France, dept. Bouches-du-Rhône, on the Rhone, 13 m. S.W. of Avignon; pop. 12,424.

Tarassacum, n. [Gr. tarasso, I change, from its supposed effects on the blood.] (Bot.) A genus of plants, order *Asteraceae*. *T. officinale* is the common Dandelion. The root of this plant is very extensively employed as a medicinal agent, and is believed to possess aperient, diuretic, and alterative properties. It contains a bitter crystalline principle, to which it seems to owe its medicinal power. The bright yellow flowers of this plant open in the morning between five and six o'clock, and close in the evening between eight and nine—hence, this was one of the plants selected by Linnaeus to form his floral clock.

Tarborough, in North Carolina, a post-village, cap. of Edgecomb co., 76 m. E. of Raleigh.

Tarazona, (ta-ra-tho'na), two towns in Spain. 1. On the Queiles, 50 m. from Saragossa. *Manuf.* Leather and coarse woollen caps. Pop. 6,000. — 2. In the prov. of Albacete. *Manuf.* Printed cottons and handkerchiefs. Pop. 6,500.

Tarbes, (tarb'), a town of France, cap. of the dept. of the Hautes Pyrénées, on the Adour, 25 m. from Pau. It is the seat of an active general trade.

Tar'digrades, Tar'digrada, n. pl. [Lat. tardus, slow, gradior, I march.] A family of edentate Mammals, comprising those which are remarkable for the slowness of their motions when upon the ground, as the sloths.

Tar'dily, adv. Slowly; with slow pace or motion.

Tar'diness, n. The state or quality of being tardy.

Tar'do, n. [It, slow.] (Mus.) A term denoting that the movement to which it is affixed is to be performed slowly. It is nearly the same in signification as *largo*.

Tar'dy, a. (comp. TARDIER; superl. TARDIEST.) [Fr. tardif.] Slow; moving with slow or hesitating pace or motion. — Late; dilatory; behindhand; as, a person tardy in his payments.

Tar'dy-gaited, a. Slow-paced.

Tare, n. [From A. S. tarian, tyrgan, to vex, to consume.] (Bot.) The common name of *Eryum hirsutum*, and other species of the genus *ERYUM, q. v.*

—[Fr.; It. and Sp. tara.] (Comm.) A deduction made from the weight of goods by taking into account the weight of the packing. It is said to be *real*, when the true weight of such a packing is estimated; *average*, when a few similar cases are taken, and the average estimated as equal on all the cases; *customary*, when a uniform weight is taken as the rule of the place. The allowance of *tret* is a fixed one, being 4 lbs. for every 104 lbs., in goods which are liable to lose from dust, refuse, &c.

Target, n. [A. S. targ.] A large, round shield; a mark to shoot at.

Targeted, a. Furnished or armed with a target.

Targum, n. [Chal.] The name given to the Chaldee, or more properly Aramaic, version of the Old Testament.

Targumist, n. The writer or expounder of a targum.

Tarifa, (ta-rē'fa), a town of Spain, on the N. side of the Straits of Gibraltar, and 15 m. from Gibraltar. It is defended by an old castle, built by the Moors. Pop. 8,643.

Tariff, n. [It. tariffa; Fr. tarif; Sp. tarifa.] (Com.) A table giving the various duties, drawbacks, bounties, &c., charged or allowed on the importation or exportation of various articles.

—v. a. To form a list of duties upon. (R.)

Tariffville, in Connecticut, a post-village of Hartford co., 45 m. N.E. of New Haven.

Tarija, or Tarisa, a town of Bolivia, cap. of a dept. of same name, bordering on the Argentine Republic. It is situated 80 m. S.E. of Cinti; pop. 2,500.

Tarkeo, or TARKIO, in Iowa, a post-vill. and township of Page co., abt. 11 m. W. of Clarinda.

Tarkeo River, rises in Montgomery co., Iowa, and flowing S., enters the Missouri River in Holt co.

Tarki, (tar'ke), a town of the Russian dominions, in Transcaucasia, on the W. coast of the Caspian, 70 m. from Derbend; pop. 8,700.

Tarkilu Creek, in New Jersey, flows into the Delaware Bay from Cumberland co.

Tar'latan, n. A kind of thin, gauzy muslin, used for ladies' dresses, &c.

Tarlton, in Ohio, a post-village of Pickaway co., 35 m. S.E. of Columbus.

Tar'ma, a town of Peru, dept. and 25 m. S. of Jumin; pop. abt. 8,000.

Tarn, n. A mountain, lake, or pool; a bog; a fen; a marsh.

Tarn, in France, a river which rises in Mount Lozère, and after a course of 220 m., joins the Garonne, 3 m. from Moissac. — A dept., formed of a part of the old province of Upper Languedoc, and adjacent to the departments of the Aveyron and Upper Garonne. Area, 2,234 sq. m. Desc. Mountainous in the S.E., being traversed by branches of the Cevennes; in the other parts exhibiting a succession of undulating hills, interspersed with beautiful plains. Rivers. The Agout, Aveyron, and Tarn. Pro. All the usual cerealia, with various fruits. Cattle and sheep are extensively reared, and coal is worked. *Manuf.* The principal are woollens and cottons. Pop. 355,513.

Tarn-et-Garonne, a department in the S. of France, formed of portions of the old province Guienne, and surrounded by the departments Gers, Lot, and Lot and Garonne. Area, 1,436 sq. m. Desc. Fertile in the plains; but generally exhibiting an undulating surface. Rivers. The Garonne, Tarn, and Aveyron. Pro. Wheat, barley, maize, hemp, flax, wines, chestnuts, and several fruits of a southern climate, as almonds and figs. Horses and mules are also extensively reared. *Manuf.* Unimportant. Pop. 228,969.

Tarnopol, a town of Austrian Poland, on the river Sered, 70 m. from Lemberg; pop. 18,000.

Tarnish, v. a. [Fr. ternir.] To sully; to diminish, deteriorate, or destroy the lustre or brightness of; as, to tarnish silver plate, to tarnish gilding by exposure to damp. — To lessen, impair, or destroy the purity of; as, a woman of tarnished reputation.

—v. n. To become impaired in lustre or sheen; to present a dull or dead appearance; as, steel will tarnish by corrosion.

—n. A spot; a stain; a blot; a blemish; state of being tarnished.

Tarnisher, n. One who, or that which, tarnishes.

Tarnishing, n. The act of one who, or that which, tarnishes, or the state of being tarnished. — A process of giving gold or silver a pale or dim cast, without either polishing or burnishing it.

Ta'ro, a river of N. Italy, which, after a course of 65 m., falls into the Po, 6 m. from Casal-Maggiore.

Tarpau'lu, **Tarpan'ling**, **Tarpaw'ling**, *n.* A piece of canvas covered with tar or composition, to render it water-proof, used to cover the hatches of a ship, hammocks, boats, &c.—A hat covered with painted or tarred cloth, worn by sailors and others.—Hence, by implication, a sailor; a seaman: a tar.

Tar'peian Rock. (*Rom. Hist.*) According to the legend, Tarpeia, the daughter of the governor of the citadel of Rome, surrendered it to the Sabines, who were advancing against Romulus (B. C. 722) to avenge the abduction of the Sabine virgins—on condition of receiving the gold bracelets they wore upon their left arms. Titus Tatius, the Sabine king, to punish her perfidy, as he entered the gates, cast not only his bracelet, but his shield upon her. This example was followed by his soldiers, and Tarpeia was crushed to death. Tarpeia was buried in the capitol, and the rock, from which traitors were afterwards hurled, received her name.

Tarquin'ius, surnamed PRISCUS, or TARQUIN THE ELDER, fifth mythical king of Rome, was the son of Greek parents, and B. in the town of Tarquinii, in Etruria, succeeding Ancus Martins, 614 B. C. He had, according to the legends, a long and prosperous reign, and had reached his 80th year, when he was assassinated by the sons of his predecessor, B. C. 576. To T. Priscus are attributed several changes in the constitution, the construction of the Cloaca Maxima, and the building of the Forum.

TARQU'NIUS, surnamed SUPERBUS, or TARQUIN THE PROUD, seventh and last mythical king of Rome, grandson of the preceding, obtained the throne by the murder of Servius Tullius, whose daughter, Tullia, he had married, and rendered himself odious to the Romans by his pride and cruelty. He appears also in the legends as a successful warrior, strengthening and extending the influence of Rome. The rape of Lucretia, by his son, Sextus Tarquinius, is represented as the immediate occasion of the revolution which put an end to the monarchy, and established the republic of Rome, about 507 B. C.

Tar'rago'na, a seaport-town of Spain, in Catalonia, near the mouth of the River Francoli, in the Mediterranean, 52 m. from Barcelona. *Manuf.* Soap, spirits, coarse cloth, hats, &c.

Tar'arakai, (*Bay of*), a port of the Sea of Japan, dividing the island of Saghalien from Manchouria. It is 400 m. long, with a breadth varying between 50 and 200.

Tar'raut, in *Texas*, a N. co.; area, 900 sq. m. *Rivers*. W. Fork of Trinity river, Clear Fork, and Mary's creek. *Surface*, mostly prairies; *soil*, fertile. *Cap.* Fort Worth. *Pop.* (1897) 49,490.—A village, former cap. of Hopkins co., 300 m. N. E. of Anstin.

Tarra'sa, a town of Spain, in Catalonia, 15 miles from Barcelona. *Pop.* 6,000.

Tarrega (*ur-rai'ga*), a town of Spain, in Catalonia, 7 m. from Cervara. *Pop.* 4,500.

Tarren'tum, in *Pennsylvania*, a post-borough of Allegheny co. See TARENTUM.

Tar'riauce, *n.* [From *tarry*.] Act of tarrying.

Tar'rier, *n.* One who taries or delays.

Tar'rock, *n.* (*Zoöl.*) The young of the Kittiwake. See LARIDÆ.

Tar'ry, *v. n.* (*imp.* and *pp.* TARRIED, *tär'rid*.) [*Fr. tarder*, to stay, from *Lat. tardus*, slow.] To loiter; to stay behind; to hold back; to remain in arrears.—To delay; to defer; to procrastinate; to dilly-dally; to put off going or coming.—To stay; to dwell; to abide; to lodge or remain in a place.—(This word is seldom used except in composition.)

—*v. a.* To wait or remain for; to stay or stop for; as, "He plodded on his way, *tarrying* no further question."

—*n.* Stay; stop; hesitation; halt; delay; procrastination.

—*a.* [From *tar*.] Consisting of, covered with, or resembling, tar; as, a *tarry* rope.

Tar'rytown, in *New York*, a post-village of Westchester co., 27 m. N. of New York.

Tarse, *n.* (*Anat.*) The TARSUS, *q. v.*

Tarsh'ish, a name frequently mentioned in Scripture, and which, in some passages, seems identical with *Tartessus*, a city and emporium of the Phœnicians in Spain, somewhere near the mouth of the Guadalquivir; while in others it seems used as a general expression applicable to all the distant shores of Europe.

Tar'sier, *n.* (*Zoöl.*) The English of *Tarsius*, a genus of Quadrumanous Mammalia, belonging to the *Lemuridæ*, and inhabiting the Moluccas. They have the tarsi elongated, which gives to their limbs a disproportionate extent; tail very long; large membranous ears; and great eyes, which indicate a nocturnal life. They feed chiefly on lizards; hold their prey in their fore arms, while they rest on their haunches; produce one young at a birth, and live in pairs.

Tarsorraphy, *n.* [*Gr. tarsos*, the sole of the foot, and *raphê*, a suture.] (*Surg.*) An operation for diminishing the size of the opening between the eyelids when it is enlarged by surrounding cicatrices.

Tarsotomy, *n.* [*Gr. tarsos*, and *tomê*, a cutting.] (*Surg.*) The section or removal of the tarsal cartilages.

Fig. 2470.
TARSIIUS BANCANUS.

Tar'sus, *n.*; *pl.* TARSI. [*Lat.*] (*Anat.*) The ankle, or the seven bones which constitute that portion of the lower extremity. The tarsus, or ankle-joint, connects the *tibia* and *fibula*, or bones of the leg, with those of the foot or *metatarsus*.

Tar'sus, or **Tar'sous**, a city of Asia Minor, on the River Cydnus, 18 m. from Adana. Its antiquity is great, as it is said both by *Arrian* and *Strabo* to have been founded by *Sardauapalus*. It was much favored by *Augustus*, as well as *Adrian*, and rose to such celebrity as to rival in wealth and grandeur, as well as in the cultivation of literature and science, *Athens*, *Antioch*, and *Alexandria*. Hardly a single inscription, or monument of beauty or art, can be now discovered. The port is abt. 7 or 8 m. distant from the town. *Pop.* Estimated at 30,000 in winter, and scarcely 7,000 in summer, a large part of the people repairing to the highlands of the interior during the excessive heat of summer. It is the birthplace of *St. Paul*, of the philosopher *Athenodorus*, and the Stoic *Antipater*.

Tart, *a.* [*A. S. teart*.] Acidulous; sharp or poignant to the taste; as, a *tart* fruit.—Cutting; sharp; severe; incisive; pungent; as, a *tart* rebuke.

—*n.* [*O. Fr. tarte*; *Swed. tart*.] A species of pie or pastry, consisting of fruit or preserves, baked in a covering of paste; as, an apple-tart, a jam-tart.

Tart'an, *n.* [*Fr. tiretaine*.] Cloth woven in colors, originally of wool or silk;—specifically, woollen cloth, checkered or cross-barred with threads of various colors; as, Scottish *tartan*.

Tart'an, **Tar'tane**, *n.* [*Fr. tartane*, from *Ar. tarrad*, a fast-sailing vessel.] (*Naut.*) A small coasting vessel of the Mediterranean, with one mast, a bowsprit, and a lateen sail.

Tart'ar, *n.* [*Fr. tartre*.] (*Chem.*) A whitish crust deposited from wines upon the inside of the casks in which they are stored. It consists essentially of the sparingly soluble bitartrate of potash. When purified, it crystallizes in oblique rhombic prisms of snowy whiteness, forming ordinary cream of T. Crude T., or argol, forms the chief source of tartaric acid.—Also, a salivary concretion which forms an incrustation upon the teeth. According to *Berzelius*, it consists of salivary mucus, 13.5; animal matter soluble in muriatic acid, 7.5; earthy phosphate of lime, 79.0 = 100.

—A person of a bitter, irritable temper; especially, an irascible domineering woman; as, that man who marries a *tartar* is to be profoundly pitied.

(*Geog.*) See TARTARS. (Also written *Tatar*.)

To catch a *Tartar*, to encounter an antagonist who proves to be more than one's match in strength or cunning.

Tartar emetic. (*Med.*) So called because prepared by acting on the oxide of antimony by means of tartrate of potash. It is very largely used as an internal remedy in cases of pulmonary disease; as a counter-irritant, either to produce redness and heat, or excite successive crops of small pustules or blisters, in which cases it is employed in the form of an ointment, the strength depending on the quickness with which the effect is desired.

Tarta'rean, **Tarta'reous**, *a.* Pertaining or relating to Tartarus; hence, hellish; infernal; as, the *Tartarean* shades.

Tarta'rean, *a.* (*Geog.*) Belonging or having reference to Tartary.

Tartareous, (*tar-tä're-üs*), *a.* Consisting of, or resembling, tartar.

(*Bot.*) Presenting a rough and crumbled surface, as certain lichens.

Tartar'ic Acid, *n.* (*Chem.*) An organic acid obtained principally from the crude tartar formed on the insides of the casks in which wine is stored. It also occurs in the berries of the tamarind and of the mountain ash. In order to prepare the acid, the crude tartar, which consists mainly of bitartrate of potash, is dissolved in boiling water, and chalk is added until effervescence ceases. Insoluble tartrate of lime is precipitated, and neutral tartrate of potash remains dissolved. The tartrate of potash remaining in solution is then decomposed into tartrate of lime and chloride of potassium, by chloride of calcium. The product of the two operations is well washed and digested with dilute oil of vitriol at a gentle heat. The T. A. is thus set free, insoluble sulphate of lime being thrown down. When cool, the liquid is filtered, evaporated in leaden vessels to the consistence of syrup, and allowed to crystallize, the formation of the crystals being favored by the presence of sulphuric acid. The acid thus obtained crystallizes in large colorless transparent rhombic prisms, which are permanent in dry air. T. A. dissolves readily in water, alcohol, and wood spirit. It is much used in dyeing and in medicine. T. A. is a dibasic, and exhibits a strong tendency to form double salts, of which there are several varieties. The most important salts of this acid are the following:—*Bitartrate of Potash*, or pure cream of tartar. It is sparingly soluble in cold water, requiring about 180 times its own weight for solution. It is used in medicine as an aperient, and when heated to redness in a covered crucible, it forms the mixture of carbon and carbonate of potash known in the laboratory as *black flux*. Calcined with twice its weight of water, it forms *white flux*. In its impure state it forms the chief source of T. A. Its composition may be represented by the formula $KO.HO.C_4H_4O_6$. The equivalent of basic water may be replaced by different bases; such as soda, sesquioxide of iron, and tetroxide of antimony. *Tartrate of potash and soda*, or *Rochelle salt*, forms large hexagonal prismatic crystals. It is much used in medicine as an aperient. The double tartrates of iron and potash, and of iron and ammonia, are also used for the

same purpose. *Tartrate of potash and antimony*, or *tartar emetic*, has long been extensively used in medicine. It may be prepared by mixing three parts of tetroxide of antimony with four parts of cream of tartar, into a thin paste, with water, and allowing it to digest for several hours. It is then boiled with water, filtered while hot, and allowed to crystallize. Internally administered in doses of two or three grains, it acts as a powerful emetic; in doses of one grain and under, as a sedative and expectorant. It is very much prescribed in a great variety of diseases. A compound, similar in character to tartar emetic, may be formed with arsenious acid. Boracic acid will also replace the equivalent of water in the bitartrate of potash; thus acting as a pseudo-base. It forms the *borotartrate* of potash, a soluble tartar used in medicine as a purgative.

Tar'tarous, *a.* Consisting of tartar, or partaking of its qualities; containing tartar.

Tar'tars, or **Tat'tars**, *n. pl.* (*Hist.*) The T. were a tribe nearly allied to the Mongols in race, but their name became afterwards synonymous with that of the Mongols, and came to be extended to all the tribes brought under Mongolic sway by Genghis Khan and his successors, including Tungusic and Turkic races. The term is therefore not to be considered as ethnological, though all, or almost all, the peoples included under it, in its widest sense, belong to the Turanian family, but is rather to be understood in the same sense as the term "Frank" used by Mohammedans. In the classification of languages, Tartaric has become the distinctive name of that class of Turanian languages of which the Turkish is the most prominent member, while the Mongolic form a separate class.

Tartary, or **Tatary**, (*tar'ta-re*.) By this name is understood a vast extent of country comprising the great central belt of Asia, from the Caspian Sea to the Eastern Ocean, including a large region of Persia, Thibet, China, and Mongolia, and may be said to extend from 35° to 55° N. Lat., and from 53° to 135° E. Lon. Tartary, however, is now usually divided for convenience into East and West Tartary. Western Tartary appertains, by conquest, almost exclusively to Russia, and extends from the Black to the Caspian Seas, that portion to the east of Mount Imaus, or Belur, being taken as Independent Tartary. Eastern Tartary belongs almost entirely to China, or is tributary to that empire, and is divided into three provinces—*Teiticar*, *Kirin*, and *Leatong*. In a more restricted and proper sense, Tartary is identical with Turkistan.

Tartarus, *n.* [*Lat.*, from *Gr. tartaros*, a dark abyss.] (*Myth.*) The name of the infernal regions over which Pluto ruled; Hades.

Tartini, **GUISEPPE**, (*tar-tä're*), a celebrated Italian musician, B. at Pisano, 1692, who became so excellent a performer on the violin that he was appointed master of the band in the Church of St. Anthony, at Padua. His works are sonatas, and a treatise on music, which was translated into English by Stillingfleet. D. 1770.

Tart'ish, *a.* [From *tart*.] Somewhat tart; as, a *tartish* taste.

Tart'let, *n.* A small tart containing fruit or jam.

Tart'ly, *adv.* Sharply; with acidity; with poignancy; severely; with sourness of aspect; in a tart manner.

Tart'ness, *n.* Quality of being tart; acidity; sharpness to the taste; also, sharpness of language or manner; sourness; keenness; poignancy; acrimony; asperity; as, *tartness* of temper.

Tar'trate, *n.* (*Chem.*) See TARTARIC ACID.

Tar'tro-viu'ic, *a.* [From *Lat. tartarum*, tartar, and *vinum*, wine.] (*Chem.*) Pertaining or relating to, or designating, a certain acid.

Tartro-vinic acid. (*Chem.*) An acid composed of tartaric acid, in which an atom of water has been replaced by oxide of ethyl.

Tartuffe', *n.* [Derived from the name of the celebrated comedy of Molière.] A nickname for an hypocritical pretender to devotion.

Tartuffisui, (*-izm*), *n.* The practice of tartuffes.

Tar'-water, *n.* A cold infusion of tar in water, formerly a celebrated remedy for many chronic affections.—Also, the ammoniacal water of gas-works.

Task, *n.* [*O. Fr. tasche*; *Fr. tâche*, a task, duty; *Lat. tascat*, a rating, valuing.] A definite amount of work or labor imposed by another, to be in a limited or specified time; as, the *task* of daily toil.—Business; undertaking; employment; occupation.

"His mental powers were equal to greater tasks."—*Atterbury*.

—Arduous or burdensome labor or employment; as, the herculean *task* of subjugating a brave and patriotic people.—A lesson; an allotted portion of study imposed by a teacher or preceptor; as, to set each boy his *task*. To take to *task*. To chide; to reprove; to reprimand; to charge with a fault; as, to take a servant to *task* for dilatoriness.

—*v. a.* [*O. Fr. tascher*.] To allot or assign to a definite or specified amount of labor or employment; as, to *task* a servant.—To exact an excessive amount of toil or

Fig. 2471.

COSTUME OF KHOONDDOOZ, master of the band in the Church of St. Anthony, at Padua. (In Independent Tartary, or Turkistan.)

Torquato Tasso

1544-1595

exertion from; to oppress with severe or burdensome labor; as, his energies were *tasked* to the utmost.

Task'er, n. One who imposes a task; a task-master; also, one who performs a task.

Task-master, n. One who imposes a task.

Task-work, n. Work done as a task.

Tas'man, ABEL JANSSEN, a celebrated Dutch navigator, who flourished in the 17th cent. He was commissioned by Anthony Van Diemen to explore the coast of the Australian continent, sailed from Batavia in 1642, and first discovered a land which he called Van Diemen, and afterwards the country now called New Zealand.

Tasma'nia. See VAN DIEMEN'S LAND.

Tas'se, n. [Fr.; It. *tazza*.] A cup or bowl; a chalice.

Tas'sel, n. [L. lat. *tasselæ*, knots made of gold and silk, of many folds, hanging from the corners of garments.] A sort of pendent ornament, attached to the corners of cushions, to curtains, and the like, ending in loose threads.—A small ribbon of silk sewed to a book, to be put between the leaves as a marker.—The pendent head of some plants, as of maize.—A tassel. See TEASEL.

—*v. n.* (imp. and pp. *TASSELLED*.) (*tăs'seld*.) To put forth a tassel or flower, as the maize.

—*v. a.* To adorn or equip with tassels; as, to *tassel* a cap.

Tassinoug', or TASSINONG GROVE, in Indiana, a post-village of Porter co., abt. 10 m. S.E. of Valparaiso.

Tas'so, TORQUATO, one of the greatest poets of modern Italy, was the son of Bernardo Tasso, himself a good poet, and was b. at Sorrento, 1544. He studied law at the University of Padua, but had no heart for it, and vexed his father by liking poetry better and writing it. After being for some years in the service of Cardinal Luigi d'Este, by whom he was introduced at the court of Alfonso, duke of Ferrara, brother of the cardinal, he entered the service of Alfonso, who admired his poetical compositions, and made him his familiar associate. *T.* the while had fallen in love with the fair Princess Eleonora, the duke's sister, and had addressed to her many love-songs, some of them overpassing the line of delicacy and propriety. The princess remained his friend, but nothing more. It appears probable that Alfonso by some means became possessed of some of *T.*'s verses to Eleonora, and that this was the cause of his subsequent treatment of the poet. The latter, however, was of a very irritable temper, and on some occasions did not restrain himself from passionate and offensive outbreaks. On one such occasion, in 1577, the duke had him arrested and confined in a convent, alleging that he was mad; but *T.* made his escape, and visited Sorrento and Rome. He soon after begged and obtained

Taste, (tăst, v. a. [O. Fr. *taster*, to taste, also to handle, to feel; It. *tastare*, to touch.] To perceive and distinguish by causing to touch the palate; to perceive by means of the tongue; to have a certain sensation in consequence of something applied to the tongue; to try the relish of by the perception of the organs of taste; as, to *taste* honey.—To try by eating a little of, or to eat a little.—To essay first; to experience; to feel; to undergo; as, to *taste* the fear of death.—To relish intellectually; to enjoy; to derive pleasure from; as, to *taste* domestic happiness.

—*v. n.* To try by the mouth; to eat or drink; or to eat or drink a little only; to have a smack; to excite a particular sensation by which the quality or flavor is distinguished; followed by *of*; as, this wine *tastes of* the wood.—To distinguish intellectually; to try the relish of anything; to be tinged; to have a particular quality or character; to experience; to have perception of; as, he *tastes of* my bounty.—To take for gratification; to enjoy sparingly; as, one *tastes of* pleasure in moderation.

—*n.* Act of tasting; gustation.

(*Physiol.*) One of the five special senses by which are perceived certain impressions made by particles of bodies, dissolved by the saliva in the mouth. The object clearly is to take cognizance of matters about to be swallowed, and to act as sentinels to the alimentary canal, at the entrance of which they are situated. The *T.* of bodies are very different and varied; but in order to have a *T.*, a substance must be either liquid or soluble in the mouth. The organ of *T.* is the tongue, and the seat of sensibility is the mucous covering of its surface. It is dependent on the lingual branch of the fifth, and the glossopharyngeal nerves,—the former distributed to the two anterior thirds, and the latter to the posterior third of the tongue. This organ is covered over with minute prominences, which, when magnified, present four principal forms; viz. 1. Simple papillæ; 2. Conical or filiform papillæ; 3. Fungiform papillæ; 4. Circumvallate, or caliciform papillæ. It is supposed that the two former are more especially concerned in the sense of touch, with which the tongue is also highly endowed; while the two latter, but particularly the last, constitute more especially the apparatus of *T.* Sapid bodies pressed against these papillæ give rise to impressions, which, when transmitted to the brain, occasion the peculiar sensation. The condition for the perception of *T.* are,—1. The presence of a nerve with special endowments; 2. The irritation of this nerve by the sapid matters; 3. The solution of these matters in the secretions of the organ of *T.* The precise mode in which the nerves of the tongue are stimulated is not understood. This sense is much more acute in some persons than others, and may be much improved by education, as in the case of wine-tasters. It is diminished or lost in febrile or other disorders which alter the condition of the mucous surface of the tongue and mouth. Professor Bain classifies the different kinds of *T.* as follows:—1. Relishes, or the agreeable feelings arising from the stimulus of food on the organs of mastication and deglutition,—they are of an intense and massive kind; 2. Disgusts, or the opposite of relishes; 3. Sweet *T.*, as that of sugar; 4. Bitter *T.*, as that of quinine or bitter aloes; 5. Saline, as that of common salt; 6. Alkaline; 7. Sour, or acid; 8. Astringent; 9. Fiery, as that of alcoholic liquors.

(*Esthetics.*) That faculty of the human mind by which we judge of the beautiful and proper, and distinguish them from the ugly and unsuitable. Much difference of opinion has prevailed respecting the nature of this faculty. By some it has been regarded as the result of caprice or fashion, without any uniform or permanent principles on which to ground its decisions; by others, a compound of various complex elements, in the resolution of which into its component parts several ingenious attempts have been made. It seems, however, to be, as stated by Burke, "a separate faculty of the mind;" "a species of instinct, by which we are struck naturally and at the first glance, without any previous reasoning, with the excellencies and defects of a composition." It is, however, highly susceptible of improvement by being made habitually and attentively conversant with a particular class of agreeable objects. This faculty exercises an important and highly beneficial influence in such a state of society as ours, not only over the pursuits of those who devote themselves to the study of literature and the fine arts, but over the enjoyments of every individual who partakes of the general refinement of manners.

—Style; manner with respect to what is pleasing; as, he dresses in *bad taste*.—A bit; a small portion given or taken as a sample or specimen; a little piece tasted or eaten; as, a *taste* of Gruyère cheese.

Taste'ful, a. Tasty; having a high taste or relish; as, a *tasteful* dish.—Having or exhibiting good taste; as, she is *tasteful* in dress.

Taste'fully, adv. With good taste.

Taste'fulness, n. State or quality of being tasteful.

Taste'less, a. Having no taste; insipid; as, *tasteless* food.—Having no power of giving pleasure; as, *tasteless* recreations.

Taste'lessly, adv. In a tasteless manner.

Taste'lessness, n. Want of taste or relish.

Taster, n. One who tastes; also, one who first tastes food or liquor; as, a *tea-taster*, a *wine-taster*.

Tast'ily, adv. With good taste; in a tasty manner.

Tast'ing, n. Act of perceiving by the tongue.—The sense by which we perceive or distinguish savors.

Tas'to, adv. [It.] (*Mus.*) A term used in conjunction with *solo*, to signify that the instruments which can accompany by chords are to play only single sounds till

the direction is contradicted by the word *accordo* or *accompagnamento*.

Tasty, (tăs'ty, a. (comp. *TASTIER*; superl. *TASTIEST*.) Having a good taste, or delicate perception and appreciation of excellence;—said of persons; as, a *tasty* connoisseur in women or wine.—Elegant; being in harmony with, or conformity to, the principles of good taste and proper fitness; as, a *tasty* selection of pictures.

Tate, in Ohio, a township of Clermont co. Pop. (1897) about 2,850.

Tat'uall, in Georgia, a S.E. co.; area, 1,123 sq. m. Rivers, Altamaha, Cananoochee, and Ochopee. Surface, level; soil, sandy, but fertile along the river banks. Cap. Reidsville. Pop. (1897) 11,140.

Tat'ou, Tat'ouay, n. (*Zoöl.*) The *Armadillo cabassu*. See ARMADILLO.

Tat'ta, a town of British India, in Sind, near the banks of the Indus, 57 m. from Hyderabad. Pop. abt. 10,000.

Tat'ter, n. [From A. S. *toteran*, to tear or rend in pieces.] A rag, a shred, or a part torn and hanging to the main body or thing;—chiefly used in the plural; as, a poor wretch in *tatters*.

Tat'tered, a. Rent; torn; hanging in rags or shreds.

Tat'ter-demonia'tion, (-măl'yun, n. A man in rags or tatters; a ragamuffin; a wretched, pitiable-looking object.

Tat'ting, n. A kind of lace edging woven or knit from common sewing-thread, with a peculiar stitch.

Tat'tle, v. n. [A. S. *to-tellan*.] To tell over and over; to speak much or often; to prate; to talk idly; to use many words with little meaning; as, the *tat'tling* quality of old age.—To tell tales; to communicate secrets; as, a *tat'tling* busybody.

—*n.* Prate; idle talk or chat; trifling talk; gossip.

Tat'tler, n. One who tattles; an idle talker. (*Zoöl.*) The common name of several species of gallinaceous birds, family *Scelopacidae*, belonging to different genera. The *Wandering Tattler*, *Heteroscelus brevipes*, distinguished by its stout and compressed bill, is about 10 inches long and the wing 6 inches. It inhabits Washington.

Tat'tlery, n. Idle talk or chat.

Tat'tling, a. Given to idle talk; apt to tell tales.

—*n.* Idle talk; babbling.

Tat'tlingly, adv. In a tattling manner.

Tattoo', n. [Said to be from Fr. *tapoter*, to tap, to beat; *tapotez tous*, beat all of you.] (*Mil.*) A beat of the drum at night, giving notice to soldiers to retreat, or to repair to their quarters;—opposed to *reveille*.—*Devil's tattoo*, a drumming or tapping with the fingers or feet, as from listlessness, ennui, absence of mind, fatigue, or the like; as, having nothing better to do, he beat the *Devil's tattoo* on the window-pane.

Tattoo', v. a. To prick the skin and stain the punctured spots with a colored substance, forming lines and figures upon the body.

—Figures on the body, made by punctures and stains in lines and figures.

Tattoo'ed, a. Marked by stained lines and figures on the body; as, the *tattooed* wrist of a sailor.

Tattoo'ing, n. The operation or practice of pricking the skin and staining the punctured spots with a colored substance, so as to form lines and figures on the body; the figures thus formed.

Taught, n. (*Naut.*) Same as TAUT, *q. v.*

Taught, imp. and pp. of TEACH, q. v.

Taunt, v. a. [Fr. *tañcer*, to rebuke.] To speak biting words to; to reproach with severe or insulting words; to revile; to upbraid; to expostulate; to censure; as, to *taunt* a man with his low birth.

—Upbraiding words; bitter or sarcastic reproach; insulting invective.

—*a.* (*Naut.*) Very high or towering, as a ship's mast.

Taunter, n. One who taunts.

Taunt'ing, n. The act of one who taunts.

Taunt'ingly, adv. In a taunting manner.

Taun'ton, a market-town of England, in Somersetshire, on the river Tone, 10 m. from Bridgewater. Manuf. Coarse woollen goods. It is a place of great antiquity, and was the residence of the West-Saxon kings. Pop. 15,500.

Taun'ton, in Massachusetts, a river which rises in Plymouth co., and flowing S.W. enters Mount Hope Bay in Rhode Island.—A city, port of entry, and semicap. of Bristol co., on Taunton river, 35 m. S. of Boston; Lat. 41° 54' 11" N., Lon. 71° 5' 55" W. It contains extensive manufactures of locomotives, steam-engines, cotton and other machinery, nails, tacks, cotton goods, &c.; also ship-building. Pop. (1895) 27,115.

Taur'ic Cherson'esus. The ancient name of the CRIMEA, *q. v.*

Tauricor'nous, a. [Lat. *taurus*, bull, and *cornu*, horn.] Horned after the manner of a bull.

Taurida, or KRIM, (taur'ide-da, a S. govt. of European Russia, consisting in part of the Crimean peninsula, and in part of a tract of mainland; is bounded on the N. by Cherson and Ekaterinoslav; S. and W. by the Black Sea, and E. by the Sea of Azov; area, 23,460 sq. m.; between Lat. 44° 30' and 47° 50' N., and Lon. 31° 25' and 40° 25' E. The principal rivers are the Dnieper, Kouskaia, and Berda. Pop. 702,615.

Taur'ine, n. [From Gr. *tauros*, bull, because originally found in the bile of the ox.] (*Physiol.*) A crystalline substance obtained by the transformation, under the influence of acids or alkalis, of taurocholalic acid, one of the constituents of bile. It may also be prepared by the action of heat upon isethionate of ammonia.

—*a.* Like or pertaining to a bull.—Connected with the constellation Taurus.

Tau'rocol, Taurocol'la, n. [Gr. *tauros*, and *kolla*, glue.] Glue made from the ears and genitals of a bull.

Fig. 2472. — HOME OF TASSO.

leave of the duke to return to Ferrara; but it was on condition of submitting to the rules of the physicians; and he was not permitted to see the princess. Again he left Ferrara, went to Mantua, Urbino, and Turin, but was induced to return early in 1579. His demeanor was so violent that he was once more arrested and confined in a madhouse, where after a time he appears to have been kindly treated, and was allowed to write and receive the visits of his friends. Among those who came to see him were Montaigne, the great French essayist, and the younger Aldo, one of the famous printers. Through the intercession of several sovereigns, the pope, the emperor, the duke of Mantua, and the grand-duke of Tuscany, on his behalf, he was liberated in 1586, and went first to the court of Mantua. He could not rest, but moved from place to place, now at Naples, now at Rome, then at Florence; and in 1594 he was called to Rome, to receive at the hands of Pope Clement VIII. the laurel-crown. But soon after his arrival he fell ill, and by his own desire was removed to the monastery of St. Onofrio, where he died. *T.*'s masterpiece is the *Gerusalemme Liberata*, an epic poem in 24 books, on the events of the great Crusade and the recovery of Jerusalem from the Saracens. It was published in 1581; and the savage attacks made on it by the critics wounded the sensitive poet severely. It nevertheless won immense admiration, passed through seven editions within the first year, and took its place among the great poems of the world. It is constantly reprinted, and has been translated into almost all the languages of Europe. Among his other works, which are very numerous, are *Rinaldo* (his earliest poem), *Aminta* (an exquisite pastoral drama), *Il Torrismondo* (a tragedy), many short poems, dialogues, and other prose pieces. D. at Rome, April 25, 1595.

Tast'able, a. [From *taste*.] That may be tasted; savory; relishing.

Tanromachian. (-mā'ki-an,) *a.* Pertaining or having reference to bull-fights.

—*n.* A matador; one who engages in bull-fights.

Tauromachy. (-rom'a-ke,) *n.* [Gr. *tauros*, bull, and *machē*, fight.] Bull-fighting.

Taurus. *n.* [Lat.; Gr. *tauros*.] (*Astron.*) The Bull, the second in order of the 12 zodiacal constellations. It is marked thus, ♉, and contains 141 stars, among which are *Aldebaran*, of the first magnitude, and the well-known clusters called *Pleiades* and *Hyades*. It is entered by the sun in April.

(*Geog.*) A chain of mountains. See *NATOLIA*.

Tauss. a town of Austrian Bohemia, 80 m. from Prague. *Munuf.* Chiefly, tapes. *Pop.* 6,940.

Tauste. (tous'tai,) a town of Spain, in Aragon, on the Rignel, 170 m. from Madrid; *pop.* 4,500.

Taut. (sometimes, but inelegantly, written *TAUGHT*.) *a.* Tightly drawn, stretched, or strained; — the opposite of *slack*; as, a *taut* rope. Also, neat; ship-shape; properly disposed or ordered; prepared against emergency; as, everything is *taut* aboard.

Tautochrone. (-krōn,) *n.* [Gr. *tauto*, and *chronos*, time.] (*Math.*) A curved line, having this property that a heavy body descending along it by the action of gravity will always arrive at the lowest point in the same time, wherever the point from which the body begins to fall be taken in the curve.

Tautogorical. *a.* [Gr. *tauton*, for *to auton*, the same, and *agorein*, to speak.] Signifying the same word or subject, but expressed in different words, or presented in a different form; — the converse of *allegorical*. (*n.*)

Tautog'. *n.* (*Zoöl.*) See *LABRUS*.

Tautologie. **Tautological.** (-loj'ik,) *a.* Pertaining or having reference to, or containing, tautology.

Tautology. *n.* A repetition of the same meaning in different words; needless repetition of a thing in different words or phrases.

Tautophonical. (-fon'ik-l,) *a.* [Gr. *tauto*, same, and *phoné*, voice, sound.] Repeating the same sound.

Tautophony. *n.* Repetition of the same sound.

Tavaunes. (ta-van') The name of an ancient family of Burgundy, which has furnished several distinguished personages to French history; the most celebrated being GASPARD DE SAULX DE TAVANNES, a French marshal, and one of the most eminent of their commanders, b. 1509; distinguished in the wars of Italy, and the religious wars ending in the massacre of St. Bartholomew. D. 1573.

Tavern. *n.* [Fr. *taverne*; Lat. *taberna*.] A house where wines or other liquors are sold, and entertainment provided for large parties; an inn.

Tavernier. JEAN BAPTISTE, (ta-vair'ne-ai,) a celebrated Eastern traveller, b. in Paris 1605, d. at Moscow 1686. He made an immense fortune in trading with diamonds; his *Travels*, published in 6 vols., 1679, are highly valued.

Tavira. or **TAVILA** (ta-vee'ra,) a seaport-town of Portugal, in Algarva, at the mouth of the river Segna, 156 m. from Lisbon; *pop.* 10,903, mostly connected with fisheries.

Tavistock. a market-town of England, in Devonshire, on the Tavy or Tay, 13 m. from Plymouth; *pop.* 8,700, chiefly agricultural.

Tavoy. (ta-voi,) a town of British Burmah, presidency of Bengal, 25 m. from the sea, and 90 from Yeh; *pop.* 11,000.

Taw. *v. a.* [A. S. *tawian*.] To dress or prepare white leather for gloves, &c., by imbuing skins with alum, salt, and other substances.

—*n.* [A. S.] A large marble, used in boy's play; also, a game at marbles.

—*pl.* A whip or rod used by a schoolmaster as an instrument of punishment.

Tawas City. in *Michigan*, a post-village, cap. of Iosco co., on Saginaw Bay, abt. 54 m. N.E. of Bay City.

Taw'drily. *adv.* In a tawdry manner.

Taw'driness. *n.* State of being tawdry.

Taw'dry. *a.* (*comp.* *TAWDRIER*; *superl.* *TAWDRIEST*.) Having an excess of showy or tinsel ornaments; very fine and showy in colors without elegance or good taste; as, a *tawdry* costume, a *tawdry* bonnet, dress, &c.

Tawee. (taw-e'), an island of the Asiatic Archipelago, off the N.E. extremity of Borneo, and contiguous with the Sooloo-Island chain. *Ext.* 40 miles long, with a breadth of 15.

Taw'er. *n.* One who taws skins.

Taw'ery. *n.* The place where skins are tawed.

Taw'ing. *n.* The art or process of dressing skins. See *LEATHER*.

Taw'iness. *n.* Quality of being tawny.

Taw'ny. *a.* [Fr. *tanné*, from *tanner*, to tan.] Of a yellowish-brown color; of the color of things tanned, or of persons who are sunburned; as, a *tawny* mulatto, a *tawny* lion.

Tax. (taks,) *n.* [Norm. *taxus*, taxes; *taxer*, to settle; Lat. *taxo*, to appraise, from *tag*, root of *tango*, to touch.] A rate or duty levied by government on the incomes or property of individuals, or on the products consumed by them. — Particularly, the sum levied upon a specific thing; a sum imposed on individuals, or on some distinct branch of their property or source of revenue, for state, local, or civic purposes; as, an income-tax, a land-tax, a capitation-tax, a tax on watches, carriages, &c. — The produce of such duty or rate placed at the disposal of the national, state, local, or municipal government for the public good; as, revenue derived from the taxes. — Hence, any obnoxious, compulsory or burdensome demand, duty, or charge; as, unremitting labor is a heavy tax upon health. — Charge; censure.

(*Pol. Economy.*) Taxes are either direct or indirect. "A direct tax is one which is demanded from the very persons who it is intended or desired should pay it;" an indirect tax, one which is "demanded from one person in the expectation and intention that he shall indem-

nify himself at the expense of another," as in the excise or customs. Direct taxes are generally on income, indirect on expenditure. Though most governments have had recourse to direct taxes, indirect taxes have generally been viewed with the greatest favor both by princes and subjects. Being generally paid, in the first instance, by the producers, the purchasers confound them with the natural price of the commodity; and hence their effects are not so readily felt and appreciated. They have also the advantage of being paid by degrees, in small portions, and at the time when the commodities are wanted for consumption. Indirect taxes, however, have the disadvantage that they not only increase the price of the articles by their amount, but also, being advanced by the producers before they are finally paid by the consumers, the former must necessarily have a profit upon them. As the income of individuals must be derived from one or more of the three sources of rent, profit, or wages, all taxes which do not fall upon capital, must, however imposed, ultimately fall upon one or other of these sources. — *Taxes on property* are in most respects highly objectionable, differing but little from taxes on capital, about the worst that can possibly be devised. And even though such were not the case, insuperable difficulties stand in the way of establishing it on any fair basis. An income-tax is at first sight apparently the fairest of all taxes, but in its practical operation it is the most unequal, oppressive, and vexatious of any that it is possible to imagine. The difficulties in the way of assessing incomes are of two sorts: 1st, the difficulty of ascertaining the incomes of different individuals; and 2d, the difficulty of laying an equal tax on incomes derived from different sources; incomes arising from rents of land, houses, mortgages, funded property, &c., being very different from those arising from trade, business, or profession. Three rules are to be kept in view in the carrying out of an income-tax: 1, that incomes below a certain amount should be altogether untaxed; 2, that incomes above that limit should be taxed only in proportion to the surplus by which they exceed the limit; 3, that all sums saved from income and invested should be exempt from the tax. In providing for the enormous expenditure resulting from the Civil War, the govt. of the U. States was compelled to inaugurate the levying of an income tax.

—*v. a.* (*imp.* and *pp.* *TAXED* (*takst*.) To subject to pay a tax or taxes; to lay, impose, or assess upon individuals a specific sum; to lay an impost or burden upon; — specifically, to levy money from for the support of national, state, or municipal government; as, are not Americans *taxed* more than enough? — To assess, fix, or determine judicially, as the amount of professional charges on legal actions; as, to *tax* a lawyer's bill of costs. — To censure; to charge; to accuse; — usually preceding *with*, rarely *of*; as, the man was *taxed with* the crime in question. — Figuratively, to strain; to call to task; to exact from; as, to *tax* one's best endeavors.

Taxability. *n.* State or condition of being taxable.

Taxable. *a.* That may be taxed.

Tax'ableness. *n.* Taxability.

Taxaceæ. *n. pl.* (*Bot.*) The Yew family, an order of plants, class *Gymnogams*. *DIAG.* Repeatedly branched, continuous stems, simple leaves often fork-veined, solitary females, 2-celled anthers opening longitudinally and the membrane next the nucleus inclosed. — There are 9 genera and 50 species, chiefly natives of temperate regions, and of the mountains of tropical countries.

Taxation. (taks-ā'shun,) *n.* [Fr.; Lat. *taxatio*.] A taxing; act of laying or levying a tax, as upon the citizens of a state, by government, local, or other proper authorities for public purposes. — Act of taxing or assessing a bill of costs. — Tax; sum imposed or thing exacted.

Tax'er. *n.* One who assesses or levies taxes.

Tax'-free. *a.* Exempt from the payment of taxes.

Tax'icorn. *n.* [Lat. *taxus*, a yew, and *cornu*, horn.] (*Zoöl.*) One of a family of Coleopterous insects, including those in which the antennæ gradually increase in size as they extend from the head, or terminate in an enlargement.

Taxider'mie. *a.* [Fr. *taxidermique*.] Pertaining or relating to taxidermy.

Taxider'mist. *n.* One skilled in taxidermy.

Tax'iderny. *n.* [Gr. *taxis*, an arrangement, and *derma*, a skin.] The art of preparing and arranging the skins of animals intended for preservation, in such a manner as to represent their natural appearance; operation of stuffing the bodies of dead animals to be kept as curiosities.

Tax'is. *n.* [Gr., a division, an arrangement.] (*Arch.*) That disposition which assigns to every part of a building its just dimensions.

—*n.* [Gr., arrangement.] (*Surg.*) The replacement of parts which have quitted their natural situation, by the hand, and without instrument or operation; as in reducing hernia or rupture.

Taxon'omy. *n.* [Gr. *taxis*, order, and *nomos*, a law.] That branch or department of natural history which treats of the laws and principles of classification.

Taxus. (taks'us,) *n.* [Lat.] (*Bot.*) The yew, the typical genus of the order *Taxaceæ*. *T. Coccata*, the common yew, is an evergreen tree, which often attains a great size. Specimens of remarkable antiquity are commonly seen in old churchyards. The timber is extremely durable and valuable, and was formerly much used for making bows. Its leaves and young branches act as narcotic-acrid poisons when eaten by man or the lower animals. *T. Canadensis*, the Dwarf Yew, or Ground Hemlock, is a small, evergreen shrub, with the general aspect of a dwarf hemlock spruce (*Pinus Canadensis*).

It grows on thin, rocky soils in shady places, 2–3 feet long, from Canada to Pennsylvania and Kentucky. Leaves nearly an inch long, arranged in 2 opposite rows, on the sides of the branchlets. Staminate flowers in small, roundish, axillary heads. Drupes oval, concave or open at the summit, red and juicy when mature.

Tay. (tai,) one of the largest rivers of Scotland, which rises on the frontier of Lorn, in Argyleshire, and after a course from 120 to 150 m., falls into the German Ocean, 8 m. below Dundee.

Tay (Loch). one of the most beautiful of the Scottish Lakes, lies in Breadalbane, Perthshire. *Ext.* 15 m. long, and from 1 to 2 broad.

Taychee'da. in *Wisconsin*, a post-village and township of Fond du Lac co., on Lake Winnebago, 3 m. E. of Fond du Lac.

Taygetus. a part of a lofty ridge of mountains, which, traversing the whole of Laconia from the Arabian frontier, terminates in the sea at the promontory of Taurarus. Its outline, particularly as seen from the N., is of a more serrated form than the other Grecian mountains. In winter it is covered with snow, which renders the vicinity extremely cold. In summer it reflects a powerful heat upon the Spartan plain, from which it keeps the salubrious visits of the W. winds, and thus makes it one of the hottest places in Greece.

Fig. 2413
VIEW OF MOUNT TAYGETUS FROM THE SITE OF SPARTA.

Taylor. BAYARD, an American author and traveller, b. in Kennett Square, Chester co., Penna., 1825. His first literary production, a poem on an incident in Spanish history, was written when he was eighteen. In 1844 he spent two years in Great Britain and other parts of Europe, and published on his return an account of his travels, entitled *Views Afoot*; or, *Europe seen with Knapsack and Staff*. Having settled in New York, he became connected with the *Tribune* newspaper, and in 1848–49 was in California, as its correspondent. He has since travelled in the same capacity, visiting Egypt and other parts of the East, Sicily, and Spain, and accompanied the U. States expedition to Japan. The results of these various journeys have been published, under the titles of *El Dorado, Life and Landscapes from Egypt, Pictures of Palestine, Japan, India, and China*, &c. His later explorations are recorded in *Northern Travel, or Summer and Winter Pictures of Sweden, Denmark, and Lapland*, (1856;) and *Travels in Greece and Russia, with an Excursion to Crete*, (1857.) During this most active life of travel, correspondence, and authorship, his best and most spirited writings were in verse. In 1848, he published *Rhymes of Travel, Ballads and other Poems*; in 1851, a *Book of Romances, Lyrics and Songs*; in 1854, *Poems of the Orient*; and in 1855, *Poems of Home and Travel*. In 1859 and 1862, he furnished two series of *At Home and Abroad, or Sketch-book of Life, Scenery, and Men*, and edited a *Cyclopædia of Modern Travel*. In 1878, appointed Minister to Berlin. At the time of his D., Dec. 19th, 1878, he was preparing a life of Goethe.

Taylor. JEREMY, an English prelate, b. at Cambridge, 1613. Entered into orders, and became so eminent a preacher, that Archbishop Laud procured him a Fellowship at All Souls' College, Oxford. He was also appointed chaplain to that prelate, and rector of Uppingham, in Rutlandshire. In 1642 he received the degree of doctor of divinity from Charles I., whose chaplain he was, and to whose cause he adhered. After the defeat of the Royalists, he retired to Caernarthenshire, where he taught a school for a livelihood. He afterwards went with Lord Conway to Ireland, where he wrote his *Cases of Conscience*. Charles II., at his restoration, preferred T. to the bishopric of Down and Connor. In the same year he became privy councillor and Vice-chancellor of Trinity College, Dublin. Bishop Heber thinks that J. T. was removed to a distance from court principally because he had been married to a natural daughter of Charles I., which circumstance might have given the exemplary bishop a plausible pretence for speaking plainly to the king upon many parts of his conduct. Bishop T. wrote, among other eloquent works, *The Great Exemplar, or the Life and Death of Jesus Christ*; *Holy Living and Dying*; and several sermons and controversial and pious treatises. D. 1667. Bishop T. was the advocate of toleration, of freedom of thought, of charity, and of practical religion as of more worth than dogmatic strictness. By general consent T. assumes

Zachary Taylor

1784-1850

the highest rank among the writers of sermons of the English Church.

Taylor, ZACHARY, the 12th President of the U. States, was b. in Orange co., Va., in 1784. His father, Col. Richard Taylor, the representative of an old Virginian stock, removing to Kentucky while his son was yet an infant, young Zack grew up to manhood in that State, and at the age of 24 was appointed first lieutenant in the 7th U. S. infantry; becoming a captain in 1810. T., two years later, was placed in command of Fort Harrison, a frontier-post on the Wabash River, which he successfully defended against a large force of hostile Indians. For his services on this occasion, T. was made major by brevet, being the first instance in the service of this species of promotion. In 1814, he commanded an expedition against the British and their Indian allies on Rock River, where he fought an indecisive action against a superior force of the enemy. In 1832, he was promoted to the grade of colonel, and in the following year served in the Black Hawk war. In 1837, T. defeated the Seminoles in the desperate battle of Okechobee, which terminated the war. Promoted for this affair to the rank of brig.-general by brevet, he, in 1840, was appointed to the command of the army of the North-west. Six years later, he was sent at the head of a force of about 4,000 men, to protect Texas from Mexican invasion, and on the 5th of May, 1846, defeated, at Palo Alto, a Mexican force of 6,000 men commanded by General Arista. The latter retreated to Resaca de la Palma, where they assumed a position which was taken on the following day by T., who, after a severe battle, drove the Mexicans across the Rio Grande. The fall of Matamoros followed, and on the 19th of Sept., T. attacked Monterey, defended by a strong Mexican force, which capitulated after three days obstinate fighting. On the 22d of February, Taylor defeated Santa-Anna in a hard-fought battle at Buena Vista. He received from his soldiers the familiar name of "Rough and Ready." Elected President of the U. States in 1848, T. entered on the duties of his high office in March, 1849, found a democratic majority in Congress, with a small but vigorous free-soil party holding the balance of power, while the most exciting questions connected with the extension of slavery, as the admission of California, the settlement of the boundaries of Texas, the organization of the newly-acquired Mexican territories, &c., were agitating the country, and threatening a disruption, postponed by the compromises introduced by Mr. Clay. Worn down by the unaccustomed turmoil of politics, the good-natured old soldier was attacked with bilious colic the 4th of July, 1850, and b. on the 9th. During his administration he fully maintained the popularity which had led to his election, and T. is still remembered as one of the most esteemed of those who have filled the chief executive office in the country.

Fig. 2474.—GEN. TAYLOR.

Taylor, in *Florida*, a N.W. co., bordering on the Gulf of Mexico; area, 1,079 sq. m. It is drained by the Aucilla river. Surface, level; soil, sandy. Cap. Perry. Pop. (1897) 3,124.

Taylor, in *Georgia*, a central co.; area, 356 sq. m. Cap. Butler. Pop. (1897) 9,120.

Taylor, in *Illinois*, a post-village and township of Ogle co., 172 m. N.E. of Springfield.

Taylor, in *Indiana*, a township of Greene county.—A township of Harrison county.—A township of Howard county.—A township of Owen county.

Taylor, in *Iowa*, a S.S.W. co., bordering on Missouri; area, 540 sq. m. Rivers, Platte and One-Hundred-and-Two. Surface, undulating; soil, fertile. Cap. Bedford. Pop. (1895) 17,347.

—A township of Allomakee county.

—A township of Appanoose county.

—A township of Benton county.

—A township of Dubuque county.

—A post-office of Pottawattamie co.

Taylor, in *Kentucky*, a S. central county, drained by several affluents of Green river. Surface, undulating; soil, fertile. Cap. Campbellsville. Pop. (1897) 10,250.

Taylor, in *Louisiana*, a post-village of Bienville parish.

Taylor, in *Maryland*, a post-village of Harford co.

Taylor, in *Michigan*, a township of Wayne co.

Taylor, in *Missouri*, a township of Greene co.

—A post-village of Marion co.

Taylor, in *Nebraska*, a post-village, cap. of Loup co.

Taylor, in *New York*, a post-township of Cortland co.

Taylor, in *Ohio*, a former township of Hardin co.

—A township of Union county.

Taylor, in *Pennsylvania*, a township of Blair county.—A township of Centre county.—A township of Fulton county.—A township of Lawrence county.

Taylor, in *Texas*, a N.W. central co.; area, 900 sq. m. It is drained by the Clear Fork of Brazos river. Cap. Abilene. Pop. (1897) 7,350.

Taylor, in *West Virginia*, a N. co.; area, 177 sq. m. Rivers, Tygart's Valley river, and Sandy and Elk creeks. Surface, hilly; soil, generally fertile. Min. Iron and bituminous coal. Cap. Grafton. Pop. (1897) 14,170.

Taylor Creek, in *Ohio*, a township of Hardin co.

Taylor's Falls, in *Minnesota*, a post-village of Chisago co., 30 m. N. E. of Stillwater.

Taylor'sville, in *California*, a post-village of Plumas co., 12 m. N. E. of Quincy.

Taylorville, in *Illinois*, a city, cap. of Christian co., 25 m. S. E. of Springfield. Pop. (1897) 3,130.

Taylorville, in *Indiana*, a post-village of Bartholomew co., 7 m. N. of Columbus.

Taylorville, in *Iowa*, a post-village of Fayette co., abt. 66 m. W.N.W. of Dubuque.

Taylorville, in *Kentucky*, a post-village, cap. of Spencer co., 30 m. S.W. of Frankfort.

Taylorville, in *Maryland*, a village of Anne Arundel co., 5 m. N.W. of Annapolis.

Taylorville, in *N. Carolina*, a post-village, cap. of Alexander co., 160 m. W. of Raleigh.

Taylorville, in *New York*, a post-village of Ontario co.

Taylorville, in *Ohio*, a post-village of Muskingum co., 9 m. S. of Zanesville.

Taylorville, in *Pennsylvania*, a post-village of Bucks co., 116 m. E. of Harrisburg.—A village of Indiana co., abt. 30 m. N.W. of Altoona.

Taylorville, in *Tennessee*, a village, former cap. of Johnson co., 350 m. N.E. of Nashville.

Taylorville, in *Texas*, a village, former cap. of Wise co., about 100 m. W.S.W. of Bonham.

Taylorville, in *Virginia*, a post-village of Hanover co., 20 m. N. of Richmond.

Taylorville, or **Patrick Court-House**, in *Virginia*, the former name of a post-village of Patrick co., 226 m. S.W. of Richmond.

Tay'mouth, in *Michigan*, a post-township of Saginaw co., about 12 m. S. of Saginaw City.

Tazewell, in *Georgia*, a post-village of Marion co., about 35 m. E. of Columbus.

Tazewell, in *Illinois*, a N.W. central co.; area, 650 sq. m. It is drained by the Mackinaw creek. Surface, level; soil, fertile. Cap. Pekin. Pop. (1897) 31,890.

Tazewell, in *Tennessee*, a post-village, cap. of Claiborne co., 250 m. N.E. of Nashville.

Tazewell, in *Virginia*, a S.W. co., bordering on W. Virginia; area, 500 sq. m. Rivers, Bluestone and Clinch rivers, the Tug Fork of Sandy River, and Wolf Creek. Surface, mountainous; soil, fertile in the valleys. Min. Iron, stone coal, and limestone. Cap. Tazewell. Pop. (1897) 21,764.

Tazza, (lat'sa.) n. [It.] (*Fine Arts.*) A flat cup or shallow vase, having a foot and handles; as, a *tazza* of malachite.

Tehad, (Lake), a lake of Africa, in Soudan; Lat. bet. 12° 30' and 14° 30' N., Lon. bet. 14° and 17° E. Its height above the sea is estimated at 850 feet, and its mean depth from 8 to 15. Ext. 200 m. long, with a breadth of 140.

Tehad'da, a river of Guinea, flows W., and joins the Quorra, abt. 40 m. N. of Iddah. It is supposed to be the principal drain of the lake Tehad.

Tchao-choo-foo, a city of China, prov. of Kwang-tong, on the Hon-kiang, and near its entrance into the China Sea.

Tche-kiang, a province of China. See CHINA.

Tchernya, a small stream of Crimea, flowing N.W. into the head of the principal bay on which Sebastopol is situated. On its banks, May 16, 1855, the Russians under Gen. Liprandi were defeated by the French and Italians under Marshal Pelissier and General Della Marmora.

Tchernigov, a town of European Russia, cap. of a S.W. govt. of same name, on the Desna, 80 m. N.N.E. from Kiev. It is one of the oldest towns of the Ukraine, and formerly held by the Tartars and Poles. Pop. 13,000.

Tebinghiz Khan, see GENGHIS KHAN.

Tchoo'-tchoo', a city of China, prov. of Tche-kiang, on the Toon, 80 m. from the coast.

Tea, (tē.) n. [Fr. *thé*; Chin. *tshā*.] (*Bol. and Agric.*) The name given to the dried leaves of one or two Chinese species of the genus *Thea*, order *Ternströmiaceae*, differing from the genus *Camellia* by its not deciduous calyx, and by the dissepiments remaining connected in the centre of the capsule after it opens. The two Linnean species *T. bohea* and *T. viridis*, and even the Assam Tea (*T. assamensis*), are now generally regarded as varieties of *T. sinensis*, the Tea shrub or Chinese Tea (Fig. 2475), which is 20-30 feet high, but in a state of cultivation only 5-6 feet high, with numerous branches and lanceolate leaves, which are 2-6 inches long. The flowers grow singly, or two or three together in the axils of the leaves; they

are rather longer, white, and fragrant, with 5-parted calyx, 6-9 petals, and many stamens. This plant thrives best in the cooler parts of the tropical zone, but grows also in the temperate zone, and is cultivated as far N. as 45°. When one year old they are planted out, and by cropping the main shoot for the first year are kept down to a height of about three feet, and made to spread. They are placed in rows, 3 or 4 feet apart, and resemble gooseberry bushes; in the fourth and fifth years the leaves are gathered by women and converted into tea. The youngest and earliest leaves are the best and highest flavored; the second and third gatherings are more bitter and woody. The leaves, when freshly gathered, are neither decidedly astringent, aromatic, nor bitter; the pleasant taste and odor for which they are afterwards remarkable are developed by the process of drying. Another interesting chemical fact is, that different qualities of tea are prepared from the same leaves, according to the way in which they are treated in the drying; either green or black tea, though these varieties are so unlike each other, may be prepared from the same leaves, gathered at the same time, and under similar circumstances. Though possessing medicinal properties, tea has never, so to speak, properly been employed in the treatment of disease; though it has been frequently given in an experimental manner in diseases affecting the nervous system. It acts on the human body as a stimulant, a sedative, and as an astringent. On some constitutions, especially when taken strong, it acts directly on the heart through the nervous system, lowering the circulation, and producing all the effects of the foxglove or digitalis, on which account it should be very sparingly used by persons so influenced. Green tea exercises the same effect, but far more powerfully than black, and many persons are unable to take it except at the risk of nausea, fainting, palpitation of the heart, and much constitutional disturbance. To those whose avocations cause them to trench on the hours of sleep for labor, either physical or mental, tea is the best beverage they can possibly take to insure watchful vigilance. Tea contains a large amount of tannin, and in consequence is often used as a gargle in certain conditions of a sore throat, and also as an injection for the urethra in cases of gleet. Excess in the use of either tea or coffee is a fruitful source of indigestion, headache, lowness of spirits, and faintness. The well-known power of tea in driving away drowsiness is owing in the first instance to its influence on the heart.—For the chemical properties of tea, see CAFFEINE. The tea-plant, supposed to be indigenous in China, according to their writers, was first discovered in the 8th century. An impost was levied on tea by the Emperor Te-Tsang, in 781. Japanese writers maintain that it was brought there from China in the 9th century. The culture of the tea-plant was introduced into Brazil in 1815, and it was discovered in India in 1823. (See ASSAM.) It was introduced into Europe by the Dutch in 1591, and was used in England, on rare occasions, some years prior to 1657, and sold at from \$30 to \$50 the pound. The first American ship sailed for China in 1784; the following year two vessels were dispatched, and brought back home 1,181,860 pounds. Up to 1845 the trade in tea was transacted almost exclusively at Canton. In 1842, Shanghai, Ningpoo, Foo-chow and Amoy were opened to foreigners by the treaty of Nanking, and the China tea-trade now is mainly made with Shanghai, Foo-chow and Amoy. At Canton scented teas are still bought for England, but almost never come to this country. The principal kinds of scented teas are Pecoos and Capors. Towchong is the only tea of this class used in the U. S. In 1859, the first shipment of tea from Japan was made to England. The Japanese leaf was first brought to this country in 1860. The first direct cargo of tea from Japan, via San Francisco and the Pacific railroad, was brought from Yokohama, in 1868, in the American barque "Benefactress," in the remarkably short time of twenty-three days. There is no impediment to the cultivation of tea in the U. States, so far as depends upon adaptation of soil and climate; and it has been proved that there is a large extent of land in this country well adapted to the production of tea, lying between the parallels of 29° 35' N. Lat., and which embraces N. and S. Carolina, Georgia, Alabama, Mississippi, and also portions of California. It has been proved that the tea-plant grows well and produces exceptionally good teas under high cultivation in the Southern States. Yet the climate does not favor tea culture, at least in the Southeastern States, the variations of temperature being great and the rainfall hardly sufficient at the proper season. The lack of cheap labor is also an unfavorable element of the situation; therefore, tea-culture may not be successfully conducted in the U. S., though it may in the future pay to raise it for those who want the best qualities, which will not bear ocean transportation.—The varieties of tea are very numerous. The following are those found in our shops:—GREEN TEAS. Chinese: (1) Gunpowder sorts—viz., Shanghai, Ping-suey or Pin'shead, Moyune, Imperial Moyune, and Canton; (2) Hyson sorts—viz., Shanghai, Shanghai young, Moyune, Moyune young, Canton young and Twankay or Imperial Hyson. Japanese: Gunpowder and Young Hyson. Java: Gunpowder.—BLACK TEAS. Chinese: (1) Congo sorts—viz., Canton, Foo-chow-foo, Hung-muey, Oopack, Kaison and Oonam; (2) Pekoe sorts—viz., Plain Orange, Foo-chow, Scented Orange and Flowery Pekoe, Oolong and Souchong. Assam: Congou, Orange Pekoe and Souchong. Java: Congou and Imperial. The latter is made into balls the size of a pea, and is rare.—G. B. consumes annually abt. 60,000,000 lbs. The imports into U. S. for 1880 were 60,194,673 lbs., value \$14,577,618; for 1890, 93,998,372 lbs.,

Fig. 2475.
CHINESE TEA, (*Thea sinensis*.)

worth \$12,704,440, showing a fall in price.—The name *tea* is also applied to a decoction or infusion of the dried leaves of the tea-plant in boiling water; as, to drink *tea*.—Hence, any infusion or decoction, as of the dried leaves of certain plants; as, chamomile *tea*.—Also, the expressed essence of certain animal juices, prepared in the form of a decoction, as for invalids; as, beef *tea*.—The evening meal, at which tea is usually served; as, to invite a party of friends to *tea*, i. e., to partake of the evening meal, or supper.

Tea, *v. n.* To drink tea. (Rare and colloquial.)

Tea-board, Tea-tray, *n.* A board or tray to put tea furniture on.

Tea-caddy, *n.* A small ornamental case or box for holding tea to supply a tea-pot.

Tea-cake, *n.* A light kind of cake, toasted, buttered, and eaten hot at the tea-table.

Teach, *v. a.* (*imp.* and *pp.* TAUGHT) (*tawt.*) [*A. S. tæcan.*] To exhibit so as to impress on the mind of; to communicate to another, as the knowledge of that of which he was before ignorant; to give intelligence respecting; to tell; to impart the knowledge of; as, "Men . . . learn in suffering what they *teach* in song." (*Shelley*).—To deliver, as any doctrine, art, principles, or words for instruction; to inform; to instruct; to conduct through a course of studies; to direct as an instructor; as, to *teach* a school.—To accustom; to make familiar with; to inform or admonish; to give previous notice to; to suggest to the mind; as, he *taught* himself to act with prudence.

—*v. n.* To carry out the business of a tutor or preceptor; to practise imparting instruction; as, "History is Philosophy *teaching* by examples."—*Bolingbroke*.

Teachable, *a.* That may be taught; docile; apt to learn.

Teachableness, *n.* Quality of being teachable.

Teache, *n.* [*Gael. teasaich.*] The last of the series of boilers used in the manufacture of sugar.

Teacher, *n.* An instructor; a preceptor; one who teaches or imparts instruction; a tutor.—One who instructs others in matters of religion; a preacher; a minister of a religious denomination;—also, one who preaches without regular ordination; as, a *teacher* of the gospel.

Tea-chest, *n.* A small, square wooden case, usually lined with sheet-lead or tin, in which tea is imported from China.

Teaching, *n.* Instruction; act or business of instructing.

Tea-cupful, *n.* As much as a tea-cup can hold.

Tea-garden, *n.* A public garden where refreshments are served; a place for al-fresco entertainment. (*Engl.*)

Teague, (*teeg.*) *n.* [*W. taeg, a clown.*] An Irish peasant;—used in contempt.

Teak, *n.* [*tekku*, its name in Malabar.] The name given to two kinds of hard and durable timber. East-Indian *T.*, which is extensively employed for ship-building, is the wood of *Tectona grandis*, a tree belonging to the order *Verbenaceæ*. African *T.* is the produce of *Oleifolia africana*, one of the *Euphorbiaceæ*.

Teal, (*tél.*) *n.* [*Fr. tarulle.*] (*Zoöl.*) The common name of the small river-ducks comprising the genera *Nettion* and *Querquedula*, family *Anatinae*. They have a very slightly lobed hind-toe, narrow bill, as long as the head, the sides nearly parallel, or widening a little at the end, the wings pointed, the tail moderately large and wedge-shaped. There are about 20 species distributed all over the globe. Among the N. American species are the Green-winged Teal, *Nettion Carolinensis*, 14 inches long, and 22 to 24 inches in alary extent, distinguished by its broad, rich, green speculum; and the Blue-winged Teal, *Querquedula discors*, somewhat larger, and which, says Wilson, "is the first of its tribe that returns to us in the autumn from its breeding place in the N. They are usually seen early in Sept., along the shores of the Delaware, where they sit on the mud close to the edge of the water, so crowded together that the gunners often kill great numbers at a single discharge." These two species afford a delicious flesh, and the Green-winged, according to Audubon, is much superior to the Canvas-back.

Fig. 2476. — GREEN-WINGED TEAL. (*Nettion Carolinensis*.)

Team, *n.* [*A. S. team*, offspring.] A succession of anything, as animals, following in a row or in order; as, a team of swans, a team of players.—Specifically, two or more horses, oxen, or other beasts, harnessed together for drawing, as to a carriage, wagon, sleigh, and the like; as, he drives a crack, four-in-hand team.

Teamster, *n.* The driver of a team; a coachman; a wagoner.

Team-work, (*-work.*) *n.* Work performed by a team.

Teano, (*tai-a-no.*) *n.* A town of S. Italy, 12 m. from Capua; pop. 8,746.

Tear, (*teer.*) *n.* [*A. S. taare*; *Lat. lacryma.*] (*Physiol.*) A drop of the limpid fluid secreted by the lacrimal glands, and flowing on the surface of the eyes. Tears serve to prevent the friction of the eyelids on the eyes, to keep the cornea moist, and to wash away any extraneous bodies that may have fallen into the eye. See EYE. (TEAR is occasionally employed in the formation of self-explanatory compounds; as, *tear-drop*, *tear-stained*, &c.)

Tear, (*tair.*) *v. a.* (*imp.* TORE; *pp.* TORN.) To pull in pieces; to rend; to lacerate; to separate by violence or pulling; as, to *tear* one's clothes, to *tear* the skin or

flesh.—To wound; to break; to form fissures by any violence; to rend; to shatter; to divide by violent means; as, a nation *torn* by intestine strife.—To pull with violence; as, to *tear* one's hair, a tree *torn* by storms, &c.—To move or agitate violently; as, "Torn ocean's roar."—*Byron*.

To *tear from*, to separate by violence; to take away by sudden force; as, a husband *torn* from his wife by conscription.—To *tear up*, to remove from a fixed state or position by force or violence; to rip or root up; as, to *tear up* a flooring, passion frequently *tears up* modesty.—*v. n.* To move and act with turbulent violence; to rush with violence, as a mad bull; hence, to rave; to rage; to boil over with passion or fury.

—*a.* A rent; a fissure; a laceration.

Tearer, (*tair'er.*) *n.* One who tears or rends anything.—One who raves or rages with uncontrollable violence or passion.

Tearful, *a.* Abounding with, or adapted to excite, tears; shedding tears; weeping; as, *tearful* eyes.

Tearless, *a.* Shedding no tears; without tears; hence, not expressing feeling; as, profound grief is sometimes *tearless*.

Tease, (*tēz.*) *v. a.* [*A. S. tæsan*, to pluck, to gather.] To comb or card, as wool or flax.—To scratch, as cloth in dressing, for the purpose of raising a nap.—To vex by petty requests, or by untimely jests or railery; to worry with importunity or impertinence; to annoy; to plague; to torment; to chagrin.

Teasel, (*tē'zel.*) *n.* [*A. S. tæsel*, to pluck, to gather.] (*Bot.*) See *DIPSACACEÆ*.

—The burr of the *Fuller's* teasel, *Dipsacus fullonum*.—Any contrivance that acts as a substitute for teasels in dressing cloth.

—*v. a.* To raise a nap, as on cloth, by means of teasels.

Teaseler, (*tē'zel-er.*) *n.* One who raises a nap on cloth by means of teasels.

Teasel-frame, *n.* A frame or set of iron bars in which teasel beads are fixed for carding woollen cloth.

Teaser, (*tēz'er.*) *n.* One who teases.

Tea-service, *n.* A complete set of things for the tea-table.

Tea-spoon, *n.* A small spoon belonging to a tea-service.

Tea-spoonful, *n.*; *pl.* TEA-SPOONFULS. As much as will fill a tea-spoon.

Teat, (*teet*; *vulg.* pron. *tīt.*) *n.* [*A. S. tīt*, *titt*; *Sp. teta*; *Fr. tette*, *teton*, from *Gr. titthē*—*thāō*, to suckle.] The pap or nipple of a woman's breast; also, the dug in female mammalia.

(*Mach.*) A small nozzle resembling a teat.

Tea-nru, *n.* A vase-shaped vessel for supplying hot water for tea at table.

Teaze-hole, *n.* (*Glass-making.*) The opening in the furnaces through which fuel is introduced.

Teazer, *n.* [From *Fr. tiser*, to feed a fire.] In glass-works, the stoker or fireman of a furnace.

Tebeth, *n.* [*Heb.*] (*Chron.*) Among the Jews, the tenth month of the ecclesiastical year, and fourth of the civil year; beginning with the new moon in December, and ending with the new moon in January.

Tèche, (*tesh.*) a bayou of Louisiana, commences in St. Landry parish, near Opelousas, and joins the Atchafalaya Bayou, near the S.E. of Lake Chetimaches, after a S.E. course of 200 m., navigable for steamboats during high water.

Tech'ily, Tetch'ily, *adv.* In a techy manner.

Tech'iness, Tetch'iness, *n.* State or quality of being techy.

Technic, (*tēk'nik.*) **Technical**, (*tēk'nik'l.*) *a.* [*Gr. technikos*—*technē*, art.] Pertaining or relating to art or the arts; noting a word, term, or phrase exclusively used, or used in a peculiar sense, in any art or science; as, *technical* language.—Belonging, or especially appropriate to any particular art, science, or business; as, nautical terms are, for the most part, purely *technical*.

Technicality, Technicalness, *n.* State or quality of being technical.

Tech'nically, *a.* In a technical manner.

Technicals, (*tēk'nik'alz.*) *n. pl.* Technical terms; those things which have reference to the practical application of an art, science, profession, &c.

Tech'nicist, *n.* One skilled in the practical arts.

Technicology, *n.* Same as TECHNOLOGY, *q. v.*

Tech'nics, *n. sing.* or *pl.* The doctrine of arts in general; such branches of learning as respect the arts; plurally, technicals.

Technologic, (*tēk-no-lōj'ik.*) **Technological**, *a.* [*Fr. technologique.*] Pertaining or having reference to technology; relating to the arts.

Technologist, *n.* One who discourses or treats of arts, or of the terms of art.

Technol'ogy, *n.* [*Gr. technē*, art, and *logos*, discourse.] The science which treats of the arts, more particularly the mechanical. It is properly the science of the arts. "Its object is not itself, i. e., the practice of art, but the principles which guide or underlie art, and by conscious or unconscious obedience to which the artist secures his ends." In its ordinary acceptation, however, it includes only the utilitarian arts, and in fact only some of these. Painting, sculpture, music, poetry, do not come within its sphere. It deals only with the industrial or necessary arts, or according to the division generally adopted, to the *mechanical* and *chemical* arts, according as they relate mainly to physics or to chemistry.

Tech'y, Tetch'y, *a.* Same as TOUCHY, *q. v.*

Teco'ma, *n.* (*Bot.*) A genus of the order *Bignoniaceæ*, comprising trees or shrubs which are often climbing, and distinguished by their opposite, digitate, or unequally pinnate leaves.

Tectibranch'iata, *n. pl.* [*Lat. tēgo*, I cover, and *branchia*, gills.] (*Zoöl.*) A name given by Cuvier to an order of hermaphrodite Gasteropods, comprehending those species in which the gills are covered by a process of the mantle, containing a shell, or enveloped in a reflected margin of the foot.

Tecto'ma, *n.* (*Bot.*) A genus of plants, order *Verbenaceæ*. *T. grandis*, the Teak, or Indian Oak, is an enormous tree, with deciduous leaves, covered with rough points. It inhabits the forests of the mountainous parts of Malabar, Pegu, and other districts in the E. Indies. Its timber abounds in particles of silex, and has no rival in Asia for durability. With much of the appearance of coarse mahogany, it is lighter and very strong. For ship-building it is perhaps the best in the world.

Tecton'ic, *a.* [*Gr. tēktonikos*—*technē*, an art.] Pertaining or having reference to building or construction.

Tectrices, (*tēk-tri'sēs.*) *n. pl.* [From *Lat. tēgo*, I cover.] (*Zoöl.*) The name of the feathers which cover the quill-feathers and other parts of the wing.

Tecum'seh, a chief of the Indian tribe of Shawnees, B. on the banks of the Scioto River, near Chillicothe, Ohio, abt. 1770. About 1804, he formed, in conjunction with his brother Elskwatawa, called the "Prophet," a project to unite all the Western Indians in a defensive alliance against the whites. They had considerable success, and had already gathered around them several hundred warriors, when their plan was ruined by the battle of Tippecanoe, Nov. 7, 1811, in which the Indians were defeated. *T.* then made an alliance with the English, received the rank of brigadier-general, commanded all the Indians who cooperated with the English in the campaigns of 1812-13, and was present at every important action previous to that of the Thames, in which, seeing the Indians driven back, *T.* rushed forward where the American fire was thickest, and fell, Oct. 5, 1813.

Tecum'seh, in Kansas, a post-village and township of Shawnee co., on the Kansas River, abt. 6 m. E. of Topeka.

Tecumseh, in Michigan, a post-village and township of Lenawee co., 10 m. N.E. of Adrian.

Tecumseh, in Nebraska, a prosperous city, cap. of Johnson co., on the Chicago, Bur. & Quincy R.R., 48 m. S. E. of Lincoln; is in the midst of a fine agricultural region and has some manufactures. Pop. (1897) 2,950.

Ted, *v. a.* (*imp.* and *pp.* TEDDED.) [*W. teddw*, from *tedd*, to spread.] To turn, as new-mown hay from the swath, and scatter it for drying;—mostly used in the past participle; as, *tedded* grass.

Ted'der, *n.* and *v. a.* See TETHER.

Te De'mm, *n.* [*Lat.*] (*Mus.*) The name given to a celebrated hymn, from the first words of the original Latin, *Te Deum laudamus*, Thee, O God, we praise. It has been ascribed to St. Ambrose and St. Augustine; but the more probable opinion seems to be that it was composed by Nicetus, bishop of Tiers, in Gaul, who flourished about 535, and is said to have composed it for the use of the Gallican church.

—Hence, (*Ecol.*) a religious service of thanksgiving, in which the singing of the hymn *Te Deum laudamus* forms a leading feature.

Tedge, (*tēj.*) *n.* (*Founding.*) Same as INGATE, *q. v.*

Tedious, (*tē'di-ūs*, or *tēd'yus.*) *a.* [*Lat. tediosus.*] Tiresome; wearisome; irksome or fatiguing from continuance, prolixity, or slowness which causes prolixity; involving tediousness; boring; as, a *tedious* task, a *tedious* person.—Slow; tardy; dilatory; sluggish; as, a *tedious* course.

Tediously, *adv.* In a tedious manner.

Tediousness, *n.* State or quality of being tedious; wearisome by length of continuance, or by prolixity; tiresomeness; slowness that wearies; boredom; as, the *tediousness* of a humdrum discourse.

Tedium, *n.* [*Lat. tedium.*] Tiresomeness; wearisomeness.

Ted'si, a town of Morocco, Africa, in the prov. of Soos, 25 m. from Taradant; pop. 15,000.

Tee, in Ohio, a township of Carroll co.; pop. abt. 1,700.

Teel-seed, *n.* See SESAMUM.

Teem, *v. n.* [*A. S. tyman*, to beget, *team*, progeny.] To bring forth, as an animal; to bear; to produce; to yield fruit, as a plant.—To conceive; to be pregnant; to engender young; as, a *teeming* womb.—To be full; to be charged, as a breeding animal; to be prolific; as, the earth *teems* with natural riches.

—*v. a.* To produce; to yield; to bring forth; as, to *teem* a new idea.—To pour out; as, to *teem* a cup of tea.

Teem'er, *n.* One who, or that which, teems.

Teem'ful, *a.* Pregnant; prolific.—Brimful.

Teens, *n. pl.* Those years of one's age which have the termination *teen*, beginning with thirteen and ending with nineteen; as, a miss in her *teens*.

Tees, a river of England, running between the cos. of York and Durham, and after a course of 90 m., joining the North Sea by an æstuary, 10 m. from Stockton.

Tees'ta, a river of Hindostan, rising in Thibet, and after a course of 300 m., joining the Ganges 40 m. from Dacca.

Tee'ter, *v. n.* or *a.* [From *Icel. titra*, to tremble.] To seesaw; to titter. (U. S.)

Teeth, *n. pl.* of TOOTH, *q. v.*

—*v. n.* [From the noun.] To breed teeth; as, the child is *teething*.

Teething, *n.* See DENTITION.

Teeto'tal, *a.* [Formed by reduplicating, for the sake of emphasis, the initial letter of the adjective *total*.] Entire; whole; total; utter; as, a *teetotal* abstainer from intoxicating drinks. (Colloq.)

Teeto'taller, *n.* One pledged to entire abstinence from intoxicating liquors; a reprobate. (Used colloq.)

Teeto'talism, (*-izm.*) *n.* The principle or practice of

entire abstinence from alcoholic liquors; rigid temperance. (Colloq.)

Tecto'tally, *adv.* Wholly; entirely; totally. (Colloq. and vulgar.)

Tecto'tum, To'tum, *n.* A child's plaything that is spun round after the manner of a top; as, the gyrations of a *tectotum*.

Teffe, (*tef'fa*), a river of Brazil, flows into the Amazons near Egas, after a N.E. course of 500 m.

Teflis, or **Tiflis**, a city of W. Asia, the cap. of Georgia, and of all the Caucasian and Transcaucasian prov. of Russia, on the Kur, 280 m. E. by N. of Trebizond; Lat. 41° 30' 30" N., Lon. 45° 1' 30" E. It is the great emporium for all the trade between Russia, Turkey, and Persia. *Manuf.* Carpets, shawls, and silks. *Pop.* 60,937, of which the majority are Armenians, with some Mussulman families.

Tefsa, or **Tefza**, a town of Morocco, Africa, the cap. of the prov. Tedlar; *pop.* 11,000.

Teg'men, *n.*; *pl.* TEGMENA. [Lat.] An integument or covering.

Tegular, (*-tēg'u-lar*), *a.* [Lat. *tegula*, a tile.] Pertaining or relating to tiles.

Tegularly, *adv.* In a tegular manner.

Tegument, *n.* [Fr.; Lat. *tegumentum*.] A covering or integument.

(*Anat.*) The skin or general covering of the body.

(*Zoöl.*) The covering of the wings of orthopterous or straight-winged insects.

Tegumentary, *a.* Pertaining or having reference to teguments.

Telha'ma, two maritime plains of Arabia, one extending along the W. coast from Ras-Mohammed to Djeddah, a distance of 550 m.; the other from Batna to Bab-el-Mandeb, with a width of from 20 to 40 m.

Telhu'ma, in California, a N. co.; *area*, 2,988 sq. m. *Rivers.* Sacramento river, and Antelope, Battle, Beaver, Cottonwood, Deer, Elder, and Rock creeks. *Surface*, diversified; *soil*, fertile in the valleys. *Cap.* Red Bluff. *Pop.* (1897) 10,650.

—A post-village and township of the above co.

Te-hee, *n.* A titter; a giggle.

—*v. n.* To laugh in a silly manner; to giggle; to titter.

Teheran, or **TEHRAN**, (*te-ran'* or *te-ra-un'*) the capital city of Persia, 210 m. from Ispahan, and 70 from the Caspian Sea; Lat. 35° 40' N., Lon. 50° 52' E. It is about 5 m. in circumference, surrounded by a strong wall, flanked by innumerable towers and a broad dry ditch. The Persian monarchs make it their residence, and it has many well-furnished shops and bazaars. *T.* has greatly improved within the last quarter of a cent.; the new parts of the city have clean, broad streets and compare, in this respect, with most European cities. *Manuf.* Carpets and iron goods.

Tehuacan, (*ta-wa-kan'*), in Mexico, a town of La Puebla, 65 m. S.E. of La Puebla City; *pop.* abt. 14,000.

Tehuantepec, (*tai-wan'tai-pek*), a town, river, isthmus, and gulf of Mexico. The town, which is the capital of a dept. of the same name in the prov. of Oajaca, is situated on the River *T.*, 10 m. above its mouth in the Pacific. The town has manufactures of salt and cotton fabrics, fisheries of pearl, and a mollusc that yields a purple dye, and has a *pop.* of 16,000. The river, which runs in the middle of the prov. of Oajaca, flows E.S.E., and, after a course of 170 m., and receiving several streams, falls into the Pacific near Ventosas. The isthmus of *T.* extends from the Bay of Guasacualco in the Gulf of Mexico in the E. to the Gulf of Tehuantepec in the Pacific in the W., having an extreme length between the two oceans of 140 m. The number of streams that flow across the isthmus, and the moderate height of the Cordillera range in this part, have long since been thought to render the isthmus the most advantageous situation for the cutting through of a canal to connect the two oceans, and in 1869 a company of American capitalists was formed for the study and undertaking of a railway and canal across that isthmus. The Gulf of *T.* is an indentation of the Pacific Ocean on the W. coast of Mexico and Guatemala, and extends from Lon. 92° to 97° E., with a breadth near the centre of 70 m.

Teignmouth, (*tain'mouth*), a seaport-town of England, in Devonshire, at the mouth of the river Teign, 13 m. from Exeter; *pop.* 5,800.

Teil, (*til*), *n.* [Lat. *tilia*.] (*Bot.*) See **TILIA**.

Teka'mah, or **TEKAMA**, in Nebraska, a post-village, cap. of Burr co., abt. 42 m. N.W. of Omaha City.

Tekon'sha, in Michigan, a post-village and township of Calhoun co., on the St. Joseph River, abt. 14 m. S. of Marshall.

Telamones, *n. pl.* [Gr. *telamon*, a bearer.] (*Arch.*) See **ATLANTES**.

Tel'egram, *n.* [Gr. *tēle*, afar off, and *gramma*, a writing.] Any piece of intelligence conveyed by an electric telegraph; a telegraphic despatch. (This is a modern word, introduced with a view to distinguish between the intelligence conveyed, and the apparatus which conveys it; the word *telegraph* being confined to the latter, and *telegram* to the former.)

Telegraphic, *a.* Pertaining or having reference to a telegram.

Telegraph, (*tel'e-graf*), *n.* [Gr. *tēle*, afar off; *graphein*, to write.] The art of conveying intelligence to a distance by means of certain signals, previously agreed upon between the parties. Telegraphs may be divided into those worked by *mechanism*, and those worked by *electricity*. Long before the *T.* attained its present perfection by the introduction of voltaic electricity as its motive power, individuals and nations were in the habit of communicating information of battles, defeats, and victories by means of beacon-fires. This continued in use from the time of the ancient Greeks and Romans down

to about the end of the last century, when a French engineer, M. Chappé, invented, or rather improved, the *semaphore T.*, which was at once taken up by the French government. They erected a series of *T.* stations between Paris and Lille in 1794, and two minutes only were occupied in communicating intelligence from one city to the other. The aerial *T.* now spread, and before many years every country in Europe had its system of *T.* between its capital and the important ports on its seaboard. The idea of utilizing electrical force for the transmission of signals to a distance was almost coeval with the discovery of the conductivity of the electric current, and of the exceeding velocity with which it travels. The first electric *T.* on record is that established by M. Lesage, at Geneva, in 1782. It consisted of 24 wires, insulated from each other, and communicating with pith-ball electrometers, marked with the letters of the alphabet. On sending a current of frictional electricity along any of the wires, the pith-balls diverged and indicated the letter or symbol desired. The next we hear of is that of Lomond, which consisted of only one wire and one electrometer, the signals being made by the number and variation of the divergencies. In 1794, Reizen made a *T.* in which frictional electricity was also used. The current was conveyed to the distant station by 30 insulated wires, communicating with strips of tin foil placed on glass breaks, in the form of the different letters and figures, being made so that, in the passage of the electricity, a bright spark would be seen at each break. Several other electricians constructed *T.* involving similar principles, but most of them were mere philosophical toys. It was not until the discovery of Ersted, in 1819, that a delicately suspended magnetic needle has a tendency to place itself at right angles to a conductor through which a current of voltaic electricity was passing, that the idea of the electric *T.* as now worked out began to be developed. Previous to this, in 1809, Sömmering employed voltaic electricity, and was the first who utilized that power for the transmission of signals. His plan was to lay insulated wires to the distant station, the ends of which terminated in gold, and dipped into tubes containing acidulated water. The tubes were lettered and numbered, and the signal was made visible by the escape of bubbles of gas, when the current was passed, and decomposed the acidulated water. In 1816, and the following years, Mr. Ronalds, of Hammersmith, devoted much time to the construction and perfection of the electric *T.* He put up a *T.* on his lawn, which communicated with eight miles of insulated wire, and used frictional electricity for the production of signals. He employed the ordinary electrical machine, and a pith-ball electrometer. Two clocks, going synchronously, were placed at different stations. They were of peculiar construction, and as the dials moved round, they displayed the letters of the alphabet in regular order. The clocks were each provided with an electrometer, the pith-balls of which diverged when the current was passed. The transmitter of the signals caused a constant current to flow through the wire and operate on the electrometers. The pith-balls therefore remained separate during the transmission of the message, collapsing as the desired letter was shown by the clock-dials, by the transmitter discharging the electricity from the wire. All that was required in the form of *T.* was that the clocks used should go synchronously only during the time the message was being transmitted, a matter which could be easily managed by a preconcerted signal between the parties before commencing operations. The first great step in advance was made by Ampère in 1820, a year after the discovery of Ersted. Its principle of action was the same as that afterwards employed by Cooke and Wheatstone in the needle *T.* Ampère's *T.* had as many needles as there were letters in the alphabet, and the needles were surrounded by cords of wire. It was consequently easy to move any needle that was required by the passage of the current. Although a number of wires and needles was required in this instrument, it was the first good needle-*T.* Some twelve years afterwards, Baron von Schilling invented two *T.*, which were modifications of Ampère's, in one of which he employed five needles, in the other a single needle only. In 1838, Gauss and Weber constructed a *T.* which worked through a mile of wire at Göttingen. The needles in this case were deflected by a current of electricity, developed by the magneto-electric machine. This *T.* was afterwards improved upon by Steinheil. By this arrangement, either sounds could be employed, or permanent marks made upon paper, passing in front of the needles. Steinheil's was the first perfect instrument invented, and came into operation in July, 1837. It was 12 m. long, and had 3 intermediate stations in circuit. In the same year, and about the same time, Prof. S. F. B. Morse exhibited in the University of New York a *T.* constructed on the same principle, which had been gradually brought to a working condition by experiments and contrivances derived by the inventor since 1832. This *T.* was first brought into practical use, May 27, 1844, between Washington and Baltimore. His system has been almost universally adopted in all parts of the world, and almost all electric telegraphs are operated on the principles first developed by him. The electro-magnetic *T.* is based upon the principle that a magnet may be endowed and deprived at will with the peculiarity of attracting iron by connecting or disconnecting it with a galvanic battery. All magnetic *T.* are based solely on this principle. It is by breaking off the magnetic circuit, which is done near the battery, that certain marks are produced by means of a style or lever, which is depressed when the current is complete. It was at first considered necessary to use a second wire

to complete the magnetic circuit. Now one wire may be used, and the earth made to perform the office of the other. In order that the depressions of the key used to make and break the electric circuit might be easily and simply translated into language, Morse invented the alphabet that bears his name, in which each letter is represented by combinations of dots and dashes. A short, quick stroke of the key makes a dot, and a slow, dwelling stroke a dash, which may be read by ear by the variation in time of the clicks of the key, or by the eye by recording on a strip of paper actual dots and dashes. In Morse's alphabet—

A dot and a dash (—) represent the letter *a*;

A dash and three dots (—...) represent the letter *b*;

Two dots, a space and a dot (.. .) represent the letter *c*;

A dash and two dots (—..) represent the letter *d*.

Other combinations form the balance of the alphabet, the figures, and punctuation points. The combinations used on the Continent of Europe are slightly different from those used in the U. S., but both agree in representing *e* with a dot and *t* with a dash, these being the letters of most frequent occurrence.

MECHANISM.—The Morse system of telegraphy involves the use of an electric battery, a Morse key as a sending instrument, a *sounder* as a receiving instrument for the ear, and a *recorder* as a receiving instrument for the eye, and a *relay* for adding to the strength of a current, and a *repeater* for automatically repeating messages which have to be sent a great distance. The Morse key is a simple lever having a finger-piece or button, which the operator or sender depresses in accordance with the Morse code. The button is normally upheld by a spring, and its depression makes a contact, closing an electric circuit, and allowing a current to flow to the sounder at the other end of the line. The coil of the sounder becomes magnetic the instant the current reaches it, and attracts the end of a lever, or armature, causing it to rise and fall in unison with the lever of the sending instrument. This armature bears a stop which strikes a miniature anvil as it makes its strokes, emitting a sharp, clicking sound, which may be read by ear by one familiar with the Morse code. For the sake of preserving a record of the messages sent, the recorder is used. This is similar in principle to the sounder, but in place of the stop and anvil an ink-wheel and

Fig. 2477.—TELEGRAPHIC SOUNDER.

1, magnet; 2, armature; 3, anvil.

advancing strip of paper are used. As the paper travels the strokes of the message are printed upon it in dots and dashes, dependent in length upon the dwell given the button of the sender or Morse key. A relay is placed in connection with a telegraphic circuit when a point has been reached where the current becomes weak, and it is necessary to introduce new batteries in the line to secure capacity for working a sounder or recorder. The relay resembles the sounder in principle, and the weak current which reaches it is used to magnetize its armature, making a contact that introduces the new and stronger current from local batteries. Where it is desired to operate more than a few hundred miles of telegraph line in one circuit, a repeater is used. This resembles the relay, but its office is to repeat the message and send it along an extension of the line, whereas the relay usually serves only to bring into use an instrument in the same office in which it is located. In other words, the repeater is a relay that works on distant instruments, and by introducing it at intervals of a few hundred miles a circuit may be extended indefinitely. In the case of the Indo-European line, direct working is common between London and Teheran, a distance of 3,800 miles, 5 repeaters being employed.

The needle system of telegraphy is essentially different from the above, and is in general use on British railways, though it has been discarded by the postal telegraph service in the United Kingdom within a few years in favor of the Morse-sounder system above described. The needle system consists in the use of a dial and magnetic needle, the latter lying normally in the direction of the current, and being deflected to the right or left by current impulses, so that a message can be deciphered by reading the deflections to one side as dots, and to the other as dashes. Telegraph lines are ordinarily erected on wooden poles spaced from 25 to 50 to the mile. The poles usually bear cross-pieces, upon the ends of which the wires are hung by insulated supports. The most common form of insulator is of glass, made to fit over a wooden support by screwing on with the hand. A turn or two of the wire about this serves to give it a point of support, without allowing direct contact. In cities, where overhead wires are objectionable, the wires are often placed underground in pipes or cables. The wire employed is most commonly

of galvanized iron. Steel would be preferred for strength, but it is not as good a conductor as iron. The different qualities of telegraph wire are known in the trade as B, BB, ExBB, &c., signifying best, double best, extra best, &c. The very best telegraph wire is bimetallic, and is restricted in use because of its cost. It has a copper core, giving great conductivity, and a steel exterior, giving the strength necessary for stringing long distances. Bichromate batteries are generally preferred for furnishing the electric current for telegraphic purposes. The Leclanché and Daniell batteries are in common use, and secondary batteries are used to a considerable extent. See GALVANIC BATTERY.

The submarine telegraph is described at ATLANTIC TELEGRAPH (*q. v.*). The receiving instrument used in ocean telegraphy is the *siphon-recorder*, the invention of Sir William Thomson (*q. v.*), now Lord Kelvin, who patented it in 1867. It consists of a siphon of glass, arranged to draw ink from a well, and deposit it in a wavy line on a moving strip of paper, producing undulations which may be interpreted by the Morse code. As now used, in improved form, this siphon is attached to a device resembling a galvanometer, having a rectangular coil, surrounding a core of soft iron, which is suspended by two parallel threads from the line-wire, so as to hang freely between the poles of two powerful electro-magnets. When a current passes, the rectangular coil is deflected to the right or left, according to the direction of the current, and swings the recording end of the siphon. Lord Kelvin also designed the automatic *curb-sender* for diminishing induction in submarine cables. This apparatus after each contact removes the residual charge in the cable by putting the line to the other battery-pole, applying an electromotive force at the sending end equal to that producing the signal. In sending by hand the end of the cable is put to one or the other pole of the battery and to earth alternately, the relative time depending on the accuracy of movement of the operator. The automatic curb-sender puts the cable to one or the other pole of the battery and then to the reverse pole for definite periods, thus charging the cable positively and negatively for each signal sent, and also providing accurate intervals. The message requires to be prepared in advance on a strip of paper, holes being punched on one edge for the dots, and on the other edge for the dashes. This paper being passed through

Fig. 3071.—MORSE TELEGRAPHIC KEY.

1, button; 2, lever; 3, spring; 4, switch; 5, 6, table-clamps.

the instrument, with a lever resting over each row of holes, contacts are made through the holes at the proper intervals. The paper strip is fed regularly by a central row of holes, and the reversal of the current is provided for during the advance between holes. The *mirror galvanometer* was used for receiving signals on the first Atlantic cable. This consisted of a very small mirror, having four exceedingly light magnets attached to its back, the whole being suspended by a silk thread within a magnetic coil. As a current was passed through the coil the suspended magnets and the mirror tended to take a position at right angles to the plane of the coil, and a vibration of the mirror was accomplished by sending the current through the coil first in one direction, then in the other. A light being conveniently placed, the mirror threw reflections to one side and the other, which were interpreted as dots and dashes of the Morse code. The *spark-recorder* was used later, before the siphon-recorder was introduced. This had an indicator hung between electro-magnets, so as to vibrate with the currents. The indicator was connected with a magnetic coil arranged to discharge sparks regularly to a metal plate. The action of the indicator, as affected by the currents from the line, interrupted the sparks so as to indicate the pauses interpretable by dots and dashes.

STATISTICS.—The *T.* is used more in the U. S. than in any other country, except the United Kingdom of Great Britain and Ireland. The tolls in the two countries are practically the same, 25 cents per message of 10 words and address and signature in the U. S. for moderate distances, and a shilling in the United Kingdom. The submarine *T.* rate is commonly one shilling per word. The Western Union Telegraph Company controls almost all the *T.* lines of the U. S., having absorbed its leading competitors by purchase in 1881, and now operates nearly 200,000 miles of line, with a capital stock of \$95,350,000. It also has exclusive contracts for the operation of most of the Atlantic submarine cables. The stock pays regular dividends, whereas the *T.* system conducted in the United Kingdom as a branch of the Post-office Department, under government control, shows an annual deficit. There are 5,673 *T.* offices in the United Kingdom and 32,000 miles of line. As the amount of business transacted is nearly the same in both countries, at practically similar rates, and the fact that messages are sent here over lines six times as long with more profit, speaks well for American methods. The growth

of telegraphy in the past 20 years is well shown by the following figures: Number of messages, 1870—Russia, 2,716,300; Norway, 466,700; Sweden, 590,300; Denmark, 513,623; Germany, 8,207,800; Holland, 1,837,800; Belgium, 1,998,800; France, 5,663,800; Switzerland, 1,629,235; Spain, 1,050,000; Italy, 2,189,000; Austria, 3,388,249; Hungary, 1,489,000; United States, 9,157,646; Great Britain and Ireland, 9,650,000. Number of messages, 1890—Russia, 9,949,405; Norway, 1,453,932; Sweden, 1,755,000; Denmark, 1,502,965; Germany, 25,847,836; Holland, 4,285,516; Belgium, 5,312,205; France, 28,094,000; Switzerland, 3,695,988; Spain, 4,084,704; Italy, 8,175,870; Austria, 9,081,631; Hungary, 4,464,277; United States, 60,000,000; Great Britain and Ireland, 66,409,000.

Telegraph Plant, n. (*Bot.*) See DESMODIUM.

Telegraphy, n. The art or practice of telegraphing.

Telemachus (*te-len'-a-kus*). (*Heroic Hist.*) A son of Ulysses (Odysseus) and Penelope, whose history is narrated in Homer's *Odyssey*, and has been used in modern times as the subject of a celebrated romance of Fénelon.

Teleology, n. [*Fr. téléologie*, from *Gr. telos, teleos*, the issue, and *logos*, doctrine.] The doctrine of final causes of things; the philosophical treatment of final causes in general.

Telesaur, n. [*Gr. teleios*, perfect, *sauros*, a lizard.]

One of a genus of fossil Crocodilla, differing from the *gacialis* by having the vertebrae united by flat surfaces instead of ball-and-socket joints.

Telephon'ic, a. [*Gr. phonē*, sound.] Far-sounding.

Telescope, n. [*Gr. tele*, afar off; *skopeo*, I view.]

(*Optics*.) An optical instrument used for the purpose of observing or discovering distant objects, especially the celestial orbs. It consists of a tube which contains a lens or a concave mirror, in whose focus is formed an image of some distant object, and of a microscope lens, or combination of lenses, known as the *eye-piece*, by which this image may be magnified and studied. (Fig. 223.) It is difficult to decide to whom the credit of discovering this useful instrument is due. Some claim that it was known to the Greeks and Romans; others, that it was possessed by the Arabian astronomers, but on very slight evidence. Roger Bacon seems to have understood its principle, but not to have constructed one, and the practical discovery of the telescope appears to have been made in Holland about 1608, the honor being probably due to Hans Lippershey. In the following year, Galileo, who had heard of this discovery, studied its optical principles, and made an independent discovery of the instrument, of which he was the first to make a practical use. On the first night in which he used it, Jan. 7, 1610, he had the good fortune to discover 3 of Jupiter's moons. His first telescope magnified 3 diameters, his second, 8; and the one with which this discovery was made, 33. In the following year, Kepler pointed out the advantages of a telescope constructed of two convex lenses, a form of the instrument which supplanted the Galilean on account of its much larger field of view. Huygens made the first powerful telescopes of this construction, and with one of them discovered, in 1655, the brightest of Saturn's satellites. The first reflecting telescope was made by Newton, who, in 1666, came to the conclusion that the difficulty arising from the colored image made by the lenses of the refracting telescope was insuperable. In this telescope the image of the object, instead of being formed in the focus of a convex lens, as in the refractor, is similarly focussed by a concave mirror, and magnified by a microscopic eye-piece. Hadley produced a telescope on this principle, which magnified up to 230 diameters. The next vital discovery in this field was made by Chester Moor Hall, an English experimenter, who, by combining different kinds of glasses, succeeded in correcting the color defect of all previous object-glasses, the refraction of light in one glass being corrected by the other, so that an achromatic effect was produced. This discovery completed the steps of evolution of the telescope, all later improvements being in the direction of increase of its optical powers. In the refracting telescope, as now made, the achromatic effect is obtained by a combination of crown-glass and flint-glass lenses, the tendency of the one to disperse the light into its primary colors being overcome by the different dispersive power of the other. These are made of as great diameter as possible, so as to take in the largest available number of light-rays from the object. They are mounted in the end of a long tube, whose other end is occupied by the eye-piece, which is movable in the tube, so as to adjust it to the focal distance of nearer or more distant objects. What is seen in the telescope is not the object, but its focussed image, which may be greatly magnified by the microscopic powers of the eye-piece. In the reflecting telescope, the light from the object enters at the end occupied by the eye-piece in the refractor, strikes on the mirror, and is reflected at an angle, so that the image may be perceived through an eye-piece placed at the edge of the mouth of the tube, or outside the tube. In some instances a double mirror is used, the second gathering the light from the first, and reflecting it back through a hole in the center of the first, behind which the eye-piece is placed. The defect in this process is the loss of light due to the double reflection. Large and powerful telescopes have been made on both principles, the largest reflector being that of Lord Rosse (72 inches aperture, 1844). Next in size is that of Mr. Commons (60 inches, 1889). One of the principal difficulties in the construction of large reflectors has been the casting and annealing of metallic masses of several tons' weight. This has been overcome by the Liebig process of depositing on glass a very thin film of silver, which can be polished until highly reflective. Of large refractors

in Europe may be named those of the National Observatory, Paris (23.6 inches); Cambridge, England (25 inches); Vienna, Austria (27 inches); Greenwich, England (26 and 28 inches); Nice, France (29.9 inches); Pulkowa, Russia (30 inches); Mendeau, France (24, 29, and 32 inches). In the United States the largest are those of the Chamberlain Observatory, Denver, Col. (20 inches); Halsted Observatory, Princeton, N. J. (23 inches); Harvard University (24 inches); University of Virginia (26 inches); Naval Observatory, Washington, D. C. (26 inches); Lick Observatory, California (36 inches), and Yerkes Observatory, Geneva Lake, Wis. (40 inches). The last, completed and opened to observation in Oct., 1897, is the largest in the world. The great object-glass is mounted in a steel tube 64 feet long, 52 inches diameter at center, and weighing 6 tons, the total weight of the telescope and its mountings being 75 tons. Its great power has been already fully demonstrated, and it will undoubtedly add greatly to our knowledge of the celestial spheres.

Telescoped, v. To be driven into each other after the manner of a telescope; as, the cars *telescoped*. (U.S.)

Telescope Fly, n. (*Zoöl.*) See DIOPSIS.

Telescope-shell, n. (*Cochol.*) A species of *Turbo*, with plane, striated, and numerous spires.

Telescop'ic, Telescop'ical, a. [*Fr. téléscopique*.]

Pertaining, or having reference, to a telescope; performed by a telescope; as, a *telescopic* view.—Seen or discoverable only by means of a telescope; as, *telescopic* heavenly bodies.—Far-seeing; far-reaching; competent to discern objects afar off; as, *telescopic* vision.

Telestereoscope, n. [*Gr. tele*, far; *stereos*, compact, and *skopein*, to view.] (*Optics*.) A telescopic stereo-

scope.

Teles'tich, n. [*Gr. telos*, the end, and *stichos*, verse.]

A poetical composition wherein the final letters of the lines form a name;—the correlative to *acrostic*.

Tell'fair, in Georgia, a S. co.; area, 491 sq. m. Rivers.

Ocmulgee and Little Ocmulgee rivers, and Sugar creek.

Surface, level; soil, sandy. Cap. McKee. Pop. (1897)

6,400.

Tell, v. a. (imp. and pp. TOLD.) [A.S. *tollan*, *getellan*.]

To put together in spoken words; to utter; to express in speech; to communicate orally to others; to relate; to narrate; to rehearse, as particulars; as, to *tell* a story.

—To make known; to show by words; to reveal; to discover; to disclose; to divulge; to betray; as, to *tell* of another's misdoings.—To teach; to inform; to acquaint; to interpret; to publish; to unfold; as, *tell* me how I may know him.—To reckon; to count; to number; to compute; to enumerate; to mention one by one; as, to *tell* money.—To find out; to ascertain by observation; to discern or notice so as to report; as, I cannot *tell* which is which.

To *tell* off, to count; to divide; as, a detachment was *told* off for special duty.

—*v. n.* To make report; to give an account.—To take or produce effect; as, every shot *tells*.

To *tell* of, to speak of; to mention; to describe or recount; as, he *tells* of many wonders.—To *inform* against, to act the tell-tale; as, he is always *telling* of others;—on is occasionally and incorrectly used for *of* in this sense; as, "Lest they should *tell* on us."—1 Sam. xxvii. 11.

—*n.* That which is told; tale; narration; account. (r.)

Tell, WILLIAM, the renowned champion of Swiss liberty, was a native of Burglen, in the canton of Uri. He was distinguished by his skill in archery, his strength and courage. He joined the league of the Three Forest-cantons formed to free the country from Austrian tyranny. The Austrian governor of Switzerland, Herman Gessler, pushed his insolence so far as to require the Swiss to uncover their heads before his hat (as an emblem of his sovereignty), and is said to have condemned *T.*, who refused to comply with this mandate, to shoot an apple from the head of his own son. *T.* was successful, but confessed that a second arrow, which he bore about his person, was intended, in case he had failed, for the punishment of the tyrant, and he was therefore retained prisoner. While crossing the Lake of the Four Cantons, or Lake of Lucerne, in the same boat with Gessler, a violent storm arose. *T.*, as the most vigorous and skilful helmsman, was set free, and he conducted the boat successfully to the shore, but seized the opportunity to spring upon a rock, at the same time pushing off the boat. On this rock, since called the *Rock of Tell*, a commemorative monument or chapel has been erected. He had fortunately taken his bow with him; and when the governor finally escaped the storm, and reached the shore, *T.* shot him dead on the road to Küssnacht. This event was the signal for a general rising, and a most obstinate war between the Swiss and Austrians, which was not brought to a close until 1499. *T.* is supposed to have lost his life during an inundation in 1350. Doubt has been thrown upon this popular story by some modern critics, and lately by M. Marc Monnier in the *Revue des Deux Mondes*; but even if some of its romantic details are mythical, it is scarcely possible, in the face of the testimony of early chroniclers, and the concurrent evidence of local customs and observances, to deny the substantial truth of the history. However, it is certain that *T.* contributed to emancipate his country; and there are many local customs referring to the events here related. The memorable event above described is said to have happened on the 7th of November, 1307; and the citizens having previously chosen for their leaders three men of approved courage and abilities, namely, Werner of Schwytz, Walther Fürst of Uri, and Arnold Melchthal of Unterwalden, they secretly agreed to surprise and demolish the castles in which the imperial governors resided. This compact being effected,

these three cantons joined in a league for ten years, which gave birth to the Helvetic Confederacy.

Tell, in *Pennsylvania*, a township of Huntingdon co.; pop. abt. 1,009.

Tellable, *a.* That may be told or mentioned.

Tell City, in *Indiana*, a post-village and township of Perry co.

Teller, *n.* One who tells, relates, or communicates the knowledge of something.—An enumerator; a recounter. (*Banking*) An officer in a bank, who receives money into the bank, and pays it out on checks.

—A person appointed to count the votes given by the members of a legislative assembly, &c., on a division.

Tellicherry, (*tel-li-cher're*), a fortified seaport-town of British India, presidency of Madras, 93 m. from Serin-gapatam; lat. 11° 44' N., lon. 75° 36' E. Pop. 22,000.

Tellieo River, rises in Cherokee co., *N. Carolina*, and flowing N.W., enters Little Tennessee River in the N. of Monroe co., Tennessee.

Tellina, *n.* (*Zoöl.*) A genus of Cockles (cardiaceous bivalves in the Cuvierian system), characterized by the hinge of the shell having one tooth on the left and two teeth on the right valve, often bifid; in the right valve there is a plate which does not enter a cavity in the opposite valve. There is a slight fold near the posterior extremity of both valves which renders them unequal at that part, where they gape a little.

Fig. 2479.

CAT'S-TONGUE TELLINA.

Telling, *n.* The act of relating. (*Tellina lingua-felis*.)

—*p. a.* Having or producing great effect; as, a telling speech.

Tellingly, *adv.* In a telling manner; effectively.

Tell-tale, *a.* Revealing; babbling; telling tales or secrets; as, tell-tale blushes.

—*n.* A babbler; a tattler; one who officiously communicates information of the private concerns of individuals; a busy-body; as, a tell-tale out of school.

(*Naut.*) An instrument by which, by communicating with a small barrel on the axis of the steering-wheel, indicates the position or situation of the wheel; also, a compass in the cabin of a ship giving information to persons below of the vessel's course.

(*Mus.*) A movable piece of ivory, or other material, attached to an organ, that serves to give notice, by its position, when the wind is exhausted.

(*Mech.*) A contrivance for indicating or recording something, especially for keeping a check upon employes, as factory hands, &c., by revealing to their overlookers what they have done or omitted to do.

Tellurite, or **Telluric Ochre**, *n.* (*Min.*) Native oxide of tellurium.

Tellurium, (*Chem.*) A brilliant crystalline, brittle metal, resembling bismuth in color, and fusing between 800° and 900° Fahr., above which temperature it may be distilled in a current of hydrogen. According to Mitscherlich, it crystallizes in a rhombohedral form. It conducts both heat and electricity, though imperfectly. Like sulphur and selenium, it dissolves to a slight extent in sulphuric acid, from which it may be precipitated unchanged by dilution. When strongly heated in the air, it takes fire, burning with a brilliant blue flame edged with green, emitting a peculiar characteristic odor and producing fumes of tellurous acid. *T.* is a very rare substance, occurring in nature in combination with gold, silver, bismuth, copper and lead, in certain mines of Hungary, Transylvania and Colorado. Identified as a distinct metal by Klaproth in 1798. It is prepared from it by a long and tedious process which cannot be detailed here. With oxygen, like sulphur and selenium, it forms two combinations, TeO_2 , tellurous acid, and TeO_3 , telluric acid. The former may be prepared by dissolving *T.* in nitric acid, and pouring the solution into water, when hydrated tellurous acid falls down as a bulky white precipitate. It is slightly soluble in water, reddens litmus, and combines with the alkaline bases. Its salts are said to act as emetics. It also has basic properties, forming soluble salts with oxalic and tartaric acids. Telluric acid is obtained by heating *T.* with nitre. Tellurate of potash is formed, from which tellurate of baryta may be procured, the baryta being afterwards separated by sulphuric acid. It crystallizes as a trihydrate, in hexagonal striated prisms. Heated to redness, they become anhydrous, and assume an orange-yellow color. Telluric acid has but a feeble affinity for bases, forming salts which contain 1, 2, and 4 equivalents of acid. Two chlorides, TeCl and TeCl_2 , have been formed. *T.* forms tellurides with bismuth, gold, silver, lead, and most other metals. The tellurides belong to the class of metallic alloys. With hydrogen it forms telluretted hydrogen, or hydrotelluric acid, TeH_2 , a compound analogous to the combinations of sulphur and selenium with that element. It is obtained by decomposing telluride of zinc or tin with hydrochloric acid. The gas which escapes has an odor singularly similar to sulphuretted hydrogen, and has a faintly acid reaction. It dissolves in water, forming a colorless solution, which turns brown by the oxidation of the hydrogen and separation of *T.* Tellurium also forms two sulphides, corresponding to its two oxides. *T.* is interesting as being the connecting link between the metals proper and the metalloids. Equiv. 64, sp. gr. 66. *Symbol*, *Te*.

Telotype, *n.* [*Gr. tēle*, afar, and *typos*, image.] An electric telegraph which prints the messages.

Temascaltepec, a town of Mexico, 68 m. S.W. of Mexico city; pop. 6,000.

Temerarious, *a.* [*Fr. téméraire*.] Headstrong; recklessly adventurous; heedless of, or despising, danger.

Temerariously, *adv.* In a temerarious manner.

Temerity, *n.* [*Fr. témérité*; *Lat. temeritas*.] Rashness; headlong precipitancy; reckless boldness; unreasonable contempt of hazard or danger; extreme venturesomeness; as, the temerity of a gun-brig attacking two frigates.

Temesvar, (*tem-esh-var'*), a fortified city of Hungary, cap. of the Banat of Temesvar, and one of the strongest fortresses of the Austrian empire, 74 m. from Belgrade, at the junction of the river Temes and the Baga canal. *Manuf.* Silk, iron goods, and woollens. Pop. 25,426.

Temiscaming Lake, on the border of Ontario and Quebec, 30 m. long, and 15 m. broad, discharges its surplus waters into the Ottawa River; lat. 47° 30' N., lon. 80° W.

Temiscanota, (*tem-is-koo-a'ta*), a lake of prov. of Quebec, 130 m. N.E. of Quebec, 22 m. long, and abt. 2 wide.

Tempe, a valley of Greece. See GREECE, and Fig. 1195.

Tempean, *a.* Resembling the valley of Tempe;—hence, pastoral; beautiful; charming.

Temper, *v. a.* [*Fr. tempérer*; *Lat. tempero*—*tempus*, a section cut off.] To mingle, mix, or unite in due proportion; to adjust, as parts to each other; to mix so that one part qualifies the other; as, to temper justice with mercy.—Hence, to assuage; to mollify; to reduce, as any violence or excess; to soften; to soothe; to calm; as, woman's nature is designed to temper that of man.—To adjust; to accommodate; to modify; to fit one to the other.—To form to a proper or adequate degree of hardness; as, to temper a sword-blade.—To govern;—a Latinism; as, "Tartare tempereth."—*Spenser*.

(*Mus.*) To adjust, as the mathematical scale to the scale in actual use.

(*Founding*.) To moisten and knead to a suitable consistency; as, to temper moulding clay.

—*n.* Due mixture or proportion of different qualities; or the state of any compound substance which accrues from the mixture of sundry ingredients; as, the temper of cement.—Temperament or constitution of the body.—State or constitution of the mind, particularly with regard to the passions and affections; disposition; humor; mood; as, a man of imperturbable temper.—Moderation; serenity and calmness of mind.—Irritability; heat of mind or passion; tendency to anger or exasperation;—used in a reproachful sense; as, his wife has got a temper of her own.—State or quality of a metal, particularly as to its hardness produced by mechanical process; as, the temper of iron or steel.—Mean or medium; middle course; as, "some reasonable temper."—*Swift*.

Temperament, *n.* [*Fr.*; *Lat. temperamentum*—*temper*.] Mental constitution; general state, frame, or disposition of the mind; state with respect to the predominance of any quality or combination of qualities; as, the temperament of the body.—Act of tempering, adjusting, or modifying; accommodation, as of antagonistic rules, interests, passions, &c., or the means by which such accommodation is brought to pass; as, "The common law . . . has reduced the kingdom to its just state and temperament."—*Hale*.

(*Physiol.*) That peculiarity of organization which to a certain extent influences man's thoughts and actions. The ancient physicians enumerated four temperaments, viz.: the bilious or choleric, the phlegmatic, the sanguine, the melancholic. To these some have added the nervous; and these terms are still in use among medical writers.

(*Mus.*) A system of compromise in keyed instruments for the avoidance of the necessity, presupposed by the strict relation of musical intervals, of having a separate row of keys corresponding to each tonic. Pianofortes are generally tuned on what is called equal temperament, i. e., there being eleven notes in the octave, an equal value is given to each interval between them, representing a semitone. The consequence of this is, that, although all the intervals, the thirds, fifths, &c., are slightly imperfect, yet they all approach perfection in the same degree; whereas, if some were made accurate, others must be very far wrong.

Temperance, *n.* [*Fr.*; *Lat. temperantia*.] (*Morals*.) That virtue which a man is said to possess who moderates and restrains his sensual appetites; but it is often used in a much more general sense, as synonymous with moderation, and is then applied indiscriminately to all the passions. *T.* is one of the best means of preserving health. "It," says Addison, "is a kind of regimen into which every man may put himself, without interruption to business, expense of money, or loss of time." "It may be practised by all ranks and conditions at any season or in any place." Since attention has been called to the pernicious effects of intemperance in the use of alcoholic liquors, the term has come to be frequently used to denote a temperate use of these, and by a somewhat singular manipulation, to denote even total abstinence from them.

Temperance societies, are institutions established for the purpose of extending the principles of total abstinence from the use of spirituous liquors. The evils that result from drunkenness are, unfortunately, too well known to require any special notice. It is only within recent times, however, that any attempt has been made to grapple with this monstrous evil. The first united effort made to check the progress of intemperance was by the formation of an association for that purpose in Massachusetts, which held its first meeting in 1813. It collected facts and statistics from year to year, exhibiting the nature and magnitude of the evil, with the view of calling public attention to it, and of directing efforts for its removal. Next year, a similar institution was organized in Connecticut, with various branches, and in 1818 the number of these societies was

above forty. A new impulse was given to the movement by the formation, at Boston, on a much more extensive plan, of the American Society for the Promotion of Temperance. In 1829, the number of auxiliary associations had increased to upwards of 1,000, no State of the Union being without at least one. In 1831, there were 2,200 societies, including 170,000 members, in connection with the parent association; and since then the numbers have been very largely increased. They did much in the way of diffusing their principles by circulating tracts and employing travelling-agents to deliver addresses. The principle of total abstinence appears to have been introduced among the members by an association formed at Andover, in Sept., 1826. Soon after their establishment in the U. States, *T. S.* began to be formed in England and Scotland, and spread so that, in 1831, there were several hundreds of them in those countries. In Ireland, the cause of temperance was advocated with much success by the Rev. Father Mathew, a Roman Catholic clergyman, who affirmed that in three years (1839–1841) he had made more than a million of converts to that principle. Of late years, the advocates of total abstinence have much increased, and they now form, in the U. States, a large and influential portion of the community. They are still actively employed in the diffusion of their principles, and with much success. Whatever views may be held on the subject of total abstinence, every one must admit that these societies have been the means of effecting an incalculable amount of good. In 1851, the State of Maine passed a law *For the Suppression of Tippling Shops*, &c., rendering penal the sale of intoxicating drinks; and though, in 1856, the existing laws were repealed, and it became lawful to distil spirits, to sell spirits, and to have spirits in possession, drinking-houses continued to be prohibited. A similar law was passed in Massachusetts in 1867, and repealed in 1875. There are now some other States in which the sale and manufacture of fermented drinks is totally prohibited, and many more in which its sale is prohibited during Sunday. See LIQUOR LICENSE LAWS.

Temperance, in *Georgia*, a post-village of Telfair co., abt. 90 m. S. of Milledgeville.

Temperanceville, in *Pennsylvania*, a post-village of Alleghany co., abt. 2 m. S. of Pittsburg.

Temperate, *a.* [*Fr. tempéré*; *Lat. temperatus*—*temper*.] Limited; moderate; not excessive or extreme; as, a temperate climate.—Moderate in the gratification of the appetites and passions; abstemious; as, temperate in pleasures.—Not marked with passion or violence; cool; calm; dispassionate; sedate; sober; as, temperate language.

Temperate zones. (*Geog.*) Two of the five zones into which the terrestrial globe is divided. The north temperate zone is included between the tropic of Cancer and the arctic circle, and the south temperate zone between the tropic of Capricorn and the antarctic circle.

Temperately, *adv.* Moderately; without excess or extravagance; calmly; without violence of passion; with moderate force.

Temperateness, *n.* Quality of being temperate.

Temperature, *n.* [*Fr.*; *Lat. temperatura*.] State; constitution; degree of any quality.

"Memory depends upon the consistence and temperature of the brain."—*Watts*.

(*Phys.*) A definite degree of sensible heat as measured by the thermometer. Thus, we say a high *T.*, a low *T.*, to denote a manifest degree of heat or cold. *T.*, in general, denotes the degree of free caloric which a body appears to possess when compared with other bodies; or, in other words, the state of a body in relation to its capability of producing in other bodies the effects arising from the presence of free caloric. There are two methods of measuring the *T.* of bodies, namely, by our sensations, or by the different degrees of expansion produced in bodies on being subjected to different degrees of free caloric. The first of these is so imperfect that no dependence can be placed upon it as a measure of *T.*; but the second is much more regular and extensive. When two bodies produce the same increase or diminution of volume in a third body, to which they are equally applied, they are said to be at a higher or lower *T.*, as it produces a greater or less expansion in another body with which it is in contact.

Tempered, (*tem'perd*), *p. a.* Disposed;—frequently used in composition; as, a good-, or bad-tempered person.

Tempering, *n.* (*Metal.*) The process by which the hardness of steel is more or less reduced.—See STEEL.

Tempest, *n.* [*Fr. tempête*; *Lat. tempestas*.] A violent storm of considerable duration; an extensive current of wind, rushing with great velocity and violence, and commonly attended with hail, rain, or snow; a hurricane; a storm of extreme vehemence;—hence, by analogy, any violent tumult or commotion; as, a tempest of the passions.

(*NOTE.* *Tempest* is occasionally employed in the construction of certain self-explanatory compounds; as, tempest-driven, tempest-tossed, &c.)

Tempestuous, *a.* [*It. tempestoso*.] Abounding in tempests; very stormy; turbulent; rough with wind; blowing with violence; as, tempestuous weather.

Tempestuously, *adv.* With great violence of wind, or great commotion; turbulently.

Tempestuousness, *n.* State of being tempestuous.

Tempio, a town of Sardinia, 32 m. from Sassari; pop. 10,000.

Templars, KNIGHTS TEMPLARS, or KNIGHTS OF THE TEMPLE, *n.* (*Ecccl. Hist.*) A religious order of knights, founded in the beginning of the 12th century, for the defence of the Holy Sepulchre and the protection of Christian pilgrims. Knights were fixed at Jerusalem by King Baldwin II., who gave them the ground on the

east of the Temple. Their rules, taken from those of the Benedictine monks, involved the vows of chastity, obedience, and poverty. The classes of the order were, knights, esquires, servitors, and chaplains; the universal badge of the order was a girdle of linen thread. The officers of the order were chosen by the chapter from among the knights; and the Grand Master, in some respects, assumed the dignity of a sovereign prince, being independent in secular matters, and depending solely on the Pope in spiritual. The chief part of the 9,000 estates, lordships, &c., which the society possessed in the 13th century, was situated in France; and the Grand Master was usually of that nation. The T., with the rest of the Christians, were driven from Palestine by the Saracens, and then fixed the chief seat of their order in Cyprus. Their exorbitant power and wealth, and the haughty manner in which they endeavored to keep aloof from the control of European sovereigns, and

Fig. 2480. — KNIGHT TEMPLAR.

act as a military republic independent of their authority, were probably the principal reasons which induced Pope Clement V. and Philip "the Fair" of France to concert their overthrow. The charges of heresy and idolatry, which were preferred against them, were at least unsupported by evidence. In 1307, Jacques de Molay, the Grand Master, having been enticed into France, was arrested by Philip; the estates of the order were seized; many of the T. were burnt alive, after the mockery of a trial; and, in 1312, the order was abolished by a bull of Clement V. Its vast estates fell partly into the hands of the sovereigns of the countries in which they were situated, partly into those of the Hospitallers and other military orders. Detached bodies of the order, however, continued to exist in different countries.

TEMPLARS, MASONIC KNIGHTS, a modern adjunct to Freemasonry, based upon the ideas of the ancient Knights Templar.

—In England, a student of the law, so called from having chambers in the *Temple*, one of the inns of court, at London; and which originally belonged to the Knights Templars.

—*a.* Pertaining, or having reference to, a temple.

TEMPLARS, (INDEPENDENT ORDER OF GOOD.) In Ithaca, New York, July 21, 1852, was organized the first society, by Nathaniel Curtis, who became their first Worthy Chief Templar, and on the 17th of August was chosen the first Grand Worthy Chief Templar. He was a man of broad views, who had been reformed by the Washingtonians, and who at once threw into this new Order all his power, zeal, and energy. He established this new Temperance Order upon a new basis; discarding all beneficial features. Firstly; requiring as a qualification of membership the recognition of the existence and power of Almighty God, the Ruler of all things. Secondly; the necessity of a life-long pledge to abstain totally from the use of any intoxicating liquors. Thirdly; the importance of bringing into the same bond the entire family circle that had arrived to years of discretion. Fourthly; the equality of all members of the Order, making no distinction in sex, color, sect, or condition, merit being the only just qualification for office or position. It adopted from the first the motto of *Faith, Hope, and Charity*, and also principles of Prohibition, and the duty of its members to reclaim the fallen, as well as save others from becoming addicted to the habit of using intoxicants. The whole ritualistic ceremony is replete with holy instructions. This Order has its password, grips, and signals. Some Christian denominations, recognizing its religious influence, have one of these societies connected with their church. There are four Degrees in this Order. 1st, The Subordinate or Lodge Degree; 2d, the Degree of Fidelity; 3d, the Degree of Charity; 4th, the Grand Lodge Degree. The latter forms the head or legislative body of the state where it exists, and is composed of representatives elected from the respective lodges within that jurisdiction. In 1897 there were 100 of these Grand Lodges (including England and Scotland), with a membership of over 573,653. These Grand Bodies meet annually. They elect representatives and form what is called the Right Worthy Grand Lodge, whose province it is to legislate upon all matters of general interest to the whole Order.

Temple, (*tem'pl*), *n.* [Fr. *temple*, from Lat. *templum*, *templum*, a dimin. of *tempus*.] A public edifice erected in honor of some deity; as, the *temple* of Juggernaut in India.

(*Jewish Antiq.*) The building erected for the worship of God at Jerusalem. — Hence, an edifice erected as a place of Christian worship; a church; a sacred or consecrated place; as, "the Lord's anointed *temple*." (*Shaks.*) — A place wherein the divine spirit specially resides; as, "Here we have no *temple* but the wood." (*Shaks.*) — In London, England, the name of two inns of court, — the *Middle Temple*, and the *Inner Temple*; — so called because anciently the dwellings of the Knights Templars; as, a barrister of the *Inner Temple*.

[Fr. *tempe*; Lat. *tempora*, *tempus*.] (*Anat.*) One of the lateral and flat parts of the head above the ears; so called because time, or the age of an individual, is denoted by the hair becoming first gray here. The temporal bones are two irregular-shaped bones, one on each side of the head, connected with the occipital, parietal, and sphenoid bones. The temporal muscle is situated in the temple, and inserted into the coronoid process of the lower jaw, its principal use being to draw the lower jaw upwards, as in biting. The temporal artery is a branch of the external carotid, which runs on the temples and gives off the frontal artery.

—In weaving, a contrivance used in a loom for stretching the web transversely.

Temple, SIR WILLIAM, an eminent English statesman, diplomatist, and writer, b. in London, 1629. He spent twenty years in the service of the state, and then retired for the enjoyment of a learned leisure. He was the model of a negotiator, uniting politeness and address to honesty. His works are memoirs, miscellaneous letters, and observations on the United Provinces. D. 1700.

Temple, in *Maine*, a post-township of Franklin co., abt. 150 m. N.W. of Augusta.

Temple, in *N. Hampshire*, a post-township of Hillsborough co., 33 m. S.S.W. of Concord.

Temple, in *Pennsylvania*, a post-village of Berks co., 5 m. N.N.E. of Reading.

Templemore, a neat modern town of Ireland, co. Tipperary, 75 m. from Dublin, near the Devil's Bit Mountains; pop. 4,600.

Templet, **Template**, *n.* (*Arch. and Engin.*) A short piece of timber or stone laid under the bearing of a girder, with the object of distributing the weight of the latter; also, a mould used by bricklayers, masons, &c., for cutting or setting out work, or by millwrights for cutting the teeth of wheels; also, any plate or board formed to the exact dimensions of parts of engines and machines, so that new parts may be produced from such templates of the exact size required to fit the other parts.

Templeton, in *Massachusetts*, a post-village and twp. of Worcester co., 55 m. W. of Boston.

Templeville, in *Maryland*, a post-village of Queen Anne co., abt. 55 m. S.E. of Baltimore.

Tempo, *n.* [It. time.] (*Mus.*) Time.

Temporal, *a.* [Fr. *temporel*; Lat. *temporalis*, from *tempus*, time.] Pertaining or having reference to time; belonging to this life, or this world, or this body only; unmeasured or limited by time, or by this life or mundane state of things; secular; — in distinction from *sacred* or *eternal*; as, *temporal* matters. — Civil or political; — as opposed to *ecclesiastical*; as, *temporal* power.

Temporal augment. (*Gram.*) In certain tenses, the augmentation of the short initial vowel of a verb into the corresponding long one.

[Fr.] (*Anat.*) Pertaining or relating to the temple, or temples, of the head; as, the *temporal* bone.

—*n.* That which is secular; a temporality.

Temporality, *n.* [L. Lat. *temporalitas*, ecclesiastical goods.] (*Eng. Law.*) State or quality of being temporary; — in contradistinction to *perpetuity*.

(*Ecll.*) See **TEMPORALS**.

Temporally, *adv.* In a temporal manner.

Temporals, **Temporalities**, **Temporalities**, *n. pl.* Secular possessions; ecclesiastical revenues, proceeding from lands, tenements, lay-fees, tithes, and the like; as, the Pope's *temporalities*.

Temporarily, *adv.* In a temporary manner.

Temporariness, *n.* State or condition of being temporary.

Temporary, *a.* [Fr. *temporaire*.] Pertaining or relating to time; lasting but for a time; existing or continuing for a limited period of time; — hence, fleeting; transitory; as, to obtain *temporary* relief or assistance, a *temporary* truce, a *temporary* expedient, &c.

Temporization, (*zā'shun*), *n.* Act of temporizing.

Temporize, *v. n.* [Fr. *temporiser*.] To comply with the time or occasion; to humor, or yield to, the current of opinion or the pressure of circumstances. — To delay; to procrastinate. (*R.*)

Temporizer, *n.* A triummer; one who temporizes or yields to the time or to the force of circumstances, or complies with the prevailing opinions, modes, or occasions.

Temporizing, *n.* A yielding to the time, or to its attendant circumstances; a complying with the prevailing opinions, fashions, or occasions.

Tempt, (*tēmt*), *v. a.* [Fr. *tenter*; Lat. *tento*, also *tempto*, to prove, to test, to urge.] To try; to attempt; to venture on; to endeavor to reach or accomplish; as, to *tempt* one's fate. — To provoke; to incite; to instigate; to seek to persuade. — To test; to prove; to put to trial or demonstration.

"Ye shall not *tempt* the Lord your God." — *Deut.* vi. 16.

—To tamper with; to excite; to solicit to an evil act; to incite to something wrongly, presenting inducements that are plausible or alluring, or by the offer of some pleasure or apparent advantage as the inducement; to

seduce; to decoy; as, to *tempt* a person into committing a sin.

Temptability, *n.* State or quality of being temptable.

Temptable, *a.* That may be tempted or allured; susceptible to temptation.

Temptation, (*tem-tā'shun*), *n.* [Fr. *tentation*; Lat. *tentatio*.] Act of tempting; allurement to evil or wrongdoing; enticement to sin or error proceeding from the prospect of pleasure or advantage.

"All *temptation* to transgress repel." — *Milton*.

—State of being tempted or enticed to evil. — Trial; allurement; attraction; that which is presented to the mind or passions as an inducement to evil; as, a great city abounds with *temptations*.

Tempter, (*tēm'ter*), *n.* One who tempts; one who entices or solicits to evil. — Particularly, the arch-fiend; the Devil; the great adversary of man.

Tempting, *p. a.* Attractive; adapted to entice or allure; as, a *tempting* woman.

Temp'tress, *n.* A female who beguiles, allures, bewitches, or entices.

Ten, *a.* [A. S. *tyñ*; Lat. *decem*; Gr. *deka*.] Twice five; nine and one. — Many; several; — used as a kind of proverbial number; as, you have given for it *ten* times more than it is worth.

—*n.* The sum of five and five; the number comprising nine and one. — A symbol expressing ten units, as X, or 10.

Tenability, *n.* Same as **TENABLENESS**, *q. v.*

Tenable, *a.* [Fr., from Lat. *teno*, to hold tightly.] That may be held, maintained, or defended against an assailant, or against attempts to take or overthrow it; as, a *tenable* fort or city.

Tenableness, *n.* State of being tenable; tenability.

Tenace, (*tē'nās*), *n.* (*Games*.) In whist-playing, the state of holding the best and third-best cards.

Tenacious, (*ten-ā'shus*), *a.* [Fr. *tenace*; Lat. *tenax*.] Holding fast or inclined to hold fast; inclined to retain what is in possession; retentive; apt to retain long what is committed to it; as, a *tenacious* memory. — Adhesive; apt to adhere to another body, as oily, glutinous, or viscous matter; as, glue is a *tenacious* substance. — Close-fisted; niggardly; meanly parsimonious.

Tenaciously, *adv.* In a tenacious manner.

Tenaciousness, *n.* State or quality of being tenacious.

Tenacity, (*ten-ā'se-tē*), *n.* [Fr. *tenacité*; Lat. *tenacitas*.] State or quality of being tenacious; retentiveness; adhesiveness; firmness; as, *tenacity* of opinion. — Cohesiveness; that quality of bodies which makes them stick or adhere to others; glutinous; stickiness; that quality of bodies which keeps them from parting without considerable force; — opposed to *fragility*.

Tenaculum, *n.* [Lat., a holder.] (*Surg.*) A sharp-pointed, crooked instrument used by surgeons to transfix and pull out bleeding arteries which require to be tied.

Tenaille, (*ten-ī'tē*), *n.* [Fr.] (*Fort.*) A rampart raised in the main ditch immediately in front of the curtain between two bastions. In its simplest form, it consists of two faces, coinciding in direction with the faces of the bastions, and consequently forming with each other a re-entering angle. A *tenaille*, however, usually consists of three faces, of which two have the directions above stated, while the third forms a curtain, which is parallel to that of the enceinte.

Tenailion, or **Great Tenaille**, (*ten-ī'tē'yon*), *n.* [Fr.] (*Fort.*) A species of exterior work constructed on each side of the ravelins, like the lunettes, to increase the strength of the ravelins, procure additional ground beyond the moat, or cover the shoulders of the bastions.

Tenancy, *n.* [L. Lat. *tenantia*, from Lat. *teneo*.] (*Law.*) A holding or possession of lands or tenements; tenure.

Tenant, *n.* [Lat. *teno*, I hold.] (*Law.*) One who holds or possesses lands or tenements by any kind of title, either in fee, for life, for years, or at will. In a popular sense, he is one who has the temporary use and occupation of lands or tenements which belong to another, the duration and other terms of whose occupation are usually defined by an agreement called a lease.

—*v. a.* To hold or possess, as a tenant.

Tenantable, *a.* In a state of repair suitable for a tenant; fit to be rented.

Tenantableness, *n.* The state of being tenantable.

Tenantless, *a.* Having no tenant; unoccupied.

Tenantry, *n.* The body of tenants.

Tenant's (or Tennant's) Harbor, in *Maine*, a p. v. of Knox co., on the Atlantic, 14 m. S.S.W. of Rockland.

Tenasserim Provinces, in British Burmah, a long, narrow and mountainous strip of territory in Further India, separated from Siam on the E. by a mountain-chain, and having on their W. the Indian Ocean and the Salween River. Ext. 500 m. long, and 40 to 80 broad. A canal through this peninsula and Siam is projected, connecting the bay of Bengal with the Gulf of Siam, commencing at Kraw, on the W. coast. Area, 33,000 sq. m. Pop. 150,000. — Also, a river of Further India, falling, after a course of 200 m., into the Indian Ocean.

Tenby, a small town and fashionable watering-place of England, in Wales, situated on Caernarthen Bay, at the mouth of the Bristol Channel, 11 m. from Pembroke; pop. 3,200.

Tenche, (*tānce*), *a.* town of France, dept. of the Haute Loire, on the Lignon, 9 m. from Yssengeaux; pop. 6,746.

Tench, *n.* [Fr. *tanche*.] (*Zoöl.*) *Tinea vulgaris*, a fish Fig. 2481. *TENCH*, (*Tinea vulgaris*.)

of the Carp family, or *Cyprinidae*, common in most of the lakes of Europe. Like the carp, the tench is extremely tenacious of life. It is about 24 inches long, and of a deep yellowish-brown (sometimes golden and greenish) color.

Tend, *v. a.* [Lat. *tendere*.] To accompany as an assistant or protector; to watch; to guard; to look after. — To be attentive to; to attend. — *To tend a vessel.* (Naut.) To turn or swing round, as a vessel when at single anchor, or moved by the head in a tide-way, at the beginning of the flood or ebb.

—*v. n.* To move in a certain direction. — To be directed to any end or purpose; to aim. — To contribute. — To wait; to attend, as servants. (R.)

Tendency, *n.* [Fr. *tendance*, from Lat. *tendo*, to stretch.] Direction or course towards any place, object, effect, or result; inclination; drift.

Tender, *n.* One who attends or takes care of; a nurse. — On railways, a carriage which attends on the locomotive to supply the fuel.

(Naut.) A small vessel employed to attend a larger one for supplying her with provisions and other stores, or to convey intelligence, and the like.

(Law.) An offer to deliver something, made in pursuance of some contract or obligation, under such circumstances as to require no further act from the party making it to complete the transfer. See **LEGAL TENDER**.

—*v. a.* To offer in payment or satisfaction of a demand, for saving a penalty or forfeiture. — To offer in words, or to exhibit or present for acceptance.

—*a.* [Fr. *tendre*; It. *tenero*; Lat. *tener*, soft, delicate.] Easily impressed, broken, bruised, or injured; not firm or hard; as, "the tender grass." (Millon.) — Very sensible to impression or pain; easily pained. — Not hardy or able to endure hardship; delicate; effeminate. — Weak; feeble; as, *tender age*. — Susceptible of the softer passions, as love, compassion, kindness; forgiving; kind; merciful; pitiful. — Exciting kind concern; expressive of the softer passions; dear; precious. — Careful to save inviolate, or not to injure.

"I have been tender of every particular person's reputation." Tillotson.

—Unwilling to cause pain; mild. — Apt to give pain; as, a *tender subject*. — Adapted to excite feeling or sympathy.

Tender-hearted, *a.* Having great sensibility; susceptible of impressions or influence; very susceptible of the softer passions of love, pity, or kindness.

Tenderling, *n.* One made tender by too much kindness; a fondling. (R.) — The first horns of a deer.

Tenderloin, *n.* The tender, fleshy part in the hind-quarter of beef.

Tenderly, *adv.* With tenderness; mildly; gently.

Tenderness, *n.* The state or quality of being tender, or easily broken, bruised, or injured; softness; brittleness. — The state of being easily hurt; soreness. — Susceptibility of the softer passions; sensibility. — Kindness; compassion; pity; humanity; benevolence. — Extreme care or concern not to give or commit offence. — Cautious care to preserve or not to injure. — Softness of expression; pathos.

Tendinons, *a.* [It. *tendinoso*.] Pertaining to a tendon; partaking of the nature of tendons. — Full of tendons; sinewy.

Tendon, *n.* [Fr. and Sp.; Lat. *tendo*.] (Anat.) The white, glistening bands or cords, commonly called *sinews*, which are continued from both ends of muscles to attach them to the bones; the upper tendon, which is the shortest, forms the head, or the fixed point of the muscle's origin; the lower, and longest, its insertion.

Tendo Achilles. See **ACHILLIS TENDO**.

Tendre, (Mont.) (*ten'dr.*) One of the Jura mountains of Switzerland, on the E. side of the Lake of Joux. Height, 5,338 feet above sea-level.

Tendrill, *n.* [Fr. *tendron*.] (Bot.) Any slender twining or clasping part or organ by which a plant attaches itself to some other object.

—*a.* Clasping; climbing, as a tendril.

Tenebrific, **Tenebrificous**, *a.* [From Lat. *tenebra*, darkness, and *facere*, to make.] Causing darkness.

Tenebrious, *a.* Dark; gloomy.

Tenebrous, *a.* Tenebrous.

Tenebrosity, *n.* Darkness; gloom.

Tenebrous, **Tenebrose**, *a.* Dark; gloomy.

Tenebrousness, *n.* State or quality of being tenebrous.

Tenebrionidae, *n. pl.* (Zool.) A family of coleopterous insects, distinguished by having the elytra not

monly called the *Meal-worm*, may be taken as the type of the family. This insect frequents corn-mills, granaries, bake-houses, &c., doing much damage by devouring flour, meal, bran, &c. It is also very destructive to ship-biscuit packed in casks, which, when opened, are found eaten through in holes by these insects and their larvæ.

Tenedos. [Turk. *Bogdsha-adassi*.] An island belonging to Turkey in the Grecian Archipelago, off the coast of Asia Minor, and adjoining ancient Troy, 14 m. S. of the Straits of Gallipoli. It is 5 m. long, by 3 wide, and famous for its Muscadine wine. — Also, the name of a town, the cap. of the island.

Tenement, *n.* [Fr., from Lat. *teneo*, to hold.] A house; a building for a habitation; or an apartment in a building, used by one family.

(Law.) In its largest acceptation, denotes anything that may be held in the legal sense; viz., all corporeal hereditaments, and incorporeal hereditaments of a permanent nature issuing out of the same, as lands, houses, right of common, franchises, offices, &c. In its more narrow and popular signification, it is applied only to houses and other buildings.

Tenemental, *a.* Pertaining to tenanted lands; that is, or may be, held by tenants.

Tenementary, *a.* Held by tenants.

Tenoid, *a.* [Lat. *tenia*, a tape-worm.] Resembling, or pertaining to, tape-worms.

Teneriffe, (*ten-e-rif*.) See **CANARY ISLANDS**.

Tenès, a seaport-town of Algeria, 190 m. W. of Algiers; pop. 7,552.

Tenesmus, *n.* [Gr. *teinesmos*, from *teinein*, to stretch.] (Med.) A continuous and painful sensation of the rectum; a constant straining and attempt to empty the bowel, with no result. This very distressing pain is a symptom or an effect of diarrhoea or dysentery. Sitting on a vessel filled with hot water for a few minutes has been recommended for this exhausting complaint, but the best and most expeditious remedy is a suppository of three or four grains of soft opium passed up the rectum, the patient assuming the recumbent position till the opium begins to act.

Tenet, *n.* [Lat., from *tenere*, to hold.] That which a person firmly believes or maintains as a part of his creed; doctrine; opinion; principle; dogma.

Tenfold, *a.* Ten times more.

Teniers, DAVID, the ELDER, a celebrated painter of the Flemish school, was B. at Antwerp, in 1582; studied under Rubens, and afterwards at Rome. On his return to his native country, he occupied himself principally in the delineation of fairs, rustic sports, and carousals, &c., which he exhibited with such truth, humor, and originality, that he may be considered the founder of a style of painting which his son afterwards brought to perfection. His pictures are usually of a small size, and are highly valued. D. 1649.

TENIERS, DAVID, the YOUNGER, son of the preceding, was B. at Brussels, in 1610. In his youth, such was his facility of imitating the styles of various masters, that he was called the Proteus, and the Ape of painting. He confined himself principally to the same kind of subjects as his father, but excelled him in correctness and finish. D. 1694. The younger T. rose to the highest reputation in his profession, and was patronized by Christina of Sweden, the King of Spain, and other illustrious personages.

Ten-mile Creek, in *Pennsylvania*, enters the Monongahela River from Greene co.

Ten-mile Valley, in *Pennsylvania*, a village of Greene co.

Tennantite, *n.* (Min.) A sulphide of copper, arsenic, and iron, occurring in lead-gray crystals.

Tenne, TAWNY, or BRUSH, *n.* [Sp. *tanetto*, a chestnut.] (Her.) A color not often used in coat-armour. It is the same as *tawny*, and is composed of red, yellow, and brown; which, when mixed together, form a kind of chestnut color. By some heralds it is called *brusk*, and in engraving it is expressed by diagonal lines drawn from the sinister chief point, and traversed by horizontal ones.

Tennemann, WILHELM GOTTLIEB, a German philosopher and historian of philosophy, B. 1761, at Brembach, near Erfurt. He became, in 1804, ordinary professor of philosophy at the University of Marburg, a post which he filled till his death. His most important work is the *Geschichte der Philosophie*, published in eleven volumes, between 1798-1809. His well-known *Manual of the History of Philosophy*, of which an English translation, by Johnson, appeared in 1832, is an epitome of the *History*. Among T.'s other works, are an exposition of the *System of the Platonic Philosophy*, and German translations of Locke's *Essay on the Human Understanding*, and Hume's *Inquiry concerning the Human Understanding*. T. was a disciple of the Kantian philosophy, and employed its terminology. D. 1819.

Tennessee, one of the Southern States of the American Union, in the basin of the Mississippi, between Lat. 35° and 36° 40' N., and Lon. 82° and 90° W., having N. Kentucky and Virginia, E. North Carolina, S. Georgia, Alabama, and Mississippi, and W. the river Mississippi, which divides it from Arkansas and Missouri; area, 45,600 sq. m. The E. part of this State is intersected by the Alleghany chain, which here sometimes rises to the height of 2,000 ft.; the middle part is hilly, while the W. portion is an extensive undulating plain. Principal rivers, after the Mississippi, the Tennessee and Cumberland, both tributaries of the Ohio. T. is generally well watered, and, except in the mountainous parts, comprises a good deal of excellent land. Eastern T. is crossed by several ridges of the Alleghany Mountains, some of which have elevations of 2,000 feet; the middle region between the Cumberland and Tennessee river is

hilly, and the west level. The western portion of the State, between the Mississippi and the Tennessee, is of the alluvial and cretaceous formation of the shores of the Atlantic and Gulf of Mexico.

Extensive iron mines lie between the Tennessee and Cumberland rivers. In the limestone regions are numerous caves, mostly unexplored. Several in the Cumberland Mountains are 100 feet deep, and miles in extent. A considerable river has been discovered in one at a depth of 400

feet; another opening perpendicularly in a mountain has never been fathomed. In some of these caves are large deposits of fossil bones of extinct animals. In many places are interesting remains of ancient mounds and fortifications. Agriculture is the chief occupation of the inhabitants. The products are much the same as those of Kentucky, with the addition of cotton. Indian corn, wheat, and oats are the principal crops. Cotton is grown in most parts of the State. Tobacco is also cultivated to a considerable extent. The central portion of middle T. ranges from 250 to 500 feet above sea-level, and is noted for its great fertility. It forms the garden spot, not only of the State, but of the South, producing in great luxuriance all the leading crops of the temperate zone. In western T. the soil between the Mississippi and Tennessee rivers is finely adapted to all crops that require a fast growth, especially garden stuffs and small vegetables. These are sent in large quantities to the Northern markets, anticipating the gardens in that locality by several weeks, and giving large returns. The climate of T. is temperate and very salubrious, excepting in the swampy districts of the northwest. The eastern division is noted for its pure, bracing mountain air. The State is richly wooded with pine, oak, hickory, sugar-maple, cedar, black-walnut, and other hardwood timber, the forests of this timber forming a great natural source of wealth. — **Minerals.** East T. is noted for its numerous fine quarries of marble, some of which are widely celebrated for their beauty. Among the other valuable rocks of this region are its granites and its deposits of lithographic stone. The carboniferous deposits of the Cumberland plateau form a part of the great Appalachian coal-field, the coal measures covering an area of 5,100 sq. m., and containing veins of exceptional thickness. The available supply of bituminous coal has been estimated to be fully equal to that of Pennsylvania, if not to exceed it. Iron is as well represented as coal, the deposits of ore in different sections of the State being very large. Other minerals include copper and zinc, and there are several famous mineral springs, much resorted to by invalids. The development of the coal and iron mines is increasing, the production of pig-iron having been greatly enhanced within recent years. The annual yield of the coal mines is over 2,500,000 tons, and of iron in proportion, a production which is susceptible of an immense increase. — **Manuf.** The production of iron has been followed by the development of various iron-manufacturing industries, including machinery, agricultural implements, &c. There are also numerous woollen and cotton factories, paper and flour mills, with tobacco factories, potteries, &c. — **Education.** The State is well provided with public schools, while the Peabody fund supplies normal school instruction, and there are many private schools. There are over 20 collegiate institutions, at whose head is the Vanderbilt University at Nashville. State asylums for the deaf and dumb, the blind, and the insane exist. The State is divided into 96 counties, viz.:

Anderson,	Fentress,	Lake,	Rhea,
Bedford,	Franklin,	Lauderdale,	Roane,
Benton,	Gibson,	Lawrence,	Robertson,
Bledsoe,	Giles,	Lewis,	Rutherford,
Blount,	Grainger,	Lincoln,	Scott,
Bradley,	Greene,	Loudon,	Sequatchie,
Campbell,	Grundy,	Macon,	Sevier,
Cannon,	Hamblen,	Madison,	Shelby,
Carroll,	Hamilton,	Marion,	Stewart,
Carter,	Hancock,	Marshall,	Sumner,
Cheatham,	Hardeman,	Maury,	Sullivan,
Chester,	Hardin,	McMinn,	Sumner,
Claiborne,	Hawkins,	McNairy,	Tipton,
Clay,	Haywood,	Meigs,	Trousdale,
Cocke,	Henderson,	Monroe,	Unicoi,
Coffee,	Henry,	Montgomery,	Union,
Crockett,	Hickman,	Moore,	Van Buren,
Cumberland,	Houston,	Morgan,	Warren,
Davidson,	Humphreys,	Obion,	Washington,
Decatur,	Jackson,	Overton,	Wayne,

Fayette,	Knox,	Putnam,	Wilson.

Cities and Towns. Nashville (the capital), Memphis, Knoxville, Columbia, Shelbyville, Lebanon, Pulaski, Jackson, Brownsville, Franklin, Greenville, Chattanooga, &c. — **History.** In 1756 a settlement was formed near Knoxville, then a part of North Carolina. Nashville was settled near the close of the Revolution; in 1790 Tennessee was organized as a territory with Kentucky; and admitted, in 1796, into the Union as a

Fig. 2483. — SEAL OF THE STATE.

Fig. 2482. — TENEBRIO MOLITOR.

1 and 2, perfect insect; 3, pupa; 4, larva (meal-worm).

soldered together, with the wings fitted for flight. The *Tenebrio molitor* (Fig. 2482), the larva of which is com-

separate State. In January, 1861, a proposition to secede from the Union was defeated; but in June, carried by a majority of 57,667. In ten months the State raised 50 regiments for the Southern Confederacy; while 5 or 6 were also recruited for the Union. The State was the scene, at Knoxville and Chattanooga, of some of the most important operations of the war. For years after the general pacification of the country, local disorders continued in *T.* to disturb the tranquillity of the community, and it was only in 1870 that, after the adoption of the 15th amendment to the Constitution of the U. States, and of a new State constitution, *T.* was readmitted to representation in Congress. Pop. (1880) 1,542,359; (1900) 1,767,518; (1897) 1,861,550.

Tennessee, a river of the U. States, and the principal tributary of the Ohio, formed by the junction of the Clinch and Holston rivers, at Kingston, in Roane co., Tennessee. It flows first S.W. to Chattanooga, in Hamilton co., thence S.W. and W., passing through N. Alabama, to the N.E. of Mississippi, from whence it proceeds N., passing through Tennessee and Kentucky, and falling into the Ohio River at Paducah, 48 m. from its mouth. Its entire length is estimated at 800 m., and including the Holston, 1,100 m. It is navigable for steamboats 280 m. to Florence, at the foot of the Muscle Shoals, above which it is again navigable 500 m. to Knoxville.

Tennessee, in Illinois, a post-village and township of McDonough co., 51 m. N.E. of Quincy.

Tennis, *n.* [Fr. *tenir*, to hold.] A game in which a ball is kept up, or driven continuously to and fro, by several persons striking it alternately, either with the hand or a small bat, called a racket, the object being to keep the ball in motion as long as possible, without allowing it to fall to the ground. This game was very popular with the nobility in most of the states of Europe, in the 16th century.

Tennyson, ALFRED, an English poet, b. in Somerby, Lincolnshire, 1809, was educated by his father, rector of Somerby, and in due course proceeded to Cambridge. With the exception of a volume of poems published in conjunction with his brother Charles, when they were boys, and a prize poem, composed whilst an undergraduate at Cambridge, *T.* did not publish anything till

Fig. 2484. — TENNYSON.

1830, when he put forth a collection of poems, chiefly lyrical, which contained, among other pieces, *Mariana*; *Lilian*; *The Mermaid*; *Recollections of the Arabian Nights*; *The Dying Swan*; *All Things Will Die*; and *The Sea-Fairies*. Two years after, *T.* published a second volume containing, in addition to several of his former productions improved and altered, *The Miller's Daughter*; *The Lotus-Eaters*; *Locksley Hall*; *Lady Clara Vere de Vere*; *The Talking Oak*, &c. In 1847, *T.* gave to the public *The Princess*, and shortly after he was appointed Poet Laureate. The *Ode on the Death of the Duke of Wellington* appeared in 1852, *Maud* in 1855, and *The Idylls of the King* in 1859. A gorgeously illustrated edition of his poems has been published, upon which the best artists of the time have been employed. In 1856 he was created D. C. L. of the University of Oxford. In 1864 was published *Enoch Arden*, the most popular of all his books, having reached in his country alone a circulation of over one hundred thousand copies. He also wrote *Holy Grail* (1869); *Queen Mary*, a drama (1875). *T.* led a retired life at Farringford, Isle of Wight, and in a residence that he built in a picturesque valley in Surrey. He was raised to the peerage as Lord Tennyson in 1883, and died Oct. 6, 1892.

Ten'on, *n.* [Fr., from Lat. *teneo*, to hold.] (*Carp. and Joinery*.) The projection left at the end of a piece of timber to be inserted into a socket, or *mortise*, made to receive it. (See Fig. 1862.)

Ten'or, *n.* [Lat., from *teneo*, to hold.] Stamp; character. —Sense intended; purport; substance; general course or drift; as, the *tenor* of a letter.

(*Mus.*) The most common natural pitch of a man's voice in singing, or the higher of the two kinds of voices usually belonging to adult males; hence the part of a tune adapted to this voice, the second of the four parts, reckoning from the bass. —The person who sings the tenor, or the instrument that plays it.

(*Law*.) The exact copy of a writing, pursuing the course of its words as they succeed one another; — the true intent and meaning of an instrument.

Tenot'omy, *n.* [From Gr. *tenon*, a tendon, and *temnēin*, to cut.] (*Surg.*) The operation of dividing a tendon.

Ten Pound Island, in Massachusetts, in Ann Harbor, immediately S. of Gloucester, contains a fixed light 45 ft. above the sea; Lat. 42° 35' N., Lon. 70° 40' W.

Ten'ree, *n.* (*Zoöl.*) A small insectivorous quadruped of Madagascar, allied to the hedgehog; it forms the type of the genus *Centetes*.

Ten'sas, or TENSAS, a river of Louisiana, rises in Carroll parish, and unites with the Washita and Trinity, after a S. course of 250 m., for 150 of which it is navigable for steamboats during 6 months of the year.

Tensas, in Louisiana, an E.N.E. parish, bordering on the Mississippi River; area, 680 sq. m. *Rivers*, Tensas River and Macon Bayou. *Surface*, level; *soil*, fertile. *Cap.* St. Joseph.

Tense, *a.* [Lat. *tensus*, from *tendo*, to stretch.] Drawn tight; strained to stiffness; rigid; not lax; stretched.

[Lat. *tempus*.] (*Gram.*) The particular modification of a verb which expresses the time at which an action is conceived as taking place. The three primary or simple *T.* are the present, past, and future; but these admit of various modifications in different languages. In English there are six *T.* usually recognized; namely, the present, imperfect, perfect, pluperfect, future, and future perfect.

Tense'ly, *adv.* With tension.

Tense'ness, *n.* State of being tense or stretched to stiffness.

Tensibil'ity, *n.* The state of being tensile.

Ten'sible, *a.* Capable of being extended. (*R.*)

Tensile, (*ten'sil*), *a.* Capable of extension.

Tensil'ity, *n.* The state or quality of being tensile.

Tension, (*ten'shun*), *n.* [Fr.; Lat. *tensio*, from *tendere*.] The act of stretching or straining. —The state of being stretched or strained to stiffness. —The degree of stretching to which a wire, cord, piece of timber, &c., is strained by drawing it in the direction of its length.

(*Mech.*) The force by which a bar or string is stretched. Thus, when a weight is suspended by a string, the tension at every point of the latter is equal to that weight.

(*Physics*.) Gases are bodies whose molecules are in a constant state of repulsion, in virtue of which they possess the most perfect mobility, and are continually tending to occupy a greater space. This property of gases is known by the names *expansibility*, *tension*, or *elastic force*, from which they are often called *elastic fluids*.

Ten'sity, *n.* The state of being tense; tenseness.

Ten'sive, *a.* [Fr. *tensif*.] Giving a sensation of stiffness or contraction.

Ten'sor, *n.* [From Lat. *tendere*, to stretch.] (*Anat.*) The name of some muscles whose action is to stretch or make rigid some part. One of the most important is the *tensor vaginæ femoris*, or the muscle that stretches the thigh and adjacent parts.

Tent, *n.* [Fr. *lente*; Lat. *tentorium*.] A pavilion or portable lodge, consisting of canvas or other coarse cloth, stretched and sustained by poles, used for sheltering persons from the weather. Dwelling in tents was very general in ancient times among eastern nations. The patriarchs Abraham, Isaac, and Jacob dwelt in tents; and on the exodus of the Israelites from Egypt, throughout their peregrinations until they obtained the promised land, and to some extent afterwards, they adopted the same

kind of habitation. But the people most remarkable for this unsettled and wandering mode of life are the Arabs, who from the time of Ishmael to the present have continued the custom of dwelling in tents. Amid the revolutions which have transferred kingdoms from one possessor to another, these wandering tribes still dwell in tents unsubdued and wild as was their progenitor. This kind of dwelling is not, however, confined to the Arabs, but is used throughout the continent of Asia, and by the Indians of N. America. In modern times and among civilized nations, tents are almost exclusively used as a shelter for soldiers when in active service.

(*Surg.*) A roll of lint or linen, used to dilate an opening in the flesh.

—*v. n.* To lodge, as in a tent; to tabernacle. (*R.*)

—*v. a.* To cover with tents; as, a *tented* field. —To probe; to search, as with a tent. —To keep open with a surgical tent.

Tentacle, (*ten'ta-kl*), *n.* [Fr.; L. Lat. *tentaculum*.] (*Zoöl.*) A term used in a restricted sense to signify the elongated, filiform, inarticulate appendages of the mouth of Annelides, but also applied to all appendages, whether jointed or not, which are used as instruments of exploration and prehension. Thus, the oral arms of the Polyps, the prehensile processes of Cirripeds and Annelides, the cephalic feet of the Cephalopods, the barbs of fishes, are termed *tentacles*.

Ten'tative, *a.* [Fr. *tentatif*.] Trying; essaying.

—*n.* [Fr.] An essay; a trial.

Ten'tatively, *adv.* In a tentative manner.

Tent'-bed, *n.* A post-bedstead, having the roof formed like a tent.

Tent'ed, *a.* Covered or furnished with tents.

Ten'ter, *n.* [Lat. *tendo*, *tentus*, to stretch.] A stretcher; a machine for stretching cloth, by means of hooks called *tenter-hooks*.

—*v. a.* To hang or stretch on tenters.

—*v. n.* To admit extension, as by tenters.

Ten'terden, a town of England, in Kent, near the river Rother, 24 m. from Canterbury. Pop. 4,500.

Tenth, *a.* The ordinal of ten; the first after the ninth. —*n.* The tenth part; tithe; the tenth part of annual produce or increase.

(*Mus.*) An interval, which is the octave of the chord

Tenth'ly, *adv.* In the tenth place.

Tenthredin'etæ, *n. pl.* (*Zoöl.*) A family comprising Hymenopterous insects in which the female has an ovipositor consisting of double saws lodged under the body, and covered by two pieces which serve as a sheath. They are sluggish in their habits, and fly only in the warmest days. Their larvæ have from 18 to 22 legs, and are found in communities on the leaves of birch and alder, holding on by their true legs, while the rest of the body is curved curiously upwards; or appearing like slugs on the leaves of the pear and other fruit-trees, and those of the rose; while others feed upon the stems of plants, or roll up a leaf, or construct cases of particles of leaves to hide in.

Tenni'ros'tres, *n. pl.* [Lat. *tenuis*, slender, and *rostrum*, a beak.] (*Zoöl.*) A tribe of insectivorous birds, including those which have a long and slender bill.

Tenu'ity, *n.* [Fr. *ténuité*; Lat. *tenuitas*.] State of being stretched out or drawn out; thinness; smallness in diameter; exility; thinness (applied to a broad substance), and slenderness (applied to one that is long); rarity; rareness; thinness, as of a fluid; simplicity; plainness.

Tenure, (*yūr*), *n.* [From Fr. *tenir*, to hold.] (*Eng. Law*.) The manner of holding lands or tenements of a superior, or the feudal relation which subsists between lord and vassal in respect of these. All land in England is held mediately or immediately of the crown, and thus, ultimately, all land is held of the king, who is lord paramount. Tenants holding immediately under the king, when they grant out portions of their lands to inferior persons, become, with respect to these, lords, as they were tenants with respect to the king; thus partaking of a middle nature, and hence called *mesne* or *middle lords*.

—Manner of holding or having possession of anything.

Teocal'li, *n. pl.* Pyramidal buildings erected for religious worship by the ancient inhabitants of Mexico.

Tepea'ka, or **Tepeaca**, a town of Mexico, 30 m. from Puebla. Pop. unascertained.

Tepecotah, in Minnesota, a village of Wabashaw co., on the Mississippi River, abt. 7 m. S.E. of Wabashaw.

Tepefac'ion, *n.* Act or operation of making tepid or moderately warm; state of being made tepid.

Te'pefy, *v. a.* [Lat. *tepefacio*—*tepeo*, to be moderately warm, and *facio*, to make.] To make tepid or moderately warm.

—*v. n.* To become moderately warm.

Teph'roite, *n.* [Gr. *tephra*, ash-gray.] (*Min.*) A native silicate of manganese.

Tephro'sia, *n.* [From Gr. *tephros*, ash-colored, gray.] (*Bot.*) A genus of herbs or shrubs, with unequally pinnate leaves, order *Fabaceæ*. The Goat's Rue or Catgut, *T. Virginiana*, is 1-2 feet high, with beautiful white and purple flowers. It is found in dry, sandy soil, from Canada to Florida.

Tepic', a territory of Mexico; area, 11,275 sq. m. Pop. (1897) 152,480.

Tep'id, *a.* [Lat. *tepidus*.] Moderately warm; lukewarm.

Tep'idity, **Te'pidness**, *n.* Moderate warmth; lukewarmness.

Te'por, *n.* [Lat.] Moderate or gentle warmth; tepidity.

Tequandama Falls, in S. America. See BOGOTÁ (RIO DE).

Te'rah. (*Script.*) The son of Nahor, and father of Nahor, Haran, and Abraham (*Gen.* xi. 24), begat Abraham at the age of 72 years, in Ur of the Chaldeans. Upon Abraham's first call to remove into the land of promise, Terah and all his family went with him as far as Haran, in Mesopotamia, about B. C. 1918 (*Gen.* xi. 31, 32). He died there the same year, aged 275 years. Scripture intimates plainly that Terah had fallen into idolatry, or had for a time mingled some idolatrous practices with the worship of the true God (*Josh.* xxiv. 2, 14).

Teramo, (*tai-ra'mo*), (anc. *Interamna*), a town of S. Italy, prov. of Abruzzo (Ultra I.), 28 m. N.E. of Aquila. It carries on an active trade in corn, wine, and olives. Pop. 28,253. In the plain below *T.* took place, July 27, 1460, between the army of John, Duke of Anjou, and the Milanese allies of Ferdinand I. of Aragon, one of the most sanguinary battles ever fought in Italy.

Ter'aphim. (*fīm*), *n. pl.* [Heb., commonly translated *idols*.] (*Script.*) This word is used 13 or 14 times in the Old Testament, appearing to be applied to household gods, where worship was sometimes blended with that of Jehovah. The images of Rachel (*Gen.* xxxi. 19, 30) were teraphim.

Teratog'eny, *n.* The formation of monsters.

Teratol'ogy, *n.* [Gr. *teras*, monster, and *logos*, a discourse.] Bombast in language.

(*Physiol.*) A name given by Geoffroy St. Hilaire to the doctrine of congenital deformities.

Teree, *n.* See TIERCE.

Terceira, (*ter-sai-e-ra*), a mountainous island near the coast of Africa, forming one of the group of the Azores; Lat. 38° 38' 9" N., Lon. 37° 13' 7" W. Area, 223 sq. m. *Chief town*, Angra. Pop. 50,000.

Tercent'enary, *a.* [Lat. *ter*, thrice, and *centum*, a hundred.] That comprises three hundred years.

Alfred Tennyson

1809-1892

Terce'ro, a river of the Argentine Republic, rises in the state of Cordova, and flowing S.E. joins the Parana, abt. 30 m. N. of Rosario.

Ter'cet, *n.* (*Mus.*) A third.

Ter'ebinth-tree, *n.* (*Bot.*) *Pistachia terebinthus*. See PISTACHIA.

Terebra'n'tia, (-she-ah), *n.* (*Zoöl.*) A section of hymenopterous insects, characterized by the possession of an anal instrument organized for the perforation of the bodies of animals, or the substance of plants. The borer (*terebra*) is peculiar to the female, and is composed of three long and slender pieces, of which two serve as a sheath for the third.

Terebra'tula, *n.* [*Lat. terebro*, to bore.] (*Zoöl.*) A genus of deep-sea brachiopodous mollusca, in which one of the valves is perforated for the transmission of a peduncle.

Tere'do, *n.* [*Lat. tere'don*, the ship-worm.] (*Zoöl.*) A genus of lamellibranchiate mollusks, family *Pholadidae*. See BORING-WORM.

Terek', a considerable river of Asiatic Russia, gov't of Caucasus. After a course of 350 m., it divides in three branches, and falls into the Caspian Sea in Lat. 44° N., Lon. 46° to 48° E.

Terence, (PUBLIUS TERENTIUS AFRICANUS), a celebrated author of comedies in the Latin tongue, supposed to have been born in Carthage about 194 B. C. He was carried to Rome as a slave, and brought out his first play, the *Andria*, in 166, and the others now extant between that period and 160 B. C. Shortly afterwards he went on a literary journey to Greece, and having translated the plays of Menander, is supposed to have died on his voyage home, about 146 B. C.

Terenite, *n.* (*Min.*) A kind of altered scapolite.

Terete', *a.* [*From Lat. tero*, to rub.] (*Bot.*) Cylindrical, and somewhat tapering.

Ter'gal, *a.* [*Lat. tergum*, the back.] Relating to the back; dorsal.

Tergem'inons, *a.* [*Lat. ter*, thrice, and *geminus*, twin.] Threefold.

Ter'giant, *a.* [*Lat. tergum*.] Showing the back part; recumbent.

Tergiferous, *a.* [*Lat. tergum*, and *fero*, to bear.] (*Bot.*) Dorsiferous.

Tergiversate, (*ter-jiv'er-sät*), *v. n.* [*Fr. tergiverser*, from *Lat. tergum*, and *verso*, to turn.] To use evasion; to shift; to boggle.

Tergiversation, *n.* [*Fr.*] A shifting; shift; subterfuge; evasion; change; fickleness of conduct.

Ter'giversator, *n.* [*Lat.*] One who practises tergiversation.

Ter'gum, *n.* [*Lat.*, the back.] (*Zoöl.*) The upper or supine surface of the abdomen, in insects.

Terlizzi, (*lair-lit'se*), a town of S. Italy, 60 m. from Taranto, and 7 from the Adriatic; pop. 13,136.

Term, *n.* [*Fr. terme*; *Lat. terminus*.] A limit; a boundary; a bound; a confine; the extremity of anything; that which limits its extent.—The time for which anything lasts; any limited time.—The limitation of an estate; or, rather, the whole time or duration of the holding of an estate.—The time in which a court is held or open for the trial of causes.—The time during which instruction is regularly given to students in universities and colleges.—A word or expression; the word by which a thing is expressed; that which fixes or determines ideas; a word or expression that denotes something peculiar to an art.—The subject or the predicate of a proposition in logic.—In algebra, a member of a compound quantity.

—*pl.* Conditions; propositions stated or promises made, which, when assented to or accepted by another, settle the contract and bind the parties.

—*v. a.* To name; to call; to denominate.

Ter'magane'y, *n.* Turbulence; tumultuousness.

Ter'magant, *a.* [*Corrupted from Teregant*, the name of an old Saracen deity, represented in old plays as of a most violent character.] Tumultuous; turbulent; boisterous or furious; quarrelsome; scolding.

—*n.* A boisterous, brawling, turbulent woman; a shrew; a virago.

Term'er, *n.* One who travels up from the country to a law term for the sake of tricks to be practised, and for other purposes;—sometimes called *term-trotter*.—One who holds an estate for a term of years, or for life.

Ter'minable, *a.* That may be terminated; limitable.

Ter'minal, *a.* [*From Lat. terminus*.] Forming the end or extremity; terminating; of, or belonging to, a terminus.

—*n.* The extremity; the end.

Termina'tia, *n.* [*From Lat. terminus*, the leaves being in bunches at the end of all the branches.] (*Bot.*) A genus of trees or shrubs, order *Combretaceae*, dispersed over the tropics of both hemispheres. The astringent fruits of several of them are used in considerable quantities, chiefly by calico-printers, under the name of *Myrobalans*, for the production of a permanent black. The principal kinds of Myrobalan are the Chebulic, the produce of *T. chebula*, which are smooth and oval; and the Belleric, *T. Bellerica*, obscurely five-angled, and covered with grayish silky down.

Ter'minate, *v. a.* [*Fr. terminer*, from *Lat. terminus*.] To set bounds to; to mark off by boundaries; to bound; to limit; to set the extreme point or side of; to put an end to; to complete; to finish; to close; to end.

—*v. n.* To be bounded or limited; to close; to come to the farthest point in space; to close; to come to a limit in time.

—*a.* Limited; bounded; that comes to an end.

Termina'tion, *n.* [*Lat. terminatio*.] Act of limiting or setting bounds; act of terminating; act of ending or concluding; bound; limit in space or extent; end in

time or existence; the end or ending of a word; the syllable or letter that ends a word; end; conclusion; result; last purpose.

Ter'minational, *a.* Pertaining to, or forming the end or concluding syllable.

Ter'minative, *a.* That terminates; absolute; not relative.

Ter'minator, *n.* One who, or that which, terminates.

Ter'miner, *n.* (*Law.*) See OYER.

Termini, (*lair'me-ne*), a seaport-town of Sicily, in the Val di Mazzara, at the mouth of the river Termini, 23 m. from Palermo; Lat. 38° 5' N., Lon. 13° 45' E. Pop. 10,000.

Ter'minists, *n. pl.* (*Ecol. Hist.*) A name given to a class among the Calvinists whose tenet it is (or was, for such opinions hardly exist at the present day) that there are persons to whom God has fixed, by a secret decree, a certain term before their death, after which He no longer wills their salvation, however long they may live.

Ter'minology, *n.* [*Gr. termōn*, a boundary, *logos*, a discourse.] The name given in every science or art, to the definition of the words or phrases peculiarly employed in it; otherwise called *technical terms*.

Ter'minos, (LAGUNA DE), in Mexico, a seaport-town of Yucatan; Lat. 18° 38' 24" N., Lon. 91° 50' 42" W. Pop. abt. 2,500.

Ter'minos Lake, an inlet of the Gulf of Mexico, dividing the Mexican states of Tabasco and Yucatan; between Lat. 18° and 19° N., Lon. 91° and 92° W.; 70 m. long and 40 m. wide.

Ter'minus, (*Myth.*) A divinity among the Romans supposed to preside over boundaries, frontiers, and landmarks. He was represented with a human head and neck, placed on a plinth, or column, and being destitute of legs or arms, was thus supposed to testify his immovable and steadfast character.

Ter'minus, *n.*; *pl.* TERMINI. [*Lat.*] A boundary line; boundary; bound; limit; a column; also, the extreme point, as either end of a railway.

Ter'mite, *n.* [*Lat. termes*, a bough or twig.] (*Zoöl.*) One of the TERMITIDÆ, *q. v.*

Termit'idæ, *n. pl.* (*Zoöl.*) The Termitæ family, comprising neuropterous insects divided into several genera, which have the body depressed, wings when present longer than the body and laid horizontally on the back, head rounded, thorax nearly square or semicircular, abdomen with two small conical points at the extremity, and the legs short (Fig. 2486). *T.* inhabit warm countries mainly, and are known by the name of *White Ants*. They live in communities, whose numbers are great. In their communities there are five classes—males, females, workers, neuters, and soldiers. The workers, neuters, and soldiers seem all to be imperfectly developed females. They are among the most destructive of all insects, particularly in the larva state, devouring all kinds of wooden furniture, boards, timber, and all the

Fig. 2486.

1 and 2, perfect termites; 3, soldier; 4, worker.

wood-work of houses, excavating galleries in all directions in these materials, leaving only a thin surface-crust or shell untouched, which on the slightest shock crumbles to pieces. A beautiful edifice in the Isle of France was thus entirely destroyed in a few months after its completion. Some species of this family raise their nests or domiciles above the surface of the ground, in the form of pyramids or mounds, sometimes surmounted with a solid roof; they are so high—ten or twelve feet sometimes—and numerous, that they resemble a little village (Fig. 1048). Some species make their nests in the form of a globular mass upon trees. Having become perfect insects, *T.* leave their retreats and fly off for sexual reproduction.

Ter'mor, *n.* (*Law.*) One who holds lands and tenements for a term of years, or life.

Tern, *n.* (*Zoöl.*) See STERNA.

Ter'nary, *a.* [*Lat. ternarius*, from *terni*, three each.] Proceeding by threes; consisting of three.

—*n.* The number three.

Ter'nate, *a.* [*Lat. ternus*, three (distributive).] (*Bot.*) A term applied when three things are in opposition round a common axis; a whorl of three; as, *ternate leaves*, *i. e.*, leaves with three leaflets.

Ternaux, GUILLAUME LOUIS, BARON, (*lair'no*), a celebrated French manufacturer of shawls, b. 1763; he was the first to introduce spinning-machines in France. D. 1833.

Terni, (*lair'ne*), [anc. *Interamna*], a town of Italy, in the former States of the Church, between two branches of the river Nera, 48 m. from Rome. The cascades of the Velino, abt. 4 m. from *T.*, are considered among the finest in the world. *Ihp.* 15.217.

Terno'va, or TIRNOVA, a town of European Turkey in Bulgaria, 110 miles from Adrianople. It stands on a basaltic hill 1,000 feet high, and is inclosed by a wall and trench. *Ihp.* 17,400.

Ternströmiæ'ceæ, *n. pl.* (*Bot.*) An order of plants, alliance *Guttiferales*. DIAG. Single alternate leaves, without stipules, or with very small ones, symmetrical flowers, equilateral petals, versatile anthers, few or single seeds, and stigmata on a long style. The plants of this order are ornamental trees or shrubs, natives chiefly of South America, a few being found in the East Indies, China, and North America, and one only in Africa. See CAMELLIA, TEA, and GORDONIA.

Ter'odant, or TARUDANT, a city of Morocco, cap. of prov. of Soos, 120 m. from Morocco. The inhabitants excel in the art of dyeing. *Pop.* 22,000.

Terpsichore, (*terp-sik'o-re*). (*Myth.*) One of the Muses, daughter of Jupiter and Mnemosyne. She presided over dancing, and is represented as a young virgin, holding in her hand a musical instrument (Fig. 2487).

Ter'ra, *n.* [*Lat.*] The earth.

Ter'race, *n.* [*Fr. terrasse*.] A raised level space or platform of earth, supported on one or more sides by a wall or bank of turf, &c., used either for cultivation, or as a promenade.—The flat roof of a house.

—*v. a.* To form into a terrace; to open to the air and light.

Ter'ra-cot'ta, *n.*; *pl.* TERRACOTTAS. [*It.*; *Lat. terra cotta*, baked clay.] (*Fine Arts.*) The name given to statues, architectural decorations, figures, vases, &c., modelled or cast in a paste made of pipe or potter's clay and a fine-grained colorless sand, with pulverized pot-shreds, slowly dried in the air, and afterwards fired to a stony hardness in a proper kiln.

Ter'ra del Fuego, more correctly TIERRA-DEL-FUEGO, *q. v.*

Ter'ra di Lavo'ro, (anc. *Campania Felix*), a maritime province of S. Italy, now administratively called Caserta. Area, 2,500 square miles. It was anciently inhabited by the Ausonii, the Osci, and later by the Campani. *T. di L.* is watered by two rivers, the Liris, or Garigliano, and the Volturno. Towards the east, it is broken by the Apennines, and its beautiful ranges of hills are clothed with vine and olive yards, and studded with country-seats. It produces corn, strong wines, oil, fruits, and silk. Its seaport-towns are populous and busy, although here and there the sea-board is interrupted by marshes. The climate is very mild in winter, and extremely hot in summer. *Pop.* 692,723.

Ter'ra di Sien'na, *n.* [*It.*] (*Painting.*) A kind of ochre, of a brownish-yellow color, found near Siena, in Italy. It is used as a paint both in its natural state (*raw sienna*), and after ignition, when it becomes of a rich chestnut color, and is called *burnt sienna*.

Ter'ra-fir'ma, *n.* [*Lat.*, firm or solid earth.] A term frequently employed to denote continental land as distinguished from islands.

Ter'ra Japon'ica, *n.* See CATECHU.

Ter'rapin, *n.* (*Zoöl.*) The common name of the *Emydoidæ*, a family of fresh-water turtles, which have the shell highest in the middle, and the sternum flat, broad, and long. It is the largest of all the turtle families, and its representatives present a wide range of difference. Most of its members inhabit bogs, marshes, still streams, and ponds. Some, however, live upon the land; nearly all are perfectly harmless. Their food is both vegetable and animal. Their eggs are more or less elongated, and covered with a shell which is in most cases flexible. About 12 genera and 20 species belong to N. America. *Cistudo Virginiae*, the Common Box Turtle of the United States, is about 7 inches long; its plastron is composed of two parts that are movable upon an axis, and which can be brought into close contact with the carapace, and thus completely conceal all the extremities of the animal. They are found in dry woods.

Terra'queous, *a.* [*From Lat. terra*, the earth, and *aqua*, water.] Consisting of land and water, as the globe or earth.

Terre-aux-Bœufs, (*ter-o-boof*), in Louisiana, a village of St. Bernard parish, 15 m. S.E. of New Orleans.

Terre Bonne (*ter-bonn'*), in Louisiana, a S. E. parish, bordering on the Gulf of Mexico; area, 1,800 sq. m. It is drained by the Black, Caillou, and Terre Bonne bayous. Surface, low and flat, and subject to inundations; soil, fertile. *Cap.* Houma. *Pop.* (1897) 21,540.

—A bayou of the above parish, which flows S.E. into the Gulf of Mexico.

Terre Coupee (*ter-koo-pee'*), in Indiana, a village of St. Joseph co., 150 m. N.W. of Indianapolis.

Terre-de-Haut (*ter-de-ho'*), and **Terre-de-Bas** (*ter-de-ba'*), in the French West Indies, two small islands forming the group of Petit-Terre, 26 m. E. of Guadeloupe.

Terre Haute (*ter'reh-hôt*), in Illinois, a post-village of Henderson co., about 14 m. S.S.E. of Burlington, Ia.

Terre Haute, in Indiana, a thriving city, cap. of Vigo co., on the Wabash, 73 m. W.S.W. of Indianapolis. It is the center of an active and important trade, is well built, on an elevated plateau, in a rich agricultural country, with 3 railways, the Wabash and Erie canal, machine shops and manufactories. *Pop.* (1897) 34,415.

Terre Haute, in *Missouri*, a post-village of Putnam co., abt. 50 m. N. of La Clede.

Terre Haute, in *Ohio*, a post-village of Champaign co., 50 m. W. of Columbus.

Terrell, in *Georgia*, a S.W. co.; area, 350 sq. m. It is drained by the Ichawaynockaway Creek. *Surface*, level; *soil*, generally fertile. *Cap.* Dawson.

Terrene, *a.* [Lat. *terrenus*.] Pertaining to the earth; earthy. — Earthly; terrestrial.

Terre Noir, (*ter-noar'*), "Black Land," in *Arkansas*, a township of Clarke co.

Terre-plein, (*ter-plân*), *n.* [Fr., from Lat. *terra*, and *planus*, level, even.] (*Fort.*) The upper surface of the rampart where the guns are placed and worked.

Terrestrial, *a.* [Lat. *terrestris*.] Pertaining to the earth; existing on the earth. — Consisting of earth. — Pertaining to the world, or to the present state; sub-lunary. — Consisting of earth, as distinguished from water.

—*n.* An inhabitant of the earth.

Terrestrially, *adv.* In a terrestrial manner.

Terret, *n.* The ring on a saddle through which the girths pass.

Terre-tenant, *n.* [Fr. *terre*, earth, and *tenant*, holding.] (*Law.*) One who has the actual possession of land; but, in a more technical sense, he who is seized of the land.

Terre-verte, (*ter-vert'*) *n.* [Fr., green earth.] A species of chlorite of a green or olive color. The green earth of Verona, formerly used as a pigment, is a variety of this mineral.

Terrible, *a.* [Fr.; Lat. *terribilis*, from *terreo*, to frighten.] Adapted to excite terror; adapted to impress dread, terror, or solemn awe and reverence. — Severe; extreme. (*Colloq.*)

Terribleness, *n.* Quality or state of being terrible.

Terribly, *adv.* In a manner to excite terror or fright. — Violently; very greatly. (*Colloq.*)

Terrier, *n.* [Fr., from Lat. *terra*.] (*Zoöl.*) A small variety of dog, used for drawing out foxes, rats, &c., when they take to earth on being hunted; as, a Scotch terrier.

(*Feudal Law.*) A register containing a description or enumeration of the various lands and tenements held in a manor, with the extent of the lands, the names of the tenants, and the rents or services due from each.

Terrible, *a.* [Lat. *terrificus*.] Causing terror; dreadful; adapted to excite great fear or dread.

Terri-fy, *v. a.* To alarm or shock with fear; to frighten.

Terri-figious, *a.* [From Lat. *terra*, the earth, and *gigno*, to beget.] Earth-born; produced by the earth.

Territorial, *a.* Pertaining to territory or land. — Limited to a certain district.

Territorially, *adv.* In regard to territory.

Territory, *n.* [Fr. *territoire*; Lat. *territorium*, from *terra*.] The extent or compass of land within the bounds, or belonging to the jurisdiction, of any state, city, or other body.

(*Amer. Law.*) A portion of the country subject to and belonging to the U. States, which is not within the boundary of any of the States, and has a temporary government.

Terror, *n.* [Fr. *terreur*; Lat. *terror*, from *terreo*, to frighten.] Great fear; affright; violent fear, that agitates the body and mind. — That which may excite dread; the cause of extreme fear.

Reign of Terror. (*Fr. Hist.*) A term generally applied to that period of the Revolution when the executions were most numerous, and the people living in constant terror in consequence of the ferocious conduct of their governors. It applies more properly to that period between October, 1793, when the revolutionary tribunal first came into permanent action, and the overthrow of Robespierre and his party, in July, 1794. The agents and partisans of the system have been termed *Terrorists*.

Terryville, in *Connecticut*, a post-village of Litchfield co., abt. 24 m. W.S.W. of Hartford.

Terse, *a.* [Lat. *tersus*, from *tergeo*, to wipe.] Elegant without pompousness; compact; as, *terse* language.

Terse-ly, *adv.* Neatly; in a terse manner.

Terse-ness, *n.* The state or quality of being terse; neatness of style; smoothness of language.

Tertial, (*ter-shal*), *a.* (*Zoöl.*) Applied to the quills growing on the last or innermost joint of a bird's wing.

Tertian, (*ter-shan*), *a.* [From Lat. *tertius*, third.] Occurring every third year; as, a *tertian* fever.

—*n.* (*Med.*) An intermittent fever or ague, the paroxysms of which occur every other day. See *AGUE*.

Tertiary, (*ter-shi-a-ry*), *a.* [Lat. *tertiarius*.] Containing a third part; third; pertaining to the third.

—*n.* (*Ecol. Hist.*) The name given, in the Roman Catholic Church, to one who, without entering into the seclusion of a monastery, aspires to practise in ordinary life all the substantial obligations of the scheme of virtue supposed to be laid down in the Gospel. The obligation of tertiary, once accepted, is irrevocable, unless the party should be released, or should enter into a more strict religious order.

Tertiary or Cenozoic Formation or System. (*Geol.*) In dividing the stratified crust of the earth into primary, secondary, and tertiary formations, the early geologists regarded as *tertiary* all that occurs above the chalk. In recent geology the Tertiary system is restricted to the formations between the chalk and the somewhat indefinite glacial drift and other superficial accumulations, which are known as the Quaternary, Post-pliocene, or Pleistocene formations. The Tertiary system included, originally, three groups

of strata—the Eocene, Miocene, and Pliocene—to which has more recently been added the Oligocene, following the Eocene in order upwards. The organic remains of the Tertiary are all of recent types, though only in part of recent species. With the incoming of this geological division the supremacy of the reptiles ceased, and the mammals, which previously had been represented only by small marsupial forms, became predominant, many of them attaining enormous proportions. In mineral constitution the Tertiary formations present great variety, consisting of clays, sands, marls, calcareous grits, limestones, gypsum, and beds of lignite, with evidences of frequent alternation from marine to freshwater conditions. In the older Tertiary the number of recent species of shells is very small, while in the later Pliocene they reach from 90 to 95 per cent. In regard to the mammalia, very few species have survived to recent times. During this age, numerous gigantic quadrupeds appeared, the fauna of the European Tertiary, including the elephant, mammoth, deinotherium, palæotherium, rhinoceros, &c.; that of South America, the megatherium, megalonyx, glyptodon, &c.; of North America, the mastodon, rhinoceros, elephant, horse, camel, &c., or rather early forms of these families. The Tertiary of the Western U. S. is very rich in mammalian forms, and in particular presents the evolutionary succession of the horse tribe from an original four-toed to the modern one-toed form. The stages of advance of some other families have been less completely made out, and the mammalian fossils of the Rocky Mountain region present strong support to the evolutionary theory of animal development. A strip of Tertiary strata extends along the Atlantic border, from New Jersey to Mississippi, which has added largely to the list of American Tertiary fossils.

Tertullian, (QUINTUS SEPTIMIUS FLORENS TERTULIANUS), the first, and one of the most celebrated, of the Latin Fathers, flourished about A. D. 190-214, in the reigns of the emperors Severus and Caracalla. He was son of a centurion in the service of the proconsul of Africa, and was born at Carthage; became an eminent rhetorician; was converted to the Christian religion either at Carthage or Rome, and obtained the office of presbyter. After he was past middle-age, he embraced the doctrines of Montanus, to which his ardent, sensuous imagination, and ascetic tendencies would naturally incline him. He is said to have been determined to that course by the ill treatment he received from the Roman clergy. Whether he remained a Montanist till his death, or ultimately returned to the Catholic Church, cannot be decided. He lived to a great age, and ultimately wrote a very large number of works, some of which were early lost. The most important of his extant works are the *Apologeticus Adversus Gentes pro Christianis* (addressed to the Roman magistracy in 198); *Ad Martyres*; *De Testimonio Animæ* (in which he endeavors to work out the idea of the preformation of the human soul to the doctrine of Christ); *De Præscriptione Hæreticorum*; *De Penitentia*; *De Patientia*; *De Oratione*; and *De Baptismo*. His works are of four classes,—apologetical, practical, doctrinal, and polemical. They are characterized by vast learning, profound and comprehensive thought, fiery imagination, and passionate partisanship, leading into exaggeration and sophistry. His style is frequently obscure.

Ternel, (*lai-roo-el*), a town of Spain, prov. of Aragon, 70 m. from Valencia; pop. 7,145.

Terza Rima, *n.* [It., third or triple rhyme.] A complicated system of versification, rendered celebrated by Dante, who wrote in it his *Divina Commedia*, and adopted in English by Byron, in his *Prophecy of Dante*. The rhyme is thus arranged: At the commencement of a poem or portion of a poem in the ordinary Italian heroic lines of 11 syllables, verses 1 and 3 rhyme together, as do verses 2, 4, and 6; the third rhyme begins with verse 5, which rhymes to 7 and 9; the fourth is formed by 8, 10, and 12, and so on; and the poem or canto ends abruptly—the last rhyme, like the first, being on a complete instead of a triplet. It is obvious that the rhyme is interlaced throughout, and continually in suspense, so that no pause can be found until at the end of the poem or canto, as at the end of every line there must still be a rhyme incomplete.

Terzetto, (*tert-zet-to*), *n.* [It.] (*Music.*) A composition in three parts.

Teschén, (*tesh'en*), a town of Austrian Silesia, on the Olsa, 60 m. from Olmutz; pop. 7,000.

Tessin. See *Ticino*.

Tessellar, *a.* [Lat. *tessella*, a small, square piece of wood.] Formed in squares.

Tessellate, *v. a.* To form into squares or checkers; to lay with checkered work.

Tessellated, *a.* Formed in little squares or mosaic work; checkered. See *Mosaic*.

(*Bot.*) Spotted like a chess-board.

Tessellation, *n.* Mosaic work, or the operation of making such.

Tesseral, *a.* (*Crystall.*) Same as *MONOMETRIC*, *q. v.*

Test, *n.* [Lat. *testa*, a piece of burned clay, also a shell, from *torreo*, to bake by heat.] (*Metal.*) A large cupel, or a vessel in which metals are melted for trial and refinement. — Examination by the cupel; hence, any critical trial and examination. — Means of trial. — That with which anything is compared for proof of its genuineness; a criterion; a standard. — Discriminative characteristic. — Judgment; distinction.

(*Chem.*) A substance which, on being applied to other substances whose composition is unknown, indicates, by the sensible effects which it produces or fails to produce, their constituent elements.

—*v. a.* To compare with a standard; to prove the truth or genuineness of by experiment, or by some fixed principle or standard.

(*Metal.*) To refine, as gold or silver by means of lead, in a test, by the vitrification, scorification, &c., of all extraneous matter.

(*Chem.*) To try or examine by applying a reagent or reagents.

Testa, *n.* [Lat., a shell.] (*Zoöl.*) The covering of testaceous animals.

(*Bot.*) The integuments of a seed.

Testacean, *n.* (*Zoöl.*) A mollusc covered with a calcareous shell.

Testaceans, *a.* [Lat. *testaceus*, from *testa*, a shell.] Of, or pertaining to shells; consisting of a hard shell, or having a continuous shell which is often very thick and strong; pertaining to animals which have a strong, thick and entire shell, as oysters: — opposed to *crustaceans*.

Testaceous medicines or powders. (*Med.*) Powders consisting of burnt shells.

Testament, *n.* [Fr.; It. *testamento*; Lat. *testamentum*, from *testor*.] (*Law.*) Same as *WILL*, *q. v.*

(*Script.*) The name of each general division of the canonical books of the Scriptures; as, the *Old Testament*, the *New Testament*. See *BIBLE*.

Testamentary, *a.* Testamentary.

Testamentary, *a.* [Fr. *testamentaire*.] Of, or pertaining to, a testament, or to a will or wills. — Bequeathed by will; given by testament. — Done by testament or will.

Testamenta'tion, *n.* The power or act of bestowing by testament or will. (*R.*)

Testate, *a.* [Lat. *testatus*.] (*Law.*) Having made and left a will.

—*n.* A person who leaves a valid will at his death.

Testator, *n.* [Lat.] A man who makes and leaves a will or testament at death.

Testatrix, *n.* [Lat.] A female testator.

Tester, *n.* [O. Fr. *teste*, the head.] The head or top of a bed. — A flat canopy over a bed, pulpit, tomb, &c.

—[Lat. *testa*; O. Fr. *teste*, a shell.] An old French coin of the value of about twelve cents, having the king's head impressed upon it.

Testicle, *n.* [Lat. *testiculus*, dimin. of *testis*, a witness.] (*Anat.*) One of the glands which secrete the seminal fluid in males; — so called because they testify the sex.

Testicular, *a.* Relating to the testicles.

Testiculate, *a.* (*Bot.*) Said of a root having two oblong tubercles.

Testification, *n.* [Lat. *testificatio*.] The act of testifying or giving evidence.

Testifier, *n.* One who testifies; one who gives testimony or bears witness to prove anything.

Testify, *v. n.* [Lat. *testificor*, from *testis*, a witness, and *facere*, to make.] To make a solemn declaration; to establish some fact; to give testimony.

(*Law.*) To make a solemn declaration under oath, for the purpose of establishing or making proof of some fact to a court. — To declare a charge against one; to protest; to declare against.

—*v. a.* To bear witness to; to support the truth of by testimony; to affirm or declare solemnly for the purpose of establishing a fact.

(*Law.*) To affirm or declare under oath, before a tribunal, for the purpose of proving some fact.

Testigos, a group of islands in the Caribbean Sea, belonging to Venezuela, 50 m. N.W. of Margarita; Lat. 11° 23' N., Lon. 63° 12' W.

Testily, *adv.* Fretfully; peevishly; with petulance.

Testimonial, *n.* [Fr.] A writing or certificate in favor of one's character or good conduct.

—*a.* Relating to, or containing, testimony.

Testimony, *n.* [Lat. *testimonium*, from *testari*, to witness.] A solemn declaration or affirmation made in judicial proceedings under oath, for the purpose of establishing or proving some fact. — Affirmation; declaration. — Open attestation; profession. — Proof of some fact; witness.

Testiness, *n.* The state or quality of being testy.

Testing, *n.* The act of trying for proof.

(*Metal.*) The operation of refining large quantities of gold and silver by means of lead, in the vessel called a *test* or cupel. See *CUPELLATION*.

Test-paper, *n.* (*Chem.*) Paper colored by a concentrated vegetable infusion, as of blue cabbage, or of litmus, used as a chemical test. If colored by an infusion of blue cabbage, it acquires a bright-green color by contact with alkalis, and a bright-red color by contact with acids.

Testudinal, *a.* Pertaining to, or resembling, the tortoise.

Testudinaria, *n.* [Lat. *testudo*, a tortoise.] (*Bot.*) A genus of plants, order *Dioscoreaceæ*. *T. elephantipes*, the Tortoise-plant of the Cape, or Elephant's-foot, is pretty generally known in collections, from its having a very peculiar short thick stem, resembling an elephant's foot; from the top of this thick stem a climbing stem is sent, which bears leaves and flowers. It is covered with a soft, corky bark, which is rugged and rough.

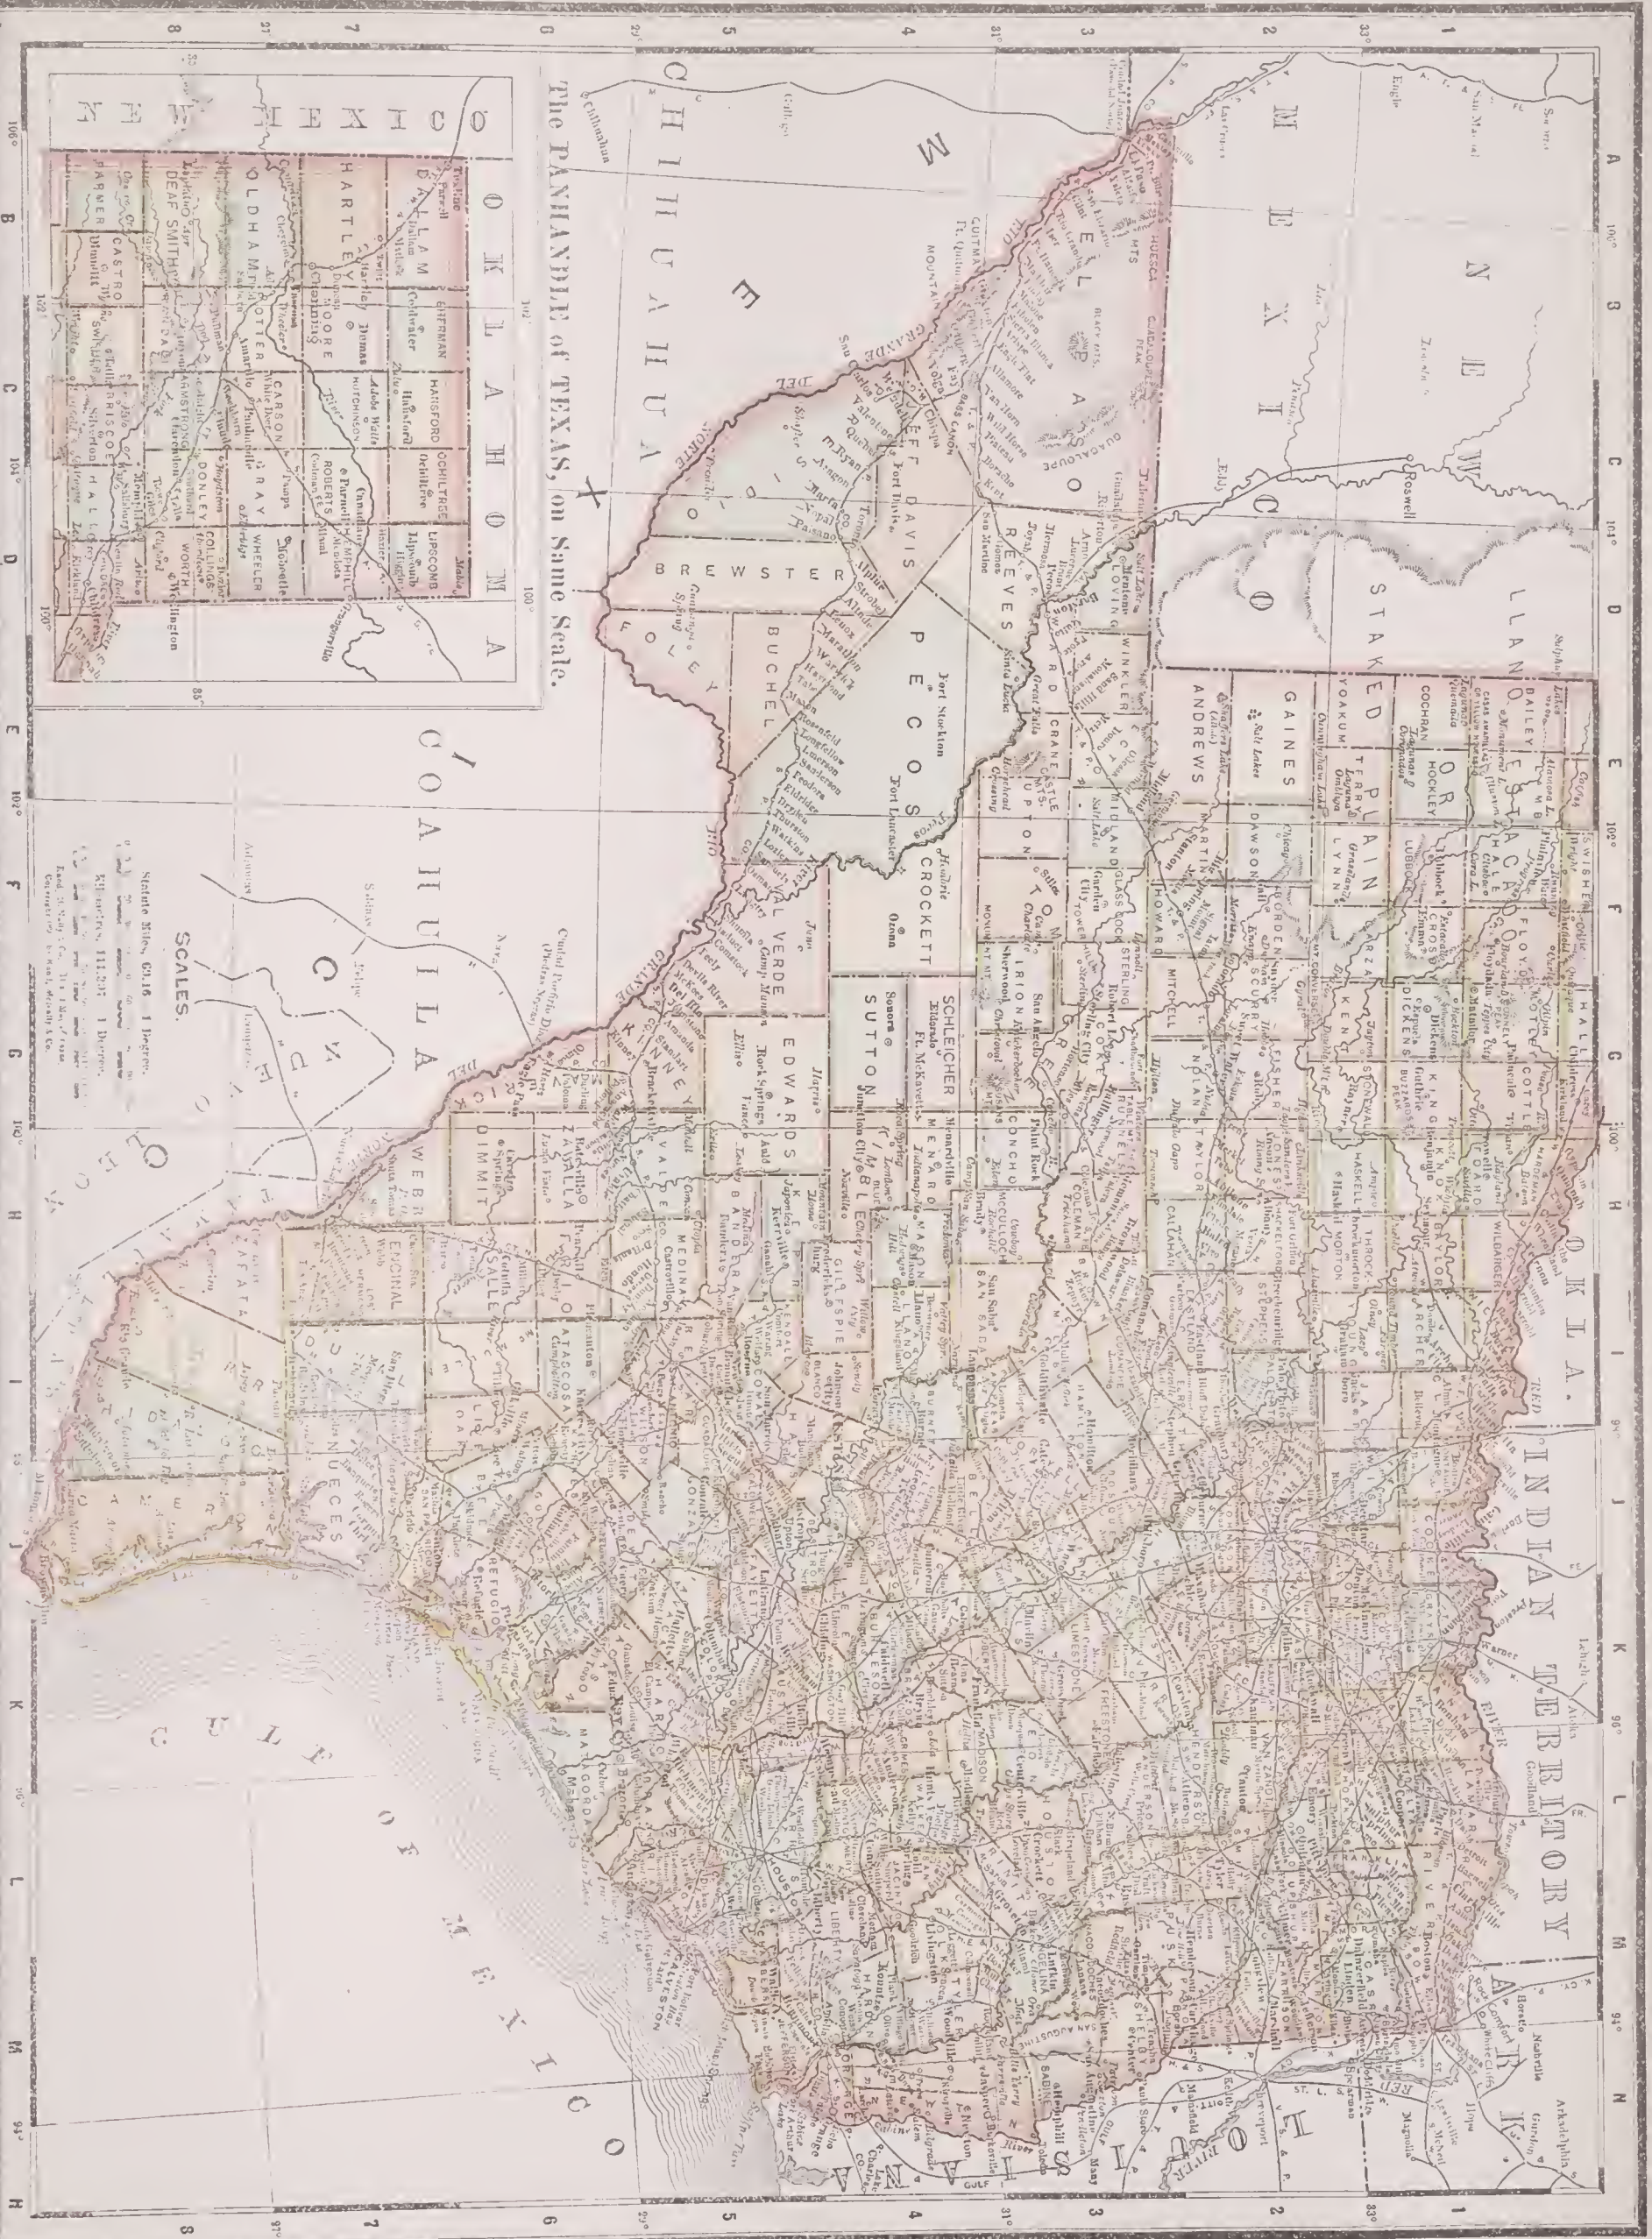

Testudinata, *n. pl.* (*Zoöl.*) An order of reptiles embracing the tortoises and turtles. This word, adopted by Agassiz, is synonymous with *CHELONIA*, *q. v.*

Testudinarius, *a.* Relating to, or resembling the shell of the tortoise.

Testudinate, *a.* [Lat. *testudinatus*.] Roofed; arched.

Testudinidae, *n. pl.* (*Zoöl.*) The Land-tortoise family. See *CHELONIA*.

Testudo, *n.* [Lat., the tortoise.] (*Zoöl.*) A genus of reptiles, family *Testudinidae*, containing the European

Land-tortoise, *T. græca*, 6 to 10 inches long; and the Galapagos or Indian Tortoise, *T. indica*, which is 3 feet long, and the largest land-tortoise known.

(*Mus.*) The lyro of Mercury, originally made from the shell of a tortoise.

(*Med.*) An encysted tumor, supposed to resemble the shell of a tortoise.

(*Mil.*) A contrivance adopted by the Greeks and Romans principally in attacking walls and fortified places. It was formed by a body of troops holding their shields above their heads, so as to overlap one another and form a kind of pent-house, which threw off the missiles of the enemy while the assailants were approaching the walls.

Tet'sty, *a.* [O. Fr. *testes*, from *teste*, the head.] Fretful; peevish; petulant; easily irritated.

Tetanus, *a.* Relating to tetanus.

—*n.* (*Med.*) A remedy which acts on the nerves, and, through them, on the muscles, occasioning, in large doses, convulsions, as *nux vomica*, *strychnia*, &c.

Tetanus, *n.* [Lat.; Gr. *tetanos*, from *teino*, I stretch.] (*Med.*) A disease characterized by a violent and rigid spasm of many or all of the muscles of voluntary motion. Persons of all ages and of both sexes are liable to its attack, but it occurs much more frequently in warm than in cold climates. It frequently arises from some irritation of the nerves, in consequence of local injury by puncture, incision, or laceration. In some instances it comes on suddenly and with great violence, but more frequently its attack is gradual, beginning with a slight stiffness in the back part of the neck, which in a short time is considerably increased, and, at length, renders the motion of the head difficult and painful. An uneasy sensation is felt at the root of the tongue, which increases and causes a difficulty in swallowing; at length preventing it altogether. A great tightness is perceived about the chest, with a violent pain at the lower part of the sternum, shooting into the back. A stiffness also takes place in the jaws, which soon increases to such a height that the teeth become so closely set together as not to admit of the smallest opening. This is the most common form of the disease, and is known as *locked jaw*. Frequently, however, the disease extends farther, and the muscles of the spine become affected, so as to bend the body forcibly backwards, or, on the other hand, the muscles of the abdomen are affected, and the body bent forwards; and sometimes the muscles both before and behind are affected. These spasms are attended with the most severe pain, but seldom with any fever. This disease is frequently fatal, and, unfortunately, it too often resists every mode of treatment. The modes of treatment indicated by the disease are: 1. The removal of any local irritation which may appear to have excited it; 2. Lessening the general irritability and spasmodic tendency; and 3. Restoring the tone of the system. Opium is the remedy which is most frequently resorted to in such cases, which must be given in very large doses, repeated at short intervals. Some recommend purgatives given in large doses, and continued for some time. When the jaws have become locked, it is necessary to administer food or medicine in the form of clysters, or something to draw some of the front teeth.

Tête, (*tal*), *n.* [Fr., the head.] A kind of wig made of false hair.

Tête-à-tête, (*tât-a-tât*), *n.* [Fr.] A familiar conversation or interview.

—*adv.* Familiarly.

Tête Des Morts, in *Iowa*, a township of Jackson co., on the Mississippi River.

Tête-de-pont, (*tât-de-pong'*), *n.* [Fr.] (*Mil.*) See BRIDGE-HEAD.

Teth'er, *n.* A rope or chain by which a beast is fastened or confined for feeding within certain limits.

—*v. a.* To confine, as a beast, with a rope or chain for feeding within certain limits.

Tethys, (*Myth.*) A daughter of *Oranos* or *Uranus* (heaven), and of *Gaia*, or *Gra* (earth), and the wife of *Oceanus*;—used for the *sea* in the later Greek and Roman poets.

Tethys, *n.* [Gr. *tethos*, an oyster.] (*Zoöl.*) A genus of nudibranchiate gasteropods, found by Cuvier, and characterized by having two rows of branchiæ along the back in the form of tufts.

Tetrabranchiata, *n. pl.* (*Zoöl.*) An order of *Cephalopods*, which are nearly extinct, the only remaining representative of it being the Pearly Nautilus.

Tetraceæ, *n.* (*Bot.*) A genus of plants, order *Dileniaceæ*, consisting chiefly of climbing shrubs, widely spread over the tropics of Asia, Africa, and America. The species have some astringent qualities.

Tetrachotomous, *a.* [Gr. *tetrachos*, in a fourfold manner, and *temno*, to cut.] (*Bot.*) Applied to a stem that ramifies in fours.

Tetracolon, *n.* [Gr. *tetra*, four, and *kolon*, limb.] (*Pros.*) A division of lyric poetry consisting of four verses; a stanza.

Tetrad, *n.* [Lat. *tetras*.] The number four;—a collection of four things.

Tetradactyl, *n.* [Fr. *tétradactyle*.] (*Zoöl.*) An animal having four toes.

Tetrade'capods, *n. pl.* (*Zoöl.*) An order of Crustacea, which normally have seven cephalic segments and pairs of appendages, and seven foot-rings or pairs of feet.

Tetradrachm, *n.* [Gr. *tetra*, four, and *drachma*, a drachm.] (*Numis.*) A silver coin (Fig. 78 and 149).

Tetradynamia, *n.* [Gr. *tetra*, and *dynamis*, power.] (*Bot.*) A class of plants which, in the Linnæan system, includes those whose flowers have six stamens, two of which are shorter than the others.

Tetragon, *n.* [Gr. *tetragonos*, from *tetra*, for *tessares*,

four, and *gônia*, an angle.] (*Geom.*) A plane figure having four angles; a quadrangle, as a square, a rhombus, &c.

Tetragonal, *a.* Pertaining to a tetragon; having four angles or sides.

Tetragonia'ceæ, *n. pl.* (*Bot.*) A small order of plants, alliance *Ficoidales*. *Diag.* No petals, and several consolidated carpels. They are succulent, leaved, herbaceous plants, or small shrubs, chiefly natives of New Zealand.

Tetragonoids, *n. pl.* (*Chem.*) See ATOMECHANICS.

Tetragynia, *n.* (*Bot.*) One of the orders of the Linnæan classification, comprising plants with four pistils.

Tetrahedral, *a.* Having four sides; having four equal and equilateral triangles.

Tetrahedrite, *n.* [So called from the tetrahedral form of the crystals in which it usually occurs.] (*Min.*) A native sulphide of copper, containing variable proportions of antimony or arsenic, or of both antimony and arsenic, and sometimes of silver or of mercury.

Tetrahedron, *n.* [Gr. *tetra*, and *hedra*, a side. See CATHEDRAL.] (*Geom.*) A solid figure having four sides, or four equilateral and equal triangles; or it is a triangular pyramid having four equal and equilateral faces.

Tetrahexahedron, *n.* [Gr. *tetra*, six, and *hedra*, a base.] (*Crystal.*) A crystal having 24 faces, each of which is an isosceles triangle.

Tetra'eter, *n.* [Gr. *tetrametros*.] (*Anc. Pros.*) A verse consisting of four measures.

Tetrandria, *n.* (*Bot.*) The fourth class of the Linnæan system of classification, containing plants furnished with four stamens.

Tetraodon, *n.* (*Zoöl.*) A genus of bony fishes, order *Plectognathes*. Like the *Diodon*, they have the faculty of inflating themselves, by filling, with air a thin and extensible membranous sac, which adheres to the peritoneum the whole length of the abdomen. When thus inflated, they roll over, and float with the belly uppermost, without any power of directing their course. Each jaw of the *T.* is marked with a suture, so as to give the appearance of four teeth. The spines are small and low, and some species are reckoned poisonous.

Fig. 2488. — GLOBE-FISH.
(*Tetraodon hispidus*.)

Tetraon'idæ, *n. pl.* (*Zoöl.*) See GROUSE.

Tetrapetalous, *a.* (*Bot.*) Having four petals.

Tetrapharmakon, *n.* [Gr. *tetra*, and *pharmakon*, a drug.] (*Med.*) An ointment composed of four remedies; viz., wax, resin, lard, and pitch.

Tetrarch, *n.* [From Gr. *tetra*, and *archê*, sovereignty.] (*Roman Hist.*) The governor of a fourth part of a country. This was a title granted by the Romans to some tributary princes, whom they did not dignify with the style of king. Such were the sons of Herod the Great, among whom his dominions were divided after his death.

Tetrarchate, *Tetrarchy*, *n.* The fourth part of a province under a Roman tetrarch, or the office of a tetrarch.

Tetrasepalous, *a.* (*Bot.*) Having four sepals.

Tetraspermous, *a.* (*Bot.*) Having four seeds.

Tetraspore, *n.* [Fr. *spora*, a seed.] (*Bot.*) One of the forms of fructification found in some sea-weeds. It consists of little clusters of spores, in most cases four in number, but very rarely eight.

Tetrastich, *a.* [Gr. *tetrastychos*, in four rows.] (*Poetry.*) A stanza of four verses.

Tetrastyle, *n.* [Gr. *tetrastylus*.] (*Arch.*) A building having four columns in front.

Tetrasyllabic, *Tetrasyllabical*, *a.* Consisting of four syllables.

Tetrasyllable, *n.* [Gr. *tetra*, and *syllabê*, a syllable.] A word consisting of four syllables.

Tetter, *n.* [A. S. *teter*, *tetr*.] The HERPES, *q. v.*

—*v. a.* To affect with the disease called tetter.

Tetter-totter, *n.* An amusement of children, in which one or more ride upon each end of a plank or piece of timber, balanced upon some support in the middle; see-saw; also called *titter-come-totter*.

Tetuan, (*tet-oo-an'*), a seaport-town of Morocco, Africa, prov. of El Garb, on the Mediterranean, immediately within the Straits of Gibraltar, 22 m. from Ceuta. The environs are carefully planted with vineyards and gardens; the grapes are exquisite, and the oranges reckoned, by some, superior to any in the world. Lat. 35° 50' N., Lon. 5° 20' W. In 1861, the Spanish government, having determined to abandon its claims against Morocco, declared *T.* the property of Spain, rendered it impregnable, and colonized its territory. Pop. 17,000.

Ten'crium, *n.* (*Bot.*) A genus of plants, order *Lamiaceæ*, consisting of herbs and shrubs widely dispersed throughout the world, but abounding chiefly in the northern temperate and subtropical regions of the eastern hemisphere. They are called *Germanders*. Several species were formerly reputed to possess medicinal virtues, but are now discarded. The genus is represented in N. America by *T. Canadense*, the wild Germander, about two feet high, found in fields and roadsides throughout the U. States.

Ten'tates, (*Myth.*) A deity mentioned by Lncan as being worshipped with sacrifices not unlike those of Moloch.

Teuthidæ, *n. pl.* (*Zoöl.*) The Lancet-fish family, comprising acanthopterygious, spine-rayed, herbivorous fishes which inhabit the warmer seas.

Teu'ton, *n.* One of the Tentones or Tentons. See TETTONES.

Teutones, or **Teu'tons**, *n. pl.* A powerful German tribe, which, in alliance with the Cimhri, advanced into Illyria, and defeated the consul Cn. Papirius Carbo, at Noreia, B. C. 113. They afterwards forced their way into Roman Gaul, and defeated Maullius and Scipio, B. C. 105; and they invaded Spain, B. C. 104. On their retreat from Spain, they were met by the Romans, under Marius, at Aquæ Sextiæ, the modern Aix, and totally defeated, B. C. 102.

Teuton'ic, *a.* Pertaining to the Teutones or Teutons.

Teutonic languages. A name given to the dialects which are comprised under the High German, Low German, and Scandinavian branches of the Aryan family of languages. Of these, the English and Dutch belong to the Low German branch. These dialects cannot be directly derived from each other, any more than Greek can be derived from Latin, or Latin from Greek, or either of these from Sanskrit; and if they are traceable at all to a common source, this source must be found in a language preceding all dialects which are known to us historically. It need scarcely be said that the language of a tribe or nation is no conclusive evidence in questions of ethnology.

—*n.* The Teutonic language.

Teutonic Order, *n.* (*Ecccl. Hist.*) A military religious order, which took its rise about 1189, during the Crusades. Frederick of Suabia, on his arrival with his army before Acre, in 1191, under the sanction of a bull of Pope Celestine III., named it the Order of the German House of the Holy Virgin of Jerusalem. After their return to Germany, they were, in 1226, invited by Courad, duke of Masovia, to assist him in conquering the heathen Prussians, and a bull was issued, empowering them to do so. They settled in Poland in 1233, and were united with the Brethren of the Sword in 1237. They conquered Prussia in 1253; but insurrections afterwards broke out, and they were defeated by the Poles and Lithuanians in a great battle near Tannenberg, in Germany, July 15, 1410, when the grand master and 40,000 of his followers were slain. The order, dissolved by the peace of Cracow, in 1525, was abolished by Napoleon I., in 1809.

Teutonia, in *Pennsylvania*, a village of McKean co., 190 m. N.W. of Harrisburg.

Teuton'icism, (*-izm*), *n.* A Germanism.

Tettopolts, in *Illinois*, a post-village of Effingham co., 88 m. S.E. of Springfield.

Tev'iot, a river of Scotland, in Roxburghshire, unites with the Tweed at Kelso.

Tew, *v. a.* [A. S. *tawian*.] To prepare or dress by beating, as hemp or leather.—To beat; to pull.—To tease.

Tewel, (*tū'el*), *n.* [Fr. *tuyan*.] A pipe or funnel, as for smoke; an iron pipe in a forge to receive the pipe of a bellows.

Tewkesbury, (*tūkes'ber-re*), a town of England, in Gloucestershire, on the Avon, 10 m. from Gloucester. *Manuf.* Stocking framework-knitting, particularly in cotton. Pop. 7,000.

Tewkesbury, in *New Jersey*, a township of Hunterdon co.

Tewksbury, in *Massachusetts*, a post-town of Middlesex co., about 22 m. N.W. of Boston.

Tex'ua, in *Texas*, a village, former cap. of Jackson co., 150 m. S. E. of Austin city.

Texas, one of the S. W. States of the American Union, is situated between Lat. 25° 50' and 36° 30' N., and Lon. 93° 30' and 107° W.; extreme length from S. E. to N. W. more than 800 m.; greatest breadth from E. to W., about 750 m.; area, 237,504 sq. m. It is bounded N. by Oklahoma, Indian Territory, and Kansas, being separated from these by the Red river; E. by Arkansas and Louisiana, from the latter of which it is separated in part by the Sabine; S. E. by the Gulf of Mexico; and S. W. and W. by Mexico and New Mexico. It is the largest State in the Union, and has a territory nearly 6 times as great as that of Pennsylvania. The general aspect of the country is that of a vast inclined plane, gradually sloping from the mountains on the W. eastward to the sea, and intersected by numerous rivers, all having a S. E. direction. The State may be divided into three separate regions, differing in many respects from each other. The first, or level, region, extends along the coast with a breadth inland varying from 100 to 70 and 30 m. The soil of this region is principally a rich pasture land. The second division, the largest of the three, is the undulating or rolling-prairie region, which extends for 150 or 200 m. farther inland, its wide grassy tracts alternating with others that are thickly timbered. These last are especially prevalent in the E., though the bottoms and river valleys throughout the whole region are well wooded. Limestone and sandstone form the common substrata of this region; the upper soil consists of a rich friable loam, mixed indeed with sand, but seldom to such an extent as to prevent the culture of the most

Fig. 2489. — SEAL OF THE STATE.

William M. Thackeray

1811-1863

who presided over festivals, pastoral and comic poetry. She is represented leaning on a column, holding a mask in her right hand, by which she is distinguished from her sisters, as also by a shepherd's crook.

Fig. 2490. — THALIA.

Thalic'trum, n.

(Bot.) The Meadow Rue, a genus of plants, order *Ranunculaceae*. *Thalic'trum cornuti* is a handsome herbaceous plant, 3-4 ft. high, racemose roots, and smooth, finely-divided leaves. It is common in meadows.

Thal'ite, n. (Min.)

A kind of Soapstone of a pale yellowish-green color, which is found diffused in the amygdaloidal trap-rocks on the north shore of Lake Superior.

Thal'ite, n. (Min.)

A variety of epidote.

Thal'ium, n. [Gr. thallos, a young shoot or twig.] (Chem.)

A metal discovered by Crookes in 1861. The spectrum of this product furnished a singularly brilliant green line, which led him to examine it further, and suggested the above name. It has since been found in some varieties of pyrites and in the residue of the evaporation of certain mineral waters. It is a soft lead-like metal; its specific gravity between 11 and 12; its atomic weight 204; it tarnishes in the air; fuses at about 560°, and at about 600° takes fire and burns with a green light; in ductility, malleability, and tenacity, it much resembles lead. It forms alloys with most of the other metals. It forms two oxides, the most important of which is the protoxide (= TlO). This oxide is soluble in water, furnishing an alkaline liquor which absorbs carbonic acid; it is yellow when anhydrous, soluble in sulphuric, nitric, and hydrochloric acids, and is thrown down from its solutions by sulphide of ammonium in the form of a dark-brown sulphide. No precipitate is formed in solution of sulphate or nitrate of thallium by the caustic alkalis, but the carbonated alkalis give a precipitate in very concentrated solutions; chlorides, bromides, and iodides, give yellowish precipitates. The salts of thallium are very poisonous; they are colorless, when formed with colorless acid, and are easily decomposed by feeble electric currents. *Symbol*, Tl.

Thal'logens, n. pl. [Gr. thallos, a shoot, and gennao, to bring forth.] (Bot.)

The first class of the vegetable kingdom, comprising those cryptogams which are extremely simple in their structure, and exhibit nothing like the green leaves of phænogams. In the few cases in which there are leaf-like expansions, they are not arranged symmetrically round a stem, and are destitute of all traces of stomates and breathing pores; while in those lichens or *Algæ* whose stems are of long duration, though there may be something like centrifugal growth indicated by zones, it is of a totally different nature from that of acrogens. The most definite point of distinction consists in the fact that the spores of acrogens when germinating produce either a cellular mass or plant, in which bodies called *archegonia* are formed, which by impregnation produce from an embryonic cell either a new plant or a spore-bearing capsule, while in thallogens no bodies corresponding to *archegonia* are ever produced. *T.* includes the 3 alliances ALGAL, FUNGAL, and LICHENAL.

Thal'lus, n.; pl. THALLI. (Bot.)

This term, used to indicate a fusion of root, stem, and leaves into one general mass, is applied to that part of thallogens immediately bearing the fructification, more particularly to the cellular mass in which the perithecia are enclosed, or still more especially to the whole vegetative system of lichens.

Thames, (ems.)

the largest and most important river of England, rises, under the name of the Isis, abt. 2 m. S. of Cirencester, and near Lechlade, 138 m. from London, becomes navigable for barges. After receiving the Windrush and the Evenlode, it reaches Oxford, turning round the city towards the N.E. It is here joined by the Charwell, after which it proceeds to Abingdon, and thence to Dorchester, where it receives the Thame. Continuing its course S.E. by Wallingford to Reading, and forming a boundary to the cos. of Berks, Bucks, Surrey, Middlesex, Essex, and Kent, it washes the towns of Henley, Marlow, Maidenhead, Windsor, Eton, Egham, Staines, Laleham, Chertsey, Weybridge, Shepperton, Walton, Sunbury, E and W. Moulsey, Hampton, Thames Ditton, Kingston, Teddington, Twickenham, Richmond, Isleworth, Brentford, Kew, Mortlake, Barnes, Chiswick, Hammersmith, Putney, Fulham, Wandsworth, Battersea, Chelsea, and Lambeth. Here, on its N. bank, are Westminster and London, and, on the opposite side, Southwark; forming together one continued city, extending to Limehouse and Deptford; and hence it rolls by Greenwich, Erith, Greenhithe, Gravesend, and Margate, into the North Sea. It receives, in its course from Dorchester, the rivers Kennet, Loddon, Coln, Wey, Mole, Wandle, Lea, Roding, Darent,

and Medway, and drains a basin estimated at an area of 6,160 sq. m. *Total course*, 215 m. It is navigable to Deptford for ships of any burden, and to London Bridge for vessels of 200 tons. It is tunnelled at London.

Thames, a river of *Connecticut*, formed by the junction of the Quinebaug, Shetucket, and Yantic rivers, near Norwich, in New London co., and enters the E. extremity of Long Island Sound after a S. course of 14 m.

Thames, a river of Upper Canada, rises in Oxford co., and flows into Lake St. Clair, after a S.W. course of 160 m. At the Moravian settlement, on that river, Oct. 5, 1813, the Americans, under Gen. W. H. Harrison, defeated the English under Gen. Proctor, and in this battle, known as the battle of the Thames, the Indian chief Tecumseh, *q. v.*, was killed.

Tham'muz, or **Tam'muz**, n. [Heb.] A Phœnician deity, identified with *Adonis*, the father (according to one legend) of *Priapus*.

(*Calendar.*) The tenth month of the Jewish civil year, answering to part of June and July, and containing 29 days.

Than, conj. [A. S. *thonne*, *thænne*.] A particle placed in comparison after some comparative adjective or adverb; noting a less degree of the quality compared in the word that follows *than*; as, wisdom is better *than* strength.

—*prep.* In comparison with.

"You are a girl as much brighter *than* he
As he was a poet sublimer *than* me." — *Prior*.

Thanatology, n. [Gr. *thanatos*, death, and *logos*, a discourse.]

A description, or the doctrine, of death, *Dungl.*

Thane, (thaine,) n. [A. S. *thegn*, to serve.] (Eng. Hist.)

A name originally applied to the minister or servant of a king or chief; and as these were often persons of influence and power, it came to signify a particular rank or dignity. It seems at one time to have been applied to all lauded proprietors below the rank of earl and above that of alderman. There were also superior and common or inferior thanes. In Scotland, the title seems to have been higher than in England, being attached to the territory of a county.

Thane'dom, n. The property or jurisdiction of a thane.

Thank, *v. a.* [A. S. *thancian*.] To express gratitude to for a favor; to make acknowledgments to for kindness bestowed.

—*n.* (Generally in the plural.) [A. S. *thanc*.] Expression of gratitude; an acknowledgment made to express a sense of favor or kindness received.

Thank'ful, *a.* Grateful; impressed with a sense of kindness received, and ready to acknowledge it.

Thank'fully, *adv.* With a grateful sense of favor or kindness received.

Thank'fulness, *n.* Expression of gratitude; acknowledgment of a favor; gratitude; a lively sense of good received.

Thank'less, *a.* Unthankful; ungrateful; not acknowledging favors; not obtaining thanks, or not likely to gain thanks.

Thank'lessly, *adv.* With ingratitude; unthankfully.

Thank'lessness, *n.* Quality of being thankless; ingratitude; failure to acknowledge a kindness.

Thank'offering, *n.* An offering made in acknowledgment of mercy.

Thanks'giver, *n.* One who gives thanks or acknowledges a kindness.

Thanks'giving, *n.* Act of rendering thanks, or expressing gratitude for favors or mercies; a public celebration of divine goodness; also, a day set apart for religious services in acknowledgment of the divine goodness.

Thank'worthiness, *n.* State of being thankful.

Thank'worthy, *a.* That deserves thanks or gratitude.

Thann, (*tan*), a town of France, dept. of the Haut Rhin, 22 m. from Colmar. *Manuf.* Cotton handkerchiefs, twist, hosiery, starch, and salt. *Pop.* 6,000.

Thap'sia, n. (Bot.) A genus of plants, order *Apiaceæ*, anciently celebrated for its medicinal products; the Cyrenæan Silphium, or *Laser cyreniacum*, being supposed to have been the produce of one of the species. They are herbaceous perennials, all natives of the countries bordering on the Mediterranean.

Tharm, n. [A. S. *thearm*.] Intestines twisted into a cord.

Tha'sos, **Thas'sus**, **Tas'so**, an island in the Ægean Sea, 4 m. from the mainland; area, 85 sq. m.; *pop.* 6,000.

That, *pron.*, or *pronominal adj.* [A. S. *that*, *the*, *that*.]

Not this but the other; the former person or thing; the more distant thing, as opposed to *this*; designating or pointing to some person or thing mentioned or alluded to before; often used emphatically.

—*pron. relative.* Equivalent to *who*, *whom*, or *which*; relating to the antecedent person or thing.

—*conj.* Because; noting a reason; noting the object, the final end, or purpose; noting a result or consequence.

Thatch, n. [A. S. *thac*, *thæc*.] A covering; a roof; straw or other substance used to cover the roofs of buildings, or stacks of hay or grain, for securing them from rain, &c.

—*v. a.* To cover with straw, reeds, or some similar substance.

Thatched, *a.* Covered with straw or thatch.

Thatching, *n.* The act or art of covering buildings with thatch, so as to keep out water; the materials used for this purpose.

Thaumatrope, n. [Gr. *thauma*, a wonder, *themo*, I turn.] An optical toy, illustrating the persistence of impressions made on the retina of the eye.

Thaumaturgie, **Thaumaturgical**, *a.* Exciting wonder; working wonders.

Thaumaturgist, n. [L. Lat. *thaumaturgus*.] A performer or worker of wonders or miracles.

Thaumaturgy, n. [Gr. *thauma*, *thaumatos*, a wonder, and *ergon*, work.] Act of performing something wonderful.

Thaw, *v. n.* [A. S. *thawan*.] To melt, dissolve, or become fluid, as ice or snow; to become so warm as to melt ice and snow.

—*v. a.* To melt; to dissolve, as ice, snow, hail, or frozen earth.

—*n.* The melting of ice or snow; the resolution of ice into the state of a fluid.

Thaw'y, *a.* Growing liquid; thawing.

Thax'ton's, in *Virginia*, a post-village of Bedford co., 30 m. W. of Lynchburg.

The, definite article. [A. S.] A word prefixed to nouns in the singular and plural number, to indicate what particular thing or things are meant; used also before adjectives in the comparative and superlative degree.

Thea, n. (Bot.) See *TEA*.

Theanthropism, n. [Gr. *theos*, god, and *anthropos*, man.] The state of being both God and man.

Theanthropy, n. Union of the divine and human nature.

Thearchy, n. [Gr. *theos*, and *archo*, to govern.] Theocracy.

The'atin, **The'atine**, n. [Fr.; It. *Teatino*.] (*Ecll.*)

A religious order in the Roman Catholic Church, the earliest of the communities of regular clerks; it was founded in 1524 by St. Cajetan of Thiene. The members, besides the ordinary monastic vows, bound themselves to the duties of the care of souls, preaching against heresies, tending the sick and convicts, while they pledged themselves to abstain from possessing property or asking for alms.

Theatre, (*thē'a-ter*), n. [Fr.; Lat. *theatrum*; Gr. *theatron*, from *theomai*, to see.]

Among the ancients, an edifice in which spectacles or shows were exhibited for the amusement of spectators. — Among the moderns, a house for the exhibition of dramatic performances, as tragedies, comedies, and farces; a play-house. — A place rising by steps or gradations like the seats of a theatre; as, a *theatre* of oaks. (*Harte*). — A place of action or exhibition; a building for the exhibition of scholastic exercises, as in a college. — A room with circular seats and a table in the centre turning on a pivot, for anatomical demonstrations.

(*Mil.*) The scene of operations of an army.

Theat'ric, **Theat'rical**, *a.* [Gr. *theatricos*.] Pertaining or relating to a theatre, or to scenic representations; resembling the manner of dramatic performers; calculated for display; pompous; as, *theatrical* performances, *theatrical* costumes, &c.

Theat'rically, *adv.* In the manner of players or actors on the stage; in a manner suiting the stage.

Theat'ricals, *n. pl.* Dramatic performances.

The'baine, n. (Chem.) See *OPIMUM*.

Thebes, (*thebz*), (*anc. Geog.*) The remains of a great city, which, at an early period, was the capital of Egypt, and the ruins of which, in Upper Egypt, extended for 7 miles along both banks of the Nile. Among its temples, the most remarkable are those of Karnak (Fig. 918) and Luxor, on the E. bank of the river. A monolith obelisk of the former has been conveyed to Paris, and erected in the Place de la Concord. Several villages are scattered over the site of this ancient city, the importance of which was destroyed after its capture by Ptolemy Lathyrus, in the 3d century B. C.

Thebes, *Thiva*, the cap. of Boeotia in ancient Greece, was founded, according to tradition, by a colony of Phœnicians, under Cadmus, B. C. 1550 or B. C. 1400. They were driven out by the Boeotians, B. C. 1124. Plataea, one of the Boeotian cities, revolted from Thebes B. C. 510, and applied for help to Athens. A war ensued between Thebes and Athens, in which the latter were victorious. This caused much animosity between Thebes and Athens, and in the Persian war, B. C. 480, the Thebans deserted the cause of Greece and fought against the Athenians at Plataea, B. C. 479. The Athenians invaded Boeotia, and established a democratic government in Thebes, B. C. 456. The Thebans were allies of the Spartans in the Peloponnesian war, B. C. 431–B. C. 404. Sparta having claimed supremacy over the whole of Greece, the Thebans joined the Athenians, B. C. 395. The peace of Antalcidas put an end to the war, B. C. 387, and deprived Thebes of her supremacy over Boeotia. The Spartans, who treacherously seized the citadel of Thebes B. C. 382, were defeated at Leuctra, in July, B. C. 371; and the Thebans regained their power in Greece. Thebes was razed to the ground by Alexander III., B. C. 335, after which it never again formed an independent state. Cassander restored the city B. C. 315, and it was taken by Demetrius B. C. 293, and again B. C. 290. The Thebans were defeated in an attempt to expel the Bulgarians from Greece in 1040, and their city was plundered by the Normans of Sicily in 1146. It was one of the most flourishing cities of Greece during the 10th and 11th centuries. The modern Thebes has a pop. of abt. 10,000.

Thebes, (*thebz*), in *Mississippi*, a post-village of Alexander co., on the Mississippi, 144 m. S.E. of St. Louis.

Thebolas'tic Acid, n. (Chem.) See *OPIMUM*.

The Buttes, in *California*, a group of porphyritic mountains, in Sutter co., 11 m. W. of Marysville, 30 m. in circumference, the principal peak of which is 1,500 feet above the sea.

The'ca, *n.; pl.* *THECÆ*. [Lat., from Gr. *thēke*, a case, box, chest.] A case.

(Bot.) One of the lobes of an anther; also, the spore-vessel of a moss.

(Anat.) A case, sheath, or inclosure.

Thecaphore, (*thē'ka-fōr*), n. [Fr., from Gr. *thēkē*, a

case, and *phoros*, bearing.] (*Bot.*) A surface or organ covered with *theae*; also, the long stalk upon which the ovary of certain plants is seated, as in the caper-bush.

The'cla, *n.* (*Zoöl.*) See *LYCENIDE*.

The'codont, *n.* [From *Gr. thêkê*, a case, and *odontos*, a tooth.] (*Pal.*) An extinct saurian, having the teeth implanted in sockets.

—*a.* Pertaining or relating to the thecodonts; having the teeth fixed in a bony socket.

Thee, *pron.*, the objective case of *THOU*, *q. v.*

Theft, *n.* [*A. S. theofth, thyfth.*] Act of thieving or of stealing; the private, unlawful, felonious taking of another person's goods or movables, with an intent to steal them.—The thing stolen.

(*Law.*) Same as *LARCENY*.

Theine, *n.* (*Chem.*) See *CAFFEINE*.

Their, (*thîr*), *pron.* or *possessive adj.* [*A. S. hiora.*] Of them, or belonging to them; in the plural, *theirs*, the possessive case of *they*.

Theism, (*thê'izm*), *n.* [*Gr. Theos*, *Lat. Deus*, *God.*] Etymologically, *theism* is the same word as *deism*; but a distinction is sometimes drawn between them, the name *theist* being applied to those who, while they reject the idea of an external revelation, maintain the existence of a Deity who directs the government of the cosmos by the constant exercise of His beneficent power; the *deist*, on the other hand, being defined as one who holds that God, having before creation laid down a law or laws, leaves those laws to execute themselves without further action on His own part.

Theiss, (*Hung. Tisza*), (*tîcz*), a river of Hungary, rising from two springs on the N.E. frontier of the kingdom, called the Black and the White Theiss. After a course of 500 m. it joins the Danube, 22 m. from Peterwardein.

Theist, *n.* One who believes in the existence of a God; —correlative to *atheist*.

Theis'tic, **Theis'tical**, *a.* Pertaining to theism, or to a theist; according to the doctrine held by theists.

Them, *pron.* [The objective case of *THEY*, and of both genders.] Those; those persons or things.

Theme, *n.* [*Lat. and Gr. thema*, from *Gr. tithêmi*.] That which is placed or laid down, as for argument; a subject; a proposition for discussion; a topic on which a person writes or speaks; as, his conduct was the *theme* of conversation.—A short essay or dissertation composed by a student, generally on some specified subject. (*Gram.*) A radical verb, or the verb in its primary absolute state, not modified by inflections. (*Mus.*) A series of notes selected as the text or subject of a new composition.

The'mis. (*Myth.*) The goddess of justice among the Greeks. She was the first to whom the inhabitants of the earth raised temples. Her oracle was famous in Attica in the age of Democritus. She was generally attended by the Seasons. Among the moderns she is represented as holding a sword in one hand and a pair of scales in the other.

Themistocles, (*the-mis'to-kleez*), an Athenian statesman and general, b. in the latter half of the 6th century B. C. His public career was contemporaneous with that of Aristides, and the rivalry between them became a subject of the highest public importance soon after the battle of Marathon (see *MILTIADES*). The character of Aristides seems to have been that of a sturdy conservative republican, resolute to stand upon the good old ways; that of *T.* was more suited to the exigencies of the period, and he possessed far greater political foresight, not unmixed with the duplicity so characteristic of statesmanship in more modern times. Greece was threatened with a partisan warfare between these leaders, when the dispute was terminated by the banishment of Aristides, B. C. 483, and *T.* was left at liberty to pursue his policy. His great object was the creation of a navy, able to cope with that of the Persians, and to the success of his design may be attributed not only the salvation of Greece, but the supremacy of Athens over the other Grecian cities. By a master-stroke of policy, he fairly tricked both the Greeks and Persians into fighting the great naval battle off Salamis, in which he totally defeated Xerxes, B. C. 480; he then took the necessary measures for securing the supremacy of Athens by internal defences, the works of which were carried on in defiance of Sparta. In B. C. 466, the jealousies excited by his great power led to his banishment by ostracism, and he retired to the Persian court, where, it would appear, he forgot his patriotism, and plotted against his country. It is related by Plutarch, however, that he poisoned himself rather than yield to the overtures of Artaxerxes. His death, from whatever cause, took place at Magnesia in Asia Minor, B. C. 470, or 472.

Themsche, (*temsh*), a town of Belgium, on the Scheldt, 9 m. from Bundermonde. *Manuf.* Linens, lace, and printed calicoes. *Pop.* 6,846.

Fig. 2491. — THEMISTOCLES.

Themselves, (*them-selvz'*) *pron.* A compound of *them* and *selves*, and added to *they* by way of emphasis or pointed distinction. See *HIMSELF*, *HERSELF*, *ITSELF*.

Then, *adv.* [*A. S. thanne.*] At that time; referring to a time specified, either past or future; as, my parents were *then* living.—Afterward; soon afterward, or immediately; as, first finish your work, and *then* think of play.—Therefore; for this reason; as, if *then* he should refuse, it would appear odd.—At another time—as, now and *then*, at one time and another.

By then, by the time that; as, one may be dead *by then*.—*Till then*, until such time, noting a time specified; as, *till then* I knew not his worth.—(NOTE. *Then* is frequently employed elliptically, in the sense of an adjective for the *then* existing; as, the *then* President of the U. States. (Not elegant.)

—*conj.* In that case; in consequence; as, "I *then* without a crime the crown had worn."—Dryden.

Then'adays, *adv.* At that time; in those days; —correlative to *nowadays*. (*R.*)

Then'ar, *n.* [*Gr. from theinai*, to strike.] (*Anat.*) The palm of the hand, or the sole of the foot.

Thenard's Blue, *n.* (*Paint.*) See *COBALT*.

Thence, (*thens*), *adv.* [*A. S. thanom.*] From that place; as, he departed *thence*, and was seen no more. (From is often used, pleonastically, before *thence*; as, he was fetched *from thence*.)—From that time.

"There shall be no more *thence* an infant of days."—*Isa.* lxxv. 20. —For that reason; as, "A gift useless, and *thence* ridiculous."—*Milton*.

Thence'forth, *adv.* From that time; as, the people *thenceforth* were free.—From *thenceforth*, is a pleonasm occasionally, but inelegantly, used; as, "A proposition which, *from thenceforth*, he never questions."—*Locke*.

Thencefor'ward, *adv.* From that time forward or onward.

Theobro'ma, *n.* [*Gr. theos*, a god; *broma*, fruit; from the delicious quality of its fruit.] (*Bot.*) A genus of plants, order *Byttneriaceae*. *T. cacao*, the Cacao or Cocoa tree, is a native of Mexico, and is now more or less extensively grown throughout Central America, Brazil, Peru, Venezuela, Caracas, Ecuador, Grenada, Demerara, Essequibo, Guayaquil, and Surinam, with some of the West-India islands, foremost among which stands Trinidad. The various kinds of cocoa and chocolate are prepared from the seeds. The pods containing the seeds are gathered when ripe, and after having lain for a day and a night, are opened, and the seeds, which are taken out by hand, are submitted to what is termed the *sweating* process. They are first placed on a sloping floor or in baskets, so that the chief part of the pulp in which they are enveloped may drain off, and are then shut up in a close box, and left for 24 to 48 hours, according to the season and weather, after which they are turned out in the sun to dry. Upon a nice performance of the sweating process, which may be likened to *malting*, the value of the cocoa greatly depends. When quite dry, the seeds are packed in barrels or bags, and are ready for shipment. The process of *roasting* is effected in a metal cylinder, with holes at each end, through which the vapor generated is allowed to escape. When the aroma is sufficiently developed, the seeds are cooled, and then passed to a mill, which removes the husks from the *nibs*. To prepare *chocolate*, the cocoa-nibs are ground in a mill consisting of stone or metal rollers, which are usually heated either by charcoal fires or by steam, so as to soften or melt the natural fat. The warm smooth paste which passes from the mill is then placed in a mixing-mill, and incorporated with *refined sugar*, and usually *vanilla* or other *flavoring substances*. The trituration is continued until the whole paste is converted into an entirely homogeneous mass, which is finally shaped, by means of suitable moulds, into various forms, as blocks, loaves, tablets, lozenges, &c. The article known as *soluble cocoa* is prepared from cocoa-nibs and arrowroot, or other starch, ground together. The addition of starch gives the article the property of readily forming an emulsion with boiling water. Cocoa-seeds contain a peculiar alkaloid called *theobromine*, which resembles *caffeine*, the principle common to coffee and tea. To this alkaloid, and the peculiar fat called *butter of cocoa*, the beverages prepared from the seed owe their exhilarating and nutritious properties. The annual consumption of cocoa in one form or another is about 100,000,000 lbs. The cocoa-tree must not be confounded with the cocoa-palm (*Cocos nucifera*), from which we obtain the cocoa-nut.

Theobro'mine, *n.* (*Chem.*) See *THEOBROMA*.

Theochristic, (*-krist'ik*), *a.* [*Gr. Theos*, *God*, and *kristos*, anointed.] Anointed by God.

Theocracy, *n.* [*Gr. Theos*, *God*, and *krato*, *I rule.*] A term applied to that form of government established by Moses among the Jews, as being under the direct control of God. Their chief magistrates or judges were appointed under the express direction of Jehovah, and governed under him. When they came, therefore, to demand a king, it was expressly declared to be an act of rebellion against God.

Theocracy, (*-ôk'ra-si*), *n.* [*Gr. Theos*, *God*, and *krasis*, a mixing.] (*Anc. Philos.*) A term invented to signify that intimate union of the soul with God in contemplation, which was considered attainable by the newer Platonists. Similar ideas are entertained by the philosophers of India, and by many religious sects. See *QUIETISTS*.—A mixture of the worship of different gods.

Theocrat'ic, **Theocrat'ical**, *a.* Pertaining or having reference to a theocracy.

Theocritus, (*the-ôk'ri-tus*), a Greek pastoral poet, some of whose "Idyls" and "Epigrams" are still extant. He lived in the time of Ptolemy Philadelphus, B. C. 284-247.

Theo'dicy, *n.* [*Gr. theos*, and *dike*, right, justice; *L.*

Lat. Theodicea.] A name given to the exposition of the theory of Divine Providence, with a view especially to the vindication of the attributes, and particularly of the sanctity and justice of God in establishing the present order of things, in which evil, moral as well as physical, so largely appears to prevail. The name is of modern origin, dating from the close of the 17th century or the beginning of the 18th century; but the theory itself, as well as the mysterious problem which it is meant to resolve, is as old as philosophy itself.

Theod'olite, *n.* [*Gr. theodolite*, I view; *dolos*, stratagem.] In surveying, an instrument used for measuring the angular distances between objects projected on the plane of the horizon. In its simplest form the *T.* consists of a divided circle, which has to be set parallel with the horizon, and a telescope which has so much motion in a vertical plane as to enable the observer to view any object which he may require, above or below the horizon.

Theodora. See *JUSTINIAN I.*

Theodoric, king of the Ostrogoths in Italy, b. about 455, was the natural son of Theodimir, and given as a hostage to the emperor Leo Magnus, in 461. He rendered great services to the emperor Zeno, who honored him with the consulate in 484. He afterwards defeated and put to death Odoacer, and made himself master of all Italy. In 509 he espoused a sister of Clovis, king of the Franks. Theodoric displayed the qualities of a great prince. He regulated the administration of justice, allayed religious disputes, revised the laws and encouraged commerce. D. 526.

Theodoric I., king of the Visigoths, succeeded Wallia in 420. During the interval 426-436, he made war upon the Romans three times, and attempted to take the city of Narbonne. He obtained territory both in Spain and Gaul, and subsequently became the ally of the Romans against Attila, whom he defeated at Châlons-sur-Marne in 451, but lost his life in the battle. His son Thorismund succeeded him.

Theodoric II., son of Theodoric I., acquired the throne by the murder of his brother Thorismund, in 452, but was himself killed by Euric, another of the sons of Theodoric I. During his short reign he increased the empire of the Visigoths, and advanced almost as far as the Loire. Killed, 466.

Theodor'us I., POPE, succeeded John IV. in 642. He excommunicated Paulus, patriarch of Constantinople, and condemned the heresy of the Monothelites. His successor was Martin I. D. 649.

THEODORUS II., succeeded John IX. in 897, but died in less than a month after his election.

Theodosius, THE GREAT, emperor of the East, was a native of Spain, and was b. about A. D. 346. He was the son of the general of the same name, who was appointed to the command in Britain in 367, afterwards distinguished himself in Africa, and, in 379, fell into disgrace, and was put to death. *T.* accompanied his father in his campaigns, and was named duke of Moesia, which province he saved by a victory over the Sarmatians. After the great defeat of the Romans, and the death of Valens at the battle of Adrianople in 378, *T.* was called by Gratian from his retreat in Spain to assume the government of the East, and to take the conduct of the Gothic War. He fixed his head-quarters at Thessalonica, and by prudent and cautious measures gradually weakened the Goths and delivered the empire. The revolt of Maximus and the murder of Gratian soon followed, and the former was recognized as emperor of the West by *T.* But the latter subsequently took arms in the cause of Valentinian, defeated Maximus near Aquileia, and had him put to death in 388. After spending the winter at Milan, he made a triumphal entry into Rome. *T.* was a zealous Catholic, and theological conflicts form a prominent part of the history of his reign. He was baptized by an orthodox bishop before the end of the first year of his reign, and immediately published an edict in support of the doctrine of the Trinity, branding all who did not hold it as heretics. The rites and sacrifices of Paganism were finally suppressed by *T.*, who promulgated many severe laws against them, and had many of the temples destroyed. In 390 broke out the sedition of Thessalonica, which the emperor avenged by a general massacre of the people when assembled in the circus by his own invitation. This frightful crime, by which 700, or perhaps double that number of lives, were sacrificed, brought on *T.* the solemn rebuke of St. Ambrose, *q. v.* After establishing Valentinian in the Western empire, he returned to his own capital, but in 394 he was called to a new war against the usurper Eugenius, and his supporter, Arbogastes, both of whom were defeated and slain. *T.* b. at Milan only four months after his victory, in January, 395, leaving the empire to be divided between his sons, Arcadius and Honorius.

THEODOSIUS II., son of Arcadius, whom he succeeded, in 408, in the Empire of the East. The government was carried on, during the greater part of his reign, by his sister Pulcheria. In his reign was compiled and published the celebrated code of laws, styled after him the *Theodosian Code*. D. 450.

THEODOSIUS III., was nominated Emperor of Constantinople in succession to Anastasius II., 716. After a reign of two years, he abdicated in favor of Leo III.

Theogony, *n.* [*Fr. theogonie*; *Gr. theogonia*—*Theos*, and *gonê*, generation.] The generation of the gods, or that branch of heathen theology which treats of the descent and relationship of the various gods who were, or are, the objects of popular pagan worship.

Theologian, (*thê-ô-lô'jan*), *n.* [*Fr. theologien.*] A person well versed in theology; a divine, or a professor of divinity.

Theologie. (-lōj'ik,) **Theolog'ical**, *a.* [Fr. *théologie*.] Pertaining, or having reference, to theology or divinity.

Theolog'ically, *adv.* In a theological manner.

Theolog'ies, *n. sing.* The science of theology.

Theologist, (-ōl'ō-jist,) *n.* A theologian.

Theologize, (-ōl'ō-jīz,) *v. a.* To render theological; as, to theologize philosophy.

—*v. n.* To theorize or speculate upon theological subjects.

Theologizer, *n.* A theologian. (R.)

Theology, *n.* [Gr. *theologia*, from *Theos*, God, and *logos*, discourse.] Literally, a discourse concerning God. In common language, a word used synonymously with *divinity*, to designate that science which treats not only of the divine existence and attributes, but also of the relations which subsist between God and his intelligent creatures, the duties of which consequently devolve upon the latter, and the arrangements which God has entered into for their government and benefit. *T.* stands to religion in the same relation as that in which any other science stands to its subject, being, in fact, the truths of religion arranged in a scientific form. Among the ancient Greeks, *theologia* denoted the philosophy of the divine existences, and included all questions relating to the nature, origin, and services of the gods. The word is not used in the New Testament, but was employed by the earliest Christian writers, who styled the author of the Apocalypse, by way of eminence, the *Theologos*, or Divine, and the doctrine of Christ, *theologia*. Theologian, hence, came to be applied as a title of honor to one who defended well the doctrine of Christ's divinity, or of the Trinity. The first who uses the term in its modern significance was Peter Abelard, who flourished in the early part of the 12th century, and wrote a system of scholastic divinity, to which he gave the name of *Theologia Christiana*. *T.*, in the form in which it now exists, is comparatively a modern science. Among the Christian fathers, we find all the essential dogmas of our faith asserted and defended; but they made few, and these very imperfect, efforts to present them in a complete and systematic form. The science began with the scholastic divines of the Middle Ages, as Anselm, Abelard, Albertus Magnus, Thomas Aquinas, Bonaventura, Duns Scotus, and others. Since the Reformation, it has been assiduously cultivated, and many digests of it have been published.

Theop'athy, *n.* [From Gr. *Theos*, God, and *pathos*, suffering.] Susceptibility of receiving religious impressions; devotional capacity.

Theophany, (-ōf'a-ne,) *n.* [Gr. *Theos*, and *phanosthai*, to appear.] A visible revelation of God to man.

Theophilanthropism, *n.* [Gr. *Theos*, God, and *philanthropos*, a love of man.] A system of religion uniting theism and philosophy.

Theophrastus, the Greek philosopher and naturalist, was a native of Ercus, in Lesbos, and flourished in the 4th century, B. C. He became a pupil of Plato at Athens, and made, at the academy, the acquaintance of Aristotle; but he quitted the academy after Plato's death, and was absent from Athens for some years. On his return, he gladly studied philosophy under his friend Aristotle, who had so high a regard for him as to bequeath to him his library, and to name him his successor. *T.* had extraordinary success as head of the Lyceum, and was attended, it is said, by 2,000 disciples. Among them were Demetrius, Phalereus, and Menander. A charge of impiety was brought against him, but he successfully defended himself, and generously interposed to save his adversary from the popular vengeance. He was, however, compelled to leave Athens in 305, under the law which banished all philosophers. The law was soon repealed, and he returned to his post, and peacefully taught and commented on the system of his master, Aristotle, till his death. His writings were very numerous, but have perished with the following exceptions: his work entitled *Characters*, a set of his lively sketches of vicious or ridiculous characters; treatises on the *History of Plants*, on the *Causes of Plants*, and on *Stones*; a work on the *Senses*, and several fragments. The *Characters* served as the model for La Bruyère's work with the same title; it has been several times translated into English, French, and German.

Theopneustic, *a.* [Gr. *Theos*, God, and *pnein*, to breathe.] Proceeding from the inspiration of the Almighty Spirit.

Theopenesty, *n.* Divine inspiration.

Theor'bo, *n.* [It. *tiórba*.] (*Mus.*) A lute of large dimensions, sometimes called the *arch-lute*, and formerly used for striking the chords of the thorough bass in accompaniments.

The'orem, *n.* [From Gr. *theorēs*, to look out.] A *T.* is properly a thing to be looked at or seen, and is used in mathematics to signify something that requires to be proved, in opposition to a *problem*, which is something that requires to be done.

Theoret'ic, **Theoret'ical**, *a.* [Gr. *theōrētikos*.] Pertaining or having reference to theory; depending upon theory or speculation; speculative; as, *theoretical* ideas. —Terminating in theory or speculation; not practical.

Theoret'ically, *adv.* In or by theory; speculatively.

Theoret'ies, *n. sing.* The speculative part of a science.

Theorist, **Theorizer**, *n.* One who forms theories.

The'orize, *v. n.* [Fr. *théoriser*.] To form opinions solely by theory; to speculate.

The'ory, *n.* [Fr. *théorie*; Lat. and Gr. *theoria*, from Gr. *theōros*, a spectator.] Speculation; hypothesis; a doctrine or scheme of things, which terminates in speculation or contemplation, without a view to practice; the rules, or abstract principles of any art, considered without reference to practice; scientifically, a connected arrangement of facts, according to their bearing on some real or hypothetical law.

Theos'ophism, **Theos'ophy**, *n.* The belief or the system of the theosophists.

Theosophist, (-ōs'ō-fist,) *n.* [Gr. *theosophos*, wise in the things of God.] One of that class of mystical religious thinkers and writers who aim at displaying, or believe themselves to possess, a knowledge of the Divinity and His works by supernatural inspiration. The best-known names at this day of the Theosophic order are those of Jacob Böhm, Madame Guyon, Swedenborg, Saint Martin. Schelling and others, who regarded the foundation of their metaphysical tenets as resting on divine intuition, have been called Theosophists, but with less exactness. See THEOSOPHY, in SECTION II.

Therapen'tic, **Therapen'tical**, *a.* [Fr. *thérapeutique*, from Gr. *therapeuein*, to heal.] Curative; pertaining, or having reference to the healing art.

Therapen'ties, *n. sing.* (*Med.*) That department of the science which deals with the way of curing disease. It treats of the symptoms of disease and the conclusions to be drawn from them; of the power of nature and how far it may be relied on; of the modes of operation of the various remedies, &c.

Therapen'tist, *n.* A person skilled in therapeutics.

Therasia, a small rocky island in the Grecian Archipelago, separated from the N.W. coast of Santorin (anc. *Thera*) by a narrow channel. Large excavations were lately made in that volcanic island for the extraction of tufa or pumice used in the construction of the Suez Canal, which resulted, in 1869, in the discovery of a buried city, supposed by some to belong to a civilization anterior to the Egyptians.

There, (thār,) *adv.* [A. S. *thær*.] In that place; also, in the place most distant, as opposed to *here*. *There* is used to begin sentences, or before a verb; sometimes pertinently, and sometimes without signification. — *There* is also used by way of exclamation, as pointing to something distant; as, look *there*!

Here and there, in one place and another.

Thereabout, **Thereabouts**, *adv.* Near that place. — Nearly, or near that number, degree, quantity, or extent; as, a couple of tons or *thereabouts*. — Concerning that; touching that matter. (R.)

Thereafter, *adv.* After that; afterward; coming after; as, it came to pass *thereafter*. — According to that; accordingly; as, when you can draw the head well, proportion the body *thereafter*.

Thereat, *adv.* At that place. — On that account.

Thereby, *adv.* By that; by means, or in consequence, of that; as, the paper will not suffer any change *thereby*.

Therefor, *adv.* For that, or this, or it.

Therefore, *conj. and adv.* For that; for that or this reason, referring to something previously stated; as, he was sick, *therefore* he could not attend. — Consequently; as, he prevaricates, *therefore* he is suspected. — In return or recompense for this or that; as, "We have forsaken all and followed thee, what shall we have *therefore*?" *Math. xix. 27.*

Therefrom, *adv.* From this or that; as, the leaves that spring *therefrom* grow white.

Therein, *adv.* In that or this place, time, or thing; as, I find myself unable to serve you *therein*.

Thereinto, *adv.* Into that; into that place.

Thereof, (thār-ōf,) *adv.* Of that or this.

Thereon, *adv.* On that or this.

Thereout, *adv.* Out of that or this.

There'sa, (St.) A reformer of the order of Carmelites, was b. in Old Castile, in 1515. She was remarkable almost from infancy for her fervent piety, but through a long course of years, periods of ascetic devotion alternated with periods of gaiety and indulgence in worldly pleasures, accordingly as she was affected by great sorrows or was free from them. She had been placed in the convent of the Augustine order in her native town, Avila, soon after the death of her mother, in 1527, and she took the vows seven years later. After years of painful interior conflicts, she resolved to attempt the reform of her order, which she commenced by founding, in 1562, another convent at Avila, in which a more close and rigorous observance of the rule should be enforced. The new society was called the "Barefooted Carmelites," and other houses were soon founded. St. Theresa was aided in her pious enterprise by the co-operation of John de Santa Cruz. D. at Alba, 1582, and was canonized by Gregory XV. in 1621. Her remains were removed to Avila in 1585, but were restored to Alba in the following year by order of the pope. The writings of St. Theresa, chiefly ascetic, were published in 1675, in 2 vols. folio, and have several times been republished. Among them is her *Life*, written by herself, that has been translated into almost all European languages, and is still frequently reprinted. *T.* describes the internal struggles and aspirations of her heart, and her frequent visions, with a candor that cannot be mistaken, while the excellence of language and style of her works have secured for them a place in the history of Spanish literature.

There'sa, in *New York*, a post-vill. and twp. of Jefferson co., abt. 20 m. N.N.E. of Watertown.

Theresa, in *Wisconsin*, a post-village and township of Dodge co., 20 m. S. of Fond du Lac.

There'siopel, more commonly called MARIA-THERE-SIOPEL (Ger. *Theresienstadt*), an important town of the Servian Wojwodschaff, 24 m. W.S.W. of Szegedin, on the Palitsch Lake. It is well built, but unpaved. Manufactures of leather and shoes, linen-weaving, dyeing, the cultivation of tobacco and fruits, together with the rearing of cattle, are the chief branches of industry. *Pop.* 57,450.

Thereto, (thār-too') *adv.* To that or this.

Therem'der, *adv.* Under that or this.

Thereun'to, *adv.* Thereto; unto that or this.

Therenpon', *adv.* Upon that or this. — On account of that; in consequence of that. — Immediately; at once.

Therewith', *adv.* With that or this.

(NOTE.) The foregoing compounds of *there* with the prepositions are, for the most part, deemed inelegant and obsolete.)

The'riac, **Theri'aca**, *n.* [Fr. *thériaque*, from Lat. *theriaca*.] A term given in ancient pharmacy to certain complex remedies supposed to be antidotes to poisons; they were usually in the form of confections.

Theriot'omy, *n.* [Gr. *thērion*, a wild beast, and *temnein*, to cut.] The anatomy of animals; zoöotomy.

Ther'mæ, *n. pl.* [Lat., from Gr. *thermē*, heat.] Warm baths; spas.

(*Antiq.*) In the Roman *Thermæ*, the baths were of secondary importance. They were a Roman adaptation of the Greek gymnasium, contained exedrae for the philosophers and rhetoricians to lecture in, porticoes for the idle, and libraries for the learned, and were adorned with marbles, fountains, and shaded walks and plantations.

Ther'mal, *a.* Pertaining to heat; warm; — a term chiefly applied to warm or hot springs; as, *thermal* waters.

Thermograph, (-mēl'ō-grāf,) *n.* [Gr. *thermē*, heat, *metron*, measure, and *graphein*, to write.] A self-registering thermometer, especially one that registers the maximum and minimum during long periods.

Ther'mia, an island of European Turkey, in the Grecian Archipelago, belonging to the Cyclades, abt. 40 m. from the island of Paros; *a.*, 48 sq. m.; *pop.*, 6,000.

Ther'mic, *a.* [From Gr. *thermē*, heat.] Thermal; belonging or having reference to heat.

Ther'mic Fever. See SUN STROKE.

Thermidor, (tair-mē-dōr') (*French Hist.*) The name of the 11th month of the year in the French Republican calendar. It commenced on July 19, and ended on August 17. The name is derived from the Gr. θερμός, warm, and was borrowed from the great heat which characterized that period of the year. It was the month signalized by the overthrow of Robespierre and the Reign of Terror, thence commonly called the Revolution of Thermidor; and those who boasted of having participated in it called themselves *Thermidoriens*.

Thermo-barom'eter, *n.* A barometric instrument graduated for giving altitudes by the boiling-point of water.

Thermoe'rosis, *n.* [Gr. *thermē*, heat, and *chrōmīs*, coloring.] (*Physics.*) A red flame looked at through a red glass appears quite bright, but through a green glass it appears dim or scarcely visible. So in like manner heat which has traversed a red glass passes through another red glass with little diminution, but is almost completely stopped by a green glass. To these different obscure calorific rays Melloni gave the name of *thermocrosis* or heat coloration.

Thermo-dynam'ics, *n. sing.* The science which treats of the mechanical action or relations of heat.

Thermo-electric, *a.* Pertaining, or relating, to thermo-electricity.

Thermo-electric'ity, *n.* (*Physics.*) When the junction of two dissimilar metals is heated or cooled, the free ends being joined by a wire, an electric current is generated. This development of electricity by heat was discovered by Prof. Seebeck in 1822, and has received the name of *thermo-electricity*. The intensity of the thermo-electric-current depends on two things: the nature of the metals employed, and the difference in temperature which exists between the two ends of the metal bars. The direction of the current can be understood by reference to the annexed figure. A represents a bar of antimony, B a bar of bismuth, the couple being soldered at the point C, and united by a wire *w*. On heating the junction C a current is generated, which moves in the direction of the arrow, i. e. from bismuth to antimony through the junction, and from antimony to bismuth along the connecting wire. On the other hand, if C be chilled, the current is reversed, now passing from antimony to bismuth across the junction. By uniting several of these couples so as to have alternate bars of bismuth and antimony soldered at their ends, the strength of the current can be greatly increased. Thus multiplying the number of pairs, and compactly arranging them in a cubical shape, Nobili constructed the first *thermo-electric pile*, an instrument which has become invaluable in researches on radiant heat. When one end of such a pile is heated, a current is produced which moves in the opposite direction when the other end is warmed. The existence of a current, therefore, depends, as already stated, upon the difference of temperature between the two opposite faces of the pile, and within certain limits the strength of the current is exactly proportional to this difference. *T.-E.* currents can also be produced in a circuit formed of a single metal. If a straight and homogeneous wire be heated, no current is produced; but if the wire be coiled or knotted, a current will at once flow from the heated part to that in which the homogeneity has been destroyed. Two pieces of bismuth or two of antimony will also generate a current, if so placed together that their crystals shall occupy different relative positions. The origin of the *T.-E.* current is probably to be found in the unequal propagation of heat in a conducting circuit. The electricity is not created;

Fig. 2492.

it results from the disappearance of an equivalent amount of heat.

Thermogen. (-jén,) *n.* [Gr. *thermē*, heat, and *genein*, to produce.] Caloric; the elementary principle of heat; — a term confined chiefly to hot springs.

Thermology. *n.* A discourse or treatise on heat; an account of heat.

Thermo-magnetism. *n.* The relation of heat to magnetism.

Thermometer. *n.* [Gr. *thermē*, heat; *metron*, a measure.] (*Physics.*) An instrument for measuring heat, founded on the principle that solid, liquid, and gaseous bodies always expand in exact proportion to the temperature to which they are subjected. *T.* are of various constructions, according to the purpose for which they are intended. The first kind of *T.* invented was the *air T.*, which consisted simply of a bulb of glass, with a narrow stem dipping into a colored liquid. As the air expanded or contracted in the bulb, the liquid fell or rose in the tube. This form of instrument was too much affected by atmospheric changes to be of much service. A modification of it is much used under the name of the DIFFERENTIAL, *q. v.* The *T.*, as at present constructed, consists of a bulb of glass, to which a tube is attached, sealed at the end, and containing mercury or spirits of wine. The operation of filling is conducted in such a manner that the mercury or spirit is at its boiling-point when the tube is sealed, in order that it may have a vacuum above it when it contracts. A good mercurial *T.* should bear the following tests: — When immersed in melting ice, it should indicate 32° Fahr.; when suspended in the steam of water boiling in a metallic vessel, the mercury should remain stationary at 212° Fahr. When suddenly inverted, the mercury should fall with a sharp metallic click, showing that a perfect vacuum exists in the tube. The bore of the tube may be tested by separating a short column of mercury, which should occupy the same number of degrees in any part of the tube. The thermometric scale is unfortunately differently divided in different countries. In this country, and in England, Fahrenheit's scale is used, the difference between freezing and boiling points being 180°; the former being 32°, the latter 212°. In the Centigrade, which is used in France, Italy, &c., this interval is divided into 100°, while in that of Réaumur, which is still used in Germany and Russia, the same distance is divided into 80°. In all these systems the degrees below the zero 0° of the scale are indicated by the sign minus (—). For scientific and chemical uses the Centigrade scale now prevails, though the meteorologists hold fast to Fahrenheit's system. In most chemical books, tables are given, showing the value of the degrees on one scale in those of another. The following formula may be used for the purpose:

$F \text{ into } C = \frac{5}{9} (F - 32) = C.$ $C \text{ into } F = 32 + (\frac{9}{5} C) = F.$
 $R \text{ into } F = 32 + (\frac{9}{5} R) = F.$ $F \text{ into } R = \frac{5}{9} (F - 32) = R.$

For meteorological purposes the most useful form of instrument is the *maximum and minimum self-registering T.* The maximum instrument is an ordinary mercurial *T.*, arranged horizontally, in the bore of which is placed a small piece of steel wire, in the empty part of the tube. The instrument is set by drawing the wire down to the mercury with a small magnet. As the mercury expands, it pushes the index along, leaving it behind when it contracts. The minimum instrument is arranged in a similar manner, spirit being used instead of mercury, and a little enamel tube containing an atom of steel wire forming the index. This is placed below the surface of the spirit, and is drawn back by it when it contracts, but is not pushed forward when it expands. There are numerous other maximum and minimum instruments (see Fig. 1770), but of too complicated a nature for description here. For meteorological use the scale is generally marked in an ivory, boxwood, or enamelled slab, placed behind the tube, but for chemical purposes the degrees are marked on the tube itself with a diamond, a piece of white enamel being often let into the glass to form a background. For the measurement

Fig. 2493.—BRÉGNÉ'S THERMOMETER.

of degrees of heat beyond 600° Fahr., which tends to melt the material, *pyrometers* are used. (See SECTION II.) A good pyrometer is, however, a desideratum. Brégné's metallic *T.* is an application of the unequal expansion of different metals; a compound

bar of platinum, gold, and silver, is rolled into an extremely thin ribbon, which is coiled into a spiral, the platinum outermost, one end being fixed and the other acting on an index moving over a circular scale; the silver, expanding most with heat, tends to nubend the spiral, and moves the index. This *T.* is both exceedingly sensitive and accurate, and can be used for very high temperatures.

Chromatic T. When the edge of a rectangular plate of glass is applied to a piece of heated metal, or other substance having a temperature different from that of the glass and exposed to a beam of polarized light, colored fringes are developed; and as the particular tints depend on the difference between the temperature of the glass (which is supposed to be known) and that of the substance to which it is applied, the color of the central fringe affords a means of inferring approximately the temperature of the substance. Hence the term *C. T.*

Thermometric. *Thermometrical.* *a.* Pertaining or relating to a thermometer; as, the *thermometrical tube*. — Obtained by means of a thermometer; as, *thermometrical observations*.

Thermometrically. *adv.* In a thermometrical manner.

Thermopylae. (*ther-mop'i-le*.) a pass in the N.E. of Greece, at the base of Mount Œta, famous for the fate of Leonidas and his 300 Spartans, who here devoted themselves to their country, 480 B. C. It consists of a narrow passage, between high cliffs on one side, and on the other the sea, or an impassable marsh, formed by alluvial deposits, 9 m. from Lamia (Fig. 1557).

Thermoscope. *n.* [Fr., from Gr. *thermē*, heat, and *skopein*, to view.] An instrument by which changes of temperature are indicated.

Thermostat. *n.* [Gr. *thermē*, *thermos*, and *istanai*, to set.] A self-acting physical apparatus for regulating temperature by the unequal expansion of different metals by heat.

Thermo-tension. (-tén'shun,) *n.* [Gr. *thermos*, and Eng. *tension*.] A stretching or expanding by heat, as of iron.

Thermotics. *n. sing.* The science of heat, as regards its action upon matter.

Thersites. (*Homeric Hist.*) An officer, the most deformed and illiberal of the Greeks during the Trojan war. He was fond of ridiculing his fellow-soldiers, particularly Agamemnon, Achilles, and Ulysses. Achilles killed him with one blow of his fist, because he laughed at his mourning the death of Penthesilea.

Thesaurus. *n.* [Lat.] A repository or treasury, as of general or cyclopædic knowledge; a lexicon.

These. (*theez*.) *pronominal adj.* The plural of *THIS*, *q. v.* *These* is opposed to *those*, as *this* is to *that*, and when two persons or things, or collection of things, are named, *these* refers to the things or persons which are nearest in place or order, or which are last mentioned.

Theseus. (*Heroic Hist.*) A king of Athens, and the son of Ægeus by Æthra, the daughter of Pittheus, was educated at the house of his father-in-law at Træzene. On arriving at years of maturity he was sent by his mother to Athens, a sword being given him by which he might make himself known to Ægeus. On his way from Træzene he destroyed Corynetes, Sigomis, Sciron, Cercyon, Procrustes, and the celebrated Phæax. He was not well received at Athens, and Medea attempted to poison him before his arrival was publicly known. The Pallatides, who attempted to assassinate him, he put to death by his own hand. He next destroyed the bull of Marathon; and at Crete, by means of Ariadne, who was enamored of him, he killed the Minotaur, and thereby redeemed the Athenians from the annual tribute of seven chosen youths and as many virgins, to be devoured by the monster. On ascending his father's throne he ruled the Athenians with mildness, made new laws and regulations, and by his policy won the friendship of the king of the Lapithæ. *T.*, in conjunction with Pirithous, carried off Helen, the daughter of Leda, but whom he was compelled to restore. While he was in captivity, Mnestheus obtained the crown, and *T.* on his return attempted to eject the usurper, but, failing, he retired to the court of Lycomedes, king of the island of Scyros, who, jealous of his fame, carried him to a high rock and threw him down a precipice. The children of *T.*, after the death of Mnestheus, recovered the Athenian throne.

Thesis. *n. ; pl. THESES.* [Lat., from Gr. *lithēmi*, to set or place.] In a general sense, a term applied to denote any proposition, affirmative or negative, which is laid down or advanced to be supported by argument; but it is more particularly applied to those questions which are propounded in most of the European universities to the students previously to their obtaining a degree. — Hence, an essay or dissertation composed upon a definite or specific theme.

(*Mus.*) The depression of the hand in marking or beating time.

(*Pros.*) The depression of the voice in pronouncing the syllables of a word. Also, the part of the foot upon which such depression falls.

Thesmothetic. *n.* [Fr., from Gr. *thesmothetic*.] (*Gr. Antig.*) Same as ARCHON, *q. v.*

Thespian. *a.* [From Gr. *Thespi*, the reputed founder of the Greek drama, who was B. at Xarca, in Attica, and flourished abt. 550 B. C.] Pertaining or relating to the representation of dramatic tragedy, or to the Tragic Muse; as, the *Thespian art*.

Thespius. (*Myth.*) A king of the Thespiades, and father of 50 daughters, all of whom bore children to Hercules. The Thespiades were conducted to Sardinia by Iolus.

Thessalonians. (EPISTLES OF ST. PAUL TO THE.)

(*Script.*) Two books of the New Testament, the authenticity and canonical authority of which have been admitted from the earliest ages by all who have received any of Paul's epistles. The first epistle was written by the Apostle from Corinth, and not from Athens, as the subscription imports, about A. D. 52. Its design was to confirm the Thessalonians in the faith, and to encourage them to a patient and consistent profession of Christianity. In his second epistle, which was evidently written soon after the first, and from the same place, the Apostle endeavors to dissipate a mistaken notion, that the coming of Christ, which he had referred to, was near at hand. The rest of the epistle consists of expressions of affection to the Thessalonians, of confidence in them, prayers on their behalf, and exhortations and directions suited to the circumstances in which they were placed.

Thessalonica. the ancient name of SALONICA, *q. v.*

Thessaly. the largest political division of ancient Greece, lay to the S. of Macedonia and the E. of Epirus, being separated from the latter by Mount Pindus, and from the former by the Cambrian Mountains, the Ægean Sea bounding it on the E., and the Malic Gulf and Mount Œta on the S. Thessaly proper is a vast plain shut in on every side by mountains; on the N. and W. by those already named, on the S. by Mount Othrys, and on the E. by Mount Pelion and Ossa, the only opening being the Vale of Tempe (Fig. 1195) in the N.E., between Ossa and Olympus. *T.* was held by the Turks from 1355 to 1851, when, as a result of the recommendation of the Congress of Berlin, *T.* south of the ridge of mountains forming the water-shed of the Sakambria (the ancient Peneus) was ceded to Greece, which thus secured much the largest and most fertile part of the province. *T.* was the seat of the war between Greece and Turkey in 1897, and after the defeat of the Greek army was occupied by Turkey. The terms of peace required its restoration to Greece, though Turkey retained an advantageous position upon the northern frontier.

Thēta. *n.* [Gr.] The unlucky letter of the Greek alphabet, so named from its being the first letter of *thanatos*, death; — it corresponds with the English *th*.

Thetford. a town of England, co. of Norfolk.

Thetford. in Michigan, a post-township of Genesee co., abt. 12 m. N.E. of Flint.

Thetford. in Vermont, a post-village and township of Orange co., 33 m. S.S.E. of Montpelier.

Thētis. (*Myth.*) One of the sea-deities, who was courted by Neptune and Jupiter. But when the gods were informed that the son she should bring forth must become greater than his father, they ceased their solicitations; and Peleus, the son of Æacus, was permitted to gain her hand. *T.* became mother of several children, among them Achilles, whom she rendered invulnerable by plunging him in the waters of the Styx, except that part of the heel by which she held him.

Thēurgy. *n.* [Gr. *theourgia* — *theios*, divine, and *ergon*, work.] The power of doing supernatural things by lawful means, as prayer to God. — Also, supernatural magic, as distinguished from *natural magic*.

They. (*thū*.) *pron. pl. ; (obj. THEM.)* [A. S. *thæge*, these.] The nominative plural of *he*, *she*, or *it*; the men, the women, the animals, the things. It is used indefinitely, as our ancestors used *man*; as, *they* say, that is, it is said by persons indefinitely.

Thi'an-shan. (Chin., "celestial mountains,") a lofty chain of Chinese Turkestan, forming the N. boundary of the great table-land of Central Asia, and extending between Lat. 42° and 43° N., Lon. 80° to 90° E.

Thibet. or **Tibet.** (*tib'et* or *tib-el'*.) (native *Tou'p'ho*, *Bhote*, and *Pu'koachin*, "snowy region of the north,") a very extensive region of Central Asia, mostly comprised within the Chinese empire, between Lat. 22° and 31° N., and Lon. 72° and 104° E., having N. Chinese Turkestan and the desert of Gobi, E. the Chinese prov. of Se-tchuen, S. Yunan, N. Birmah and the Great Himalaya, separating it from Assam, Bootan, Sikkim, Nepal, and the upper British provs., and W. the Punjab territories N. of the Himalaya, Budukh-shan, the Beelootagh Mountains, &c. The W. parts of this vast tract, called Little *T.*, including Ladakh, Lé, and Baltee, appear, however, to be independent of China. Its boundaries on every side but the S. being so uncertain, and our knowledge of the country so limited, it is impossible to form anything like an accurate estimate either of its area or population. *T.*, though it does not include the highest summits of the Himalaya, comprises a large portion of the elevated table-land in the centre of the continent, with the sources of almost all the great rivers of S. Asia, including the Indus, Sutlej, Ganges, Brahmapootra, Irrawadi, Thanleng, and Menam-kong or river of Cambodia, as well as those of the great Chinese rivers, the Yang-tse-kiang and the Hoang-ho. Its mountain-chains generally run parallel to the Great Himalaya, of which *T.* is the N. slope; but some are said to stretch in a N.E. direction to the frontiers of Koko-nor, and others extend from N. to S. between the valleys of the great rivers in the S.E. *T.* has numerous lakes. The chief are the Tengkirinor (the largest, about 110 m. N.W. of Lassa), and the lake Palte or Yamo-rouk (S. of the San-po River, which surrounds in the form of a ring a large island of a shape similar to its own). *T.* strikes a traveller, at first sight, as one of the least-favored countries under heaven. It exhibits only low, rocky hills, without any visible vegetation, or extensive, arid plains, both of the most stern and stubborn aspect, promising as little as they produce; and it is in general extremely bare of trees and the larger vegetable products. — *Climate.* The temperature and seasons possess a remarkable uniformity. The same division takes

place here as in the more southern region of Bengal: during the spring, a variable atmosphere, heat, thunderstorms, and occasionally refreshing showers; from June to September, heavy and continued rains; from October to March, a clear and uniform sky. For three months of this season, a degree of cold is felt, far greater, perhaps, than is known to prevail in Europe. Its extreme severity is more particularly confined to the S. boundary of *T.*, near the elevated range of mountains which divides it from Assam, Bootan, and Nepal. The summits of these are covered all the year with snow; and their vicinity is remarkable, at all seasons, for the dryness of the winds. — *Zoöl.* *T.*, though barren of vegetable produce, teems with animal life. The variety and abundance of wild fowl, game, and beasts of prey, flocks, droves, and herds is astonishing. Among the most remarkable animals are the cattle, which are extremely useful to the inhabitants. The bull is known by the name of the yak of Tartary, or bushy-tailed bull of *T.*

Fig. 2494. — THIBET DOG.

The musk-deer also abounds in the coldest parts of the mountains; and the goat, which yields the materials for the manufacture of the finest shawls, is also an inhabitant of these regions. This is the most beautiful of the species of goats. Wild horses are found; and there is also a fine race of dogs. Among the most valuable and useful animals of *T.* is the breed of sheep, which merits a distinguished rank. The flocks of these are numerous; and upon them the inhabitants place their chief reliance for present support as well as for winter food. — *Prod.* The usual crops are wheat, pease, and barley; but in many parts these grains never ripen. — *Minerals.* Gold, copper, cinnabar, and lead. In many cases, however, these cannot be worked, for want of fuel to smelt the ores. The dung of animals is the only substance used for fuel; and with that alone it is impossible to excite a degree of heat sufficiently intense for such purposes. Thus situated, the most valuable discovery for them would be that of a coal-mine. Tincal is found in inexhaustible quantities. It is a fossil, brought to market in the state in which it is dug out of the lake, and afterwards refined into borax in Europe. — *Exports.* To China, gold-dust, precious stones, musk, and woollen cloths; to Bengal, gold-dust, musk, tincal. The roads and bridges are much inferior to those of China, and greatly impede the progress of commerce. — *Religion.* Buddhism, of which it is the chief seat; and the country abounds with temples. It is said that there are about 80,000 lamas, or priests, supported at the expense of government. — *Race.* Mongol. — *Estim. pop.* 6,000,000. — *T.* enjoys but the shadow of independence, being ruled by Chinese sovereigns, who obtained their ascendancy over it in 1720, by interfering in the intestine commotions by which the country was then agitated.

Thibetan, (*tib'-*) *a.* (*Geog.*) Pertaining or having reference to Thibet.

— *n.* (*Geog.*) A native or inhabitant of Thibet.

Thib'et-cloth, *n.* A caulet or fabric made of coarse goat's hair.

Thibodeaux (*tib-o-do'*), in Louisiana, a post-town, cap. of La Fourche parish, 100 m. W.S.W. of New Orleans. *Pop.* (1897) 2,275.

Thick, *a.* (*comp.* THICKER; *superl.* THICKEST.) [*A. S. thic.*] Dense; close; compact; inspissated; — opposed to *thin*; as, a *thick fog*. — *Turbid*; muddy; not clear or transparent; as, *thick liquor*. — Noting the diameter of a solid body; as, a slab of timber twelve inches *thick*. — Following in quick succession; closely planted or set; abundant; close or crowded in space; not easily pervious; as, a *thick wood*, a *thick concourse* of people, honors were showered *thick* upon him, &c. — Having more depth or extent from one surface to its opposite than usual; as, a *thick board*, a *thick sheet* of paper. — Without proper intervals of articulation; not having due distinction of syllables; as, to speak *thick*, a *thick delivery* of words, &c. — Somewhat deaf, dull, or obtuse in the auditory nerves; as, a person *thick* of hearing. — Intimately acquainted; on terms of close or familiar friendship; as, they are as *thick* as two thieves. (*Col.*)

(*NOTE.* *Thick* enters into frequent combination with other words in the formation of such self-explaining compounds as *thick-bodied*, *thick-lipped*, *thick-necked*, *thick-ribbed*, *thick-stem*, and the like.)

— *n.* The thickest part, or the time when anything is thickest; as, he fell in the *thick* of the fight.

Thick and thin, whatever is in the way, great or little; as, a *thick and thin* partisan.

— *adv.* Frequently; fast; as, "*thick-beating feet*." (*Dryden.*) — Closely; as, an acre of land *thick* sown with grain. — To a great depth, or to a thicker depth than is common; as, cheeks covered *thick* with paint, land strewn *thick* with lime.

— *v. a.* To thicken; to make thick; to curdle; as, terror is apt to *thick* men's blood. (*R.*)

Thick-and-thin, *a.* (*Naut.*) With one of the sheaves larger than the other; — said of a tackle-block.

Through thick-and-thin, through all impediments, difficulties, or trials; through every fortune; as, a lover of his country will stick by her *through thick-and-thin*.

Thicken, (*thik'-n*) *v. a.* [*A. S. thiccan.*] To make thick or thicker, in any senses of the word; as, (1.) To make dense or concrete; to inspissate; as, to *thicken* varnish. (2.) To fill up interstices or openings in; to make close; as, to *thicken* a plantation of young trees. (3.) To make frequent, or more frequent or numerous; as, to *thicken* blows.

— *v. n.* To become thick or more thick in any senses of the word; as, (1.) To be inspissated; to become more dense or less tenuous; as, paint *thickens*, a fog *thickens* by degrees. (2.) To become dark, gloomy, or obscure; as, the approaching night *thickens*, the clouds *thicken* for rain, &c. (3.) To become consolidated or more compact; to concrete; as, sap *thickens* into wood. (4.) To press; to be crowded; to become close or more thick and numerous; as, the mob *thickens* each minute. (5.) To become quick, brisk, or animated; as, the plot *thickens*, the fight *thickens*.

Thick'ening, *n.* Something put into a liquid or any mass to make it more thick or concrete.

Thick'et, *n.* [*From thick.*] A coppice; a small wood, or collection of trees or shrubs thickly set; as, the chief *thicket* of the park.

Thick-head, *n.* A thick-headed, and, hence, stupid person; a dolt; one of dull intellects.

Thick'ish, *a.* Somewhat thick; of medium thickness; as, a *thickish* slice of bread.

Thick-knee, *n.* (*Zoöl.*) The common name of the genus *Oedipodus*, family *Charadriidae*, comprising European birds which differ from the true plovers in having both mandibles inflated towards the tip, and not merely the upper mandible.

Thick'ly, *adv.* In a thick manner or condition.

Thick'ness, *n.* State or quality of being thick; denseness; state of being concrete or inspissated; density; consistence; as, the *thickness* of the atmosphere, of paint, mortar, blood, soup, and the like. — The extent of a body from side to side, or from surface to surface; as, the *thickness* of a plank, the *thickness* of a wall, &c. — State of being close, dense, or impervious; as, the *thickness* of the forest shade. — Closeness of the parts; state of being crowded or near; as, the *thickness* of trees in a plantation. — Lack of quickness, sharpness, or acuteness; dullness of the auricular sense; as, *thickness* of hearing. — Wanting clear articulation or syllabic pronunciation; as, *thickness* of utterance.

Thick'set, *a.* Planted in close contiguity; as, a *thick-set* hedge. — Stout; burly; having a short, thick body; as, a *thickset* man.

— *n.* A hedge closely or thickly planted with sets. — A kind of stout, twilled cotton cloth; a kind of fustian cord or velvetene.

Thick-skin, **Thick-skull**, *n.* A coarse, gross-minded person; a numskull; a dullard; one notable for excessive stupidity.

Thick-skinned, **Thick-skulled**, *a.* Possessing a thick skin or cuticle. — Hence, by analogy, stupid; gross; dull; obtuse; lacking intelligence or sensibility; as, a *thick-skinned* ignoramus.

Thief, (*thēf*) *n.*; *pl.* THIEVES (*thēvz*). [*A. S. theaf, thef; Icel. thievfr.*] A person guilty of theft or larceny; one who secretly, unlawfully, and feloniously takes the goods or personal property of another; one who takes the property of another wrongfully, either secretly or by violence. — An excrescence in the snuff of a candle.

Thief-catcher, **Thief-taker**, *n.* An old term for a detective police-officer. See *DETECTIVE*.

Thiel, or **Tiel**, (*teel*) a town of Holland, near the river Waal, 20 m. from Utrecht; *pop.* 5,742.

Thielt, (*teelt*) a town of Belgium, in West Flanders, 18 m. from Ghent. *Manuf.* Linens, lace, &c.

Thiensville, in Wisconsin, a village of Ozaukee co., on Milwaukee River, abt. 15 m. N. of Milwaukee.

Thierry, AMÉDÉE SIMON DOMINIQUE, (*tee-er-re*) a French historian, b. at Blois, 1797, was made a member of the Institute, 1841, and senator, 1860. He assisted his brother Augustine in several of the great works produced by the latter, and himself wrote, *Histoire de Gaulois*, 1828; *Histoire de la Gaule sous l'Administration Romaine*, 1840-2, a continuation of the former work; *Récits et Nouveaux Récits de l'Histoire Romaine*, 1860-4; *Tableaux de l'Empire Romain*, 1862; and *Histoire d'Attila et de ses Successeurs*, a new edition in 1864. D. 1873.

Thierry, JACQUES NICOLAS AUGUSTIN, an eminent French historian, b. at Blois, 1795. Educated at the college of his native town, he went to Paris in 1814, an ardent enthusiastic youth, full of theories and speculative inquiries, and threw himself into the Socialist school of St. Simon, in conjunction with whom he published several political pamphlets. Disappointed in this quarter, he commenced writing for the press, and his pen was engaged in a constant supply of political and historical articles to the *Censeur Européen*, and the *Courrier Français*. These papers laid the foundation of his brilliant *History of the Norman Conquest of England*, which appeared in 1825, and gained him a world-wide reputation. His fame is sustained by his *Letters on the History of France*, published two years later. His sight and his nervous system now failed him; but though he passed the remainder of his days in total blindness, his mental eye remained undimmed, and his vigor unabated. Receiving material assistance from his brother, Amedée, and his wife, Julia Thierry, he

continued to issue to the world his philosophic thoughts in various essays, which he subsequently reprinted in a collective form. In 1840 he published his work, entitled *Récits des temps Mérovingiens*, in which he explores a considerable portion of the traditional records of that time; and which contains, among other interesting features, an autobiography. His last work was his essay on the *History of the First Estate*. It was published in 1853, and is marked by the same picturesque style and felicity of observation for which his previous works were conspicuous. D. 1856.

Thiers, LOUIS ADOLPHE, a French historian and statesman, b. 1797, at Marseilles, where his father was a working locksmith, obtained admission to the public schools, in which he made marked progress, and studied geometry with a view to the military profession. His friends decided to bring him up to the law, and he was sent to

Fig. 2495. — M. THIERS.

Aix, where in due time he made his appearance at the bar, but with very indifferent success. This disappointment induced him to turn his attention to literature, and he accordingly set out for Paris. By great perseverance he gained a footing in literary society, and having obtained an introduction to the conductor of the *Constitutionnel*, was engaged to write political articles. The first volume of his *History of the French Revolution* appeared in 1823, and the tenth and last in 1832. This work, highly appreciated for its brilliant style and historical accuracy, won for him great popularity with the public at large, and has passed through more than 20 editions. In the *National*, *T.* opposed the non-constitutional proceedings of Charles X. and his minister Polignac, and, after the revolution of July, 1830, held various minor official posts, and was made Under-Secretary of State under Lafitte's administration. About this period he was elected deputy for Aix, and distinguished himself by his financial ability and oratorical power. In 1832 he was appointed minister of the interior, which he soon exchanged for the portfolio of Commerce and Public Works. In 1836 he was President of the Council and Minister of Foreign Affairs; and in March, 1840, again held that office. During his ministry, the Eastern question having been settled by Russia, England, and Austria, without consulting France, *T.*, resenting warmly this insult to his country, and convinced that war alone could again raise France to its proper standing, was fearlessly preparing for such an emergency, and constructed the fortifications of Paris. But at last he could not prevail upon Louis-Philippe to resort to such desperate means. *T.* resigned his powerless premiership, and thenceforth was never more recalled to the control of public affairs. He employed his leisure in writing his *History of the Consulate and Empire* (20 vols. 8vo, 1845-1862), which has been several times translated in almost all the European languages, and is one of the greatest historical works of the age. The revolution of February, 1848, found him unprepared, and when the republic was proclaimed, *T.* joined the National Guard, with a musket on his shoulder. His talents and caution, however, secured him a position, first in the Constituent, and then in the National Assembly. On the elevation of Louis-Napoleon to the Presidency, it was thought by many that *T.*, whom the prince had proclaimed as his minister in the abortive expedition of Boulogne, in 1840, would take office; but though he professed to accept the republic heartily, he was banished during the *coup d'état* of Dec. 2, 1851, and, after living some time in Switzerland, was permitted to return to Paris. He devoted his attention to the completion of *The Consulate and Empire*. In 1863 he was elected deputy for the department of the Seine by the Liberal opposition; and in the Legislative Assembly, in which he was the champion of an extension of the liberties of the French people, he manifested all his former brilliancy as a parliamentary orator. He was opposed to Italian unity, and to a war for the liberation of Poland. In 1870, he delivered one of his most eloquent speeches in opposition to the declaration of war against Prussia. He was chosen president of the provisional Republic (March 17, 1871) (see *FRANCE*, p. 1031), and urged the definitive establishment of the Republic, but fell under the systematic opposition of the Conservatives, who held the ascendancy in the assembly, March 24, 1873, and was succeeded by Marshal MacMahon. He died near Paris, of apoplexy, Sept. 3d, 1877.

Thiers, a town of France, dept. of Puy-de-Dôme, 22 m. from Clermont. *Manuf.* Cutlery, paper, and candles. *Pop.* 15,268.

Thieve, (*thēv*), *v. a.* [A. S. *theofian*.] To steal; to practise theft.

Thiev'ery, *n.* The practice of stealing; theft. — That which is stolen.

Thiev'ish, *a.* Given to thieving or stealing; addicted to the practice of theft; as, a *thievish* servant. — Secret; sly; stealthy; acting in the manner of a thief; as, *thievish* Time. — Partaking of the nature or character of theft; as, a *thievish* act.

Thiev'ishly, *adv.* In a thievish manner; by theft.

Thiev'ishness, *n.* State or quality of being thievish.

Thigh, (*thī*), *n.* [A. S. *thioh*; allied to *thick*, *q. v.*] (*Anat.*) The thick part of the lower limb, between the knee and the hip-joint.

Thill, *n.* [A. S. *thil* or *thill*.] The shaft, or one of the shafts, of a cart, gig, or other carriage.

Thiller, **Thill-horse**, *n.* The horse which goes between the thills or shafts and supports them.

Thimble, (*thim'bl*), *n.* [A corruption of *thumb-bell*.] A cover for the thumb, such as that still used by seamen and sailmakers; — specifically, a kind of cap or covering for the finger, indented with small depressions, and usually made of silver or other metal, used by tailors and seamstresses for urging the needle through cloth.

(*Naut.*) An iron ring with a hollow or groove round its whole circumference, to receive the rope which is spliced about it, used to keep the eye of the rope from being chafed.

(*Mach.*) A fixed or movable tube, ring, or lining placed in a hole. Also, a strut through which a bolt or pin passes.

Thimble-berry, *n.* (*Bot.*) The Blackberry. See *RUBUS*.

Thimbleful, *n.*; *pl.* THIMBLEFULS. As much as a thimble will hold; — hence, proverbially, a small quantity.

Thimble-rig, *n.* A trick of legerdemain, played with three small thimble-shaped cups and a small ball.

— *v. a.* One who cheats by tricks of sleight-of-hand; especially one who practises the game of thimble-rig.

Thimble-rigger, *n.* One who practises sleight-of-hand tricks, especially the game of thimble-rig; — hence, a low cheat or trickster.

Thimble-rigging, *n.* Tricks or practices of a thimble-rigger.

Thin, *a.* (*comp.* THINNER; *superl.* THINNEST.) [A. S. *thyn*; Ger. *dünn*.] Stretched out or extended so as to have little thickness; having little thickness or extent from one surface to the opposite; — the opposite of *thick*; as, a *thin* board, a *thin* piece of cloth. — Rare; tenuous; subtle; not dense; as, *thin* air, *thin* blood. — Not close; not crowded; not filling the space; not having the individuals that compose the thing in a close or compact state; — hence, not plentiful; as, a *thin* crop of grain, a *thin* head of hair, a *thin* attendance of people, &c. — Not fully developed or well grown; as, a *thin* ear of wheat. — Lean; slim; slender; gaunt; attenuated; as, a *thin* person. — Small; exile; not sonorous or full; as, a *thin* hollow sound, a *thin* voice. — Flimsy; slight; diaphanous; not sufficient to hide what is beneath; as, a *thin* veil, a *thin* disguise.

(*NOTE.* *Thin* is of frequent occurrence as a prefix in the construction of self-explaining compound terms; as, *thin-faced*, *thin-peopled*, *thin-soled*, and the like.)

— *adv.* In a scattered or loose state; not thickly or closely; as, grain *thin* sown, to go about *thin* clad, &c.

— *v. a.* (*imp.* and *pp.* THINNED.) [A. S. *thinnian*.] To make thin in any of its senses; as, (1.) To attenuate; to make rare or less thick or inspissated; as, to *thin* the blood, to *thin* a liquid substance. (2.) To make less close, crowded, compact, or numerous; as, to *thin* weeds in a garden, or the trees of a forest; to *thin* the ranks of an opposition party. (3.) To rarefy; to attenuate; to make less dense, solid, or concrete; as, to *thin* vapors.

— *v. n.* To grow or become thin or attenuated; — generally used before such adverbs as *out*, *away*, &c.; as, geological strata *thin out* when they gradually diminish in thickness and disappear.

Thine, (*thin*), *pronominal adj.* [A. S. *thin*; Fr. *tien*.] Thy; belonging or relating to, or being the property of thee; — used principally, nowadays, when a verb is interposed between this word and the noun to which it refers; as, I will not take anything that is *thine*. (The term *thine* is now generally esteemed antiquated, and only obtains place in scriptural language, in poetry, and in the peculiar phraseology of the Society of Friends: its place is commonly superseded by *your*.)

Thing, *n.* [A. S. *thing*, *thinc*.] Any inanimate substance, in distinction from a living object. — That which is created as a separate being, whether animate or lifeless; that which exists, or is conceived to exist, as a separable or distinguishable object of thought; as, God created all *things*. — A matter; an affair; a cause, transaction, or occurrence; an event, deed, or action; that which happens or falls out; that which is done, told, or proposed; as, this is a sad state of *things*. — Something; a portion, part, or modicum; as, he understands not any *thing* of this matter. — Any object considered as simply existing; — used, commonly, in pity, contempt, or disparagement; as, an object *thing*, the poor *thing* sighed, it is a trumpery *thing*, &c. — Also, an object viewed as a prodigy, or rarity of excellence or preëminence; something commanding honorable appreciation; as, "She was the sweetest *thing* that grew." — *Wordsworth*.

— *pl.* Clothes; furniture; accoutrements; appointments; baggage; traps; as, to pack up one's *things*.

Think, (*think*), *v. n.* (*imp.* and *pp.* THOUGHT, (*thawt*). [A. S. *thencan*.] To look with the mind's eye; to have the mind occupied on some subject; to have ideas, or to

revolve ideas in the mind; — hence, specifically, to reflect or deliberate upon any subject; to muse; to meditate; to dwell upon in contemplation; to ponder; to consider; as, he is a man who *thinks* much and says little. — To recollect or call to mind; to remember; as, I did not *think* of it before. — To hold as a settled opinion; to judge; to conclude; to believe; to suppose; to imagine; to fancy; as, let him act as he *thinks* best. — To intend; to design; to purpose; to view as probable or likely; as, I *thought* to do her a kindness by keeping silence. — To venture; to presume; to undertake; as, do not *think* to prevent my doing so.

To *think much* of, or to *think well* of, to esteem; to hold in friendly estimation, respect, or regard; as, one is not apt to *think much* of strangers.

— *v. a.* To imagine; to conceive; to view in the mind; as, to *think ill* of a person. — To believe; to consider; to esteem.

"A woman's reason: I *think* him so, because I *think* him so." *Shaks.*

To *think much*, to grudge; to look upon as a great matter; as, "We have no reason to *think much* to sacrifice to God our dearest interests." — *Tillotson*.

Think'able, *a.* That may be thought or conceived.

Think'er, *n.* One who thinks, reflects, or cogitates; especially, one who thinks in a particular manner; as, a deep *thinker*, a superficial *thinker*.

Think'ing, *p. a.* Possessing or employing the faculty of thought; cogitative; susceptible of a regular concatenation of ideas; as, a *thinking* mind.

— *n.* Imagination; cogitation; judgment; as, she was, to my *thinking*, quite an agreeable woman.

Think'ingly, *adv.* By thought or cogitation.

Thin'y, *adv.* [From *thin*.] In a thin, loose, scattered manner; not thickly or closely; as, a country *thinly* peopled.

Thin'ner, *n.* One who makes thin.

Thin'ness, *n.* State or quality of being thin, in any of the senses of the word; smallness of extent from one side or surface to the opposite; as, the *thinness* of a wall or partition. — Rareness; tenuity; — opposed to *spissitude*; as, the *thinness* of ice, the *thinness* of paper, the *thinness* of vapor. — A scattered state; paucity; as, the *thinness* of an audience or congregation, *thinness* of vegetation in a tract of country.

Thin'nish, *a.* Somewhat thin or meagre.

Thin'-skinned, (*-skind*), *a.* Having a thin skin; hence, unduly sensitive; scrupulous; fastidious; as, a *thin-skinned* person.

Thionville, (*te'awn(g)-veel*), a fortified town of France, on the Moselle, 15 m. from Metz. *Manuf.* Gloves, hosiery, and oils. This place was a residence of the Merovingian and Carolingian kings. It was taken by the Prussians in 1870. *Pop.* 7,766.

Third, (*thér'd*), *a.* [A. S. *thrida*.] The first after the second; — the ordinal of three; as, the *third* day of the week. Constituting or being one of three equal parts into which a thing is divided. — *Third estate*. (*Pol.*) In England, the commonalty, as represented in Parliament by the House of Commons. — In France, under the ancient régime, the body of the people, below the rank of the noblesse or titled classes. — *Third order*. (*Eccl. Hist.*) An order among the Remonstrants, Carmelites, Franciscans, Augustines, &c., composed of secular associates not bound by vows, but conforming to a certain extent to the general designs of the order. — *Third person*. (*Gram.*) The person spoken of.

— *n.* The third part of anything; the quotient of a unit divided by three; as, a *third* of a share. — The sixtieth part of a second of time.

(*Mus.*) An interval in the musical scale, which may be either *major* or *minor*, the former containing *four*, the latter *three* semitones; — sometimes called *third sound*.

— *pl.* (*Law*.) The third part of a deceased husband's estate, which, in some countries, a widow is authorized to enjoy during her life.

Third'y, *adv.* In the third place.

Third-rate, *a.* Next interior to that which is secondary or second-rate.

— *n.* (*Naut.*) Formerly, a ship of war carrying from 70 to 80 guns.

Thirsk, a town of England, in Yorkshire, 23 m. from York; *pop.* 5,000.

Thirst, (*thérst*), *n.* State of being dry or parched.

(*Physiol.*) That painful sensation of the throat or fauces, occasioned by the want of drink; a vehement or uncontrollable desire for beverage; hence, an eager or vehement desire for something; — generally preceding *for*, or, sometimes, *of*, or *after*; as, *thirst* of praise, a *thirst* after happiness, a *thirst* for fame. — *Dryness*; drought. — A peculiar sensation which attends the desire to drink. — During the operations of the animal functions, a great quantity of moisture is consumed, the loss of which must be supplied; and *T.* is the voice of nature calling upon the animal to supply the place of the lost moisture by drinking. Water is the proper object of this desire; and the quantity necessary for this purpose varies greatly according to the different circumstances of age, sex, and temperament; and still more according to the nature of the food taken, the state of the atmosphere, the mode of life, and the custom of the individual. The sensation of dryness of the mouth and throat, which most strongly characterizes *T.*, is not always the result of these parts being actually deficient in moisture, nor is it removed by supplying the mouth alone with fluid. An outward application of moisture is found to diminish *T.*; and sailors have been able to sustain life by bathing in the sea. *T.* is a sensation much more difficult to bear than hunger, leading from restlessness to anxiety, despair, and madness.

— *v. n.* [A. S. *thirstan*.] To be or become dry; to experience a painful sensation in the throat and fauces for want of drink; to be athirst; — before *for*; as, a man *thirsts* for his beer. — To have a vehement desire to obtain something; with *for* or *after*; as, to *thirst* for an enemy's blood.

Thirst'er, *n.* One who thirsts.

Thirst'ily, *adv.* In a thirsty manner.

Thirst'iness, *n.* State of being thirsty or athirst.

Thirst'y, *a.* (*comp.* THIRSTIER; *superl.* THIRSTIEST.) Suffering from thirst; experiencing a painful or distressing sensation in the throat or fauces, for want of drink; as, a *thirsty* toper. — Very dry; parched; lacking moisture; as, "The *thirsty* earth soaks up the rain." (*Cowley*). — Feeling a vehement or eager desire for something.

Thirteen, *a.* [A. S. *threohtyne*.] Ten or three, or one more than twelve and less than fourteen.

— *n.* The sum of ten and three; the number greater by one than twelve, or less by one than fourteen. — A symbol denoting thirteen units, as 13, or xiii.

Thirteenth, *a.* [From *thirteen*.] The third after the tenth; — the ordinal of thirteen; as, the *thirteenth* day of January. — Consisting, or being one of thirteen equal parts of a thing when divided.

— *n.* One of thirteen equal parts; the quotient of a unit divided by thirteen.

(*Mus.*) The interval embracing an octave and a sixth.

Thirtieth, *a.* The tenth three-fold; — the ordinal of thirty; as, the *thirtieth* year of Our Lord. — Being, or constituting, one of thirty equal parts into which a thing is divided.

— *n.* The quotient of a unit divided by thirty; one of thirty equal parts.

Thirty, (*thér'ty*), *a.* [A. S. *thritig*.] Thrice ten, or twenty and ten; as, *thirty* shillings.

— *n.* The sum of three times ten, or twenty and ten. — A symbol expressing thirty units, as 30, or xxx.

Thirty Year's War. (*Hist.*) The name given to a series of wars carried on between the Protestants and Roman Catholic leagues in Germany, in the first half of the seventeenth century. The house of Austria was throughout at the head of the latter party. The Protestant princes of Germany were assisted by various foreign powers; in the earlier part of the war by Denmark and Sweden, and afterwards by France. It is considered to have commenced with the insurrection of the Bohemians in 1618, and it ended with the peace of Westphalia in 1648.

This, *pron.* or *pronominal adj.*; *pl.* THESE. [A. S. *thies*, fem. *theos*, neut. *this*.] That is present or near in place or time; that is just mentioned; that is to be now mentioned or referred to; as, must I endure all *this*? — Denoting the present time, or time last past; as, he has not written home for *these* three years. — Denoting a correlative to *that*, and sometimes the opposite to *other*; as, *this* way and *that*; the author had to write *this*, or to design the *other*.

(*NOTE.* When *this* and *that* bear reference to subjects previously expressed, *this* relates to the thing last mentioned, and *that* conversely; as, "Their judgment in *this* we may not, and in *that* we need not follow." — *Hooker*.)

By *this*, by this time; after such an interval has elapsed; — employed elliptically for *by this time*; as, by *this* he will have received my letter.

This'be. See PYRAMUS.

Thistle, (*thís'sl*), *n.* [A. S. *thistel*.] (*Bot.*) See CARDUUS.

— Figuratively, the national emblem of Scotland.

Order of the Thistle. (*Her.*) See ANDREW, (St.)

Thistle-down, *n.* The fine, flocculent substance attached to the seeds of thistles, by which they are wafted to a distance by the wind.

Thistly, (*thíst'ly*), *a.* Overgrown with thistles; as, a *thistly* brake. — Figuratively, pungent; poignant; keen; painful.

Thither, (*thith'éer*), *adv.* [A. S. *thider*, *thyder*.] To that place; — correlative to *hither*; as, I am going *thither* shortly. — To that end, point, or effect. — *Hither and thither*, to this place and to that.

Thitherward, **Thitherwards**, *adv.* Toward that place.

Thlas'pi, *n.* (*Bot.*) A genus of plants, order Brassicaceæ. *T. arvense*, the Shepherd's purse or Penny-cress, is found in cultivated stony fields.

Thlips'is, *n.* [Gr., pressure.] (*Med.*) Compression; especially, constriction of vessels by an external cause.

Tho', *conj.* A contraction of THOUGH, *q. v.*

Thole, *n.* [A. S. *thol*.] The handle of a scythe-swath.

— *pt.* (*Naut.*) The pins forming the rowlocks in the gunwale. — Also called *thole-pins*.

Thol'en, an island of Holland, prov. of Zealand, bounded on the S. by the Scheldt. It contains about 34,000 acres of rich land, and is defended from floods by strong dykes. *Pop.* 15,000.

Tholobate, *n.* [Gr. *tholos*, and *batos*, that may be passed.] (*Arch.*) That part of a building on which a cupola is placed.

Thomar, (*to'mar*), a town of Portugal, in Estromadura, 17 m. from Abrantes; *pop.* 4,682.

Thom'as, GEORGE HENRY, a major-general in the U. S. army, b. in Southampton co., Va., 1826. After studying law for some time, he entered as a cadet in West Point Military Academy, graduated June 30, 1840, and joined the U. S. Army as second lieutenant of artillery, served with distinction in the Mexican War, and obtained his captaincy, Sept. 23, 1846. After some other service, he was transferred to West Point as instructor of artillery and cavalry, March 28, 1851. When the Civil War broke out, he was ordered to Carlisle Barracks, to remount the 2d Cavalry, became lieutenant-colonel of his

George Henry Thomas

1826-1870

regiment April 25, and colonel, May 3, 1861. After various services, he was made brigadier-general, Oct. 27, 1863, and greatly distinguished himself at the battle of Chattanooga, in Nov. of the same year. He was made major-general, June 27, 1865; and, March 11, 1867, was assigned to the command of the third military district,

Fig. 2496. — GEN. THOMAS.

under the reconstruction act of Congress, embracing the States of Georgia, Florida, and Alabama. He was afterwards for some time in command of the department of the Cumberland, which was discontinued by an order of March 16, 1869, which assigned him to the command of the military division of the Pacific. To this post he soon after repaired, making his headquarters at San Francisco, where he d. 1870.

Thom'as, in *Georgia*, a S.W. co., bordering on Florida; area, 800 sq. m. It is drained by the Ocklockonee river. Surface, level; soil, productive. Cap. Thomasville. Pop. (1897) 21,480.

Thomas à Kem'pis, the most generally reputed author of the celebrated *De Imitatione Christi*, born about 1380, at Kempen, entered the religious body called the Brethren of the Common Life, and finally was made sub-prior of the convent of Mount St. Agnes, near Zwoll. D. 1471.

Thom'as, (St.), one of the twelve apostles of Jesus Christ, is presumed to have been a native of Galilee. He is distinguished in sacred history by his disbelief of the resurrection of his master; on which Jesus vouchsafed to permit him to put his fingers into his wounds, and Thomas exclaimed, "My Lord and my God!" He is supposed to have suffered martyrdom in Coromandel, where there are still Christian churches which are called by his name.

Thom'as, (St.), a Portuguese island in the Gulf of Guinea, off the coast of Africa; Lat. 0° 5' to 0° 50' N., Lon. 0° 25' E.; area, 145 sq. m. In its centre is the peak of Santa Anna, 7,020 feet high. Pop. unascertained.

Thom'as, (St.), an island of the W. Indies. See SAINT THOMAS.

Thom'aston, in *Georgia*, a post-village, cap. of Upson co., 75 m. S.W. of Milledgeville.

Thomaston, in *Maine*, a post-village and township of Knox co., 80 m. E.N.E. of Portland.

Thomaston, in *Michigan*, a township of Saginaw co.

Thom'asville, in *Georgia*, a post-vill., cap. of Thomas co., 200 m. S.W. of Milledgeville. This place has become of late a popular winter resort.

Thomasville, in *N. Carolina*, a post-village of Davidson co., 28 m. N.E. of Salisbury.

Thom'ists, *n. pl.* (*Ecol. Hist.*) The name assumed by the followers of St. Thomas Aquinas, as distinguished from the *Scotists*. See AQUINAS.

Thompson, WILLIAM, a distinguished British naturalist, b. at Belfast, 1805. Of his great work on the *Natural History of Ireland*, the first 3 vols., devoted to Birds, appeared in 1841-59; but he died before finishing it. The final vol. was published in 1856, with a biography of the author, edited by Prof. Dickie. D. 1852.

Thomp'son, in *Arkansas*, a township of Pike co.

Thompson, in *Connecticut*, a post-village and township of Windham co., 35 m. N.E. of Norwich. Manuf. Cotton and woollen goods.

Thompson, in *Georgia*, a post-village, cap. of McDuffie co., 60 m. E.N.E. of Milledgeville.

Thompson, in *Illinois*, a township of Jo Daviess county.

Thompson, in *Iowa*, a township of Guthrie co.

Thompson, in *New York*, a township of Sullivan county.

Thompson, in *Ohio*, a township of Delaware co.

—A post-township of Geauga co.

—A township of Seneca co.

Thompson, in *Pennsylvania*, a township of Fulton county.

—A post-borough of Susquehanna county, 20 m. E. of Montrose.

Thompson's Creek, in *Louisiana*, rises in Wilkinson co., Mississippi, and flowing S. enters the Mississippi on the border of E. and W. Feliciana parishes, 2 m. N. of Port Hudson.

Thomp'sontown, in *Pennsylvania*, a post-borough of Juniata co., 37 m. W.N.W. of Harrisburg.

Thomp'sonville, in *Conn.*, a town of Hartford co., 17 m. N.E. of Hartford. The Hartford Carpet Co. situ-

ated at T., give employment to 1,300 hands, consuming 12,000 lbs. wool daily, with an average daily product of 8,000 yards of Brussels, 2-ply and 3-ply carpets, all from original designs. Pop. (1897) 5,150. —In N. Y., a post-village of Sullivan co., 100 m. S.S.W. of Albany. —In *Penn.*, a post-village of Washington co.

Thompsonville, in *Wisconsin*, a post-village of Racine co., 92 m. S. of Madison.

Thom'son, JAMES, an English poet, b. in 1700, and educated at Edinburgh. Abandoning his original intention of taking holy orders, he resorted to London, where, from 1726 to 1730, he produced the four great poems collectively called *The Seasons*. Besides these, he afterwards published several dramatic works, and *The Castle of Indolence*, his second-best poem. *The Seasons* still retains its popularity, while the *Castle of Indolence*, though less generally read, is more carefully finished, and in some respects deserves the highest place. D. 1748.

Thong, *n.* [A. S. *thwang*.] A band; a strap of leather used for fastening anything; also, the lash of a whip.

Thor, or **Asa-Thor**. (*Scandinavian Myth.*) A son of Odin, the Supreme God, and Freya his wife. He reigned over all the aerial regions, in a palace composed of 540 halls; directed the meteors, winds, and storms; launched the thunder and pointed the lightning. To him the Saxons and Danes prayed, when requiring favorable winds, rains, and plentiful seasons. The fifth day of the week, which still bears his name (Thor's-day), was dedicated to him.

Thoracic, (-räs'ik,) *a.* [From Lat. *thorax*.] Pertaining or relating to the thorax or breast; as, the thoracic arteries.

T. duct. (*Anat.*) See THORAX.

Thorax, (thor'aks,) *n.* [Gr. from *thoreo*, I leap, because the heart leaps in it.] (*Anat.*) The chest, or that part of the body which is situated between the neck and the abdomen. It is composed of bones, cartilages, and ligaments, which form a large conical cavity for the lodgment of the heart, lungs, and large blood-vessels. Its walls are formed posteriorly by the dorsal-thoracic vertebrae and the ribs as far outwards as their angles, laterally by the bodies of their ribs, and anteriorly by the anterior extremities of the ribs, the sternum, and the costal cartilages. It is separated from the abdomen below by the diaphragm. The thoracic duct (Fig. 597) lies upon the dorsal vertebrae between the aorta and the vena azygos, and extending from the opening of the diaphragm to the angle formed by the union of the left subclavian and jugular veins, into which it opens and pours its contents. It is the great trunk of the absorbents, which pour their contents into it from almost every part of the body.

(*Zoöl.*) The second segment of insects is so called by Latreille and Andouin; the term is restricted to the upper surface of the trunk by Linné and Fabricius. In Arachnids the thorax and head are confluent, and form but one segment, which is termed the *cephalo-thorax*.

Thor'da, or **Thorenburg**, a town of Austria, in Transylvania, 16 m. from Klausenburg, near the Aranjós; pop. 8,640.

Thor'ium, or **Thorinum**, *n.* [From *Thor*, the Scandinavian deity.] (*Chem.*) A rare metal, much resembling aluminium, but taking fire considerably below a red heat, and burning with great brilliancy. *Thorina*, or *Thoria*, is supposed to be the protoxide, and is remarkable for its high specific gravity, 9.4. Thorinum was discovered in 1829 by Berzelius in an earth to which he had given the name *Thorina*, and which occurs in a rare black Norwegian mineral termed *Thorite*. None of the compounds of this metal are of any practical importance. *Equiv.*, 231.5; *Symbol* Th.

Thorn, *n.* [A. S. and Icel.] A spine; a sharp, ligneous, or woody shoot from the stem of a tree or shrub; a pointed process from the woody part of a plant; a prickle. — Hence, by analogy, that which pricks, annoys, or troubles the mind; as, "those thorns that in her bosom lodge." — *Shaks.*

(*Bot.*) A common name applied to various kinds of plants, which are furnished with thorns or spines, as the *Crataegus oxyacantha*, also known as the Whitethorn, Hawthorn, or Quick; the Blackthorn, *Prunus spinosa*; the Buckthorn, *Rhamnus*; the Camel's-thorn, *Alhagi camelorum*; the Christ's Thorn, *Paliurus aculeatus*; and the Willow-thorn, *Hippophae rhamnoides*.

Thorn, (town,) a fortified town of W. Prussia, on the Vistula, 92 m. from Dantzic. Manuf. Woollens, linens, hats, leather, gloves, &c. It is the birthplace of Copernicus. Pop. 11,266.

Thorn, in *Ohio*, a township of Perry co. Pop. (1897) 1,740.

Thorn'-apple, *n.* (*Bot.*) See DATURA.

Thron'apple, in *Michigan*, a river which rises in Eaton co., and enters Grand river in Kent co., 10 m. E. of Grand Rapids, after a N.W. course of 80 m. —A township of Barry co. Pop. (1897) 1,764.

Thorn'back, *n.* (*Zoöl.*) The name of a species of ray (*Raja clavata*), distinguished by the short and strong recurved spines, rising from a broad osseous tubercular base, which are scattered over the back and tail. Two of these broad-based spines occupy the central ridge of the nose.

Fig. 2497. — THORNBAC.

Thorn'burg, in *Virginia*, a post-village of Spottsylvania co., 69 m. N. of Richmond.

Thorn'bury, a town of England, co. of Gloucestershire, near the Severn, 11 m. from Bristol. Pop. (1897) 4,360.

Thornbury, in *Pennsylvania*, a post-township of Chester co., 24 m. W. of Philadelphia.

—A township of Delaware co.

Thorn Creek, in *Indiana*, a township of Whitley co.

Thorn'dike, in *Maine*, a post-township of Waldo co., 38 m. N.E. of Augusta.

Thorn'dike, in *Massachusetts*, a post-village of Hampden co., abt. 18 m. E.N.E. of Springfield.

Thorn Hill, in *Virginia*, a post-village of Orange co., abt. 5 m. S.E. of Orange Court-House.

Thorn'leysville, in *Indiana*, a village of Boone co., 7 m. S.E. of Lebanon.

Thorn'set, *a.* Set with thorns, as a hedge. (*Tautological.*)

Thorn'ton, in *Illinois*, a post-village and township of Cook co., abt. 24 m. S. of Chicago.

Thornton, in *New Hampshire*, a post-township of Grafton co., 54 m. N.W. of Concord.

Thornton, in *Pennsylvania*, a post-village of Delaware co., 87 m. S.E. of Harrisburg.

Thorn'ton's, in *Virginia*, a river which rises in the W. border of Rappahannock co., and flowing S.E., unites with Hedgman's River in Culpepper co., to form the N. Fork of the Rappahannock.

Thorn'ton's Ferry, in *New Hampshire*, a post-vill. of Hillsborough co., 11 m. S. of Manchester.

Thorn'town, in *Indiana*, a post-village and township of Boone co., 36 m. N.W. of Indianapolis.

Thorn'y, *a.* (*comp.* THORNIER; *superl.* THORNIEST.)

[A. S. *thornigt*.] Full of thorns, spines, or prickles; rough with thorns; as, a thorny brake, a thorny branch. — Sharp; piercing; pricking; as, "thorny points." (*Shaks.*) — Figuratively, occasioning pain or distress; troublesome; harassing; vexatious; provoking; as, "the steep and thorny way to heaven." — *Shaks.*

Thorough, (thür'o,) *a.* [A. S., O. Sax., and O. Ger. *thurh*.] Passing through or to the end; — hence, entire; perfect; complete; as, a thorough scholar, a thorough reformation, a thorough scoundrel.

—*n.* (*Agric.*) An inter-furrow between two ridges.

Thor'ough-bass, *n.* (*Mus.*) See BASS.

Thor'ough-brace, *n.* A leathern strap serving the purpose of a spring for supporting the body of a carriage.

Thor'ough-bred, *a.* Bred from the purest strain of blood; as, a thorough-bred race-horse, a thorough-bred hound. — Hence, by analogy, perfectly bred, refined, or accomplished; as, a thorough-bred gentleman.

—*n.* A horse of the best strain of blood.

Thor'oughfare, (-fair,) *n.* [A. S. *thurhfaru*.] A passage through; — especially, a passage from one street or opening to another; an unimpeded way; — hence, a public street or road; as, Broadway is a noble thoroughfare. — Power of passing.

"Hell . . . one continent of easy thoroughfare." — *Milton*.

Thor'ough-going, *a.* Going through to the end or the bottom; complete; entire. — Hence, going all lengths; extreme; as, a thorough-going impostor.

Thor'ough-light'ed, *a.* Furnished with thorough lights or windows at opposite sides, as an apartment or building.

Thoroughly, (thür'o-ly,) *adv.* In a thorough manner; fully; perfectly; completely.

Thoroughness, (thür'o-ness,) *n.* State or quality of being thorough; fullness; entireness; completeness; as, the thoroughness of a mutual understanding.

Thorough-paced, (thür'o-päst,) *a.* Going all lengths; stopped by nothing; consummate; complete; perfect.

Thor'ough-pin, *n.* (*Far.*) A kind of encysted tumor on either side of a horse's hough, caused by extravasation of the synovial fluid.

Thor'ough-sp'ed, *a.* Thorough-paced; finished in opinions or principles; as, "a thorough-sp'ed republic of Whigs." — *Swift*.

Thor'ough-wax, *n.* (*Bot.*) An herbaceous plant, called also Modesty (*Eupleurum rotundifolium*), the only representative in N. America of the genus *Eupleurum*, order *Brassicaceae*; stem, one foot or more high, branching; umbels, 5-9-rayed; flowers, yellow. It is rare in New York and Pennsylvania.

Thorough-wort, (thür'o-wart,) *n.* (*Bot.*) See EUPATORIUM.

Thorp, *n.* [A. S.; Dn. *dorp*.] A hamlet; a little village.

Thor'waldsen, ALBERT BERTEL, a Danish sculptor, b. near Copenhagen, 1770, was the son of a carver in wood, and was gratuitously educated at the Copenhagen Academy of Arts. Here he studied so effectually that he obtained two gold medals and a travelling studentship, which entitles the competitor to a salary for three years. Thus far fortunate, T. proceeded to Rome. The young sculptor was preparing to return home, his three years' allowance being completely exhausted, when the clay model of his Jason was seen by Henry Philip Hope, a princely patron of art, who ordered the marble statue at a price which set aside all his thoughts of returning home. The model had received emphatic praise from Canova. The Jason once completed, and by Mr. Hope's means made known, T.'s fortune was virtually made; orders at vast prices poured in upon him from all parts; and the numerous works completed by him from the commencement of 1800 to the close of 1837, gave him a high place among modern sculptors. His countrymen were justly proud of him, and honored him with a public funeral. Among his most celebrated works are the *Triumph of Alexander*, a bas-relief; *Night and Day*; *Christ and the Twelve Apostles*; *Procession to Golgotha*; monuments to Copernicus, Poniatowski, Maximilian of Bavaria, &c. D. 1844.

Those, (thöz,) *pron. pl.* of THAT, *q. v.*

Thou, *pron.* (In the obj., *THEE*.) [A. S.] (*Gram.*) The second personal pronoun in the singular number, denoting the person addressed;—used only in the solemn style, unless in very familiar language, and by the Friends, or Quakers, who, however, generally employ the more corrupt form, *thee*.

—*v. a.* To treat with undue familiarity or contumely, by making use of the word *thou* toward.

—*v. n.* To use *thee* and *thou* in conversation or discourse.

Though, (*thō*), *adv.* and *conj.* [A. S. *theah*, *thēh*.] Grant; admit; allow; even if; notwithstanding; as, *though* his fault be great, I will forgive him.—However;—used familiarly at the end of a sentence; as, we may manage with this, *though*.—As *though*, as if; as, it was as *though* an affront was intended. See **ALTHOUGH**.

Thought, (*thawt*), *imp.* and *pp.* of **THINK**, *q. v.*

Thought, (*thawt*), *n.* [A. S. *theaht*, from *thencan*, to think.] Act of thinking; reflection; exercise of the higher intellectual functions; operation of the faculties of the mind in any way except sense and perception.—Act of pondering; meditation; cogitation; serious consideration; as, "This dead of midnight is the noon of *thought*." (*Barbauld*).—That which the mind thinks; something framed in the mind; an idea; a conception or preconceived notion; as, (1.) An opinion; a notion; a judgment; a supposition; a conclusion; as, we interchanged *thoughts* on this subject. (2.) An offspring of the imagination; a sentiment; a conceit; a fancy.—Design; purpose; intention.—Solicitude; care; compunction; concern; workings of conscience; as, "Adam took no *thought*, eating his fill." (*Milton*).—A small degree or quantity; as, this stew requires a *thought* more pepper.

Thoughtful, *a.* Full of, or absorbed by, thought; employed in meditation or cogitation; reflecting; contemplative; musing; as, a *thoughtful* man.—Having the mind or attention directed toward an object; careful; intent; regardful; heedful; as, a person *thoughtful* of the future.—Anxious; solicitous; exhibiting concern; as, an act of *thoughtful* kindness.—Favorable to pondering or meditation; having a tendency or aptness to superinduce serious thought or contemplation; as, a *thoughtful* mood.

Thoughtfully, *a.* In a thoughtful manner.

Thoughtfulness, *n.* State or quality of being thoughtful; deep reflection or meditation; serious attention, especially to spiritual concerns; solicitude; anxiety.

Thoughtless, *a.* Lacking, or exhibiting absence of, thought; heedless; negligent; careless; as, a man *thoughtless* of his duties.—Gay; volatile; dissipated; full of levity; as, a *thoughtless* youth.—Stupid; dull; insensate; as, *thoughtless* majesty.

Thoughtlessly, *adv.* Without thought; heedlessly; stupidly.

Thoughtlessness, *n.* State or quality of being thoughtless.

Thousand, (*thou'zand*), *a.* [A. S. *thusand*.] Denoting the number of ten hundred.—Proverbially, denoting a great number indefinitely; as, I have mentioned the thing a *thousand* times.

—*n.* The number of ten hundred; the sum of ten times one hundred;—frequently used in the plural; as, he is worth a score *thousands* of dollars.—Hence, a great number indefinitely.—A symbol expressing one thousand units; as, 1000, M, or C³.

Thousand-fold, *a.* Multiplied by a thousand.

Thousand Islands, the most numerous collection of river islands in the world, between the U. States and prov. of Ontario, consist of about 1,500 rocky islets, in an expansion of the St. Lawrence, at its emergence from Lake Ontario, hence called the Lake of the Thousand Islands.

Thousandth, (*thou'zandth*), *a.* The ordinal of thousand; as, the *thousandth* part of a thing.—Being, or constituting, one of a thousand equal parts into which a thing is divided.—Hence, by implication, minute; very small; trifling;—used in a proverbial sense.

—*n.* The thousandth part of anything; the quotient of a unit divided by a thousand.

Thowls, *n. pl.* (*Naut.*) Same as **THOLES**, *q. v.*

Thrace, (*anc. Hist.*) The ancient name of the Turkish prov. of Roumelia. It is said to have been peopled by a tribe of Pelasgians. The authentic history of the country commences with the formation of the Greek settlements in the 6th century, B. C. Of these, the principal were Byzantium (675 B. C.), Selymbria, Abdera (560 B. C.), Mesembria, Dicea, Maronea, Ems, Cardia, Sestus, Amphipolis, &c.; but their want of union enabled the Thracian chiefs of the interior to preserve their independence. In 513 B. C., Darius, king of Persia, marched through *T.* on his way to punish the European Scythians, and on his return, left Megabazus, with 80,000 men, to subdue the country. In this he partially succeeded, but new disturbances and complications arose between the Persians and Greeks, which resulted (480 B. C.) in the famous expedition of Xerxes. The rise of the Macedonian kingdom, under Philip II. (359 B. C.), destroyed the independence of a great part of Thrace. Under the government of Lysimachus, Thrace was incorporated with Macedonia, and became complete. On the fall of the Macedonian kingdom (168 B. C.) it passed into the hands of the Romans, and subsequently shared the vicissitudes of the Roman Empire. In 395, it was overrun by Alaric, and in 447, by Attila. In 1353, Amurath obtained possession of all its fortresses, except Constantinople, and it has ever since remained in the hands of the Turks.

Thralldom, **Thralldom**, *n.* [*Dan.* *trældom*.] State of a thrall or slave; state of servitude; bondage; slavery; serfdom; as, to live in *thralldom*.

Thrash, **Thresh**, *v. a.* [A. S. *therscan*; Ger. *dreschen*.]

To beat out, as grain from the husk with a flail, or with a machine; as, to *thrash* wheat.—To beat or belabor soundly with a stick or whip; to drub; to eastigate; as, to *thrash* a bully.

—*v. n.* To practise thrashing; to perform the business of beating out grain from the ear, either by manual or mechanical process; as, the machine *thrashes* capitally.—Hence, to drudge; to toil; to labor; to work in a servile manner; as, "I would rather *thrash* for rhymes." **Thrasher**, **Thresher**, *n.* One who thrashes grain; also, a thrashing-machine; as, a patent *thrasher*.

(*Zoöl.*) See **THRUSH**

Thrashing, **Threshing**, *n.* (*Agric.*) The act of beating out the grain from wheat or other crops. In former times, the hand-flail was the only implement used for *T.* grain; it separated the grain from the husks and straw very effectively; but that method is too expensive in this country, and has been abandoned in Europe for the same cause, and also because it was found that the flail always bruised a large number of seeds. Proper machines, provided with a large number of flails, or other parts answering the same purpose, and moved by the power of water, wind, or horses, were soon introduced. It was found that by this means the process of *T.* could be effected more cheaply, more quickly, and with less damage to the health of the thrasher, than by the old means. To the farmer on an extensive scale, the *T.* machine is an absolute necessity. In the present ordinary *T.* machine in its improved form, a rapid motion is given to a hollow cylinder round a horizontal axis: on the outer surface there are projecting ribs, parallel to the axis, at equal distance from each other: the width of these is from two to six inches. Round one-half of the cylinder is a case, the inner surface of which is lined with plates of cast iron, grooved in the direction of the axis. Since the beaters, or ribs, come quite close to these ribs, an ear of corn or other grain cannot well pass through them without being flattened. After being unbound, the sheaves of grain are spread upon a slanting table, and in some machines are drawn in between two iron rollers, one of which is fluted and the other plain. The motion of these rollers is slow, while that of the cylinder is rapid. As the straw comes through, the beaters act upon it, and thrash out most of the grain; that which remains is carried in between the beaters and the fluted cases, and on making half a revolution, all the grain has been beaten or rubbed out. It falls on a shaker, which allows the grain to pass through, but tosses off the straw. In England, *T.* machines worked by steam-power have been erected on very large farms; and travelling steam-machines (Fig. 2498) thrash out the largest quantity of the grain grown

Fig. 2498. — STEAM THRASHING-MACHINE.

in that country. In the U. States, innumerable thrashing-machines have been patented, in which the spiked cylinder is generally employed. Most modern *T.* machines have grain separators attached, by which the grain is winnowed by a revolving fan, and also elevators, which are long endless aprons moved on rollers, by means of which the straw is taken up into a mow or on to a stack.

Thrasoneal, *a.* [From Lat. *Thraso*, the name of a braggadocio in the "Ennuch" of Terence.] Giving to boasting, swagger, or braggadocio.—Gasconading; boastful; pretentious; as, *thrasoneal* behavior.—*Shaks.*

Thrasylus, a celebrated Athenian general, who, in the time of the Thirty Tyrants, took refuge at Thebes. Having gained some followers, he marched against the usurpers and expelled them. In commemoration of this triumph, a yearly festival was instituted at Athens. Thrasylus wisely procured the passing of a general amnesty, which decreed that no one but the principals should be punished for the atrocities which had been committed. He subsequently displayed great valor in Thrace, and slew the Lacedæmonian general with his own hand. Thrasylus fell in a battle with the Aspendians, who were the allies of Sparta, 394 B. C.

Thrave, *n.* [A. S. *thraf*, a handful; W. *dref*, a bundle.] The number of two dozen.—In some parts of England 24, in other parts 12, sheaves of wheat or barley.

Thread, (*thred*), *n.* [A. S. *thred*, *thred*.] A very small, attenuated twist of flax, wool, cotton, silk, or other fibrous material, spun out to a considerable length.—The filament of any fibrous substance, as of bark; a fine filament or line of gold or silver.—Something resembling a thread; something carried out in a continued course or uniform tenor; as, the *thread* of an argument or narrative.—The prominent spiral part of a screw.—*Air-threads*, gossamer.—*Thread and thrum*, good and bad taken together.

—*v. a.* To pass a thread through the eye, as of a needle.—To pass or pierce through, as a narrow way or channel.

Threadbare, *a.* Worn to the bare thread; having the nap or gloss worn off; as, a *threadbare* coat.—Hence, by analogy, worn out; trite; stale; hackneyed; humdrum; having lost its novelty or interest; as, a *threadbare* joke, a *threadbare* quotation.

Threadfoot, *n.* (*Bot.*) See **PODOSTEMACEÆ**.

Threadiness, (*thred'-y*), *n.* State of being drawn out into threads, or after the manner of threads.

Thread-lace, *n.* Lace fabricated of linen thread.

Thread-needle, **Thread-the-needle**, *n.* A game among children, in which they stand in a row, with joined hands, when the outer one, still holding the hand of the next one, runs between the others.

Thread-shaped, (*thred'shapt*), *a.* (*Bot.*) Filiform.

Thread-worm, (*-wurm*), *n.* (*Zoöl.*) See **ASCARIS**.

Thready, (*thred'y*), *a.* Resembling thread or filaments.—Consisting of, or resembling, thread.

Threat, (*thret*), *n.* [A. S. *thryth*.] A menace; denunciation of evil; declaration of an intention or determination to inflict punishment, loss, or pain on another.

—*v. a.* To threaten;—used only in poetry.

Threaten, (*thret'n*), *v. a.* [A. S. *threatian*.] To pain or harass by threats or menaces; to declare the purpose of inflicting punishment, pain, or other evil upon; to terrify, or attempt to terrify, by menaces or denunciation; to charge or enjoin with menace or with implied rebuke; to charge strictly or censoriously; as, to *threaten* a man's life.—To menace by action; to present, or assume, the appearance of coming evil; to exhibit the indication of some danger or catastrophe which will happen; as, the state of the weather *threatens* us with a storm.

—*v. n.* To employ threats or menaces.

Threatener, *n.* One who threatens or menaces.

Threatening, *p. a.* Denoting a threat or menace; as, *threatening* language.—Indicating something about to happen; as, the clouds look *threatening*.

—*n.* Act of menacing; also, a menace; a denunciation of evil, or declaration of a purpose to inflict evil on an individual, or a country, usually for sins and offences.

Threateningly, *adv.* In a threatening manner.

Three, *a.* [A. S. *thry*; Lat. *tres*; Gr. *treis*.] Two and one;—often used, like other adjectives, without the noun to which it refers.

(NOTE. *Three* is very frequently joined with other words to form compounds having a generic signification of three parts, portions, organs, &c.; as, *three-celled*, *three-edged*, *three-legged*, *three-pronged*, *three-stringed*, &c.)

—*n.* The sum of two and one; the number next above two, and one less than four.—Proverbially, a small number; as, "a *three-suited* knave." (*Shaks.*) (*R.*)—A symbol indicating three units, as 3, or iii.

Three-coat, *n.* (*Arch.*) Applied to a kind of plastering which consists of roughing-up, or roughing-in, floating, and a finishing coat.

Three-cornered, (*-kor-nerd*), *a.* [*Three* and *corner*.] With three corners; triangular; as, a *three-cornered* hat. (*Bot.*) Having three salient, longitudinal angles, as a stem.

Three-decker, (*-dek'er*), *n.* (*Naut.*) A man-of-war carrying guns on three decks.

Threefold, *a.* [A. S. *thryfeald*.] Consisting of a sequence of three; as, a *threefold* offering.

Three Mile Bay, in New York, a post-village of Jefferson co., 16 m. W. N. W. of Watertown.

Three Oaks, in Michigan, a post-township of Berrien co., abt. 22 m. W. of Niles.

Three Parks. See **COLORADO**.

Three-nerved, (*-nurd*), *a.* (*Bot.*) Possessing three slender ribs; trinnervate.

Three-parted, *a.* Same as **TRIPARTITE**, *q. v.*

Threepence, (*thrip'ens*), *n.* [*Three* and *pence*.] The sum of three pennies; or, in England, a small silver coin of three times the value of a penny.

Threepenny, *a.* Worth three pennies only; as, a *threepenny* bit (*i. e.*, a small English silver coin);—hence, of little value; mean; poor; trivial.

Three-pile, *n.* The finest quality or costliest kind of velvet.

Three-piled, *a.* Having the quality of three-pile;—hence, of the best or costliest kind; as, a *three-piled* piece of velvet.—Hence, high-flown; exaggerated; bombastic; as, "*three-piled* hyperboles." (*Shaks.*)—Piled in sets of three.

Three-ply, *a.* [From *three*, and Fr. *plier*; Lat. *plico*. See **PLY**.] Threefold; consisting of three thicknesses or folds; as, a *three-ply* carpet.

Three-pointed, *a.* (*Bot.*) Same as **TRICUSPIDATE**, *q. v.*

Three-quarter, *a.* (*Paint.*) A term applied to designate a particular size of portraiture, measuring 30 inches by 25. The term is also applied (adjectively) to a portrait delineated to the hips only.

Three Rivers, (or **TROIS RIVIÈRES**), in prov. of Quebec, a town, cap. of St. Maurice co., at the confluence of the St. Lawrence and St. Maurice rivers, 90 m. S. W. of Quebec.

Three Rivers, in Massachusetts, a post-village of Hampden co., 65 m. W. S. W. of Boston.

Three Rivers, in Michigan, a post-village of St. Joseph co., 86 m. S. W. of Lansing.

Three-score, *a.* Three times a score; thrice twenty; sixty.

Threnet'ic, *a.* [*Gr.* *threnetikos*.] Mournful; sorrowful.

Threnody, *n.* [*Gr.* *threnos*, a wailing, from *threnonai*, to cry aloud, and *ōdē*, a song.] A song of lamentation; a monody.

Threpsology, (*-je*), *n.* [*Gr.* *threpsis*, aliment, and *logos*, treatise.] (*Med.*) The doctrine of, or a treatise on, the nutrition of organized bodies.

Thresh, (*thrash*), *v. a.* See **THRASH**.

Thresh'old, *n.* [A. S. *thersc-wald*, *thresc-wald*.] A

door-sill; the plank, stone, or piece of timber which lies at the bottom or under a door, particularly of a dwelling-house, church, and the like; hence, entrance; gate; door; as, on the *threshold* of one's own home.—The place or point of entering or beginning; outset; as, they are now at the *threshold* of their enterprise.

Threw, (*thru*.) *imp.* of **THROW**, *q. v.*

Thrice, (*thris*.) *adv.* [From *three*. A.S. *thriga*.] Three times; as, he made the attempt *thrice*.—Very; emphatically;—used by way of amplification; as, "*thrice* noble Lord."—*Shaks.*

(NOTE. *Thrice* is frequently used in the formation of compounds conveying intensive application; as, *thrice*-favored, *thrice*-happy, *thrice*-told, &c.)

Thrid, *v. a.* [A corruption of *thread*.] To thread; to slip, shoot, or run through, as a needle, bodkin, or the like; to slide through by a narrow passage; as, to *thrid* a labyrinth.

Thrift, *n.* [From *thrive*.] A state of thriving; frugality; economy; good husbandry; careful management in regard to property.—Acquisition or increase of property or worldly goods; prosperity; gain; as, "*thrift* may follow farming." (*Shaks.*)—Vigorous growth or development, as of a plant.

(Bot.) See **ARMERIA**.

Thriftily, *adv.* In a thrifty manner.

Thriftiness, *n.* State or quality of being thrifty.

Thriftlessly, *adv.* Without thriving; extravagantly.

Thriftlessness, *n.* State or condition of being thriftless.

Thriftly, *a.* (comp. **THRIFTIER**; superl. **THRIFTIEST**.) Economical; frugal; sparing in the use of means or money; given to, or exhibiting thrift; employing economy and good management of property; as, a *thriftly* housewife.—Increasing in wealth or substance; prosperous in the acquisition or accumulation of worldly riches; thriving by industry and parsimony; as, a *thriftly* tradesman.—Well-husbanded; as, *thriftly* hire. (*Shaks.*) (R.)—Thriving with quick or vigorous growth, as a plant or tree.

Thrill, *n.* A drill; a borer.—A thrilling or tingling sensation; as, a *thrill* of ecstasy, a *thrill* of horror.

—*v. a.* [A.S. *thryllan*.] To bore; to drill; to pierce; to puncture; to perforate by turning an auger or similar instrument in.—Hence, to pierce; to penetrate, as something sharp; particularly, to cause a tingling sensation that pervades the system with a slight shiver; as, a voice that *thrills* the hearer.

—*v. n.* To feel a sharp, shivering sensation running through the body; as, a sudden horror *thrilled* through his veins.

Thrillingly, *adv.* In a thrilling manner.

Thrips, *n.* [Lat. and Gr., a worm.] (*Zoöl.*) A genus of small spotted flies, family *Aphidae*. The species are numerous, and widely distributed. They are very active, and some of them very troublesome, by the injury which they do to cultivated plants, upon the juices of which they live.

Thrive, *v. n.* (*imp.* **THRIVE**, or **THRIVED**; *pp.* **THRIVEN**, or **THRIVED**.—*thrived* is rarely used.) [Icel. *threifa*, to put one's hand to.] To advance or increase in anything valuable or advantageous; to increase in goods or estate; to prosper by industry, frugality, and good management of property or means; as, a person *thrives* by diligence and economy in expenditure.—To have profit, increase, or success; to prosper or succeed in any business or occupation; as, a *thriving* manufacturer, a *thriving* country.—To flourish; to vegetate luxuriantly; to increase in bulk or stature; as, the palm *thrives* in tropical latitudes.

Thriven, (*thriv'n*.) *pp.* of **THRIVE**, *q. v.*

Thriving, (*thriv'g*.) *u.* The act of increasing in wealth or size.

Thrivingly, *adv.* In a thriving manner.

Thro, (*throo*.) A contraction of **THROUGH**, *q. v.*

Throat, (*throt*.) *n.* [A.S. *throta*.] (*Anat.*) The anterior part of the neck of an animal, in which are the gullet and windpipe, or the passages for the food and breath; the pharynx.

Diseases of the throat. See **DIPHThERIA**, **QUINSEY**, **THRUSH**.

(Arch.) See **CHIMNEY**.

(Bot.) The opening or orifice of a monopetalous corolla.

(Ship-building.) The hollow part of the knee-timbers.

(Naut.) The wide end of a gaff next the mast, in opposition to the peak.—Also, a part of the **ANCHOR**, *q. v.*

To give one the lie in his throat, to tax one with lying deliberately and impudently.—To lie in one's throat, to lie barefacedly or manifestly.—**Throat-brails**. (*Naut.*) Brails attached to the gaff close to a ship's mast.—**Throat-halyards**, those halyards that serve to raise the throat of the gaff.

Throat-band, **Throat-latch**, *n.* A strap of a halter, bridle, &c., passing under a horse's throat.

Throat-pipe, *n.* The windpipe or trachea.

Throb, *v. n.* (*imp.* and *pp.* **THROBBED**, (*throbb'd*.) [Of uncertain etymology.] To beat, as the heart or pulse, with more than common force or rapidity; to palpitate; to beat in consequence of agitation or excitement; as, *throbbing* temples.

Throbbing pain, a kind of pain which is, or seems to be, caused or augmented by the pulsation of arteries.

—*n.* A beat or strong pulsation;—especially, a violent agitation of the heart and arteries; a palpitation.

Throbbing, *n.* Act of beating with unusual force, as the heart and pulse; palpitation.

Throckmorton, in *Texas*, a N.W. co.; area, 900 sq. m. *Rivers*, *Brazos*, and *Clear Fork*.

Throe, (*thro*.) *n.* [A.S. *throwian*, to suffer, to endure.]

Extreme pain; anguish; agony; violent pang;—particularly applied to the anguish of travail attendant on parturition.

—An instrument for splitting wood into shingles.

—*v. n.* To agonize; to struggle in acute or intense pain.

Thrombolite, *n.* [Gr. *thrombos*, a mass, and *lithos*, stone.] (*Min.*) Native amorphous, hydrated sulphate of copper, of an opaque-green color, which becomes black on exposure to the air.

Thrombus, *n.* [Gr. *thrombos*, a clot of blood.] (*Med.*) A small tumor, which sometimes ensues in consequence of the escape of blood into the cellular membrane in the operation of bleeding.

Throne, *n.* [Fr. *trône*; Lat. *thronus* = Gr. *thrōnos*.] A royal seat of state;—also, sometimes, the seat of a bishop.—Hence, regal power or dignity; as, in constitutional monarchies, the law is above the *throne*.—Hence, also, the place where God peculiarly manifests his power and glory; as, "Th' eternal Father from his *throne*."—*Dryden*.

—*v. a.* To enthrone.—Hence, to place in an elevated position; to exalt; to give a high or elevated place to.

—*v. n.* To be placed in, or as if upon, a throne; as, "Venice . . . *throned* on her hundred isles."—*Byron*.

Throng, *n.* [A.S. *thrang*.] A crowd; a concourse; a multitude of persons or of living beings pressing or pressed into a close body or assemblage.—A great multitude; as, the heavenly *throng*.

—*v. n.* [A.S. *thringan*.] To press or crowd together; to come in crowds or multitudes; to press into a close body, as a concourse of persons; as, people *throng* to the President's levee.

—*v. a.* To crowd, or press, as a multitude of persons; to incommode or annoy with a concourse of living beings; as, the place of meeting was *thronged* to excess.

Throop, in *New York*, a post-village and township of Cayuga co., abt. 3 m. N.W. of Auburn.

Throstle, (*throst'l*.) *n.* [A.S.; Icel. *thröstr*.] (*Zoöl.*) The song-thrush. See **THRUSH**.

Throstle, (*throst'l*.) *n.* A machine for spinning wool, cotton, &c., from the rove, consisting of a set of drawing rollers with bobbins and flyers, and differing from the *mule* in having the twisting apparatus stationary.

Throstling, (*throst'ling*.) *n.* A disease affecting the glands of the throats of cattle.

Throt'tle, *n.* The windpipe or trachea;—vulgarly, the weasand.

—*v. a.* [From *throat*.] To seize and compress the throat of, so as to choke; to suffocate, or to obstruct so as to endanger suffocation; as, a *throttling* quinsy. (*Dryden*).—To utter with breaks or interruptions, as a person half suffocated.

—*v. n.* To choke; to suffocate;—also, to breathe hard.

Throt'tle-lever, *n.* (*Mach.*) In a locomotive steam-engine, the hand-lever by which a throttle-valve is moved.

Throt'tle-valve, *n.* (*Mach.*) A valve in the steam-pipe of an engine, for regulating the supply of steam to the cylinder. It is moved by a hand-lever called the *throttle-lever*.

Through, (*throo*.) *prep.* [A.S.] Noting passage by transmission; indicating the means of conveyance; noting passage among or in the midst of; as, a ship moves *through* the water, a man walks *through* a wood.—From end to end, or from side to side; from one surface or limit to the opposite; as, a nail is driven *through* a board, a shot passes *through* one's body.—By means of; by the agency of;—noting instrumentality; as, he heard of it *through* me.—Within; between the walls or sides of; to pass *through* a gateway.—Over the whole surface or extent of; as, to ramble *through* a country.—From the beginning or commencement to the end or conclusion; as, some people have a hard time of it *through* life.

—*adv.* From one end or side to the other; as, the cold pierces one *through* and *through*.—From beginning to end; as, to read a book *through*.—To the end or conclusion; to the ultimate purpose; as, to carry an undertaking *through*.

(NOTE. *Through* occasionally forms the prefix to certain compounds; as, *through-bolt*, *through-train*, &c.)

To drop or fall *through*, to collapse; to fall to pieces; to become futile; as, the project *dropped through*.

Through-bolt, *n.* A bolt which passes through all the thicknesses of that in which it is fixed.

Throughout, *prep.* Quite through; in every part; from one end or extremity to the other; as, we were busy *throughout* the year.

—*adv.* In every part; in all ways; as, he is a good fellow *throughout*.

Through-stone, *n.* (*Arch.*) A stone in a wall which reaches entirely through it, and shows itself on both sides.

Through-ticket, *n.* A ticket for an entire journey.

Through-train, *n.* A railroad train which goes over the whole of a long route.

Throve, the old *imp.* of **THRIVE**, *q. v.*

Throw, (*thro*.) *v. a.* (*imp.* **THREW**; *pp.* **THROWN**.) [A.S. *throwan*.] To fling or cast in any manner; to propel; to send; to drive to a distance from the hand or from an engine; to hurl; as, to *throw* a stone with the hand, a fire-engine *throws* water to put out a fire.—To wind; to twist together, as fibres or filaments.—To venture at dice; as, to *throw* a main in hazard.—To divest or strip one's self of; to put off; as, a serpent *throws* its skin.—To put on; to lay over carelessly; as, he *threw* a cloak over his shoulders.—To cast; to send; to hurl; to fling; as, to *throw* words of contempt on another.—To prostrate or overturn; as, to *throw* an antagonist in wrestling.—To drive or impel by force or violence; as, sailors *thrown* upon a desert island.—To bear; to bring

forth or produce, as young;—said particularly of rabbits.

To *throw away*. (1.) To expend to no purpose; to lose by neglect, folly, or misapplication; as, asking a miser to lend money is time *thrown away*. (2.) To reject; to discard; as, to *throw away* a good opportunity.—To *throw back*. (1.) To reject; to refuse. (2.) To retort; to fling back, as an answer.—To *throw by*, to cast aside as no longer wanted; as, to *throw by* an old hat.—To *throw down*. (1.) To subvert; to overturn; to destroy; as, to *throw down* a fence. (2.) To degrade; to reduce from a high station to a lower.—To *throw in*. (1.) To loject, as a liquid. (2.) To put in along with others; to deposit or add without enumeration or valuation; as, an article *thrown in* to complete a bargain. (3.) To give up; to relinquish.—To *throw off*. (1.) To discard; to reject; to forsake; as, to *throw off* a mistress. (2.) To purge or clear from; to expel; as, to *throw off* a disorder.—To *throw on*, to load; to cast or fling on.—To *throw one's self down*, to fall prone; to lie down.—To *throw one's self on or upon*, to repose upon; to resign one's self to the disposal of; as, the prisoner *threw himself* on the mercy of the court.—To *throw out*. (1.) To cast out; to reject, discard, or decline to entertain; as, the bill was *thrown out*. (2.) To speak; to utter; to give expression to; as, to *throw out* a hint.—To *throw up*. (1.) To resign; to demit; to surrender; as, he *threw up* a good situation. (2.) To vomit.

—*v. n.* To perform the act of throwing;—specifically, to cast dice.

—*n.* Act of hurling, casting, or flinging; a driving or propelling from the hand or from an engine; as, a straight *throw*.—A cast of dice; also the manner of casting dice; as, a fair *throw*, a lucky *throw*.—The distance which a missile is or may be thrown; as, the place is not a stone's *throw* off.—An overturn in wrestling.—A turner's lathe.—A potter's jigger. See **JIGGER**.

(Mach.) In steam-engines, the extreme movement of a slide-valve; also of a crank or eccentric measured on a direct line passing through the centre of motion.

Throw-crook, *n.* (*Agric.*) An instrument by which ropes are twisted out of straw.

Throw'er, *n.* One who throws.

Thrown Silk, *n.* (*Com.*) Silk consisting of two or more singles twisted together like a rope, in a direction contrary to that in which the singles of which it is composed are twisted.

Throw-off, *n.* A start in hunting or racing. (*Eng.*)

Throw'ster, *n.* One who throws, twists, or winds silk.

Thrum, *n.* [Ger. *trumm*.] A tuft; one of the ends of weavers' threads.—Any coarse yarn.

—*v. n.* (*imp.* and *pp.* **THRUMMED**, (*thrum'd*.) To play coarsely or inharmoniously on a musical instrument with the fingers; to strum; as, to *thrum* the pianoforte.

—*v. a.* To fringe, or furnish with thrums or small tufts.

—To strum, or play inelegantly upon with the fingers, as on a musical instrument.

(Naut.) To stick short pieces of yarn through, as a mat.

Thrummy, *a.* Containing, or resembling, thrums.

Thrush, *n.* [A.S. *thrisc*.] (*Zoöl.*) The common name of insectorial birds, comprising the family *Turdide*. Thrushes, or birds bearing considerable resemblance to thrushes, are found in almost every part of the world. Those which inhabit high latitudes, and places which are otherwise very seasonal in their character, are in general migratory, and those which inhabit places of more mild and uniform character are in general stationary. The generic characters are,—beak of moderate size, straight, convex above; point of the upper mandible compressed, notched, and slightly curved downwards; the gape furnished with a few hairs, the nostrils oval, lateral, half concealed by membrane; middle toe not so long as the tarsus, and the outer toes joined to it at the base. 140 to 150 species have been described. The Wood T. (*Turdus melodus*, or *T. mustelinus*) is one of the most abundant American species. It is about 8 inches in length; the whole of the upper parts of the body are fulvous brown, brightest on the head, and inclining to olive on the rump and tail; throat and breast white, tinged with buff, and sprinkled all over with dusky spots; eyes surrounded with a white circle; legs

Fig. 2499. — WOOD-THRUSH.

and claws flesh-color. It inhabits the whole of N. America, from Hudson's Bay to Florida; its song is heard every morning and evening during the months of May and June, and is greatly admired; but during the day it is silent; its favorite haunts are thick shaded hollows by the sides of brooks or rivulets; its nest, made of withered beech-leaves with layers of dry grass mixed with mud, and lined with dry fibrous roots, is often placed in an alder-bush. Its eggs are four or five in number, and of a light blue color. Among the other American species are the Hermit T. (*Turdos pallasi*, or *T. solitarius*); the Dwarf T. (*Turdos nanus*); Wilson's T.

(*Turdus fuscescens*). The Robin, the Blue-bird, the Wren, and the Water Onzel, described under their respective names, belong also to the *Turdidae*. The Song T., or Thrush (*Turdus musicus*), of Europe, much resembles the Wood T. The Brown T., or Thrasher (*Harporhynchus rufus*), of N. America, east of the Missouri, has been placed by Cabanis and Baird in the family *Lio-trichidae*. It is over 11 inches long, the wing over 4; the color above light cinnamon-red, beneath pale rufous-white, with longitudinal streaks of dark brown. In the pleasant spring mornings, this bird utters the sweetest melodies from the topmost twigs of some isolated tree. Later in the day, and at all times late in the season, it prefers low thick bushes. Its flight is low and heavy, and continued only a few rods at a time. The nest is made in a clump of low bushes a few feet from the ground; the eggs four to six, dull buff, thickly sprinkled with dots of brown.

(Med.) A disease common to infants who are ill-fed, consisting of an eruption of *aphthæ*, or small white or ash-colored ulcers on the tongue and inside of the mouth, and not unfrequently extending to the throat and fauces. It is caused by irritation of the bowels, and is almost always attended with diarrhoea. It is rarely dangerous; and in its treatment the disordered state of the bowels is to be corrected by the administration of some anti-acid and astringent mixture, and the system strengthened by preparations of iron and cod-liver oil. A dilute solution of nitrate of silver should be applied to the eruptions of the mouth.

(Far.) An inflammatory or suppurative affection in the feet of the horse and certain other animals.

Thrust, *v. a.* (imp. and pp. *THRUST*.) [*Icei. thrista.*] To push or drive with force; to impel with some degree of violence.

To *thrust away*, *off*, *out*, or *from*, to push or drive away; to reject; to discard; as, he *thrust* the woman *off*. — To *thrust in*, to push or drive in; as, to *thrust* a bayonet in a man's body. — To *thrust on*, to urge; to impel; to cause to move; as, a divine *thrusting on*. (Shaks.) — To *thrust one's self*, to obtrude or intrude; to enter without leave or welcome; as, an officious person *thrusts himself* where he is not wanted. — To *thrust through*, to pierce; to stab; as, he *thrust* the knife through his hand. — To *thrust together*, to compress; as, he *thrust* the fleece together.

— *v. n.* To make a push or driving; to attack with a pointed instrument or weapon. — To squeeze or urge in; to enter by pushing; to intrude; as, an office-seeker *thrusts* into notice. — To press on or push forward; to come with force or violence; as, fresh men still *thrust* on. — *n.* A violent push or driving, as with a pointed weapon, or with the hand or foot, or with any instrument; — a term commonly used in fencing. — Attack; assault; onslaught; as, the *thrust* of a repartee.

(Arch.) The horizontal force of an arch, by which it acts against the piers from which it springs. Also, a similar action of rafters or of a beam against the walls which bear them.

Thucydides, (*thu-cid'i-dees*), a Greek historian, b. at Athens, about 471 B. C., d. about 400 B. C. He was of noble birth, and, on arriving at maturity, took part in the Peloponnesian War; but, failing in an expedition with which he had been intrusted, he was banished, and during the 20 years of his banishment collected materials for his *History of the Peloponnesian War*. This history is the first example of philosophical history, portraying not so much the merely outward and visible facts and movements, as the development of character in actions and the operation of human action on the world. Motives and the secret workings of things are unfolded, not speculatively, but as ascertained matters of fact. A very marked feature of the work is the speeches, introduced sometimes as actually spoken, sometimes as discourses appropriate to occasions, and for the explication of causes. The most conscientious care in the ascertaining of facts and dates, brevity and clearness of narration, perfect consistency in the details of one part with another, and of the whole with the laws of nature and the known characters of the actors, inspire the fullest confidence in the truth and fidelity of the historian.

Thuin, (*toŭ'ā*), a town of Belgium, on the Sambre, 8 m. from Charleroi. *Manuf.* Woollens and linens. *Pop.* 4,642.

Thu'ja, **Thu'ya**, *n.* [*Gr. thyon*, a sacrifice.] (*Bot.*) A genus of trees or shrubs, with evergreen, squamose, intricate leaves, ord. *Pinaceæ*. *T. occidentalis* is the *Arbor Vitæ*, the resin of the Eastern variety of which is used instead of incense at sacrifices. Why it is called *Arbor Vitæ* is not known, unless it be on account of the supposed medicinal qualities of its berries. In the E. the Cypress is called the tree of life, and its berries are considered a cure for all diseases.

Thug, *n.* [From Hind. *thugna*, to deceive.] A member of a singular association of robbers and murderers long existing in Hindostan, but which has, of late years, been almost extirpated by the British government. The Thugs were directed in all their proceedings by auguries supposed to be vouchsafed by their goddess Kali; and particular classes were altogether exempt from their attacks. They seldom destroyed women unless for their own safety; and they very seldom ventured to attack Englishmen. They usually moved in large gangs, and attached themselves to travelling parties, with whom they would journey for days, until they found an opportunity for mastering them. When all would be ready, one division of the murderers strangled their victims, while another body prepared their graves; and by means of this division of labor the fearful work was accomplished with wonderful celerity. The destruction of life occasioned by them may be conjectured from

the fact that one Thug confessed that he had been concerned in the murder of 719 people.

Fig. 2500. — A THUG.

Thu'le, (or **ULTIMA THU'LE**), the name given by the ancients to the most N. parts of Europe known to them, and in the description of which, fancy played a conspicuous part.

Thu'rite, *n.* (*Min.*) A rose-colored variety of epidote, containing cerium.

Thumb, (*thūm*), *n.* [*A. S. and Fris. thuma.*] The short, strong, thick finger, answering to the other four in the human hand; also, the corresponding member of other animals.

— *v. a.* To handle clumsily or awkwardly; to play with the fingers; as, to *thumb* a pianoforte. — To soil by frequent contact with the fingers; as, to *thumb* a pack of playing-cards.

— *v. n.* To thrum; to strum; to play on with the fingers.

Thumb-band, *n.* A twist of any material made as thick as the thumb; as, a *thumb-band* of hay.

Thumb-blue, *n.* Indigo in the form of small balls or humps, used by laundresses to blue linen and the like.

Thumb'kin, **Thumb'screw**, *n.* An instrument of torture for compressing the thumb.

Thum'erstone, **Thu'mite**, *n.* (*Min.*) Same as AXINITE, *q. v.*

Thum'min, *n. pl.* [*Heb.*] See URIM.

Thump, *n.* [Perhaps allied to Scot. *bump*, a stroke; formed in imitation of the sound of a heavy blow.] A heavy blow given with anything that is thick, as with a club or the fist.

— *v. a.* To strike or beat with something thick or heavy.

— *v. n.* To strike or fall on with a heavy blow.

Thun, (*toon*), in the canton of Berne, Switzerland, a lake situated between the town of Interlaken on the E., and that of Thun on the N.W.; is 10 m. long, 2 m. broad, 1,775 feet above sea-level, and in some places between 700 and 800 feet deep. The scenery is very attractive.

— A town, 17 m. S.S.E. of Berne. It stands on the Aar, 1 m. from the Lake of Thun, out of which the river rushes past the town in a stream of crystal clearness. *Pop.* 4,000.

Thunder, *n.* [*A. S. thuner, thunor*; *D. donder*; *Ger. donner.*] (*Meteorol.*) The violent report which succeeds lightning in stormy weather. The lightning and the T. are always simultaneous, but an interval of several seconds is always observed between these two phenomena, which arises from the fact that sound only travels at the rate of about 1,100 feet in a second, while the passage of light is almost instantaneous. Hence an observer will only hear the noise of T. five or six seconds, for instance, after the lightning, according as the distance of the T.-cloud is five or six times 1,100 feet. The noise of T. arises from the disturbance which the electric discharge produces in the air. Near the place where the lightning strikes, the sound is dry and of short duration. At a greater distance a series of reports are heard in rapid succession. At a still greater distance the noise, feeble at the commencement, changes into a prolonged rolling sound of varying intensity. Some attribute the noise of the rolling of T. to the reflection of sound from the ground and from the clouds. Others have considered the lightning not as a single discharge, but as a series of discharges, each of which gives rise to a particular sound. But as these partial discharges proceed from points at different distances, and from zones of unequal density, it follows not only that they reach the ear of the observer successively, but that they bring sounds of unequal density, which occasion the duration and inequality of the rolling. The phenomenon has finally been ascribed to the zigzag of lightning, assuming that the air at each salient angle is at its greatest compression, which would produce the unequal intensity of the sound.

Hence, by analogy, any loud noise: as, the *thunder* of artillery. — Fulmination; an alarming or startling threat, menace, or denunciation; as, the *thunders* of the Church.

— *v. n.* To sound, rattle, or roar, as an explosion of electricity. — To make a loud noise, especially a heavy sound of some continuance; as, the walls fell with a *thundering* crash.

— *v. a.* To publish, as a threat, menace, or denunciation; to fulminate; to emit with noise and terror; as, to *thunder* out an ecclesiastical censure.

Thunder Bay, in *Michigan*, an arm of Lake Huron, on the coast of Alpena co., 13 m. long and 10 m. broad.

Thunder Bay River, in *Michigan*, rises in Montmorency co., and flowing E., enters the upper part of Thunder Bay.

Thunderbolt, *n.* [*Thunder* and *bolt*.] A shaft of lightning; a brilliant stream of the electrical fluid passing from one part of the heavens to another, and particularly from the clouds to the earth. — Figuratively, a daring or irresistible hero; as, "those *thunderbolts* of war." (*Dryden*). — Fulmination; ecclesiastical denunciation; as, the *thunderbolt* of excommunication.

Thunder-clap, *n.* A clap or burst of thunder.

Thunder-cloud, *n.* A cloud that produces lightning and thunder.

Thunderer, *n.* One who, or that which, thunders; — a term applied by the ancients to Jupiter.

Thundering, *n.* Thunder; the report of an electrical explosion.

Thunder-shower, *n.* A shower of rain attended with thunder.

Thunder-storm, *n.* A storm of wind, rain, or hail, accompanied with lightning or thunder.

Thunder-stroke, *n.* A thunder-clap.

Thunder-struck, *p. a.* Amazed; astonished; confounded; struck dumb by something marvellous, surprising, or terrible, suddenly presented to the mind or view.

Thunder-tube, *n.* Same as FULGURITE, *q. v.*

Thurgau, or **Thurgovia**, (*toor'gow*), a canton of Switzerland, in the N.E. part of the confederation, between Lat. 47° 20' and 47° 40' N., Lon. 8° 40' and 9° 30' E.; having S. St. Gall, W. Zurich and Schaffhausen, and N. and E. the Rhine and the Lake of Coustance; *area*, 268 sq. m. The surface is undulating or hilly, but nowhere mountainous, the chief height being the Hörnli in the extreme south, 3,605 feet. The principal river is the Thur, which, flowing W.N.W. through a broad valley, joins the Rhine in the canton of Zurich. The soil is fertile in the ordinary crops, and remarkably so in fruits. *Cap.* Frauenfeld. *Pop.* 94,760.

Thur'ibie, *n.* [*L. Lat. thuribulum*.] A CENSER, *q. v.*

Thuringia, (*thoo-rin'je-a*). [*Ger. Thüringen*.] The name, almost obsolete, of that part of central Germany which embraced the six small states of Saxe-Weimar-Eisenach; Saxe-Meiningen; Saxe-Altenburg; Saxe-Coburg-Gotha; Schwarzburg-Sondershausen; Schwarzburg-Rudolstadt; and the principalities of Reuss. T. was so called from the *Thuringi*, or *Doringi*, a Gothic tribe by whom it was found inhabited in the 5th century. — The *Thuringian forest*, which bounds the above territory on the S.W. and S., is a narrow and wooded mountain range, extending abt. 70 m. in length, not including some offshoots toward the Hartz.

Thuri'gite, *n.* (*Min.*) A hydrated silicate of alumina, and the protoxide and peroxide of iron, which occurs in the form of an aggregation of minute olive-green scales in Thuringia.

Thurl, *n.* (*Mining*.) A short communication between the adits.

Thur'man, in *New York*, a post-township of Warren co., abt. 7 m. N.W. of Caldwell.

Thurs'day, *n.* [*Dan. Torsdag*, that is, *Thor's day*, the day consecrated to *Thor*, the old Saxon god of thunder.] The fifth day of the week.

Thurs'ton, in *New York*, a post-township of Steuben co., 7 m. S. of Bath.

Thurston, in *Washington*, a N.W. co., bordering on Puget Sound; *area*, 768 sq. m. *Rivers*, Black, Chehalis, and Nisqually. *Surface*, diversified; *soil*, fertile. *Cap.* Olympia. *Pop.* (1897) 10,260.

Thurzofalva, (*thoortz-o-föl'vō*), a town of Hungary, on the borders of Galicia. It has mineral baths. *Pop.* 7,200.

Thus, *adv.* [*A. S.*] In this or that manner; in this wise; as, "with tokens *thus* and *thus*." (*Shaks.*) — To this degree or extent; as, having come *thus* far, go further.

Thutines III., an Egyptian King, abt. B. C. 1600.

Thwack, (*thwāk*), *v. a.* [*A. S. thaccian*, to stroke.] To belabor; to thump; to bang; to beat or thrash; to strike with something flat or heavy.

Thwart, *a.* [*A. S. thweor, thweorh*.] Transverse; being across something else.

— *v. a.* To be, lie, or come across the bent or direction of; to move counter to. — To cross, as a purpose; to resist; to withstand; to oppose; to contravene; hence, to balk; to frustrate; to defeat.

— *v. n.* To move or go in an oblique or crosswise manner.

— *n.* (*Naut.*) One of the cross-beams of an open boat, forming seats for the rowers, and bracing the sides together.

Thwart'er, *n.* A disease in sheep, indicated by tremors or convulsive motions.

Thwart'ing, *n.* Act of crossing or frustrating.

Thwart'ly, *adv.* In a thwart manner.

Thy, *a.* [*Contracted from thine*.] Of thee, or belonging to thee; — the possessive of *thee*, used in poetry and in solemn declamation.

Thylacine, *n.* (*Zool.*) A marsupial animal of the family *Dipodidae*, found in Australia, and distinguished from the true opossum by two incisors less in each

jaw, a non-prehensile tail, and the absence of a thumb on the hind feet.

Thy'ine-Wood, *n.* (*Script.*) A precious wood, which was formerly used in burning incense. It is probably the wood of the Arbor Vitæ. See **THUJA**.

Thyme, (*tim*), *n.* [*Fr. thym.*] (*Bot.*) See **THYMUS**.

Thymela'ceæ, *n. pl.* (*Bot.*) An order of plants, alliance *Daphnates*.—*DRAG.* Apetalous or polypetalous flowers, anthers bursting lengthwise, a solitary suspended ovule, and an imbricated calyx.—They are shrubs, or very rarely herbs.—This order, inhabiting most parts of the world, are especially abundant in Australia. They are chiefly remarkable for the toughness and acidity of their bark. The fruit of *Dirca palustris* is narcotic, and that of the plants generally poisonous or dangerous; however, the seeds of *Inocarpus edulis* are said to resemble chestnuts when roasted. Several species of *Daphne* and *Pimelea* are handsome shrubby plants.

Thymiatechny, (*thim'i-a-tik-ne*), *n.* [*Gr. thymia*, incense, and *technē*, art.] (*Med.*) The art of employing perfumes in medicine.

Thymus, *n.* (*Bot.*) The Thyme, a genus of plants, order *Lamiaceæ*. The Garden *T.*, *T. vulgaris*, is common upon dry hills in the south of Europe, and is very commonly cultivated in gardens, on account of its fragrance.—Wild *T.*, or Mother of *T.*, *T. serpyllum*, occasionally found in Massachusetts, N. Y., and Pennsylvania, is abundant on hills and mountains in all parts of Europe, and the north of Asia. It is less fragrant than Garden *T.*, but both species contain an aromatic essential oil. The flowering branches (*Herba Thymi* and *Herba Serpylli*) are used in medicine as a powerful stimulant, and those of Garden *T.* are also used in cookery for flavoring.—The Lemon-*T.*, or Lemon-scented *T.*, of our gardens, is regarded as a variety of *T. serpyllum*.

(*Anat.*) A small gland found in the anterior mediastina of the thorax in the fetal infant, but which as soon as respiration commences, collapses and rapidly disappears. Neither anatomists nor physiologists have yet discovered a satisfactory theory for the duty this organ performs in fetal life; all that we really know of it is the fact that it is always present in the fetus, and never in the adult, entirely disappearing a few weeks after birth.

Thy'roid Cartilage, *n.* [From *Gr. thyreos*, an oblong shield.] (*Anat.*) See **LARYNX**.

Thy'roid Gland, *n.* (*Anat.*) A gland situated upon the thyroid and cricoid cartilages of the trachea (Fig. 753); it is of the class of ductless glands, and, when enlarged, forms the bronchocoele, or goitre.

Thyrsus, (*thér'-*), *n.*; *pl.* **THYRSI**. [*Lat.*; *Gr. thyrsos*.] A staff entwined with ivy, which formed part of the accoutrements of a bacchical, or performer in the orgies of Bacchus.

(*Bot.*) A form of inflorescence, consisting of a compact panicle, the lower branches of which are shorter than those of the middle; in other words, it is composed of a primary axis developing secondary axes from its sides, which in their turn develop tertiary axes, the upper and lower branches being shorter than those of the middle, as in the common lilac.

Thyself, *pron.* [*Thy and self*.] A pronoun used after *thou*, to express distinction with emphasis; as, *thou thyself* shalt go.—It is sometimes, also, used in the predicate, without *thou*; as, it must be so, content *thyself*.

Tia'ra, *n.* [*Sp., It., Lat., and Gr. tiara*; *Fr. tiare*.] In antiquity, a dress for the head, worn by the Persians, and somewhat similar to the covering used by the Jewish priests.—In modern times, the triple crown of the Pope (Fig. 719), which is considered to be symbolical of his temporal, as the keys are of his spiritual authority. It is composed of a high cap of gold cloth, encircled by three coronets, with a mound and cross of gold on the top. From the cap hang two pendants, embroidered and fringed at the ends, and semée of crosses of gold.

Tiarel'la, *n.* (*Bot.*) A genus of plants, order *Saxifragaceæ*. *T. cordifolia*, the Mitre-wort, Gem-fruit, or Cool-wort, is found in rocky woods, from Canada to Pennsylvania. Its leaves are cordate, acutely lobed; its scape racemose; its stamens are creeping; and its flowers white, with minute bracts.

Ti'ber. [*It. Tevere*.] A river of central Italy, rises from two springs in a dell of the Tuscan Apennines, Lat. abt. 43° 45' N. Its course, until it reaches Perugia, is S.S.E.; thence, as far as Rome, it pursues, along a zigzag line, a S. direction; but when it enters the plain of the Campagna, it curves to the S.S.W., and enters the Mediterranean by two branches, which inclose the Isola Sacra. Its entire course is abt. 212 m. In 1877 the commencement was made by the Italian govt. of straightening the *T.* and draining the Campagna, under plans brought before the Italian Parliament by Garibaldi. See Fig. 1238.

Tibe'rias, a city of Galilee, founded by Herod Antipas, and named by him in honor of the Emperor Tiberius. *T.* was situated on the W. shore of the Sea of Galilee, or Lake of Genesareth, about two hours' ride from the place where the Jordan issues from the lake. In the vicinity of the city were hot springs which were much celebrated. The lake is also sometimes called, from the city, the Sea of Tiberias (Fig. 1101). After the destruction of Jerusalem, *T.* was celebrated as the seat of a flourishing school of Jewish learning. Modern *Tubari'eh* lies on a narrow undulating plain between the high table-land and the sea. It was half destroyed by an earthquake in 1837. Pop. 2,500, nearly one-third of whom are Jews.—Here, July 3 and 4, 1157, Saladin defeated the Crusaders under Gny of Lusignan, king of Jerusalem. Guy, Marquis of Montferrat, and many of the chief Christian leaders, were made prisoners, and the reputed true cross, used as a standard during the

battle, fell into the hands of the enemy. Saladin disgraced his victory by the massacre in cold blood of 230 knights of St. John, who were among the prisoners.

Tibe'rius, **CLAUDIUS NERO**, the second emperor of Rome, was born B. C. 42, and succeeded Augustus, A. D. 14. He was a great general, and a master of Greek and Roman literature, but as he grew older in years he disgraced himself with every species of cruelty and debauchery. He was probably insane long before the commander of his præ rian guard assumed the responsibility of putting him to death, March 16, A. D. 57.

Tibe'rius Constantine, called also **TIBERIUS II.**, one of the most virtuous emperors of Constantinople, was a native of Thrace, and was brought up at the court of Justinian. He succeeded to the throne in 578, and having suppressed the conspiracy of Sophia, widow of his predecessor, reigned unchallenged till his death, in 582.

Tib'et. See **THIBET**.

Tib'ia, *n.* [*Lat.*] (*Mus.*) The pipe, a primitive instrument much used by the ancients. It was of various forms, and occasionally double. (See 4, Fig. 1893.)

(*Anat.*) See **LEG.**

(*Zool.*) The fourth joint of the leg in insects. It is very long, and usually triquetrous.

Tibul'us, **ALBIUS**, a Roman patrician and elegiac poet, whose productions are marked by much feeling for the beauties of nature and the pleasures of a country life. They are generally printed with the compositions of Catullus and Propertius; flourished in the 1st century.

Tibur'us, an island in the Gulf of California, 30 m. long, and 20 broad; Lat. 29° N., Lon. 112° 26' W.

Tibur'us, a seaport-town of Hayti, on the S.W. coast, 38 m. W.N.W. of Aux Cayes.

Tic, *n.* (*Med.*) A local and habitual convulsion of certain muscles;—especially, such a motion of some of the muscles of the face: twitching; vellication.

Tic-douloureux, (*tik-dol-o-roo'*), *n.* [*Fr.*, painful spasm.] (*Med.*) A very painful affection of a facial nerve, most commonly that branch of the fifth pair which comes out of the infra-orbital foramen. It comes on in sudden and excruciating attacks, attended with convulsive twitchings of the muscles, and continues from a few minutes to several hours. The nature of this affection is unknown, and no definite mode of treatment has been discovered. Sometimes a division of the nerve has been recommended; otherwise, the general treatment resorted to in other cases of neuralgia may be adopted. See **NEURALGIA**.

Tich'field, a town of England, in Hampshire, near the Tichfield river, 3 m. from Fareham. Pop. 4,500.

Ticino, (*te-che'no*), a river of Switzerland and the N. of Italy, rises on the S. slopes of Mount St. Gothard, and flows S. through Lake Maggiore, and S.S.E. through the N. of Italy to its junction with the Po, 4 m. below Pavia. Entire length abt. 120 m., for the last 75 of which, from the point at which it leaves Lake Maggiore, it is navigable.

Ticino, or **Tessin**, the most S. canton of Switzerland, between Lat. 45° 50' and 46° 37' N., and Lon. 8° 25' and 9° 12' E., being separated by the main chain of the Alps from Uri and the Grisons on the N., while on either side it is surrounded by Italy; area, 1,034 sq. m. Offsets from the Lepontine and Rhaetian Alps occupy the greater part of the canton. In the S. the country falls away into flats, and the scenery becomes Italian in character. The principal river is the Ticino. In the N., cattle-breeding and the preparation of dairy produce are the chief employments. S. of the Alpine regions are elevated forest-clad districts; and further S., olive-yards and vineyards, corn-fields, and plantations of figs, almonds, oranges, citrons, and pomegranates occur. The canton varies as much in climate as in productions. Cattle, cheese, wine, fruits, and hay are exported. The N. part of Lake Maggiore, and almost the whole of Lake Lugano, are included within the canton. The inhabitants belong to the Italian type, and for the most part speak the Italian language, and are of the Catholic religion. The chief towns are Bellinzona, Locarno, and Lugano, each of which is by turns the seat of government. Pop. 119,619.

Tick, (*tik*), *n.* [*Fr. tique*; *Ger. zecke*.] (*Zool.*) A species of minute animals of a parasitical nature, belonging to the general division *Acaridæ*. Ticks have the mouth shaped like a sucker, and they are found in thick woods hanging on low plants, and ready to attach themselves to the coats of horses, cows, dogs, and other animals which approach them. They bury their sucker deep in the skins of the animals they attack, and work their way down into the flesh, preying on the blood. They attach themselves so firmly to the victims, and multiply so fast, that many horses and cattle often perish from exhaustion, on account of the blood of which they have been deprived. The Ox-tick, *Ixodes reticulatus*, when inflated with blood, is about half an inch long. The Water-ticks, *Hydrachnidæ*, form another variety of the species, and always live in the water; but in habits and mode of life resemble the others in nearly every particular.

—The cover or case of a bed, which contains the feathers, wool, or other material.—The audible quick beat, as of a watch or clock.

—A check, or any small mark intended to direct attention to something.—Trust; credit. (Colloq.)

—*v. n.* To beat; to pat; or, to make a small noise by beating or otherwise, as a watch.—To strike gently.—To go on trust or credit; to run on score. (Colloq.)

—To trust; to give tick or credit. (Colloq.)

—*v. a.* To score; to check off by means of a tick or small mark; as, to tick off the items of a bill.

Tick'et, *n.* [*Fr. etiquette*, a ticket fastened within the mouth of a lawyer's book-bag, containing the titles of the

books, and the names of those to whom they belong.] A piece or slip of paper; a piece of paper, or card-board, which gives the holder a right of admission to some place; a piece of paper or writing acknowledging some debt, or a certificate that something is due to the holder; a piece of paper bearing some number in a lottery, which entitles the holder to receive such prize as may be drawn against that number; a marked card or slip of paper put upon goods to indicate the price, &c.; a label.

T. of leave. (*Eng. Law.*) During the continuance of the English system of transportation as an ordinary punishment, the practice was to release convicts, of good behavior, before the regular expiration of their sentence, with a ticket of leave, *i. e.*, a license to be at large, forfeitable on misconduct. When transportation was superseded by penal servitude, a similar system was introduced into convict prisons in England.

—*v. a.* To designate or distinguish by a ticket.—To place a ticket on; as, to ticket goods.—To supply with a ticket; as, to ticket a through-passenger by railroad.

Tick'faw, in Louisiana, a post-village of Tangipahoa parish.

Tick'faw River, in Louisiana, rises in St. Helena parish, and flowing S., enters Lake Maurepas in Livingston parish.

Tick'ing, *n.* A closely woven cloth, used to contain the feathers or other material of beds.

Tickle, (*tik'l*), *v. a.* [Probably from A. S. *citelan*, to rickle, by transposition of letters.] To touch or rub lightly, and cause a peculiar thrilling sensation in, which excites laughter.—To please by slight gratification; as, to be tickled with a pun.

—*v. n.* To feel titillation.—To excite the sensation of titillation.

Tick'ler, *n.* One who, or that which, tickles or pleases.—Something that puzzles or perplexes; as, your question is a tickler. (Colloq.)

—In American commercial phraseology, a book containing a memorandum of notes and debts, arranged in the order of their maturity.

Tick'ling, *n.* Act of affecting with the sense of titillation.

Tick'lish, *a.* Easily tickled; sensible to slight touches; as, the sole of the foot is a ticklish part.—Tottering; unfixed; easily moved or affected; as, things are in a ticklish state.—Nice; critical; difficult; dangerous; as, "these ticklish times."—Swift.

Tick'lishly, *adv.* In a ticklish manner.

Tick'lishness, *n.* State or quality of being ticklish or very susceptible of the sense of touch.—State of being tottering or liable to fall.—Criticalness of condition or state.

Tick'nor, **GEORGE**, an American writer and philologist, b. in Boston, 1791. After completing his education at Dartmouth College, N. H., he devoted himself to the study of the law, which, however, he subsequently relinquished to follow a literary career. In order to perfect himself in the modern languages, he spent some years in the cities of Paris, Rome, Madrid, Lisbon, London, and Edinburgh. At the last-mentioned place he made the acquaintance of Sir Walter Scott, who, in a letter to Sonthey, spoke of him as a "wondrous fellow for romantic lore and antiquarian research." In 1819 he returned to his native country, and accepted the professorship of modern languages at Harvard University, the duties of which office he fulfilled during fifteen years. Although his lectures upon European literature were greatly admired, he published nothing until 1849, having, in the meanwhile, paid a second visit to Europe. At the last-named date he produced his *History of Spanish Literature*; with *Criticisms on the Particular Works, and Biographical Notices of Prominent Writers*, an exhaustive and admirable work, which has been translated into Spanish and German. Mr. T. also edited *The Remains of Nathaniel Appleton Haven*, and wrote a *Life of Lafayette*, first published in 1825 in the *North American Review*. His last work (1864) was the biography of his friend, W. H. Prescott. Died in 1871.

Tick'-seed Sun'flower, *n.* (*Bot.*) See **COREOPSIS**.

Tick'-tack, *n.* A continuous beat or noise like that made by a time-piece.

—*adv.* With a ticking sound, like that of a watch.

Ticondero'ga, in New York, a post-village and township of Essex co., 95 m. N. E. of Albany; pop. about 2,691. This place is chiefly remarkable for the promi-

Fig. 2501.—TICONDEROGA.

nent place its fortifications have held in American history. The fortress of Ticonderoga was built by the French in 1755. The English, under Abercrombie, as-

sailed it unsuccessfully, July 8, 1758. It was taken by them, under Amherst, July 26, 1759. The Americans surprised it May 10, 1775, and they evacuated it on the approach of the English, under Burgoyne, July 6, 1777. Gen. Lincoln made a vain attempt to recover it, September 13, 1777, and soon after the garrison destroyed their cannon and withdrew into Canada. The English occupied it again for some time in 1780. The old importance of Fort T. is still attested by the extent of its ruins (Fig. 2501).

Tidal, *a.* Pertaining, or relating to tides; periodically rising and falling, or flowing and ebbing; as, a *tidal* stream.

Tidal basin, a dock that is filled upon the rising of the tide.

Tidbit, *n.* A delicate bit; a rarity; a *bonne-bouche*.

Tide, *n.* [A. S.] The alternate rising and falling of the waters of the ocean, which is to be observed on all its coast and estuaries. The rising is designated as the *flood*, and the highest elevation as *high water*; the falling is termed the *ebb*, and the lowest depression *low water*. The duration of high and low water, without apparent change of level, is known as the *stand*; and the cessation of the ebb and flood streams, or tidal currents, is called *slack water*. The popular explanation of the T., as depending on the law of gravitation, is sufficiently simple. If the earth be conceived to be wholly or in a great degree covered with water, and subject to the attraction of the sun, the force of which is inversely as the square of the distance, it will be obvious that, while the whole earth will fall towards the sun with a velocity proportioned to the aggregate attraction upon its solid portions, the water nearest to the sun, being accelerated with a greater force, will approach the sun more rapidly than the solid core; it will thus run from all sides into a protuberance beyond the form of equilibrium of the earth's attraction and rotation, until the pressure of the elevated mass equals the difference in the attraction of the sun. Moreover, a similar protuberance will be formed on the side opposite to the sun, since the particles of water, being solicited by a less force than the solid core, will fall more slowly towards the sun, and, as it were, remain behind. The same considerations hold good in regard to the attraction of the moon upon the earth, and the waters surrounding it; for although we are in the habit of considering the moon as simply revolving round the earth, it must be remembered that the attraction is mutual; that both bodies describe orbits about their common centre of gravity, and that while the moon obeys the attractive forces of the earth, the latter equally follows that of the former, by which it is at every instant of time drawn from the path it would pursue if that influence did not exist. As a consequence of the elevation of the water in the regions nearest to and most remote from the attracting body, there must be a corresponding depression below the mean level of the sea at points distant 90° from the vertices of the protuberances, or at the sides of the earth, as seen from the sun or moon. It will be seen, therefore, that, taking the whole earth into view, there are always two high T. diametrically opposite to each other, and two low T. also, midway between the high ones. The high T. are two great waves or swells, of small height, but extending each way through half a right angle; these waves follow the moon in its monthly motion round the earth, while the earth, turning on its axis, causes any given place to pass through each of these swells and the intervening depressions in a lunar day, or 24 hours 50 minutes. At new and full moon, when the sun's and moon's actions conspire, the T. are highest, and are called *spring T.*; but at the first and last quarters of the moon the action on one body tends to counteract that of the other, and the T., both at ebb and flow, are smallest, and are called *neap T.*

Tide-gate, *n.* (Naut.) A place in which the tide runs with great velocity.

Tide-gauge, (-gāj,) *n.* A mechanical contrivance for registering the state of the tide continuously at every instant of time.

Tide-mill, *n.* A mill which has the ebb and flow of the tide for its first mover.

Tide-rips, *n. pl.* An agitation or commotion of the water of the ocean, resembling that produced by a conflict of tides or of other powerful currents.

Tide-rode, *n.* (Naut.) The situation of a vessel at anchor, when she swings by the force of the tide;—opposed to *wind-rode*.

Tide-tables, *n. pl.* Tables showing the time of the tides, or of high-water at any place, or at different places, for each day throughout the year.

Tide-waiter, *n.* An officer who watches the landing of goods, to secure the payment of duties.

Tide-way, *n.* The channel in which the tide sets.

Tide-wheel, *n.* An undershot wheel.

Tidily, *adv.* Neatly; with neat simplicity.

Tidiness, *n.* Quality or state of being tidy; neat simplicity; neatness.

Tidings, *n. pl.* [A. S. *tidan*, to happen.] Account of things which have happened, and which were unknown before; news; advice; information; intelligence.

Tidioute, in Pennsylvania, a post-borough of Warren co., on the Allegheny river, 20 m. S.W. of Warren.

Tidology, *n.* [Eng. *tide*, and Gr. *logos*, a discourse.] That branch of science which treats of tides.

Tidor, or **Tidore**, (-tee-dor,) one of the Molucca Islands, lying to the W. of Gilolo, and 9 m. S. of Ternate; Lat. 0° 45' N., Lon. 127° 25' E.

Tidy, *a.* [Ger. *zeitig*.] Neat; dressed with becoming simplicity; being in good order.

—*v. a.* To make neat; to put in good order.

—*n.* A piece of fancy knitwork or a cloth, to throw over the back of an arm-chair or a sofa to keep it clean; a light outer covering for a child; a pinafore; a work-bag.

Tie, *v. a.* [A. S. *tan*, *getian*, to bind.] To bind; to fasten with a rope, a band, or cord and knot.—To fold and make fast; to knit; to complicate; to fasten; to hold.—To unite so as not to be easily parted.—To oblige; to constrain; to restrain; to confine.

—*n.* That which binds, unites, or fastens together; a knot; a fastening.—Bond; obligation, moral or legal.—A knot of hair.—An equality in numbers, as of votes, &c., which prevents either party from being victorious.—A sort of neckcloth.

(Arch.) A piece of timber or metal placed in any direction, for the purpose of binding two bodies together which have a tendency to separate or diverge.

(Mus.) A character used to connect notes which are divided by a bar, and which are nevertheless intended to be joined together and sounded without any break.

Tieck, (teek,) LUDWIG, a German poet, novelist, and translator, one of the reputed founders of the so-called Romantic School of German literature, was b. in Berlin, 1773. During his youth he was chiefly attracted by the poetic side of nature and literature, and he ranged himself on the side of the critical principles set forth by Goethe and Schiller in the "Horen" and "Xenien." After completing his studies he travelled, married at Hamburg, and after several changes of residence, settled, in 1819, in Dresden, which appears to have been his home from that period for about twenty years, and where his literary activity was almost incessant. In 1840 he removed to Berlin on the invitation of the king, who honored him with the title of privy-councillor. There he spent the remaining thirteen years of his laborious and fruitful life. His works are of very varied character, and far too numerous to be named here; they fill 20 volumes. Among those which brought him the highest reputation are his tales and plays embodying in new forms some of the old familiar Märchen. The publication of these, under the title of *Peter Leberecht's Volksmärchen*, in 1797, first brought him into general notice. They were republished in 1812, retouched and combined into a whole by a tissue of conversations, under the title of *Phantasies*. They are full of mirth and genial laughter and good-natured satire on the literary world of his time. *Franz Sternesbald's Wanderungen*, the fictitious history of an art student, and *Kaiser Octavianus*, are perhaps his highest achievements as a novelist, and *Genoveva*, his best play. His *Dichtersleben* is a novel in which he attempts to depict Shakspeare and his times. Among his other works are, *Minnelieder aus dem Schwäbischen Zeitalter*; *Alt-Englisches Theater*; *Alt-Deutsches Theater*; and *Dramaturgische Blätter*. D. at Berlin, 1853.

Tiedemann, DIETRICH, (tee-dai-man,) a German philosopher and opponent of Kant, famous for his researches in the history of philosophy, anthropology, the origin of languages, and similar subjects, 1745–1803.

Tien-Tsin, a large city and river-port of China, prov. of Chih-le, on the river Pei-ho, 34 m. from the mouth of that river. It is the port of the city of Peking, from which it is distant 80 m. S.E. Estimated pop. 1,000,000.

Tier, *n.* [A. S., series, heap, attire.] A row; a rank; particularly when two or more rows are placed one above another.

Tierce, (tērs,) *n.* [Fr.; Lat. *tertius*, third.] A cask whose contents are one-third of a pipe, that is, forty gallons.

(Mus.) The interval of a third.

(Fencing.) A thrust delivered at the outside of the body over the arm.

(Gaming.) A sequence of three cards of the same color.

(Her.) A term applied to a field divided by lines into

In pale.

In bent.

In pall.

Fig. 2502.

three equal parts. The most common arrangements in tierce are represented in Fig. 2502.

Tierce-major, *n.* (Gaming.) A sequence of the three best cards.

Tiercet, (tir'set,) *n.* A triplet; three lines of poetry, rhyming together.

Tier-ra Bom'ba, an island of the Caribbean Sea, off the N.W. coast of the Republic of Colombia, 10 m. W. of Carthagena.

Tierra del Fuego, (te-er-ra-del-fwa'go,) "the land of fire," a group of islands at the S. extremity of S. America, bet. Lat. 52° 40' and 56° S., Lon. 63° 40' and 75° W., separated from the mainland by the Strait of Magellan, and having E. the Atlantic Ocean, S. the Antarctic, and W. the Pacific. The principal islands are the E. Tierra del Fuego, or King Charles' South Land, 385 m. long, and about 200 m. broad, Navarino, Hoste, Clarence, and the Land of Desolation. Surface, mountains, many of the peaks being covered with perpetual ice and snow, and Mount Sarmiento attaining an elevation of 6,800 ft.; soil, generally infertile. Climate, raw and cold, being a succession of snow, rain, and mist, with frequent storms. The inhabitants (Fig. 1375) are of a dark copper color, low in stature, and ill-looking, coarse, and of filthy habits, and live in huts made of branches of

trees. T. was discovered by Magellan in 1520, and received its name from fires seen on its coast during the night, supposed to be caused by volcanic eruption.

Tiers Etat, (tē-arz ā-tā') [Fr., third estate.] The name given in France, under the ancient monarchy, to the third order of the estates, consisting of representatives of the trading inhabitants of the towns, and of the peasantry in the country, in distinction from the nobility and clergy.

Tiete, ANHEMBY, or ANHEMBI, (te-a'ta,) a river of Brazil, prov. of São Paulo, joins the Parana, about Lat. 20° 45' S., Lon. 52° W., after a W. course of 500 m.

Tiff, *n.* Slight anger; a pet; a miff. — A drink; a small draught of liquor.

—*v. n.* To be in a pet; to quarrel. (R.)

—*v. a.* To dress; to deck.

Tiffany, *n.* A kind of very thin silk gauze.

Tiffin, *n.* In Hindostan, a luncheon.

Tiffin, in Ohio, a township of Adams co. Pop. (1897) 2,680.—A township of Defiance co. Pop. about 1,300.—A manufacturing city, cap. of Seneca co., 33 m. S.W. of Sandusky city. Heidelberg College and Theological Seminary, under the supervision of the German Reformed Church, is at this place. Pop. (1897) 11,500.

Tiffin's River, rises in Lenawee co., Michigan, and flowing S., enters the Maumee River in Defiance co., Ohio. It is sometimes called *Beau Creek*.

Tiffish, *a.* Inclined to anger; pettish.

Tiflis. See TEFLIS.

Tige, (tēj,) *n.* [Fr.] (Arch.) The shaft of a column from the astragal to the capital.

Tiger, *n.* [Fr. *tigre*; Lat. *tigris*.] (Zool.) A species of the genus *Felis* (Fig. 997), as large as the lion, but with a rounder head and longer body: of a bright-reddish fawn color above, a pure white below, irregularly crossed with black stripes. It is clothed with short hair, and has no mane. The tiger is the most formidable and cruel of all quadrupeds, and the scourge of the less inhabited parts of India. It is limited to the Asiatic continent. The so-called American Tiger is the JAGUAR, *q. v.*

T. cat, a name of no very definite signification, often given to some of the *Felide* of middle size, which resemble the tiger in their form or markings. The *T.-C.* (*Felis eyra*) of Texas to Guiana, is about the size of the common domestic cat, with large fawn-colored spots, bordered with black, forming oblique bands on the flank.

Tiger-beetle, *n.* (Zool.) See CICINDELA.

Tiger-flower, *n.* (Bot.) See TIGRIDIA.

Tiger-moth, *n.* (Zool.) See ARCTIA.

Tiger River, in S. Carolina, rises in Greenville dist., and flowing S.E., enters Broad River in Union dist.

Tigerville, in Louisiana, a post-village of Terre Bonne parish.

Tiger-wood, *n.* The heart-wood of *Machuerium Schomburgkii*, a valuable cabinet wood obtained from Guiana.

Tight, (tit,) *a.* [A. S. *tan*, to tie.] Tense; tied; not loose or not open; having the joints so close that no fluid can enter or escape; not leaky; not admitting much air.—Sitting close to the body, as clothes.—Not having holes or crevices; not loose; closely pressed.—Not ragged; not slack or loose, applied to a rope extended or stretched out.—Parsimonious; stingy. (Colloq. U.S.)—Inebriated. (Colloq.)

—*v. a.* To make tight; to tighten.

Tight'en, *v. a.* To draw tight or tighter; to straighten; to make more close in any manner.

Tightly, (tite'ly,) *adv.* In a tight manner; closely.

Tightness, *n.* State or quality of being tight.

Tights, (tites,) *n. pl.* Pantaloon or drawers which fit close to the legs. (Vulgar.)

Tigré, (tee'grai,) an extensive and mountainous prov. of Abyssinia, which has now communicated its name to almost all the N.E. districts of that great country. The chief outlet for its produce is Arkiko, on the Red Sea. Lat. between 11° and 17° 30' N., Lon. between 37° and 41° E.

Tigre, or PEQUENA, (tee'gra,) a river of Ecuador, flows into the Amazon, 40 m. W. of the mouth of the Ucayale, after a S.E. course of 350 m.

Tigress, *n.* The female of the tiger.

Tigridia, *n.* (Bot.) The Tiger-flower, a genus of plants, order Iridaceae, containing only one species, *T. pavonia*, distinguished by the three outer segments of the perianth being larger, and by the filaments being united into a long cylinder. It is a native of Mexico, and much cultivated in flower-gardens for the singularity and great beauty of its flowers, which are, however, evanescent. The root is a scaly bulb.

Tigrine, *a.* Like a tiger.

Tigris, a river of Western Asia, flowing along the boundaries of the Turkish and Persian empires, and rising in the mountains of Armenia, about 50 m. to the north of Diarbekr, and 15 to the east of the source of the Euphrates. At Kurnah it joins the Euphrates; and the united stream falls into the Persian Gulf. This river rises twice in the year, first and most remarkably in April, in consequence of the melting of the snows in the mountains of Armenia; afterwards in November, through the accession of the periodical rains. Its total course is estimated at 1,150 miles.

Tigrish, *a.* Resembling a tiger.

Tilburg, a manufacturing town of Holland, prov. of N. Brabant, 14 m. E.S.E. of Breda. Pop. 18,785.

Tilbury, *n.* A two-wheeled open pleasure carriage; a sort of chaise without a top.

Tile, *n.* [A. S. *tigel*, *tigle*; Lat. *tegula*.] A plate or piece of baked clay or earthenware, used for covering the roofs of buildings; a piece of baked clay used in drains.—The finer kinds of paving tile are known as *Encaustic tiles*. See ENCAUSTIC.—A cant term for a man's hat. See TILES, ROOFING, in SECTION II.

Tile, *v. a.* To cover with tiles, as a roof; to cover, as tiles.
Tiled, *a.* Covered with tiles.
Tile-drain, *n.* A drain of tiles.
—v. a. To drain by means of tiles.
Tile-kiln, **Til'ery**, *n.* A kiln in which tiles are burnt.
Tile-ore, *n.* (*Min.*) An impure oxide of copper, of a brick-red or reddish-brown color.
Tiler, *n.* One who covers buildings with tiles. — The door-keeper of a Masonic lodge.
Tile-stone, *n.* (*Geol.*) The uppermost group of the Silurian period, consisting of a reddish, thin-bedded, slightly micaceous sand-stone, which in some places attains a thickness of 1,000 feet.
Tilia, *n.* (*Bot.*) A genus of plants, order *Tiliaceæ*. *T. Americana*, the Linden. Lime-tree, Bass-wood, or Pumpkin-wood, is a common forest-tree in the Northern and Middle States. It often grows to the height of 80 feet, the trunk straight and naked more than half this height, and 2-3 ft. in diameter. Leaves 4-5' by 3-4'; those of the young shoots often twice these dimensions. Bract yel-

Fig. 2503. — LINDEN OR LIME-TREE.

lowish, linear-oblong (Fig. 2503). Petals yellowish-white, larger than the scales at their base. Fruit woody, greenish, of the size of peas. Jn. — The inner bark is very strong, and is manufactured into ropes. The wood is white, soft, and clear, much used in cabinet-work and in the panelling of carriages.

Tiliaceæ, (*til'-ai'-see-e*), *n.* (*Bot.*) The Lime or Linden family, an order of plants, alliance *Malvales*. It resembles in many respects the *Malvaceæ*, *Sterculiaceæ*, and *Byttneriaceæ*, but may be at once distinguished from them by having a glandular disc, by the stamens not being monadelphous, and by the anthers being 2-celled. From all other thalamifloral orders it may be known by its alternate, entire, stipulate leaves, valvate aestivation of calyx, floral envelopes in four or five divisions, hypogynous stamens, 2-celled anthers, hypogynous glandular disc, and many-celled fruit with axile placentas. There are 35 genera and 350 species. A few are found in the northern parts of the world, where they form large trees; but the majority are tropical herbs, shrubs, or trees.

Tiling, *n.* A roof covered with tiles; tiles in general: the operation of covering roofs with tiles.

Till, *n.* [*Etymol. uncertain.*] A money-box in a shop; a drawer.

(*Geol.*) A term used in Scotland for the BOULDER-CLAY, *q. v.*

—prep. or adv. [*A. S. til, tille.*] To the time or time of; as, *till to-day*; — used before verbs and sentences in a like sense, denoting the time specified in the sentence or clause following; as, *I will wait till you arrive*. — To the degree that; until.

—v. a. [*A. S. tilian, to labor, take care of, plough, cultivate.*] To labor; to cultivate; to plough and prepare for seed, and to dress crops.

Tillable, *a.* Capable of being tilled; arable; fit for the plough, as land.

Tillia, *n.* (*Bot.*) A genus of the order *Crassulaceæ*, consisting of very minute aquatic herbs, with opposite leaves. The Pigmy-weed (*T. simplex*), occasionally found in some parts of the U. States in muddy brooks, has a stem 1-3 feet high, and flowers as large as a pin's head.

Tillage, (*til'laj*), *n.* [*A. S.*] (*Agric.*) The art or practice of tilling or cultivating the soil. Lands kept under the plough, that is, cropped with annual or biennial plants, which require a continual change of the surface-soil by stirring and turning with the plough, are called *tillage lands*.

Tillamook, in *Oregon*, a N.W. co., bordering on the Pacific, and drained by the Tillamook River. It is densely wooded. *Cap. Tillamook*.

Tillandsia, (*til-länd'-se-a*), *n.* (*Bot.*) A genus of plants, order *Bromeliaceæ*. *T. usneoides*, the Tree-beard, or Old-man's-beard, appears as a mass of dark-colored fibres hanging from the tree on which it grows. It is a common plant in S. American forests. These hanging fibres form the article known in commerce as Spanish moss, and are employed for stuffing cushions, bird-skins, &c.

Till'er, *n.* [*A. S. tilia.*] One who tills; a husbandman; a cultivator; a ploughman. — The bar or lever employed to turn the rudder of a ship. — The shoot of a plant springing from the root or bottom of the original stalk;

also, the sprout or young tree that springs from the root or stump. — A small drawer; a till.

—v. n. To send forth steuis from the roots, as a culmiferous plant.

Til'mus, *n.* [*Gr. tilmos, from tillo, I pluck.*] (*Med.*) Picking of the bed-clothes, or floccitation, a symptom of the fatal termination of some disorders.

Til'sit, a town of Prussian Lithuania, on the Tilse and the Niemen, 58 m. from Königsberg. *Manuf.* Woollens, hosiery, arms, leather, and hardware. Its chief title to historical notice is from the treaty of peace concluded here on July 1, 1807, between France on the one hand, and Prussia on the other.

Tilt, *n.* [*A. S. teld.*] A covering stretched overhead; a tent; the cloth covering of a cart or wagon; the cover of a boat; a small canopy or awning of canvas or other cloth, extended over the stern-sheets of a boat.

—v. a. To cover with a cloth or awning.

—v. n. [*A. S. tealtian.*] To run or ride and thrust with a lance; to fight with rapiers; to rush, as in combat; to lean; to fall, as on one side.

—v. a. To set in a sloping position, as a harrel.

—n. A shock; inclination forward. — A military game, at which combatants run against each other with lances on horseback. — A large hammer, raised by machinery, used in manufactories.

Tilter, *n.* One who tilts.

Tilth, *n.* [*A. S. from tilian, to till.*] (*Agric.*) That which is tilled; the state of the soil in respect to ploughing, manuring, &c.

Tilt-hammer, *n.* A large hammer worked by machinery, impelled either by a water-wheel or a steam-engine. See **HAMMER**.

Tilting, *n.* A tilt. — The operation of condensing and rendering uniform blistered steel by subjecting it to the blows of a tilt-hammer.

Til'ton, in *New Hampshire*, a post-town of Belknap co. *Pop.* (1897) 1,550.

Tim'an Mountains. See **OCRAI**.

Timbalier Bay, (*tim-ba-leer'*), in *Louisiana*, an inlet of the Gulf of Mexico, at the mouth of Bayou La Fourche.

Tim'ber, *n.* [*A. S.*] (*Carp.*) That sort of wood which is suitable for buildings, or for ships, furniture, utensils, tools, carriages, fences, &c. The term is applied to standing trees which are suitable for any of these purposes, or to the beams, scantlings, rafters, boards, &c., which are hewn or sawn from such trees. The timber-trade is one of very great extent and importance.

(*Ship-building*.) A rib or curving piece of wood, branching outward from the keel of a ship in a vertical direction.

—v. a. To furnish with timber.

Tim'ber, in *Illinois*, a post-village and township of Peoria co., 15 m. W.S.W. of Peoria.

Tim'ber Cove, in *California*, a post-village of Sonoma co., on the Pacific, 45 m. N.W. of Santa Rosa.

Tim'ber Creek, in *Iowa*, a post-village of Marshall co., 80 m. W.N.W. of Iowa City.

Timber Creek, in *New Jersey*, enters the Delaware River from Gloucester co.

Tim'bering, *n.* Timber materials.

Tim'ber-scribe, *n.* A pointed instrument for marking logs, &c.

Tim'ber-tree, *n.* A tree valuable for its timber.

Timbre, (*tim'ber*), *n.* [*Fr.*, a stamp.] (*Her.*) The crest which in any achievement stands on the top of the helmet.

(*Mus.*) The distinctive quality of a voice or of an instrument.

Tim'brel, *n.* [*Sp. tamboril.*] (*Mus.*) A name of the Hebrew drum (I. Fig. 876).

Timbnetoo'. See **TOMBUCTOO**.

Time, *n.* [*A. S. tima*; *Dan. time*, an hour; *Fr. temps*; *Lat. tempus.*] The general relation in which all things perceptible stand to each other in regard to their origin, continuance, and dissolution. It is a form necessary to enable the mind to unite successive periods of existence. It is not an external object, nor a mere relation of individual things to each other, but is infinite, like the phenomena which are submitted to this form in our perceptions. Accordingly, we also distinguish the past, present, and future as its component parts, which pass continually into the succeeding. In order to measure the succession and duration of particular things and events, the great motions of the heavenly bodies, which always remain the same, particularly of those bodies which are most closely connected with the earth, have been taken as standards; hence, the physical or astronomical time. Such a measure of time is afforded by nature herself in the rotation of the earth on its axis. This gives rise to the sidereal time. But as the sidereal time will not serve for the purposes of common life, it was necessary to resort to the solar time. The latter, indeed, is unequal, and neither agrees with the sidereal time, nor with that indicated by a clock; but this evil is remedied by the equation of time, through which the true solar time is changed into mean time.

(*Mus.*) The measure of sounds with regard to their duration, which is of the greatest importance. It may be divided into two principal divisions, — *common* and *triple*; these may be again divided into *simple* and *compound*. Simple common *T.* is expressed by the letter *C*, either plain or with a line drawn through it, and generally contains four crotchets in a bar. Sometimes, however, there are only two; in which case it is marked thus, $\frac{2}{4}$, the 4 showing the measure note to be a crotchet, and the 2 indicating that there are two crotchets in a bar. Compound common *T.* takes place when two triple bars are joined in one, and is divided into four kinds, marked thus, $\frac{6}{8}$, $\frac{9}{8}$, $\frac{12}{8}$, $\frac{12}{16}$. Simple tri-

ple *T.* is of three kinds, marked by the figures $\frac{2}{3}$, $\frac{3}{4}$, and $\frac{3}{8}$; while of compound triple *T.* there are only two species, viz. $\frac{9}{8}$ and $\frac{9}{16}$. The speed of a movement is also regulated by certain Italian words placed at the beginning; as, for example, *presto*, quickly; or *andante*, slowly. See **METRONOME**.

—v. a. To adapt to the time or occasion; to bring, begin, or perform at the proper season or time. — To regulate as to time. — To measure, as in music or harmony.

—To ascertain the time or duration of.

—v. n. To keep time; to move in time.

Time-honored, *a.* Honored for a long time.

Time-keeper, *n.* A clock, watch, or other chronometer. — A person appointed to keep the workmen's time, or to mark time in any occupation.

Time-less, *a.* Done at an improper time; untimely. (*R.*)

Time-lessly, *adv.* Unseasonably.

Time-liness, *n.* The state or quality of being timely; seasonableness; a being in good time.

Time-ly, *a.* Being in good time; seasonable; opportune. — *adv.* Early; soon; in good season.

Time-ous, *a.* Early; in good season. (*R.*)

Time-ously, *adv.* Seasonably. (*R.*)

Time-piece, *n.* A clock, watch, or chronometer.

Time-pleaser, *n.* One who complies with the prevailing opinions, whatever they may be.

Time-server, *n.* One who adapts his opinions and manners to the times; one who obsequiously complies with the ruling power.

Time-serving, *a.* Obsequiously complying with the opinions and manners of the times.

—n. The act of obsequiously acquiescing with the spirit of the times.

Time-table, *n.* A table of the times of starting, arrival, &c., of railroad trains, packets, &c.

(*Mus.*) A representation or table of the several notes, and their relative lengths and duration.

Tim'id, *a.* [*Fr. timide*; *Lat. timidus*, from *timeo*, to fear.] Wanting courage to meet danger; not bold; timorous; — opposed to *intrepid*.

Timidity, **Tim'idness**, *n.* [*Fr. timidité.*] Want of courage or boldness to face danger; timorousness.

Tim'idly, *adv.* In a timid manner.

Tim'ing, *n.* Adaptation to the time.

Tim'ist, *n.* A time-server.

(*Mus.*) One who keeps time in playing or in singing.

Tim'o'leon, a Corinthian general and statesman. His elder brother Timophanes, aiming at the sovereign power, was slain by *T.*, assisted by his brother Satyrus. He went afterwards to relieve the Syracusans from the tyranny of Dionysius, whom he compelled to fly. *T.* spent the rest of his life at Syracuse, whose laws he amended, and whose popular liberties he established. D. 337 B. C.

Timon, the MISANTHROPE, was B. near Athens, and lived during the Peloponnesian war. The faithlessness of his friends and successive disappointments soured his nature, and drove him into solitude; where he is said, however, to have welcomed Alcibiades. His name has become proverbial, and his story is familiar through the tragedy of Shakespeare.

Timoneer', *n.* [*Fr. timonnier*, from *Lat. temo*, *temonis*, a pole.] A helmsman. (*R.*)

Timor, the southernmost and most important of the Malacca islands, in the Malay archipelago, in 8° 16'–10° 25' S. Lat., and 125° 25'–127° 10' E. Lon., has an area of 8,820 sq. m. A chain of wood-clad mountains runs throughout its entire length; Alas, on the S.E., being 11,800 feet in height. The rivers are numerous, but small, and most of them yield gold. Near the sea are very fertile lands, on which are grown rice, maize, beans, tobacco, sugar-cane, cotton, potatoes, and all sorts of tropical fruits. Three-fourths of *T.* on the S.W. is subject to the Dutch, whose chief settlement is Koe-pang (Kupang); the remaining part in the N.E. belongs to the Portuguese, who have a town, called Dilly, on the N. coast. *T.* is divided into small kingdoms, ruled by rajahs under Dutch or Portuguese control. The exports are, sandal-wood, horses, wax, tortoise-shell, edible nests, &c.; imports, cotton, woollen, and silk fabrics, provisions, and general supplies. Pearls are found on a bank 30 m. S.E. from Koe-pang. The natives are partly Oceanic negroes, and partly of Malay race. Estimated pop. 400,000. — About 300 m. N.E. of Timor is *Timor Laus*, an island 70 m. in length by abt. 25 m. average breadth.

Tim'orous, *a.* [*L. Lat. timorosos*, from *timere*, to fear.] Fearful of danger; timid; destitute of courage. — Indicating fear; full of scruples.

Tim'orously, *adv.* Fearfully; timidly; without boldness.

Tim'oronsness, *n.* Fearfulness; timidity.

Tim'orously, *a.* Timorous. (*Colloq.*)

Tim'o'theus, an Athenian general who took a distinguished part in the social wars, and was condemned for avoiding a naval conflict, B. C. 358.

Tim'othy, a disciple of St. Paul, was a native of Lystra, in Asia Minor. His father was a pagan, but his mother a Jewess. He became bishop of Ephesus, where, it is believed, he was stoned to death, in 97.

Tim'othy, (*Epistles of St. Paul to.*) (*Script.*) The name of two books of the New Testament, of whose authenticity there has never been any reasonable cause to doubt, and it has only been called in question by the hypercriticism of modern Germany. The dates of these epistles are uncertain and much disputed, but probably the first may be referred to about the year A. D. 64, the second to 65. The design of the first epistle is partly to instruct *T.* in the duties of that office with which he had been intrusted; partly to supply him with credentials to the churches which he might visit; and partly

to furnish through him guidance and direction to the churches themselves. The second epistle was written when the Apostle was a prisoner at Rome; and its design is partly to inform *T.* of his circumstances, and partly to utter his last warning voice against the errors and delusions which were corrupting and disturbing the churches.

Tim'othy-grass, *n.* (*Bot.*) See **PHLEUM**.

Tim'pano, *n.*; *pl.* **TIMPANI**. [*It.*] (*Mus.*) A kettle-drum.

Timur, **Timour**, (*tee-moor'*) or **Tamerlane**, an Oriental conqueror, b. in the village of Sebz, near Samarcand, 1333, was of Mongol origin, and a descendant of Genghis Khan. Having become chief of the tribe of the Berlas in 1361, he made himself master of Balkh, the capital of Khorasan, after which he made an easy conquest of the province of Candahar. In this war he was wounded in the thigh, and became lame for life, being called, in consequence, Timur-lenk, "lame Timur," which term has been corrupted by the Europeans into Tamerlane. He next subdued the whole of ancient Persia, and then took Bagdad. Flushed with his success, he marched into India, where he took Delhi, the capital, and thus gained possession of immense treasures. But while he was engaged in this expedition, Bagdad revolted; upon which he hastened back, delivered the city up to pillage, and put to death 90,000 persons. He also invaded Syria, and took Damascus. During this splendid career the Greek emperor and some inferior princes implored his assistance against Bajazet, emperor of the Turks. *T.* sent to him to withdraw from before Constantinople, and to replace the princes whom he had deposed. Bajazet returned a fierce answer; upon which *T.* marched against him, and, after a battle of three days, the Turkish emperor was defeated and taken prisoner. Different and very irreconcilable accounts are given of the conqueror's treatment of his captive. Some assert that he was confined in an iron cage, and exposed to scorn and contempt; while others relate that *T.* behaved to him and his family with the greatest liberality. *T.* fixed the seat of his vast empire at Samarcand, where he received the envoys of numerous sovereigns, and, among the rest, the ambassadors of the Emperor Manuel Paleologus and Henry III., King of Castile. Having resolved to make the conquest of China, he set out with his army, but died on the march, 1405.

Tin, *n.* [*A. S.*; *Lat. stannum*.] A white, malleable, easily fusible metal, not much affected by exposure to dry or moist air at ordinary temperatures, but becoming oxidized superficially when heated, burning with a brilliant flame if the temperature be raised sufficiently high. It occurs chiefly as *tin oxide*, being very rarely found native. The ore is commonly known as *tin-stone*, and technically as *cassiterite*, which is a dioxide of adamantine luster, crystallizing in the tetragonal system. It dissolves in hydrochloric acid, with the evolution of hydrogen, forming hydrated chloride of *T.* Strong nitric acid acts on it violently, producing an insoluble hydrated binoxide of the metal, a considerable amount of ammonia being formed at the same time by the decomposition of the water and nitric acid present. Cold dilute sulphuric acid has no action on it, but if the concentrated acid be used, the metal is converted into the sulphate, while sulphurous acid escapes. Hot dilute sulphuric acid also converts it into sulphate of *T.*, hydrogen being evolved. *Tn.* is one of the chemical elements, bearing the symbol *Sn*. Its atomic weight is 119, and specific gravity 7.25. It fuses at 551° F., and in valence it is both dyadic and tetradic. Its chemical combinations are numerous and important, and its resistance to oxidation and to the action of vegetable acid renders it extremely useful for domestic purposes.

It is wanting in tenacity, but is extremely malleable at a temperature of 212°. It has a great tendency to crystallize, and its crystalline form may be easily shown by rubbing a piece with a little dilute nitric or hydrochloric acid, when it assumes the appearance known as *moiré métallique*. By slow cooling it may be procured in octohedral crystals, and on bending a piece of *T.* backwards and forwards a peculiar crackling or grating sound is heard, arising from the friction of the internal crystals, and known as the *cry of tin*. Extensive *T.* mines are in Cornwall, England, the British Isles being known to the ancients as the Tin Islands. Still greater are those in the island of Banca, in the Dutch East Indies. Within recent years large deposits have been found in the Malay Peninsula, and at several places in Australia. The *T.* production of the world in 1894 was estimated by the U. S. Geological Survey at 83,387 tons of 2,240 pounds, of which more than half was produced in the Straits Settlements of the Malay Peninsula. Deposits have been located in the U. S. at South Riverside, Cal.; in the Black Hills, South Dakota; the Cash Mine, Rockbridge co., Va.; and at King's Mansion, N. C. In none of these has mining proved profitable, and all were abandoned prior to 1893. English *T.* generally contains small quantities of arsenic, copper, iron, and lead. That obtained from the Banca mines is nearly pure. To extract the metal, the ore is first stamped and washed, to get rid of the lighter particles of sand or earth adhering to it. It is then roasted, to free it from arsenic and sulphur, and again washed to carry off the sulphate of copper and oxide of iron. The washed ore is mixed with from one-fifth to one-eighth its weight of powdered anthracite or charcoal, and a small portion of lime to form a fusible slag with any of the remaining gangue. The charge is placed on the hearth of a low-crowned, reverberatory furnace, and the doors are closed up. Heat is applied very gradually for five or six hours, care being taken to raise the temperature high enough to cause the carbon to reduce the *T.* without melting the silicious

gangue, which would form with the binoxide an enamel troublesome to remove. When nearly all the *T.* is reduced, the heat is raised considerably, the slags being thus rendered fluid and capable of floating on the top of the melted metal. The *T.* is then run off into cast-iron pans, from which it is ladled off into molds to form ingots. The *T.* thus procured is far from being pure; it is therefore submitted to the process of lignation, which consists in heating the ingots to incipient fusion. By this means the purer *T.*, which fuses at a comparatively low heat, separates, running down, and leaving the impure portions behind. The less fusible portion, when re-melted, forms *block T.*, and the part which has run out is again melted, agitated, and skimmed for purification. The finest quality of *T.*, when heated to a temperature just short of its melting-point, becomes brittle, and is broken up into masses, showing the crystals of the metal, and forming what is known as *grain T.* The formation of crystals is to some extent a guarantee of its purity, since impure *T.* does not become brittle in this way.

The alloys of *T.* are numerous and important. Tin and iron make a perfect alloy; tin and lead may also be alloyed in almost any proportions. Other alloys are Britannia metal, consisting of equal parts of brass, *T.*, antimony, and bismuth; pewter, 4 *T.* and 1 lead; Queen's metal, 9 *T.*, and 1 each of antimony, bismuth, and lead; the various solders; bell-metal, 78 copper, 22 *T.*; bronze, copper, with 4 to 6 per cent. of *T.*; gun-metal, 78 copper and 22 *T.* Speculum metal, used for the mirrors of reflecting telescopes, is a steel-white, hard, brittle alloy, of 1 part of *T.* and 2 of copper. An amalgam of *T.* and mercury is used for silvering looking-glasses.

Chlorides of T. There are two chlorides of *T.*, — the protochloride and the per- or bichloride. The protochloride, *SnCl*, may be prepared in the anhydrous state by the action of dry hydrochloric acid on *T.* at a gentle heat. The hydrated chloride is obtained by dissolving the metal in hydrochloric acid diluted with an equal bulk of water. It crystallizes in transparent needles, containing two equivalents of water. It is a powerful reducing agent, and is much used by dyers for altering redncible coloring matters, such as sesquioxide of iron and peroxide of manganese. It is also used as an antichlore. It forms crystallizable double salts with the alkaline chlorides. The bichloride, perchloride, or fuming liquor of Libavius, *SnCl₂*, is made by passing chlorine over an inclined tube, fitted to a receiver, and containing pieces of tin-foil rolled up. When pure, it is a colorless liquid, evolving suffocating white fumes in the air. Dropped into water, it forms a hydrate, crystallizing with five equivalents of water. It forms salts with the alkaline chlorides. It is used to a considerable extent in solution in dyeing. It absorbs sulphuretted and phosphuretted hydrogen, and forms a compound with ammonia. In some respects it plays the part of an acid — chlorostannic acid.

Oxides of T. There are two oxides of *T.*, — the protoxide and the binoxide. The protoxide is prepared in a variety of ways, too prolix for description here, and is only interesting in a chemical point of view. When heated in air, it burns like tinder, and is converted into the binoxide, which is described under the head of **STANNIC ACID**. The only ore of *T.*, *T.-stone*, is a form of the binoxide.

Sulphides of T. There are two sulphides of *T.*, — the protosulphide, formed by fusing together metallic *T.*, and sulphur. The bisulphide, when prepared in the dry way, is known by the name of *aurum musivum*, or mosaic gold, and is used as bronze-powder in coarse decorative works. It is prepared by fusing together seven parts of flowers of sulphur and six of sal-ammoniac, with an amalgam of twelve parts of tin and six of mercury. The ingredients are kept in a melted condition until no more white fumes issue from the flask, and the bisulphide is found as a yellow crystalline layer at the top. A second sublimation is necessary to give it its greatest degree of brilliancy.

For further information, see article on **TIN-PLATE**, in SECTION II.

Tin-foil. — *T.* or an alloy of lead and *T.* beaten to extreme thinness, for use in wrapping up small articles, and excluding the air. The thickness, or rather the thinness, of the foil runs from one-half of one one-thousandth of an inch upward, the thinnest being the most expensive, as representing the most labor. It is rolled in sheets which on the average are 50 inches long and 5½ inches wide (some also being rolled as wide as 12 inches), and is then cut into the lengths desired.

The modern process of manufacture was invented about 1852, by John J. Crooke, of New York, who opened a factory on Stanton Street. Besides the Crooke concern, there are now 4 tinfoil factories in the U. S., 2 being in New York, 1 in Philadelphia, and 1 in St. Louis. These 4 were started after the expiration of the original Crooke patent. The foil is also made in England, France, and Germany, its production being especially large in the last-named country. Owing to the impossibility of competing with foreign labor in its manufacture, the U. S. have no export trade in the article, except a little with Havana, where it is used in the packing of cigars.

For wrapping up articles of food, where such come in contact with the foil, only pure tin is admissible, the alloy with lead being restricted in use to wrapping of articles not designed for food, or which receive an interior wrapping of paper to keep them from contact with the lead. Tinfoil is valued for wrapping tobacco, yeast-cakes, Limburger cheese, &c., because it keeps them moist. In many cases its use as a wrapper is

valued only because of its tendency to remain tightly folded, and for its slightly appearance. This latter is further enhanced by embossing and ornamenting. The embossing of the foil in various ornamental designs is a branch of the business which has gradually developed, until highly artistic results are obtained. In the fancy patterns, the silvery surface is diversified, in bright and dead effects, by stars, plaids, flowers, bars, diagonal lines, &c. Many samples are printed in colors, such as pink, blue, and red, both the colors and the patterns being produced by putting the sheets of foil through a process of printing. Other specimens are lacquered with gold and embossed in various forms, presenting a beautiful appearance, and still others are brilliantly lacquered in colors. The output of tinfoil in the U. S. amounts to millions of pounds a year. The market price of the most expensive embossed and lacquered foils runs as high as 75 cents a pound, and from that it goes down almost to the value of the metals employed, the average price having been reduced one-half within the last 15 or 20 years, being lower now than ever before, owing to increased facilities of manufacture, increased production, and keen competition, particularly in the lower grades.

Tin, *v. a.* To cover with tin, or overlay with tin-foil.

Tin'amon, *n.* (*Zoöl.*) The common name of the *Tinamides*, a family of Rascorial birds peculiar to S. America. They are remarkable for a long and slender neck, covered with feathers, the tips of the barbs of which are slender and slightly curled, which imparts a peculiar air to that part of their plumage. The beak is long, slender, and blunt at the end; somewhat vaulted, with a small groove at each side. Their wings are short, and they have scarcely any tail. Their size varies from that of a pheasant down to that of a quail.

Tincto'rial, *a.* [*Fr.*] Relating to tincture or dyeing; coloring.

Tincture, (*tinkt'yur*), *n.* [*Lat. tinctura*; *Fr. teinture*.] A tinge or shade of color. — A slight taste superadded to any substance, or to another taste; flavor. — A slight quality added to anything. — The finer and more volatile part of a substance, separated by a solvent.

(*Med.*) A spirituous solution of such of the active principles of vegetables and animals as are soluble in pure alcohol or proof spirit; a spirit containing medicinal substances in solution.

(*Her.*) See **HERALDRY**.

— *v. a.* To tinge; to communicate a slight foreign color to; to impregnate with some extraneous matter. — To imbue, as the mind; to communicate a portion of anything foreign.

Tin'der, *n.* [*A. S. tynder, tyndre*, from *tendan*, to set on fire.] Something very inflammable used for kindling fire from a spark, as scorched linen.

Tin'der-box, *n.* The box for holding tinder.

Tine, *n.* [*A. S. tindas*, the teeth of harrows.] The tooth or spike of a fork; a prong; also, the tooth of a harrow or drag.

Tin'ea, *n.* [*Lat. a worm*.] (*Med.*) The SCALD-HEAD, *q. v.*

Tinea, *n.*; **Tineidae**, *n. pl.* (*Zoöl.*) A gen. and fam. of Lepidoptera, comprising an extensive series of minute insects, distinguished by their narrow wings and the slenderness of their palpi; the head is often densely clothed with scales in front, the body generally long and slender; the antennæ are of moderate length. In the larva state the species called cloth-moth are notoriously destructive to woollen materials of every description, feathers, furs, skins, &c., upon which they feed; using the material also for the construction of their cases; in which, when full grown, they become chrysalides. Some species inhabit the nests of bees, the larvæ feeding upon honey, and forming galleries in the honeycomb. Others make great havoc in granaries and malt-houses; and one, *Diatrea sacchari*, is a most destructive pest of the sugar-cane, the larva burrowing into the centre of the stems, and often destroying whole acres.

Fig. 2504.
CLOTH-MOTH.

Tin'-foil, *n.* Tin reduced to a thin leaf.

Ting, *n.* A sharp, clear sound, as of a bell.

Tinge, (*ting*), *v. a.* [*Fr. teindre*; *Lat. tingo*; *Gr. teggo*, to wet, to dye.] To imbue or impregnate with a color; to dye. — To communicate, as the qualities of one substance, in some degree to another.

— *n.* Color; dye; taste; a slight degree of some color, taste, or something foreign, infused into another substance or mixture, or added to it; tincture.

Tin'ger, *n.* The person who, or thing which, tinges.

Ting-hae, (*ting'hai*). The capital city of the island of Chusan, off the east coast of China, 70 m. from Ningpo.

Tin'-glass, *n.* A name of bismuth.

Tin'gle, *v. n.* [*Lat. tinneo*.] To feel a kind of thrilling sensation, as in hearing the sound of metallic bodies when struck. — To feel a sharp, thrilling pain. — To experience a thrilling sensation, or a sharp, slight, penetrating sensation.

Tin'icum, in *Pennsylvania*, a post-township of Bucks co. *Pop.* (1897) 2,120. — A township of Delaware co., 11 m. S.W. of Philadelphia. *Pop.* about 250. — An island in the Delaware river, belonging to Delaware co.

Tink, *v. n.* To make a sharp shrill noise.

— A sharp, shrill noise.

Tink'er, *n.* A mender of brass kettles, pans, and the like, — so called from the noise he makes when at work. — *v. a.* To mend, as old vessels of brass, copper, &c.

— *v. n.* To be occupied in mending old vessels, &c.

Tink'ering, *n.* The act or employment of a tinker.

Tink'erly, *adv.* In the manner of a tinker.

Tinkle, (*tin'kl*), *v. n.* To make small, quick, sharp

sounds, as by striking metal; to tingle; to clink.—To hear a small, sharp sound.

Tinkle, *v. a.* To cause to clink, or make sharp, quick sounds.

—*n.* A clink; a quick, sharp noise.

Tin-liquor, (*lik'ur*), *n.* A solution used by dyers, prepared by digesting tin filings in hydrochloric and nitric acids, and adding a small quantity of common salt.

Tin'man, *n.*; *pl.* **TINMEN**. A manufacturer of tin vessels; a dealer in tin-ware.

Tin'month, in *Vermont*, a post-township of Rutland co., 70 m. S.S.W. of Montpelier.

Tin'ner, *n.* One who works in tin mines.—A tinman; one who works in tin-ware.

Tinnevely, a town in India, presidency of Madras, cap. of a maritime district of same name. It is surrounded by extensive rice-fields, and is unhealthy for Europeans. *Pop.* 20,000. *Lat.* 8° 48' N., *Lon.* 71° 1' E.

Tin'ning, *n.* The act, art, or process of covering plates of iron, the inner surfaces of iron or copper vessels, &c., with a thin coat or layer of tin.—The covering or layer thus put on.

Tin'ny, *a.* Abounding with tin.

Tinos, (*te'nos*), an island of the Grecian Archipelago, 10 m. from Syra; *area*, 87 sq. m.; *pop.* 18,000.

Tin'plate, *n.* Thin sheet-iron coated with tin, in order to protect it from oxidation or rust.

Tin-pyrites, *n.* (*Min.*) Native sulphide of tin, copper, and iron.

Tin'sel, *n.* [*Fr. tincelle*, from *Lat. scintilla*.] Something sparkling or very shining and gaudy; something superficially shining and showy, or having a false lustre, and more gay than valuable.

—A kind of shining cloth; a kind of lace.

—*a.* Gaudy; showy to excess; specious; superficial.

—*v. a.* To adorn with something glittering and showy, without much value; to make gaudy.

Tin'selly, *a.* Like tinsel; gaudy.

—*adv.* Gaudily.

Tin'smith, *n.* A tinner.

Tin'stone, *n.* (*Min.*) The ore of tin.

Tint, *n.* [*It. tinta*, a dye; from *Lat. tingo*, to dip.] A slight coloring or tincture distinct from the ground or principal color.

—*v. a.* To tinge; to give a slight coloring to.

Tintinnabulary, **Tintinnabulous**, *a.* [*From Lat. tintinnabulum*, a little bell.] Having the sound of a bell.

Tinto, *n.* [*Sp.*] A red Madeira wine wanting the high aroma of the white sorts, and, when old, resembling tawny port.

Tintou Falls, in *New Jersey*, a post-village of Monmouth co., 48 m. E. of Trenton.

Tintoretto, (*It.*) (*tin-to-rel'lo*), one of the most celebrated Italian painters, b. in Venice, 1512. His name was **JACOPO ROBUSTI**, and he acquired that by which he is usually called from the fact of his being the son of a dyer (*tintore*). He was placed in the school of Titian, but only remained there a few days—Titian dismissing him on seeing some of his clever drawings. *T.* eventually became the acknowledged rival of Titian in Venice itself. His *Miracle of St. Mark*, the *Miracolo dello Schiavo*, his masterpiece, is in the academy of Venice, and is generally admitted to be one of the finest pictures in Italy. *T.* is sometimes called *Il Furioso*, from the extraordinary vigor and rapidity with which he painted. *D.* 1594.

Tint-tool, *n.* (*Engraving*.) A kind of graver having its point of different degrees of width, to cut lines in copper or wood of certain breadths.

Tin-ware, *n. pl.* Articles made of tin, or tinned iron.

Tiny, *a.* [*Gr. tynos*, small, little.] Very small; little; puny.

Tioga, in *New York*, a S. co., bordering on Pennsylvania; *area*, 480 sq. m. *Rivers.* The N. branch of the Susquehanna River, and Cayuta and Owego creeks. *Surface*, hilly; *soil*, generally fertile. *Cap.* Owego. *Pop.* (1897) 32,750.

—A village and township of the above co.

Tioga, in *Pennsylvania*, a N. co., bordering on New York; *area*, 1,120 sq. m. *Rivers.* Tioga river, and Cowanesque and Pine creeks. *Surface*, hilly; *soil*, adapted for pasturage. *Min.* Bituminous coal. *Cap.* Wellsborough. *Pop.* (1897) 55,515.—A post-borough and twp. of the above co., 15 m. S. of Corning.

Tioga Center, in *New York*, a post-village of Tioga co., 5 m. S.W. of Owego.

Tioga River, rises in Tioga co., Pennsylvania, and flowing N. unites with the Conchocton to form the Chemung in Steuben co., New York.

Tiones'ta, or **Teonis'ta**, in *Pennsylvania*, a creek which rises in Crawford co., and flowing S., enters the Allegheny river in Forest co.—A post-borough and twp., cap. of Forest co., 29 m. N. E. of Franklin.

Tioughnioga River, (*te-oh-ne-aw'ga*), in *New York*, rises in Madison co., and flowing S. enters the Chenango River in Broome co.

Tip, *n.* [*Du. tip*, end; *Ger. zipfel*, tip, point.] The point or extremity of anything small.—A donceur.—A gentle stroke; a tap. (*R.*)

—*n. a.* To form a point upon with something.—To give a donceur to.—To strike slightly, or with the end of anything small; to tap.

To *tip off*, to pour off or out, as liquor.—To *tip over*, to upset; to overturn.—To *tip the wink*, to call the attention of another by a wink.—To *tip up*, to partly raise one end of anything.

—*v. n.* To fall on one side; to throw off.

Tip-cat, *n.* A boy's game.

Tip'pah, in *Mississippi*, a N. co., bordering on Tennessee; *area*, 490 sq. m. *Rivers.* Wolf, Tallahatchie, and

Hatchie rivers, and Tippah creek. *Surface*, diversified; *soil*, fertile. *Cap.* Ripley. *Pop.* (1897) 14,250.—A creek which rises in Tippah co., and flowing S.W. enters the Tallahatchie river in Lafayette co.

Tippecanoe (*tip-pe-ka-noo'*), in *Indiana*, a W.N.W. co.; *area*, 500 sq. m. *Rivers.* Wabash and Tippecanoe. *Surface*, level; *soil*, very fertile. *Cap.* Lafayette. *Pop.* (1897) 38,050.—A river which rises in Kosciusko co., and enters the Wabash River in Tippecanoe co., 9 m. N.E. of Lafayette, after a S.W. course of 200 m. It is famous for the battle fought on its banks, Nov. 5, 1811, in which the Americans under Gen. Harrison defeated the Indians under Tecumseh's brother, the prophet.—A township of Carroll county.—A township of Kosciusko county.—A post-village and township of Marshall county, 15 m. S.E. of Plymouth.—A township of Pulaski county.—A township of Tippecanoe county.

Tippecanoe, in *Iowa*, a township of Henry county.

Tippecanoe, in *Ohio*, a post-village of Harrison co., 17 m. W. of Cadiz.—A post-village of Miami co., 14 m. N. of Dayton.

Tipperary, a town of Ireland, cap. of a co. of same name, 100 m. from Dublin. It is a beautiful town, finely situated in a romantic country, and is both well built and a place of considerable industry and trade. *Pop.* 8,900.

Tippet, *n.* [*A. S. tappet*.] A narrow garment or covering, of fur or cloth, for the neck and shoulders, worn by females.

Tipple, *v. n.* To drink spirituous or strong liquors habitually; to indulge in the frequent and improper use of spirituous liquors.

—*v. a.* To drink, as strong liquors in luxury or excess.

—*n.* Drink; liquor taken in tipping.

Tippled, *a.* Intoxicated; inebriated; tipsy.

Tippler, *n.* One who tips, or who habitually indulges in the excessive use of spirituous liquors.

Tipping-house, *n.* A house in which liquors are sold in small quantities.

Tippoo Saib, sultan of Mysore, the son of Hyder Ally, was b. in 1749, and succeeded to the throne in 1782. He continued the war in which his father was engaged with the English, until the peace of Paris (1783), which deprived him of the assistance of the French. In 1790 he engaged in a new war with the English, and was defeated in a number of actions. In 1792 Lord Cornwallis obliged him to sue for peace, when Tippoo delivered his two sons as hostages. The war was resumed in 1799, and terminated with the entire conquest of Mysore and the death of Tippoo, who fell bravely fighting on the ramparts of his capital.

Tip'sily, *adv.* In a tipsy manner.

Tip'siness, *n.* State of being tipsy.

Tip'staff, *n.* (*Amer. Law.*) An officer, sometimes appointed by a court, whose duty it is to wait on the court and serve its process.

Tip'sy, *a.* Overpowered with strong drink; intoxicated.

Tip'toe, *n.* The end of the toe.—To be, or to stand a tiptoe, or on tiptoe; to be in a state of high expectation.

Tip'ton, in *Indiana*, a N. central co.; *area*, 260 sq. m. It is drained by Buck and Cicero creeks. *Surface*, level; *soil*, fertile. *Cap.* Tipton. *Pop.* (1897) 20,200.

—A city, capital of Tipton co., 40 m. N. of Indianapolis. *Pop.* (1897) 3,150.

Tipton, in *Iowa*, a post-town, cap. of Cedar county, in Cedar township.

Tipton, in *Missouri*, a post-village of Moniteau co., 35 m. N. W. of Jefferson City.

Tipton, in *Pennsylvania*, a post-village of Blair co., 10 m. N.N.E. of Altoona.

Tipton, in *Tennessee*, a W.S.W. co., bordering on the Mississippi river; *area*, 404 sq. m. The Hatchie river forms its N. border. *Surface*, level; *soil*, fertile. *Cap.* Covington. *Pop.* (1897) 25,650.

Tipularie, *n. pl.* (*Zoöl.*) The Crane-fly family, embracing dipterous insects, of which the most important species, the Hessian-fly, popularly called, in England, Daddy Long-legs, has been described under the name of its genus, *CECIDOMYIA*, *q. v.*

Tirade, *n.* [*Fr.*, from *tirer*, *Lat. trahere*, to draw.] A strain or flight.—A series of violent invectives; a declamatory flight of censure or reproof.

Tirailleur, (*te-rat-yur'*), *n.* [*Fr.*, from *tirailleur*, to skirmish.] (*Mil.*) A French skirmishing soldier, often put in front of the line to annoy the enemy.

Tira'no, a town of N. Italy, in the Valtellina, on the Adda, 15 m. from Sondrio; *pop.* 11,196.

Tiras'pol, a town of European Russia, on the Dniester, 8 m. from Bender; *pop.* 5,800.

Tire, *n.* A row or rank.—A head-dress.—Attire; apparel.—A band or hoop of iron, used to tie or bind the felloes of wheels, to secure them from wearing and breaking.

—*v. a.* [*A. S. teorian*, to fail.] To exhaust the strength of by toil or labor; to weary; to fatigue.

To *tire out*, to harass; to weary to excess.

—*v. n.* To become weary; to be fatigued; to fail with weariness; to have the patience exhausted.

Tired'ness, *n.* The state of being weary; weariness.

Tire'some, *a.* Wearisome; fatiguing; tedious.

Tire'somely, *adv.* In a tiresome manner.

Tire'someness, *n.* The act or quality of tiring or exhausting strength or patience; wearisomeness; tediousness.

Tire'-woman, *n.* A milliner; a dresser in a theatre.

Tir'ing-house, **Tir'ing-room**, *n.* The room or place where actors dress for the stage.

Tirlemont, (*teer'mawn*), a t. of Belgium, on the Geete. *Man.* Woolens, paper, &c. *Pop.* 13,296.

Tirnova, a t., cap. of Bulgaria.

Tir'ra-lir'ra, *n.* An imitation of the voice of the lark, or of the sound of a horn or other musical instrument.

Tir'yus, or **TIRYNTHUS**. (*Anc. Geog.*) One of the oldest cities of Greece, in Argolis, 2 m. from Nauplia. It was celebrated for its massive walls, which were popularly attributed to the Cyclops, and are the finest existing specimens of the military architecture of the heroic age

Fig. 2505.—WALLS OF TIRYNS.

of Greece. The ruins at present occupy the lowest hill of several which rise out of the plain, the S.E. part of the wall having a remarkable covered gallery (Fig. 2505), 36 feet in length, and 5 in breadth. The origin of *T.* belongs to the mythical period, and in 468 B. C. it was entirely destroyed by the Argives.

Tis, a contraction of *it is*, often used in poetry.

Tis'sane, *n.* [*Fr.*] (*Med.*) An infusion made of certain herbs, leaves, or flowers, used as tea for medicinal purposes. It is a very favorite form of remedy in France.

Tis'bury, in *Massachusetts*, a township of Duke co., 70 m. S.S.E. of Boston.

Tishomin'go, in *Mississippi*, a N.E. co., bordering on Tennessee and Alabama; *area*, 435 sq. m. *Rivers.* Tennessee and Tombigbee rivers, and Tuscombua creek. *Surface*, diversified; *soil*, fertile. *Products.* Corn, cotton, vegetables, live stock, &c. *Cap.* Inka. *Pop.* (1897) 9,750.

Tis'ic, *n.* See **PHthisis** (*q. v.*).

Tisiphone (*ti-sif'one*). (*Myth.*) One of the Furies, daughter of Nox and Acheron, was the minister of the vengeance of the gods upon mankind, and punished the wicked in Tartarus. She was represented with a whip in her hand; serpents hung from her head, and were wreathed round her arms.

Tiskil'wa, or **TISKILWA**, in *Illinois*, a post-town of Bureau co., 23 m. W. of La Salle. *Pop.* (1897) 950.

Tis'ri, or **TI-SRI**. The first month of the Jewish civil year, and the seventh of the ecclesiastic, corresponding to part of September and October. On the first day of *T.* the Feast of Trumpets occurred; on the tenth, the great day of Expiation; and on the fifteenth, the Feast of Tabernacles commenced.

Tissue, (*tish'shu*), *n.* [*Fr. tissu*, from *tisser*, *Lat. texere*, to weave.] Any woven stuff;—particularly, cloth interwoven with gold or silver, or with figured colors.—A connected series or combination; as, "a tissue of epigrams."—*Addison*.

(*Anat.*) The substance of which systems of organs are composed, as, *e. g.* bone, or osseous *T.*, in the osseous system; flesh, or muscular *T.*, in the muscular system; neurine, or nervous *T.*, in the nervous system; dentine, or tooth-bone, in the dental system. The branch of anatomy which treats of the tissues is termed *Histology*.

(*Bot.*) A compound structure formed by the combination of different kinds of cells. The principal *T.* may be classed under two heads; namely, *Parenchyma*, or cellular *T.*, and *Prosenchyma*, or woody *T.* *T.* of the former class constitute the entire structure of the lower plants, as *Alga*, *Fungi*, and *Lichens*. The higher plants are made up of *T.* of both classes.

—*v. a.* To variegate; to interweave.

Tit, *n.* Anything small; a small horse.—A woman, in contempt.—A small bird; a titmouse or tom-tit.

Ti'tan, *n.* (*Myth.*) One of the *Titanes*, or *Titanides*, the sons of Caelus and Terra. They were forty-five in number, according to the Egyptians. The most celebrated of the *T.* are Saturn, Hyperion, Oceanus, Japetus, Cottus, and Briareus. They were all of gigantic stature, and with proportionable strength. They were confined in the bowels of the earth by Caelus, till Terra, sympathizing with their misfortunes, armed them against their father. The wars of the *T.* against the gods are very celebrated in mythology. They are often confounded with that of the giants; but it is to be observed that the war of the Titans was against Saturn, and that of the giants against Jupiter.

Titan'ic, *a.* Relating to, or resembling, the Titans; gigantic.

T. acid. (*Chem.*) See **TITANIUM**.

Ti'tanite, *n.* (*Min.*) Native oxide of titanium.

Tita'nium, *n.* (*Chem.*) A metal occurring in the somewhat rare minerals, rutile, anatase, brookite, and titanite iron. The first three consist almost entirely of

the binoxide of *T.*, or *titanic acid* (TiO₂). Riley and others have found this metal largely diffused throughout nature in most clays. It forms a protoxide, a sesquioxide, and a binoxide, the latter acting as an acid. In many of its reactions it closely resembles tin. The metal, as yet, has only been obtained as a greenish-gray powder. In many respects it is a very singular metal. Its affinity for nitrogen is extraordinary. The red, copper-colored, cubical crystals found in the hearths of blast-furnaces were at one time supposed to be the metal, but are now found to be a compound of the cyanide and nitride of the metal. At the highest temperature of the blast-furnaces, this compound volatilizes without decomposition. Mr. Mushet has assumed that *T.* alloys with iron, producing steel of a superior quality; but from the experiments of Deville, Riley, Percy, and others, it appears that no such alloy exists. It is, however, certain that ores containing titanic iron produce steel of excellent quality, but it is very possibly on account of their freedom from other impurities, and not from their containing *T.* Titanic acid is employed in the manufacture of artificial teeth, and for imparting a straw-yellow tint to the glaze of porcelain. *Equiv. of T.*, 48. *Symbol*, Ti.

Tit-bit, *n.* A nice piece; a tidbit.

Tithe, *n.* [A.S. *teotha*.] The tenth part of anything; but appropriately, the tenth part of the increase annually arising from the profits of land and stock, which, in England, is allotted to the clergy for their support.

—*v. a.* To levy a tenth part on; to tax to the amount of a tenth.

(*Jewish Hist.*) Under the Mosaic economy, the tenth part of the yearly increase of their goods was due by the children of Israel to their priests; but the system has evidently an earlier and more extended origin, for we read of Abraham, on his return from his expedition against the five kings, giving the tenth part of his spoils to Melchisedec, king of Salem; and traces of the same custom are to be found among several of the nations of antiquity.

—*v. a.* To tax to the amount of the tenth part; to levy a tithe of.

Tith'ing, *n.* Act of levying tithes.

(*Eng. Hist.*) A number or company of ten householders, with their families, who, dwelling near each other, were sureties or free pledges to the king for the good behavior of each other.

Titian, (TIZIANO VERCELLI,) (*tish'yan*.) One of the greatest of Italian painters, and the prince of colorists and portrait-painters, b. in Cadore, Friuli, 1477. He studied in the school of the Bellini, and first appeared as a great painter at the court of Alfonso I., duke of Ferrara, in 1514, when he painted the *Bacchus and Ariadne*. Two years later he had attained to the full vigor of his extraordinary powers; in that year he executed his celebrated *Assumption of the Virgin*, now in the academy of Venice. In 1523 *T.* painted his *St. Peter Martyr*, in

Fig. 2506. — TITIAN.

which he has shown himself one of the first of landscape painters, especially of landscape as an accessory to figures. In 1545 he visited Rome, where he saw Michael Angelo; he returned to Venice in the following year. He is supposed also to have visited Spain. This great painter died at Venice of the plague, in 1576, having lived to the extraordinary age of ninety-nine years. To describe fully his masterpieces alone would occupy a volume; of his scholars, Paris Bordone, Bonifazio Veneziano, Girolamo di Tiziano, and his own son Orazio VerCELLI, were able painters.

Titicaca Lake, (*te-te-ka'ka*.) the most elevated, and one of the largest lakes of S. America, on the border of Bolivia and Peru, between Lat. 15° 15' and 16° 35' S., Lon. 68° 40' and 70° W. It is 160 m. long, and about 65 wide. Its surface is abt. 12,800 ft. above the sea. It contains several islands, and its surplus waters are discharged by the Desaguadero River.

Titillate, *v. n.* [Lat. *titillo*, *titillatum*.] To tickle.

Titillation, (*-la'shun*.) *n.* [Fr.] The act of tickling, or the state of being tickled; any slight pleasure.

Tit'lark, *n.* (*Zoöl.*) See ANTHUS.

Title, *n.* [Fr. *titre*; It. *titolo*; Lat. *titulus*, a superscription, inscription.] An inscription put over anything, as the name by which it is known. — The inscription in the beginning of a book, containing the subject of the work, and commonly the author's and publisher's names. — A general head, containing particulars. — An appellation of dignity, distinction, or pre-eminence given to persons, as prince, count, colonel, &c. — A name; an appellation. — Right; a claim of right, or that which constitutes a just cause of exclusive possession; that which is the foundation of ownership; the instrument which is evidence of a right.

—*v. a.* To entitle; to name; to call.

Titled, *a.* Having a title.

Tit-le-deeds, *n. pl.* The writings evidencing a man's right or title to property.

Tit'ler, *n.* A conical mass of refined sugar, a little larger than the ordinary loaf.

Tit'ling, *n.* [From *tit*.] A small bird, called also moor-titling, stone-chat, &c.

Tit'mouse, *n.*; *pl.* TITMICE. (*Zoöl.*) The common name of the *Paridae*, a family of Insessorial birds, distinguished by short conical bills, which have their tips entire, and their base covered with a few short stiff bristles. The wings are short and the tail long; the tarsi rather long and thick; the inner toe the shortest; and all the toes furnished with strong curved claws. The titmice are active little birds, and are commonly known under the names of tits, titmice, and tomtits, and many are distinguished for the beautiful color of their plumage. They inhabit principally countries abundant in wood, and they feed on the insects and larvae which they find on the bark and leaves of trees and shrubs. In this pursuit they exhibit their gracefulness and activity to great advantage, and may be seen clinging round the branches and twigs of trees in the most sprightly manner. One of the most common American species is the Black-cap *T.*, or Chickadee (*Parus atricapillus*) of E. Mississippi, which is five inches long, the wings 2½ inches; the back brownish ashy, under parts whitish, top of the head and throat black, and the sides of the head between white. The nest is generally made in a hole in a stump; the eggs rarely exceed eight in number, the color white, slightly dotted and marked with light reddish. The Blue *T.* or Blue-bonnet (*Parus ceruleus*) is an inhabitant of Europe, but it is said to have been found lately in Texas.

Fig. 2507.

TITMOUSE, (*Parus atricapillus*.)

Tit'ter, *v. n.* To laugh with the tongue striking against the root of the upper teeth; to laugh with restraint; to twitter; to giggle.

—*n.* A restrained laugh. See TWITTER.

Tit'tering, *n.* Restrained laughter.

Tittibawas'see, a river of Michigan, rises in Ogemaw co., and flowing S.E. joins the Saginaw River about 3 m. W. of Saginaw City. It is navigable for boats about 80 m. — A township of Saginaw co.

Tit'tle, *n.* [From *tit*, small.] A small particle; a minute part; a jot; an iota.

Tit'tle-tat'tle, *n.* Idle, trifling talk; empty prattle; gossip; scandal.

—*v. n.* To talk idly; to prate.

Tit'tle-tat'tling, *n.* The act of prating idly.

Tit'ular, *a.* [Fr. *titulaire*; Lat. *titulus*, a title.] Existing in title or name only; nominal; having or conferring the title only; having the title to an office or dignity without discharging the duties of it. See TITLE.

—*n.* Titulary.

Tit'ularly, *adv.* Nominally; by title only.

Tit'ulary, *a.* Consisting in a title; pertaining to a title.

—*n.* A person invested with a title, in virtue of which he holds an office or benefice.

Tit'us, a disciple of St. Paul, was a Greek and a Gentile; but, on his conversion, he became amanuensis to the apostle, who consecrated him bishop of Crete, where, according to tradition, he died at an advanced age. The epistle of St. Paul to *T.* is similar in its contents to the first epistle to Timothy, and was probably written not long after it, A. D. 65.

Titus, FLAVIUS VESPASIANUS, a Roman emperor, b. 40 A. D. He accompanied his father Vespasian to Syria, where he distinguished himself greatly in the Jewish War. When Vespasian was summoned to Italy to assume the purple, *T.* was left in command of the Roman army at the memorable siege of Jerusalem. In A. D. 70, the city was taken, and in spite of the exertions of *T.* to preserve it, the Temple was burnt. Though his youth was tainted with the vice of dissipation, he happily disappointed the gloomy predictions of the people when he came to the throne, A. D. 79, by the wisdom and beneficence of his government. The Romans, however, did not long enjoy his administration, *T.* having been

seized with a violent fever, which carried him off in the 41st year of his age, after a reign of a little more than two years, A. D. 81.

Tit'us, in Texas, a N.E. co.; area, 400 sq. m. Rivers, Sulphur Fork of Red river, and Big Cypress and White Oak Bayous. Surface, diversified; soil, very fertile. Cap. Mount Pleasant. Pop. (1897) 9,350.

Tit'usville, in New Jersey, a post-village of Mercer co., 10 m. N.W. of Trenton.

Titusville, in Pennsylvania, a city of Crawford co., 28 m. E. of Meadville. Pop. (1897) 8,350.

Tiumen, (*te-oo'men*.) a town of Siberia, 120 m. from Tobolsk, on the Touira, an affluent of the Ob. Manuf. Leather, carpets, soap, &c. Pop. 12,000.

Tiv'erton, a town of England, in Devonshire, at the confluence of the Exe and Loman, 14 m. from Exeter. Manuf. Lace and woollens. Pop. 11,800.

Tiv'erton, in Ohio, a township of Coshocton county.

Tiverton, in Rhode Island, a post-village and township of Newport co., 28 m. S.S.E. of Providence. Pop. (1895) 2,964.

Tiverton Four Corners, in Rhode Island, a post-village of Newport co., 18 m. S.E. of Providence.

Tivoli, (*tiv'-ole*.) (anc. *Tibur*.) a town of central Italy, 18 m. from Rome. It is delightfully situated on an eminence covered with olives and fruit-trees; but its greatest attraction now, as in former ages, consists in the falls of the Teverone (the anc. *Anio*), which glides gently through the town till reaching the brink of a rock, over which it precipitates itself nearly 80 feet. On the summit of the steep bank stands a beautiful temple of the Corinthian order (Fig. 2145), built in the Augustan age. Pop. 6,554.

Tivoli, in Iowa, a post-village of Dubuque co., 20 m. N. W. of Dubuque.

Tivoli, in Minnesota, a post-village of Blue Earth co., abt. 6 m. S.E. of Mankato.

Tivoli, in New York, a post-village of Dutchess co., 100 m. N. of New York.

Tivoli, in Pennsylvania, a post-village of Lycoming co., abt. 20 m. N.E. of Williamsport.

Tiv'y, *adv.* [See TANTIVY.] With great speed;—a huntsman's word or sound.

Tixco'co, in Mexico, an Indian town of Yucatan, 20 m. S.E. of Merida.

Tjet'tek, *n.* The Japanese name for the virulent poison prepared from *Strychnos Fieut.*

Tlap'a, in Mexico, a town of La Puebla, on the Yopez River, 60 m. N.N.E. of its mouth in the Pacific.

Tlapujahua, or Tlapuxahua, (*tal-poo-ha'wa*.) in Mexico, a town of Michoacan, 50 m. E. of Valladolid.

Tlasea'la, in Mexico, a town of the state of La Puebla, 10 m. N. of La Puebla; pop. abt. 4,500.

Tlent'sen, a town of Algeria, cap. of the prov. of same name, 65 m. from Oran.

Tme'sis, *n.* [Gr., from *temno*, I cut.] (*Gram.*) A figure by which a compound word is separated into two parts by the intervention of one or more words; as, "The Lord . . . is long-suffering to us-ward." 2 Pet. iii. 9.

Tuntar'akan, a fortified maritime town of S. Russia, on the Strait of Yenikale, 13 m. from Yenikale; pop. unknown.

To, (pron. *tōō*, when emphasized; otherwise, *tōō*.) *prep.* [A. S. *tō*.] Noting motion toward a place or thing, or in the direction of;—also, approach and arrival;—opposed to *from*, or placed after another word expressing movement toward;—also, in the majority of its senses, interchangeable with *into*; as, he has gone *to* New York, they came *to* the house.

—Hence, expressing motion, course, or tendency toward anything that may be looked upon as limiting action or motion; as, to be on the high road *to* fame, he is going *to* marry an heiress.

—Hence, also, generally, and with a wide scope of application, causing the junction of transitive verbs with their ultimate object, and with neuter verbs, nouns, and adjectives preceding a substantive which confines their action; in this respect it bears a modified analogy to *for*; as, we will have the fun *to* ourselves, this wine is suited *to* my palate, he has taken an antipathy *to* a certain individual, many persons were burnt *to* death, &c.

—As the common prefix to the infinitive, and in cases where it has no prepositional signification, *to* is employed where the infinitive is direct object or subject; as, *to* slander another is a base act, *i. e.* the slandering of another. Formerly, where the infinitive pointed to the intent or purpose, *for* was allowably used as a prefix to *to*; as, I went *for* *to* get my dinner. Modern grammarians have, however, condemned such usage as antiquated and vulgar. Colloquially, particularly in the U. States, *to* still obtains and reinforces a preceding infinitive; as, he asked me *to* read it, but I do not mean *to*. — In a variety of phrases, and in combination with many other terms, *to* is employed elliptically; as, (1.) Noting apposition; affinity; opposition; antithesis; as, hand *to* hand, face *to* face, man *to* man. (2.) Comparison; as, the odds are ten *to* one. (3.) Extent or inclusion as far as; limit or degree of comprehension; as, his friends mustered *to* the number of fifty. (4.) Sympathy; accord; fitness; adaptation; conformity; as, I have not met with a wife *to* my taste. (5.) Result; end; effect; issue; consequence; as, his folly will lead him *to* beggary. (6.) Addition; combination; alliance; union; as, he has children *to* complete his happiness. (7.) Accompaniment; as, she sings *to* music. — *To and fro*, backward and forward; as, to walk *to and fro*. — *To-and-fro*, a moving backward and forward; as, a *to-and-fro* journey. — *To the face*, in presence of. — *To wit*, namely; to know;—largely used in legal and official phraseology.

Toad, (*tōd*.) *n.* (*Zoöl.*) The common name of the *Bufo*.

idæ, a family of tailless Batrachians, having half-webbed toes the glandular swelling called *parotoid* between the eye and ear, and the sacral diapophyses expanded (Fig. 2508). The genus *Bufo* has no teeth, tongue elliptical, skin more or less warty. Toads exist in almost every part

Fig. 2508. — TOAD.

of the globe. The parotoids exude a fetid and rather acrid milky secretion, which is the sole foundation for the vulgar error of the poison of the toad. The animal is useful to man by destroying insects, ants, &c., and in no way noxious. It attains a considerable age. Several species are found in the U. States.

Toad-eater, *n.* A fawning, obsequious parasite; a mean sycophant. (Colloq.)

Toad-fish, *n.* (Zool.) Same as Frog-fish. See BATRACHUS.

Toad-stool. See AGARICUS.

Toady, *n.* Same as TOAD-EATER, *q. v.* Also a person in contempt. (Vulgar.) [manner.]

Toadyism, (*-izm*), *n.* Servile adulation; the practice of obsequiously fawning on another, as for patronage or favors; base sycophancy.

Toast, *v. a.* [Sp. *tostar*.] To dry and scorch by the heat of a fire; as, to *toast* bread or bacon. — To warm thoroughly; as, to *toast* one's feet.

n. Bread dried and scorched by the fire. — Also, a kind of food prepared by soaking scorched bread into milk or other liquor; as, a *toast* in sack.

Toast, *n.* [Perhaps from Fr. *tasse*, a drinking-cup, *tassé*, heaped, piled; implying a person to whose health a full cup is drank.] Originally, a celebrated woman whose health was often drank by a company of gentlemen; as, Lady Coventry was the reigning *toast* of her day. — Now generally applied also to public characters or private friends of either sex, whose health we propose to drink; as, "Let the *toast* pass, we'll drink to the lass." — *Sher.*

v. a. To name or propose, as any one whose health, success, &c., is to be drank; to propose any sentiment or subject, to the honor, success, &c., of which a bumper is to be devoted; to drink in honor or celebration of anything, or to its prosperity, success, &c.; as, to *toast* one's native land.

Toast'er, *n.* One who toasts or pledges another in a bumper. — An instrument or fork for toasting anything; as, a *cheese-toaster*.

Toast'ing, *n.* Act of scorching by fire; act of drinking a bumper to the honor of.

Toasting-fork, *n.* A long-handled fork, often with sliding joints, employed for toasting bread, &c., before the fire.

Toast-master, *n.* An officer appointed to announce toasts at great public banquets.

Toast-rack, *n.* A stand for a table having partitions for slices of dry toast.

Tobac'co, *n.* [Sp. *tabaco*; Fr. *tabac*.] The common name of the plants comprised in the monopetalous genus *Nicotiana*, *q. v.* According to Humboldt, the term tobacco was used by the Caribbees to designate the pipe in which they smoked; which term having been transferred by the Spaniards from the pipe to the herb itself, it has been adopted by other countries. Other accounts say that the name is derived from the province of Tabaca in St. Domingo, whence it was introduced into Europe, in 1559, by a Spanish grandee. Afterwards, through the agency of Jean Nicot, French ambassador at Lisbon, it was taken to Paris, where, in the form of a powder, it was used by Catharine de' Medici. It was some time after the use of tobacco as snuff that the smoking of it began. Very shortly after its appearance, the herb was prohibited in many parts of Europe. The physicians declared it hurtful to health, the priests denounced its use as sinful. Pope Urban VIII. issued a bull excommunicating all persons found taking snuff whilst in church. Sultan Amurath made smoking a capital offence; whilst the penalty paid for smoking in Russia was to have the nose cut off. The strenuous way in which it was opposed by James I. of England is a curious matter of history. Without the consent of his parliament, he raised the duty on the weed from 2d. to 6s. 10d. per pound; and his famous *Counterblast* to Tobacco declared smoking "loathsome to the eye, hurtful to the nose, harmful to the brain, dangerous to the lungs, and in the black stinking fume thereof nearest resembling the horrible Stygian smoke of the pit that is bottomless." But kingly and priestly wrath were futile against the far and wide extension of the use of the herb, and at the present day, it has become perhaps the most generally diffused luxury in existence; for, according to statistics, the average consumption of tobacco by the whole human race, of 1,000 millions, is

seventy ounces a head per annum. The largest growers of tobacco are the Southern States of America. It is also an important item of production in many of the U. States, chiefly Virginia, Kentucky, Maryland, N. Carolina, Tennessee, Ohio, and Missouri. *T.* is raised early in spring on beds, and when the plants have acquired four leaves, they are set in the fields, a distance every way of three ft. being preserved between the plants. It is very sensible to frost, and in consequence of the destructive invasion of a certain worm which infests it, the plant has to be examined every morning and evening. When the plant has put forth eight or nine leaves, and is prepared to have a stalk, the top is nipped off, so that the leaves may grow larger and thicker. When the leaves become brittle, they are considered fit for cutting. After being cut, they are allowed to lie for some time, afterwards being conveyed to a shed, where they are hung up to sweat and dry. When perfectly dry, the leaves are stripped from the stalks, and made up into small bundles. These are laid in heaps in the

Fig. 2509. — VIRGINIAN TOBACCO.
(*Nicotiana tabacum*.)

open air, and covered with blankets. After being allowed to carefully heat for some time, they are stowed in casks for exportation. The herb is manufactured into three different forms, usually by three distinct classes of traders. It is cut into shreds for smoking in pipes; its leaves are rolled up into compact cylindrical bundles to be smoked as cigars; and a compound, partly of the leaves and partly of the stalks of the leaves, is ground into a state of powder to be taken as snuff. In manufacturing the different varieties of tobacco to be smoked in a pipe, the stalks are stripped from the leaves, and the leaves are pressed in large quantities into the form of a cake, being often moistened during the process, and finally they are cut into shreds with knives moved by machinery. In the case of that variety of cut-*T.* known as *bird's-eye*, a portion of the stalks is cut up with the leaf. *Shag T.* is manufactured from the darkest colored leaves; *pig-tail T.* is spun into long cords. Snuff is made sometimes from the stalks alone, or from the leaves only, or from a mixture of both stalk and leaf. Scotch snuff is either entirely of stalk, or with a very slight admixture of the leaf. The peculiar qualities of "high-dried" snuffs are owing to the degree of drying, which imparts a scorched flavor to them. In making snuff, various matters are added for giving it an agreeable scent. The French manufacturers give the following characters to the tobaccos they employ: — the Virginian (Fig. 2509), strong, very aromatic, and much esteemed for snuff; the Kentucky, strong, large-leaved, very choice; the Maryland, light odoriferous, large-leaved, used exclusively for smoking in pipes; the Havana, unequalled for cigars; the Java, used for the same purpose, its odor like pepper. The tobaccos from the Levant are little esteemed. The Holland product has much strength, and is excellent for snuff mixed with weaker sorts. The Hungarian varieties are used for cigars and smoking tobaccos. Some of the French departments produce *T.* used exclusively for cigars, and other varieties used only for pipes — superior flavor. The cigar is composed of two distinct parts, — the inside and the cover, the leaf for the latter being of a finer texture than that made use of for the inside. The leaves are damped the night previous to their being made up. The cigars are rolled into shape by enveloping the inner leaves within an outer covering. One end is then screwed up to a point, while the other is cut off to a particular gauge of length. Of the best common cigars a workman, with one or two assistants, can make a thousand a day; of finest Regalias, six hundred. The best cheroots come from Manilla, and women only are employed in making them. — The total production of *T.* in the United States, for the year 1896 amounted to 409,876,533 pounds. A very large quantity is annually imported, chiefly from Cuba and Manila.

Tobac'conist, *n.* A dealer in tobacco; also, a manufacturer of tobacco.

Tobac'co-pipe, *n.* A pipe used for smoking tobacco. They are made of various materials, as wood, meerschau, &c. The commonest imported from Europe are made of a fine white clay, called *pipe-clay*. Their usual form is too well known to need description.

(Bot.) The Indian pipe. See MONOTROPA.

Tobacco-pipe fish. (Zool.) Same as PIPE-FISH, *q. v.*

Tobac'co Port, in Tennessee, a village of Stewart co., 85 m. W.N.W. of Nashville.

Tobac'co River, in Michigan, rises in Clare co., and flowing S.E., enters the Tittabawassee Riv. in Gladwyn co.

Tobac'co Root, *n.* (Bot.) See LEWISIA.

Toba'go, in the British W. Indies, an island of the Windward group, 24 m. N.E. of Trinidad, 32 m. long and 12 m. broad; Lat. of N. point, 11° 25' N., Lon. 60° 32' W.; area, 97 sq. m. Surface, mountainous, with fertile valleys intervening. It has several excellent harbors. Chief town, Scarborough. Pop. abt. 15,400.

To'bine, *n.* Same as TABINET, *q. v.*

To'binsport, in Indiana, a post-village and township of Perry co.

To'bit, (BOOK OF.) (*Script.*) A book of the Old Testament in the canon of the Roman Catholic Church, but regarded as apocryphal by Jews and Protestants. It contains the private history of a venerable and pious old man of this name, who was carried captive into Assyria by Shalmaneser. Nothing is known with certainty respecting either the author or the age of the book. All ancient writers looked upon the narrative as historical and authentic. But the question has been raised in modern times, whether the book is to be regarded as a true history or a moral fiction. Luther was the first who adopted the latter view; others have maintained that the book is partly historical, partly mythical. Gutmann, a modern Jewish rabbi, adopts the opinion that it is a fiction founded on facts. Its authority in the early Christian church is beyond question.

Tobol', a river of Asiatic Russia, rising in the S. part of the Ural Mountains, and, after a course of 450 m., joining the Irtisch, near Tobolsk.

To'bolsk, a city of Western Siberia, cap. of the govt. of same name and of Siberia in general, on the river Irtisch, near its confluence with the Tobol, 976 m. E. of St. Petersburg; Lat. 58° 12' N., Lon. 68° 15' E. It is well built with timber houses and wide and regular streets, and its position is picturesque (Fig. 2510). Its situation, considerably north of the great commercial highway between Russia and Siberia, and at a distance from the

Fig. 2510. — TOBOLSK.

more productive regions of the country, is unfavorable for the development of commerce. *T.* contains a large prison, capable of accommodating 3,000 prisoners; and the convicts condemned to exile in Siberia are first assembled at this town, and thence deported to various parts of the country. Several regiments are stationed here. Pop. 16,926.

Tobos'co, or TOBOSO, in Ohio, a post-village of Licking co., abt. 10 m. E. of Newark.

Toboyne, (*to-boin'*), in Pennsylvania, a township of Perry co.

To'by, in Pennsylvania, a township of Clarion county.

Tobyhan'na, in Pennsylvania, a post-township of Monroe co.; pop. abt. 650. — A creek which enters Lehigh River from Monroe co.

Tocantins, (*to-kan-teens'*), a large river of Brazil, prov. of Goyaz, formed by the junction of the Almas and Maranhão, near Lat. 14° S., and falls into the Para abt. 70 m. S.W. of the town of Para, after a N. course of 1,000 m. — A town of the prov. of Goyaz, 210 m. N.E. of Goyaz.

Tocat', or Tokat, a commercial city of Turkey, in Natolia, 36 m. from Sivas; Lat. 39° 35' N., Lon. 36° 30' E. It rises in the form of an amphitheatre, in a deep valley on the banks of the Yezil-Irmak, the ancient Isis. Pop. abt. 2,500.

Tocca'ta, *n.* [It., from *toccare*, to touch.] (*Mus.*) An old form of instrumental music, adapted to the organ or harpsichord, and partaking of the characteristics of the modern *fantasia* or *capriccio*.

Toco'a River, rises in Union co., Georgia, and flowing N.W. enters the Hiawasse river from Polk co., Tennessee. It is sometimes called *Ocoee*.

Tocqueville, ALEXIS C. H. CLEREL DE, (*tök-vül*), a French historian and statesman, b. at Verneuil, 1805; studied law, and was admitted a member of the French bar in 1825. In 1832, he was sent on a joint mission with M. G. de Beaumont to the U. States, to inquire into our penitentiary system, with a view to its introduction into France. Here he spent 2 years, visiting the different States, and inquiring assiduously into the institutions of the country. As the results of his researches and reflections, he published in 1845 his *Démocratie en Amérique*, which has been pronounced to be the best work that has appeared in Europe on the political institutions of the U. States. In 1839, he became a member of the Chamber of Deputies. In 1847 appeared his *Histoire Philosophique du Règne de Louis XV.*, to which

he afterwards added the *Coup d'œil sur le Règne de Louis XVI.* After the revolution of 1848, he was returned both to the national and legislative assemblies; and in June, 1849, he was appointed minister of foreign affairs, but resigned his portfolio in October, in consequence of the president's message appearing to deviate from the system of moderation to which he was attached; and two years afterwards he was one of those who protested against the *coup d'état* of Dec. 2, 1851. From this period, he devoted himself entirely to literary pursuits; and in 1856 he published his elaborate work, *L'Ancien Régime et la Révolution*, which for profound and original views and beauty of style has rarely been surpassed. D. 1859.

Toc'sin, *n.* [Fr.; O. Fr. *toque-seing*, an alarm-bell—toquer, to clap, knock, or hit against = *lt. toccare*.] An alarm-bell, or the ringing of a bell for the purpose of giving an alarm. The use of the tocsin, during the troubles of the French Revolution, to assemble the multitudes, has rendered the word almost proverbial.

Tocu'yo, a river of Venezuela, dept. of Caracas, rises E. of Truxillo, and enters the Caribbean Sea N. of the Gulf of Triste, after a N.N.E. course of 200 m.—A town on the above river, 34 m. E.N.E. of Truxillo; pop. 11,000.

Tod, *n.* [Icel. *toddi*, a piece of a thing.] A bush; a thick shrub; as, an ivied *tod*. (R.)—A weight used in weighing wool. It contains 28 pounds avoirdupois.—An old term for a fox;—still used in Scotland.

Tod'ars, Tod'awars, Tu'das, the name of a singular race of people found in the upper part of the Neilgherries, in S. India. They are a fine, muscular race, of pastoral habits of life; possess a peculiar, unwritten language of their own; worship the sun; practise polyandry; assert that their ancestors were the aboriginal inhabitants of Hindostan; levy a *goodoo*, or tithe, of 1-6th of the crops of various agricultural tribes, they themselves holding aloof from the culture of the soil. (See Capt. Burton's *Goa and the Blue Mountains*, Lond. 1861).

To-day, *n.* [A. S. *to-dæg*.] The present day.—*adv.* On this day; on the present day; as, he is expected to return to-day.

Todd, in Kentucky, a S.W. co., bordering on Tennessee; area, 360 sq. m. Rivers. Pond river, and Clifty, Elk, and Whippoorwill creeks. Surface, undulating; soil, fertile. Min. Coal. Cap. Elkton. Pop. (1897) 17,500.

Todd, in Minnesota, a central co.; area, 972 sq. m. Rivers. Mississippi, Crow Wing, and Long Prairie. Surface, undulating; soil, fertile. Cap. Long Prairie. Pop. (1895) 17,674.

Todd, in Ohio, a twp. of Crawford co.

Todd, in Pennsylvania, a post-township of Huntingdon county, 22 miles S.W. of Huntingdon.—A township of Fulton co.

Toddle, (*tōd'el*) *v. n.* [Allied to *totter* and *topple*.] To walk with short, tottering steps, as a child.

Tod'dler, *n.* One who toddles; specifically, a young child just commencing to walk.

Todd's Creek, in Ohio, rises in Clinton co., and flows into the Little Miami in Warren co.

Todd's Valley, in California, a post-village of Placer co., 20 m. N.E. of Auburn.

Tod'dy, *n.* [Hind. *tāri*.] Another name for *ARRACK*, *q. v.*—A mixture of spirits and water sweetened, and, generally, drank hot;—it differs from grog in having a less quantity of spirit, and in being sweetened; as, a glass of whisky *toddy*.

Todleben, FRANCIS EDWARD (*tol-lai'ben*), a Russian general of engineers, b. at Mittau, 1818. When the Russian war broke out, in 1854, he was second captain in the corps of engineers destined for service in the field, and having distinguished himself under Gen. Schilders, in the campaign of the Danube, proceeded to the Crimea. Although Sebastopol was comparatively an open city, he succeeded, under the continuous fire of the enemy, in converting it into a fortress, which resisted for more than a year the efforts of the allied armies. Within twelve months he passed successively through the grades of captain, lieutenant-colonel, adjutant-colonel, major-general, and adjutant-general. During this memorable siege he was wounded in the foot, and was compelled to retire. He was intrusted by the emperor with the defence of Nicolaieff, threatened by the Allies; and afterwards sent to protect Cronstadt. After the peace of 1856 he devoted himself to scientific and literary studies. In 1877, he directed the operations against Osman Pacha before Plevna. He wrote a *History of the Defence of Sebastopol*. D. 1884.

Todmor'den-with-Wafsdan, a town of England, in Lancashire, 8 m. from Rochdale. Man. Cotton goods.

To-do, (*to-doo'*) *n.* Ado; fuss; commotion; bustle; hurry; stir; racket;—used colloquially, as, what means this *to-do*?

To'dos Santos Bay. See ALL SAINTS' BAY.

Tody, *n.* (*Zōl*.) The common name of the genus *Todus*, comprising Insectorial birds, principally natives of the warmer parts of America, and nearly similar to the Kingfishers in their general form. They are characterized by a peculiar flatness or depression of the beak, which is blunt at the end, and has a gape extending as far back as the eyes. They are birds of gaudy plumage and rapid flight; and feed on insects, worms, &c.

Toe, *n.* [A. S. and Icel. *tā*; Dan. *taa*.] (*Anat.*) One of the small members which form the extremity of the foot, corresponding to a finger on the hand.—The fore-part of the hoof of a horse, and of other hoofed animals.—The member of a beast's foot corresponding to the toe in man.

(*Mach.*) In a steam-engine, an arm fastened to a lifting rod to raise it.

—*v. a.* To touch or reach with the toes; as, to *toe* a mark.

Toed, (*tōd*) *a.* Having toes; as, narrow-toed.

Toffee, Toffy, *n.* A kind of candy made of molasses,

or sugar and butter, boiled down, and allowed to cool into hard, thin, flat cakes.

Toft, *n.* [A. S., Icel., and Dan.] A grove or thicket of trees, sheltering a homestead, and sometimes surrounding it. In old deeds it is commonly joined to *croft*, another Anglo-Saxon word meaning an inclosed field.

To'ga, *n.* [Lat.] (*Rom. Antiq.*) The name given to the principal outer garment worn by the Romans. As only freeborn citizens were allowed

to wear the *T*, it was considered an honorary garment, and at the same time distinguished the Romans from other nations. For this reason the Roman people were called *Gens togata* and *Togati*. The *T* was thrown over the left shoulder, and passed under the right arm, which thus remained free. It was sewed together from the breast downwards, and as the Romans wore no pockets, the hollow in the folds of the breast, called *sinus*, was used to put small articles in. The rank of a citizen was indicated by the color, the fineness of the wool, and the ornaments attached to his *T*. It was generally white. Rich persons wore wide, and poor persons narrow *T*. A pure white *T* was always worn by the candidates for an office; a black *T* was worn for mourning. The *T. praetexta* was worn by all superior magistrates and priests; it was ornamented with a purple stripe. This *T* was also worn by boys and girls; by the former till they were 17 years of age, and by the latter till their 14th year; after which periods the former changed it for the *T. virilis*, which was the simple white *T*. A conqueror, or other distinguished person celebrating a triumph, wore a *T* with gold and purple. The material of which the *T* was generally made was woollen cloth. Under the Empire, persons of rank had their *T* made of silk.

Tog'ated, Tog'ed, *a.* [Lat. *togatus*, from *toga*, a gown.] Gowned; dressed in, or wearing, a gown.

Together, (*-gēth'er*) *adv.* [A. S. *togedere*—*to*, and *gaderian*, to gather.] Gathered in one body or place; in the same place; as, they all live *together* in the same house.—In company; not apart; not in separation; as, those two friends are always seen *together*.—Contemporaneously; coexistently; in the same time; as, Shakespeare and Raleigh flourished *together*.—In or into union; into junction or a state of union; as, to mix things *together*.—In concert; in combination; as, the Allies made war upon Russia *together*.—*Together with*, in union with; in a state of mixture or association with; as, take the bad *together with* the good.

Tog'gel, Tog'gle, *n.* [From L. Ger. *stücker*, a little stick.] (*Naut.*) A double cone of wood, firmly fixed in a loop at the end of a rope. By passing the toggle through another small loop in another rope, a strong junction is easily formed, which can be cancelled in a moment. Toggels are very useful in bending flags for signals.

Tog'gery, *n.* [From Lat. *toga*, a gown.] A humorous colloquialism for clothes; garbure; articles of dress, or accoutrements; as, a swell got up in first-class *toggery*.

Tog'gle-joint, *n.* A knee-joint formed of two connecting bars brought into a straight line, in such a manner as to produce great end-wise pressure, when any force is applied to bring them into such a position.

Tol'lick'on Creek, in Pennsylvania, enters the Delaware from Bucks co.

Toil, *v. n.* [A. S. *tiolan*, *tilian*, to toil, labor, endeavor, take care of.] To labor; to work; to endeavor; to exert strength and forcible application with pain and fatigue of body or mind, particularly of the former, with efforts of some continuance and duration.

—*n.* Labor with pain and fatigue; labor or exertion that oppresses the body or mind; drudgery. (NOTE. *Toil* sometimes forms a prefix to certain self-explanatory compounds; as, toil-wasted, toil-worn, and the like.)

—*n.* [Fr. *toiles*, *toils*, nets, from *toile*, cloth, from Lat. *tela*, a web.] Any net or snare woven or meshed; any thread, web, or string spread for taking prey; as, a fly falls into the *toil* of a spider.

Toil'er, *n.* One who toils or labors with pain or arduous exertion.

Toil'et, Toil'ette, *n.* [Fr. *toilette*, from *toile*, cloth, from Lat. *tela*, a web.] A covering of cloth, or of linen, silk, or tapestry, spread over a table in a chamber or dressing-room.—Hence, a dressing-table.—Also, mode of dressing, or that which is formed or arranged by the operation of dressing; attire; costume; as, her *toilet* is elegant.—A bag or case for night-clothes.

Toilette-glass, a long mirror or looking-glass used in the arrangement of the toilet.—*Toilet-service*, *toilet-set*, the lavatory fittings or appointments of a dressing-room.—*Toilet-table*, a dressing-table.

To make one's *toilet*, to arrange or adjust one's dress with study or care.

Toil'ful, *a.* Involving much labor; toilsome; wearisome.

Toil'less, *a.* Free from toil.

Toil'some, (*-sūm*) *a.* Necessitating or involving toil; attended with fatigue or pain; laborious; wearisome; as, *toilsome* work, a *toilsome* journey.

Toil'somely, *adv.* In a toilsome manner; laboriously.

Toil'someness, *n.* State of being toilsome; laboriousness.

Toiros, (*tō'e-roce*) a seaport-town of Brazil, prov. of

Fig. 2511.
ROMAN TOGA.

Rio Grande do Norte, on the Bay of Toiros, 15 m. N. of Natal; pop. abt. 5,000.

Toise, (*toiz*) *n.* [Fr.] A French measure of length, containing six French feet, or 1.949040 mètres, equivalent to 6.3945925 English feet.

Tokay, a town of Hungary, co. Zemplin, at the confluence of the Bodrog with the Theiss, 113 m. N.E. by E. of Pesth; pop. 4,548. *T* derives its celebrity from its being the entrepot for the sale of the famous sweet wine of the same name, made in the hilly tract called the *Heyaltya*, extending 25 or 30 m. N.W. from the town. When new, *T* wines are of a brownish-yellow muddy color, which, when very old, changes to a greenish tint. The best qualities are extremely rich and luscious, but cloying. The finest and oldest varieties of *T* fetch immense prices.

Token, (*tō'ku*) *n.* [A. S. *tacen*, *tacn*; Du. *teeken*; Icel. *takn*.] A sign; something to represent or indicate another thing or event; a mark; an indication; as, "They have not the least *token* or show of the arts and industry of China." (*Heylyn*).—A souvenir; a keepsake; a memorial of friendship; some memento by which the regard of another person is to be borne in mind; as, keep this ring as a *token* of my esteem.—A piece of money current by sufferance, and not coined by authority; as, a penny *token*.

(*Print.*) Ten quires of 25 sheets of *perfect* paper, or 250 impressions.

Tokio, in Japan. See YEDDO.

Tol'bie, a plain of Germany, near Cologne, where Clovis I., king of the Franks, defeated the Alemanni, in 496.

Told, *imp.* and *pp.* of TELL, *q. v.*

Tole, *v. a.* To draw, entice, or allure, as by means of a bait.

Toledo, (*to-lai'do*), a city of Spain, in New Castile, cap. of the prov. of same name, 41 m. from Madrid. It is situated on the sides and top of a steep hill, washed by the Tagus. The principal attraction in *T* are its public edifices, the most celebrated of which is the Alcazar, or palace, a large structure at the top of a hill, built with solidity, and decorated with statues. *Manuf.* Woollens, linens, and silks; and the Toledo swords, so noted throughout Spain, and now made in a large building on the banks of the Tagus. The secret of tempering them is said to have been recovered, and they fetch a very high price. *T* is a place of great antiquity, and was successively the seat of government under the Goths, the Moors, and the kings of Castile. Pop. 28,342.

Toledo, in Iowa, a post-village and township, cap. of Tama county, about sixty-five miles E.N.E. of Des Moines.

Toledo, in Kansas, a post-village and township of Chase co., about 12 m. W. of Emporia.

Toledo, in Ohio, a thriving city, cap. of Lucas co., on the Maumee River, near its mouth at the W. extremity of Lake Erie, 112 m. W. of Cleveland; Lat. 41° 39' 30" N., Lon. 83° 32' W. It is one of the most important entrepôts in the commerce of the Great Lakes. Pop. in 1840, 1,322; in 1850, 3,829; in 1860, 13,768; in 1870, 31,693; in 1880, 50,143; in 1890, 81,434; in 1897, 97,600.

Tolent'ino, a town of Italy, in the former States of the Church, 12 m. from Macerata; pop. 10,642.

Tolerable, (*tōl'ur-a-bl*) *a.* [Fr., from Lat. *tolerabilis*.] That may be borne or endured; supportable, either bodily or mentally.—That may be tolerated; sufferable; allowable; as, a *tolerable* excuse.—Passable; moderately good or agreeable of its kind; not absolutely pleasing or excellent, but such as can be permitted or accepted without opposition, resentment, or repugnance; not mean or contemptible; as, a *tolerable* performance, a *tolerable* administration.

Tolerableness, *n.* State or quality of being tolerable.

Tolerably, *adv.* In a tolerable manner.—Passably; moderately well; not excellently or perfectly.

Tolerance, *n.* [Fr.; Lat. *tolerantia*.] Toleration; a feeling or habit which disposes a person to be patient and indulgent towards those whose opinions or practices differ from his own;—opposed to *intolerance*.

Tolerant, *a.* Indulgent; forbearing; favoring or exercising toleration; as, a *tolerant* theologian.

Tol'erate, *v. a.* [Fr. *tolérer*; Lat. *tolero*, *toleratum*.] To support; to endure; to bear with; to suffer to be or to be done without prohibition or hindrance; to allow or permit negatively, by not preventing; not to restrain or suppress; as, such conduct must not be for one moment *tolerated*.

Toleration, *n.* [Fr.; Lat. *toleratio*.] Act of tolerating; allowance given to that which is not wholly approved.—Appropriately, the allowance of religious opinions and modes of worship in a state, when contrary to or different from those of the established church or belief.

—Hence, freedom from bigotry or intolerance in judging of the opinions or doctrines of others, especially as expressed in religious matters.

Tol'ersville, in Virginia, a village of Louisa co., 45 m. W.N.W. of Richmond.

Toles'ton, in Indiana, a post-village of Lake co., about 30 m. S.E. of Chicago.

Tolima (*to-lee'ma*), a volcano of the Republic of Colombia, 18,270 feet high; Lat. 4° 46' N., Lon. 73° 37' W.

Toll, (*tōl*) *n.* [A. S.; Du. *tol*, duty, custom; Ger. *zoll*, excise, custom.] A portion of goods, money, &c., taken or exacted as a tax, impost, or duty; a tax paid or duty imposed for some liberty or privilege;—especially, a duty imposed on travellers and goods passing along public roads, bridges, over ferries, &c. It is also used to indicate the payment to the corporation of a town, or to the owner of a market or fair, upon sale of things tollable.—A certain quantity of grain taken by a miller as compensation for the grinding of the remainder.

Toll is sometimes taken by a man for every beast driven across his ground, and is then called *toll-traverse*; also, by a town for beasts going through it, or over a bridge or ferry maintained at its cost, and is then called *toll-thorough*. — *Toll-turn* signifies a toll paid at the return of beasts from market, as being unsold.

Toll, *v. a.* To take from, as a part of a general contribution or tax; to exact, as an impost or tribute.

—*v. n.* To pay toll; — also, to take toll, as a miller.

Toll, (*tól*), *v. n.* [Probably formed from the sound.] To sound or ring, as a bell, with strokes uniformly repeated at intervals, as at funerals, or in summoning assemblies, or to announce the death of a person.

—*v. a.* To cause to sound, as a bell, with strokes slowly and uniformly repeated, as for summoning public bodies or religious congregations to their meetings, or for announcing the death of a person, or to give solemnity to a funeral; as, to *toll* the passing bell. — To strike, or to devote by striking; as, the clocks *toll*ed the hour of midnight.

—*n.* A particular sounding of a bell, with strokes slowly and measuredly repeated.

Tollable, *a.* Liable to the payment of toll; as, *tollable* merchandise.

Tolland, in *Connecticut*, a N.N.E. co., bordering on Massachusetts; area, 403 sq. m. *Rivers*, Hop and Williamantic. *Surface*, hilly in the E. and level in the W. *Cap.* Tolland. *Pop.* (1897) 25,960.

—A post-village and township, capital of the above co., 20 m. E.N.E. of Hartford.

Tolland, in *Massachusetts*, a post-township of Hampden co., 112 m. W.S.W. of Boston.

Toller, *n.* A tax-collector; a toll-gatherer; one who tolls a bell.

Tolmen, *n.* (*Archæol.*) Same as *CROMLECH*, *q. v.*

Tolna, or *TOLNAN*, a town of Hungary, to the W. of the Danube, 12 m. from Koloosa; *pop.* 7,200.

Tolore, (*to'lore*), the largest of the Salibabo islands, in the Malay Archipelago, between Gilolo and Mindanao. It has a circuit of abt. 80 m. *Desc.* Diversified and well cultivated. Lat. 4° 28' N., Lon. 126° 55' E. *Pop.* unascertained, but considerable.

To'loro, or *TOLOSA*, in *Illinois*, a post-village of Champaign co., 137 m. S.W. of Chicago.

Tolosa, a town of Spain, in Biscay, at the confluence of the rivers Orio and Araxes, 42 m. from Bilbao. It stands in a narrow defile, and is inclosed by a wall entered by several gates. *Manuf.* Earthenware, woollens, hats, and leather. *Pop.* 7,300.

Toln, (*to'loo*), *n.* The concrete balsam of *Myrospermum totuiferum*. This substance is pale-brown; brittle in cold, but tenacious in hot weather; fragrant when heated; and entirely soluble in alcohol. It contains *cinnamic acid*. See *MYROSPERMUM*.

Toln', Santiago de, a seaport town of the Republic of Colombia, department of Magdalena, on the Gulf of Morrosquillo, 65 m. S. of Cartagena.

Toln'ca, a town of Mexico, 40 m. S.W. of the city of Mexico; Lat. 19° 16' N., Lon. 99° 21' W.; *pop.* abt. 14,000.

To'mah, in *Wisconsin*, a city and township of Monroe co., 40 m. N.E. of La Crosse. *Pop.* (1895) 2,458.

Tomahawk, *n.* [N. American Indian, *tomehagen*.] An Indian hatchet; a weapon of war used by the North American Indians. Those made by the natives are headed with stone; but they also use heads of metal, made in civilized countries, with the hammer-head hollowed out to suit the purposes of a smoking-pipe, the mouth-piece being in the end of the shaft.

—*v. a.* To cut or kill with a tomahawk; to scalp.

Tomahawk, in *Arkansas*, a township of Searcy county.

To'males, in *California*, a post-village and township of Marin co., 15 m. W. of Petaluma.

To'males Bay, in *California*, an inlet of the Pacific in Marin co., 14 m. long and 2 m. wide.

Tomaszow, (*tom-as'yo*), a town of Russian Poland, 20 m. from Rana; *pop.* 5,500.

Tomato, (*mā'to* or *mah-to*), *n.* (*Bot.*) See *LYCOPERSICUM*.

Tomb, (*toom*), *n.* [Fr. *tombe*; It. *tomba*, from Gr. *tumbos*, the place where a dead body is burned.] A heap or mound of earth raised over the dead; a grave; a pit in which the dead body of a human being is deposited. — Especially, a house or vault formed wholly or partly in the earth, with walls and a roof for the reception of the dead. — A tombstone; a monument erected to the memory of the departed.

—*v. a.* Same as *EXTOMB* or *INTOMB*, *q. v.*

Tombac, *n.* (*Metal.*) An alloy of copper and zinc, or a species of brass with excess of zinc; when arsenic is added, it forms *white tombac*.

Tombig'bee, or *TOMBECKEE*, a river which rises in Tishomingo co., Mississippi, and unites with the Alabama to form the Mobile River, 45 m. N. of Mobile, after a S.E.E. course of 450 m. It is navigable for large steamboats to Columbus, 366 m.

Tombless, (*tōm'les*), *a.* Without a tomb.

Tom'boy, *n.* [From *Tom*, dim. of *Thomas*, and *boy*.] A rough, rude, boisterous boy; also, and more generally, a hoiden; a romp; a skittish girl.

Tombstone, *n.* A monument; a slab or stone erected over a grave, to preserve record of the memory of the dead lying beneath.

Tom'bueto, more commonly *TIMBUCTOO*, a famous city of the Soudan, on the southern border of the desert of Sahara, and about 8 m. N. of the main stream of the Jobila or Upper Niger. Its site is elevated only a few feet above the river level, and is at present about 3 miles in circumference and without walls, though formerly it was a walled city covering a much larger area. The houses are principally mud hovels of one story, though one of its mosques is a large and impos-

ing building, built in 1325. *T.* enjoys a large trade, it being a principal station for the caravans which cross the Sahara, and for the trade from the west and south. The extension of French influence toward it has increased its importance. The exports comprise gold-dust, salt, kola-nuts, ivory, gums, dates, tobacco, and ostrich feathers; the imports, Manchester goods, mirrors, knives, tea, coral, &c. *T.* stands on the border of several tribal territories, as those of the Fulahs, Tuaregs, Berbers, 'Mandiugoes, &c. All these tribes are represented in its population of some 20,000, together with Jews, Arabs, and Arabized Africans. — *Hist.* *T.* is said to have been founded 1213 A. D., and first became known to Europeans in the 14th century, Ibu Batuta visiting it about 1330. It soon became the capital of an important Moorish monarchy, its inhabitants becoming zealous Mohammedans. After the overthrow of this government and the demolition of the walls of the city, it long remained a center of discord, being placed under tribute by the successively dominant tribes. Since 1884 the advance of the French in Senegambia has brought it under European influence, and it is included within the boundaries of the West African French territory.

Tom'cod, or *Frost'-fish*, *n.* (*Zoöl.*) A species of cod (*Morhua pruinosa*) of the North Atlantic, usually abundant in the mouths of the rivers after the first frosts of autumn. It is from 4 to 12 inches long, olive-green above, and silvery below.

Tome, *n.* [Fr., from Gr. *tomos* — *temno*, to cut off.] A book; a volume; as many writings as are bound in a volume, forming the part of a larger work. It is usually applied to a single bulky volume.

To'mentose, *Tomen'tous*, *a.* [Lat. *tomentum*, a stuffing of wool, hair, or feathers.] (*Bot.*) Downy; nappy; covered with flocculence; as, a *tomentose* stem.

Tom'fool, *n.* A ninny; a great fool; a silly trifler.

Tom'foolery, *n.* Gross absurdity; silly, foolish trifling. (*Low.*)

Tomhan'nock, in *New York*, a post-village of Rensselaer co., 15 m. N.N.E. of Troy.

Tomina, a town of Bolivia, dept. of Chuquisaca, 50 m. E. of Chuquisaca.

Tom'noddy, *n.* A fool; a dunce; a simpleton; a noddy. (*Zoöl.*) The *PUFFIN*, *q. v.*

To-morrow, (*mō'r'rō*), *n.* The day after the present. —*adv.* On the morrow; on the day after the present.

Tomp'ion, *n.* (*Ordin.*) A conical plug or stopper, placed in the muzzle of a gun to keep out the wet. — Also, the iron bottom to which grape-shot are fixed.

Tomp'kins, in *Illinois*, a township of Warren county.

Tomp'kins, in *Michigan*, a post-village and township of Jackson co., 90 m. W. of Detroit.

Tomp'kins, in *New York*, a central co.; area, 494 sq. m. Cayuga Lake penetrates S. almost to the center, and it is drained by Fall creek. *Surface*, undulating; soil, fertile. *Cap.* Ithaca. *Pop.* (1890) 32,923.

—A township of Delaware co.

Tomp'kinsville, in *Kentucky*, a post-village, cap. of Monroe co., 140 m. S.S.W. of Frankfort.

Tomp'kinsville, in *New York*, a post-village of Richmond co., on the N.E. of Staten Island, 6 m. S.W. of New York.

Tomsk, a town of Asiatic Russia, cap. of a district of same name, on the Tomi, 25 m. from its junction with the Obi; Lat. 56° 30' N., Lon. 84° 10' E. It is the centre of a large trade; *pop.* of district, 838,756; area, 330 sq. m; *pop.* of town, 25,000.

Tom's River, in *New Jersey*, rises in Monmouth co., and flowing S.E. enters Barnegat Bay from Ocean co. — A post-village, cap. of Ocean county, 40 m. S.E. of Trenton.

Toms'town, in *Pennsylvania*, a village of Franklin co., 15 m. S.S.E. of Chambersburg.

Tomtit, *n.* (*Zoöl.*) The *TITMOUSE*, *q. v.*

Ton, (*tōn*), *n.* [Fr., from Lat. *tonus*, tone.] The tone of society; the air of fashion; the prevailing mode; vogue; style. See *BOX-TON*.

Ton, (*tūn*), *n.* [A. S. *tanne*, a butt, a large vessel. See *TUN*.] (*Com.*) A denomination of weight equal to 20 cwt. or 2,240 lbs. avoirdupois. The *long ton* often used in wholesale dealings is equal to 21 cwt., or 2,352 lbs. avoirdupois. In the U. States the ton is commonly measured at 2,000 lbs., this being often called the *short ton*. — Also, an English measure of capacity, more usually written *TUN*, *q. v.*

(*Naut.*) Forty cubic feet; — by which the burden or carrying capacity of a ship is estimated; as, a steamer of 1,000 tons, or, in other words, a steamer that will carry 1,000 tons.

—The quantity of 10 bushels of potatoes. — The quantity of 8 sacks, or 10 barrels, of flour. — A certain quantity of timber, comprising, if round, 40 solid feet; if square, 54 feet.

Tonal'ity, *n.* (*Mus.*) A term used generally to denote that peculiarity which modern music possesses, in consequence of its being written in definite keys, thereby conforming to certain defined arrangements of tones and semitones in the diatonic scale.

Tonawan'da, in *New York*, a post-town and township of Erie co., 12 m. N. of Buffalo. *Pop.* (1897) 8,650. — A creek which rises in Wyoming co., and flowing N.W., falls into Niagara river 12 m. N. of Buffalo.

Ton'dern, a town of Prussia, in the former duchy of Schleswig, 37 m. from Schleswig. *Manuf.* Woollens, lace, and linen fabrics. *Pop.* 7,340.

Tone, (*tōn*), *n.* [Fr. *ton*; Sp. *tono*; Gr. *tonos*.] A sound or the character of a particular sound; as, a high or low *tone*, a sweet or harsh *tone*, a grave or acute *tone*. — A whine or whining sound; a kind of mournful strain of voice; an affected sound in speaking; an artificial in-

flexion of the voice. — In Rhetoric, accent, or rather a particular inflection of the voice, adapted to express emotion or passion; as, she spoke in a *loud tone*. — Mood; temper; disposition or state of mind; as, a person of a philosophical *tone*. — Tenor; drift; animus; spirit; ruling characteristic; as, the *tone* of your remarks is quite irrelevant to the subject. — Mode or prevailing features or style, as of manners, morals, and the like, in relation to a scale of merit or inferiority; as, an elevated *tone* of sentiments; he exhibited the *tone* of gentle breeding in his deportment, &c.

(*Mus.*) Literally, a fixed sound of a certain pitch; but the term is often used incorrectly to signify the distance between two sounds; as in the *major* and *minor* *T.* In speaking of the sound or voice of any instrument, with reference to its quality, the word *T.* is also used; as, a rich *T.*, a full *T.*, or a mellow *T.*

(*Med.*) That state of a body in which the animal functions are healthy, and possess full powers of performance.

(*Paint.*) The prevailing color of a picture, or its general effect, denominated *dull tone*, *bright tone*, &c., as the case may be. It depends first, upon the right relation of objects in shadow to the principal light; second, upon the quality of color, by which it is felt to owe part of its brightness from the hue of the light upon it.

—*v. a.* To intone; to utter in an affected tone. — To tune.

To *tone down*. To depress the tone or character of; to soften, diminish, or weaken the prevailing features of; to moderate or relax; as, to *tone down* exuberant spirits. — (*Paint.*) To bring the chiar-oscuro into harmonious blending of colors; — said of a picture. — To *tone up*, to heighten or make more intense in tone; to cause to give a higher tone or sound.

Tone, THEOBALD WOLFE, an Irish revolutionist, b. in Dublin, 1763, was the founder of the first club of "United Irishmen." Compelled to fly from Ireland, he came to the U. States, 1795. The following year, urgent letters from Ireland, stating that the country was ripe for a revolt, induced him to sail for France, where he induced the Directory to dispatch an expedition to Ireland, of which he was appointed adjutant-general. He was taken prisoner, and being sentenced to be hanged on Nov. 12, 1798, on the 11th he cut his throat with a penknife, and died in consequence a few days afterwards.

Toned, *a.* Possessing a tone; — mainly used in composition; as, high-toned, sweet-toned, and the like.

Tone'less, *a.* Without tone; hence, inharmonious.

Tone-syllable, *n.* An accented syllable.

Tonga Islands. See *FRIENDLY ISLANDS*.

Tongay, a town of Chili, on the Bay of Tongay, and abt. 200 m. N. of Valparaiso.

Tongres, (*to'gur*), a town of Belgium, on the Jaar, 9 m. from Liege. *Manuf.* Hats and chicory. *Pop.* 7,044.

Tongs, *n. pl.* [A. S. *tang*; pt. *tangan*.] An instrument of metal, consisting of two parts or long legs or shafts, joined at one end, by which tight hold is taken of anything, as of coals in the fire, heated metals, &c.; as, a pair of *tongs*, a smith's *tongs*.

Tongue, (*tung*), *n.* [A. S. *tung*.] (*Anat.*) An organ found in most animals. The human *T.* is a soft fleshy viscus, situated interiorly in the cavity of the mouth, very movable in every direction, and constituting the organ of taste, (*q. v.*) Its movements are chiefly subservient to speech and the prehension and swallowing of food; and besides taste, it is also highly endowed with the sensation of touch. The sensitive power of the *T.* resides in the membrane which covers it, the motor power in the interior. Indeed almost the entire substance of the *T.* is composed of muscular fibres running in different but determinate directions, many of which belong to muscles which enter at its base and under surface, and attach it to other parts. Hence the great variety and regularity of its movements, and its numerous changes of form. Between the several layers and bundles of muscular fibres, there is always found a considerable quantity of soft fatty tissue, and also a very fine areolar web. It is abundantly supplied with arteries, veins, and nerves, the last being, 1. The lingual or gustatory branch of the fifth pair; 2. The sublingual branch of the glosso-pharyngeal; and 3. The hypo-glossal nerve. The upper surface of the *T.* is covered all over with numerous projections or eminences named papillæ. Towards the tip and free borders they gradually become smaller, and disappear on the under surface. These are doubtless chiefly concerned in the spe-

Fig. 2512.

THE UPPER SURFACE OF THE TONGUE, SHOWING THE PAPILLÆ.

1, the raphe or mesial line; 2, 2, the lateral parts; 3, the tip; 4, 4, the sides or edges; 5, 5, the V-shaped mass of circumvallate papillæ; 6, the foramen cecum; 7, the mucous glands at the root of the tongue; 8, the epiglottis; 9, 9, the frenula epiglottides; 10, 10, the greater horns of the hyoid bone.

cial sense of taste, but they also possess in a very high degree that of touch.

—Hence, speech; discourse; sometimes fluency of speech. —Power of articulate utterance; speech, as well or ill used; mode of speaking; as, a parrot imitates the human tongue. —A language; the whole vocabulary of words used by a particular nation or nations; as, he speaks various tongues. —Speech; words, declamations, or declarations only; —as opposed to *thoughts* or *actions*; as, "Give thy thoughts no tongue." (*Shaks.*) —A nation, as distinguished by language; as, "all nations and tongues." —*Isa.* lvi. 18.

—That which resembles a tongue in position or form; as, (1.) A point or projection; or a projecting, slender appendage or fixture; as, the tongue of a buckle or of a balance. —(2.) A point or long narrow strip of land, projecting from the main into a sea or lake. —(3.) The taper part of a thing.

(*Naut.*) The upper main-piece of a mast composed of several pieces.

(*Arch.*) Same as GROOVE, *q. v.*

To hold the tongue, to be silent; to refrain from speaking.

Tongue, *v. a.* To chide; to scold. —To connect by means of a tongue and groove as, to tongue shingles together.

(*Mus.*) To modulate with the tongue, as notes, in playing the flute or other wind-instrument.

—*v. n.* To talk; to prate; to chatter; as, such stuff as madmen tongue. —*Shaks.*

Tongued, (*tūng'd*), *a.* Having a tongue; as, *tongued* like a loquacious woman.

Tongueless, (*tūng'les*), *a.* Lacking a tongue; —hence, mute; speechless.

Tongue River (*bug*), rises in Wyoming, about Lat. 44° N., Lon. 107° W., and falls into the Yellowstone, after a N.N.E. course of 300 miles.

Tongue-tie, (*tūng'ti*), *n.* (*Med.*) Impeded motion of the tongue in consequence of the shortness of the frenum, or of the fixed adhesion of its margins to the gums.

—*v. a.* [*Tongue and tie.*] To deprive of speech or the power of speech, or of distinct articulation.

Tonguy, (*tūng'y*), *a.* Over-ready with the tongue; voluble of speech; as, a *tonguy* boy. (*Colloq.* and vulgar.)

Ton'ie, *a.* [*Fr. tonique.*] Relating to tones or sounds; as, the *tonic* sol-fa system. —Increasing tension; —hence, imparting an accession of strength; as, *tonic* force.

(*Med.*) Improving the tone of the bodily system; imparting new strength; neutralizing functional debility, and restoring healthy and vigorous action; as, a *tonic* medicine.

—*n.* [*Lat. tonicum.*] (*Med.*) One of a class of medicines which gradually and permanently increase the tonicity of the system, strengthening and invigorating it when in a debilitated condition; they increase the appetite, assist digestion, and thus, by increasing nutrition, give firmness to the muscular and circulating system. The principal tonics are to be found among the vegetable astringents and bitters, the mineral acids, and the preparations of iron.

(*Mus.*) The principal or key-note of the scale. It is the chief sound upon which all regular melodies depend, and in which they, or at least the base accompanying them, should usually terminate.

Ton'ica, in *Ill.*, a p. v. of La Salle co., 9 m. S. of La Salle.

Tonic Sol-Fa. See *MUSIC*.

Ton'ical, *a.* Tonic; as, a medicine possessing *tonical* properties.

Tonicity, (*nīs'i-te*), *n.* (*Physiol.*) A condition of healthy tension of muscular fibres in the human body while at rest.

To-night, (*nīt'*), *n.* [*To and night.*] The present night, or the night after the present day.

—*adv.* On this night.

Ton'ish, *a.* In the ton; modish; stylish; fashionable.

Ton'ishness, *n.* Quality of being in the ton or reigning mode; fashionableness.

Ton'ka-bean, TONGA-BEAN, TONQUIN-BEAN, *n.* See DIPTERIX.

Tonnage, (*tōn'naj*), *n.* [*From ton.*] (*Naut.*) The number of tons weight which a ship can carry; the weight of goods carried in a ship or vessel; the cubical content or burden of a ship in tons; as, a line of packet-ships of an average *tonnage* of 3,000. —A duty or impost on ships, proportioned to the registered size of the vessels. —The aggregate amount of shipping belonging to a country estimated by tons; as, the *tonnage* of the U. States.

Tonnains, (*ton'nain*), *a* town of France, dept. of Lot-and-Garonne, on the Garonne, 55 m. from Bordeaux. *Manuf.* Woollens, cigars, &c. *Pop.* 8,476.

Tonnerre, (*ton-nair'*), *a* town of France, dept. of the Yonne, on the Armengon, 18 m. from Auxerre. *Manuf.* Glass, hats, &c. *Pop.* 5,314.

Tonometer, *n.* [*Gr. tonos*, a stretching, a tone, and *metron*, measure.] An instrument whereby tones or sounds are measured.

Ton'ous, *a.* Full of tone or sound.

Ton'quin, the most northerly prov. of COCHIN-CHINA, *q. v.*

Ton'quin, (*Gulf of*), an inlet of the China Sea, 150 m. in width, and 300 m. in length. It is bounded by Cochin-China on the W., by China on the N., and by the Chinese prov. of Quang-Tung and the island of Hainan on the E.

Ton'sil, *n.* [*Lat. tonsillæ*, tonsils.] (*Anat.*) One of the two complex glands, situated one on each side of the fauces, between the anterior and posterior arches of the soft palate. In relation to the surface of the neck, the *T.* corresponds to the angle of the lower jaw, where it may be felt beneath the skin when it is enlarged.

They are of an elongated oval form, usually about six lines in length, and four in width and thickness, but they vary much in size in different individuals. Each is composed of a number of smaller glands, and presents a number of orifices opening on the surface of the mucous membrane. The nature of the secreted fluid is not certainly known, but it bears a general resemblance to saliva, and doubtless serves a similar purpose. The *T.* are largely supplied with blood-vessels and nerves.

Tonsile, (*ton'sil*), *a.* [*Lat. tonsilis.*] That may be clipped or shorn.

Ton'silar, **Tonsil'ic**, *a.* (*Med.*) Relating to the tonsils.

Tonsil'itis, *n.* (*Med.*) Same as QUINSY, *q. v.*

Tonsor'ial, *a.* [*From Lat. tonsor*, a barber, a shearer.] Pertaining, or relating, to a barber, or to the operation of shaving.

Tonsure, (*tōn'shūr*), *n.* [*Fr.* from *Lat. tonsura*, from *tondeo*, *tonsus*, to shear.] The act of clipping the hair, or of shaving the head; or the state of being shorn.

(*Ecll.*) The crown or space on the top of the head kept shaven by persons in orders, or belonging to religious bodies in the Roman and other churches. *T.* is said to be of two kinds: one denominated after St. Paul, across the whole front of the head from ear to ear, in use in the Eastern churches (and those of Britain and Ireland); the other from St. Peter, the ordinary Roman Catholic. *T.* was first rendered obligatory by the Fourth Council of Toledo, A. D. 633. The *T.* is larger in proportion to the rank of the person in the church. It is supposed to represent the crown of thorns placed on the head of Christ when before Pilate.

Tonsured, (*tōn'shōord*), *a.* Having the tonsure; shaven; shorn; —hence, bald; as, a *tonsured* head.

Tonti, in *Illinois*, a post-village of Mariou co., 14 m. N. E. of Centralia.

Tontine, (*ton-teen'*), *n.* [*Fr.*; said to be from its inventor *Tonti*, an Italian.] A partnership composed of creditors or recipients of perpetual or life-rents or annuities, formed on the condition that the rents of those who may die shall accrue to the survivor, either in whole or in part.

Too, *adv.* [*A. S. tō*. See *To*.] More than enough; over; —noting addition or excess; as, *too* many, *too* much, *too* long, *one too* many. —Also; moreover; likewise; in addition; as, let him come *too*.

Toobonai Island, (*to-bon'ai*), one of the Society Islands, in the S. Pacific Ocean; Lat. 23° 25' S., Lon. 210° 37' E.

Tooele, in *Utah*, a W. co., bordering on Nevada; area, 6,240 sq. m. It is traversed by the Humboldt or St. Mary's river. *Lakes.* Great Salt Lake on the N.E. border, and Pyramid Lake. *Surface*, diversified by mountains and deserts. *Cap.* Tooele. *Pop.* (1895) 4,428.

—A post-village, cap. of the above co., 30 m. S.W. of Salt Lake City.

Took, *imp.* of TAKE, *q. v.*

Tool, *n.* [*A. S. tōl*, *tool*, *tohl*.] An instrument of manual operation, particularly such as are used by artisans, mechanics, craftsmen, &c.; an implement of labor, as a hammer, saw, plane, chisel, and the like; —also, a cutter or other part of an instrument or machine that dresses or finishes off work; as, a set of carpenter's tools, a planing tool, &c. —Hence, any instrument of use or service; —especially, a pistol employed in duelling; as, each second carried the respective tools. —A person employed as an instrument or agent by another person; —used in an ill sense; as, he found him to be the most suitable tool for the purpose.

—*v. a.* To shape, form, dress, or finish with a tool; as, the *tooled* binding of a book.

Toon, **Toon'a**, *n.* (*Bot.*) A tree of the order *Cedrelaceæ*. It is one of the largest trees in the East Indies.

Toot, *v. a.* [*D. toeten*, *tuilen*.] To make a particular sound, by bringing the tip of the tongue in contact with the root of the upper teeth; also, to sound a horn in a like manner.

Toot, **Tootle**, (*toot'l*), *v. n.* To canse to sound, as a horn; —hence, to blow; to wind; to sound; as, to *toot*, or *tootle*, the horn or bugle.

Tooter, *n.* One who toots or plays upon a horn or bugle.

Tooth, *n.*; *pl.* TEETH. [*A. S. toth*, *pl. teth*; *Lat. dens*; *Gr. odous*, *odontos*.] (*Anat.*) One of the hard bodies attached to parts of the mouth or beginning of the alimentary canal, and peculiar to vertebrate classes of animals. They are principally adapted for seizing, tearing, dividing, pounding, or grinding the food; but in some they are modified to serve as weapons of offence and defence; in others, as aids to locomotion, means of anchorage, instruments for uprooting or cutting down trees, or for the transport and working of building materials. They are characteristic of age and sex; and in man they are also subservient to beauty and speech. In man, every tooth consists of two hard parts, —one external, white, uniform, somewhat like ivory; the other internal, somewhat like the compact structure of bone. The former, which is a covering of enamel, is very close in texture, perfectly uniform and homogeneous, yet presenting a fibrous arrangement. It is seen only at the crown of the tooth, the upper and outer part of which consists of this substance. The internal portion of the tooth and the root consists of close-grained bony matter, as dense as the compact walls of the long bones. In the interior of the bony part of each tooth is a cavity, which descends into the root and communicates at its extremity with the outer surface by openings corresponding to the number of branches into which the tooth is divided. This cavity, which is large in young or newly formed teeth, and small in those which are old, contains a delicate vascular membrane. It presents two surfaces, —an exterior, adhering to the bony

surface of the dental cavity by minute vessels, and an interior, free, and, so far as can be determined, of a body as minute, resembling a closed sac. In the child, the teeth usually begin to cut through the gum about the sixth or seventh month after birth; and the temporary or deciduous set of teeth, 20 in number, are generally

Fig. 2513.

A, the separate human teeth as they occur in the half jaw of the adult; B, the human teeth *in situ* in the upper jaw; a, a, incisors; b, b, canine; c, c, premolars; d, d, true molars.

completed by the end of the third year. The period of dentition is usually a time of disordered health to children, especially if anything occurs to prevent the ready yielding of the gum to the pressure of the tooth below. The deciduous teeth begin to fall out about the age of seven or eight, and are replaced by the adult or permanent set. These are 32 in number, or 16 in each jaw; namely, 4 incisors or front teeth, 2 cuspidi or canine teeth, 4 bicuspidi, and 6 molars. The last two molars are called *deutes sapientie*, or wisdom-teeth, on account of their not making their appearance till about the age of eighteen or twenty, or later, when one is supposed to have reached the years of discretion. The teeth are subject to decay, and require to be kept clean by frequent brushing. See TOOTHACHE.

—Hence, taste; palate; gustatory sense; as, to have a dainty *tooth*. —A tine; a prong; a cog; something pointed or resembling an animal tooth, and corresponding to such in shape, position, or office; as, the *tooth*, or *teeth*, of a comb, saw, file, rake, wheel, and the like.

In spite of one's teeth. In defiance of objection or opposition; in the face of all antagonistic efforts; as, I will have my way in spite of your teeth. —In the teeth. Face to face; in direct front or opposition; as, we sailed right in the wind's teeth. —To show the teeth. To threaten; to menace; as, she shows her teeth, but dare not bite. —To cast in the teeth. To insult by open reviling; to retort reproachfully; as, to cast a stigma in one's teeth. —With the skin of the teeth. A metaphorical expression, having a but vague definition. It is generally understood to imply the enamel of the teeth, and occurs in Job xix. 20: "I am escaped with the skin of my teeth." —Tooth and nail. By biting and scratching; by all available means; by one's whole efforts; as, to fight tooth and nail. —Tooth-ornament. (*Arch.*) Same as DOG-TOOTH, *q. v.* —To one's teeth. Directly to one's face; in open antagonism or defiance; as, I told him to his teeth my opinion of him.

—*v. a.* To furnish with teeth; as, to *tooth* a rake. —To indent; to jag; to cut into teeth; as, to *tooth* a saw or comb. —To interlock.

Toothache, (*āk*), *n.* (*Dentistry.*) A well-known and very painful disease, situated in the teeth, —most frequently in the molars, and more rarely in the incisors. The pain sometimes reaches up to the eyes, and sometimes backwards to the cavity of the ear. It may arise from various causes; but most frequently it is owing to some decayed tooth. Often, however, it is a mere rheumatic affection arising from cold. It attacks persons in all periods of life, but is most frequent in the young and plethoric. When the pain takes place in a decayed tooth, it is owing to the admission of cold air irritating the exposed nervous fibrils in the hollow or carious part; hence, a frequent cure of *T.* is by destroying the nerve. The application of opium, chloroform, or oil of cloves to the part often affords relief. When there is much inflammation, bleeding the gums, blisters behind the ears, and purgatives are necessary. When the disorder proceeds from rheumatism, which will be known by the pain being more diffused and affecting the muscles about the jaw, fomentations, blisters behind the ears, and the other remedies for rheumatism, are to be employed. Frequently, however, every means fails, and the only remedy left is to draw the tooth. Filling the tooth with gold is very serviceable in protecting the nerve from injury and preventing further decay; but this should never be had recourse to when there is any pain or inflammation present, as its tendency, by pressing upon the nerve, is to aggravate them.

Tooth-drawing, *n.* Same as DENTISTRY, *q. v.*

Toothed, *p. a.* Having teeth or jagged projections. (*Bot.*) Dentate.

Tooth-edge, (*-ēj*), *z.* The disagreeable sensation excited by rasping or grating sounds, and by contact with certain acidulous or noxious substances.

Tooth'ing, *n.* (*Arch.*) Bricks alternately projecting at the end of a wall, in order that they may be banded into a communication of it when the remainder is carried up.

Tooth'ing-plane, *n.* A plane whose tool is serrated, for the purpose of raising asperities on surfaces.

Tooth'-key, *n.* An instrument used to extract teeth, by a motion resembling that of the turning of a key.

Tooth'-pick, **Tooth'-picker**, *n.* [*Tooth* and *pick*.] An instrument for clearing the teeth of substances between them.

Tooth'-powder, *n.* A DENTIFRICE, *q. v.*

Tooth-rash, *n.* (*Med.*) Same as RED-GUM.

Tooth'some, *a.* Grateful or agreeable to the taste; palatable; as, *toothsome* viands.

Tooth'-wort, (*-wurt*), *n.* (*Bot.*) See LATHREA and DENTARIA.

Top, *n.* [*A. S.*, *Dan.*, *Fris.*, and *D.*; *Swed.* *topp*.] The highest part of anything; the upper end, edge, or extremity; the apex; the summit; the upper side or surface; as, the *top* of a hill, the *top* of a mountain, the *top* of a tower, the *top* of a tree, &c. — The utmost or most elevated degree; as, fame is the *top* of some men's desires. — The chief; the highest person; the most prominent individual among many; as, "the *top* of zealots." (*Milton*). — Highest rank; most elevated position or condition; utmost attainable place; as, a man at the *top* of his profession, a student at the *top* of his class. — The crown or upper surface of the head; the hair on the crown of the head; the forelock; as, he is a brave fellow from *top* to toe. — The head of a plant; as, the *top* of a cabbage.

(*Woolen Manuf.*) The combed wool ready for the spinner, from which the shorts and dust have been taken out.

[*Fr.* *toupie*, probably from *Belg.* *toppen*, to turn.] A pear-shaped toy, which children play with by whirling it on its point or axis, continuing the motion with a whip; — also called a *spinning-top*.

[*Icel.* *toppr*.] (*Naut.*)

A sort of platform surrounding the head of the lower mast of a ship, and projecting on all sides (*f. f.*, Fig. 2514).

— *a.* Being on the top or summit; highest; most elevated; as, the *top* stone of a building.

— *v. n.* (*imp.* and *pp.* TOPPED, (*töpt*).

To rise aloft; to be eminent; as, some letters *top* it over their fellows. — To predominate; as, *topping* uneasiness. — To rise above others; to surpass; to excel.

— *v. a.* To cap; to tip; to cover on the top; as, a building *topped* with a cupola. — To rise over or above; as, he *topped* my thought. — To outgo; to surpass; as, some persons *top* others in assurance. — To crop; to lop the head or upper part of; as, to *top* a rose-tree. — To perform eminently; as, he *tops* his part. — To raise, as one end of a yard, in such a manner as to make it higher than the other.

To *top off*. To finish or perfect by putting on the top or uppermost part of; as, to *top off* a building; — hence, to complete.

Topa'lias, or COPAIS, a celebrated lake in Boeotia, the largest in Greece, 47 m. in circumference. It is formed by the Cephissus and other streams, which descend from the surrounding hills.

Toparchy, *n.* [*Lat.* and *Gr.* *toparchia*; *Fr.* *toparchie*.] (*Anc. Hist.*) A small state or lordship, consisting only of a few cities or towns; or a petty country under the sway of a ruler called a *toparch*. Thus, Judea was anciently divided into ten toparchies.

Top'-armor, *n.* (*Naut.*) On shipboard, a railing on the top, sustained by stanchions, and supporting netting.

Topan, *n.* (*Zool.*) The Hori-bill. See BUCERIDE.

Topaz, *n.* [*Fr.* *topaze*; *Gr.* *topazos*, the yellow or oriental topaz; *Ar.* and *Hind.* *topaz*.] (*Min.*) A silicate of alumina, containing fluorine. It occurs crystallized and in water-worn pebbles, and is harder than quartz, but less hard than ruby. It is limpid and transparent, colorless or yellow, or of a wine-color, blue, green, &c. When heated, the Brazilian topaz becomes rose-red, and is sometimes passed off in this state as a ruby. The Saxon topaz loses its color by heat. When without flaws, and of a good color, it is much employed in jewelry. The Saxon is usually paler than the Brazilian, which often has a pinkish hue. The Siberian topaz is usually colorless, and the Scotch has a blue tinge.

(*Her.*) The color or (gold). See Fig. 1274.

Topaz'olite, *n.* [*Fr.* from *Gr.* *topazos*, and *lithos*, stone.] (*Min.*) A honey-yellow variety of lime-garnet.

Top'-boots, *n. pl.* A pair of riding-boots, having upper bands of light-colored leather.

Top'-cloth, *n.* (*Naut.*) On ships of war, a piece of canvas which serves to cover the hammocks lashed to the top, in time of action.

Top'-draining, *n.* (*Agric.*) Act, art, or practice of draining the surface of land.

Top'-dress, *v. a.* (*Agric.*) To apply a dressing of manure or compost to, as the surface of soil.

Top'-dressing, *n.* (*Agric.*) A dressing of manure applied to the surface of land.

Toppe, *v. n.* [Probably from *Ger.* *topf*, a pot, in *L. Ger.* *topp*.] To drink to excess; to indulge in a debauch of strong liquors.

To'per, *n.* One who topes; a tippler.

Fig. 2514. — TOP.

Top'e'ka, in *Illinois*, a post-village of Mason co., 17 m. N.E. of Havana.

Top'e'ka, in *Kansas*, a city, cap. of the State, and seat of justice of Shawnee co., on the Kansas river, about 50 m. S.W. of Leavenworth. Pop. (1897) 35,500.

Top'ful, *a.* [*top* and *full*.] Full to the top or brim; as, a person *topful* of self-conceit.

Top'-gallant, *n.* (*Naut.*) Designating that mast of a ship which is above the topmast, and also the sail, yards, braces, &c., upon it.

Tophaceous, (*-fū'shūs*), *a.* [*Lat.* *tophaceus*, from *tophus*.] Gritty; stony; rough; sandy; as, a *tophaceous* soil.

(*Med.*) Relating or belonging to tophus; as, a *tophaceous* concretion.

Tophet, **Topheth**, (*tō'fēt*), *n.* [*Heb.*, an unclean place.] (*Script.*) Originally, a garden or pleasure of the Jewish kings, which some among them defiled by the worship of Baal, and by human sacrifices offered to Moloch. The name was thenceforward used to denote any polluted or unclean place; as, "Tophet, the type of hell." — *Milton*.

Tophus, **Tofus**, **Toph**, (*tō'fus*), *n.* [*Gr.* *tophos*, sandstone.] (*Med.*) A small tumor upon a bone; also, a gouty deposit in the smaller joints.

(*Min.*) A name given to a porous deposit of calcareous matter from water; tufa.

Top'ie, *n.* [*Fr.* *topique*; *Lat.* *topicus*, from *Gr.* *topos*, a place.] Any subject of discourse or argument; a probable argument drawn from the several circumstances and positions of a fact; also, a matter treated of; a subject, as of conversation or meditation; a general head; a point or matter of discussion; as, they spoke on desultory *topics*. — An argument or reason; as, "*topics* brought from Scripture and reason." — *Swift*.

(*Rhet.*) A commonplace of argument or oratory.

— *pl.* A system or scheme of argumentative or oratorical forms or commonplaces; as, Aristotle's *Topics*.

(*Med.*) A remedy to be applied outwardly to a particular part of the body, as a plaster, a blister, a poultice, and the like.

Top'ie, **Top'ieal**, *a.* Pertaining or having reference to a place or part; local; limited; as, a *topical* application. — Pertaining or relating to a topic or subject of discourse, or to a general head; consisting of a topic or topics; as, *topical* matters. — Not demonstrative or conclusive, but simply probable; as, *topical* or probable arguments.

Top'ieally, *adv.* Locally; with limitation to a place; with application to a particular part.

Top'less, *a.* Having no top; as, a *topless* height.

Top'litz, or TOPPLITZ, a town and watering-place of Bohemia, and next to Carlsbad the most popular place of its kind in Germany. It is pleasantly situated on the Saubach, a small stream in the valley between the Erzgebirge and Mittelgebirge mountains, 47 m. N.W. of Prague. Pop. 3,000, increasing to 16,000 or 17,000 in the height of the season, in July and August.

Top'man, *n.*; *pl.* TOPMEN. Among sawyers, the man who stands above the saw-frame.

(*Naut.*) A sailor on shipboard on duty in the top.

Top'mast, *n.* (*Naut.*) On shipboard, the second mast, or that which is next above the lower mast, and below the top-gallant mast.

Top'most, *a.* Highest; uppermost; of greatest elevation; as, the *topmost* branch of a tree.

Topog'rapher, **Topog'raphist**, *n.* One who is versed or skilled in topography.

Topog'raphie, (*-grā'fik*), **Topog'raphical**, (*grā'f-i-k'l*), *a.* [*Fr.* *topographie*.] Pertaining or having reference to topography.

Topographical surveying. That department of the art of surveying which has reference to the process of determining and delineating upon a plane surface the contour or figure of any portion of the earth's superficies.

Topog'raph'ically, *adv.* In a topographical manner; by way of topography.

Topog'raphy, (*-ra'fē*), *n.* [*Fr.* *topographie*; *Gr.* *topos*, a place, and *graphē*, description.] Strictly, the description of a place or locality, or the science of describing places, as distinguished from *chorography*, or the description of a district, and from *geography*, the description of the earth.

Topol'ogy, (*-jē*), *n.* [*Gr.* *topos*, place, and *logos*, treatise.] Art of, or scheme devised for, aiding the memory by association of the subject with something analogous thereto. (*R.*)

Top'ping, *p. a.* Surpassing; being of superior elevation. — Hence, conveying an assumption of loftiness or superiority. — Fine; gay; gallant; showy. (*Low.*)

— *n.* Act of cutting off the top. — (*pl.*) That which is parted from the hemp in the process of hutchelling.

(*Naut.*) The act of hauling one end of a yard higher than the other.

Top'ping-lift, *n.* (*Naut.*) A tackle for raising the outer end of a gaff or boom.

Top'pingly, *adv.* In a proud or lofty manner.

Topple, (*tō'pl*), *v. n.* [*dim.* of *top*.] To fall, as from a top or height; to fall forward or prone; to pitch or tumble down; as, a high stool *topples* over.

Top'-proud, *a.* Proud to the superlative degree; as, a *top-proud* fellow.

Top'-sail, *n.* (*Naut.*) A sail extended across a ship's topmast, and next below the top-gallant sail.

Top'-sawyer, *n.* The uppermost sawyer in a pit; hence, one eminent in a line of business.

Tops-and-bottoms, *n. pl.* Small rolls of dough, baked, cut in halves, and then browned in an oven, used for infants' food.

Tops'field, in *Maine*, a post-township of Washington co., 132 m. N.E. of Augusta.

Topsfield, in *Massachusetts*, a post-vill. and township of Essex co., 20 m. N.N.E. of Boston.

Tops'ham, in *Maine*, a post-village and township of Sagadahoc co., 32 m. S.W. of Augusta.

Topsham, in *Vermont*, a post-township of Orange co., 20 m. S.E. of Montpelier.

Top'-shaped, *a.* Having the form of a child's top. (*Bot.*) Turbinate.

Tops'man, *n.*; *pl.* TOPSMEN. The chief driver of a herd of cattle. — A topman, or top-sawyer.

Top'-soil, *n.* The upper surface of the soil.

Top'-stone, *n.* The upper stone, as of a building, or a pile of stones, &c.

Top'sy-turvy, *adv.* [From *top*, and *A. S.* *torfian*, to throw, meaning to throw over.] With the top or head in an inverted position; upside-down; as, in the confusion, everything was turned *topsy-turvy*.

Top'ton, in *Pennsylvania*, a post-borough of Berks co., 19 m. N.E. of Reading.

Toque, (*tōk*), **Toquet**, (*to-kē*), *n.* [*Fr.*] A kind of bonnet or covering for the head.

Torch, *n.* [*Fr.* *torche*; *It.* *torcia*.] A large candle; a flambeau; a light or luminous agent formed of some combustible substance, as of resinous wood, or of twisted flax, hemp, &c., soaked with tallow, naphtha, or other inflammable substance; a link.

Torch'-bearer, *n.* [From *torch* and *bear*.] One who carries a torch; a link-boy or link-man.

Torch'-light, (*-līt*), *n.* The light of a torch or flambeau, or of torches. — A light kindled to supply artificial illumination, as at night; as, we buried our dead by *torch-light*.

Torch'-thistle, (*-thī's'l*), *n.* (*Bot.*) A plant of the genus *Cirsium*, order *Cactaceae*.

Tor'da, a town of Austria, in Transylvania, 20 m. from Klausenburg; pop. 8,192.

Tordesil'las, a town of Spain, on the Douro, 18 m. from Valladolid; pop. 4,416.

Tore, *imp.* of TEAR, *q. v.*

Torent'ic, *a.* [*Gr.* *torēntikos*, belonging to work in relief.] (*Sculp.*) A term applied to such objects as are executed with high finish, delicacy, and polish; but properly to all figures in hard wood, ivory, &c., and often restricted to metallic carvings or castings in basso-relievo. But in its widest sense it signifies sculpture in any style, or in any material, whether modelled, carved, or cast.

Torgan, (*tor-gow*), a town of Prussian Saxony, on the Elbe, 46 m. from Dresden. Here, Nov. 11, 1760, Frederick II. of Prussia obtained a victory over the Austrians.

Torinese, (*tō-reen-ē'z*), *n.* (*Geog.*) A native or inhabitant of Turin; — plurally, the people of Turin.

Torment, *n.* [*Fr.* *tourment*; *Lat.* *tormentum*, from *torqueo*, to twist.] The utmost degree of misery, either of body or mind; acute pain; anguish; torture; excruciating distress or agitation. — That which produces pain, anguish, vexation, or misery.

— *v. a.* To subject to torment; to put to acute pain or anguish; to inflict intolerable misery upon, whether mentally or physically; as, to *torment* a prisoner by the torture. — To afflict; to distress; to cause pain to; as, a person *tormented* with the toothache. — To harass; to tease; to vex, as by petty annoyances, importunity, and the like; as, one is quite *tormented* by the printer's devil wanting copy. — To throw into great perturbation or agitation.

Torment'er, *n.* One who torments; that which torments.

Torment'il, *n.* (*Bot.*) A popular name for the genus *Potentilla*, *q. v.*

Torment'ingly, *adv.* In a tormenting manner.

Torment'or, *n.* One who, or that which, torments; one who applies penal tortures; as, "Let his *tormentor*, conscience, find him out." — *Milton*.

(*Cookery*.) An instrument used in broiling steaks or bones, de-villing kidneys, fowls, &c.

Torment'ress, *n.* A female who inflicts torment, as the tormenting wife of a quiet man.

Tor'mes, a river of Spain, rising in the prov. of Salamanca, and, after a course of 150 m., falling into the Douro on the border of Portugal.

Tor'mina, *n. pl.* [From *Lat.* *tormen*.] (*Med.*) Same as GRIPES, *q. v.*

Torn, *pp.* of TEAR, *q. v.*

Torna'do, *n.* [*Sp.* *torrada*, return from a journey, from *tornar*, to turn or return.] A hurricane; a tempest; a violent gust of wind; — more especially applied to those circular hurricanes prevalent in the W. Indies; on the W. coast of Africa, about the time of the equinoxes; and in the Indian Ocean, about the changes of the monsoon. *T.* are usually accompanied with thunder-storms and torrents of rain, and are generally of short duration.

Tor'nea, a small town in the N. of Finland, at the N. extremity of the Gulf of Bothnia. It stands on a small island in the river Tornea; Lat. 65° 50' N., Lon. 24° 10' E. It is often visited in summer by travellers, anxious to witness the singular spectacle of the sun remaining above the horizon both night and day at the summer solstice.

Tor'o, a small island in the Mediterranean, off the S.W. coast of the island of Sardinia.

Tor'o, a city of Spain, prov. of Leon, on the Douro, 19 m. from Zamora; pop. 7,608.

Tor'o, (*Bo'ca Del*), "Bull's Mouth," in Cen. America, a strait connecting Chiriqui lagoon with Caribbean sea.

Torok-Betze, or TURKISH-BETSCHÉ, (*tor-ok-bets*), a town of Hungary, on the Theiss. Pop. 5,400.

Toron'to, a city, and since 1867 the cap. prov. Ontario and York co., on the N. shore of Lake Ontario, and the cap. of Upper Canada from 1794 to 1841, and of the

united provinces, with Quebec, alternately, until 1858. *T.* contains many superior public and private buildings; among the former are the university, government house, custom house, and post-office, opera-house, city hall, St. Lawrence hall, several colleges, free schools, and the legislative building. *T.* has an excellent harbor, is prettily situated and carries on an extensive trade; manufactures annually over \$45,000,000. *Pop.* (1897) 205,200.

Toron'to, in Iowa, a post-town of Clinton co.

Toropez', a town of Russia, on the Toropa; *pop.* 9,200.

Torose', **To'rous**, *a.* [Lat. *torosus*, from *torus*.] (*Bot.*) Protuberant; as, a *torose* petiole.

Torped'inous, *a.* Pertaining to, or presenting the characteristics of, a torpedo; stupefying; exercising a benumbing or repellent influence.

Torpe'do, *n.*; *pl.* TORPEDOES. [Lat., from *torpeo*, to benumb.] (*Zoöl.*) A genus of fishes, family *Raidae*. The *T.*, so called in consequence of the electric shock which the fish diffuses through any one who touches it, inhabits the European seas, is flat, and of a nearly cylindrical form; the skin is smooth, and of a dark-brown color above and light beneath; and the tail is short, with the dorsal fins placed in close proximity (Fig. 2515). The electrical apparatus with which this creature is endowed is formed of two organs lodged on either side of the head, and encompassed by the gills and the anterior border of the pectoral fins.

Fig. 2515. — COMMON TORPEDO.

(*Navy.*) An explosive agent arranged with mechanism especially for blowing up ships, invented by Mr. D. Bushnell, of Connecticut, in 1776; first efficiently devised by Fulton, 1805; subsequently perfected by Colt, and used by the Russians in the Crimean War, 1854; very largely used by the Confederates during the U. S. Civil War, and now employed by all maritime nations as a weapon of defence and offence. Those employed for defence are mostly of the submarine-mine type, for use in harbors and water-channels, where they may be exploded either by direct contact or by electric connection from the shore, upon the intrusion of a hostile vessel. Those employed for offence are usually dirigible (that is, steerable) or locomotive, and are either directed from the shore or launched from vessels known as torpedo boats. (For a complete description of these, see TORPEDO and TORPEDO BOAT, in SECTION II.) The submarine-mine class of torpedoes may be divided into (1) those that explode by direct contact of superposed rods or feelers; (2) those fired by electricity, on contact; (3) those fired by electricity by observation from the shore. In a common form of the first class, when a ship impinges on the feelers a rod is deflected from the perpendicular; a ring at its lower end breaks a glass tube, and an acid acting chemically on lime generates great heat, and explodes the powder. In the second class of submarine-mine torpedoes, a covered wire is laid from a battery on shore to the inside of a metal cylinder in the middle of the torpedo. The other pole of the battery is connected by a wire with the water. An iron rod rises from the center of the torpedo, with attached feelers. Its lower end has a certain play within the metallic cylinder. When an enemy's ship approaches, the shore communication is made complete by attendants on the land; if the ship strike the feel-rod, the lower end is brought against the side of the cylinder, and from the strong conductivity of the water the entire circuit is immediately formed, when the apparatus explodes. These are best adapted for rivers or parts near the shore. In the third class of submarine mine there are two observers at separate points in the wire circuit connecting the torpedo with the electric battery, who look along lines intersecting at the machine. Each maintains the electric connection at his station so long as an enemy's ship is over his line of view, and when both observers simultaneously connect, the electric circuit becomes complete, and the powder is blown up, the ship being of necessity where the lines of sight cross.

Simple forms of torpedoes are also made for the development of flow in oil wells. (See OIL WELLS.) They serve both to start a successful flow, and to revive the flow after it ceases, by breaking up the oil-sand about the lower part of the well, and creating numerous fissures leading to the central point. The most common way of exploding such torpedoes is to lower them into place, and drop a plunger from above, but they have also been exploded by time-fuses, and by electrical action from a wire. Nitro-glycerine is the usual explosive employed in torpedoing oil-wells. A yet smaller form of torpedo is made in the form of a cartridge, designed to be placed on the rail in advance of an approaching train to warn the engineer of some danger, as that a drawbridge is open beyond. The smallest form of torpedo is a toy, consisting of a small quantity of fine gravel and some fulminate wrapped in paper, and designed to be exploded by concussion as a toy. Fig. 2516 shows a form of torpedo much employed in blasting oil-wells.

Fig. 2516.

Torpe'do-catch'er, *n.* (*Navy.*) The name given to a class of small vessels, ranging from 500 to 1,000 tons displacement, and having engines of high power with a correspondingly high rate of speed. These vessels are not armored, nor do they carry a battery, one or two rapid-fire guns of from 2-in. to 4-in. caliber being their usual armament. They are designed to repel the attacks of torpedo boats, their comparatively small size and rapid movements enabling them to overtake and perhaps destroy the former before they can inflict damage upon the larger vessels of a fleet. The English navy is well supplied with vessels of this type, as are several other European powers; at this time there are none under the U. S. flag.

Torpescence, (*-pès'sens*), *n.* State or quality of being torpescent; torpidness; numbness; stolidity; stupidity.

Torpescent, (*-pès'sent*), *a.* [Lat. *torpescens*.] Becoming torpid or numb, or incapable of motion.

Torpid, *a.* [Lat. *torpidus*, from *torpeo*, to be motionless.] Stiff; benumbed; stupefied; having lost motion, or the power of exertion or feeling; as, a *torpid* animal. — Hence, dull; stupid; stolid; lazy; sluggish; inactive; as, a *torpid* nature.

Torpidity, **Torpidness**, **Tor'pitude**, *n.* State of being torpid; numbness. — Hence, sluggishness; dullness; laziness; stupidity.

Tor'pify, *v. a.* (*imp.* and *pp.* TORPIFIED.) [Lat. *torpidus*, and *facio*, to make.] To numb or benumb; to make torpid.

Tor'por, *n.* [Lat., from *torpeo*.] State of being torpid; numbness; inactivity; loss of motion, or of the power of motion. — Hence, dullness; sluggishness; stupidity.

Torporific, *a.* Having a tendency to stupefy or to produce torpor.

Torquay, (*tor-ke*), a watering-place of England, on the S.W. coast of Devon, 18 m. S. of Exeter; *pop.* 17,000.

Torque, **Tore**, (*tork*), *n.* [Lat. *torqueo*.] (*Archæol.*) Among the ancient Celtic, Gallic, and Teutonic races, a collar or neck-chain of thick gold wires twisted together.

Torqued, (*torkt*), *a.* [From Lat. *torquere*, to twist.] Wreathed; twisted; intertwined.

(*Her.*) Bent; twisted; — as a dolphin harrier, represented in the form of the letter S.

Torre del Greco, (*tor del grai'ko*), a town of S. Italy, at the foot of Vesuvius, 7 m. from Naples. It was totally destroyed in the eruption of 1795. *Pop.* 10,411.

Torre dell' Annunziata, (*-a-noon-che-a'ta*), a town of S. Italy, on the S. base of Vesuvius, 13 m. S.E. of Naples; *pop.* 15,247.

Torre don Gimeno, (*-je-mai'no*), a town of Spain, on the Solado, 10 m. from Jaen; *pop.* 6,700.

Torrefaction, (*-fak'shun*), *n.* [Fr., from Lat. *torrefacio*.] Act of torrefying; operation of drying by a fire; the operation of roasting ores; also, the drying or roasting of drugs on a metallic plate, placed over or before coals of fire, till they become friable to the fingers, or till some other desired effect is produced. — State of being torrefied.

Tor'refy, *v. a.* [Fr. *torréfier*.] To make dry by heat or fire.

(*Metal.*) To roast or scorch, as metallic ores.

(*Pharm.*) To dry or parch, as drugs.

Tor'rent, *n.* [Fr., from Lat. *torrens* — *torreo*, to burn.] A violent, rushing stream of water falling suddenly from high lands or mountains, where there have been heavy rains, or an extraordinary dissolution of snow; a violent, rushing stream of any other fluid, as of lava; a stream suddenly raised, and running rapidly, as down a precipice; as, a roaring *torrent*. — Metaphorically, any violent or rapid flow, or strong current; as, a *torrent* of words.

— *a.* Rushing or rolling in a rapid stream; as, "waves of *torrent* fire." — *Milton*.

Torrente, (*tor-ent'e*), a town of Spain, 5 m. from Valencia; *pop.* 5,626.

Torrential, (*-rén'shal*), *a.* Caused by, or exhibiting the characteristics of, a torrent. (*R.*)

Torren'tine, *a.* Pertaining to, or resembling, or rushing like a torrent.

Torresdale, in Pennsylvania, a village within the limits of Philadelphia City, on the Delaware, 14 m. N. of the State House.

Torres No'vas, a walled town of Portugal, 20 m. from Santarem; *pop.* 4,632.

Torres Strait, a channel about 18 m. in width, lying between N. Australia and Papua or New Guinea, in Lat. 9° 20' and 10° 40' N., Lon. 142° 30' E.

Torres Ve'dras, a small town of Portugal, in Estremadura, 28 m. from Lisbon; *pop.* 2,500. — It is celebrated for the lines of defence established by the Duke of Wellington, to repel the approach of the French.

Torrey, in New York, a township of Yates co., on Seneca Lake.

Torreya, *n.* [After Dr. Torrey, an American botanist, b. in the city of New York, 1798.] (*Bot.*) A genus of plants, order *Taxaceæ*, to which the name of Stinking-Yews has been given, from the disagreeable smell given off by the leaves and wood when bruised or burnt. They are small evergreen trees of N. America, China, or Japan, and grow from 20 to 50 feet high, with two-ranked linear or lanceolate leaves and dioecious flowers.

Torricelli, EVANGELISTA, a celebrated Italian mathematician and philosopher, b. 1608, at Faenza; began his education under the Jesuits there, and completed it at Rome; was invited to Florence by Galileo, whom he succeeded as professor of mathematics at the academy of Florence. He is celebrated as the discoverer of the barometer, and for his improvements in microscopes and telescopes. D. 1647.

Torricellian Tube and Vacuum. See BAROMETER.

Tor'rid, *a.* [Fr. *torride*; Lat. *torridus*, from *torreo*, to parch.] Dried with heat; parched; as, a *torrid* desert. — Burning; parching; intensely hot; as, a *torrid* climate.

Torrid zone. (*Phys. Geog.*) The zone of the earth included between the tropics of Cancer and Capricorn. It extends from the equator, on both sides, to the parallel corresponding to the sun's greatest declination, about 23½ degrees.

Tor'ridness, *n.* State of being torrid.

Tor'ringford, in Connecticut, a post-village of Litchfield co., 25 m. N.W. of Hartford.

Tor'rington, in Connecticut, a post-township of Litchfield co., 22 m. W.N.W. of Hartford.

Torse, *n.* [Fr., from Lat. *tortus* — *torquere*, to twist.] (*Her.*) A wreath or chaplet.

Tor'sel, *n.* (*Arch.*) Anything in a twisted form.

Tors'hok', or **Torjok**, a town of European Russia, govt. of Tver, on the Tverza, 35 m. from Tver. *Manuf.* Colored Russian leather shoes and gloves. *Pop.* 18,000.

Torsibility, *n.* The tendency to untwist after being twisted; as, the *torsibility* of a cord.

Torsion, (*tor'shun*), *n.* [Fr.; Lat. *torsio*, from *torqueo*, to twist.] Act of turning, twining, or twisting; the twisting or wrenching of a body by the exertion of a lateral force.

(*Mech.*) That force by which a thread, as of wire, returns to a state of rest after it has been twisted by being turned round on its axis.

(*Geom.*) The departure of a curve from the plane containing three consecutive elements.

Torsion balance. (*Phys.*) See ELECTROMETER.

Torsional, (*-tor'shun-al*), *a.* Pertaining or relating to, or resulting from, torsion; as, *torsional* force.

Torsk, TUSK, CUSE, *n.* (*Zoöl.*) *Brosomus vulgaris*, a fish of the family *Gadidae*, abundant in the northern parts of the Atlantic Ocean. It is about 2 feet long, and is caught in the same manner as cod.

Tor'so, *n.* [It.] (*Sculp.*) The trunk of the human body; — a term usually applied to mutilated statues from which the head and limbs are broken.

Tors'var, or **TORZBURG**, a town of Transylvania, 20 m. from Kronstadt. *Pop.* 7,000.

Tort, *n.* [Fr., from Lat. *tortus*, twisted.] (*Law.*) A wrongful act, for which an action will lie; a form of action brought for the redress of wrongs not arising from breaches of contract.

Torticollis, *n.* [From Lat. *tortus*, twisted, and *collum*, neck.] (*Med.*) Same as WRY-NECK, *q. v.*

Tortilla, (*-ter'lyä*), *n.* [Sp.] A kind of unleavened pancake or maize meal, baked on a heated hearth; — a favorite comestible among the Mexicans.

Tortious, (*tor'shus*), *a.* [From *tort*.] Injurious; done by wrong.

(*Law.*) Implying tort.

Tortiously, *adv.* In a tortious manner; wrongfully.

Tort'ive, *a.* [From Lat. *tortus*.] Twisted; wreathed; as, the pine's *tortive* grain.

Tortoise, (*tor'tois*, or *tor'tis*), *n.* [Fr. *tortue*, from Lat. *torqueo*, *torvus*, to wind, to twist.] (*Zoöl.*) The popular name of a group of Chelonian reptiles, which once included the whole order, but is now much restricted. The popular name *T.* is never given to the marine Chelonians, which are called *Turtles*, and although it is sometimes given — generally with a prefix, as Marsh *T.*, River *T.*, Fresh-water *T.* — to the kinds which inhabit fresh water, yet when used by itself, it is commonly the designation of what are distinctively called Land Tortoises, which belong to the genus *Testudo* as now restricted, and the genera most nearly allied to it. See CHELONIA, TERRAPIN, TESTUDO, TURTLE, &c.

(*Mil.*) Same as TESTUDO, *q. v.*

Tort'oise-beetle, *n.* (*Zoöl.*) See CASSIDA.

Tort'oise-shell, *n.* (*Com.*) The shell of the *Testudo imbricata*, separated into thin plates, and used for a great variety of decorative purposes. It softens in hot water, and if then placed in metal moulds, may be impressed with any ornamental figures; the horn being afterwards immersed in cold water, the figures become permanent. Razor- and knife-handles, combs, and a variety of ornamental articles are produced by this means. *T. S.* is so called because formerly all the *chelonias* were confounded under the general name of Tortoises.

Torto'la, one of the Virgin Islands, in the West Indies, Lat. 18° 24' N., Lon. 64° 32' W. It is 12 m. long, with a breadth of 4 m.

Torto'na, a town of N. Italy, on the Scrivia, 12 m. from Alessandria. *Manuf.* Silk, &c. *Pop.* 12,876.

Torto'sa, a town of Spain, in Catalonia, on the Ebro, 42 m. from Tarragona. *Manuf.* Paper, glass, &c. *Pop.* 21,000.

Torts'burg. See TORSVAR.

Tor'trix, or **Tortric'idæ**, *n. pl.* [From Lat. *tortus*, twisted.] (*Zoöl.*) A genus and family of nocturnal lepidopterous insects, comprising an extensive group of minute, generally dull-colored moths, distinguished by their broad, entire forewings, which form a triangle with the body when at rest. The larvae are naked fleshy grubs,

Fig. 2517. — NEST OF THE TORTRIX.

which, for the most part, take up their abode in a leaf, curled up by the insect itself (Fig. 251*) and fastened with silken threads, forming a cylindrical tube, open at each end, which thus serves them for abode and food; others frequent the young buds and shoots of various plants, fastening several of the leaves together so firmly as to impede its growth; others, again, find their home in the pulpy substance of various fruits, particularly the apple and plum.

Tortu'ga, [Sp. *Tortorse*], an island of the W. Indies, belonging to Venezuela, in the Caribbean Sea, 55 m. W. of Margarita, 15 long, and 8 wide.

Tortuga, an island in the Gulf of California, 85 m. S. of Tiburon.

Tortuga, an island off the N.W. coast of Hayti, 22 m. long, and 5 m. broad; Lat. 20° N., Lon. 72° 36' W.

Tortugas, an island of the W. Indies, off the N.E. coast of Cuba, opposite the entrance of the harbor of Nuevitas, 26 m. long, and 6 broad.

Tortu'gas, a group of islands belonging to the U. States, at the entrance of the Gulf of Mexico, 120 m. W.S.W. of Cape Fancha, the S. extremity of Florida; Lat. 24° 37' N., Lon. 83° W. They are 10 in number, on one of which, called Bush or Garden Key, is a light-house.

Tortulous, (*tort'ū-lūs*), *a.* (*Nat. Hist.*) Bulged out at intervals, like a knotted cord.

Tortu'ose, *a.* Same as TORTUOUS, *q. v.*

Tortuous'ity, *n.* Same as TORTUOUSNESS, *q. v.*

Tortuous, **Tortu'ose**, *a.* [*Fr. tortueux*; Lat. *tortuosus*, full of crooks or turns.] Wreathed; twisted; winding; deflected; bent in different ways; as, a *tortuous* road.—Deviating from right or straightforwardness; wrong; erroneous; mischievous; as, a *tortuous* policy.

Tortu'ously, *adv.* In a tortuous manner.

Tortuousness, **Tortu'osity**, *n.* State of being tortuous, twisted, or deflected; wreath; flexure.

Tortu'able, *a.* That may be tortured.

Torture, (*tort'chūr*), *n.* [*Fr.*, from L. Lat. *tortura*, from *tortus*, to twist.] Acute pain; mental or bodily anguish or suffering; torment; pang; agony; as, the *torture* of a guilty conscience.

—In a legal sense, *T.* designates the application of bodily pain in order to extort confession from a suspected person or condemned criminal. Sometimes, however, although improperly, the term has been used to signify the torments to which condemned criminals have submitted, as part of their punishment. With the ancient Romans, it was only practised upon the bodies of slaves. Judicial *T.* formed part of all the legal systems of Europe wherein the Roman law was adopted; still, it does not appear to have been generally had recourse to until the 13th century. But when this severe form of punishment received the ecclesiastical sanction, its employment became painfully general. By the Inquisition it was resorted to upon every occasion, and under its most terrible forms. The last instance of *T.* in England took place in 1640, and was abolished in Scotland in 1708. In France it was partially abolished by a decree of Louis XVI., in 1780; but it was not until the Revolution that it was finally swept away. Human ingenuity seems to have been boundless in the invention of instruments capable of inflicting the most exquisite and prolonged sufferings by means of *T.* One of the most fearful and most commonly resorted to was the RACK, *q. v.*

—*v. a.* To put to mental torture; to pain to extremity; to torment; to vex; to harass; to worry; as, to *torture* one's mind with jealous doubts.—To punish judicially with torture; to put to the rack; as, to *torture* a suspected traitor.

Tortur'er, *n.* One who, in former times, administered the punishment of torture;—hence, a tormentor.

Tortur'ingly, *adv.* So as to torture, torment, or harass.

Torturous, (*tort'yoor-ūs*), *a.* Pertaining or relating to, involving, or characterized by torture; as, *torturous* punishment.

Tortulous, **Tortu'lose**, *a.* [From Lat. *torus*.] (*Bot.*) Resembling a knotted cord; tortulous.

To'rus, *n.* [Lat., a protuberance.] (*Arch.*) The semicircular moulding at the base of a column (Fig. 650).

(*Bot.*) Same as THALAMUS, *q. v.*

To'ry, *n.* [According to Archbishop French, a name derived from the Irish Rapparees, who robbed and plundered while professing to be in arms for the maintenance of the royal cause, and from them transferred, about the year 1680, to those who sought to maintain the extreme prerogative of the crown.] (*Eng. Pol.*) The name originally given to an adherent to the ancient constitution of the English monarchy, and to the apostolical hierarchy;—opposed to WHIG, *q. v.*;—in a more modern sense, one who, in political bias and principles, always leans to Church and State, supports the regal, ecclesiastical, and aristocratical institutions, as by law established, and is jealous of the extension of democratic power and radical constitutional changes;—the term is now to a certain degree extinct, the party-name now assumed being that of *Conservatives*, as opposed to the *Liberals*.

(*Amer. Hist.*) One who, in the Revolutionary epoch, upheld the rights of the British crown, and favored its claims against the American colonies; a Royalist;—opposed to *Whig*.

—*a.* Pertaining or relating to the Tories, or to conservative principles in politics or religion.

To'ryism, (*-izm*), *n.* The political faith and principles professed by the Tories.—In the more modern sense, CONSERVATISM, as opposed to LIBERALISM.

Toss, *v. a.* (*imp.* and *pp.* *TOSSed*, or *TOSt*.) [*Ger. stossen*; W. *toslaw*.] To fling or throw with the hand;—particularly, to throw with the palm of the hand upward, or to fling upward; as, to *toss* a ball, to *toss* a penny in the

air.—To lift or throw up with a sudden jerk or violent motion; as, to *toss* up the head, to *toss* a person in a blanket.—To cause to rise and fall; or to move one way and the other; to make to upheave and to subside alternately; as, a boat is *tossed* on the waves.—To agitate, disturb, harass, or make restless; as, adversity *tosses* the temper.—To tumble over; to keep in play; as, he *tossed* over the books, volume by volume.—To *toss off*, to drink promptly or rapidly; as, he *tossed off* his magnum of claret.—To *toss the oars*. (*Naut.*) To salute, by throwing the oars, blades up, in a perpendicular direction.

—*v. n.* To be tossed.—To roll and tumble; to writhe; to be in violent commotion; as, *tossing* and tumbling from one side to the other.

To *toss for*, to gamble for; to throw dice for; as, to *toss for* drinks.—To *toss up*, to throw a coin into the air, and wager on which side it will drop; as, to *toss up* for choice of ground.

—*n.* Act of tossing; a throwing upward or with a jerk; as, the *toss* of a pancake.—A throwing up of the head with a jerk.

Tos'ser, *n.* One who tosses.

Tos'sily, *adv.* Scornfully; contemptuously.

Tos'sing, *n.* Act of throwing upward; a violent commotion; a sudden rising and falling; a rolling and tumbling.

Toss'pot, *n.* An habitual toper; a drunkard.

Tos'sy, *a.* Tossing the head, as in scorn or pride;—hence, supercilious; proud; contemptuous.

Tost, *imp.* and *pp.* of Toss, *q. v.*

Tot, *n.* Anything wee or small;—used as a term of fondness.

Total, *a.* [*Fr.*; L. Lat. *totalis*, from Lat. *totus*, all, the whole.] Whole; full; complete; as, the *total* amount, a *total* loss.

—Integral; not divided; entire; as, *total* responsibility.

—*n.* The whole; the whole sum or amount; as, to form a *total*.

Total'ity, *n.* [*Fr. totalité*; L. Lat. *totalitas*.] The whole sum, quantity, or amount.

To'talize, *v. a.* To make total, entire, or complete.

To'tally, *adv.* In a total manner; wholly; fully; entirely; completely; thoroughly; as, the thing is *totally* impossible.

To'talness, *n.* State or quality of being total.

Tota'na, a town of Spain, in Murcia, 12 m. from Lorca; pop. 9,437.

Tote, *v. a.* [*Etymol. unknown.*] To carry; to bear; to convey. (*Colloq. U. S.*)

—*n.* [From Lat. *totus*, whole.] All; the complete or entire body or amount. (*Colloq.*)

To'tem, *n.* A rude diagram of a bird, beast, reptile, &c.;—used by the N. American Indians as a symbolic appellation of a family.

To'ther. A colloquial and vulgar contraction of the other.

Toties quoties, (*tō'she-ēz kwō'she-ēz*). [*Lat.*] As often as.

To'tila, king of the Ostrogoths, who conquered the kingdom of Italy from Justinian. In 545–47 he was defeated in several engagements by Belisarius; but after the departure of that general he regained possession of all the countries he had formerly taken. Slain in battle, 552.

Tot'nes, a town of England, in Devonshire, on the Dart, 22 m. from Exeter; pop. 5,000.

Totonicapan', in Mexico, a town of Guatemala, 100 m. N.W. of Guatemala; pop. abt. 12,000.

Tottenville, in New York, a post-village of Richmond co., abt. 20 m. S.W. of New York.

Tot'ter, *v. a.* [*A. S. teallian, teallrian*.] To vacillate; to shake so as to threaten a fall; to stagger; as, a *tot'tering* old man.—To shake; to reel; as, "Troy *tot'ters* to her fall."—*Dryden*.

Tot'terer, *n.* One who, or that which, totters.

Tottle, (*tō'tl*), *v. a.* Same as TODDLE, *q. v.*

To'ty, *n.* A Polynesian term for a sailor or fisherman.

Toucan, (*tōo'kan*), *n.* (*Zoöl.*) See RAMPHASTIDÆ.

(*Astron.*) A small modern constellation of the S. hemisphere.

Touch, (*tūch*), *v. a.* [*Fr. toucher*; It. *toccare*; Lat. *tango*, from Gr. *thinggānō*.] To come close to, so that no space intervenes; to come or be in contact with; to be in conjunction with; to put the hand, finger, foot, or anything else on or against; to hit or strike against; to meet; to be a tangent to; as, to *touch* one's hat in saluting.—To perceive by the sense of feeling.—To arrive at; to reach; to come or attain to; as, "I have *touched* the highest point of all my greatness." (*Shaks.*)—To concern; to relate to; to have reference or regard to; as, your remarks do not *touch* the point at issue.—To handle slightly; to deal with gently or superficially.—To meddle or interfere with; as, *touch* not anything without my permission.—To move, as the sensibility; to melt; to mollify; to soften; to affect, as the mind or sympathies; as, a *touching* incident.—To make an impression on; to have a tangible effect on; as, this chisel will not *touch* so hard a wood.—To mark or delineate with slight strokes; as, to *touch* a sketch in crayons.—To infect; to seize upon in some slight degree; as, a person *touched* with the small-pox.—To afflict, distress, or provoke; to treat with slight or contempt; as, he was *touched* to the quick.—To strike or play on, as a musical instrument; as, "With fairy hands she *touched* the strings." (*Darvies*).—To perform, as a musical or concerted piece; to play; as, the minstrels *touched* a lively tune.—To influence by impulse; to impel forcibly; to sway; as, do not think to *touch* the bent of his disposition.—To affect with partial insanity;—seldom used except participially; as, he appears, at times, somewhat *touched* in his head.

To *touch up*, to renovate, or improve by adding slight touches, emendations, or corrections; to repair; to restore; as, to *touch up* a picture, to *touch up* a faded complexion by means of cosmetics.

—*v. n.* To come or be in contact; to be in a state of junction or connection, so that no space intervenes; as, two spheres *touch* only at points. (*Johnson*).—To fasten; to attach to; to take effect on.—To treat anything slightly or desultorily in discourse or argument; to pass comment gently;—frequently before *on* or *upon*; as, to *touch* incidentally on a certain topic.

(*Naut.*) To have the sails so set that they shiver when the wind comes edgewise upon them.

To *touch and go*. (*Naut.*) To keep the ship as much in the wind's eye as possible.—To *touch at*, to call at or pay a brief visit to; as, the ship *touched* at the Azores to take in water.—To *touch on* or *upon*, to come or go to for a short time; as, to *touch upon* the enchanted coast.

—*n.* [*Fr. touche*.] Act of touching; contact; state of being touched; the junction of two bodies at the surface, without intervening space; as, a razor wounds with a *touch* that is scarcely felt.

—Particular relation; personal reference or application; as, speech of *touch* to others. (*Bacon*).—Power of exciting or enlisting the affections or sensibilities.—An emotion, affection, or passion; as, "One *touch* of nature makes the whole world kin." (*Shaks.*)—Test; that by which anything is examined; tried quality; proof; criterion; as, "He dares not put it to the *touch*." (*Montrose*).—A stroke; as, a *touch* of sarcasm;—hence, railery; animadversion; reproof; censure; rebuke; as, a *touch* of conscience.—Single act or stroke of a brush or pencil on a drawing or picture; as, to apply the finishing *touch*.—Feature; lineament; portraiture; as, "A son . . . the very same in every *touch*." (*Dryden*).—A hint; a slight notice; a suggestion; an insinuation; as, to give a *touch* to the memory.—Act of the hand on an instrument of music;—and hence, musical notes; as, a crisp *touch* on the violin.—A slight essay; a brief sketch; a literary bagatelle; as, a sixpenny *touch*. (*Swift*).—A little; a modicum; a slight quantity intermixed; as, a *touch* of the Irish brogue.

(*Physiol.*) One of the five senses. It is not confined to any particular part of the body, like the other senses, but, on the contrary, exists in all parts capable of perceiving the presence of a stimulus by ordinary sensation. It is, in fact, a modification or exaltation of common sensation or sensibility. It properly belongs to the outward covering of the body, the skin, but is also shared in a minor and modified degree by parts of the mucous membranes, which are, indeed, continuous prolongations of the same substance. In no essential particular, however, is it to be distinguished from the common sensibility which resides in the deeper organs of the body. The nerves on which it depends are the same as those which confer ordinary sensation on the different parts of the body. There are certain parts in which the sense of *T.* is much more acute than in others; as the tongue, lips, hands, soles of the feet, &c. These are more abundantly than other parts studded with numerous papillæ, on which this sense mainly depends. Each papilla is abundantly supplied with blood, and also contains one or more terminal nerve-fibres, on which its exquisite sensibility depends. The papillæ do not come into direct contact with external objects, but, like the rest of the surfaces of the skin, are covered with one or more layers of epithelium forming the cuticle or epidermis. By the sense of touch the mind is made acquainted with the size, form, and other external characters of bodies. The distinctness and intensity of a sensation in the nerves of *T.* depend in great measure on the degree in which the mind coöperates with the feeling; for if the mind does not thus coöperate, the sensation remains unperceived, and on the other hand, a painful sensation becomes more intolerable the more the attention is directed to it.

(*Paint.*) The peculiar handling of a picture common to a painter, and by which his works may be known.

(*Mus.*) Characteristic method of action; style of resistance of the keys of an instrument to the fingers; as, a light *touch*; also the manner of fingering the keys of a pianoforte.

(*Surg.*) In obstetrics, the examination of the month of the uterus by manipulation.

(*Ship-building*.) The middle of a plank worked top and butt, or in anchor-stock mode; also, the angular parts of the stern-timbers.

Touch and go, just enough and no more; within a hair's breadth; critically close or near; as, it was *touch and go* whether he lived or died. (*Colloq.*)

Touch'able, *a.* Tangible; that may be touched.

Touch'ableness, *n.* State or quality of being touchable.

Touch'-hole, *n.* The vent of a piece of ordnance, and of smaller fire-arms.

Touchily, (*tūch'-*), *adv.* In a touchy manner; techily; with irritation; peevishly; with morbid susceptibility.

Touch'iness, *n.* State or quality of being touchy.

Touch'ing, *a.* Affecting the sensibilities; pathetic; moving; as, a *touching* scene.

—*prep.* Concerning; with respect, regard, or relation to; as, *touching* your remarks I have no reply to make.

—*n.* Touch; the sense of feeling.

Touch'ingly, *adv.* In a manner to touch the feelings or move the passions; pathetically.

Touch'-me-not, *n.* (*Bot.*) See IMPATIENS.

Touch'-needle, *n.* Among assayers, a small bar consisting of gold and silver alloyed with various definite proportions of copper; whereby, by comparing their color and streak upon a piece of hard black stone, such

as basalt, with that of alloys of the precious metals, the relative quantity of gold and silver is determined.

Touch'-paper, n. Paper steeped in saltpetre, which burns slowly, and is used as a match for firing gunpowder and the like.

Touch'-stone, n. Any test or criterion by which the qualities and merits of a thing are tested; as, "Calamity is man's true touchstone." — *Beau. and Fl.*

(*Min.*) Same as BASANITE, *q. v.*

Irish touch-stone. (*Min.*) Same as BASALT, *q. v.*

Touch'-wood, n. Decayed wood used as tinder for catching fire from a spark.

Touch'y, a. Unduly or morbidly sensitive, especially to reproach or ridicule; petulant; peevish; irritable; apt to take fire upon trifling provocation.

Tough, (tūf'), a. (*comp.* TOUGHER; *superl.* TOUGHEST.) [A. S. *tōh*; D. *tuai*.] That does not easily or readily break, yield, or undergo separation of its parts, by drawing, extending, or bending; possessing the quality of ductility or flexibility without brittleness; yielding to force without warping or breaking; as, *tough* timber, a *tough* metal. — Firm; strong; compact; not easily injured or broken; capable of enduring hardship or rough usage.

"He's tough, ma'am, tough is J. B. Tough and de-vilish sly" *Dickens.*

—Stiff; rigid; fibrous; not pliant or flexible; not tender; as, a *tough* beef-steak, a *tough* constitution of body. —Viscous; inspissated; tenacious; ropy; not readily attenuated or separated; tenacious; as, *tough* glue or gelatine. —Characterized by violence, severity, or impressive force of action; as, a *tough* struggle, a *tough* debate. (*Colloq.*)

Toughen, (tūf'n.) v. n. To grow tough, or move tough; as, steel *toughens* by hammering.

—*v. a.* To make tough, or tougher.

Toughish, a. Somewhat tough; as, *toughish* meat.

Toughly, (tūf'le,) adv. In a tough manner.

Toughness, (tūf'-), n. State or quality of being tough.

Toul, (tool.) a town of France, dept. Meurthe, on the Moselle, 13 m. W. of Nancy. It has a fine Gothic cathedral. *Manuf.* Calicoes, muslins, &c. *Pop.* 8,147.

Toulon, (too'lawn), a seaport of France, being the second naval port in the kingdom; dept. Var, at the bottom of one of the finest harbors of the Mediterranean, 32 miles E.S.E. of Marseilles, and 190 miles S.S.E. of Lyons. The town is strongly fortified, being surrounded by a double rampart, and a large and deep ditch, defended to the E., W., and N., by hills covered with redoubts. Both the old and new harbors are artificial. The latter, formed by hollow and bomb-proof jetties running off from the E. and W. sides of the town, is sufficiently extensive to accommodate 30 sail of the line, as many frigates, and an equal proportion of small craft. The entrance is shut by a boom, and it is never ruffled by any wind to occasion damage. The arsenal of *T.* is one of the finest in Europe. The *Bayne*, instituted in 1682, is, from want of room on shore, established on board some hulks; it is occupied by criminals condemned to hard labor for ten years and under. The trade of the port was formerly inconsiderable, but it has been yearly increasing since the conquest of Algiers. *T.* was unsuccessfully besieged by Prince Eugène in 1707. Having, in 1793, been delivered up by the Royalists to the English and Spaniards, it was retaken by the Republicans, after a siege in which Napoleon I. gave the first decided proofs of his extraordinary military talents. *Pop.* 79,642.

Toulon, (too'ton), in *Illinois*, a post-village, cap. of Stark co., 35 m. N.N.W. of Peoria.

Toulouse, (too-looz'), a city of France, cap. of the dept. of Haute-Garonne, on the Garonne; Lat. 43° 36' N., Lon. 1° 27' 37" E. It is large and well built, and has many fine public buildings, among which the most remarkable are the cathedral, the archbishop's palace, and the town-house, called *Capitole* (Fig. 1122). *Manuf.* Silks, woollens, leather, potteries, iron foundries, &c. The last battle before the abdication of Napoleon I. was fought here, April 10, 1814, between the French, under Marshal Soult, and the British, under the Duke of Wellington. *Pop.* 130,423.

Toupee, Toupet, (tōō-pā'), n. [Fr. *toupet*.] A curl, or artificial tuft or lock of hair; —also, a small wig.

Tour, (toor, vulgarly pron. *tawr*), n. [Fr., a turn; Heb. *tur*, to go round.] A going round; — hence, a circuitous journey; an excursion; a ramble; as, the *tour* of Europe. — A circular border or fillet of hair, worn on the head, especially by females.

(*Mil.*) A turn; anything done in the order of routine; as, a *tour* of inspection.

Tour de force. [Fr.] A feat of strength, skill, or dexterity.

—*v. n.* To make a tour; to go on a tour.

Touraine, (too'rain), a former prov. of France, with Tours for its capital. It now corresponds to the dept. of Indre-et-Loire.

Tourbillon, (tōōr-bīl'yun), n. [Fr. *tourbillon*, a whirlwind.] (*Pyrotechny.*) A kind of ornamental firework, which, when lighted, undulates in the air, and presents the appearance of a fiery scroll.

Tourcoing, (toor-go'ā), a town of France, dept. of the Nord, 8 m. from Lille. *Manuf.* Cotton and worsted thread, camlets, plushes, cloths, and muslins. *Pop.* (1897) 69,250.

Tourist, (tōōr'ist), n. One who makes a circuitous journey; a rambling abroad for health or pleasure.

Tourmaline, (-līn), n. [Fr.] (*Min.*) A name for the more perfect forms of Schorl. It is chiefly composed of silica, alumina, boracic acid, &c., and has been divided by Rammeisberg into five sub-groups, viz.: 1, *Magnesia T.*; 2, *Iron-magnesia T.*; 3, *Iron or Black T.*; 4, *Iron manganese-lithia T.*; 5, *Lithia T.* The transparent colored varieties are sometimes cut into ring-stones, &c.,

and when reduced to thin slices, are much valued for making experiments on the polarization of light, and for analyzing the optical properties of other minerals. The Red *T.*, or *Rubellite*, possesses considerable beauty. The finest kinds of *T.* are brought from Brazil, Ceylon, Ava, and Siberia.

Tournament, Tour'ney, n. [O. Fr. *turnor*, from *turner*, to turn, to wheel round.] (*Chivalry.*) A martial sport or species of combat performed in former times by a company of knights and cavaliers on horseback, for the purpose of exercising and exhibiting their prowess, courage, and skill in arms. A *T.* differed from a *joast*, in that the latter was confined to the encounter of two persons only. As chivalry declined, and as gunpowder revolutionized the art of war, *T.* gradually died out.

Tournay, (toor'nai), a fortified town of Belgium, prov. of Hainault, 28 m. from Mons, on the Scheldt. *Manuf.* Carpets, stockings, caps, with woollen and cotton stuffs generally. *Pop.* 44,778.

Tourney, (tur'ny), n. Same as TOURNAMENT, *q. v.*

—*v. n.* [O. Fr. *turnoyer*.] To tilt; to encounter in tournament.

Tourniquet, (tur'nī-kēt), n. [Fr., from Lat. *turner*, to turn.] (*Surg.*) A bandage which may be tightened to any extent by means of a screw, so as to exert pressure upon a cushion and compress the arterial trunks to which it is applied; it is chiefly used to prevent hemorrhage in the operation of amputation.

Tournois, (toor'noah), n. [Fr., from the city of *Tours*.] A former French money of account, worth one franc, or twenty cents American; as, a *livre tournois*.

Tournon, (toor'non), a town of France, dept. of Ardèche, near the Rhone, 48 m. from Lyon. *Manuf.* Woollen and silk fabrics. *Pop.* 5,648.

Tournure, (toor'noor'), n. [Fr., from *turner*, to turn.] Contour; figure; shape. — A lady's bustle.

Tournus, (toor'noos), a town of France, dept. of Saône-et-Loire, on the Saône, 19 m. from Mâcon. *Manuf.* Silks, beet-root sugar, &c. *Pop.* 5,896.

Touroukchansk, a town of Russia, in E. Siberia, gov. of Yeniseisk, on the Yenisei, 4,172 m. E. of St. Petersburg, and only 50 S. of the Arctic circle; pop. 9,178.

Tours, (toors), a city of France, cap. of the dept. of Indre-et-Loire, on the Loire and the Cher, 65 m. from Orleans. It has a cathedral remarkable for its lofty spires, an episcopal palace, hotel-de-ville, exchange, prefecture, and numerous schools and learned societies. *Manuf.* Silk stuffs, woollens, hosiery, and leather. Tours was the scene of the repulse of the Saracens by Charles Martel, in 732; and, in subsequent ages, its castle, built on a rock, served more than once as a place of refuge for the royal family in times of commotion. At the beginning of the siege of Paris, 1870, a part of the government of the Défense Nationale took refuge here, but on the approach of the Prussians, the seat of the government was transferred to Bordeaux. *Pop.* 44,260.

Tourville, ANNE-HILARION DE COTTENTIN, COUNT DE, a French naval commander, born in Normandy, 1647, became captain in 1667, and distinguished himself under D'Estrées and Duquesne at the battles of Solebay and Agosta. In 1682-88 he participated in the expeditions to Tripoli and Algiers, and became vice-admiral in the Levant in 1689. In the following year he held a command, under D'Estrées, in the flotilla dispatched to Ireland to aid the cause of James II. In 1692 he was totally defeated by the English fleet, at La Hogue; but he subsequently inflicted considerable damage upon British shipping in Portugal. D. 1701.

Touse, n. A hauling; a pulling; a rumpus; a shindy. —*v. a.* and *n.* [Probably from *tease*.] To pull; to haul; to drag; — hence, to make a disturbance.

Tousle, (tow'z'), v. a. [Dim. of *tease*.] To pull, haul, or drag about; to tumble; to throw into entanglement or disorder. (*Colloq.* and vulgar.)

Tous-les-mois, n. See CANNA.

Toussaint L'Ouverture. See L'OUVERTURE (TOUSSAINT).

Tow, (tō,) v. a. [A. S. *teogan*, *teon*; Fr. *touer*.] To draw or drag, as a boat or ship, through the water by means of a rope, either from another vessel or from the shore. —*n.* [Icel. *toga*, to pull.] The coarse and broken part of flax and hemp, separated from the finer part by the process of hatching. — Act of towing, or state of being towed; — principally used in the expression *to take in tow*, in other words, to tow, as a ship.

Towage, (tō'aj), n. [Fr. *touage*.] Act of towing. — Fees paid for towing.

Towamensing, in Pennsylvania, a township of Montgomery co.

Towan'da, in Illinois, a post-village and township of McLean co., 7 m. N.E. of Bloomington. *Pop.* (1897) 1,720.

Towanda, in Kansas, a post-village of Butler co.

Towanda, in Pennsylvania, a post-borough and township, cap. of Bradford co., 120 m. N.E. of Harrisburg; *pop.* abt. 2,000. — A creek which flows into the N. branch of the Susquehanna River near Towanda in Bradford co.

Toward, Towards, prep. [A. S. *toward*, *toweward*, coming.] In the direction of or to; as, he went *towards* home. — Regarding; with respect or direction to; touching; — in a moral sense; as, if I feel no love *toward* him, I bear no enmity. — Nearly; about; little more or less than; as, he is *toward* fifty years of age. — With ideal tendency to; as, he looks forward *towards* better days. (NOTE. Both forms of the word are in good use by elegant writers.)

—*adv.* Near; at hand; nigh approach; in a state of preparation.

Toward, a. [A. S. *toward*.] Apt; docile; ready to do or learn; — opposed to *froward*; as, a *toward* scholar.

Towardliness, Towardness, n. Quality of being towardly.

To'wardly, n. Apt; docile; tractable; ready to do or learn; compliant with duty; as, a *towardly* youth.

Tow'-boat, n. A boat which is towed, or drawn by a tow-line.

— A steam-tug used for towing other vessels.

Towel, n. [Fr. *touaille*; Sp. *toalla*, from Icel. *thro*, to wash.] A napkin; a cloth used for wiping the hands, and other parts of the body, after washing, and for other purposes.

Towelling, n. Cloth for making towels.

Tow'er, n. [A. S. *tor*, *torr*, *tar*; Fr. *tour*.] A lofty building, of a square, circular, or polygonal form, and often consisting of several stories; or, a building raised above the main edifice; a turret; as, the *Tower* of Nesle. — A citadel; a fortress; as, the *Tower* of London; — hence, by analogy, a defender; as, "the King's name is a *tower* of strength." — (*Shaks.*)

— A sort of high head-dress, worn by females about the end of the 17th century; as, "*towers*, curls, and perriwigs." — (*Hudibras.*)

Round tower. See ROUND. — *Tower bastion.* (*Fortif.*) See BASTION.

Tower of London. (*Eng. Hist.*) In feudal days, a powerful fortress; then, and for long after, a state prison of gloomy memories; now, a government storehouse and armory, and still, in some senses, a stronghold, is an irregular quadrilateral collection of buildings on rising ground adjoining the Thames, and immediately to the east of the city of London. The space occupied is between 12 and 13 acres, and the whole is surrounded by a moat of fair width, but no great depth. Usually, the moat is dry, but the garrison have the power of flooding it. Seen from without, the moat is bordered within by a lofty castellated wall, broken by massive flanking-towers at frequent intervals. Within this wall rises a second of similar construction, but greater height; and within this, again, are the several barracks, armories, &c.; and in the centre of all, the lofty keep or donjon known as the White Tower (A, Fig. 848), once the court of the Plantagenet kings.

Tower, v. n. To rise above other objects; to be very high or lofty; — hence, to rise or fly high; to soar; as, he *towers* above his fellows.

Towered, Tow'ery, a. Having towers; adorned or defended by towers.

Towering, p. a. Very high; elevated; as, a *towering* height, a man of *towering* stature. — Extreme; violent; excessive; surpassing; as, he flew into a *towering* rage.

Tower Hill, in Illinois, a post-village and township, of Shelby county, about 12 miles south-west of Shelbyville.

Tower Hill, in Rhode Island, a post-village of Washington co., 25 m. S.W. of Providence.

Towerville, in Wisconsin, a post-village of Crawford co., abt. 12 m. S. of Viroqua.

Tow'hee, Ground'-robin, Che'wink, n. (*Zoöl.*) Names commonly applied to the birds composing the genus *Pipilo*, family *Fringillidae*, distinguished by their bill rather stout, feet large, the claws stout and curved, tail considerably longer than the wings; the upper parts generally black or brown, under parts white or brown.

Tow'ing, n. The act of drawing or hauling a vessel forward in the water by means of a rope attached to another vessel, or, if on a canal, to a horse or horses.

Tow'-line, Tow'-rope, n. (*Naut.*) A small hawser, employed in towing a ship, barge, &c.

Town, n. [A. S. *tūn*, from *tynan*, to inclose; Icel. *tún*, a pleasure-garden; W. *din*, a camp; Gael. *dun*, a fortress.] Originally, a collection of huts or houses inclosed with walls, palisades, or hedges for safety. — Hence, specifically, any collection of houses larger than a village, and not incorporated as a city. — In England, any collection of houses to which belongs a market, and which is not an episcopal city: in a general sense, a borough. — The collective number of inhabitants resident in a town; as, the *town* raised three regiments during the war. — A township. (Local U. S.) — In England, the court-end of London, or the people who originate and give currency to the fashions, tastes, and opinions of the day; as, *town* begins to fill about the beginning of February. — The metropolis or any large city or its inhabitants, as opposed to the *country*, or the people in it; as, the pleasures of the *town*, to go to *town*.

Man about town, a fashionable idler; a man of pleasure.

Town'-clerk, n. An officer who acts as custodian of civic or municipal records, and enters all the official proceedings of a city, town, or borough.

Town'er's, in New York, a post-village of Putnam co., abt. 90 m. S. of Albany.

Town'-hall, n. [*town* and *hall*.] A town-house; a guild-hall; a public building, or a large room in a building, used for transacting official business.

Town'-house, n. A dwelling-house in town, in distinction from a *country-house*. — A town-hall. (U. S.)

Town'ish, a. Resembling, or partaking of the characteristics of, a town; having reference to the inhabitants of a town.

Town Line, in New York, a post-village of Erie co., 15 m. E. of Buffalo.

Towns, in Georgia, a N.E. co., bordering on N. Carolina; area, 180 sq. m. It is drained by the Hiwassee river. Surface, partly mountainous. Cap. Hiwassee. *Pop.* (1897) 4,250.

Town'send, in Delaware, a post-town of Newcastle co., 29 m. S.W. of Wilmington.

Townsend, in Massachusetts, a post-village and township of Middlesex county, 40 miles W. N. W. of Boston.

Townsend, in Ohio, a township of Huron county, 7 miles from Norwalk. — A post-township of Sandusky county.

Town'send Harbor, in *Massachusetts*, a post-village of Middlesex co., 42 m. N.W. of Boston.

Town'sendville, in *New York*, a post-village of Seneca co.

Townsfolk, (*fōk*), *n.* People of a town or city.

Town'shend, in *Vermont*, a post-village and township of Windham co., 90 m. S. of Montpelier.

Town'ship, *n.* The district or territory belonging to a town.—The public lands of the U. States are surveyed first into tracts called *townships*, being in extent 36 m. square. The subdivisions of the *T.* are called *sections*, each 1 m. square and containing 640 acres; those are subdivided into *quarter-sections*, and from that into lots of 40 acres each.

Town'sman, *n.*; *pl.* TOWNSMEN. An inhabitant of a town; a fellow-citizen.—In New England, a SELECT-MAN, *q. v.*

Town-talk, (*-tawk*), *n.* The common talk of a place, or the object of public conversation; as, her conduct was the *town-talk*.

Town'ward, *adv.* Toward a town; in the direction of a town.

Tow-path, *Towing-path*, *n.* A path alongside a canal, &c., used by men and horses that tow boats.

Tow-rope, *n.* See TOW-LINE.

Tow-ser, **Tow-zer**, **Ton-zer**, *n.* [From *touse*.] A common name for a watch-dog.

Tow'sontown, or **Towson**, in *Maryland*, a post-town, cap. of Baltimore co., 7 m. N. of Baltimore.

Towy, (*tō'e*), *a.* Composed of, or resembling tow.

Tox away River, in *S. Carolina*, flows into the Savannah River from Pickens dist.

Toxic, **Toxical**, (*tōks'ik-l*), *a.* [From Lat. *toxicum*; Gr. *toxikon*.] Poisonous; having reference to poison.

Toxicological, (*-tōj'ik-*), *a.* Pertaining or relating to toxicology.

Toxicologist, (*-kōl'o-jist*), *n.* One skilled in the science of toxicology; the writer of a treatise on poisons.

Toxicology, *n.* [Gr. *toxikon*, pertaining to a bow and arrow (and as arrows were frequently poisoned, hence a *poison*), and *logos*, doctrine.] That branch of medico-chemical science which treats of poisons and their antidotes, or of the morbid and deleterious effects of excessive and inordinate doses and quantities of drugs and medicines, commonly called *poisoning*.

Tox'odon, (*tōks-*), *n.* [Gr. *toxon*, a bow, and *odous*, *odontos*, a tooth.] (*Pal.*) An extinct genus of quadrupeds connecting the pachydermal with the rodent order, and distinguished by the curved form of the teeth. The only species known (*T. platensis*) was as large as the hippopotamus, and appears to have been restricted to the warmer parts of S. America.

Toy, *n.* [Sansk. *tor*, to play; W. *tegan*, a bauble.] A child's plaything; a bauble.—A thing that affords diversion, but which is of no real worth; a bagatelle; a trifle; a knick-knack.—A trivial matter.—A quaint fancy; an odd conceit; a whimsey.—Amorous dalliance; play; sport; pastime.

—*v. n.* To wanton; to dally in an amorous manner; to trifle; as, to *toy* with a woman.

Toy'er, *n.* One who toys or trifles.

Toy'ingly, *adv.* In a playful or toying manner.

Toy'ishly, *adv.* In a toytish manner.

Toy'ishness, *n.* State or quality of being toytish.

Toy'man, *n.*; *pl.* TOYMEN. A dealer in toys.

To'ziness, *n.* State or quality of being tozy. (*R.*)

To'zy, *a.* Soft, like wool that has been teased. (*R.*)

Tracadie, (*trak'a-dee*), in Nova Scotia, a seaport-town of Sydney co., on St. George's Bay, 115 m. N.E. of Halifax.

Trace, (*trās*), *n.* [Fr.; It. *traccia*; L. Lat. *tracua*, from Lat. *tractus*, a drawing.] A delineation; a mark left by anything passing; a footprint; a track; a vestige; as, the *trace* of a deer.—A mark, impression, or visible appearance of anything left when the thing itself no longer exists; remains; token; as, a people without any *traces* of laws or religion.

(*Port.*) The plan of a work.

—*pl.* In a harness, the straps, chains, or ropes by which a carriage, sleigh, wagon, &c., is drawn by horses.

Trace, *v. a.* [Fr. *tracer*, from Lat. *tractare*.] To pass through; to walk over; as, to *trace* a street.—To mark out; to draw or delineate with marks; particularly, to copy, as a drawing or engraving, by taking a duplicate of the lines on a thin sheet of paper.—To follow by tracks or footsteps; to follow by some mark that has been left by something which has gone before; as, to *trace* an Indian by his trail.—To follow with exactitude; as, "*tracing* word by word."—Denham.

Traceable, (*trās'a-bl*), *a.* That may be traced.

Trace'ably, *adv.* In a traceable manner.

Tracer, (*trās'er*), *n.* One who, or that which, traces, or follows by marks.

Trachea, (*trā'ke-ah*), *n.*; *pl.* TRACHEÆ. [L. Lat., from Gr. *trachys*, rough.] (*Anat.*) The cartilaginous and membranous canal (Fig. 425) through which the air passes into the lungs, commonly known as the wind-pipe. Its upper part is called the larynx, the uppermost and smallest part of which is called the epiglottis, being over the glottis or mouth of the larynx, and serving to close the passage to the lungs in the act of swallowing. (See LARYNX.) From the lower end of the larynx the canal takes the name of *T.*, or *aspera arteria*, and extends so far down as the fourth or fifth vertebra of the back, where it divides into two branches, which are the right and left bronchial tubes. Like the larynx, it is formed of cartilages, united to each other by means of very elastic ligamentous fibres. It is also furnished with fleshy or muscular fibres, some of which pass through its whole extent longitudinally, while others are carried round it in a circular direction; and hence it may shorten or lengthen itself, or contract or dilate

its passage. Thus a passage for the air is constantly kept open, and we are enabled to receive and expel it in greater or less quantity, or with more or less velocity, as in singing or declamation. It is supplied with a great number of small glands, which discharge a mucous fluid on its inner surface.

(*Bot.*) A spiral vessel.

Tracery, (*trās'er-y*), *n.* (*Arch.*) The ornamental stonework in the upper part of Gothic windows, formed by the ramifications of the mullions, (Fig. 2518); also the decorations of corresponding character which are abundantly used in Gothic architecture on panellings, ceilings, &c. These beautiful forms vary with every variety of Gothic architecture. In the *Renaissance* styles no attempt has been made to develop any new forms

Fig. 2518. — TRACERY, A. D. 1260.

of tracery, and for the most part they have not employed this feature at all, the windows being again reduced to mere apertures, which not unfrequently disfigure the whole design.

Tracheal, *a.* Pertaining or having reference to the trachea.

Tracheocele, *n.* [Fr., from Gr. *tracheia*, the wind-pipe, and *kēlē*, a tumor.] (*Med.*) An enlargement of the thyroid gland.

Tracheotomy, (*trak-ke-ot'o-me*), *n.* [Gr. *tracheia*, and *temno*, I cut.] (*Surg.*) The operation of cutting into the trachea, for the purpose of admitting air into the lungs when the upper part of the air-passages is obstructed, or for the extraction of foreign bodies from the trachea. It is necessary in many diseases, and, though not without danger, it is often the means of affording instant relief. After the opening is effected, a small silver tube is introduced, through which the operation of breathing is carried on.

Trachitis, *n.* [Lat.] (*Med.*) Inflammation of the trachea.

Trachyte, (*trāk'it*), *n.* [Fr., from Gr. *trachys*, rugged.] (*Min.*) A variety of lava which is often porphyritic, and when containing hornblende and augite passes into varieties of trap, as basalt, greenstone, dolerite, &c.

Trac'ing, *n.* [From *trace*.] Act of one who traces; especially, the act of copying the line of a drawing superimposed on thin paper.—A course; a regular track or path.—A mechanical copy of an original, produced by following its lines, through the aid of a transparent medium.

Trac'ing-paper, *n.* A transparent paper, which enables a print or drawing to be clearly seen when it is passed over it, and will allow the pencil or pen to be used in producing a fac-simile, by following the lines of the original.

Track, *n.* [Fr. *trace*, from Lat. *tractus*—*traho*, to draw.] A mark left by something that has passed along; as, the *track* of a carriage, the *track* (or wake) of a ship.—A mark or impression left by the foot, either of man or beast; footprint; trace; as, the blood-hounds were set on his *track*.—A road; a beaten path or passage; as, he pursued the straight *track*.—Way; course; as, the *track* of a comet.

(*Civ. Engin.*) The permanent way of a railroad; as, the engine got off the *track*.—*Track-master*, one who has charge of a railroad track.

—*v. a.* To follow the guidance of a trace, or of footprints; to pursue a trail; as, to *track* an Indian.

(*Naut.*) To tow; to draw a vessel or boat, by a line reaching from her to the shore or bank.

Trackage, (*trāk'aj*), *n.* A drawing or towing.

Track'er, *n.* One who, or that which, tracks.

Track'less, *a.* Having no track.

Track'road, *n.* A towing-path.

Track'scent, *n.* Same as TRECKSCHUYT, *q. v.*

Tract, *n.* [Lat. *tractus*, from *traho*, *tractum*, to drag along.] Anything drawn out or extended.—A region; a quantity of land and water, of indefinite extent; as, a *tract* of ground.—A composition shorter than a treatise, in which some particular object is treated, generally in the form of a pamphlet; as, a religious *tract*.—Continuity; length; extent; as, a *tract* of time.

Tract Society, a society for printing and promoting the sale of religious books. The first English society of the kind was established in 1701. The first in America was the *Methodist Book Concern*, originally established in Philadelphia, and which issued its first publication in 1789. At the present day almost every religious denomination has its *Tract* or Publication Society, and many of them issue a large number of publications.

Tractability, **Tract'ableness**, *n.* [L. Lat. *tractabilitas*.] State or quality of being tractable, docile, or manageable; docility.

Tract'able, *a.* [Lat. *tractabilis*, from *tracto*, to lead or handle.] That may be easily led, managed, or taught; governable; teachable; docile; as, a *tractable* child, a *tractable* beast.—That may be handled; tangible; teachable; practicable; as, *tractable* ideas.

Tract'ably, *adv.* In a tractable or docile manner.

Tractarianism, *n.* (*Theol.*) Same as PUSEYISM. See PUSEY.

Tractile, (*trāk'til*), *a.* [From Lat. *tractum*, to draw.] Ductile; that may be drawn or spun out in length; as, a *tractile* substance.

Tractility, *n.* Quality of being tractile; ductility.

Tract'ion, (*trāk'shun*), *n.* [Fr., from Lat. *tractus*, a drawing.] Act of drawing, or state of being drawn.—A drawing toward; attraction; gravitation.

Angle of T. (*Mech.*) The angle which the plane of the traces makes with the ground upon which any body is moving.—*T. engine*, a kind of locomotive engine for drawing heavy vehicles upon common roads.

Tract'ive, *a.* That pulls or draws along; attracting.

Tract'or, *n.* [L. Lat.] That which draws, or is used for drawing.

—*pl.* (*Med.*) Small bars of metal which were, formerly, supposed to possess certain metallic powers, and to cure painful affections and tumors by being drawn over the part.

Tract'rix, **Tract'ory**, *n.* [From Lat. *tractum*.] (*Geom.*) A transcendental curve generated mechanically by a small weight attached to a string, the other extremity of which is drawn along a fixed line.

Trac'y, in *Indiana*, a village of Huntington co., 10 m. S.E. of Huntington.

Tracy City, in *Tennessee*, a post-village of Grundy co. Pop. (1897) 2,120.

Tracyville, in *Pennsylvania*, a village of Wayne co., 1 m. E. of Honesdale.

Trade, *n.* [Sp. *trato*, traffic, from L. Lat. *tractare*, to bargain.] Commerce; traffic; barter; act or calling of exchanging commodities by barter, or the business of buying and selling for money; especially, the barter or purchase and sale of goods, wares, and merchandise, either by wholesale or retail.—The business which a person has learned, and which he carries on, for obtaining a subsistence, or for the acquisition of profit; occupation; particular employment, whether manual or mercantile, as distinguished from the liberal arts and learned professions, and from agriculture; as, the *trade* of a carpenter.—Business carried on; occupation;—in a somewhat contemptuous sense; as, to cheat people is his *trade*.—Instruments of any occupation.—Habitual exercise; custom; habit; standing practice; as, "Thy sin's not accidental, but a *trade*." (*Shaks.*) (*R.*)—A company or firm of persons associated in the same business or occupation; as, no credit is the rule of the *trade*.

Domestic, home, or inland trade, the exchange, or buying and selling, of goods within the country in which they were produced or manufactured.—*Carrying trade*, that branch of commerce which has reference to the carriage or transportation of goods by water.—*Foreign trade*, the exportation and importation of commodities, or the exchange of the products of different countries.—*Retail trade*, the buying and selling, or exchange, of goods in small parcels.—*Wholesale trade*, commercial transactions in which commodities are bought and sold or exchanged, by the package, or in large quantities.—*Board of Trade*, in England, a department of the govt. having jurisdiction over all matters pertaining to trade or commerce.—*Free trade*, an exchange of commodities between nations, free from fiscal restrictions.

—*v. n.* To be engaged in trade or traffic; to barter, or to buy and sell; to deal in the exchange, purchase, or sale of goods, wares, and merchandise, or anything else; to bargain; to carry on commerce as a business.—To buy and sell or exchange property, in a single instance.—To act merely for money.

—*v. a.* To buy and sell, or exchange in commerce; as, to *trade* products.—To barter; to exchange; to swap; as to *trade* hats.

Trade-mark, *n.* (*Law.*) A symbol, emblem, or mark, which a tradesman puts upon, or wraps or attaches in some way to, the goods he manufactures or has caused to be manufactured. It may be in any form of letters, words, vignettes, or ornamental design. Newly-recognized words may form a trade-mark. A common name of an article and of a place may, by combination, become a trade-mark. Alien merchants and traders have the same right of protection, in regard to their trade-mark as citizens. No property can be acquired in words, marks, or devices which denote the mere nature, kind, and quality of articles. Mere variations of arrangement of a trade-mark, with secondary additions and omissions, will justify an injunction. While there may be striking differences in trade-marks, yet if in the last-made there is an ingenuity which would deceive the court will interfere. By decision of Nov. 18, 1879, the Supreme Court declared the U. S. trade-mark statute void, for the reason that Congress had no constitutional authority to pass it. There is nothing in this decision to prevent congressional legislation in the matter of foreign *T.-M.*, but it practically renders impossible any federal statutory protection for domestic *T.-M.* The only statutory protection that the merchants and manufacturers of the country can look forward to for what has been called their commercial signatures, must be in the form of state legislation. Acts of this kind now exist in some of the States, and will doubtless be passed in others. But, independently of federal or state legislation, property

in *T.-M.* is recognized and protected by the common law, which affords a remedy by injunction and action for damages arising out of any case of infringement.

Trade'-price, *n.* A lower price allowed to members of the same trade, or by wholesale dealers to retailers.

Trad'er, *n.* (*Law*.) One who makes it his business to buy merchandise, or goods and chattels, and to sell the same for the purpose of making a profit. The quantum of dealing is immaterial, when an intention to deal generally exists. Questions as to who is a trader most frequently arise under the bankrupt laws; and the most difficult among them are those cases where the party follows a business which is not that of buying and selling principally, but in which he is occasionally engaged in purchases and sales. A farmer, who bought a large quantity of potatoes, not to be used on his farm, but merely to sell again for a profit, was also declared to be a trader. A butcher who kills only such cattle as he has reared himself is not a trader, but if he buy them and kill and sell them with a view to profit, he is a trader.

Trad'ersville, in *Ohio*, a post-village of Madison co., abt. 3 m. N. of London.

Tradescan'tia, *n.* (*Bot.*) A genus of plants, order *Commelynaceae*, characterized by flowers in terminal, close umbels, subtended by 2 or 3 long, leafy bracts. *T. virginica*, the Spider-Wort, common in moist prairies, meadows, &c., in the Middle and Western States, is 2-3 feet high, flowers of a deep, rich blue, soon fading. The juice of the plant is viscid and spins into thread; hence the common name.

Trade'-sale, *n.* A bookseller's or publisher's sale, by auction, of new books.

Trades'man, *n.*; *pl.* TRADESMEN. [From *trade* and *man*.] A trader; a shopkeeper; especially, one who retails goods.

—Any mechanic or artificer whose livelihood depends upon the labor of his hands.

Trades'people, **Trades'folk**, *n.* People employed in various trades, particularly shopkeeping, &c.

Trades'-union, *n.* (*Com.*) An arrangement or combination entered into by the workmen of particular trades, or manufactures, in order to regulate the prices of labor, the hours during which labor is employed, and not unfrequently the number of workmen engaged by an employer, the number of apprentices bound to the employer or his foreman, and the number of journeymen. The purpose of a trades-union is, therefore, the settlement of the proportion which wages should bear to profits. The effectiveness of a trades-union depends on: (1.) the esprit de corps of the workmen themselves; (2.) moral restraint; and (3.) unfortunately, when men's passions are heated, coercion exercised on those who are unwilling to join the trades-union or are indifferent to its real or supposed advantages; and (4.) failing the consent of the employer or general body of employers to the demands made by workmen, the last remedy is a STRIKE, *q. v.*

Trade'water Creek, in *Kentucky*, rises in Christian co., and flowing N.W., enters the Ohio River between Crittenden and Union cos.

Trade'-winds, *n. pl.* [So called because they are favorable to navigation and the interests of trade.] (*Meteorol.*) Winds which in the torrid zone, and often a little beyond it, blow generally from the same quarter, varying, according to circumstances, from N.E. to S.E. The cause of this wind is to be ascribed principally to the high comparative temperature of the torrid zone, combined with the rotation of the earth from W. to E. As the heated air at the surface ascends into the higher regions of the atmosphere, its place is supplied by the colder air rushing from the poles. This colder air, also becoming rarefied, ascends in its turn, and is carried in the upper regions towards the poles to supply the stream of the under current; and these under polar currents moving progressively towards the equator from the zones where the earth's motion is slower to others where it is more rapid, acquire an apparent relative motion in a westerly direction. As the currents from the two hemispheres meet near the equator, their meridional motions are there destroyed, and they therefore advance together with the remaining motion from the eastward round the globe. The regularity of the *T. W.* is disturbed in some places by local causes, and chiefly by the superior rarefaction of the air over land heated by the sun's rays. They extend farther to the northward or southward according as the sun's declination is N. or S.; and in some places they become periodical, blowing one half of the year in one direction, and the other half in the opposite one. (See MONSOON.) In the great Pacific ocean, however, the trade-wind blows with a uniform and gentle breeze all the year round.

Trad'ing, *n.* The act or business of carrying on commerce.

Tradition, (*tra-dish'un*.) *n.* [Fr., from *Lat. traditio*, from *trado*, I give or deliver.] In its widest signification, whatever is handed down to us concerning the past; and in this sense, all history is *T.* In its more limited sense, any knowledge handed down from one generation to another by oral communication. In the early ages of mankind, before the art of writing was introduced or practised, all history was thus handed down by oral communication. When these came to be written down long after the events had occurred, they partook more or less of the opinions and judgments of those who had handed them down, as well as of those who had written them out. They differ materially, therefore, from events recorded by eye-witnesses, or written down at or soon after the time when they occurred. Historians, therefore, distinguish between the two, calling the former

T., the latter history. Those who have observed how much facts are distorted even in the present day, in passing from mouth to mouth, will understand how carefully the historian has to criticize the accounts that are founded on *T.* The Jews believed that, besides the written law contained in the Old Testament, Moses had delivered an oral law, which had been handed down from father to son, and constituted their *T.*, and is contained in the *Talmud* (*q. v.*). In the Roman Catholic Church, the term *T.* is applied to the doctrines supposed to have been communicated by Christ to his apostles, and handed down by them orally to their successors. The writings of the Fathers are regarded as containing these *T.*; and hence they are considered as equally binding with the doctrines of the New Testament.

Trad'itional, **Trad'itionaly**, *a.* Pertaining or relating to, or derived from, tradition.

Trad'itionalism, **Trad'itionism**, *n.* A system of faith based on tradition.

Trad'itionalist, **Trad'itionist**, *n.* One who adheres to tradition.

Trad'itionally, **Trad'itionarily**, *adv.* By tradition.

Trad'itionaly, (*-dish'un*.) *a.* Traditional; pertaining or having reference to tradition; as, a *trad'itionaly* account of the Deluge.

Trad'itive, *a.* [*O. Fr. traditif*.] Transmitted by tradition; traditional.

Trad'itor, *n.* [*Lat. (Eccl. Hist.)*] A deliverer; — a name of infamy given to those early Christians who delivered the Scriptures or the goods of the Church to their persecutors to save their lives.

Trad'uce, *v. a.* [*Fr. traduire*, to arraign; *Lat. traduco* — *trans*, and *duco*, to lead, bring.] To expose to public contempt; to defame; to vilify; to calumniate; wilfully to misrepresent; to assert as blamable.

Trad'ucer, *n.* One who slanders, vilifies, or calumniates.

Trad'ucianism (*-izm*), *n.* (*Theol. and Eccles. Hist.*) See SECTION II.

Trad'ucible, (*-dū'si-bl*.) *a.* That may be traduced.

Trad'ucingly, *adv.* Slanderingly; by way of defamation.

Trad'uction, (*-dū'k'shun*.) *n.* [*Fr.; Lat. traductio*.] Propagation; derivation from the same kind or species. — *Tradition*; transmission from one to another. — *Conveyance*; act of transmitting or transferring; as, the *trad'uction* of animals from one place to another.

Trad'uctive, *a.* That may be deduced or derived.

Tr'algar, a cape of Spain, on the coast of Andalusia, at the entrance of the Strait of Gibraltar; *Lat.* 36° 10' N., *Lon.* 6° 1' W. It is noted for the naval victory gained, Oct. 21, 1805, by Lord Nelson, who fell in the action, over the combined fleets of France and Spain. See NELSON.

Tr'algar, *n.* (*Printing*.) A large type used in printing hand-bills or posting-bills.

Traf'fic, *n.* [*Fr. trafic*.] Originally, business done or trade carried on beyond the seas; — specifically, trade; commerce, either by barter or by buying and selling; — appropriately, foreign trade; as, a *traff'ic* in slaves. — *Goods* or commodities for market. (*R.*) — The business transacted by a railroad with respect to the number of passengers, or the amount of freight carried.

Traff'ic-return, the periodical statement of the receipts for goods and passengers on a line of railroad.

— *v. n.* (*imp. and pp. TRAFFICKED*, (*traff'ikt*.) [*Fr. trafiquer*.] To trade; to pass goods and commodities from one person or persons to another, or others for an equivalent in goods or money; to barter; to buy and sell wares. — To trade meanly or mercenarily; as, "to *traff'ic* with thee for a prince's ruin." — *Rowe*.

— *v. a.* To exchange in traffic.

Traff'icker, *n.* One who carries on traffic or commerce; a trader; a merchant.

Trag'aeanth, *n.* [*Lat. tragacanthum*, from *Gr. tragos*, a he-goat, and *acantha*, a thorn.] (*Bot.*) See ASTRAGALUS and GUM.

Tragedian, (*-jē*.) *n.* [*Fr. tragédien*; *Lat. tragædus*.] A performer of tragedy on the stage; a tragic actor.

Tragedienne, (*trah-zhā-de-ēn*.) *n.* [*Fr.*] A tragic actress.

Trag'edy, *n.* [*Fr. tragédie*; *Gr. tragēdia*, from the ancient Greek adjective *tragos*, melancholy, lamentable.] (*Lit.*) A species of drama in which the action is elevated and the catastrophe melancholy; or, a dramatic poem representing some signal action or series of actions, performed by eminent persons, and being pregnant with some great moral truth, generally having a fatal issue. — A fatal and mournful event; any occurrence in which human lives are sacrificed by violence, more particularly by illegal or unauthorized violence; as, murder is a terrible *tragedy*.

Tragetto, (*tra-jel'to*.) a town of S. Italy, 8 m. from Gaeta; *pop.* 6,194.

Trag'ic, **Trag'ical**, (*trāj'ik*.) *a.* [*Fr. tragique*.] Pertaining, or relating to tragedy; of the nature or character of tragedy; as, the *tragic* Muse. — Fatal to human life; calamitous; sorrowful; mournful; as, the affair had a *tragic* ending.

— Expressive of tragedy, the loss of life, or of sorrow; sad; as, he spoke in *tragic* tones.

Trag'ically, *adv.* In a tragical manner.

Trag'icalness, *n.* Quality of being tragical or lamentable.

Tragi-com'edy, *n.* [*Fr. tragicomédie*.] (*Lit.*) A dramatic composition partaking of the nature both of tragedy and comedy.

Tragi-com'ic, **Tragi-com'ical**, *a.* Pertaining, or having reference to tragi-comedy; partaking of a mixture of grave and comic scenes.

Tragi-com'ically, *adv.* In a tragi-comical manner.

Tragop'ogon, *n.* [*Gr., goat's-beard.*] (*Bot.*) A genus of plants, order *Asteraceae*. The salsify, salsify, or vegetable oyster, *T. porrifolius*, is 3-4 feet high, and leaves terminal, solitary, large, bluish-purple. This exotic is cultivated in gardens for the root, which is long, tapering, and nutritious. When properly prepared it has a mild, sweetish taste, which has been compared to that of the oyster.

Fig. 2519. — SALSIFY.
(*Tragopogon porrifolius*.)

Trag'us, *n.* [*Gr. tragos*.] (*Anat.*) The small cartilaginous eminence at the entrance of the external ear; in the adult it is beset with small hairs.

Trah'iras, (*tra-ee-ras*.) in Brazil, a town of the prov. of Goyaz, on the river Trahiras, 15 miles from its mouth in the Maranhao; *pop.* abt. 2,500.

Trail, *v. a.* [*D. treilen*, to tow; *O. Fr. trailer*.] To hunt by the track. — To draw along the ground; as, he *trailed* his legs. — To lay flat, or tread down, as grass, by walking through.

(*Mil.*) To lower, as arms.

— *v. n.* To be drawn out in length; as, *trailing* smoke. — To run or climb, as a plant.

Trailing arbutus. (*Bot.*) See EPIGÆA.

— *n.* Track pursued by the hunter; scent or footprints left on the ground by the man or beast pursued; as, they followed up the *trail*. — Anything drawn to length; as, the *trail* of smoke. — Entrails, as of a bird or sheep.

(*Mil.*) In artillery, that part of a gun-carriage which, in travelling, is hooked up to the limber, but when the gun is unlimbered for action, rests on the ground, forming a third point of support, the wheels being the two other points.

Trail-boards. (*Ship-building*.) The curved work between the cheeks of the bow.

Trailing-springs, *n. pl.* (*Mach.*) The springs fixed on the axle-boxes of the trailing-wheels of a locomotive-engine, which bear slightly against the side-frames, so as to leave as much weight as possible upon the thriving springs, and to assist in deadening any shock which may take place.

Trailing-wheels, *n. pl.* (*Mach.*) The wheels placed behind the driving wheels of a locomotive engine.

Trail-net, *n.* A net trailed or drawn behind a boat.

Train, (*trān*.) *v. a.* [*Fr. traîner*, from *Lat. trahere*, to draw.] To draw along; to trail. — To draw or allure by artifice or stratagem; to draw from act to act by persuasion or promise; to entice. — To exercise; to discipline; to instruct and form by practice; as, to *train* a people to the use of arms. — To break, tame, and accustom to draw, as oxen. — To teach; to educate; to bring up; to form by instruction or practice; — often preceding *up*; as, he was *trained up* at Cambridge.

(*Gardening*.) To lead or direct and shape to a wall or espalier; to adapt to a proper form by growth, lopping, or pruning; as, to *train* a vine.

(*Mining*.) To trace, as a lode of mineral, to its head. — To *train* a gun. (*Mil.*) To point the gun at some object either forward or else abaft the beam, that is, not directly on the side.

— *v. n.* To perform military drill or duty.

— *n.* [*Fr.*] That which allures, entices, or draws along; — particularly, stratagem or persuasive artifice; as, "others lay *trains* and pursue a game." (*Temple*.) — Hence, a lure or trap. — That which is drawn along in the rear of some other thing; as, (1.) That part of a lady's gown or robe which trails behind the wearer; as, pages carried her *train*. (2.) The tail of a bird. — A retinue; an escort; a number of followers or attendants; as, the king was accompanied by a *train* of nobles. — A series; a consecution or succession of connected things; as, a *train* of events or of ideas. — Process; regular method; course of procedure; as, everything is in *train* for the purpose. — A line of gunpowder laid to ignite a charge, or a mine. — The number of beats which a watch or clock makes in any specified time. — A continuous line of cars or carriages on a railroad; as, an express *train*. — The series of wheels, &c., forming a movement in a clock or watch.

Train of artillery. (*Mil.*) Any number of cannon, mortars, &c., with the attendants and carriages which follow them into the field.

Traina, (*tri'na*.) a town of Sicily, in the Val di Demoua, on the Traina, 30 m. from Catania; *pop.* 8,215.

Train'able, *a.* That may be trained.

Train'-band, *n.*; *pl.* TRAIN-BANDS. A band or company of militia.

Train'er, *n.* One who trains up; an instructor; a preceptor; especially one who prepares men for athletic exercises, or horses for the race, &c.

— In the U. States, a militia-man when called out for exercise or discipline.

Train'ing, *n.* Act or process of bringing up or educating.

ing; education; act of preparing men for athletic exercises, or horses for the race; also, the disciplining of troops.

Train-oil, *n.* The oil drawn from the blubber or fat of whales, and from the fat of various other fishes, by boiling.

Train-road, *n.* (*Mining.*) A short tram-way for wagons.

Traipse, *v. n.* [*Ger. trapsen.*] To lounge about in an idle, careless manner; to dawdle. (*Colloq. and vulgar.*)

Trait, (*trät*), *n.* [*Fr.*, from *Lat. tractus*—*traho, tractum*, to draw.] A stroke; a touch.—A distinguishing feature or marked peculiarity or idiosyncrasy; as, a *trait* of character.

Traitenr, (*trä'toor*), *n.* [*Fr.*] Same as *RESTAURATEUR*, *q. v.*

Traitor, (*trä'tor*), *n.* [*Fr. traître*; *Sp. traidor*; *Lat. traditor*.] One who betrays his trust; a treacherous or perfidious person; a deceiver; one guilty of breach of faith.—Especially, one who betrays his sovereign or country; a person guilty of treason: one who commits a breach of trust in surrendering a post, or any body of men placed under his charge, into an enemy's hands, except when vanquished; one who intrigues, or takes up arms, against his country.

Traitorous, *a.* Acting the part of a traitor; treacherous; guilty of treason; faithless; perfidious; as, a *traitorous* subject.—Consisting in treason or breach of allegiance; characterized by treacherousness; as, a *traitorous* plot.

Traitorously, *adv.* In a traitorous manner.

Traitorousness, *n.* Quality of being traitorous; treachery.

Traitress, *n.* [*Fr. traitresse.*] A female betrayer; a female who is guilty of treason or breach of trust.

Trajan, (*trä'jän*), *MARCUS ULPIUS TRAJANUS*, a Roman emperor, was b. in Spain, A. D. 52. He served with his father in the Parthian and Jewish wars, and was consul in 91. He next served in Germany, and his moral and military virtues not only endeared him to the army, but recommended him to the emperor Nerva, who in 97 adopted him, and created him Cæsar. Early in 98 he succeeded to the empire, and soon justified by his wise and vigorous administration the hopes of Nerva. A war with the Dacians began in 100, and occupied him three years. On the defeat of Decebalus, their king, *T.* had a triumph at Rome, and received the surname of *Dacicus*. In 104 the second Dacian war broke out, which ended in 106 with the defeat and death of Decebalus, and the reduction of Dacia to a Roman province. *T.* then celebrated a second triumph, and the games exhibited lasted 123 days. For the next eight years the empire enjoyed peace, and *T.* applied himself to the duties of government and the execution of many important works for the improvement of Rome. In 114 he set out for the East, carried on war with the Parthians, took Ctesiphon, Edessa, and other towns, subdued great part of Western Asia, and passed down the Tigris to the Persian Gulf, but being soon after seized with illness, he set out to return to Italy. D. at Selinus, in Cilicia, 117. His ashes were carried to Rome. *T.* was deservedly named "Optimus" by the senate, for he was one of the wisest and best of emperors. Among his benefactions may be mentioned the humane and legal mode of dealing with the Christians which he enjoined in his rescript to Pliny, appointed by him proconsul of Bithynia and Pontus. By his direction, Apollodorus, the architect, erected the famous column at Rome, which still bears his name (Fig. 651)—one of the noblest structures of this kind ever erected.

Traject, *v. a.* [*Fr. trajet*, from *Lat. trajectus, trajicere*.] To throw or cast through. (*R.*)

Traction, (*trä'kshun*), *n.* [*Lat. tractio*—*trans*, over, and *jacio, jactum*, to throw.] Act of trajecting; a throwing or casting over; transportation; also, emission.

Trajectory, *n.* That curve which a body describes in space when projected. When applied to rifle-shooting, it indicates the course of the bullet, which instead of being straight, forms a complete curve, which increases more and more in proportion as the distance from the muzzle increases.

Tralatitio, (*trä-lä'tish'un*), *n.* A metaphor.

Tralee, (*trä-le'*), a town of Ireland, co. of Kerry, 60 m. from Cork; pop. 10,000. The town was destroyed in the rebellion of 1641.

Tram, *n.* [*Sp. trama*, web.] A silk thread formed of two or more threads twisted together, used especially for the web or cross-threads of the best quality of velvet and silk goods.

Tramble, *v. a.* To wash, as tin-ore, with a shovel in a frame fitted for the purpose.

Trammel, *n.* [*Fr. tramail*, a drag-net—*trois*, three, and *maille*, *Lat. macula*, a mesh.] A net; particularly, a kind of loose net for catching birds or fishes.—An iron hook, of variable forms and sizes, used for hanging kettles and other utensils over the fire.—A kind of shackles used for regulating the motions of a horse or mule, and making him amble.—Hence, analogically, that which obstructs freedom, progress, or activity;—generally in the plural; as, the *trammels* of servitude.

(*Mech.*) An instrument (Fig. 2520) for joining ovals, much in use among joiners and other artificers. It consists of a cross, CDEF, in which are cut two grooves at right angles to each other; and a beam, AB, carrying two pins, GH (which are clamped to A B, and slide in their grooves), as well as a pencil, P; these parts are called the

Fig. 2520.—TRAMMEL.

cross and the beam. By turning A B round, the pins G H slide along the grooves, and the pencil P describes an elliptic curve.

Tram, *v. a.* To catch; to intercept. (*R.*)—To obstruct; to hamper; to confine; to shackle; to encumber.

Trammelled, *a.* (*Man.*) Having blazes on the fore and hind foot of one side, as if marked by trammels;—said of a horse.

Trammel's Creek, in Tennessee, rises in Sumner co., and flowing N.W. enters Big Barren River in Warren co., in Kentucky, abt. 5 m. E. of Bowling Green.

Tramontane, *a. and n.* Same as *ULTRAMONTANE*, *q. v.* **Tramore**, (*trä-mor'*), a neat, regular, well-built town of Ireland, co. of Waterford, on a broad, open, and dangerous bay in St. George's Channel; pop. 2,000.

Tramp, *v. a.* [*Icel. trampa.*] To trample; to tread under foot.—To cleanse, as clothes, by treading upon them in water.

Tramp, *v. n.* To travel on foot; to wander; to stroll; to ramble.

Tramp, *n.* A travel or journey on foot; as, he had a long *tramp*.—A vagrant.—An instrument used or designed for trimming hedges.

—In Scotland, a plate of iron worn by ditchers below the centre of the foot, for working their spades.

Tramper, *n.* One who tramps; a vagrant; a stroller.

Tram-plate, *n.* A flat piece of iron laid down as a rail on a tram-road.

Trample, *v. a.* [*Ger. trampeln.*] To tread under foot; particularly, to tread upon with contempt, scorn, or triumph.—To treat with arrogance, contempt, or insult.—To tread down; as, to *trample* grass.

Trampler, *n.* One who, or that which, tramples.

Trampoos, *v. n.* To tramp; to walk in a toilsome manner. (*Vulgar, U. S.*)

Tram-road, **Tram-way**, *n.* A road laid down with smooth beams of timber, blocks of stone, or plates of iron, for the easy transit of trains or wagons.

Tramutola, (*trä-moo-to'la*), a town of S. Italy, 28 m. from Policastro; pop. 4,517.

Trance, *n.* [*Fr. transe*, from *Lat. transitus*—*transeo*.] An ecstasy; a state in which the soul appears to have passed out of the body into celestial regions, or to be rapt into visions.

"Abstract as in a trance, methought I saw."—*Milton*.

(*Med.*) Same as *CATALEPSY*, *q. v.*

Tranced, (*tränt*), *a.* Lying in a trance.

Tranco'so, a seaport-town of Brazil, 20 m. S. of Porto Seguro; pop. abt. 2,000.

Trani, a town of S. Italy, on the Adriatic, 35 m. from Bari. *T.* has a handsome cathedral, a court, a theatre, and a strong castle. The streets are wide, well-built, and paved with flagstones. A considerable trade in oil, wine, corn, and cotton, which last is also manufactured here, is carried on. Pop. 24,220.

Tranque, (*tränk'a*), in Chili, an island off the E. coast of the island of Chiloe.

Tranquebar, a fortified seaport-town of India, in the Carnatic, at one of the mouths of the Cauvery, 140 m. from Madras. *T.* was originally a settlement of the Danes. It was purchased by Great Britain in 1846. Pop. (1897) 6,640.

Tranquil, (*tränk'wil*), *a.* [*Fr. tranquille*; *Lat. tranquillus*.] Free from strife, agitation, or disturbance; quiet; calm; peaceful.

Tranquillity, **Tranquillness**, *n.* [*Fr. tranquillité*.] Freedom from strife, disturbance, or agitation; a calm state; quietness; repose; as, the *tranquillity* of a contented mind.

Tranquillization, (*-zü'shun*), *n.* Act of tranquillizing; state of being tranquillized.

Tranquillize, (*tränk'wil-iz*), *v. a.* [*Fr. tranquilliser*.] To render tranquil; to quiet; to compose; to allay when agitated or disturbed; to make calm and peaceful; as, to *tranquillize* the mind.

Tranquillizer, *n.* One who, or that which, tranquillizes.

Tranquillizingly, *adv.* So as to tranquillize.

Tranquilly, *adv.* In a tranquil manner.

Trans, a Latin preposition employed as an English prefix, having the signification of *beyond, over, through, on the other side*; as in *transatlantic*, on the other side of the Atlantic.—In a moral sense, it implies a thorough change; as, to undergo *transformation*.

Transact, *v. a.* [*Lat. transigo, transactionem*, to drive through.] To carry through; to complete; to do; to perform; to dispatch; to manage; as, to *transact* business.—*v. n.* To conduct matters; to treat; to manage.

Transaction, (*-äk'shun*), *n.* [*Fr.*; *Late Lat. transactio*.] The doing or performing of any business; management of any affair.—That which is performed or transacted: a matter; an affair; as, I had nothing to do with the *transaction*.

(*Civ. Law.*) An adjustment of a dispute between parties by mutual agreement.

Transactor, *n.* [*Lat.*] One who performs or conducts any business.

Transalpine, *a.* [*Lat. trans*, beyond, and *Alpinus*, of the Alps.] Lying, or being beyond the Alps, in regard to Rome—that is, on the N. or W. of the Alps;—opposed to *cisalpine*.

Transanimate, *v. a.* [*Lat. trans*, across, and *animare, animatio*, to animate.] To transmigrate. (*R.*)

Transanimation, *n.* [*Fr.*] Same as *TRANSMIGRATION*, *q. v.*

Transatlantic, *a.* [*Lat. prefix trans*, beyond, and *Eng. Atlantic*.] Lying, or being beyond the Atlantic;—when used by a person in America, it has direct reference to Europe or Africa.

Transalency, *n.* State of being transcalent.

Transcalent, *a.* [*Lat. trans*, through, and *calere*, to grow warm.] Allowing the passage of heat.

Transcaucasia, (*trans-kau-kai'se-a*), a tract of territory belonging to Russia, and extending between the Caucasus on the N., and Turkey in Asia and Persia on the S. This name, however, has no practical geographical significance, as the Russians include the territory which it denotes in what they call the *Caucasus*, which, nominally included in European Russia, comprises the governments of Shemakha, Tiflis, Erivan, Derbend, and Kutais. The area of the Caucasus is 118,396 sq. m. Pop. 3,543,710.

Transcend, (*tran-sënd'*), *v. a.* [*Lat. transcendo*—*trans*, and *scendo*, to climb.] To climb, step, or pass over; to rise above; to surmount; as, meteorological observations not *transcending* the upper regions.—To go beyond; to pass over.

"To judge herself, she must herself transcend."—*Sir J. Davies*.

—To surpass; to excel; to exceed; to outdo; as, Shakespeare's genius *transcended* all the intellects of his time.

Transcendence, **Transcendency**, *n.* [*Lat. transcendentia*.] A transcending; state of being transcendent; supereminence; super-excellence.

Transcendent, *a.* [*Fr. transcendant*.] Superior or supreme in excellence; above others in merit; very superior; as, a man of *transcendent* probity.

(*Philos.*) See *TRANSCENDENTAL*.

Transcendental, *a.* [*Fr.*, from *Lat. transcendo*.] Supereminent; highly excellent; surpassing others; as, *transcendental* qualities.

(*Philos.*) Noting that which transcends or goes beyond actual experience. This meaning is somewhat restricted by Kant, who further draws a distinction between *transcendent* and *transcendental*. By the former he seeks "to denote what is wholly beyond experience, being neither given as an *a posteriori* nor *a priori* element of cognition—what, therefore, transcends every category of thought." Transcendental he applied to signify the *a priori*, or necessary cognitions, which, though manifested in consciousness, as affording the conditions of experience, transcend the sphere of that contingent or adventitious knowledge which we acquire by experience.

T. anatomy, that branch of the science which treats of the essential nature and homologies of the parts of the body, and the results of which study seem to be different from, or beyond, what would be suggested by the ideas of the parts derived from the outward senses.—*T. quantity*. (*Math.*) A quantity not admitting of representation by an algebraic expression of a finite number of terms, with determinate indices.

Transcendentalism, *n.* (*Philos.*) The philosophy indocrinated by Kant. See *KANT*.

Transcendentalist, *n.* A believer in the philosophical doctrine of transcendentalism.

Transcendentality, **Transcendentness**, *n.* State or quality of being transcendental.

Transcendently, *adv.* In a transcendent manner.

Transcendently, *adv.* Supereminently; with a superior degree of excellence; by way of eminence or superiority.

Transcriber, *n.* A contemptuous epithet for a transcriber.

Transcribe, *v. a.* [*Lat. transcribo*—*trans*, over, and *scribo*, to write.] To write over from one book into another; to write over again, or in the same words; to write, as a duplicate of anything; to copy; as, to *transcribe* a manuscript.

Transcriber, *n.* One who transcribes; a copyist.

Transcript, *n.* [*Lat. transcriptum*, from *transcribo*.] That which is transcribed, or has been transcribed; a writing made from and according to an original; a writing or composition consisting of the same words with the original; a written copy.

Transcription, (*-skrip'shun*), *n.* [*Fr.*; *Lat. transcriptio*.] Act of transcribing or of copying; also, state of being transcribed; a copy; a transcript.

Transduction, (*-dük'shun*), *n.* The act of conveying over.

Transelementation, *n.* (*Eccl.*) Same as *TRANSSUBSTANTIATION*, *q. v.*

Transept, *n.* [*Lat. trans*, and *septum*, a hedge.] (*Arch.*) The cruciform part of a cathedral, or the two arms, as it were, of the cross upon which the plan is laid out, extending on the north and south sides of the area between the nave and the choir.

Transfer, *v. a.* (*imp. and pp. TRANSFERRED*—*-furd*.) [*Fr. transférer*; *Lat. transfero*—*trans*, and *fero*, to carry, bear.] To carry or convey from one place or person to another; to transport or remove to another place or person.

"The war being now transferred into Munster."—*Camden*.

—To make or pass over; to convey, as a property or right.

Transfer, *n.* The act of transferring; the removal or conveyance of a thing from one place or person to another.—Something transferred; a copy.

(*Civil Law.*) The conveyance of right, title, or property, either real or personal, from one person to another.—Something transferred.

Transferability, *n.* The quality of being transferable.

Transferable, **Transferible**, *a.* [*Fr.*] That may be transferred or conveyed from one place or person to another.—Negotiable, as a note, bill of exchange, or other evidence of property that may be conveyed from one person to another by indorsement or other writing.

Transfer-book, *n.* A record of changes of ownership in stocks, bonds, &c.

Transferee, *n.* The person to whom a transfer is made.

Transferography, *n.* [*Eng. transfer*, and *Gr. grapho*, to write.] The art, practice, or act of copying inscriptions from ancient tombs, &c.

Trans'fer-paper, n. A thin, unsized kind of paper, prepared for taking copies of letters or writings with a copying-press.

Transfer'ence, n. The act of transferring, or the state of being transferred.

Transfer'rer, n. One who makes a transfer or conveyance.

Transfig'urate, v. a. Same as TRANSFIGURE, *q. v.*

Transfiguration, n. [Fr.; Lat. *transfiguratio*.] The act of transfiguring, or the state of being transfigured: change of form.

(*Script.*) A miraculous event in the life of our Saviour, when he took Peter, James, and John up into a high mountain, supposed to be Mount Tabor, and was transfigured before them, appearing in his glory in company with Moses and Elias, (*Matt.* xvii. 1-9; *Mark* ix. 2-9, &c., &c.)

Transfigure, (-fig'yur,) v. a. [Lat. *transfiguro*, from *trans*, and *figura*, form, shape.] To transform; to change the outward form or appearance of.

Transfix, v. a. [Lat. *transfigo*, *transfixum*, from *trans*, across, through, and *figo*, to fix, to fasten.] To pierce through, as with a pointed weapon.

Transfixion, (-fik'shun,) n. Act of transfixing. — The state of being transfixed.

Trans'flux, n. [Lat. *transfluxus*, from *transfluere*, to flow through.] The flowing or running through or across. (R.)

Transform, v. a. [Fr. *transformer*, from Lat. *trans*, and *forma*, form.] To change the form of; to change the shape or appearance of; to metamorphose.

—To change, as one substance into another; to transmute. (*Theol.*) To change, as the natural disposition and temper of man from a state of enmity to God and his law, into a disposition and temper conformed to the will of God.

(*Rom. Cath. Church.*) To change, as the sacramental elements, bread and wine, into the flesh and blood of Christ.

—*v. n.* To be changed in form; to be metamorphosed. (R.)

Transformable, a. That may be transformed.

Transformation, n. [Fr.; L. Lat. *transformatio*.] The act of transforming, or the state of being transformed; change of form. — Metamorphosis; change of form in insects, as from a caterpillar to a butterfly. — The change of one metal into another, as of copper or tin into gold. — Transubstantiation. — A change of heart in man, by which his disposition and temper are conformed to the divine image; a change from eternity to God, to holiness and love.

(*Algebra.*) The operation of replacing the variables or facients of a given expression by functions of another set of variables. When these functions are of the first degree in the new variables, the *T.* is said to be *linear*.

(*Geom.*) The act of changing the form of a geometrical figure, or solid, without changing its area or solidity.

Transformative, a. Having power or tendency to transform.

Transform'ing, a. Effecting, or able to effect a change of form or state.

Trans'uge, n. [Fr.] One who abandons his party in time of war, and goes over to the enemy; a turn-coat; a deserter; a runaway; a transfugitive.

Transfugitive, n. A person who turns or flees from one side to another; a deserter; an apostate; a transfuge. (R.)

Transfuse, v. a. [Lat. *transfundere*, *transfusum*, to pour out from one vessel into another.] To pour, as liquor out of one vessel into another. — To cause to pass from one to another; to cause to be instilled or imbibed.

(*Med.*) To transfer, as blood from one animal to another.

Transfusible, a. That may be transfused, &c.

Transfusion, (-fū'zhun,) n. [Fr., from Lat. *transfusio*.] Act of transfusing.

(*Med.*) The injection of blood from one living animal into another. It was at one time supposed that this operation might be resorted to, to sustain life in cases of great loss of blood from accidental hemorrhages and other causes, and that in certain cases of mental and bodily disease a cure might be effected by abstracting a large quantity of blood, and supplying its place by transfusion from another person, or from an animal, such as a calf or sheep. Some experiments, that were followed with sad consequences after having appeared at first to be attended with success, caused the practice to fall quite into disuse, except in cases of extreme exhaustion from hemorrhage during or after labor. Several cases, however, lately reported in this and in foreign countries, in which the process proved entirely successful in cases of coma from the fumes of carbonic oxide, amputation, &c., make it probable that *T.* may again come into more general medical use.

Transfu'sive, a. Tending to transfuse, or possessing the power to transfuse.
